Extensive control measures will be in place to avoid any release into the marine environment (**Table 137**), although if a release did occur, it would be a highly localised event proportional to the size of the waste lost overboard, and effects would be temporary.

The residual risk to environmental receptors arising from an accidental release of hazardous and non-hazardous materials during the Otway Basin 3D MC MSS has been assessed as **Low** (*Minor* x *Unlikely*).

8.5.3 Decision Context

The decision context for the accidental release of hazardous and non-hazardous materials has been assessed as Type A given the predicted impacts and risks are well understood and uncertainty is minimal, with little or no interest from relevant persons.

8.5.4 Identification of Control Measures, Residual Risk Assessment and Demonstration of ALARP

Control measures that will be put in place during the Otway Basin 3D MC MSS to manage any potential impacts and risks from the accidental release of hazardous and non-hazardous materials to **ALARP** have been included in **Table 137**. TGS has considered a number of control measures to determine the benefits of their implementation towards risk reduction (**Table 137**), based on a Hierarchy of Controls methodology (**Table 136**). The control measures that will be adopted are those that have been assessed and characterised as effective and practicable to implement.

Table 136 Hierarchy of Control Measures for Accidental Release of Hazardous and Non-Hazardous Materials

Eliminate	Hazardous and non-hazardous wastes will be generated throughout the voyage as a result of critical operations required to support the activities and hazardous materials are required to keep the vessels operational, thus these cannot be completely eliminated from the Otway Basin 3D MC MSS.
Substitute	While the least harmful substance that will perform the specified role will be chosen during the survey, and materials with biodegradable/recyclable packaging will be used where possible, some materials cannot be safely substituted without placing greater risk on the vessel/crew and increasing risk of an accidental release.
Reduce	Waste storage areas will be tightly secured/closed and fitted with the relevant bunding to prevent accidental release overboard of materials. Equipment will be serviced and maintained appropriately, and operated only by trained and experienced personnel, to reduce risk of equipment failure which can lead to accidental releases.
Mitigate	Control measures have been assessed within **Table 137** to mitigate the risk of impacts from accidental release of hazardous and non-hazardous materials to **ALARP** levels. Those which are appropriate and are not impracticable or unfeasible due to disproportionately large costs will be implemented during the Otway Basin 3D MC MSS.

Table 137 Assessment of Control Measures for Accidental Release of Hazardous and Non-Hazardous Materials

Control Measure	Practicability/ Effectiveness	Justification	Will it be adopted?
Legislative Requirements			
The Otway Basin 3D MC MSS will be undertaken in accordance with the approved EP.	P = Yes E = Effective	All vessels undertaking an offshore activity in waters between 3 and 200 NM must undertake that activity in line with an approved EP. The approved EP outlines the measures that will be taken to ensure that environmental effects from the activity will be reduced to **ALARP** and **Acceptable Levels**, including the management of hazardous and non-hazardous materials.	Yes
In accordance with MARPOL Annex V and Marine Order 95: • Vessels over 100 gross registered tonnage (or certified for more than 15 persons on board) will have a Garbage Management Plan; and • Vessels over 400 gross registered tonnage (or certified for more than 15 persons on board) will have a Garbage Record Book.	P = Yes E = Effective	As per MARPOL Annex V, all ships of 100 gross tonnage and above, every ship certified to carry 15 persons or more must carry a Garbage Management Plan on board, which includes written procedures for minimizing, collecting, storing, processing and disposing of garbage, including the use of the equipment on board. As per MARPOL Annex V, all ships of 400 gross tonnage and above and every ship which is certified to carry 15 persons or more engaged in voyages to ports under the jurisdiction of another party to MARPOL to provide a Garbage Record Book and to record all disposal and incineration operations. It is a legislative requirement for vessels to comply with MARPOL, and Marine Order 95.	Yes
Management and storage of hazardous substances complies with regulations 2 to 5 of MARPOL Annex III: • Packages shall be adequate to minimise the hazard to the marine environment, having regard to their specific contents; • Packages containing harmful substances shall be durably marked with the correct technical name and, further, shall be durably marked or labelled to indicate that the substance is a marine pollutant. This shall be supplemented where possible by any other means (e.g. relevant United Nations number); • The method of marking and affixing labels shall be such that this information will still be identifiable on packages surviving at least three months' immersion in the sea • In all documents relating to the carriage of harmful substances by sea where such substances are named, the correct technical name of each substance shall be used and the substances further identified by the addition of the words 'MARINE POLLUTANT'; • Each ship carrying harmful substances shall have a special list or manifest setting forth the harmful substance on board and the location thereof. A detailed stowage plan setting out the location of the harmful substance may be used in place of such list or manifest. Copies of such documents shall be made available on request; and • Harmful substances shall be properly stowed and secured so as to minimise the hazards to the marine environment without impairing the safety of the ship and persons onboard.	P = Yes E = Effective	Regulations 2 to 5 of MARPOL Annex III outlines the regulations in place for the safe management and storage of hazardous substances. It is a legislative requirement for vessels to comply with MARPOL.	Yes
Vessels over 400 gross registered tonnage will hold an approved and tested SOPEP, with crew trained in its implementation.	P = Yes E = Effective	This control measure meets the requirements of Annex I of MARPOL which requires vessels over a certain size to have a SOPEP. Having crew trained in the implementation of the SOPEP will reduce the likelihood of a spill response option being required, by reducing the likelihood of a spill occurring in the first place. The Vessel Master is responsible for activating and implementing the vessel SOPEP. It is a legislative requirement for vessels to comply with MARPOL.	Yes
Good Industry Practice			
Solid hazardous and non-hazardous wastes generated during the Otway Basin 3D MC MSS are segregated onboard the vessel/s and are either incinerated or appropriately disposed of at a licensed onshore facility in accordance with the Waste Management Plan. All wastes will be stored in suitably capped/lidded receptacles to ensure they remain secure on the vessels under all conditions. Bins will be available for the segregation of waste as per the vessel's Waste Management Plan, and bins	P = Yes E = Effective	Ensuring all waste is securely stored aboard the vessels will prevent hazardous and non-hazardous wastes from being accidentally lost overboard into the marine environment. No domestic, maintenance, hazardous, solid or plastic waste will be intentionally discharged to the ocean. Such wastes will be stored onboard to be disposed at suitable facilities onshore. Bins will be used to segregate wastes on vessels in accordance with the vessel Waste Management Plan and covered bins will be used to prevent windblown waste.	Yes

Control Measure	Practicability/ Effectiveness	Justification	Will it be adopted?
containing materials that have the potential to be wind-blown will be covered (e.g. using lids or netting).		The control is considered good practice, is well defined and established standard practice by the offshore petroleum sector. Good industry practice, environmental benefit outweighs any additional cost.	
Non-hazardous solid wastes will be recycled or re-used where practicable.	P = Yes E = Effective	Non-hazardous solid waste generated on board the vessel will either be recycled where practical or re-used. Good industry practice, environmental benefit outweighs any additional cost.	Yes
Bunding around stored hazardous substances and equipment that uses hazardous substances: • All hazardous substance storage areas will be designed and maintained to support some form of containment/bunding; and • All equipment located on the vessel's deck that uses hydrocarbons will be surrounded by primary bunding (e.g. deck edge lip), as a minimum.	P = Yes E = Effective	Containment/bunding will be in place around all locations where hazardous substances/materials are stored onboard the vessels to capture any spilled substances/materials and prevent them from entering the marine environment. Accidental release of materials may occur as a result of the use of machinery on deck. Bunding captures materials onboard the vessels and allows for an appropriate clean-up response, to avoid accidental release to the receiving marine environment. Good industry practice, environmental benefit outweighs any additional cost.	Yes
All hazardous substances carried onboard the vessels be recorded in a Hazardous Chemicals Register and accompanying Safety Data Sheets (**SDS**). All crew are to know where the register is stored.	P = Yes E = Effective	SDS contain detailed information about each hazardous substance and required information for handling and clean-up procedures in event of a spill, which will assist with minimising risk to the environment and workers in the event of an incident. Good industry practice, environmental benefit outweighs any additional cost.	Yes
Suitable spill kits will be located close to the location of hazardous substances to allow timely response and clean-up in the event of a spill/incident.	P = Yes E = Effective	Hazardous substances carried onboard the vessels will be stored in different areas and may require different methods to contain/clean-up a spill. Suitable spill kits will be located in close proximity to storage and areas of use to allow timely response and minimise the risk of release to the marine environment. Crew will be appropriately trained in the use of the spill kits. Good industry practice, environmental benefit outweighs any additional cost.	Yes
Deck scupper plugs will be available beside all deck drainage points that lead overboard.	P = Yes E = Effective	Deck scupper plugs allow for drainage to be blocked off, stopping wastes (including hazardous wastes) from entering the marine environment through deck drainage systems. Good industry practice, environmental benefit outweighs any additional cost.	Yes
All equipment shall be serviced and maintained in accordance with original manufacturer's specifications and the vessels planned maintenance schedules.	P = Yes E = Effective	To reduce the risks of equipment failure, leading to accidental release of hazardous/non-hazardous materials, all equipment should be serviced and maintained to detect early faults/defects that could cause failures. This control will reduce the likelihood of the risk of an accidental release of hazardous and non-hazardous materials. Good industry practice, environmental benefit outweighs any additional cost.	Yes
Vessels and equipment will be operated by trained and experienced crew and all crew will participate in the vessel and environmental induction prior to the commencement of operations.	P = Yes E = Effective	Accidental release of materials may occur as a result of improper/incorrect use of onboard equipment during normal operations. Crew will not operate equipment/machinery they are not trained/experienced in operating and will follow SOP or manufacturers guidelines for safe operation. This control will reduce the likelihood of the risk of an accidental release of hazardous and non-hazardous materials. It is a standard industry practice to hold inductions for all onboard the vessels, with participation in induction meetings compulsory. During inductions, crew will be made aware of their responsibilities with regard to effects of discharges to the marine environment and their roles with regard to clean-up of any accidental discharges. This control will reduce the likelihood of the risk of an accidental release of hazardous and non-hazardous materials. Good industry practice, environmental benefit outweighs any additional cost.	Yes

Control Measure	Practicability/ Effectiveness	Justification	Will it be adopted?
Alternative/Substitute Controls Considered			
All packaging and containers to be made of biodegradable materials.	P = No E = Somewhat Effective	Some materials/substances carried onboard cannot be safely contained within biodegradable containers and attempting to do so may place crew at greater danger and increase risk of incident which could result in risk to environment. Due to the potential increase in risk to crew and the environment, this control measure is not considered appropriate in reducing the impacts to ALARP.	No
Additional Control Measures Considered:			
No generation of hazardous/non-hazardous wastes onboard the vessels which require storing.	P = No E = Very Effective	Health and safety of crew requires that foods, materials, and equipment be appropriately packaged for storage onboard the vessels for use at a later date, thereby generating packaging wastes which must be stored aboard the vessels to be later disposed of onshore. Costs would be disproportionate to the benefit that may be gained.	No
Residual Risk of Impact and Risk (Receptor)	**Consequence**	**Likelihood**	**Risk Ranking**
All receptors (outlined in **Section 8.5.2**).	Minor	Unlikely	Low
ALARP Statement:			
The decision context has been assessed as Type A and the overall residual risk has been determined to Low. TGS considers the adopted control measures minimise the risk of impacts from the accidental release of hazardous and non-hazardous material and are appropriate to the localised nature and small scale of the predicted environmental impacts associated with the Otway Basin 3D MC MSS. The proposed control measures have been developed in accordance with the legislative requirements, good industry practice, using professional experience and taking into account the specific environmental, social, economic and cultural characteristics of the OA. Additional control measures were considered as part of the assessment process; however, it was considered that they were not reasonably practicable to implement. Therefore, the predicted impacts to receptors from the accidental release of hazardous and non-hazardous materials are reduced to **ALARP.**			

8.5.5 Impact and Risk Acceptability

Table 138 Demonstration of General Risk Acceptability for Accidental Release of Hazardous and Non-Hazardous Materials

Criteria for Acceptance	Acceptability Summary
Residual Risk Ranking	The residual risk has been determined to be Low.
Ecologically Sustainable Development	The management of the risk associated with an accidental release of hazardous and non-hazardous materials can be carried out in compliance with the five principles of ESD as defined within the EPBC Act. These principles have been considered as part of the development of this EP and risk assessment process. The assessment has not identified any adverse impacts to the principles of ESD, with no threats of serious or irreversible damage, no impacts to biological diversity and ecological integrity, no degradation of inter-generational equity, or negative effects on the social and economic integrity in the short or long-term.
TGS Internal Context	The proposed management of the risks associated with the establishment of IMS is consistent with TGSs QHSE Policy commitments of: • Protecting the environment; and • Conducting operations in an environmentally sustainable and responsible manner.
Existing Environmental Context	The release of hazardous wastes into the marine environment can adversely impact on marine environmental (water) quality and, subsequently marine species, biodiversity ecosystem function, social amenity and human health. Marine debris such as plastic wastes and/or packaging can potentially pose a risk for many marine organisms, including protected species, through multiple impact pathways, for example ingestion, entanglement, chocking and smothering. Impacts to water quality and marine organisms resulting from the unplanned release of hazardous and non-hazardous substances are expected to be minor, temporary, highly localised and, in the case of non-hazardous materials, proportional to the size of solid waste. Hazardous substances accidentally released into the marine environment would be quickly diluted and/or dispersed. Therefore, impacts to marine organisms are not expected. Of relevance to the OA, are the maintenance of management objectives and values for protected areas such as the Zeehan and Nelson AMPs and the West Tasmanian Canyons KEF. Following the implementation of proposed control measures, the potential risk of impacts to marine environmental quality, marine receptors and, therefore, protected areas from the accidental release of hazardous and non-hazardous materials is Low.
External Context – Management Plans, Species Recovery Plans and Conservation Advice	The residual risk of the accidental release of hazardous and non-hazardous materials has been determined to be Low and will not have a significant impact on a matter of national environmental significance in accordance with EPBC Act Policy Statement 1.1. **Section 4.5.8** provides an outline of the EPBC Act Conservation Management Plans, Recovery Plans and Conservation Advice relevant to the species identified as potentially present within the OA and/or EMBA for the Otway Basin 3D MC MSS. Marine debris causing entanglement and ingestion was recognised in 2003 as a key threatening process for marine vertebrates under the EPBC Act. Pollution generally is also identified as a threat in several conservation advices/recovery plans for EPBC-listed species potentially occurring within the OA and/or EMBA. TGS has reduced and, where possible, eliminated any adverse impacts of marine debris from the activities of the seismic survey on turtles, cetaceans, sharks and birds, noting the linkages with the *Threat Abatement Plan for the Impact of Marine Debris on Vertebrate Marine Life* (Commonwealth of Australia, 2018). The control measures in place during the Otway Basin 3D MC MSS will support the implementation of this threat abatement plan and will ensure the Otway Basin 3D MC MSS is undertaken in a manner that is consistent with the species-specific Management Plans, Recovery Plans, and Conservation Advice. The OA overlaps with two AMPs within the South-East Marine Parks Network: the Zeehan and Nelson AMPs. Management of discharges in accordance with the requirements of MARPOL meets the management prescriptions outlined for AMPs and will minimise the potential for the release of wastes in AMPs
Social Acceptance – Relevant Person Expectations	Concerns were raised by relevant persons around the potential for rubbish to accumulate on beaches as a result of discharges from the Survey Vessels operating for the Otway Basin 3D MC MSS. Concerns were also raised by relevant persons around the potential for hazardous substances to detrimentally affect stocks of commercially harvested kelp. Concerns were raised by relevant persons around the potential for hazardous substances to detrimentally affect stocks of commercially harvested kelp. TGS has committed to zero rubbish disposed at sea and with the strict control measures in place to ensure there are no accidental releases of hazardous and non-hazardous substances into the marine environment, the risk of environmental impacts relating to the accidental releases of hazardous and non-hazardous materials from survey vessels are considered to be at a socially **Acceptable Level.**
External Context – Commonwealth and State Legislative Criteria	The proposed control measures during the Otway Basin 3D MC MSS are consistent with the following relevant standards/documents: • MARPOL Annex III Prevention of Pollution by Harmful Substances Carried by Sea in Packaged Form; • MARPOL Annex V Prevention of Pollution by Garbage from Ships; • The Protection of the Sea (Prevention of Pollution from Ships) Act 1993; • Marine Order 94 (Marine pollution prevention – packaged harmful substances) 2014; • Marine Order 95 (Marine pollution prevention – garbage) 2013; and • Marine Notice 2017/4 MARPOL Annex V Discharges.
Industry Best Practice	The proposed control measures to decrease the risk of an accidental release of hazardous and non-hazardous materials follows industry best practice and best practice guidelines for MSSs, including: • The IAGC Environmental Manual for Worldwide Geophysical Operations which recommends that: - No direct discharge of any products into the sea;

Criteria for Acceptance	Acceptability Summary
	- Vessels have a waste of garbage management plan in line with relevant regulations and providing procedures for collecting, segregating, storing, processing, and disposing of garbage; - Ensure that any hazardous materials used by the crew are handled and stored correctly, and that the safety information provided by the manufacturer is available to the crew - Waste that cannot be disposed by incineration is segregated and stored for disposal ashore; and - Keep complete records of hazardous material purchases, use, storage, disposal, and spills according to local or company requirements ; • The APPEA Code of Environmental Practice which recommends that suitable waste management practices are used based on preventing, minimising, recycling, treating and disposing of wastes in accordance with any statutory requirements and procedures.
ALARP	Hazardous and non-hazardous wastes will be generated throughout the survey voyage as a result of critical operations required to support the activities associated with the Otway Basin 3D MC MSS, and hazardous materials are required to keep the vessels operational. Therefore, hazardous and non-hazardous wastes cannot be completely eliminated from the Otway Basin 3D MC MSS and there are no practicable alternatives. Following the implementation of the control measures, the potential risk of impacts to the marine environment and associated receptors associated with the release of hazardous and non-hazardous materials are likely to be temporary and highly localised. Based on the assessment above, including the potential impacts on the environment and the associated controls measures to be implemented, the residual risk of an accidental release of hazardous and non-hazardous materials from the survey vessels is considered to be **Low** and to **ALARP** levels. Therefore, the impacts from this activity associated with the Otway Basin 3D MC MSS are considered to be at an **Acceptable Level**.

Acceptability Statement
Impacts and risks classified as 'Type A' are considered acceptable if the requirements in **Table 51** can be demonstrated and it can be determined that the predicted levels of impact and/or residual risk are at or below pre-defined Acceptable Levels for that impact or risk, including those described in **Table 52.** Based on the above evaluation, the potential impacts from the accidental release of hazardous and non-hazardous materials meets the requirements of the risk acceptability criteria. The control measures that will be implemented throughout the Otway Basin 3D MC MSS have been developed in accordance with these criteria and are considered appropriate to manage the impacts of the accidental release of hazardous and non-hazardous materials to an **Acceptable Level.**

8.5.6 Environmental Performance

Table 139 Environmental Performance Outcomes, Standards and Measurement Criteria for Accidental Release of Hazardous and Non-Hazardous Materials

Number	Environmental Performance Outcome	Environmental Performance Standard(s)
EPO 29	No accidental release of hazardous and non-hazardous materials into the marine environment	**EPS 298** to **EPS 321**
EPO 30	Management of hazardous and non-hazardous waste to meet or exceed the requirements of MARPOL Annex V and Marine Order 95	**EPS 298** to **EPS 321**

Control Measure	Environmental Performance Standard	Measurement Criteria	Responsible Party
The Otway Basin 3D MC MSS will be undertaken in accordance with the approved EP.	**EPS 298**: The Otway Basin 3D MC MSS may only commence following acceptance of the EP by NOPSEMA.	Pre-mobilisation audit and inspection are completed prior to operations and confirm an accepted EP has been obtained. Audit records verify compliance with the requirements of the EP.	TGS VOM EA
	EPS 299: The Otway Basin 3D MC MSS will be undertaken in accordance with the accepted EP.	Bridge logs verify compliance with the requirements of the EP. Audit records verify compliance with the requirements of the EP.	TGS VOM VOC EA Vessel Master SEA
In accordance with MARPOL Annex V and Marine Order 95: • Vessels over 100 gross registered tonnage (or certified for more than 15 persons on board) will have a Garbage Management Plan; and • Vessels over 400 gross registered tonnage (or certified for more than 15 persons on board) will have a Garbage Record Book.	**EPS 300**: Each vessel utilised during the Otway Basin 3D MC MSS that is over 100 gross registered tonnage (or certified for more than 15 persons on board) holds a Garbage Management Plan	Pre-mobilisation inspection confirms that each vessel > 100 gross registered tonnage (or certified for more than 15 persons on board) holds a Garbage Management Plan	TGS VOM VOC Vessel Master
	EPS 301: Each vessel utilised during the Otway Basin 3D MC MSS that is over 400 gross registered tonnage (or certified for more than 15 persons on board) holds a Garbage Record Book	Pre-mobilisation inspection confirms that each vessel > 400 gross registered tonnage (or certified for more than 15 persons on board) holds a Garbage Record Book	TGS VOM VOC Vessel Master
Management and storage of hazardous substances complies with regulations 2 to 5 of MARPOL Annex III. • Packages shall be adequate to minimise the hazard to the marine environment, having regard to their specific contents; • Packages containing harmful substances shall be durably marked with the correct technical name and, further, shall be durably marked or labelled to indicate that the substance is a marine pollutant. This shall be supplemented where possible by any other means (e.g. relevant United Nations number);	**EPS 302**: Packaging will be adequate to minimise the hazard to the marine environment, having regard to their specific contents.	Pre-mobilisation inspection confirms that each vessel > 400 gross registered tonnage holds a Garbage Record Book	Party Chief SEA CSR
	EPS 303: Packages containing a harmful substance shall be durably marked with the correct technical name (trade names alone will not be used) and shall be durably marked or labelled to indicate that the substance is a marine pollutant and include the common technical name, UN Classification and CAS numbers.	Pre-mobilisation audit records confirms packaged harmful substances are stowed in accordance with MARPOL Annex III.	Party Chief SEA CSR
	EPS 304: The method of marking the correct technical name and of affixing labels on packages containing a harmful substance shall be such that this information will still be identifiable on packages surviving at least three months immersion in the sea. In considering suitable marking and labelling, account shall be taken of the durability of the materials used and of the surface of the packaging.	Pre-mobilisation audit records confirms packaged harmful substances are stowed in accordance with MARPOL Annex III.	Party Chief SEA CSR
	EPS 305: A stowage plan is to be displayed with the location of harmful substances onboard and these substances are to be stored in the locations identified in this plan.	Pre-mobilisation audit records confirms packaged harmful substances are stowed in accordance with MARPOL Annex III.	Party Chief SEA CSR

Control Measure	Environmental Performance Standard	Measurement Criteria	Responsible Party
• The method of marking and affixing labels shall be such that this information will still be identifiable on packages surviving at least three months immersion in the sea; • In all documents relating to the carriage of harmful substances by sea where such substances are named, the correct technical name of each substance shall be used and the substances further identified by the addition of the words 'MARINE POLLUTANT'; • Each ship carrying harmful substances shall have a special list or manifest setting forth the harmful substance on board and the location thereof. A detailed stowage plan setting out the location of the harmful substance may be used in place of such list or manifest. Copies of such documents shall be made available on request; and • Harmful substances shall be properly stowed and secured so as to minimise the hazards to the marine environment without impairing the safety of the ship and persons onboard.	**EPS 306**: Hazardous substances are to be properly stored and secured so as to minimise the hazards to the marine environment without impairing the safety of the ship and crew onboard.	Pre-mobilisation audit records confirms packaged harmful substances are stowed in accordance with MARPOL Annex III.	Party Chief SEA CSR
Vessels over 400 gross registered tonnage hold and approved and tested SOPEP, with crew trained in its implementation.	**EPS 307**: SOPEP formulated, known to all staff, and kept up to date onboard the vessels so that in the event of a collision where hydrocarbons are released there is a plan in place to contain or clean-up.	Pre-mobilisation audit and inspection prior will confirm vessels holds an up-to-date SOPEP. Induction records show content of induction meeting and participation of crew.	Vessel Master. Party Chief SEA CSR
	EPS 308: The Vessel Master will authorise actions in accordance with the vessel specific SOPEP and survey specific SOPEP to avoid, and where avoidance is not possible, minimise the escape of hydrocarbons.	Incident Report from a hydrocarbon spill response will confirm whether SOPEP has been followed.	Vessel Master. Party Chief.
	EPS 309: Notification procedures will be implemented, including AMSA and regulatory agencies, including: • AMSA report notification; • NOPSEMA reports; • Regulatory agencies (including DNP); • TGS incident report; and • Pollution report.	In event of vessel collision/sinking and release of MDO all appropriate forms will be completed and submitted to relevant authorities	TGS VOM Vessel Master.
Solid hazardous and non-hazardous wastes generated during the Otway Basin 3D MC MSS are segregated onboard the vessel/s and are either incinerated or appropriately disposed of at a licensed onshore facility in accordance with the Waste Management Plan. All wastes will be stored in suitably capped/lidded receptacles to ensure they remain secure on the vessels under all conditions. Bins will be available for the segregation of waste as per the vessel's Waste Management Plan, and bins containing materials that have the potential to be wind-blown will be covered (e.g. using lids or netting).	**EPS 310**: Details of solid wastes incinerated or transferred to shore are maintained in the vessel's Waste Management Log Book, including records of the receiving company for transferred wastes.	Audit records show content of Waste Management Log Book and appropriate disposal of wastes at onshore facility.	Party Chief SEA CSR
	EPS 311: Generated solid wastes will be separated and securely stored in tightly capped/lidded containers/areas for later disposal onshore. Generated wastes will be characterised and managed in accordance with MARPOL Annex V, Marine Order 94 and Marine Order 95.	Pre-mobilisation inspection confirms suitable storage areas for generated wastes which are labelled and have appropriate means of preventing wastes from escaping.	Party Chief SEA CSR
	EPS 312: Bins will be available for the segregation of waste as per the vessel's Waste Management Plan. bins containing materials that have the potential to be wind-blown will be covered (e.g. using lids or netting).	Pre-mobilisation inspection confirms suitable storage areas for generated wastes which are labelled and have appropriate means of preventing wastes from escaping.	Party Chief SEA CSR

Control Measure	Environmental Performance Standard	Measurement Criteria	Responsible Party
Non-hazardous solid wastes will be recycled or re-used where practicable.	**EPS 313**: Environmental induction includes information on waste management and housekeeping requirements, including recycling or re-using waste where practicable.	Induction records show content of induction meeting and participation of crew.	Vessel Master. Party Chief. EA
Bunding around stored hazardous substances and equipment that uses hazardous substances: • All hazardous substance storage areas will be designed and maintained to support some form of containment/bunding; and • All equipment located on the vessel's deck that uses hydrocarbons will be surrounded by primary bunding (e.g. deck edge lip), as a minimum.	**EPS 314**: Hazardous storage areas (e.g. hydrocarbons and chemicals) will be fully bunded and drain to the bilge water tank treatment system. Spill response kits will be stored nearby the storage location of these hazardous substances for clean-up purposes in the event of an unplanned spill.	Audit records confirm location of stored hazardous substances, the spill kit and appropriate bunding.	Party Chief SEA CSR
	EPS 315: All equipment located on the vessel's deck that uses hydrocarbons will be (as a minimum) surrounded by primary bunding (e.g. deck edge lip).	Pre-mobilisation inspection confirms appropriate bunding is in place around relevant deck machinery/equipment.	Party Chief SEA CSR
All hazardous substances carried onboard the vessels be recorded in a Hazardous Chemicals Register and accompanying SDS. All crew are to know where the register is stored.	**EPS 316**: Hazardous materials must be recorded in a Hazardous Chemicals Register with accompanying SDS. All hazardous materials will be appropriately stored and handled in accordance with the relevant SDS requirements and the International Maritime Dangerous Goods Code to reduce the risk of an environmental incident. SDS for all hazardous substances (as defined in the International Maritime Dangerous Goods Code) onboard the vessel will be kept readily available in locations known to all crew.	Pre-mobilisation inspection confirms a Hazardous Chemicals Register is in place and includes the correct and in-date SDS for all hazardous substances are readily available to all crew.	Party Chief SEA CSR
Suitable spill kits will be located close to the location of hazardous substances to allow timely response and clean-up in the event of a spill/incident.	**EPS 317**: Spill kits of appropriate size and composition for the type/class of hazardous substance will be located close to location of these hazardous substances. Crew will be appropriately trained in how to use the spill kits and how to properly dispose of any soiled spill kits following clean up.	Pre-mobilisation inspection confirms correct type and size of spill kit and their proximity to the hazardous substance location. Induction records show crew are appropriately trained in how to use the spill kits.	Party Chief SEA CSR
Deck scupper plugs will be available beside all deck drainage points that lead overboard.	**EPS 318**: Scupper plugs, or equivalent drainage control measures, will be readily available to allow drains to be blocked in the event of a hydrocarbon or chemical spill to deck (i.e. outside bunded areas).	Audit records confirm location of drainage control measures. Induction records show crew are appropriately trained in how to implement scupper plugs.	Party Chief SEA CSR
All equipment shall be serviced and maintained in accordance with original manufacturer's specifications and the vessels planned maintenance schedules.	**EPS 319**: Risk of equipment failure (leading to accidental material releases) reduced by service and maintenance according to vessel SOP, original equipment manufacturer's recommendations and vessel service schedule.	Pre-mobilisation inspection confirms equipment is in current test/ certification and maintenance records show completed work.	Party Chief SEA CSR
Vessels and equipment will be operated by trained and experienced crew and all crew will participate in the vessel and environmental induction prior to the commencement of operations.	**EPS 320**: All equipment to be correctly operated only by trained and experienced staff.	Induction records show which crew hold suitable certification/training to operate equipment.	Vessel Master. Party Chief.
	EPS 321: All crew will participate in a vessel induction prior to the commencement of the survey, outlining their roles and responsibilities while onboard. Induction is to include information on waste management and housekeeping requirements.	Induction records show content of induction meeting and participation of crew.	Vessel Master. Party Chief. EA

8.5.7 Accidental Release of Hazardous and Non-Hazardous Material Impact and Risk Summary

Based on the assessment above, including the potential impacts on the environment and the associated controls measures to be implemented, the residual risk of an accidental release of hazardous and non-hazardous materials from the survey vessels is considered to be **Low.**

The suite of control measures to be implemented have been developed in accordance with industry best practice, and all relevant legislation. Consequently, it is considered that the environmental impacts and risk on the marine environment and receptors arising from the accidental release of hazardous and non-hazardous material from the Otway Basin 3D MC MSS, are reduced to **ALARP** levels.

In accordance with the acceptability requirements prescribed in **Section 6.4,** the suite of control measures is considered appropriate to manage the risks and impacts arising from the accidental release of hazardous and non-hazardous material from the Otway Basin 3D MC MSS on all receptors to an **Acceptable Level**.

9 Cumulative Effects

Cumulative effects due to exposure to seismic energy may occur under the following scenarios:

- Consecutive/successive MSSs, where the spatial footprint of impacts from previous MSSs have occurred over the same area where impacts from the Otway Basin 3D MC MSS are predicted to occur. Cumulative impacts will only occur where the effects of previous MSSs overlap the same area and when recovery of the impacts from these MSSs has not occurred prior to the commencement of the Otway Basin 3D MC MSS;
- Multiple MSSs that occur concurrently in a region. Effects may or may not overlap spatially, but may result in an incremental increase in impacts within the range and extent of the same environmental receptors, e.g. where different MSSs overlap with the distribution of the same population of a marine species or with the same commercial fishery;
- Multiple exposures during a single MSS, including infill of seismic data gaps within the same MSS; and
- Interaction between different sources of sound, e.g. vessel noise and seismic energy.

Any of these scenarios could increase the overall underwater sound exposure for key receptors to levels that are above those associated with the conduct of a single MSS. Acoustic energy from multiple MSSs and shipping traffic are of particular interest as these are the two most likely potential contributors to cumulative effects of underwater noise in the Otway Basin. There is also a high likelihood that infill of seismic data gaps will be required. The noise impacts of infill lines have been identified throughout **Section 7.2**.

This section does not assess cumulative impacts from MSSs that are not yet planned (i.e. for which no EP has yet been submitted to NOPSEMA), which may occur in the same timeframes as, or after, the Otway Basin 3D MC MSS. It is not possible to anticipate what surveys will be planned and it is expected that proponents of future MSSs assess the potential cumulative impacts of their surveys with the Otway Basin 3D MC MSS within their respective EPs.

9.1 Characterising the Nature and Scale of Cumulative Effects

Potential cumulative impacts from successive MSSs on receptors are highly variable based on the recovery period of the receptors and the timing between the surveys. As outlined throughout **Section 7.2**, the range at which the various receptors recover from sounds exposure can be between minutes and hours, through to weeks and months; examples of the recovery periods for the key receptors are as follows:

- Zooplankton abundance (including eggs and larvae) will likely recover and replenish to natural levels within hours of exposure as discussed within **Section 7.2.2.2.1**;
- Benthic invertebrates may experience sub-lethal and chronic effects for weeks to months as outlined within **Section 7.2.2.2.1**. However, it is worth noting that any effects on the community composition are considered to be negligible in relation to natural variability;
- Potential effects on fish species are dependent on the species and their hearing sensitivity, but effects will likely last for minutes to hours as discussed in **Section 7.2.2.3.2**; and
- Changes in migrating or foraging marine fauna (e.g. cetaceans and marine turtles) will likely return to normal within hours or days after exposure as outlined within **Section 7.2.2.2.6** and **Section 7.2.2.2.7**.

Based on the discussions above, the longest potential recovery period relates to immobile benthic invertebrate communities, although noting that those effects are considered negligible in relation to the natural variability of those communities.

9.2 Concurrent and Consecutive Marine Seismic Surveys

A review of data available on the National Offshore Petroleum Information Management System (**NOPIMS**) and the NOPSEMA website has confirmed the MSSs that have previously been undertaken in South Australian, Otway, and TAS offshore waters in the last 5 years (2018 – 2023 inclusive). The NOPIMS and NOPSEMA website were also checked for any recently approved EPs for potential spatial and/or temporal overlap with the Otway Basin 3D MC MSS; this did not identify any other MSSs in the region so no further assessment of cumulative impacts with consecutive MSSs can be undertaken.

Overall, four historical MSSs were identified through this process, with their details provided in **Table 140** and locations depicted in **Figure 93**.

Table 140 Previous 2D and 3D MSSs completed in the Vicinity of the Otway Basin 3D MC MSS in the last Five Years

Survey Name	Acquisition Period	Spatial Overlap
Beach Energy Prion 3D MSS	08/11/2021 - 11/12/2021	None. The MSS was located in the western Bass Strait, 150 km east of the OA.
ConocoPhillips Sequoia 3D MSS	15/08/2021 - 31/10/2021	Overlap between the south-west corner of the Sequoia 3D MSS OA and the Otway Basin 3D MC MSS OA. Minor overlap between the south-west corner of the Sequoia 3D MSS AA and the Otway Basin 3D MC MSS AA, although no operation of the seismic source will occur here during the Otway Basin 3D MC MSS due to the implementation of the Giant Crab Acoustic Exclusion Zone.
Schlumberger Otway Basin 2D MC MSS	16/01/2020 - 21/04/2020	Overlap. The area where 2D seismic lines were acquired during the SLB Otway Basin 2D MC MSS is broadly similar to the Otway Basin 3D MC MSS AA.
T/30P Geophysical and Geotechnical Seabed Survey	Mid-2021	Overlap with the Otway Basin 3D MC MSS OA near the 2D tie line AA.

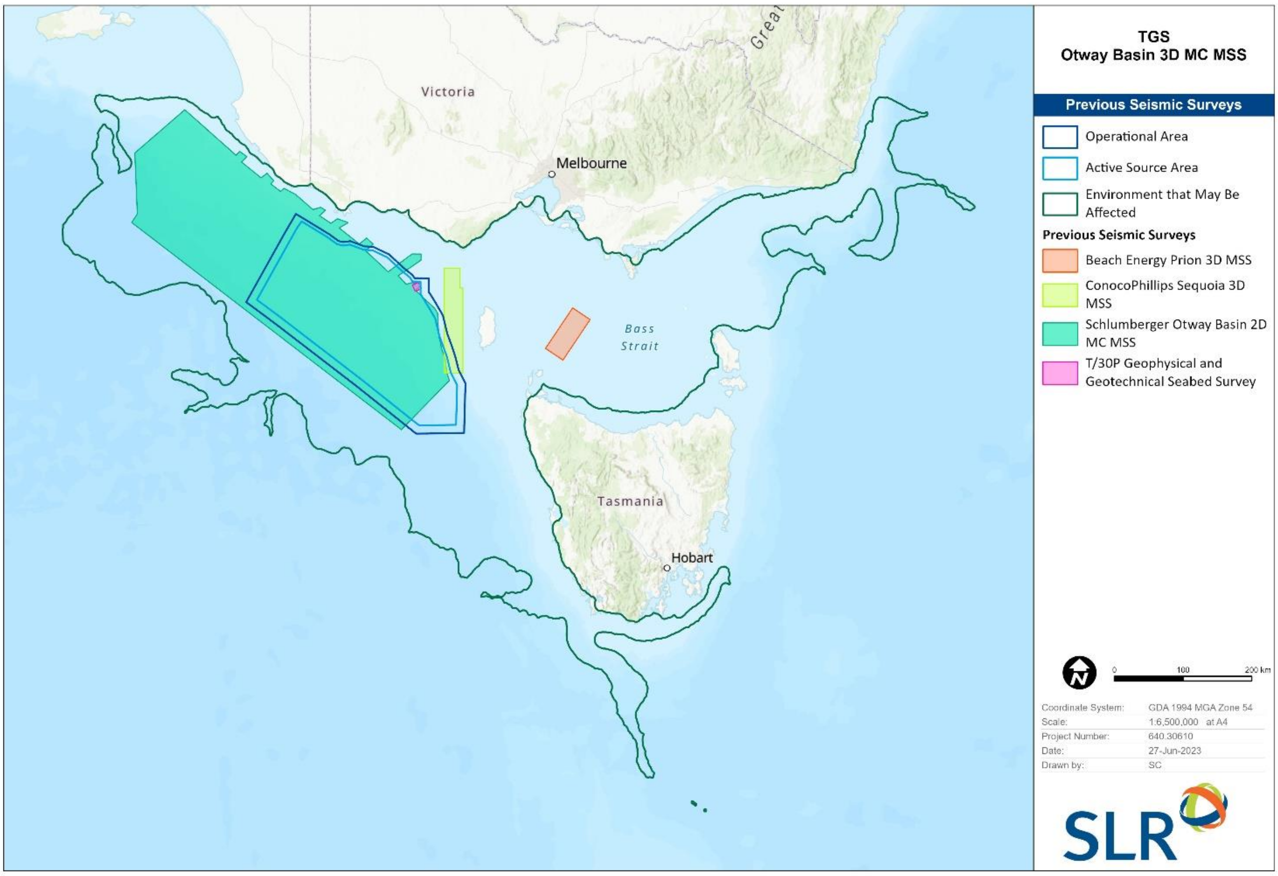

Figure 93 Previous Seismic Surveys Acquired since 2018 in the Otway Basin

Given that seismic activity has not been undertaken within or close to the OA since the start of 2022, ecological receptors are expected to have recovered. As a result, there is not expected to be any potential for cumulative impacts on marine receptors from seismic energy released from the previous MSSs. In addition, recent research indicates that short-term (acute) noise exposures (like those associated with MSSs) are less likely to affect marine species at a population level compared to long-term (chronic) noise exposures (Ellison *et al.*, 2016).

TGS is aware that CGG are also proposing to undertake the Reggia 3D MSS in the Otway Basin and are currently going through the consultation process and commencing the process for gaining regulatory approval through the development of an EP. The timing of the Reggia survey is not known at this stage, but TGS are in communications with CGG and have made a commitment to working together to minimise or reduce the potential for any cumulative acoustic disturbance within the OA or wider Otway Basin.

Similarly, TGS is also aware of the Calico 3D transition survey that is proposed by Beach Energy in Victorian state waters within three nautical miles of the shoreline. The proposed survey area is a long way inshore from the OA; however, TGS will continue to work with Beach Energy to minimise any potential for cumulative impacts should both surveys be acquired at the same time.

Seismic Vessel availability in Australia typically prevents more than one MSS being undertaken in a region at the same time, and although this cannot be guaranteed it is unlikely that both the TGS and CGG MSS's would be acquired simultaneously. TGS will engage with any additional proponents identified as having potential concurrent seismic activities within the Otway Basin, GAB or Bass Strait offshore areas prior to commencing a survey phase. Consistent with international good practice in the geophysics industry, a minimum separation distance of 40 km shall be maintained between the Otway Basin 3D MC MSS acoustic source and other operating acoustic sources. A SIMOPs Plan will also be developed and implemented if a separate petroleum activity is undertaken concurrently with the Otway Basin 3D MC MSS and within the OA. These control measures have been discussed in **Table 84**.

9.3 Multiple Exposures to the Acoustic Source

During the acquisition of seismic data, occasional gaps in data coverage occur. This can arise due to a variety of causes, such as malfunction of seismic equipment, minor navigational errors causing the vessel to move off-track, data errors, or enforced periods of non-acquisition due to interactions with marine species, weather constraints or vessel issues. These data gaps may negatively impact on the overall integrity and usefulness of the seismic data and prevent the objectives of the Otway Basin 3D MC MSS being achieved. Critical gaps in the seismic data coverage require 'infilling' where the Seismic Vessel is required to return to acquire data for a second time across the affected area. However, infill acquisition does not typically exactly replicate the original line but instead occurs slightly adjacent (typically 500 – 1,000 m) to it[41]. The time interval between initial data acquisition and infill acquisition depends on a variety of factors, such as data processing, vessel scheduling, local conditions, and competing data priorities. Infill lines typically need to be rescheduled at a later date as it is inefficient to immediately turn the Seismic Vessel to traverse the same area. Often infill lines will be left to the end of the survey schedule.

While infill acquisition has the potential to expose marine species, particularly less mobile benthic invertebrates, and site-attached species, to a second dose of seismic energy, it is noteworthy that for those marine fauna most at risk the UAM results (**Appendix B**) predict that:

- For crustaceans sublethal effects are predicted within c. 500 m of the acoustic source, but physiological effects for bivalves, sponges and corals are not predicted at any distance. Indeed, Przeslawski *et al.* (2016) concluded that none of the most recent studies (i.e. Parry *et al.*, 2002; Harrington *et al*., 2010; Aguilar de Soto *et al.,* 2013; Day *et al.*, 2016) indicate that MSSs cause mortality to benthic shellfish (scallops) under realistic exposure scenarios. Furthermore, Przeslawski *et al.* (2016) state that effects of seismic surveys on abundances have not been detected for cephalopods, bivalves, gastropods, decapods, stomatopods, or ophiuroids (Wardle *et al.,* 2001; Parry *et al.*, 2002; Christian *et al.,* 2003; Parry and Gason, 2006). These scientific results indicate that MSSs are unlikely to impact site-attached benthic species populations.
- For fish, no injury (mortal or recoverable) is predicted beyond c. 150 m from the acoustic source and while TTS could occur to a maximum of 4.8 km from the source, it is contingent on sustained exposure over a 24-hour period.

Given that infill acquisition is typically displaced by 500 – 1,000 m, and considering the UAM results summarised above, cumulative injury effects from infill acquisition are not anticipated for benthic invertebrates or site attached fish. In addition, exposure levels that could elicit TTS in site attached fish are not expected on either the primary or infill acquisition pass (even if both occurred within 24 hours of each other) as continuous 24-hour exposure of fish to sound exposure levels associated with close proximity of the acoustic source (i.e. within 4.8 km) will not occur on account of continuous vessel movement.

[41] Pers. Comm A. van der Wal, TGS. 22 June 2023.

Similar levels of cumulative exposure will occur when adjoining lines (less than 1 km parallel to each other) are acquired sequentially. Such exposure is routinely expected given the proposed 'racetrack' layout of the Otway Basin 3D MC MSS (as discussed in **Section 3.5.3**). The findings presented above for infill scenarios also apply to the sequential acquisition of adjoining lines and any other repeat acquisition that might be required, i.e. that cumulative injury effects are not anticipated for site attached marine fauna and TTS effects on fish are operationally untenable.

It is also noteworthy that re-shooting some areas may be necessary (on account of marine mammal instigated shut-downs, etc). The key differences between infill acquisition and re-shooting are that 1) re-shooting aims to replicate the original sail line, but 2) re-shooting occurs if acquisition was shut-down on the initial pass; hence cumulative exposure effects from re-shooting are not predicted as re-shooting does not subject an area to repeat exposure to seismic noise.

9.4 Multiple Sound Sources

Cumulative noise impacts can also occur due to seismic activities overlapping with existing background noise in and around the OA, such as from vessel traffic. **Section 4.7.4** provides details on the shipping activity that occurs in the general Otway Basin. The 'background' noise levels associated with shipping are known to affect the communication calls between marine mammals due to 'masking', whereby calls are not as easily heard above the noisy background. Masking is a complex phenomenon and masking levels are difficult to predict for any combination of sender, environment, and receiver characteristics (Erbe *et al*., 2016). The Otway Basin 3D MC MSS will comprise several vessels: one Seismic Vessel, and two smaller ancillary vessels including a Support/Chase Vessel and a Supply Vessel. Consequently, the increase in vessel noise will be small compared to the regular acoustic disturbance generated by commercial vessels traversing the OA.

Australia's south coast, including the Otway Basin, is transited by large commercial vessels, hence shipping noise is an existing feature of these waters, and marine mammals that are resident within the area are likely to have adapted to the persistent background noise. In the presence of constant noise, marine mammals sometimes adapt their vocalisations in order to overcome the effects of masking (e.g. McGregor *et al*., 2013) (further described in **Section 7.2.2**). In contrast, marine mammals that seasonally migrate through the OA are more likely to experience masking effects from vessel noise and noise generated during the Otway Basin 3D MC MSS.

The cumulative effects of exposure to multiple sound sources may be more relevant at the population level on a chronic basis than at the individual level on an acute basis (Ellison *et al*., 2016), and therefore introducing short-term (acute) seismic-based noise to an area that has an existing high background of vessel noise, such as the Otway Basin, is unlikely to impact marine species at the population level.

Marine environments differ in their resilience to anthropogenic stressors (Ban *et al*., 2010), and the potential for cumulative effects is likely to be related to physical features such as water depth, seabed characteristics and coastline shape. A higher risk from noise is evident in shallow waters and enclosed bays where the attenuation potential is lower, whereas open coastlines and deep water (such as within the OA of the Otway Basin 3D MC MSS) allow sound to dissipate more rapidly and therefore the risk is lower.

9.5 Conclusions

The potential for cumulative noise impacts associated with the proposed Otway Basin 3D MC MSS is low considering that:

- The last MSS conducted in the vicinity of the Otway Basin 3D MC MSS was completed at the end of 2001. Given the time that has elapsed since previous MSSs were undertaken in this area, all receptors are expected to have recovered from the effects of previous MSSs prior to commencement of the Otway Basin 3D MC MSS. Therefore, cumulative impacts to ecological receptors are not expected to occur as a result of any of the identified previous MSSs in the region and the Otway Basin 3D MC MSS;
- TGS is not aware of any potential MSSs that may overlap (spatially and temporarily) with the Otway Basin 3D MC MSS. Should TGS become aware of another MSS being approved for these areas, TGS will engage with proponents identified as having potential concurrent seismic activities within the Otway Basin, GAB or Bass Strait offshore areas prior to commencing a survey phase. A minimum separation distance of 40 km shall be maintained between the Otway Basin 3D MC MSS acoustic source and other operating acoustic sources. A SIMOPs Plan will also be developed and implemented, if a separate petroleum activity is undertaken concurrently with the Otway Basin 3D MC MSS and within the OA;
- The necessity of infilling critical gaps in the seismic data is not expected to significantly increase sound exposure impacts on marine species, especially since the deep, open ocean environment of the OA will ensure continual movement and mixing of the water mass, and the minimum time between undertaking infilling; and
- Additional vessel noise associated with the survey vessels will be small compared to the background noise associated with marine traffic and fishing. The introduction of short-term (acute) seismic-based noise to this area that has an existing high background of vessel noise is unlikely to impact marine species at a population level.

10 Implementation Strategy

Regulation 14 of the Environment Regulations requires an EP to contain an implementation strategy. As outlined within NOPSEMA Guidance Note N04751-GN1344 A339814, there are four key elements that an implementation strategy should include, these are:

- An environmental management system consistent with AS/NZS ISO 14001;
- Provision of reporting, monitoring, recording, audit, management or non-conformance and review of the titleholder's environmental performance to ensure that EPOs and EPSs in the EP are being met;
- An OPEP and demonstration that appropriate arrangements are in place for the activation of this plan in the event of a spill; and
- Arrangements for continuing consultation with relevant authorities, persons and organisations in order to demonstrate that there is an effective two-way communication process in place between the titleholder and relevant person.

It is TGS' responsibility for ensuring that the Otway Basin 3D MC MSS is managed in accordance with this implementation strategy. Likewise, all project personnel (employees and contractors) are expected to comply with the requirements of this EP at all times for the duration of the activity.

The following sections detail the implementation strategy which will be employed for the duration of the Otway Basin 3D MC MSS and associated activities and the methods in which TGS will conform to the requirements of Regulation 14. The OSMP (as part of the OPEP in **Section 10.10.8**) has been developed as a stand-alone document and is therefore separate to this EP but provided in **Appendix O**.

10.1 TGS Environmental Management System

As defined within Regulation 4 of the Environment Regulations, an Environmental Management System includes the responsibilities, practices, processes and resources used by a properly resourced and competent organisation to manage the environmental aspects of an activity.

The design and implementation of TGS Health Safety and Environmental Management System (**HSE-MS**) is underpinned by the key commitments stated within the TGS Environmental Policy and Health and Safety Policy (**Appendix A**). TGS' integrated HSE-MS is consistent with the management framework outlined within the AS/NZS ISO 14001 – Environmental Management Systems.

TGS' HSE-MS is designed to meet or exceed all appropriate legal requirements and, in the absence of any defined standards, meet or exceed industry-wide good industry practice. By employing TGS's Statement of Values and the principles of Leadership, Risk Management and Continuous Improvement, a high level of safety awareness shall always be maintained.

TGS senior management shall demonstrate leadership and commitment with respect to the HSE-MS by:

- Taking overall responsibility and accountability for the prevention of work-related injury and ill health, as well as the provision of safe and healthy workplaces and activities;
- Ensuring that the HSE policies and related HSE objectives are established and are compatible with the strategic direction of the organisation;
- Ensuring the integration of the HSE-MS requirements into the organisation business processes;

- Ensuring that the resources needed to establish, implement, maintain and improve the HSE-MS are available;
- Communicating the importance of effective HSE management and of conforming to the HSE-MS requirements;
- Ensuring that the HSE-MS achieves its intended outcome;
- Directing and supporting persons to contribute to the effectiveness of the HSE-MS;
- Ensuring and promoting continual improvement;
- Supporting other relevant management roles to demonstrate their leadership as it applies to their areas of responsibility;
- Developing, leading and promoting a culture in the organisation that supports the intended outcomes of the HSE-MS;
- Protecting workers from reprisals when reporting incidents, hazards, risks and opportunities;
- Ensuring the organisation establishes and implements a process for consultation and participation of workers; and
- Supporting the establishment and functioning of health and safety committees.

TGS and its contractors will apply a tiered approach to optimising the environmental performance of the project to ensure TGS' EPOs are achieved. The approach involves identification of local and regional environmental sensitivities, prioritization of risks, determination of appropriate practices and procedures to reduce those risks, and clear designation of roles and responsibilities for implementation.

A series of work instructions, procedures, plans and tools (e.g. spatial files) will be used for works undertaken within the OA to ensure that appropriate management measures are applied as required to minimise the risk of environmental disturbance from the Otway Basin 3D MC MSS. The work instructions, procedures and plans are documented within corporate systems/manuals developed by TGS as well as documents written specifically for the Otway Basin 3D MC MSS undertaken within the OA. The Vessel Operations Contractor shall have a suite of procedures that may apply to all vessels in their fleet; however, the associated work instructions are generally vessel specific.

Specific procedures comprising the HSE-MS that support the Otway Basin 3D MC MSS and comply with the Regulation 14 of the OPGGS (E) Regulations include but are not limited to:

- HSE-SOP-010 Risk Management;
- HSE-SOP-611 Contractor Management;
- HSE-SOP-311 Training;
- HSE-SOP-023 Communications;
- HSE-SOP-025 Management of Change;
- HSE-SOP-024 Audit and Review Process;
- HSE-SOP-140 Vessel Inspection;
- HSE-SOP-401 Emergency Preparedness and Response; and
- HSE-SOP-021 Incident Reporting and Investigation.

TGS uses HSE-MS software, Cority, to support incident management and tracking of performance.

10.2 Roles and Responsibilities

As stated in the NOPSEMA Guidance Note (N-04750-GN1344 A339814), a clear definition of the roles and responsibilities of all personnel involved in the Otway Basin 3D MC MSS ensures effective and consistent implementation of all the environmental management requirements set out in this EP and TGS' commitments to reducing potential impacts to the receiving environment to **ALARP** and an **Acceptable Level**.

While the respective Vessel Master has the overall responsibility to maintain health and safety standards for everyone on-board the survey vessels, it is the responsibility of all TGS employees and contractors to adhere to the requirements of any HSE-MS and the approved EP to ensure that their work is carried out in a safe manner and in a way that minimises any further potential risk to the receiving environment.

There is a clear chain of command for personnel implementing, managing and reviewing this EP provided below in **Figure 94**, with **Table 141** outlining the roles and responsibilities further.

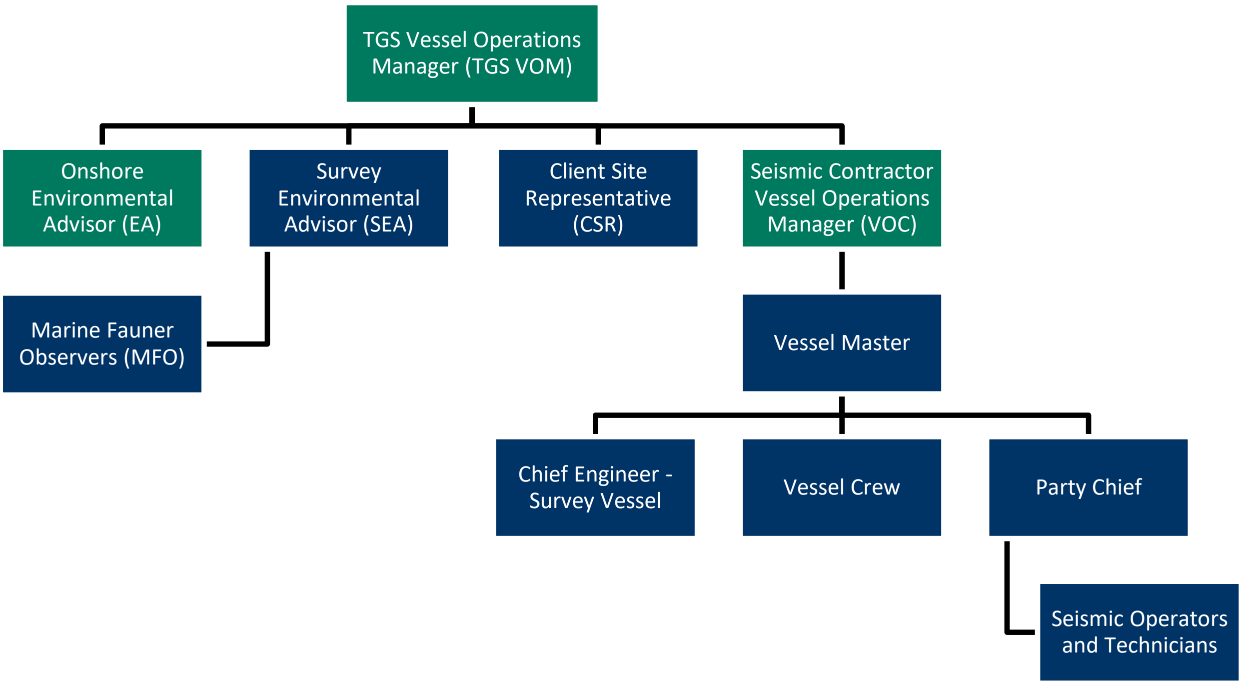

Figure 94 Chain of Command for Implementing, Managing and Reviewing the EP

Table 141 Roles and Responsibilities during the Seismic Survey

Role	Responsibility Relevant to this EP
Shore Personnel	
TGS Vessel Operations Manager (**TGS VOM**)	• Ensure the activity is undertaken as per the EP; • Provide sufficient resources to implement management measures to achieve the performance objectives of the EP; • Responsible for hiring qualified and experienced personnel, including contractors; • Manage change requests for the activity and notifying the Survey Environmental Adviser (**SEA**) of any scope changes in a timely manner; • Liaise with regulatory authorities such as NOPSEMA, NOPTA and AMSA as required; • Ensures communication is maintained with any other titleholders undertaking an MSS in the Otway Basin if/where SIMOPS is required; • Review the EP as necessary; • Ensure the programme's contractual obligations in relation to environmental management are met by the survey vessel operator; • Ensure that an annual internal audit of TGS' environmental management framework is carried out; • Ensure that audits of contractor HSE management systems are carried out annually or with every new contractor, whichever is more frequent; • Ensure environmental incident reporting meets regulatory requirements (as outlined in the EP) and TGS' internal HSE Incident Reporting Procedure; • Monitor and close out corrective actions raised from environmental inspections/audits or incidents; • Commit necessary resources to facilitate an emergency response strategy in the event of an incident; • Manage TGS' emergency response strategy in the event of an incident, including monitoring of response actions conducted by third parties such as vessel operators and designated combat agencies e.g. AMSA; • Review results of compliance audit during the program and make recommendations where required; • Ensure that all reportable and recordable incidents are reported to NOPSEMA; • During survey(s), ensure monthly reporting requirements to NOPTA and Ingress Grantors are undertaken; • Ensure that a full briefing to all project personnel is provided, including details of the environmental sensitivities of the survey area and environmental management procedures and performance outcomes detailed in this EP; • Responsible for all consultation activities and ensures that continuing consultation with relevant persons is carried out in a manner that is consistent with TGS' consultation strategy (**Section 5**) and control measures; • Ensure that a post-survey Environmental Performance Report is prepared and submitted to NOPSEMA; • Liaise directly with Seismic Contractor's onshore management team regarding all matters pertaining to the EP, survey and support vessels' activity; • Responsible for compliance with HSE Plan, ISM (International Safety Management) code, local, flag state, port state and class requirements for assigned vessels.

Role	Responsibility Relevant to this EP
Seismic Contractor Vessel Operations Manager (**VOC**)	• Ensure the activity is undertaken as per the EP; • Ensure that the following documents are onboard and implemented: ○ HSE plan; ○ Project plan; ○ Emergency response procedures; ○ HSE management procedures; ○ Hazard management procedures; ○ Environmental management procedures; • Ensure seismic and maritime personnel on survey and support/chase vessels are aware of their role and/or responsibility with regards to the EP and compliance with the EP commitments; • Responsible for compliance with HSE plan, International Safety Management Code, local, flag state, port state and class requirements for assigned vessels; • Responsible to ensure investigations are initiated on maritime events including breakdowns; • Responsible to follow up on maritime incidents and that corrective actions are identified and implemented; • Responsible to capture lessons learned and ensure Experience Transfers are issued; • Ensures latest copies of all survey-related documentation is available and on board all vessels involved in the survey, including support/chase vessel; • Ensure all offshore personnel are made available for Project Inductions and are signed-off accordingly.
Onshore Environmental Advisor (**EA**)	• Prepare and revise the survey EP as necessary; • Prepare environmental induction and vessel inspection information; • Provide a briefing to project personnel and survey vessel crew members of the environmental sensitivities of the survey area, environmental management procedures and performance objectives detailed in the EP as part of the environmental induction process; • Assist with review, investigation and reporting of environmental incidents; • Ensure environmental inspections/audits are undertaken as per the requirements of the EP; • Ensures all relevant continuing consultation which may impact the Otway Basin 3D MC MSS or relevant persons is communicated to personnel offshore, as required; • Assist in preparation of external regulatory reports required for the survey, in line with environmental approval requirements and TGS incident reporting procedures; • Assist in the preparation of the Annual Report (if required)
Vessel Personnel	
Vessel Master	• Ensure the safe execution of all operations of the vessel; • Comply with all relevant State, Federal and International laws relating to vessel; • Overall responsibility for HSE management aboard the vessel; • Ensure that appropriate control and mitigation measures are implemented to minimise potential environmental effects resulting from vessel operations (e.g. waste management/disposal; fuel/oil spill response);

Role	Responsibility Relevant to this EP
	• Immediately notify the Client Site Representative (**CSR**) and SEA of any incidents/activities arising from vessel operations that are likely to have a negative impact on the performance outcomes detailed in this EP; • Support the CSR in ensuring that all relevant HSE documents are understood and adhered to; • Ensure compliance with this EP, and any relevant statutory regulations (e.g. vessel discharges to sea); • Ensure that vessel procedures and systems comply with the EPO, EPS and MC described in this EP; • Report hydrocarbon or other chemical spillage to AMSA, the CSR and SEA; • Establish and maintain radio contact with other vessels in the OA and adjacent waters; • Provide SEA with any requested environmental compliance-related documents, tables, procedures and work instructions.
Chief Engineer Survey Vessel	• Overall responsibility for operation and maintenance of engines, generators and other machinery aboard the survey vessel; • Verify that the vessel's computerised planned maintenance system is used and updated and includes critical components and how to address them; • Select the correct survey modes for each machinery component, with special regard to fuel economy and life time costs for the different components; • Verify that engine room log, oil record book and other logs are kept according to laws, regulations and vessel contractor's instructions; • Have the daily supervision of the running of all machinery, including engines, compressors, and propulsion and power supplies; • Be responsible for the maintenance in the engine department; • Be responsible for waste management systems dealing with sewage, grey water, putrescible wastes and bilge water.

Party Chief	• Ensure safe execution of all operations carried out by the seismic crew aboard the survey vessel;
	• Ensure that the following documents are aboard and implemented;
	  ○ HSE Plan;
	  ○ Project Plan;
	  ○ Emergency Response Procedures;
	  ○ HSE Management Procedures;
	  ○ Hazard Management Procedures;
	  ○ Environmental Management Procedures; and
	  ○ This EP.
	• Ensures the seismic operations are consistent with:
	  ○ TGS Environmental Policy;
	  ○ Bridging document between TGS and seismic contractor for the operation of the survey vessel if required;
	  ○ TGS and seismic contractor plans, procedures and work instructions;
	  ○ This EP; and
	  ○ Relevant environmental legislative requirements or regulatory conditions.
	• Provide a daily log of activities and environmental incidents to the CSR;

Role	Responsibility Relevant to this EP
	• Ensure that appropriate control measures are implemented to minimise potential environmental impacts resulting from seismic acquisition; • Ensure compliance with all aspects of HSE reporting and for investigations of all incidents and near misses; • Immediately notify the CSR and SEA of any incidents/activities arising from seismic operations that are likely to have a negative impact on the EPOs detailed in this EP.
Client Site Representative (**CSR**)	• Ensure that the following documents are understood and adhered to; ○ HSE Plan; ○ Project Plan; ○ Emergency Response Procedures including survey vessel SOPEP; ○ HSE Management Procedures; ○ Hazard Management Procedures; ○ Environmental Management Procedures; and ○ This EP. • Facilitate clear communications between the TGS Perth office, the TGS Director, TGS VOM and the survey vessel personnel; • Ensure that during the Otway Basin 3D MC MSS operations within the OA all sub-contractors perform operations in a manner consistent with the environmental management procedures and EPOs detailed in this EP; • Ensure that the Vessel Master and Party Chief are adhering to the requirements of this EP; • Ensure that he/she is fully aware of ongoing operations, particularly for environmentally critical activities; • Immediately alert the TGS VOM of any changes in operations that could have a negative impact on environmental performance; • Immediately report any reportable incidents to the TGS VOM; • Maintain records of daily logs, environmental incidents, waste inventory and marine fauna sightings provided by the Party Chief, SEA and MFOs; • Assist in the preparation of the Annual Report (if required); • Before each affected line commences, confirms first and last shot point (including soft start location) are in the correct location and outside of exclusion zones and correct source capacity is selected for water depth.
Survey Environmental Adviser (**SEA**)	• Adhere to the EP as necessary; ensure all seismic activities are undertaken in accordance with the EP and that all staff on the seismic vessel and support/chase vessel are properly inducted and aware of the conditions of the EP; • Prepare and maintain the Environmental Compliance Register (**ECR**); • Record and collate all measurable performance outcomes of the EP within the ECR; • Prepare environmental induction and vessel inspection information. • Provide a briefing to project personnel and survey vessel crew members of the environmental sensitivities of the OA, environmental management strategies, EPO, and EPS detailed in the EP as part of the environmental induction process; • Assist the MFO team with visual observations and required Policy Statement 2.1 reporting for cetacean interactions;

Role	Responsibility Relevant to this EP
	• Assist MFOs and monitor for the presence of marine fauna; • Assist with review, investigation and reporting of environmental incidents; • Provide suitable support (i.e. training and materials) to assist the main seismic vessel and support/chase vessel crews with the correct identification and reporting of cetacean and other marine fauna; • Check and verify the accuracy of HSE totals provided in the daily and weekly reports, based upon independent observation of the events noted in the reports; • Ensure environmental inspections/audits are undertaken as per the requirements of the EP; • Assist in preparation of external regulatory reports required for the survey, in line with environmental approval requirements and the TGS HSE incident reporting procedures; • Assist in the preparation of the Annual Report (if required); • Bring to the immediate attention of CSR and TGS VOM any actions that are not compliant with the EP. Any recordable incidents will be logged within the ECR; • SEA will confirm the acoustic source is not located within exclusion zones or outside of the operational area prior to commencement of the acoustic source array and ensures that shapefiles of environmental sensitivities are correctly loaded onto all the navigation systems that define the boundaries where the acoustic source cannot be active within the OA, as well as the MFO and PAM observers computer system is provided to all those required that will need it to implement control measures. The shapefiles will include exclusion areas associated with marine mammals (blue whale and southern right whale), AMP boundaries, Tasmanian Giant Crab Fishery and UXO boundaries..
Marine Fauna Observers (MFO)	• Maintain watch for marine fauna during the course of the survey and advise the CSR and Party Chief of the presence of these marine fauna; • Implement Part A Standard Management Procedures and additional Part B Additional Management Procedures as identified in this EP; • Monitor and record any interactions with cetaceans and other marine fauna; • Assist in the preparation of the MFO Final Report.
PAM Operators	• Deployment and maintenance of PAM equipment; • Maintenance of 24-hour monitoring (day and night) of PAM equipment for acoustic detections of cetacean presence; • Maintenance of communication with Vessel Master, Party Chief, MFOs and Seismic Operator to initiate mitigation measures such as shut-downs of acoustic source; and • Preparation of cetacean survey reports (in collaboration with MFO) that detail any cetacean detections, interactions, and mitigation actions taken.
Seismic Operators Technicians	• Apply operating procedures in letter and in spirit; • Follow good housekeeping procedures and work practices; • Encourage improvement in environmental performance wherever possible;

Role	Responsibility Relevant to this EP
	• Immediately report environmental incidents or spillage of >1 L of hydrocarbons or other chemicals to the Vessel Master and Party Chief; • Before each affected line commences, Chief Navigator confirms first and last shot point (including soft start location) are in the correct location and outside of exclusion zones and correct source capacity is selected for water depth; • Seismic Navigators will confirm seismic acquisition lines entered into the integrated navigation system are not located within exclusion zones or outside of the AA including confirming the start of line and end of line location are located only within AA.
Vessel Crew	• Responsible for applying non-seismic vessel operating procedures in a professional and safe manner with good housekeeping procedures and work practices; • Includes personnel responsible for food and accommodation for all crew, watch-keeping and vessel navigation and compliance with local and international laws of the sea; • Ensure that any incidents are immediately reported to the Vessel Master.

10.2.1 Communications

Effective communications contribute to the achievement of HSE-MS requirements. To ensure this occurs, the communications processes within this EP are underpinned by TGS' Communications Procedure (HSE-SOP-023).

The Vessel Master is responsible for keeping the vessel crew informed about environmental issues, acting as a focal point for personnel to raise environmental issues, and consulting and involving all personnel in the following areas:

- Issues associated with the implementation of the EP;
- Any proposed changes to equipment, systems, or methods of operation of plant, where these may have potential environmental implications; and
- Any proposals for the continuous improvement of environmental protection, including the setting of environmental outcomes and training schemes.

Weekly Safety (or HSE) Meetings will be held onboard each vessel used for the duration of the Otway Basin 3D MC MSS with minutes recorded for all items and issues discussed and the resulting action items within the HSE Minutes of Meeting Form. The minutes of each meeting, including action items from the meetings, will be made available to all personnel following the meeting. Information which may be covered within the Safety Meeting are described within TGS' Communications Procedure and include, but are not limited to, incident investigations and hazard/near miss reports.

Other forms of internal communication include daily Toolbox Meetings, which are undertaken at the start of each day, at the start of each shift, and before every critical or unfamiliar job. Toolbox Meetings include all personnel involved in the task and cover a review of the hazards, designate responsible persons as required and a review of contingency measures. Additionally, they include aspects such as daily work plans, status of environmental controls, housekeeping, weather, repairs or maintenance and spill prevention requirements. A record of the meeting must be kept using the Toolbox Meeting Form.

Any concerns or issues that arise in relation to environmental performance/requirements of the EP will be recorded and communicated through:

- Personnel related issues/concerns raised are to be communicated with the Vessel Master and are communicated/recorded in daily meetings if required; and
- Infield communications with fishing and shipping activities is managed by the Vessel Master/crew and recorded on the vessel log (i.e. any vessel within the OA must follow mariners' warnings and navigational requirements and/or agreed controls under this EP).

Continuing consultation with relevant persons identified in this EP throughout will occur throughout the Otway Basin 3D MC MSS, as described in **Section 5.5.12.** The TGS VOM will communicate any updates determined through the continuing consultation process to the Vessel Master, where they have the potential to impact the Otway Basin 3D MC MSS and/or relevant persons.

10.3 Training, Competencies and Awareness

The correct selection, placement, training and ongoing assessment of competent employees and contractors is a key component of any offshore activity in order to ensure that operations meet all organisational, and statutory requirements, including the requirements of the approved EP. Essentially, this means that all personnel onboard the vessels have to be competent to undertake their roles and responsibilities.

Specific responsibilities are detailed in job descriptions and appropriate training will be provided to individuals with specific environmental responsibilities, in accordance with TGS' Training Procedure (HSE-SOP-311), such as waste management measures; routine discharges; and deployment and recovery of streamer procedures. Training may be in the form of inductions, 'on the job', internal courses or external courses.

TGS will ensure the vessel operator provides marine crew who are trained and competent to undertake their respective activities on-board the vessel. All marine personnel will be qualified in accordance with the International Convention on Standards of Training Certification and Watch Keeping for Seafarers (**STCW95**) or Elements of Shipboard Safety as relevant. It is the responsibility of the Vessel Contractor will ensure all offshore personnel employed for the Otway Basin 3D MC MSS are sufficiently trained and competent for their role onboard the vessels.

10.3.1 Contractor Management

TGS has developed a systematic approach to qualify, evaluate, select, and manage contractors so that the associated HSE risks are identified and properly managed, and applicable legislative, regulatory and industry standards are adhered to. The engagement of contractors is a two-stage process that involves completion of a contractor pre-qualification form and the assessment of their HSE management systems. This is intended to ensure that only contractors whose HSE Management Systems are compatible with or have an equal or higher standard than that of TGS' HSE-MS are utilised. All contracts for the Otway Basin 3D MC MSS will be established with minimum requirements as detailed in the TGS' Contact Management Procedure (HSE-SOP-611) and include but are not limited to vessel specific plans, project-specific Contractor HSE management plans, a Master of Services agreement (formerly bridging document), relevant insurances and certificates. TGS engages with its subcontractors in reviewing HSE-related documents.

The requirements of this EP will be rolled out to contractors through the following processes:

- The requirement to comply with the approved EP will be included in contracts for vessels;
- A copy of the approved EP and OSMP will be provided to the vessel operators by TGS;
- A Contractor HSE Plan may be required to acknowledge, as appropriate, relevant commitments in the EP;
- Possible physical inspection of the contractor's facilities and/or equipment;
- All contractor personnel are competent and trained for the roles and responsibilities they are contracted for and will be able to provide relevant CVs which reflect this;
- All contractor personnel will be required to attend an HSE induction; and
- Continuous monitoring of Contractor HSE performance.

A review of contractor compliance with the relevant EPSs will be initiated prior to mobilisation.

Once engaged, Contractor HSE performance is tracked and catalogued through TGS' HSE-MS software application, allowing TGS to continuously monitor its contractors' performance throughout the project life cycle and over time. TGS monitors and assesses the performance of contractors by tracking and reviewing a range of leading and lagging HSE indicators. Upon completion of a survey, TGS reviews all aspects of HSE performance to identify and discuss areas for improvement, lessons learned, and additional hazards identified during the acquisition phase. In addition to the review, monitoring and audit requirements set out in this EP, TGS completes an organisational review of HSE statistics and performance, including those for contractors, on a quarterly basis.

10.3.2 Vessel Master

The Vessel Master will possess the appropriate qualifications, experience, and skill to command the vessel as required by AMSA for the tonnage and vessel class to be utilised.

As part of the induction process (**Section 10.3.6**), the Vessel Master will meet with the Onshore EA and CSR to familiarise themselves with the project and EP requirements, the Contractors HSE Plan, and the Bridging Document. While the Vessel Master has the overall responsibility to maintain health and safety standards for everyone on-board the survey vessels, the CSR will be present and verify this has occurred at the conclusion of this meeting. Likewise, the Vessel Master will ensure the CSR is aware of and understands all the requirements set out in the approved EP, at the conclusion of this meeting.

During this meeting, the Vessel Master and CSR will review the accuracy and completeness of Contractors HSE Plans, the Bridging Document and the shape files denoting key environmental sensitivities to be avoided, against the boundary extents of the AA and OA, to ensure they are adequate for further circulation.

10.3.3 Survey Environmental Advisor

The SEA will possess the appropriate qualifications, experience, and skill to oversee compliance with the requirements of the approved EP.

While the Vessel Master has the overall responsibility to maintain health and safety standards for everyone on-board the survey vessel, the SEA has responsibility for ensuring the requirements of the EP are implemented and appropriately met in an effective and consistent manner. The CSR will provide secondary check of adherence to the requirements of the EP. Hence, they are commonly cited as responsible persons for a given control measure and EPS.

To achieve this, it is expected that the SEA will have experience exceeding that described for MFOs (**Section 10.3.5**). As a minimum, the SEA will have logged a minimum of 20 week's relevant sea-time engaged in MSS operations in Australian waters as an environmental advisor or MFO.

The SEA will be issued a copy of the approved EP, the Contractors HSE Plan, any relevant tools and workflows from the CSR. As part of the induction process (**Section 10.3.6**), the SEA will meet with the Onshore EA, MFOs and PAM Operators to familiarise themselves with the project and EP requirements, as they relate to their roles. The CSR will be present to verify the SEA is aware of and understands all the relevant requirements set out in the approved EP, at the conclusion of this meeting.

10.3.4 Marine Biofouling Inspector

As detailed in **Table 109**, a qualified marine biologist will provide a written report on the biofouling inspection carried out on the survey vessels. The inspector will be suitably trained and competent to carry out the biofouling inspection. This experience will be identified by their professional CVs and records of relevant past experience. To be classed as 'suitably trained and competent', the following criteria will be considered when contracting a marine biologist for the purpose of the biofouling inspection:

- Knowledge and experience:
- Experience and qualifications in the marine environment and marine quarantine/biosecurity fields. For example, BSc or MSc in marine biology and relevant industry experience;
- Knowledge and understanding of applicable legislation (see **Section 2.1**);
- Additional evidence provided on a case-by-case basis such as relevant experience, sectors covered, specialist work, professional memberships, and research conducted in the biosecurity field; and
- Maintenance of experience – maintains knowledge, ability and experience through conducting at least three IMS inspections every two years and demonstrates a commitment to ongoing professional development to remain up to date with inspection methods and technology.
- Fit and proper person:
- History of complying with relevant biosecurity legislation and reporting suspected and confirmed IMS; and
- No convictions in relation to honesty or fraud under any written law or history of making false or misleading records of returns.
- Ability:
- Demonstrated ability to determine IMS likely to be present on the vessel;
- Demonstrated ability to effectively inspect internal sea water systems and topsides, and to prepare briefings for divers and dry inspection teams;
- Demonstrated ability to deliver a dry inspection and in-water inspection, to identify IMS and deliver biofouling inspection reports; and
- Demonstrated ability to provide accurate advice relating to risk minimisation in accordance with relevant legislation, policies and guidelines, remediation and corrective measures, and ongoing management and best practice to achieve and maintain a low risk status.

The Marine Biofouling Inspector will undertake an evaluation of the risk profile of the survey vessel/s prior to vessel entry into Australian waters, during recent dry-docking or during inspection of the hull and niche areas, as required, and which concludes a low risk of IMS presence. The Marine Biofouling Inspector is not included in the chain of command and will not be required to attend project specific inductions as they have no role onboard the vessel following mobilisation from port. The Marine Biofouling Inspector will be contracted in accordance with the requirements set out in **Section 10.3.1.**

10.3.5 MFOs and PAM Operators

Policy Statement 2.1 requires MFOs to have '*proven experience in whale observation, distance estimation and reporting*'. Two dedicated, trained, and experienced MFOs will be contracted for the Otway Basin 3D MC MSS to undertake observations on the Seismic Vessel. An additional two dedicated, trained, and experienced MFOs will be stationed on the Attending Support Vessel to provide marine fauna observations from a secondary platform.

TGS will employ dedicated, trained, and experienced MFOs, as identified by their professional CVs and records of relevant past experience. Due to the sensitivity towards mammals in the OA and the 7 km Extended Shut-down Zone for BW/PBW and SRW and the Extended 2 km Shut-down Zone for other whales that will be implemented throughout the OA for the duration of the Otway Basin 3D MC MSS (**Section 3.5**), the following minimum level of experience will be required for the MFOs:

- The lead MFO on the Seismic Vessel must have logged a minimum of 20 weeks' relevant sea-time engaged in MSS operations in Australian waters as an MFO (following the recommendation of the Marine Mammal Observer Association (MMOA, 2019));
- All MFOs must have proven 'at sea' experience in whale identification and behaviour, and distance estimation, and must be confident in the identification of those species that the EP predicts will be present in the OA (as stated in this EP); and
- All MFOs will hold a JNCC Marine Mammal Observation certification (or equivalent).

In addition, two dedicated, trained, and experienced PAM Operators will be contracted for the Otway Basin 3D MC MSS to undertake acoustic monitoring for marine mammals from the Seismic Vessel. PAM Operators employed during the Otway Basin 3D MC MSS will need to be dedicated, trained, and experienced in the use of PAM for the detection and monitoring of cetacean vocalisations. Experience will be identified by their professional CVs and records of relevant past experience. The following minimum level of experience will be required for the PAM Operators:

- The lead PAM Operator must have logged a minimum of 20 weeks' relevant sea-time engaged in MSS operations in Australian waters as a PAM Operator (following the recommendation of the Marine Mammal Observer Association (MMOA, 2019));
- All PAM Operators will need to be able to demonstrate competency in the acoustic identification of the species that are likely to be present during the Seismic Survey (as stated in this EP). Noting that the ability to acoustically detect some species (e.g. blue whales) is limited; and
- All PAM operators must demonstrate competency in interpreting acoustic software and estimating distance to any detected whale calls.

MFOs and PAM Operators will be aware of the requirements of Policy Statement 2.1 Part A procedures and adopted Part B procedures. The Lead MFO and the Lead PAM Operator will also have experience with the preparation of compliance and sighting reports (see **Section 10.6.2**).

All MFOs and PAM Operators will be issued a copy of the approved EP, the Contractors HSE Plan, with respect to the MFOs this will take the form of the Marine Fauna Management Plan, and any relevant tools and workflows from the CSR. As part of the induction process (**Section 10.3.6**), MFOs and PAM Operators will meet with the Onshore EA and SEA to familiarise themselves with the project and EP requirements, as they relate to their roles no less than one week prior to mobilisation. The CSR will be present to verify MFOs and PAM Operators are aware of and understand all the relevant requirements set out in the approved EP, at the conclusion of this meeting.

10.3.6 Environmental Inductions

In accordance with Regulation 14(5) of the OPGGS (E) Regulations each employee or contractor working on, or in connection with, the activity is aware of his or her responsibilities in relation to the EP, including during emergencies or potential emergencies. Therefore, as a minimum, all TGS employees and contractors will be required to attend a survey-specific environmental induction prior to the commencement of operations. The induction will be conducted to ensure everyone's awareness and compliance with the approved EP. This may occur prior to the project commencing or during the project as new or replacement personnel are employed. The environmental component of the induction will cover awareness and compliance aspects of the approved EP, including:

- Environmental regulatory and reporting (environmental incidents or hazards) requirements (i.e. Policy 2.1 requirements);
- Environmental sensitivities (including other marine users), heritage and conservation values within the EMBA, and the key impacts/risks associated with the Otway Basin 3D MC MSS;
- Overview of activities that have highest risk for an impact and associated response and management procedures;
- Overview of Project HSE Plan and Emergency Response Procedure;
- Roles and environmental responsibilities of key personnel onboard the vessels;
- As a minimum, the control measures and relevant EPSs, EPOs and measurement criteria, as they relate to:
- The relevant requirements of Policy Statement 2.1;
- Marine fauna likely to be in the area;
- Marine fauna sighting procedures;
- Marine fauna interaction requirements;
- Protocols for communicating and interacting with any commercial fishers in the OA;
- Waste and chemical management requirements;
- Housekeeping and spill prevention; and
- Spill preparedness and response, the SOPEP, OSMP and OPEP.
- Importance of following procedures and using JHAs to identify environmental risks and control measures;
- Roles and environmental responsibilities, including during emergencies or potential emergencies;
- Overview of what constitutes a reportable and recordable incident and internal and external reporting requirements

- HSE expectations including reporting to key personnel onboard the survey vessels
- Roles and responsibilities, triggers and processes effected under the Management of Change; and
- Workflows which have been developed to successfully implement any of the above

As summarised above, all vessel crew will be given an overview and presentation during the induction process regarding the requirements of the environmental management systems that are contractor specific as well as requirements of the EP. All crew will be required to become familiar with these systems and contractor specific requirements.

The vessel contractor will conduct their own company and vessel-specific inductions independently of the induction summarised above. This induction will include the management of HSE risks to vessel personnel that are associated with working in the offshore environment, which are not related to the implementation of the EP. Communication of HSE issues will typically be through the daily Toolbox Meetings and weekly HSE meetings.

All personnel who undertake the induction will be required to sign an attendance sheet, which is retained by the Seismic Contractor VOC. All vessel-based personnel will be required to conform to all applicable guidelines and requirements for management of HSE issues. All crew on board the vessel/s will be made aware of and will be required to become familiar with the requirements of both the contractor specific environmental management systems as well as the EP during the activity induction process.

In conjunction with the contractor specific training and awareness activities described in **Section 10.3.2** to **Section 10.3.5**, the actions required to ensure all TGS employees and contractors are suitably inducted, in accordance with the implementation strategy, are summarised in **Table 142.**

Table 142 Environmental Induction and Training and Awareness Schedule

Personnel (Attending)	Personnel (Leading)	Information covered	Timing
Vessel Master CSR	Onshore EA	All Contractors HSE Plan(s), and the Bridging Document, Environmental Induction[42]	Prior to Environmental Induction, no less than one week prior to mobilisation
SEA MFOs CSR	Onshore EA	Contractors HSE Plan(s), the Marine Fauna Management Plan, Environmental Induction	Prior to Environmental Induction, no less than one week prior to mobilisation
Vessel Master Chief Engineer Survey Vessel MFOs PAM Operators Party Chief Seismic Operator Technician(s) CSR	Onshore EA/SEA	Marine Fauna Mitigation Plan	Prior to Environmental Induction, no less than one week prior to mobilisation

[42] Information covered is as described for Environmental Inductions in **Section 10.3.6**

Personnel (Attending)	Personnel (Leading)	Information covered	Timing
All other TGS employees and contractors	Onshore EA/CSR	Environmental Induction	Prior to pre-mobilisation audit/Prior to mobilisation[43]

10.4 Review of Environmental Performance

The development of this EP resulted in various control measures, EPOs, EPSs and relevant measurement criteria to ensure the control measures are operating to reduce the impacts and risks to **ALARP** and **Acceptable Levels**. These provisions have been based on various pieces of legislation (**Section 2**) to provide a suite of control measures (**Sections 7** and **8**) that ensure the levels of environmental performance specifically defined in the EP are met.

As per Regulation 14(6) of the Environment Regulations, TGS will continue to monitor the environmental performance of the control measures during the duration of the Otway Basin 3D MC MSS to ensure that:

- The EPOs and the associated EPSs are being met. This will be done through a review process which will ensure that, where necessary, the EPSs can be amended to maintain the management of impacts and risks to the receiving environment to **ALARP** and an **Acceptable Level**, as per the EPOs contained within the EP;
- Any opportunities for improvement are identified promptly to further reduce potential impacts and risks, and any non-conformances are identified to allow appropriate corrective action to be undertaken;
- Compliance with TGS' policies, manuals and procedures;
- All required monitoring requirements have been undertaken prior to the completion of the Otway Basin 3D MC MSS; and
- Any concerns raised by relevant persons during or after completion of the Otway Basin 3D MC MSS are followed up by an appropriate liaison, as required.

The key aspects and objectives of TGS' environmental performance review process, include:

- Ensuring sufficient monitoring and recording is undertaken (**Section 10.4.1**);
- Maintenance of accurate records as required within the Environment Regulations (**Section 10.4.2);**
- Undertaking auditing to ensure the processes and systems adopted are effective (**Section 10.4.3**);
- The management of non-conformances (**Section 10.4.4**);
- The review of the EP to continuously look for ways to improve operations during the Otway Basin 3D MC MSS (**Section 10.4.5**); and
- The Management of Change, if required (**Section 10.4.6**).

Findings of the environmental performance review will be used to inform continuous improvement throughout the duration of the Otway Basin 3D MC MSS and for use in future surveys, as appropriate. Further, any such findings will be incorporated into the Environmental Performance report that TGS will submit to NOPSEMA.

[43] Applicable to all TGS employees and contractors deployed for swings subsequent to the first swing.

10.4.1 Monitoring and Recording

As required by Regulation 14(7), each vessel operating as part of the Otway Basin 3D MC MSS will prepare a daily report and carry out a weekly inspection (which will be included within the end-of-week daily report) to ensure that:

- Environmental issues and/or concerns raised through the Management of Change (**MoC**) (**Section 10.4.6**) process are communicated to TGS management and recorded for future learnings;
- Any issues arising from SOPEP testing (**Section 10.10.1**) are reported;
- Monitoring of key parameters (**Table 143**) are recorded for when a review of the approved EP is undertaken, including an evaluation of environment performance based on the potential impacts and risks associated with the Otway Basin 3D MC MSS (i.e. record of emissions and discharges, seismic operation records, waste discharges and estimates of sewerage discharges); and
- The performance of key equipment as described in the approved EP is checked at least weekly to ensure ongoing reduction of risks and impacts to **ALARP** and **Acceptable Levels**, and any potential issues (i.e. observations of poor operating condition/performance or non-conformances) are continually monitored and raised as soon as practicable.

The results will be reported in the end-of-survey EP performance report submitted to NOPSEMA (**Section 10.6.1**).

Table 143 Routine Monitoring Summary[44]

Environment Aspect/Activity	Parameter Measured	Reporting to be Maintained	Responsibility[45]
Physical presence of Seismic Vessel and towed equipment			
Negative interactions with marine fauna due to physical presence of vessels	Adherence to the EPBC Regulations 2000, Part 8, Division 8.1	Induction register Bridge logs. Sighting reports Daily and weekly MFO reports. Daily and weekly PAM reports	Vessel Master MFOs PAM Operator
	Marine fauna ship strike or entanglement incidents	Spatial files of environmental sensitivities Incident report of location, time, type of marine fauna, expected injury. Bridge logs. Daily and weekly MFO reports. Daily and weekly PAM reports DoEE Ship Strike Database.	Vessel Master SEA MFOs PAM Operator
	Adherence to Navigation Act 2012	Bridge logs	Vessel Master

[44] Monitoring of key parameters identified within the OPEP are not considered herein. Instead, these are described in **Section10.10.**

[45] Note that the allocation of responsibilities *specific to the reporting component* of a control measure, may vary from the total suite of personnel responsible for ensuring a given control measure is undertaken. Where additional personnel are cited against a given control and EPS, they have been identified as being required to co-operate and communicate as a component of, or oversee, the execution of the control measure.

Environment Aspect/Activity	Parameter Measured	Reporting to be Maintained	Responsibility[45]
Interactions with other marine users	Communications relating to concurrent at-sea activities	Consultation log 48-hour look-ahead's Notice to Mariners	TGS VOM
	Incident or near miss involving the Seismic Vessel and other marine users	Bridge logs Incident report of location, time, and description of near miss. Report provided to AMSA on any incidents/near misses that threaten the safety of the Seismic Vessel and/or requires remedial action by the Support Vessel. Vessel track records	TGS VOM
Acoustic disturbance to the marine environment			
Impacts to marine fauna through acoustic disturbance	Adherence to Policy Statement 2.1	Compliance and sighting reports as per Policy Statement 2.1 Part A.4 Daily and weekly MFO reports. Daily and weekly PAM reports Whale Observation Report Bridge logs.	MFOs SEA PAM Operator Vessel Master
	Crew training	Induction records/register Audit records	CSR
	Application of Marine Fauna Mitigation Plan	Daily and weekly MFO reports	MFOs
	Spatial and temporal restrictions on acoustic release	Shape files of environmental sensitivities, AA and OA are up to date and accessible Bridge logs Daily and weekly MFO reports digital record of vessel movements, such as via AIS.	CSR Vessel Master MFOs
	Survey restrictions including maximum acoustic source size and acquisition area per year	Bridge logs.	SEA Vessel Master
Routine permissible waste discharges			
Liquid waste discharges	Adherence to MARPOL	Bridge logs Engineers log Maintenance logs confirm equipment/machinery functioned correctly.	Vessel Master Chief Engineer
Oily water discharges	The volume of oily water discharge from the seismic vessel.	Oil usage management electronic records	Vessel Master
Food waste	The volume of food-scraps discharged from the seismic vessel	Waste management electronic records	Vessel Master

Environment Aspect/Activity	Parameter Measured	Reporting to be Maintained	Responsibility[45]
Sewage/grey water discharge	The volume of sewage and grey water discharged from the seismic vessel	Engineers log	Vessel Master Chief Engineer
Atmospheric emissions			
Refuelling	MDO volume	Bridge logs will record the day of bunkering and provide sufficient detail to confirm the bunker note. Bunker note Fuel data sheet Refuelling checklist is completed	Vessel Master
Minimisation of atmospheric emissions	MDO usage	Bunkering records	Vessel Master Seismic Contractor VOC
No deliberate discharge of ODS	ODS discharges	ODS Record Book confirms no deliberate discharge of ODS.	SEA
Incineration of approved substances	Substances incinerated	Incineration Log confirms only wastes approved by the Garbage Management Plan is incinerated and at a distance greater than 12 NM from shore.	SEA
Artificial light emissions			
Light generation from Seismic Vessel	Directional lighting and minimisation of unnecessary lighting	Pre-mobilisation audit records Induction records/register Bridge logs	Vessel Master CSR
	Separation distances from shore maintained	Bridge logs Digital records, such as vessel track records and AIS tracking, showing separation distance of at least 3 NM from shore maintained.	Vessel Master
Invasive marine species			
Introduction of invasive marine species	Ballast water exchange	Pre-mobilisation audit records Ballast Water Logbook detailing all ballast water exchanges, in accordance with Ballast Water Management Plan. Ballast Water Record System	Vessel Master Seismic Contractor VOC
	Vessel hull biofouling	Biofouling Risk Assessment Report. Biofouling Record Book. Incident record form for any sighting or suspicion of any IMS on vessel(s), in niche areas, and in ports/harbours.	Seismic Contractor VOC SEA

Environment Aspect/Activity	Parameter Measured	Reporting to be Maintained	Responsibility[45]
Streamer Loss			
Physical damage to benthic environment from physical impact/loss of streamer	Utilisation of solid streamers, integration of self-recovery devices and recording real-time positioning of the streamers	Incident report/record shows the loss of the streamer and if the equipment is successfully retrieved.	Seismic Contractor VOC Vessel Master
	Location, equipment type, duration of incident and response option taken	Incident report outlining details of equipment loss.	Seismic Contractor VOC Vessel Master
Vessel Collision and Associated Hydrocarbon Spill			
Vessel collision	Location, volume, duration, type of spill and response option taken	Incident report outlining details of incident. AMSA Report Notification. NOPSEMA Reports. POLREP.	Vessel Master
	Communications with relevant persons	Consultation log Notice to Mariners Daily look-aheads	TGS VOM
	Survey restrictions including temporal and spatial restrictions	Shape files of environmental sensitivities, AA and OA are up to date and accessible Bridge logs	SEA Vessel Master
Vessel refuelling	Refuelling operations	Bridge logs will record the day of bunkering and provide sufficient detail to confirm the bunker note. Bunker note Fuel data sheet Refuelling checklist is completed	Vessel Master TGS VOM
	Survey restrictions including temporal and spatial restrictions	Shape files of environmental sensitivities, AA and OA are up to date and accessible Bridge logs	SEA Vessel Master
Hydrocarbon Spill Response			
Secondary impacts from response options	Implementation of response options	Vessel incident report outlining ‘first-strike’ response options undertaken. NEBA Report.	Vessel Master Onshore EA
Accidental Release of Hazardous and Non-Hazardous Materials			
Hazardous and non-hazardous solid waste management	Solid waste generation	Garbage Record Book Safety Data Sheets Waste Transfer Certificate issued by licensed facility of carrier for onshore transfers.	Vessel Master

Environment Aspect/Activity	Parameter Measured	Reporting to be Maintained	Responsibility[45]
Accidental release of hazardous and/or non-hazardous material	Location, volume, and duration of incident, and response option taken	Vessel incident report detailing the release. Notice to Mariners lodged for objects unable to be found/retrieved.	Seismic Contractor VOC Vessel Master

10.4.2 Record Management

The collection of records against the project-specific measurement criteria will form part of the permanent record of compliance maintained by TGS.

As required by Regulations 27 and 28 of the Environment Regulations, TGS will maintain all documents and reports relevant to the Otway Basin 3D MC MSS for a minimum of five years following the completion of the survey. Records will be made available upon request. Documents and reports to be kept by TGS are summarised in **Table 144.**

Table 144 Records Obtained or Utilised in Fulfilment of the Otway Basin 3D MC MSS to be Maintained by TGS

Environmental Management Aspect	Record to be maintained
General	The Otway Basin 3D MC MSS EP and associated documents, including any reviews or revisions
	Vessel certification
	Pre-mobilisation checklist
	Training and awareness and induction materials
	Training, competency, and awareness checklist
	Environmental induction records/register
	All Contractors HSE Plans
	Audit records
	Relevant persons consultation documentation and logs, complaints register
	48-hour look-aheads
	Notice to Mariners
	SIMOPS Plan (where required)
	Bridge logs
	Vessel track records
	Records of emergency/oil spill response exercise
	Records of reportable and recordable incidents and written incident notifications and investigation record
	NEBA Report (where required)
	EP Change Register

Environmental Management Aspect	Record to be maintained
	Environmental Performance Report
	Environmental Compliance Register
	Annual Report
	End-of-survey EP performance report
	End of survey closeout report
Marine Fauna Mitigations	CVs of MFOs and PAM Operators
	Marine Fauna Mitigation Plan
	Marine fauna sighting reports
	MFO daily and weekly logs
	PAM daily and weekly logs
Routine permissible discharges	Discharge logs
	Incineration logs
	ISPP certificate
	IOPP certificate
	IAPP certificate
	Maintenance logs
Atmospheric emissions	ODS Record Book
	Ship Energy Efficiency Management Plan
Invasive marine species management	Ballast Water Management Certificate
	Ballast Water Management Plan
	Ballast Water Record System
	Ballast Water Logbook
	Biosecurity Status Document
	Biosecurity Clearance document
	International Anti fouling certificate
	Biofouling Risk Assessment Report
	Biofouling Record Book
Oil usage management	Fuel Data Sheets
	Bunker notes
	Oil usage records
	Refuelling checklist
Hazardous and non-hazardous materials management	Garbage Management Plan
	Garbage Record Book
	Waste Transfer Certificate (where required)
	SDSs for any hazardous chemicals onboard

All records will be stored in a way that makes their retrieval for reference practicable. In accordance with regulation 28(2), TGS will make available any copies of records mentioned above, following a request in writing by:

- NOPSEMA;
- A delegate of the responsible Commonwealth Minister; and
- A greenhouse gas project inspector or a petroleum project inspector.

The copies of the records will be made available:

- In the case of an emergency relating to an activity – as soon as possible at any time of the day or night during the emergency; and
- In any other case – during normal business hours in the place where the records are kept.

Copies of records will be made available at the place where the records are kept, or if agreed between TGS and the person making the request (or the person's agent), at any other place (including by means of electronic transmission to the person or agent at that place). If the records are stored on a computer, the records will be made available in print-out form or, if TGS and the Regulator so agree, in electronic form.

10.4.3 Compliance Audits, Reviews and Inspections

TGS will undertake compliance audits and reviews consistent with TGS' Audit and Review Process Procedure (HSE-SEP-024). In addition, an ECR will document all EPSs and EPOs and will serve as an auditing tool for compliance monitoring and include a pre-mobilisation checklist. The ECR will document the following:

- The EPOs, EPSs and Measurement Criteria relevant to the Otway Basin 3D MC MSS as set out in the EP;
- The person/party responsible for implementing the performance standard to meet the EPO;
- Whether there is evidence the Otway Basin 3D MC MSS has complied with the relevant EPSs; and
- A brief description of this evaluation based on supporting information such as routine monitoring records, audit records, checklists, and certificates.

The ECR will be updated to reflect new obligations as, and when, they emerge, in accordance with the Management of Change process (**Section 10.4.6**).

TGS will undertake audits at planned intervals and if a 'sub-audit' is triggered (see **Table 145**). These audits are principally intended to support early detection of any non-compliances.

Prior to the commencement of the Otway Basin 3D MC MSS, the survey vessels and equipment will be subject to a pre-mobilisation audit and inspection, to ensure that they are fit for purpose, appropriately maintained, and to ensure compliance with the control measures outlined in the EP. The pre-mobilisation audit will comprise the following processes:

- A pre-mobilisation audit addressing pre-survey planning, preparedness for compliance with regulatory requirements, requirements defined within the EP (including the implementation strategy), operational considerations, and on-board preparedness. This audit will incorporate the training and awareness activities, responsibilities of those onboard the vessel, and environmental induction. Any corrective actions required will be implemented and recorded;
- An audit of the on-board spill response capability against the vessel SOPEP to verify spill preparedness; and

- A pre-mobilisation inspection of all vessels involved with the Otway Basin 3D MC MSS to ensure they are all compliant with the commitments that have been stipulated within the EP.

TGS will conduct a weekly HSE inspection and, using the ECR will include an assessment of compliance with the EPSs, will conduct a mid-survey audit. In both cases, these will assess whether:

- Compliance with the requirements detailed in this EP is being achieved;
- EPOs and EPSs are being monitored, measured and evaluated to ensure impacts and risks remain **ALARP** and at **Acceptable Levels**;
- Emissions and discharges are being monitored, measured and documented as required; and
- Management strategies, procedures, workflows and tools outlined within the implementation strategy are in place and being implemented effectively.

A post campaign review will be undertaken upon completion of seismic activities to review compliance against relevant EPOs and EPSs, using the ECR, and the requirements of the EP.

Throughout the duration of the Otway Basin 3D MC MSS, smaller 'sub-audits' of the contents of the EP will be carried out, as appropriate. Sub-audits will focus on the particular sections of the EP relating to the sub-audit 'trigger' and will include ensuring the EPOs, EPSs and the measurement criteria are being implemented and reviewed to keep impacts and risks to **ALARP** and **Acceptable Levels**. The triggers for a sub-audit and the relevant sections of the EP that will be the target of each sub-audit are provided in **Table 145**, and are summarised below:

- If a marine fauna instigated shut-down occurs[46]
- An adaptive management measure is implemented;
- A reportable incident occurs;
- A recordable incident occurs or non-conformance is identified;
- There is a suspected IMS incursion identified;
- An unplanned event, as identified throughout **Section 8** occurs**;**
- A person/group/organisation contacts or approaches TGS who has not previously been identified or considered as a relevant person (e.g. are self-identified or have been nominally identified by another relevant person);
- Any requirements for revision of the EP are triggered (**Section 10.4.5**);
- The MoC process is triggered (**Section 10.4.6**); and
- As directed by NOPSEMA.

[46] Given the relative frequency with which these may occur, a maximum of one sub-audit per week will occur in response to a marine fauna instigated shut-down

Table 145 Relevant Sections to be Audited during Sub-Audits

Sub-Audit	Relevant sections within EP to be audited
Occurrence of a marine fauna instigated shut-downs.	**Section 7.2, Table 84,** and **Table 87**. Provisions within **Section 10** pertaining to impact and risk management for marine fauna.
Adaptive management measure is implemented.	**Section 7.2, Table 84,** and **Table 87**. Provisions within **Section 10** pertaining to impact and risk management for marine fauna.
Occurrence of a reportable incident.	Relevant sections within **Section 7** and **Section 8** pertaining to the nature of the reportable incident. Control measures, EPSs, and EPOs are to be audited as appropriate. **Section 10**.
Occurrence of a recordable incident or identification of a non-conformance.	Relevant sections within **Section 7** and **Section 8** pertaining to the nature of the non-conformance. Control measures, EPSs, and EPOs are to be audited as appropriate. **Section 10**.
Identification of a suspected IMS incursion.	Section **8.1**, **Table 107** and **Table 109.**
Occurrence of an unplanned event.	Sections **8.1** to **8.5** and associated control measures, EPSs, and EPOs, as relevant to the nature of the unplanned event. **Section 10**.
Identification of a person/group/organisation who has not previously been identified or considered as a relevant person.	Search for new/unidentified relevant persons to be conducted as per the methodology provided within **Section 5**. Relevance of the newly identified relevant person and their claims to be assessed against the requirements provided within **Section 5** and consultation register to be updated as appropriate. Audit to be completed on relevant activities, control measures, EPSs, and EPOs pertaining to the claim made by newly identified relevant persons.
Any requirements for revision of the EP are triggered.	Sections within EP as appropriate to the required revision. Provisions within **Section 10**.
The MoC process is triggered.	Sections within EP as appropriate. Provisions within **Section 10**.
As directed by NOPSEMA.	All sections, control measures, EPSs, and EPOs, as relevant to the nature of the NOPSEMA request.

Non-compliance identified through this auditing process will follow the management of non-conformance process outlined within **Section 10.4.5**. Findings and recommendations obtained through the auditing process will be distributed to the relevant parties in order to undertake the appropriate actions.

Lessons learnt from the environmental compliance audit will be included in the Environmental Performance Report submitted to NOPSEMA (**Section 10.6.1**).

10.4.4 Management of Non-Conformances

Non-conformances and opportunities for improvement may be identified by any crew member during routine observations, during monitoring, an inspection or audit, or as a consequence of an unplanned activity. Crew are required to report any non-conformance they identify.

Any non-conformance with an EPO, EPS that is defined within this EP will be considered as an (recordable) environmental incident (**Section 10.6.3.2**).

Following identification of a non-conformance, remedial actions will be required in order to resolve the issue and to prevent recurrence. All relevant persons will be notified, and follow-up actions will be communicated to all relevant crew and affected parties. Any corrective actions will be tracked and monitored to completion in the ECR.

An internal risk assessment will be undertaken in response to any non-conformances identified, to determine whether any changes are required to operational procedures to ensure any impacts and risks are maintained or reduced to **ALARP** and **Acceptable Levels**. Investigations will include the Party Chief, Vessel Master, SEA, Seismic Contractor VOC and Onshore EA. Any corrective actions required as a result of the non-conformance, will be commensurate with the magnitude of the resulting impacts and risks. Should a change be identified during this risk assessment process, the MoC process will be affected as detailed in **Section 10.4.5**.

All non-conformances/incidents and remedial actions taken will be recorded by the Onboard TGS QC and QHSE Representative, entered into the ECR, and included in the Post-Survey Review Report (**Section 10.6.1**). Continuous improvement and prevention of further non-conformances will be achieved by communicating the identification and management of non-conformances during weekly Safety Meetings and daily Toolbox Meetings, as outlined in **Section 10.2.1**.

TGS will carry forward non-conformances identified during the Otway Basin 3D MC MSS for consideration in future seismic surveys to assist with continuous improvement in environmental management controls and performance outcomes.

10.4.5 Environment Plan Revision and Improvement

TGS will continuously look for ways to improve operations during the Otway Basin 3D MC MSS. Regulation 17 of the Environment Regulations requires the resubmission of the EP to NOPSEMA in the event of a change or proposed change to circumstances or operations. The following criteria will trigger this requirement:

- Any significant modification or new stage of the Otway Basin 3D MC MSS that is not provided for in the EP currently in force;
- The occurrence of any significant new environmental impact or risk, or significant increase in an existing environmental impact or risk that is not provided for in the EP;
- The occurrence of a series of new environmental impacts or risks, or a series of increases in existing environmental impacts or risks, which, taken together, amount to the occurrence of a significant new environmental impact or risk, or a significant increase in an existing environmental impact or risk that is not provided for in the EP;
- Identification of recent scientific publications that may have an influence on the risk assessment and increase the environmental risk of the Otway Basin 3D MC MSS;

- Identification of any changes to the biological (including the presence of threatened species not already considered under the EP), physical, and socio-economic environment which may have an influence on the risk assessment and increase the environmental risk of the survey;
- The existing suite of control measures are no longer considered suitable to reduce the environmental risk of the survey to **ALARP** and **Acceptable Levels**;
- During operations the number of sightings and/or power-downs of whales are higher than anticipated (i.e three or more shut-downs in the preceding 48 hours for BW/PBW or SRW, or three or more within the preceding 24-hours for 'other whales) during the planning of the Otway Basin 3D MC MSS; and/or
- As requested by NOPSEMA.

In the event of an incident or non-compliance, TGS will review and audit the EP and implemented control measures to identify any potential shortfalls which may exist, any additional mitigation/control measures that could be implemented to prevent such an occurrence from arising again, and to further investigate the cause of the non-compliance.

10.4.6 Management of Change

The MoC procedure outlined in this EP, and which will be implemented for the Otway Basin 3D MC MSS, is consistent with TGS' Management of Change Procedure (HSE-SOP-025). The purpose of Management of Change Procedure is to identify situations in which the MoC process should be used and to describe how the process is conducted, implemented, and closed out.

Overall, the Management of Change procedure applies to any changes to the methods, personnel, facilities, or equipment which may invalidate any control document, including this EP. Other control documents include the HSE-MS, Project HSE Plans, Contracts with Clients and Contractors. The MoC process is invoked to ensure that changes are beneficial and safe. The MoC procedure is utilised when there is a change to the proposed activity, or in the circumstances under which it is being undertaken, which may have the potential to increase or change the level of impact or risk of the Otway Basin 3D MC MSS that is not currently detailed within an accepted EP. MoC is a transparent process used for the identification, assessment, control and documentation of any such change. This process ensures that changes to TGS, personnel, systems and procedures, and equipment are identified and managed so that HSE and environmental risks arising from the change remain **ALARP** and at an **Acceptable Level**. Not all changes require a MoC review, and each change will be assessed on a case-by-case basis.

All MoC is documented using the Management if Change Record Form (HSE-FRM-025-A1). Once completed, this form must be appended to the EP, within an EP Addendum.

10.4.6.1 Triggers for Management of Change

Three regulations under the Environment Regulations require changes to be assessed and managed; these include:

- Regulation 7 – Operations must comply with the accepted EP. This requires that titleholders do not undertake an activity in a way that is contrary to the EP that is in force for that activity. This means that any changes to the Otway Basin 3D MC MSS, or the conditions under which it is being enacted, must be assessed for potential divergence from the accepted EP and possible increase in the environmental impact or risk profile;

- Regulation 8 – Operations must not continue if new or increased environmental risk is identified. This makes it an offence for the titleholder to undertake an activity after the occurrence of any significant new environmental impact or risk arising from the Otway Basin 3D MC MSS; or any significant increase in an existing environmental impact or risk arising from the Otway Basin 3D MC MSS; and the new impact or risk, or increase in the impact or risk, is not provided for in the EP in force for the Otway Basin 3D MC MSS; and
- Regulation 17 – Revision because of a change, or proposed change, of circumstances or operations. This requires a titleholder to submit a proposed revision of the EP for an activity to the Regulator, before the commencement of a new activity, any significant modification or new stage of the activity not provided for in the EP currently in force, including:
- The occurrence of any significant new environmental impact or risk, or significant increase in an existing environmental impact or risk, not provided for in the EP in force;
- Changes in knowledge of environmental impacts, environmental risks or legislative requirements that may arise from (but not limited to) new or revised publications regarding matters of national environmental significance, new knowledge about the existing environment or the effects of the titleholder's activity, information provided by stakeholders, changes in legislation; or
- The occurrence of a series of new environmental impacts or risks, or a series of increases in existing environmental impacts or risks, which, taken together, amount to the occurrence of a significant new environmental impact or risk, or a significant increase in an existing environmental impact or risk, that is not provided for in the approved EP for the Otway Basin 3D MC MSS.

Additionally, change is to be managed in accordance with the Environment Alert issued by NOPSEMA on 30 March 2016. This alert was a result of NOPSEMA inspections which found that titleholders managed change through partial or simplistic environmental assessments which differ to the assessments undertaken during the EP process. A request was made as part of this alert for better consideration of changes and a more robust procedure that is in accordance with the procedures for impact and risk assessment within an accepted EP, to confirm that these impacts and risks are ALARP and at an Acceptable Level throughout the life of the EP

The 2016 Environment Alert issued by NOPSEMA contained a number of deficiencies that were identified in managing change through the implementation of EPs. Specifically, the following points are relevant to the proposed Otway Basin 3D MC MSS which will be regularly considered under this MoC process prior to, and during, the Otway Basin 3D MC MSS:

- Extending the duration of a Seismic Survey;
- Consideration of a series of increases, or new, impacts and/or risks, arising from changes to the Otway Basin 3D MC MSS over time which additively creates a significant increase in impacts or risk;
- Alteration or removal of an environmental performance standard in the accepted EP, including changes to the wording which may materially degrade or diminish the level of performance;
- Reporting of breaches to environmental performance standards after realising that the standard does not, or cannot, monitor the level of performance set in the EP; and
- Discharges to the marine environment are greater than predicted in the EP.

If any of the following types of changes are identified, the MoC process will be implemented:

- A change in titleholder;

- Identification of new impacts or risks, such as a relevant person raises a new issue or concern prior to, or during, the implementation of the EP;
- There is an increase in impact or risk, such as if the acoustic source volume is required to be increased to improve quality of imagery;
- A new stage of the Otway Basin 3D MC MSS is required, e.g. if a significant extension of timeline is required to complete the acquisition;
- Reduced ability to effectively implement the EP to meet its stated environmental performance standards, such as if an MFO is taken ill and demobilised;
- Any incremental change in the Otway Basin 3D MC MSS increasing the risk of significant impact;
- There is a change to QHSE policies, procedures, and legislation;
- There is a change to personnel and organisational changes; and
- Findings from incident investigations indicate the existing implementation strategy, including associated workflows and tools, do not, or cannot, support the level of performance set in the accepted EP.

External changes will also be monitored for a potential trigger for a MoC process, such as:

- New hazards or risks such as gazetting of a new marine park;
- NOPSEMA website listing of a new third party EP including increased petroleum exploration in the region with potential for increased cumulative risks or simultaneous activities in the area that may impact TGS or be impacted by TGS' activities;
- Legislative changes or government documents, such as changes to management plans, species recovery plans, or conservation advice releases;
- New publications, research, or guidelines; and
- External audits, inspections and investigations.

TGS will undertake monthly reviews of the currency of the list of relevant persons and may initiate MoC if new relevant persons are identified and/or new issues which have potential to increase the risk of interference with their functions, activities or interests are determined. A review of potentially new or previously unidentified relevant persons may also be initiated at any time, in the event that TGS is approached, contacted by, or made aware of a person/group/organisation (via self-identification or identified by other relevant persons) that had not previously been identified as a relevant person for the purpose of this EP. TGS will undertake an assessment of any newly identified person/group/organisation to determine if they have functions, activities or interests relevant to the Otway Basin 3D MC MSS, and assess the merit of their claim as a relevant person as per the methodology provided in **Section 5** of the EP. This review will ensure that the impacts and risks of the Otway Basin 3D MC MSS remain **ALARP** and at an **Acceptable Level**.

Likewise, should any revision of the EP be made, TGS will undertake further consultation with relevant persons to inform them of any changes to the Otway Basin 3D MC MSS that may affect their functions, activities, and interests.

Monitoring for potential external triggers of change will be conducted via subscriptions to relevant government websites, journals, and advice, as well as through the continuing consultation process.

10.4.6.2 Originator of Management of Change

All personnel involved with the Otway Basin 3D MC MSS, including vessel crew and TGS staff managing the survey, are required to exercise vigilance and identify any potential changes to the Otway Basin 3D MC MSS which have the potential for changing the impact and/or risk profile, or which may cause deviation from the EP.

All personnel in charge of work functions will be required to report any changes within their area of work. For example, the Vessel Master will be required to report changes to the functionality of pollution control equipment on the vessel as they become aware of such changes. Potential MoC triggers shall be reported immediately to the SEA and CSR.

Responsibilities for reporting MoC triggers will be reinforced to all personnel during the environmental induction process.

10.4.6.3 Management of Change Process

If potential changes to the Otway Basin 3D MC MSS activity are identified which trigger a MoC as identified above, the following steps will be initiated and documented:

- If the trigger identified impacts the current work activity, stop the activity that is impacted;
- Establish a risk assessment team and advise the CSR and SEA;
- Alert the risk assessment team (**Section 10.4.5**);
- Assess the need for TGS to implement a MoC;
- Initiate a risk and impact assessment by Onshore EA, using the same procedures as outlined in **Section 6** of this EP. This process will determine if the increase in risk is significant and would therefore trigger a requirement to revise and resubmit the EP under Regulation 17 of the Environment Regulations. The EP change register will document the assessment timing and its findings and summarise any changes to the EP which are required to manage risks and impacts to **ALARP** and to an **Acceptable Level**;
- If resubmission of the EP is required, the work or the new activity is to be suspended until the revised EP is accepted by NOPSEMA;
- Evaluate the level of HSE risk resulting from the change, in accordance with TGS' Standard Operating Procedure for Risk Management (HSE-SOP-010) to determine the impact on existing critical safety items and devices, or requirements for new ones, on existing documentation, training requirements and identify any special precautions required to maintain safe operations during implementation of the change;
- Develop any additional controls required to reduce risks and impacts to **ALARP** and to an **Acceptable Level**;
- Assign responsibilities for any additional or amended controls, EPSs and measurement criteria required;
- Additional or amended controls, EPSs and measurement criteria will only be applied where the risk and impact assessment determine they demonstrably enhance or improve performance;
- Further consultation with relevant persons will occur if any changes may affect their activities/interests or the risk profile of their activity. Further consultation will give consideration to previous feedback discussed throughout **Section 5** and **Appendix K**;
- Document that Management of Change process using the Management of Change Record Form (HSE-FRM-025-A1);

- Develop an EP Addendum which documents the following:
- The MoC process followed;
- The risk and impact assessment process undertaken;
- Rationale for conclusions on residual risk;
- Relevant person consultation and any feedback received;
- Details on any additional controls to be implemented to manage the impacts and risks;
- Demonstration of **ALARP** and justification for acceptability;
- Revised EPSs, measurement criteria, control measures and any associated revisions to the responsibilities for each;
- Details on how the implementation of the change was managed, including through communication and to ensure training, competency and awareness;
- Confirmation that all sections of EP have been checked to ensure any potential deviations from the accepted plan have been captured and addressed; and
- Append the Management of Change Record to the EP Addendum

10.4.6.4 Approver of Management of Change Outcomes

If a resubmission and approval from NOPSEMA is not required under Regulation 17 resubmission (and hence approval from NOPSEMA), any work on new or modified activities will only commence on the authority of the TGS VOM.

10.5 Support Vessel Operations

At least one Support Vessel (i.e., support, chase, or supply vessel) will be present in close proximity to the Seismic Vessel for the duration of the Otway Basin 3D MC MSS; this vessel is referred to as the Attending Support Vessel in this EP. The primary role of the Support Vessel is to manage any possible interactions between the Seismic Vessel and the seismic array (i.e. acoustic source and streamer) with any other vessels or maritime activities occurring in the area. The Support Vessel/s will assist with informing any other vessels in the path of the approaching Seismic Vessel that cannot be raised on VHF radio or any other means. In addition, the Attending Support Vessel will also be utilised as an additional platform for MFOs. The Attending Support Vessel will have two dedicated and trained MFOs onboard to support the MFO efforts from the Seismic Vessel.

While the presence of the Support Vessel/s in the OA does pose additional risk to marine mammals in the area, the Vessel Master of these vessels will be operating in accordance with the EPBC Regulations Part 8, Division 8.1 in regards to the minimum approach distances and vessel speed for “other craft” and follow the prescribed actions when adult cetaceans and/or calves are present within the caution zone (defined by these regulations as a 150 m radius around a dolphin, and 300 m radius around a whale).

The following procedures will be implemented onboard the Support Vessel/s:

Communications:

- The Support Vessel/s will be in close contact with the Seismic Vessel on VHF radio at all times to ensure clear communications are maintained;

- The Support Vessel/s will be able to receive and transmit communications via VHF radio at all times with all maritime traffic in the area; and
- The MFOs on the Support Vessel/s will maintain direct communication with the MFOs and PAM Operators onboard the Seismic Vessel at all times throughout their observational shift.

Maintenance of distance to Seismic Vessel:

- The Support Vessel/s will be present around the Seismic Vessel at all times unless an intervention with another marine user is necessary;
- In the case that the Support Vessel/s is unable to maintain such a presence (e.g. it is undertaking intervention actions), the Masters of the survey vessels will maintain radio contact;
- The Attending Support Vessel will have an MFO on watch during daylight hours observing for marine mammals;
- The Support Vessel will travel as far as practicable ahead of the Seismic Vessel (Defined as an 180° arc ahead of the Seismic Vessel) and will conduct visual surveillance for marine mammals during daylight hours; and
- The Support Vessel/s will be equipped with radar, ARPA and AIS, allowing the exact position and distance between the survey vessels to be continuously monitored.

Use of the Attending Support Vessel as a secondary observational platform for marine mammals:

- Two trained and experienced MFOs will be on the Attending Support Vessel to provide additional visual observational capabilities for the duration of the Otway Basin 3D MC MSS;
- The on-duty MFO will be stationed on the bridge of the Attending Support Vessel during daylight hours to assist the Seismic Vessel detect marine mammals;
- If the MFOs on the Attending Support Vessel observe a marine mammal, the lead MFO on the Seismic Vessel will be notified immediately;
- The MFOs on the Attending Support Vessel will have the same roles and responsibilities as those on the Seismic Vessel, including the full authority to direct control measures such as shut-down of the acoustic source if a whale is observed within a relevant Shut-down Zone; and
- After the Seismic Vessel has been notified by the Attending Support Vessel of a shut-down/power-down requirement, the appropriate control measure will be implemented immediately by the Seismic Vessel (including any required adaptive management procedure, see **Section 7.2.2.3.6**).

10.6 Reporting

The Environment Regulations requires a number of notifications for starting and ending an activity, and ending of an EP. TGS will comply with these notification requirements, as per the below:

- Start of Activity Notification – At least 10 days before the commencement of the Otway Basin 3D MC MSS, TGS must provide written notification to NOPSEMA of the date of intention to commence the activities approved under the EP;
- End of Activity Notification - At least 10 days following the completion of the Otway Basin 3D MC MSS, TGS must provide written notification to NOPSEMA of the date of the completion of the activities approved under the EP; and

- End of EP Notification – As soon as practicable on the completion of the last activity covered under the survey, TGS must provide written notification to NOPSEMA informing that all of the activities and obligations covered under the EP have been completed. Following acceptance of the notification by NOPSEMA, the EP is no longer in force.

Further pre-survey and post-survey notifications will also be provided to the relevant persons outlined within **Sections 5.5.10** and **5.5.14**.

10.6.1 Environmental Performance Reporting

Under Regulation 14(2) of the Environment Regulations, TGS are required to '*report to the Regulator in relation to the titleholder's environmental performance of the activity, and provide that the interval between reports will not be more than one year'*. Accordingly, TGS will maintain a record of the environmental performance of the Otway Basin 3D MC MSS in relation to the EPOs, EPSs, measurement criteria and implementation strategy. This record will be documented in the form of an ECR.

A detailed report on the environmental performance ('Environmental Performance Report'), including the ECR, will be submitted to NOPSEMA for assessment within two months of survey completion or annually from the date of EP acceptance, whichever occurs first. The report and associated ECR will be retained by TGS for a period of five years and will be made available as stated in **Section 10.4.2.**

Regulation 26(c) requires submission of a report to the regulator '*in relation to the titleholder's environmental performance for the activity, at intervals provided for in the EP'*. The Annual Report will be submitted to satisfy this requirement.

The Post-Survey Review Report/Annual Report will include the following:

- A review of routine activities and incident records, including:
- Whale sighting records, and any other interactions with whales requiring start-up delays;
- Records of any interaction between marine fauna and vessels of towed equipment used during the survey; and
- Records of any unplanned activities, such as accidental discharges of hazardous and non-hazardous substances, vessel collisions or negative interactions with commercial operators in the Otway Basin (fishing, shipping etc.);
- An assessment of compliance with requirements set out in the EP (i.e. compliance with the EPOs and EPSs);
- An assessment of compliance with the TGS HSE MS; and
- A review of all recordable and reportable incidents.

10.6.2 Marine Fauna Reporting

As required by Policy Statement 2.1, a report on all whale interactions will be provided to the DoCCEEW within two months of survey completion. In addition, given the other sensitivities in the area, this report will also include any interactions with other marine fauna such as marine turtles, pinnipeds, and aggregations of southern bluefin tuna. The report will contain the following information as a minimum:

- The location, date and start time of the survey;
- Name, qualifications and experience of any MFOs (or research scientists) involved in the survey;

- The location, times and reasons when observations were hampered by poor visibility or high winds;
- The location and time of any start-up delays, shut-downs or stop work procedures instigated as a result of whale or turtle sightings;
- The location, time and distance of any whale, pinniped, marine turtle and southern bluefin tuna aggregation sighting including species, where possible;
- Details of any incidents (reportable and recordable) and non-conformances; and
- The date and time of survey completion.

The following additional information may also be collected for all marine mammals, during the Otway Basin 3D MC MSS:

- The location, time and distance of any marine mammal sighting including species where possible;
- Method of detection (visual or PAM);
- Observation platform;
- Water depth at time of each whale sighting;
- Sea condition (Beaufort scale) at time of each marine mammal sighting;
- Number of animals involved in each marine mammal sighting (total);
- Number of juveniles involved in each marine mammal sighting (if present);
- Description of behaviour for each marine mammal sighting;
- Description of any injuries, mortality, entanglement or other interactions;
- Distance from acoustic source at first sighting;
- Closest subsequent distance to acoustic source;
- Behaviour at first sighting (travelling, feeding, milling etc.); and
- Subsequent behaviours (avoidance, attraction and other changes in behaviour).

Cetacean sightings will be recorded using the 'Cetacean Sightings Application' software as outlined in Policy Statement 2.1. Upon completion of the survey the information entered into this application will be exported as a text file and emailed to sightingsdata@aad.gov.au.

10.6.3 Reportable and Recordable Incident Reporting

10.6.3.1 Reportable Incidents

Regulation 26 of the Environment Regulations requires TGS to report all 'reportable incidents' that occur in relation to the Otway Basin 3D MC MSS. Under the Environment Regulations, a reportable incident is defined as '*an incident relating to the activity that has caused, or has the potential to cause, moderate to significant environmental damage*'.

For the purpose of the Otway Basin 3D MC MSS, reportable incidents have been identified as:

- Confirmed introduction of IMS;
- Any incident involving a collision between the survey vessels and marine megafauna;
- Any incident involving the entanglement of megafauna in towed equipment;

- Any incident involving a negative interaction between other marine users (i.e. those identified in the EP) such as a collision or whereby intervention by the Support Vessel is required; and
- Any incident that results in a hydrocarbon spill of > 80 L into the surrounding marine environment.

In line with guidance provided by NOPSEMA (Notification and Reporting of Environmental Incidents Guidance Rev 4 2014), additional environmental incidents that are required to be reported to NOPSEMA, whether or not they have been classified as having the potential to cause '*moderate to significant environmental damage*' includes any impacts to Part 3 Protected Matters under the *Environment Protection and Biodiversity Conservation Act 1999*. Matters under Part 3 of the EPBC Act that are relevant to the proposed activity are:

- National Heritage places;
- Listed Threatened Species and Communities;
- Listed Migratory Species;
- Commonwealth marine areas; and
- Nationally Important Wetlands.

NOPSEMA must be provided with an oral notification (phone 1300 674 472) of any reportable incident as soon as practicable after the reportable incident, and no later than two hours after the first occurrence of the reportable incident, or after first becoming aware of a reportable incident.

Notification of the Reportable Incident must be oral and must include the following:

- All material facts and circumstances concerning the incident that TGS knows, or is able to find out with reasonable effort;
- Actions taken to avoid, or mitigate adverse impacts arising from the reportable incident; and
- Any corrective actions that were taken, or have been proposed to be taken to stop, control, or remedy the reportable incident.

Following oral notification of the reportable incident, a written record of the notification must be provided to the following as soon as practicable, but within seven days of the incident:

- NOPSEMA (via submissions@nopsema.gov.au);
- National Offshore Petroleum Titles Administrator (via resources@nopta.gov.au); and
- Department of the responsible State Minister.

Even though a Level 2 incident/Tier 2 hydrocarbon spill will require involvement from a third-party control and control agency, the overall responsibility for reporting reportable incidents in accordance with the Environment Regulations is with TGS.

10.6.3.2 Recordable Incidents

TGS will maintain a record via an ECR of breaches of an EPOs or EPSs that do not meet the definition of a reportable incident (i.e. a recordable incident). Recordable incidents occurring during the survey that have actual or potential reputational risk to TGS will also be recorded in the ECR. The reputational risk of recordable incidents will be assessed as they apply to TGS' risk assessment and performance standards.

A record detailing the incident must be provided to NOPSEMA as soon as practicable, but not later than 15 days, after the end of the calendar month. If no recordable incidents occur, a monthly 'nil incident' report is required to be submitted to NOPSEMA (via submissions@nopsema.gov.au). The monthly Recordable Incident Report must include the following:

- A record of all recordable incidents that occurred during the previous calendar month, including date of each incident;
- All material facts and circumstances concerning the incident that TGS knows, or is able to find out with reasonable effort;
- The EPS and/or EPO breached;
- Actions taken to avoid, or mitigate any adverse impacts arising from the recordable incident;
- Any corrective actions that were taken, or have been proposed to be taken to stop, control, or remedy the recordable incident; and
- Any actions that were taken, or have been proposed to be taken, to avoid a similar incident occurring in the future.

If the non-conformance is identified to be the result of a deficient performance standard which does not, or cannot, monitor the level of performance set in the EP, the MoC process and reporting will be affected as detailed in **Section 10.4.5**.

The Annual report will include a summary of all recordable incidents that occurred during the Otway Basin 3D MC MSS. Any lessons learnt during such an incident and the subsequent compliance audit, will be included in the Annual Report as well.

10.6.3.3 TGS Incident Reporting

Incidents involving people, environment, and property (including reportable and recordable incidents) during the survey will be recorded, reported and investigated to ensure continual improvement throughout the Otway Basin 3D MC MSS and future surveys is maintained. TGS will report incidents according to the requirements outlined in TGS' Incident Report and Investigation Procedure (HSE-SOP-012).

All corrective actions arising from incidents, audits and inspections are recorded and monitored until closure. Corrective and preventative actions taken to eliminate the cause of potential incidents will be commensurate with the magnitude of the environmental risks.

In line with TGS' commitment to continual improvement, environmental incidents and near misses will be shared amongst vessels (seismic and support vessels), and corrective actions will be applied to other vessels where relevant. In addition, TGS will carry forward the identified corrective/preventative actions from incidents for consideration in future seismic survey campaigns to ensure "lessons learnt" are captured and assist with continuous improvement in environmental management or to provide frequency data (i.e. likelihood determination) associated with seismic survey operation.

10.6.3.4 Incident Reporting to Other Agencies

In the event of an incident, TGS will provide appropriate reporting to external agencies in accordance with the regulatory requirements and good industry practice and as described within the EP. A summary of identified requirements for external incident reporting, timing, methods (forms) and responsible person are provided in **Table 146**.

Table 146 Summary of External Incident Reporting Requirements and Timing

<table>
<tr><th>Requirement</th><th>Timing</th><th>Contact</th><th>Responsible Person</th></tr>
<tr><td colspan="4">Recordable Incident – as defined in Section 10.6.3.2.</td></tr>
<tr><td>The monthly Recordable Incident Report must include the following:
• A record of all recordable incidents that occurred during the previous calendar month, including date of each incident;
• All material facts and circumstances concerning the incident that TGS knows, or is able to find out with reasonable effort;
• The EPS and/or EPO breached;
• Actions taken to avoid, or mitigate any adverse impacts arising from the recordable incident;
• Any corrective actions that were taken, or have been proposed to be taken to stop, control, or remedy the recordable incident; and
• Any actions that were taken, or have been proposed to be taken, to avoid a similar incident occurring in the future.
If no recordable incidents occur, a monthly ‘nil incident’ report is required.</td><td>Before the 15th day of the following calendar month.</td><td>NOPSEMA:

10.7 Regulatory Inspections

Under Part 5 of the OPGGS Act, NOPSEMA inspectors have authority to enter TGS premises, including the survey vessel/s for the purposes of undertaking monitoring or investigations against the EP. TGS will fully cooperate with NOPSEMA during such inspections.

10.8 Emergency Response

A survey specific Emergency Response Procedure (**ERP**) will be included in the Project HSE Plan, in accordance with the requirements of TGS' Emergency Preparedness and Response Procedure (HSE-SOP-401). The ERP contains instructions for medevac, fire/explosion, spill and security events, at a minimum, with further ERPs produced as circumstances dictate and as identified during project planning.

In the event of an emergency of any type, the Vessel(s) Master will assume overall onsite command and act as the Emergency Response Coordinator. All persons aboard the vessel/s will be required to act under the Emergency Response Coordinator's directions. The survey vessel(s) will maintain communications with the TGS VOM and/or other emergency services in the event of an emergency. Emergency response support can be provided by TGS, if requested by the Emergency Response Coordinator.

The survey and support vessels will have equipment onboard for responding to emergencies, including but not limited to medical equipment, firefighting equipment and oil spill equipment.

As part of the pre-mobilisation audit, TGS will initiate emergency response tests as required with the assigned personnel. This will include a desktop-based exercise to confirm on-call emergency response team contact details.

The Vessel Master will conduct a vessel SOPEP and OPEP test via a drill assessment and evaluation with recommendations for future drills. This testing will be undertaken:

- Prior to mobilisation;
- Periodically during the Seismic Survey, at a frequency of every three months;
- When response arrangements are significantly modified, following response exercises; and
- Where required by any action defined in the post-activity report.

10.9 Adverse Weather Procedures

Severe weather events have the potential to cause damage to survey vessels, equipment, risk to the health and safety of survey of personnel and unplanned discharges of hazardous materials into the marine environment.

TGS will ensure that approved vessel contractors have a procedures and controls in place that covers dangerous weather situations. TGS will ensure that the approved vessels adverse weather procedures and controls align with TGS's HSE-MS Policies and Standard Operating Procedures, prior to commencing the Otway Basin 3D MC MSS.

In addition to the severe weather procedures and controls that will be in place, TGS will subscribe to a weather monitoring service that will provide forecasts that update regularly throughout the day. This monitoring service will provide information on wind, waves/seas and currents, primarily to plan the movements and operations to occur when and where in the OA the weather is safest and operationally feasible to acquire the survey safely. The benefit of this service will provide TGS prior warning of any severe weather event forming within, or approaching, the OA.

If sustained severe weather looks to be forming within the region, the vessels may leave the OA for safer waters. Depending on the situation, the survey vessel may also retrieve the seismic equipment and in a worst-case scenario proceed to the nearest port.

10.10 Oil Pollution Emergency Plan

This section sets out the OPEP to be followed in the event of a Type 1 or Type 2 hydrocarbon spill. This is set out in accordance with Regulation 14(8AA)(d) of the OPGGS (E) Regulations (2009).

It is important to note that TGS' response arrangements do not negate the requirements for a SOPEP. Once contracting has been completed with the successful Seismic Vessel, the SOPEP for this vessel will be reviewed, tested, and incorporated into the OPEP arrangements as part of this EP.

This OPEP does not describe spills for petroleum operator infrastructure as the Otway Basin 3D MC MSS will have no interactions with offshore infrastructure, thus is out of scope for this EP.

10.10.1 Vessel Shipboard Oil Pollution Emergency Plan

MARPOL Annex I require a SOPEP to be carried on all vessels greater than 400 gross tonnes. In general, a SOPEP describes the steps to be taken:

- In the event that a hydrocarbon spill has occurred;
- If a vessel is at risk of a hydrocarbon spill occurring, and
- For notification procedures in the event of a hydrocarbon spill occurring and provides all important contact details.

The Vessel Master is the overall in charge of the SOPEP and ensuring that all crew comply with the plan.

Although Support Vessels are not required under MARPOL Annex I to have a SOPEP, TGS will require the Support Vessel, Seismic Vessel and Chase Vessel hold a SOPEP.

Each SOPEP will be specific to the vessel that holds it (i.e. separate SOPEPs will be held by the survey vessels and will contain vessel-specific details). The SOPEP will provide the following:

- A description of all actions to be taken by onboard personnel to reduce or control the discharge following a hydrocarbon spill incident;
- A detailed description of all spill response equipment held onboard the vessel including what equipment is available and its stored location;
- Detailed diagrams of the vessel, including locations of drainage systems, location of spill response equipment, and general layout of the vessel;
- An outline of the roles and responsibilities of all onboard personnel with regard to hydrocarbon spill incidents;

- A description of the procedures and contacts required for the co-ordination of hydrocarbon spill response activities with the relevant National and Local Authorities; and
- Requirements for testing of the SOPEP and associated drills.

The SOPEP also includes specific emergency procedures including steps to control discharges for bunkering spills, hull damage, grounding and stranding, fire and explosions, collisions, tank failure, sinking and vapour release.

In accordance with the control measures that will be implemented during the Otway Basin 3D MC MSS (**Section 8.3.6**) each vessel involved in the Otway Basin 3D MC MSS will have:

- An IMO certified SOPEP;
- A SOPEP drill conducted prior to the Otway Basin 3D MC MSS commencing (i.e. within three months). A SOPEP drill is normally every three months; however, due to the proposed duration of the Otway Basin 3D MC MSS, with this measure in place a SOPEP drill will be performed at least once during the Otway Basin 3D MC MSS;
- The spill kits will be kept fully stocked (to vessel class requirements) and any items will be replaced if they are used; and
- In the event of a hydrocarbon spill, the Vessel Master will implement available controls and resources of the SOPEP.

10.10.2 Statutory Plans

10.10.2.1Commonwealth Waters

If an oil spill occurs within Commonwealth waters the National Plan will apply and integrates with the relevant State response plans (discussed in **Section 10.10.2.2**). Initial actions would be undertaken immediately by the Vessel Master, with any further actions determined following immediate contact with AMSA.

The National Plan integrates the response from both the Commonwealth and relevant State Governments to ensure an effective response to marine pollution incidents. The National Plan provides for AMSA to be the Controlling Authority when responding to a spill event who works closely with the relevant State Governments, emergency services and industry to ensure a robust response capability.

10.10.2.2State Waters

Should a spill occur during the Otway Basin 3D MC MSS which originates within, or is likely to move into, State waters, the relevant statutory plans are as follows (depending on the location and trajectory of the spill):

- The VIC state plan is the Transport Safety Victoria (**TSV**) (transport safety regulator for VIC) Victorian State Emergency Management Plan[47] (**SEMP**). The Maritime Safety Victoria (**MSV**) unit is the Controlling Authority.
- The TAS state plan is the Tasmanian Marine Oil and Chemical Spill Contingency Plan- (**TasPlan**)[48]. The EPA Tasmania (**TAS EPA**) is the Controlling Authority for TAS waters.

[47] https://www.emv.vic.gov.au/index.php/responsibilities/semp#_ga=2.79633948.961878487.1684482621-2142804526.1684482621
[48] https://epa.tas.gov.au/Documents/TasPlan.pdf

- The NSW state plan is the NSW State Waters Marine Oil and Chemical Spill Contingency Plan49, a sub-plan to the NSW State Emergency Management Plan. The NSW Department of Transport (Maritime) (**NSW DoT Maritime**) is the Controlling Authority for NSW state waters.
- The South Australia state plan is the South Australian Marine Spill Contingency Action Plan[50] (**SAMSCAP**). The South Australia Department of Planning, Transport and Infrastructure (**SA DPTI**) is the Controlling Authority for South Australian state waters.

10.10.3 Hydrocarbon Spill Response Framework

TGS utilise the incident classification as outlined in the National Plan (AMSA, 2019) for hydrocarbon spills to provide direction on the potential consequence and impact of the incident and to provide guidance for preparedness, incident notifications and response actions.

Two levels of incident are possible for the Otway Basin 3D MC MSS:

- **Level 1:** Incidents are generally able to be resolved through the application of local or initial resources only (e.g. first-strike capacity); and
- **Level 2:** Incidents are more complex in size, duration, resource management and risk and may require deployment of jurisdiction resources beyond the initial response.

The division of the responsibilities in the event of a hydrocarbon spill that affects State and Commonwealth Waters is provided in **Table 147**.

Table 147 State and Commonwealth Hydrocarbon Spill Responsibilities

Location	Spill Source	Statutory Authority	Controlling Authority	
			Level 1	Level 2
Commonwealth waters	Shipping sourced spill	NOPSEMA	AMSA	AMSA
Victoria state waters		TSV MSV	TSV MSV	TSV MSV
Tasmania state waters		TAS EPA	TAS EPA	TAS EPA
NSW state waters		NSW DoT (Maritime)	NSW DoT	NSW DoT
South Australia state waters		SA DPTI	SA DPTI	SA DPTI

10.10.3.1Controlling Authority

AMSA is the designated Controlling Authority if a hydrocarbon spill occurs from a ship associated with the Otway Basin 3D MC MSS within Commonwealth waters. AMSA will assume control of the incident and respond in accordance with the National Plan. TGS will assume a Support Agency role and provide all available assistance to AMSA during their Controlling Authority responsibilities.

[49] https://www.nsw.gov.au/sites/default/files/2022-07/oil-spill-contingency-plan-nsw-state-waters.pdf
[50] https://cdn.environment.sa.gov.au/environment/docs/sa-marine-spill-cont-action-plan.pdf

10.10.3.2 Cross Jurisdictional Coordination

As stated in the National Plan, maritime environmental emergencies have the potential to impact upon the interests of two or more Australian jurisdictions, where both jurisdictions have legitimate administrative and regulatory interests in the incident. In this case, the National Plan addresses these complexities through the *Guidance on the Coordination of Cross Border Incidents* which provides for the establishment of an incident coordination process and the determination of a 'lead' jurisdiction, if appropriate.

10.10.4 Nature and Scale of Preparedness

10.10.4.1 Maximum Credible Scenario

As described in **Section 8.3** it is considered that either a vessel collision or refuelling at sea are the only credible scenarios in which a hydrocarbon spill could occur during the Otway Basin 3D MC MSS. As the vessel collision, and associated hydrocarbon spill, would result in the greatest impact on the receiving environment, this scenario is considered here. Based on AMSAs "*Technical Guidelines for Preparing Contingency Plans for Marine and Coastal Facilities*" (AMSA, 2015), the largest fuel tank is adopted as the worst-case Maximum Credible Scenario (**MCS**) that may result from a vessel collision. In the absence of vessel specifications, a spill of 1,066 m^3 of MDO from the Seismic Vessel (through vessel collision) is considered to be the MCS. This MCS is very conservative, as it is assumed vessel fuel tanks will be at smaller capacity than 1,066 m^3, fuel will be compartmentalised into separate tanks, and while the survey is underway it is likely that the tank will not be 100% full. In addition, there is a hierarchy of controls in place to avoid this MCS from occurring.

10.10.4.2 Hydrocarbon Characteristics and Behaviour

The fuel to be used during the Otway Basin 3D MC MSS is MDO which is a light petroleum distillate. This would undergo rapid dispersion and evaporation if it was released into the high energy offshore marine environment of the Otway Basin. DNV (2011) estimates that the half-life of MDO is 2.5 hours in wind speeds of 10 m/s, 1 hour at 20 m/s and approximately 12 minutes in storm conditions with wind speeds over 30 m/s.

Based on outcomes of scenario modelling (summarised in **Section 8.3.2**, and **Appendix C**) for the Otway Basin, the MDO will initially be present longer as entrained oil (near the surface), but then undergo rapid partitioning to vapour (i.e. to air), degraded through decay, partition into water (as dissolved and dispersed fractions), with a small fraction expected to be beached. The worst-case scenario (from deterministic modelling), whilst predicting that under calm weather and the most proximate release point to result in up to 11% of a 1,066 m^3 spill to be beached (from a spill at Location 1), is considered highly conservative. It is highly unlikely given the hierarchy of controls in place to prevent this occurrence.

10.10.4.3 Spatial Extent of Maximum Credible Scenario

Hydrocarbon spill modelling has been summarised in **Section 8.3.2** to inform the development of this EP and risk assessments. In the unlikely event that a vessel collision occurs, real-time modelling is also proposed to confirm any assumptions about the EMBA, and level of response required. The extent of the MCS has been based on stochastic modelling using the SIMAP.

Outputs of the scenario modelling were used to define the extent of the EMBA and identification of intersections with potential impacts on sensitive receptors which have the potential to be subjected to surface-oiling (assessed in **Section 4**).

10.10.5 Net Environmental Benefit Assessment / Spill Impact Mitigation Assessment

NEBA and SIMA are commonly used globally for evaluating the potential benefits versus impacts of implementing a pre-defined spill response strategy. The purpose is to identify the most appropriate response strategy(ies) which can be implemented under real-time factors influencing the spill dynamics (location, amount, prevailing weather conditions etc). It can also be a rapid decision-making tool employed by the CA under time constraints.

The following is a summary of steps normally used by the CA to conduct a NEBA/SIMA for a Level 2 spill (summarised from IPICEA, 2017):

1. **Compile and evaluate data** for relevant spill scenarios (oil properties, situational awareness, Oil Spill Trajectory Modelling, environmental sensitivities, identification of resources at risk, and determination of feasible response options);
2. **Predict outcomes/impacts** for the no intervention (or 'natural attenuation'/unmitigated spill impact) option as well as the effectiveness (i.e. relative mitigation potential) of the feasible response options for each scenario;
3. **Balance trade-offs** by weighing and comparing the range of benefits and drawbacks associated with each feasible response option, including no intervention, for each scenario; and
4. **Select the best response option(s)** to form the strategy for each scenario, based on the combination of techniques that will minimize the overall ecological, socio-economic and cultural impacts and promote rapid recovery, and maximise potential for environmental protection.

For any response initiated in Commonwealth Waters, TGS will provide support to the AMSA IMT (CA) for NEBA/SIMA though utilisation of existing TGS personnel, or third-party Subject Matter Experts where appropriate. For State waters (either VIC, TAS, NSW, South Australia) TGS will also provide support. Oil spill response and planning tools listed on the AMSA and relevant state plan websites will be used throughout the planning and response process.

10.10.6 Hydrocarbon Spill Response Arrangements

10.10.6.1 Hydrocarbon Spill Resources

TGS will ensure that the vessels used for the Otway Basin 3D MC MSS will have on-site response equipment for the prevention and minimisation of loss of oil to the sea. This equipment will include the on-board spill containment and recovery kits which includes absorbent material to meet the flag state and class requirements. All crew onboard will be trained in the use of this spill response equipment and know the location of the response kits. However, this response equipment that will be onboard will not be suitable for deployment to sea for any spills.

For Level 2 spills, the equipment needed (such as booms – although this is not likely needed for MDO) will come from AMSA stockpiles (either from the Melbourne (VIC), Devonport (TAS), Sydney (NSW), and/or Adelaide (South Australia) stockpile dependant on location of the spill) deployed through the National Plan arrangements. AMSA also has access to stockpiles in other states which are managed by the Australian Marine Oil Spill Centre.

10.10.6.2Spill Response Options

An assessment of the hydrocarbon spill response options was undertaken within **Section 8.4**. These options include:

- Source control including securing cargo and trimming;
- Natural weathering relating to monitoring and evaluating the spill via vessel/aerial surveillance and trajectory modelling;
- Physical break-up via vessel prop-washing;
- Application of dispersants;
- Containment and recovery through booms and skimmers;
- Protection and deflection utilising booms in the intertidal area;
- Shoreline clean-up through physical removal, surf washing, flushing and natural dispersion; and
- Oiled wildlife response via capture and rehabilitation.

This assessment concluded that source control and natural weathering are the preferred options when dealing with a hydrocarbon spill during the Otway Basin 3D MC MSS due to the location of the OA and the likely break-up of MDO.

Source control will be undertaken as part of a Level 1 response in accordance with the vessels SOPEP. For Level 2 responses, TGS will assist where required by the Controlling Authority, including provision of up-to-date monitoring information from visuals from the available vessels, and trajectory modelling.

10.10.6.3Notifications

The Vessel Master has the responsibility for notification and reporting of any spills into the marine environment (via POLREP Form contained in the vessel's SOPEP) to the AMSA Response Coordination Centre. Once this initial report has been undertaken, further reports will be sent at regular intervals to keep relevant parties (such as AMSA, TGS, NOPSEMA, etc.) informed.

The TGS CSR is responsible for advising the TGS VOM of the spill incident. The TGS VOM is then responsible for notifying NOPSEMA.

The Notification and associated timeframes for both Level 1 and Level 2 responses are outlined in **Table 148**.

Table 148 Hydrocarbon Spill Response Notifications and Timeframes

Incident Classification	Notification Timing	Authority/Company	Contact Number	Instructions
Level 1 and Level 2	Immediately	TGS VOM	[redacted]	Verbally notify TGS of event and estimated volume and hydrocarbon type.
	Within 2 hours	NOPSEMA	(08) 6461 7090	Verbally notify NOPSEMA for spills > 80 L Record notification using Initial Verbal Notification Form or equivalent and send to NOPSEMA as soon as practicable
	Within 3 days			Provide a written NOPSEMA Incident Report Form as soon as practicable (no later than 3 days after notification)
	Within 1 day	NOPTA	(08) 6424 5317	Provide a verbal or written incident summary
	As soon as possible	DNP	(04) 19 293 465	Provide titleholder details, time and location of incident, name of marine park likely to be affected, proposed response arrangements (as per OPEP), confirmation of providing access to relevant monitoring and evaluation reports when available, and contact details for the response coordinator.

Incident Classification	Notification Timing	Authority/Company	Contact Number	Instructions
	As soon as possible	Commercial Fishers Industry Bodies: • AFMA • ASBTIA • CFA • MFA • SEPFA • SIA • SIV • SETFIA • SRLL • TSIC • TA	AFMA: 1300 723 621 ASBTIA: [redacted] CFA: [redacted] MFA: [redacted] SEPFA: [redacted] SIA: [redacted] SIV: [redacted] SETFIA: [redacted] SRLL [redacted] TSIC: [redacted] TA: [redacted]	Verbally notify Commercial Fishers Industry Bodies of a fuel oil spill, providing details of the spill in terms of volume and where it is heading. WAFIC have made a commitment to notify commercial fishers that utilise the wider EMBA in case if a spill occurred. TGS are to be copied into the communications so they can verify the notifications have been completed.
	As soon as possible	RNTBC: Eastern Maar Aboriginal Corporation RNTBC Gunaikurnai Land and Waters Aboriginal Corporation RNTBC Gunditj Mirring Traditional Owners Aboriginal Corporation RNTBC Ngarrindjeri Aboriginal Corporation RNTBC Circular Head Aboriginal Corporation (TAS)	Eastern Maar Aboriginal Corporation RNTBC: [redacted] Gunaikurnai Land and Waters Aboriginal Corporation RNTBC: [redacted] Gunditj Mirring Traditional Owners Aboriginal Corporation RNTBC: [redacted] Ngarrindjeri Aboriginal Corporation RNTBC: [redacted] Circular Head Aboriginal Corporation (Tas): [redacted]	Verbally notify RNTBC if a fuel oil spill occurs with as much information as possible to that can be provided. A request for Native Title Holder to advice native title holder groups and any traditional owners that the spill may be of relevance too based on cultural values and sensitivities.

Incident Classification	Notification Timing	Authority/Company	Contact Number	Instructions
Level 2	Within 2 hours	AMSA	1800 641 792	Verbally notify AMSA Response Coordination Centre of the hydrocarbon spill. Follow up with a written POLREP as soon as practicable following verbal notification.
	As soon as possible if spill heading towards VIC waters	TSV MSV	1800 223 002	Verbally notify TSV MSV Follow up with a written POLREP as soon as practicable following verbal notification.
	As soon as possible if spill heading towards TAS waters	TAS EPA	(03) 6230 8600	Verbally notify TAS EPA Follow up with a written POLREP as soon as practicable following verbal notification.
	As soon as possible if spill heading towards NSW waters	NSW DoT	(02) 8202 2200	Verbally notify NSW DoT Follow up with a written POLREP as soon as practicable following verbal notification.
	As soon as possible if spill heading towards SA waters	SA DPTI	(08) 8248 3505	Verbally notify SA DPTI Follow up with a written POLREP as soon as practicable following verbal notification.

Incident Classification	Notification Timing	Authority/Company	Contact Number	Instructions
	Within 2 hours	Type II Monitoring Service Provider	To be confirmed prior to commencement	Verbally notify the nominated emergency contact person for the Type II Monitoring service provider (see **Section 10.10.7.2**). Note that the initial notification may not be able to provide key details (i.e. meeting the scientific monitoring program initiation criteria); however, will allow the service provider to commence planning activities to be at the ready. Follow up with more formal notification (includes written documentation), if and when a scientific monitoring program initiation criterion is met (see **Section 10.10.7.3**).

10.10.6.4Control Measures for Hydrocarbon Spill Response

TGS has developed a number of control measures that are necessary to ensure timely response to an emergency that result, or may result, in hydrocarbon pollution. These control measures are described in **Section 8.4.4.**

10.10.6.5Capability and Training Requirements

As part of the basic introductory and technical training, all staff will also receive environmental awareness training. TGS's QHSE Environmental Management System provides addition training where required in accordance with TGS' Environmental Standards, such as for site-specific environmental exposures etc. as all employees are responsible for environmental protection and to minimise the potential impacts on the environment.

10.10.6.6Arrangements for Testing the OPEP

Prior to the commencement of the Otway Basin 3D MC MSS the OPEP will be tested. A summary of arrangements for testing the response arrangements is provided in **Table 149**.

Table 149 Testing Requirements of the Response Arrangements

Environment Regulations	Description
Regulation 14(8B) of the Environment Regulations requires the arrangements for testing the response arrangements to include:	
A statement of the objectives of testing:	The objectives of testing are to provide an opportunity for crew to gain confidence in using the onboard spill equipment and implementing the incident response procedures. The result of this will increase efficiency in the event of an emergency, review the efficiency of procedures and detect any failures in equipment.
A proposed schedule of tests:	Three-monthly drills and exercise will be carried out on all vessels associated with the Otway Basin 3D MC MSS in line with IMO/SOPEP. The timing of the drills will be scheduled to coincide at the start of the Otway Basin 3D MC MSS. These drills will include, but not be limited to: • Spill response; • Collision and grounding; • Fire and explosion; and • Helicopter emergency.
Mechanisms to examine the effectiveness of response arrangements against the objectives of testing:	Refer to **Section 10.4**, **i**n particular: • Issues raised (if any) will be described in daily report; • Weekly checklists will ensure that spill monitoring equipment is in place and fully stocked; • Requirements described for the review of the EP and OPEP; and • Requirements described for testing below.
Mechanisms to address recommendations arising from tests:	As mentioned above, any issues raised resulting from testing will be described in the daily report. Also, the Vessel Master is made aware that any change to this OPEP and EP is managed through MoC described in **Section 10.4.6**.

Environment Regulations	Description
Regulation 14(8C) of Environment Regulations states that proposed schedule of tests must provide for the following:	
Testing the response arrangements when they are introduced:	As outlined in **Section 10.10.1** SOPEP drill conducted prior to the Seismic Survey (within three months) and at least every three months during the Seismic Survey if it proceeds that long.
Testing the response arrangements when they are significantly amended:	The MoC process described in **Section 10.4.6** details the process for any changes to be introduced to the OPEP and EP. Where these changes reasonably affect the arrangements in place, the changed arrangements will be tested prior to finalising the MoC.
Testing the response arrangements, no later than 12 months after the most recent test:	As discussed above, and in **Section 10.10.1** testing will occur every three months during the Otway Basin 3D MC MSS. If this is longer than the duration of the survey, the testing will occur when the survey starts.
If a new location for the activity is added to the EP after the response arrangements have been tested, and before the next test is conducted — testing the response arrangements in relation to the new location as soon as practicable after it is added to the plan:	TGS will not be undertaking work outside of the OA described within **Section 3.2.1.**
If a facility becomes operational after the response arrangements have been tested and before the next test is conducted—testing the response arrangements in relation to the facility when it becomes operational:	Not applicable to the Otway Basin 3D MC MSS.

10.10.7 Operational and Scientific Monitoring Plan

The OSMP is set out in **Appendix O**. This sets out the framework for developing a specific OSMP following an oil spill based on the parameters of the spill, including the location, nature and scale of the spill, and any potentially impacted values including sensitive resources.

As part of the initial response, TGS and the Seismic Vessel operator will provide a first-strike response (i.e. local or initial resources to stop or contain spill) at the direction of the Controlling Authority and provide ongoing response and monitoring arrangements where requested.

10.10.7.1Type I Operational Monitoring

As outlined in the OSMP and within **Section 8.3**, Type I 'Operational Monitoring' will be implemented where safe to do so and when there is a net benefit in doing so (as agreed with the Controlling Authority). This monitoring will be implemented to:

- Determine the extent and character of a spill;
- Visual tracking of the movement/ trajectory of surface slicks;
- Identify areas/ resources potentially affected by surface slicks; and
- Determine sea conditions/ other constraints.

This monitoring will enable the Vessel Master to provide the necessary information to the relevant Controlling Authority, via a POLREP form, to determine and plan appropriate response actions under the National Plan and the relevant State plan. Operational monitoring and observation in the event of a spill will inform an adaptive spill response and scientific monitoring of relevant key sensitive receptors.

Ongoing situational awareness information is provided to the Controlling Authority through the use of a Marine Pollution Situation Report.

For a Level 2 spill, TGS will undertake real-time spill trajectory modelling to provide assurances that response options can be tailored to the specific spill situation. The modelling will be based on continuous weather monitoring which will be utilised in conjunction with hindcast data to predict any potential beaching locations of the hydrocarbon, if any exist. This real-time spill trajectory modelling will be utilised to focus any potential scientific monitoring if it were to be required (and directed by the Controlling Authority) in order to monitor the impacts from a spill occurrence. Further discussion on scientific monitoring is detailed within the OSMP and summarised in **Section 10.10.7.2**.

Field-based monitoring, including vessel and/or aerial surveillance, will be undertaken immediately following a spill event. This monitoring will enable the Vessel Master to provide up-to-date information to the relevant Controlling Authority via the POLREP form to appropriate plan any response options. This field-based monitoring will be utilised further in the development of any scientific monitoring of key sensitive receptors if scientific monitoring is required and requested by the Controlling Authority. Field-based monitoring has its limitations in that it can only be conducted during daylight hours when the surface slick is visible.

TGS will assist with further operational monitoring (including funding if required) as directed by the Controlling Authority.

10.10.7.2Type II Scientific Monitoring

In consultation with the Controlling Authority, TGS will commit to scientific monitoring dependent on the circumstances of the spill, and the sensitivities at risk. The proposed approach to any detailed scientific monitoring is set out in the OSMP. For the purpose of this EP, it is not considered that more detailed Scientific Monitoring Plans are required to be developed or environmental baseline monitoring is required prior to the Otway Basin 3D MC MSS commencing due to the potential risks associated with the Otway Basin 3D MC MSS and a hydrocarbon spill through vessel collision are considered very low with all of the associated control measures in place. The identified potential risks are assessed as short term, transient and in the very unlikely even that it did occur, it is unlikely to cause significant impact on the marine environment given the likely volumes and nature of the MDO onboard the Seismic Vessel. It is considered that this proposed approach is reasonable for the Otway Basin 3D MC MSS as existing control measures, including meeting all of the legislative requirements and industry standards, will reduce the risk or a hydrocarbon spill to the marine environment.

As discussed in **Section 10.10.4**, it is recognised that there is a remote chance of shoreline contact depending on the location of a hydrocarbon spill. Therefore, TGS commit to having a service agreement with a service provider prior to the commencement of the Otway Basin 3D MC MSS. This agreement will ensure TGS has a capability to undertake Type II monitoring if required and also enable the chosen service provider to act (in a capacity as agreed with all parties), to either assist the Controlling Authority or to undertake key Type II monitoring activities on TGS's behalf (if initiation criteria are triggered).

10.10.7.2.1 Type II – Scientific Monitoring Services Agreement

As outlined above, prior to the commencement of the Otway Basin 3D MC MSS, TGS will commit to having a service agreement with a service provider who have demonstrated capability to undertake Type II Monitoring. Prior to agreement with a third-party service provider, they must demonstrate they have the following capabilities:

- Emergency manned mobile telephone number;
- Capacity to prioritise and deploy qualified personnel to execute each scientific monitoring plan (**Section 10.10.7.3**);
- Qualifications and capacity to prepare detailed supporting sampling analytical plans/ monitoring plans for each of the scientific monitoring plans described in **Section 10.10.7.3**;
- The ability to prioritise and mobilise resources to the region (i.e. logistics are in place); or resources are located within the region; and
- Capacity to mobilise personnel and resources to the region as soon as practicable.

After agreeing to a services agreement, should the service provider suggest amendments of **Section 10.7**, this will be managed through the MoC process outlined in **Section 10.4.5**.

A notification will be provided to the service provider within two hours of a known spill event, so the service provider can be 'at the ready', even in the event initiation criteria are not yet triggered.

10.10.7.2.2 Situational Awareness

In the event of a hydrocarbon spill, details that will be exchanged between TGS and the service provider describing situational awareness will include:

- Hydrocarbon type and size of spill;
- Is the spill under control;
- Potential environmental or external influences that may impact a monitoring response;
- Predicted behaviour and predicted trajectory of the spill;
- Potential sensitivities at risk;
- Any ongoing safety concerns; and
- Protection priorities.

10.10.7.3Scientific Monitoring Plans

The framework for implementing SMPs is set out in the OSMP document, **Appendix O**. The service provider will develop and implement a variety of scientific monitoring plans if and when the initiation criteria are met (**Table 150**). The monitoring plan(s) required in the event of a Level 2 hydrocarbon spill are assessed based on the nature and scale of the MCS and the situational awareness at the time of any spill.

Due to the potential beaching of a hydrocarbon spill as identified by modelled scenarios, a number of monitoring plans may be required to monitor the potential impacts of a hydrocarbon spill. **Table 150** provides rationale for the various monitoring plans that would be developed.

Any monitoring plans that are implemented are required to be adaptive to allow key sensitivities at risk to be identified. Such as, if a Controlling Authority makes a reasonable request for monitoring to be undertaken on a receptor which isn't specified here, any service agreement will provide TGS with the capacity to react to these requests.

Table 150 Scientific Monitoring Plan Aims, Objectives and Rationale

Scientific Monitoring Plan	Key Receptor(s)	Aim	Objective	Rationale
Marine water quality	Background water quality	To monitor the hydrocarbons in marine waters to support assessment of impacts and recovery of sensitivities and to verify hindcast modelling	Assess and document the extent and severity of hydrocarbon contamination utilising observations and/or in-water measurements made during operational monitoring. Provide data to inform further scientific monitoring plans.	Reductions in water quality are likely to result due to aromatic hydrocarbons being entrained within the water column. Subsequent partitioning, including to the water column, is expected. Impacts on the water quality from a hydrocarbon spill are important to understand and evaluate as this will potentially impact a range of other receptors, and data will be used to inform other monitoring plans described below.
Intertidal and shoreline sediment quality	Background sediment quality, particularly focused on sensitive locations	Gain an understanding of the characteristics, persistence, and fate of spilled hydrocarbons within sediments exposed to beached oil	Estimate spilled hydrocarbon concentrations within sediment exposed to beached oil. Monitor changes over time in hydrocarbon concentrations. Provide data to assist assessment of impacts on benthic communities. Establish necessary response options.	Should a spill of hydrocarbons reach the shoreline it has the potential to impact on the sediment quality, and as such impact on intertidal biota (described below) which may be exposed to chronic toxicity levels of hydrocarbons.
Intertidal and shoreline habitats and benthos	Invertebrates, filter feeders, benthic primary producers, demersal fish, shorelines and intertidal habitats	Determine the impacts of spilled hydrocarbons on intertidal benthos and habitats	Monitor impacts on intertidal and shoreline habitats from beached hydrocarbon contamination. Define recovery parameters for benthos. Monitor benthos recovery to hydrocarbon contamination. Establish necessary response options.	Shoreline habitats can be impacted from a spill through stranded floating hydrocarbons, or droplets entrained within the water column, with hydrocarbons becoming increasingly entrained within the nearshore waters. Aquatic organisms utilising these habitats can be exposed to elevated levels of hydrocarbons over their thresholds which will ultimately impact the organism.

Scientific Monitoring Plan	Key Receptor(s)	Aim	Objective	Rationale
Seabirds and shorebirds population and recovery	Foraging seabirds and coastal shorebird populations	Assess impacts on seabird and shorebird populations.	Quantify foraging, nesting or breeding seabird and shorebird populations potentially impacted by spilled hydrocarbons. Quantify oiled avifauna, including mortalities. Establish necessary response options.	Seabirds and shorebirds can be impacted by hydrocarbons spills through the presence of hydrocarbons on the surface of the water and from hydrocarbons entrained within the water column. This can lead to potential behavioural, physiological and physical impacts such as deviation from migratory routes, disruption to their indigestion and/or coating their feathers resulting in the inability to fly.
Marine fauna (excluding avifauna)	Marine mammals, marine reptiles, bony fish, elasmobranchs	Assess impacts on non-avian marine fauna potentially impacted by a hydrocarbon spill.	Quantify oiled marine fauna, including mortalities.	Hydrocarbon spills resulting in a surface slick or entrained within the water column has the potential for long-term impacts to marine fauna. Contact between marine fauna and a surface slick or in-water concentrations of hydrocarbon has the potential to elicit lethal and sub-lethal impacts, including behaviour (avoidance of foraging habitats or migratory routes), physiological (inability to digest) and/or physical effects.
Socio economic impact monitoring (fisheries and tourism)	Target species or areas of importance for fishing/tourism	Assess impacts on fisheries (including aquaculture) and tourism activities	Monitor hydrocarbon concentration within tissue of species targeted by commercial fisheries. Identify potential impacts on human health as a result of hydrocarbon contamination. Assess recovery of tourism operations in area affected.	Commercial fishing operations for pelagic fish, lobster fisheries, shellfish can be impact from a hydrocarbon spill which can include lethal and sub-lethal physiological and physical effects. Any exposure to commercial and recreational target species can result in the tainting of flesh and increase in toxicity above human consumption thresholds. In terms of tourism, a hydrocarbon spill can result in a negative perception on the environment impacted by the spill.

10.10.7.3.1 Development of Detailed Scientific Monitoring Plans

The agreed service provider will develop detailed scientific monitoring plans after receiving the initial notification in the event of a spill, and when the initiation criteria outlined in **Table 150** have been met. A draft scientific monitoring plan will be provided to TGS as soon as practicable, but within 24 hours after receiving the initial notification that a hydrocarbon spill has occurred. A final proposed monitoring plan will then be provided to the relevant Controlling Authority for review as soon as practicable, but within 24 hours of initial notification.

The monitoring plans will include, as a minimum:

- Objectives and rationale of the monitoring plan: Each plan developed will outline the key objectives, rationale and focus of the plan;
- Baseline information: It is important for each monitoring plan to specify the details of the baseline to be applied, or a method for selection of suitable reference/control sites. If possible, previous monitoring from published studies and findings is to be utilised;
- Spatial awareness: It is important for any scientific monitoring plan to provide information and outcomes obtained from the operational monitoring (such as real-time spill trajectory modelling) to support the proposed design;
- Methodology: The proposed survey methodology should consider the statistical methods and sampling effort required to achieve the objectives of the scientific monitoring plan. If sampling is proposed as part of the monitoring plan, industry recognised methods for collection and analysis of the samples must be used. This includes utilising accredited laboratories and following best practice guidelines and applicable legislation where applicable. The methodology should include, as a minimum:
- Details of any permits or approvals required to undertake the work, including whether there are any exemptions;
- Collection and analysis requirements (i.e. permits);
- Personnel proposed to undertake the monitoring, including appropriate qualifications and skills;
- Equipment required to complete the proposed monitoring;
- HSSE requirements to complete the survey;
- QA/QC requirements if appropriate;
- Initiation criteria: The criteria used to initiate the proposed scientific monitoring plan;
- Termination criteria: Each monitoring plan will include a termination date at which time the monitoring can stop which is consistent with the objectives of the monitoring plan. These criteria must be adaptive and be able to change based on the actual circumstances of the impacts and/or risks of assessment;
- Management of change: The monitoring plans must be adaptive to ensure the impacts and risks are managed appropriately. As such, if a monitoring plan is required to change to adapt to these circumstances, then a process for change needs to be detailed so that any revision is provided to TGS and the relevant Controlling Authority for acceptance as soon as practicable. Any revisions undertaken must be tracked to clearly communicate the current status of the monitoring requirements; and

- Reporting: Each monitoring plan is required to detail the reporting of results during and post monitoring. This reporting will include ongoing situation reports during the implementation of monitoring; the timing of these situation reports will be based on the nature and scale of the impacts/risks. Post monitoring, a draft report and third-party peer reviewed report will be provided to TGS, the Controlling Authority and NOPSEMA which will include any recommendations resulting from the monitoring plan.

10.10.7.3.2 Implementation of Scientific Monitoring Plans

During the development of the monitoring plan(s) outlined in **Section 10.10.7.3** above, the service provider will undertake all planning actions required to mobilise to the site. This will include providing a brief proposal to TGS which will outline the resources and personnel required, transport arrangements and timeframes for implementation. The service provider will undertake all reasonable measures to mobilise to the site as soon as practicable. The ability for the service provider to mobilise within 24 hours will be required under the service agreement.

Due to the low likelihood of a spill occurring, it is not considered reasonable to have these resources on standby during the Otway Basin 3D MC MSS. It would require considerable financial investments over and above the significant control measures implemented to reduce the risks of a vessel collision to **ALARP** and **Acceptable Levels**. Therefore, TGS consider the approach outlined above to be reasonably practicable based on the nature and scale of the risks associated with the Otway Basin 3D MC MSS.

10.10.7.3.3 Initiation Criteria for Scientific Monitoring Plan

The initiation criteria (**Table 151**) for each monitoring plan is broadly applied to enact the response described within this EP. However, it is important to note that the final decision to commence each monitoring plan will be based on the net environmental benefit in which the environmental sensitivities should be avoided if the monitoring proposed may reasonably result in further impacts and offer no net benefit.

Table 151 Scientific Monitoring Plan Initiation Criteria

Plan	Initiation Criteria
Marine water quality	Notification of a Level 2 or greater hydrocarbon spill.
Intertidal and shoreline sediment quality	Notification of a Level 2 or greater hydrocarbon spill. and Where modelling and/or Operational Monitoring indicates likely exposure to intertidal and/or shoreline sediments. or Reports are received of shoreline and/or shoreline contact from hydrocarbon spill.
Intertidal and shoreline habitats and benthos	Notification of a Level 2 or greater hydrocarbon spill. and Where modelling and/or Operational Monitoring indicates likely exposure to intertidal and/or shoreline habitats or benthos. or Reports are received of shoreline and/or shoreline contact from hydrocarbon spill.

Plan	Initiation Criteria
Seabirds and shorebirds population and recovery	Notification of a Level 2 or greater hydrocarbon spill. and Where modelling and/or Operational Monitoring indicates likely exposure to seabird and/or shorebird populations. and/or Reports are received of contact with avifauna from hydrocarbon spill. and/or Reports of oiled or dead avifauna are received.
Marine fauna (excluding avifauna)	Notification of a Level 2 or greater hydrocarbon spill. and Where modelling and/or Operational Monitoring indicates likely exposure to non-avian marine fauna. and/or Reports are received of contact with non-avian marine fauna from hydrocarbon spill. and/or Reports of oiled or dead non-avian marine fauna are received.
Socio economic impact monitoring (fisheries, aquaculture and tourism)	Notification of a Level 2 or greater hydrocarbon spill. and Where modelling and/or Operational Monitoring indicates likely exposure to aquaculture operations. and/or Reports are received of commercial fisheries closures due to hydrocarbon contamination. and/or Reports are received of tourism operation closures due to hydrocarbon contamination.

10.10.7.3.4 Termination Criteria for Scientific Monitoring Plan

Each scientific monitoring plan that is undertaken as part of a response operation will continue until certain termination criteria have been met (**Table 152**), in consultation with the relevant Controlling Authority.

Table 152 Scientific Monitoring Plan Termination Criteria

Plan	Termination Criteria
Marine water quality	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens are predicted by the modelling. Monitoring data of in-water concentrations of hydrocarbons have been compiled and analysed. Data confirm water concentrations are at background/reference levels. Reporting on sampling has been completed detailing extent and severity of spilled hydrocarbons which can enable further analysis of impacts on other receptors in any further scientific monitoring plans.

Plan	Termination Criteria
Intertidal and shoreline sediment quality	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens/beaching are predicted by the modelling. Any monitoring undertaken confirms concentrations of hydrocarbons present within sediments fall below relevant receiving guidelines (e.g. ANZG, 2018), and pose low to negligible ecological risk. Reporting on the sampling has been completed detailing the extent and severity of spilled hydrocarbons which can enable further analysis of impacts on benthic communities.
Intertidal and shoreline habitats and benthos	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens/beaching are predicted by the modelling. Impacts from hydrocarbon spill on benthos are quantified and recovery evaluated. Reporting on the monitoring has been completed detailing the extent and severity of spilled hydrocarbon impacts on benthos.
Seabirds and shorebirds population and recovery	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens/beaching are predicted by the modelling. Objectives and values associated with any relevant avian species recovery plans and/or conservation advice's have been met. Impacts from hydrocarbon spill on avifauna quantified and recovery evaluated. Reporting on the monitoring has been completed detailing the extent and severity of spilled hydrocarbon impacts on avifauna.
Marine fauna (excluding avifauna)	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens are predicted by the modelling. Objectives and values associated with any relevant species recovery plans and/or conservation advice have been met. Impacts from hydrocarbon spill on marine fauna (excluding avifauna) quantified and recovery evaluated. Reporting on the monitoring has been completed detailing the extent and severity of spilled hydrocarbon impacts on marine fauna (excluding avifauna).
Socio economic impact monitoring (fisheries, and tourism)	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens are predicted by the modelling. Impacts to important commercial fisheries quantified and recovery evaluated. Impacts to seafood quality and secondary impacts on human health evaluated. Impacts on tourism ventures quantified and evaluated. Reporting on the monitoring has been completed detailing the extent and severity of spilled hydrocarbon impacts on commercial fisheries, and tourism operations.

10.10.8 OPEP Review and Revision

In accordance with subregulation 14(8) of the Environment Regulations, the OPEP will be reviewed, updated and resubmitted to NOPSEMA should a change to the existing OPEP be required. It is considered, such changes to the OPEP could arise due to:

- A change to the EP that may impact spill response capabilities or coordination, such as an increase to the potential risk of a spill or release of hydrocarbons;
- When a significant change to the activities currently included within this EP has occurred, which could have implications on spill response or coordination;

- During routine testing of the OPEP, where improvements or corrections of the current OPEP are identified; and
- Any learnings from the result of a Level 1 or Level 2 spill or incident.

Any changes made to the OPEP, and any subsequent resubmission will be informed by the Environment Regulations or any other relevant Commonwealth regulations. If a change to the OPEP is required, TGS will undertake this in accordance with the MOC procedures defined in **Section 10.4.7.**

The TGS Project Manager will be responsible for the OPEP and ensuring that any relevant updates are made to the OPEP, and should any amendments be required, that the revised plan is submitted to NOPSEMA.

10.11 Continuous Improvement

TGS' HSE-MS ensures that the organisation supports the culture, processes and structures required to identify and manage potential quality, health, safety and environment risks or hazards over the life of its activities and operations. TGS's and its employees are committed to continual improvement of the standards, quality and safety of its products, activities, and services through regular, periodic review of internal HSE policies, procedures, processes and systems throughout all aspects of its business.

In accordance with the TGS' Environmental Policy and Health and Safety Policy, all employees and contractors are actively encouraged to identify and suggest improvements to existing standards, processes and systems and monitor the results of continuous improvement efforts, as described within TGS's HSE-MS and throughout this EP.

11 Conclusion

This EP has been prepared to support TGS' application process for the Otway Basin 3D MC MSS. This MSS is planned to commence in Q4 2023 and will cover an AA of 45,000 km^2. The maximum number of days acquired per calendar year will be 200 days. The Otway Basin 3D MC MSS will be completed by 31 December 2028. The majority of the planned sail lines lie within water depths greater than 500 m, however, a single 2D tie line will enter shallower waters of approximately 115 m. The single tie line represents a few hours of acoustic acquisition in shallower waters.

As part of developing the EP, an EMBA was derived utilising stochastic hydrocarbon dispersion and fate modelling (**Appendix C**) which provides a conservative area that may be impacted by the Otway Basin 3D MC MSS. A comprehensive description of the key physical, biological, socio-economic, and cultural characteristics of the existing environment and the sensitivities and receptors has focused on the EMBA.

This EP assesses the potential risks and associated impacts from the Otway Basin 3D MC MSS on the biological and socioeconomic values of the EMBA, employing three key methods: 1) an extensive literature review; 2) project specific UAM to examine the spatial spread and magnitude of acoustic outputs from the Otway Basin 3D MC MSS and to predict how this would affect various receptors; and 3) extensive consultation with relevant persons (which will continue for the life of the project).

UAM (**Appendix B**) was undertaken to predict received SELs and spread of noise emissions, or the 'footprint' of acoustic emissions generated from the acoustic source utilised for data acquisition during the Otway Basin 3D MC MSS. The UAM involved three key components: array source modelling; underwater acoustic propagation modelling; and animat modelling. The results from the UAM were then compared with a variety of noise criteria and sound levels identified in scientific research to cause the onset of PTS and TTS in sensitive marine receptors.

Through the development of the EP, TGS has undertaken an extensive consultation programme with relevant persons, including traditional owner groups, commercial and recreational fishers, industry bodies and associations, marine park authorities, tourism operators, researchers, etc. The review and updates to the consultation programme, following the High Court Decision and NOPSEMA's Consultation Guidance Document, and subsequent iterations of the consultation process has provided TGS with a deep level of understanding with regard to the potential impacts (both real and perceived) from relevant persons on their sensitivities. The nature of responses varied; some included requests for further information, to be kept informed, some noted that the proposed survey was not relevant for their interest in the area, while some raised concerns/objections to the Otway Basin 3D MC MSS. These claims are considered to be adequately addressed through the development of this EP.

One of the key sensitivities identified through the preparation of the EP was the proximity of the OA to the BW BIAs and the SRW Ag BIA. TGS recognises that the potential to encounter whales increases as the Otway Basin 3D MC MSS approaches and overlaps these BIAs, particularly as the Seismic Vessels moves towards more coastal waters. In addition to Standard and Additional Control Measures (as per Policy Statement 2.1), TGS has proposed several control measures in relation to the location of the BW and SRW BIAs which were developed in consultation with Blue Whale Study.

The following is a summary of these control measures, with the full suite of marine mammal control measures provided in **Appendix M** as a separate summary document:

- An Extended Observation Zone for PW/PBWs and SRW such that vessel based MFOs will observe for PW/PBWs and SRWs as far as practicable, and to a minimum of 7 km during daylight hours

- An Extended 7 km Shut-down Zone for BW/PBWs and SRWs whereby if a BW/PBW or SRW is detected within this zone, the acoustic source will be immediately shut down and the vessel will relocate to another area at least 32 km from the last PBW sighting or at least 11 km from the last SRW sighting. This distance increases to 42 km if a SRW calf is sighted;
- If relocation in response to the sighting of a BW/PBW or SRW is not possible (as per the above bullet point), acquisition will cease and will not recommence until 24 hours have elapsed and no BW/PBW or SRW has been detected in the 7 km Extended Shut-down Zone;
- Soft-start Procedures at night or during periods of low visibility will be limited to circumstances when acquisition has occurred within the preceding 24 hours and no whale initiated shut-downs have been made during this period, and may only occur outside of the BW BIAs and buffers, and the SRW Ag BIA/buffer;
- Poor visibility or night-time operations may occur provided that no BW/PBW shut-downs have been instigated during the preceding 24 hours within 32 km of the planned acquisition and no SRW shut-downs have been instigated during the preceding 24 hours within 42 km of the planned acquisition;
- PAM will be implemented on the Seismic Vessel and will operate 24-hours per day for the duration of the Otway Basin 3D MC MSS while the acoustic source is in the water and during the 30 minutes before the commencement of any Soft-start Procedure;
- If a mother and calf SRW pair is observed from the Seismic Vessel or the Attending Support Vessel at any distance during the Otway Basin 3D MC MSS, the acoustic source will be immediately shut-down and the Seismic Vessel will relocate to another area at least 42 km away, and outside of the SRW Ag BIA/buffer, before commencing Pre Start-up Visual Observations and Soft Start Procedures;
- Aerial surveys will be flown, if possible, within the seven days prior to commencement of any acquisition in the SRW Ag BIA/buffer during April and October, and within the seven days prior to commencement of any acquisition in the BW BIAs/buffers. Any sightings of SBT aggregations observed during aerial surveys will also be reported to ASBTIA; and
- 2D tie line acquisition inside any BW/PBW or SRW BIA/buffer will only be permitted to occur providing specific criteria (e.g. aerial surveys, restrictions on total time acoustic source is active within BIA/buffer) have been met, acquisition occurs in daylight hours only, and two MFOs are on-duty on the Seismic Vessel and two MFOs are on-duty on the Attending Support Vessel.

In addition to the above control measures tailored to the BW/PBWs and SRWs, TGS has developed a suite of control measures to ensure that the impacts and risks from the planned and unplanned activities associated with the Otway Basin 3D MC MSS are reduced as far as practicable. For example, the OA was reduced following consultation with South Australian tuna fishers to remove areas of the survey from South Australian waters, and a Giant Crab Exclusion Area will be established in waters 1,000 m or less near the 2D tie line to protect TAS giant crab habitat and fisheries.

In light of the extensive suite of proposed controls, the overall conclusion from the environmental risk assessment is that the impacts from the Otway Basin 3D MC MSS have been reduced to **ALARP** and **Acceptable Levels**. The survey will fully comply with all relevant legislation and industry best practice, and all EPSs provided within the accepted EP.

APPENDIX A

TGS Environmental Policy and Health and Safety Policy

ENVIRONMENTAL POLICY

TGS is committed to protecting the environment in which we live and work, while also conducting our operations in an environmentally sustainable and responsible manner. TGS strives to lead the industry in minimizing the impact of our operations on the environment. TGS is dedicated to the continuous improvement of our environmental programs and standards across all our operations.

We will strive to achieve these commitments by:

- Planning operations to minimize and/or reduce environmental impacts to acceptable levels;
- Incorporating climate risk into TGS' business and operational strategy;
- Monitoring our performance against approved environmental management plans;
- Measuring and reporting direct and indirect Greenhouse Gas Emissions (GHG) generated through seismic operations and across TGS' supply chain;
- Carrying out environmental audits, inspections and site visits of TGS operations;
- Maintaining compliance with applicable laws, regulations and guidance from trade associations;
- Monitoring the environmental performance of our contractors throughout the life cycle of each project;
- Ensuring that our contractors restore all project sites to their original condition;
- Promoting the International Association of Geophysical Contractor's (IAGC) Ghost Net and Marine Debris Removal Initiative (GNI), and contractually requiring that all vessel contractors participate;
- Educating our employees and contractors in TGS' environmental stewardship and sustainability strategies;
- Identifying, developing and implementing alternative energy solutions;
- Publishing our environmental performance in the annual Corporate Social Responsibility report;
- Periodically reviewing this policy and related plans to ensure ongoing suitability and effectiveness.

Our environmental efforts will be based on the implementation of the following key global strategies:

- Conducting environmental risk assessments of our operations and assessing our impact on the environment;
- Minimization and reduction of waste generated by design and purchase;
- Adoption of reduce, re-use and recycle programs where efficiencies can be found;
- Where hazardous chemicals, materials or products are used, adopt substitution techniques aimed at reducing or eliminating the handling, use and storage of such items;
- Minimization of carbon emissions by survey design and minimization of technical and non-technical downtime;
- Guarding against accidental and operational pollution;
- Development of emergency response plans for environmental incidents;
- Implementing applicable UN Global Compact Sustainable Development Goals (SDG's), including SDG 7 (Affordable and Clean Energy), SDG 12 (Responsible Consumption & Production), SDG 13 (Climate Action), SDG 14 (Life Below Water) and SDG 15 (Life on Land).

This policy is applicable across all of TGS' operations. We shall take steps to encourage our non-operated business partners to apply this policy or an equivalent policy. We expect our contractors, vendors, suppliers and consultants to adhere to this policy when providing services to, or acting on behalf of, TGS.

Kristian Johansen
Chief Executive Officer – TGS
November 2nd, 2021

Health & Safety Policy

"TGS is committed to providing a safe, healthy, sustainable, and secure workplace. Our belief is that all incidents are preventable. Our single greatest asset is our employees and we are committed to minimizing the risks to people (i.e. our employees, contractors, visitors, and others) who may encounter or subsequently be affected by our activities. We do this by providing training, maintaining defined procedures, emergency response planning, a program of continual improvement, monitoring and reporting health and safety performance, and by managing change. We hold all employees and contractors accountable for their own health and safety, as well as for those with whom they work. No job is so important, no task is so urgent, that we will not take the time to do it safely with quality in mind. We support, empower, and encourage employees to intervene and STOP any operation or activity that they feel may be unsafe or hazardous."

We are committed to:

1. Complying with the regulations and codes of practice for occupational health, safety, and security. These will be relevant to our clients' requirements, and the industry in which we operate.
2. Providing resources (e.g., worksites, machinery, tools, equipment, and people) that are safe, secure, and reduce risks to as low as reasonably practical levels.
3. Assessing the risks associated with activities or conditions that may harm people's health and safety, and implement the appropriate control measures.
4. Implementing safe systems of work that minimize the risks from our operations.
5. Delegating health and safety duties and resources, throughout the organization, allowing all staff to be held accountable for effective performance.
6. Supporting employees who STOP an activity when they believe it may compromise TGS' health or safety standards.
7. Consulting and communicating with employees, contractors, and visitors. We encourage participation in all matters relating to their health, safety, and security, and we recognize and positively reinforce safe behaviours and practices.
8. Informing stakeholders of their individual responsibilities and expect reasonable precautions to be taken to ensure their own health, safety, and security; as well as that of others, who may be affected by their acts or omissions.
9. Providing all employees with appropriate information, instruction, training, and supervision to achieve the level of competence necessary to perform their work safely.
10. Insisting that critical suppliers and contractors maintain similar health, safety, and security policies, and applicable management programs.
11. Top management's leadership and involvement in health and safety matters.

This policy provides a framework for setting occupational health, safety, and security objectives. It shall be reviewed on a regular basis to ensure ongoing suitability and effectiveness.

Executive Summary

JASCO Applied Sciences (JASCO) performed a numerical estimation study of underwater sound levels associated with the planned TGS Otway Basin 3-D Multi-client Marine Seismic Survey (MSS) to assist in understanding the potential acoustic impact on key regional receptors including marine mammals, fish, sea turtles, and benthic invertebrates. The modelling considered a 3480 in^3 triple seismic source towed at 7 m depth with an impulse interval (inter-pulse interval) of 12.5 m and a crossline array separation of 75 m.

JASCO's specialised airgun array source model was used to predict the acoustic signature of the seismic source, and complementary underwater acoustic propagation models were used in conjunction with the modelled array signature to estimate sound levels over large areas around the source. Single-impulse sound fields were predicted at sixteen sites within three Assessment Areas, all within the larger Operational Area, with five additional standalone sites and two seafloor only sites, with water depths ranging for 114 to 4252 m. Accumulated sound exposure fields were predicted for a representative scenario within each of the three Areas, for likely survey operations over 24 hours. Since the original modelling was undertaken, the Operational Area has been reduced with one of the Assessment Areas now outside the Operational Area, however, those modelling results are still valid for sites with similar seismic source configuration and environmental properties including the bathymetry, sound speed profile and the geological makeup of the seabed.

The modelling methodology considered source directivity and range-dependent environmental properties likely to be encountered within the survey area. Estimated underwater acoustic levels are presented as sound pressure levels (SPL, L_p); zero-to-peak pressure levels (PK, L_{pk}); peak-to-peak pressure levels (PK-PK; $L_{pk\text{-}pk}$); and either single-impulse (i.e., per-pulse) or accumulated sound exposure levels (SEL, L_E) as appropriate for different noise effect criteria. For each of the three Assessment Areas a separate conservative sound speed profile which would be most supportive of sound propagation conditions over for survey activities within that Area was defined and applied to all modelling, along with distinct geoacoustic profiles based on sediment and sub-bottom properties in each location.

SEL_{24h} is a cumulative metric that reflects the dosimetric effect of noise levels within 24 hours, based on the assumption that a receiver (e.g., an animal) is consistently exposed to such noise levels at a fixed position. More realistically, marine animals would not stay in the same location for 24 hours (especially in the absence of location-specific habitat) but rather a shorter period, depending on the animal's behaviour and the source's proximity and movements. Therefore, a reported radius for the SEL_{24h} criteria does not mean that marine fauna travelling within this radius of the source will be impaired, but rather that an animal could be exposed to the sound level associated with impairment (either Permanent Threshold Shift (PTS) and Temporary Threshold Shift (TTS)) if it remained at that location for 24 hours.

A more realistic representation of the potential exposures for foraging pygmy blue whales in the foraging Biologically Important Area (BIA) and migrating southern right whales within the known core range area was undertaken using animal movement modelling ('animat modelling'). Simulations with animats restricted to these areas provide an understanding of how animats will be exposed given the location and environment-specific context in which they are most likely to occur. Scenarios in which the pygmy blue whales are seeded in an unrestricted manner allow for the calculation of exposure range across the entire survey area. These ranges may then be interpreted to determine buffer zones around the BIA for different survey options and scenarios. The unrestricted seeding approach is informative in cases where there is very little overlap between BIAs and the Active Source Area, as is the case for the foraging pygmy blue whale BIA in this survey. While acoustic modelling inherently assumes static animals, the JASCO Animal Simulation Model Including Noise Exposure (JASMINE) combines modelled sound fields with realistic animal movements to predict how animals might be impacted through sound exposure. JASMINE provides a framework for understanding and predicting

sound exposure for species of interest and for calculating ranges to relevant regulatory thresholds. The distribution of distances to the source of simulated animals ('animats') predicted to be exposed to sound levels above relevant thresholds was used to calculate the 95th percentile exposure range ($ER_{95\%}$), and the probability of animats being exposed above threshold within the $ER_{95\%}$ (P_{exp}).

A total of four scenarios were considered using animal movement modelling including one unrestricted and one restricted animat seeding scenario for pygmy blue whales and two restricted animat seeding scenarios for southern right whales.

The analysis considered the distances away from the seismic source at which several effects criteria or relevant sound levels were reached. The results are summarised below for the representative single-impulse sites and accumulated SEL scenarios for both acoustic modelling results and animat $ER_{95\%}$ results and probabilities.

Marine mammal injury and behaviour

- The maximum distance where the NOAA (2019) marine mammal behavioural response criterion of 160 dB re 1 µPa (SPL) for impulsive noise could be exceeded was between 7.39–12.2 km in Area 1, 4.45–6.61 km for Area 2, and 7.23-9.33 km in Area 3.
- The results for marine mammal injury considered the criteria from Southall et al. (2019). These criteria contain two metrics (PK and SEL_{24h}), both required for the assessment of marine mammal Permanent Threshold Shift (PTS) and Temporary Threshold Shift (TTS). The longest distance associated with either metric is required to be applied for assessment. Table 1 summarises the maximum distances for PTS, along with the relevant metric associated with the maximum PTS distance.
- The SEL_{24h} is a cumulative metric that reflects the dosimetric impact of noise levels within 24 hours based on the assumption that an animal is consistently exposed to such noise levels at a fixed position. The corresponding SEL_{24h} radii for low-frequency cetaceans were larger than those for peak pressure criteria, but they represent an unlikely worst-case scenario. More realistically, marine mammals (and fish) would not stay in the same location for 24 hours. Therefore, a reported radius for SEL_{24h} criteria does not mean that marine fauna travelling within this radius of the source will be injured, but rather that an animal could be exposed to the sound level associated with injury (either PTS or TTS) if it remained in that location for 24 hours.
- The distance to PTS and TTS was always farthest in the broadside direction with distances shown in Table 1.

Table 1. Summary of maximum (R_{max}) horizontal distances (in km) from modelled sites or scenarios to behavioural response thresholds and temporary threshold shift (TTS) and permanent threshold shift (PTS) for marine mammals. Maximum extents are in the broadside direction.

Hearing group	Modelled distance to effect threshold (R_{max})		
	Behavioural response[1]	Impairment: TTS[2]	Impairment: PTS[2]
LF cetaceans	12.2	156	0.50
HF cetaceans		0.10	-
VHF cetaceans		0.85	0.11
Otariid Seals		0.10	-

Noise exposure criteria: [1] NOAA (2019) and [2] Southall et al. (2019)
A dash indicates the threshold was not reached within the limits of the modelling resolution (20 m)

Animal Movement Modelling

- The exposure ranges predicted using animat modelling are significantly more realistic, due to the incorporation of species-specific realistic movements, rather than conservative approach of calculating ranges using the maximum-over-depth sound fields and receivers which are stationary for 24 hours. This is because the exposure ranges account for animats sampling the sound field vertically and horizontally based on species-specific diving and movement parameters.
- Both scenarios with pygmy blue whales resulted in exposures. Of these, the maximum $ER_{95\%}$ to the marine mammal behavioural response threshold (NOAA 2019) was 7.01 km for the unweighted SPL results, with a probability of exposure of 41%. The maximum $ER_{95\%}$ to TTS and PTS thresholds (Southall et al. 2019) were 31.7 km and 0.13 km, respectively, with probabilities of exposure of 46% and 53%.
- Both scenarios with southern right whales resulted in exposures. Of these, the maximum $ER_{95\%}$ to the marine mammal behavioural response threshold (NOAA 2019) was 6.10 km for the unweighted SPL results, with a probability of exposure of 73%. The maximum $ER_{95\%}$ to TTS and PTS thresholds (Southall et al. 2019) were 11.0 km and 0.04 km, respectively, with probabilities of exposure of 73% and 98%.
- Exposure ranges ($ER_{95\%}$) for single exposure metrics, such as the SPL behavioural response criteria, are typically comparable to the predicted acoustic ranges. Exposure ranges are generally slightly lower than the R_{max} acoustic ranges, which is the case for the unweighted SPL results.
    - Considering pygmy blue whales, the $ER_{95\%}$ distances to the behavioural response for unweighted SPL results were slightly shorter for the unrestricted case, with a maximum of 6.21 km and a probability of exposure of 80%.
    - The southern right whale scenario, where animats are restricted to the known core range area, resulted in no exposures above the behavioural response threshold.
    - Considering southern right whale mother-calf-pairs only, the maximum $ER_{95\%}$ to the 140 dB and 160 dB behavioural threshold for weighted SPL results was 31.5 and 0.59 km, respectively, with probabilities of exposure of 61% and 82%.
- Exposure ranges from animal movement modelling for PTS and TTS criteria are typically shorter than those predicted using acoustic propagation modelling because of the shorter dwell time of the moving animats. In all scenarios, for both restricted and unrestricted cases, PTS and TTS exposure ranges were substantially shorter than acoustic ranges to threshold.
    - The pygmy blue whale restricted scenario had much smaller TTS $ER_{95\%}$ than their unrestricted counterparts, with a maximum of range for TTS 15.4 km and a probability of exposure of 32%. There were no exposures above the PTS threshold.
    - The southern right whale scenario, where animats are restricted to the known core range area, resulted in no exposures above the PTS threshold. The maximum $ER_{95\%}$ to the TTS threshold was 8.51 km with a probability of exposure of 33 %.

Sea turtles

- The PK sea turtle injury criteria of 232 dB re 1 µPa for PTS and 226 dB re 1 µPa for TTS from Finneran et al. (2017) was not exceeded at a distance greater than 20 m from the acoustic centre of the source.
- The maximum distance to the SEL_{24h} metrics from the sail line was 0.11 m for PTS onset and 0.31 km for TTS onset for the 3480 in^3 seismic source (Finneran et al. 2017). As is the case with marine mammals, a reported radius for SEL_{24h} criteria does not mean that sea turtles travelling within this radius of the source will be injured, but rather that an animal could be exposed to the sound level associated with either PTS or TTS if it remained in that location for 24 hours.

- Table 2 summarises the distances to where the criterion for behavioural response of sea turtles to the 166 dB re 1 µPa (SPL) and the 175 dB re 1 µPa (SPL) threshold for behavioural disturbance (McCauley et al. 2000a) could be exceeded.

Table 2. Summary of distances to sea turtle behavioural response criteria, temporary threshold shift (TTS), and permanent threshold shift (PTS).

Hearing group	Modelled distance to effect threshold (R_{max})			
	Behavioural response[1]	Behavioural disturbance[2]	Impairment: TTS[3]	Impairment: PTS[3]
Sea turtles	4.18	1.37	0.31	0.11

Noise exposure criteria: [1] NSF (2011), [2] , and [3] Finneran et al. (2017)

Fish, fish eggs, and fish larvae

- This modelling study assessed the ranges for quantitative criteria based on Popper et al. (2014) and considered both PK (seafloor and water column) and SEL_{24h} metrics associated with mortality and potential mortal injury as well as impairment in the following groups:
  - Fish without a swim bladder (also appropriate for sharks in the absence of other information),
  - Fish with a swim bladder that do not use it for hearing,
  - Fish that use their swim bladders for hearing,
  - Fish eggs and fish larvae.
- Table 3 summarises distances to effect criteria for fish, fish eggs, and fish larvae along with the relevant metric. Peak seafloor sound levels were assessed at nine different depths within the Operational Area (114, 220, 450, 569, 674, 870, 903, 1139, and 1216 m).

Table 3. Summary of maximum fish, fish eggs, and larvae injury and temporary threshold shift (TTS) onset distances for single impulse and 24 h sound exposure level (SEL_{24h}) modelled scenarios.

Relevant hearing group	Effect criteria	Water column		Seafloor	
		Metric associated with longest distance to criteria	R_{max} (km)	Metric associated with longest distance to criteria	R_{max} (km)
Fish: No swim bladder	Recoverable injury	SEL_{24h}	0.11	*	*
	TTS	SEL_{24h}	4.80	SEL_{24h}	4.50
Fish: Swim bladder not involved in hearing and Swim bladder involved in hearing	Recoverable injury	PK	0.14	*	*
	TTS	SEL_{24h}	4.80	SEL_{24h}	4.50
Fish eggs, and larvae	Injury	PK	0.14	*	*

An asterisk indicates that the threshold was not reached.

Benthic invertebrates, Sponges, Coral, and Plankton

Peak and peak-to-peak sound levels at the seafloor were assessed at the same nine water depths as for fish seafloor results to assist with assessing the potential effects on these receptors. The following results were determined:

- Crustaceans: The sound level of 202 dB re 1 μPa PK-PK from Payne et al. (2008), which is representative of no effects, was considered for seafloor sound levels. The sound level was reached at ranges between 358 and 512 m for the 3480 in^3 source and was not assessed in Area 2.
- Bivalves: The distance where a particle acceleration of 37.57 ms^{-2} at the seafloor could occur was determined for comparing to results presented in Day et al. (2016a) and was not reached for any of the modelled water depths.
- Sponges and coral: The PK sound level at the seafloor directly underneath the seismic source was estimated at several modelled sites and compared to the sound level of 226 dB re 1 μPa PK for sponges and corals (Heyward et al. 2018). It was not reached at any of the modelled sites.

Divers

An SPL human health assessment of 145 dB re 1 μPa (SPL; L_P) derived from was considered for people swimming and diving and the sound level was reached at ranges between 12.5 and 30.2 km for the inshore direction depending on the modelled site.

1. Introduction

JASCO Applied Sciences (JASCO) performed a numerical estimation study of underwater sound levels associated with the planned TGS Otway Basin 3-D Marine Seismic Survey (MSS) to assist in understanding the potential acoustic effect on receptors including marine mammals, fish, sea turtles, benthic invertebrates, plankton, sponges, and corals. This study considered a single seismic source array operating in three defined Assessment Areas within the larger Operational Area.

JASCO's specialised Airgun Array Source Model (AASM) was used to predict acoustic signatures and spectra for a triple 3480 in^3 seismic source array (see Section 4.2). AASM accounts for individual airgun volumes, airgun bubble interactions, and array geometry to yield accurate source predictions. Complementary underwater acoustic propagation models were used in conjunction with the array signature and spectra to estimate sound levels considering site-specific environmental influences. Single-impulse sound fields were predicted at sixteen sites within the three defined Assessment Areas, plus at seven additional standalone sites, with water depths ranging from 114 to 4252 m. Accumulated sound exposure fields were predicted for a representative scenario within each of the Areas, for likely survey operations over 24 hours (see Section 2). Since the original modelling was undertaken the Operational Area has been reduced with one of the Assessment Areas now outside the Operational Area (see Section 2). Modelling results outside of the Operational Area are still valid for sites sharing similar seismic source orientation and environmental properties including bathymetry, sound speed profile, and geoacoustic profiles (see Appendix D.3).

The modelling methodology considered source directivity and range-dependent environmental properties. Estimated underwater acoustic levels are presented as sound pressure levels (SPL, L_p); zero-to-peak pressure levels (PK, L_{pk}); peak-to-peak pressure levels (PK-PK; $L_{pk\text{-}pk}$); and either single-impulse (i.e., per-pulse) or accumulated sound exposure levels (SEL, L_E) as appropriate for different noise effect criteria.

The first planned seismic assessment area slightly overlaps with the pygmy blue whale foraging Biologically Important Area (BIA) and the southern right whale known core range area. Therefore, the acoustic modelling results were also used in conjunction with animal movement modelling ('animat modelling') simulations to predict the distance at which foraging pygmy blue whales (*Balaenoptera musculus brevicauda*) and migrating southern right whales (*Eubalaena australis*) are expected to be exposed above threshold criteria for PTS, TTS, and behavioural response. Sound exposure distribution estimates are determined by moving large numbers of simulated animals (animats) through a modelled time-evolving sound field, computed using specialised sound source and sound propagation models. This approach provides the most realistic prediction of the maximum expected SPL and SEL_{24h} for comparison against the relevant thresholds.

Section 3 explains the metrics used to represent underwater acoustic fields and the effect criteria considered. Section 4 details the methodology for predicting the source levels and modelling the sound propagation, including the specifications of the seismic source and all environmental parameters the propagation models require. Section 4 also describes the methodology used in the animal movement and exposure modelling simulations. Section 5 presents the results, which are then discussed and summarised in Section 6.

2. Modelling Scenarios

The Operational Area was broken up into three Assessment Areas with a nominal acquisition scenario defined for each, considering a triple 3480 in^3 seismic source, to assess the accumulated SEL. Sixteen single impulse sites were defined between the three Assessment areas, as well as seven standalone sites, including two representative sites along a 2D tie-line close to Area 2. The locations of the modelled sites are provided in Table 5, with an overview of the broad Operational Area shown in Figure 1, and a more detailed look at the lines and sites for each Assessment Area shown in Figures 2 to 4. The modelling assumed that a survey vessel sailed along survey lines at ~4.5 knots, with an impulse interval (inter-pulse interval) of 12.5 m.

The single impulse sites and accumulated SEL scenario were determined based on a proposed survey line plan. Table 4 shows the key parameters for each scenario, the acquisition period for each scenario excludes turn duration and will henceforth be referred to as 24 h. The locations were selected based on the survey line plans along with their proximity to key features and were inclusive of depths that support the greatest sound propagation towards Biologically Important Areas (BIA) near the Operational Area including southern right whale aggregation and migration, pygmy blue whale foraging and Australian sea lion foraging. The single impulse sites and accumulated SEL scenarios are considered representative of the range of water depths for locations within the Operational Area where the source will be active and the potential sound propagation characteristics that may arise during survey acquisition. Seafloor sound levels were assessed at nine different representative depths within the Operational Area ranging from a water depth of 114 to 1216 m (see Table 5). Only seafloor sound levels were assessed at the two sites along the 2D tie-line, and the depths were chosen to be representative of relevant densities and distributions for seafloor invertebrates.

Additional SPL receiver locations were chosen at key BIAs to assess possible impacts to marine fauna; the coordinates to these receivers are shown in Table 6 for cetaceans and Australian sea lions.

Since the original modelling was undertaken the Operational Area has been reduced with Assessment Area 3 now outside the Operational Area (see Figure 1). Modelling results for Area 3 are still valid for locations based on similar seismic source orientation (see Table 4), bathymetry, sound speed profile, and the geoacoustic profile (see Appendix D.3).

Table 4. Key parameters of the two accumulated sound exposure level (SEL) scenarios.

Scenario	Array	Impulse interval (m)	Tow direction (°)	Total impulses	Acquisition period (h)
1	Triple 3480 in^3 seismic source	12.5	132/312	12781	19.17
2			114/294	13529	20.29
3			125/305	14166	21.25

Table 5. Location details for the single impulse modelled sites.

Area	Site	Latitude	Longitude	MGA[1] Zone 54		Water depth (m)	Tow direction (°)
				X (m)	Y (m)		
1	1[2]	38.90809041° S	142.05632515° E	591588	5692892	870	312

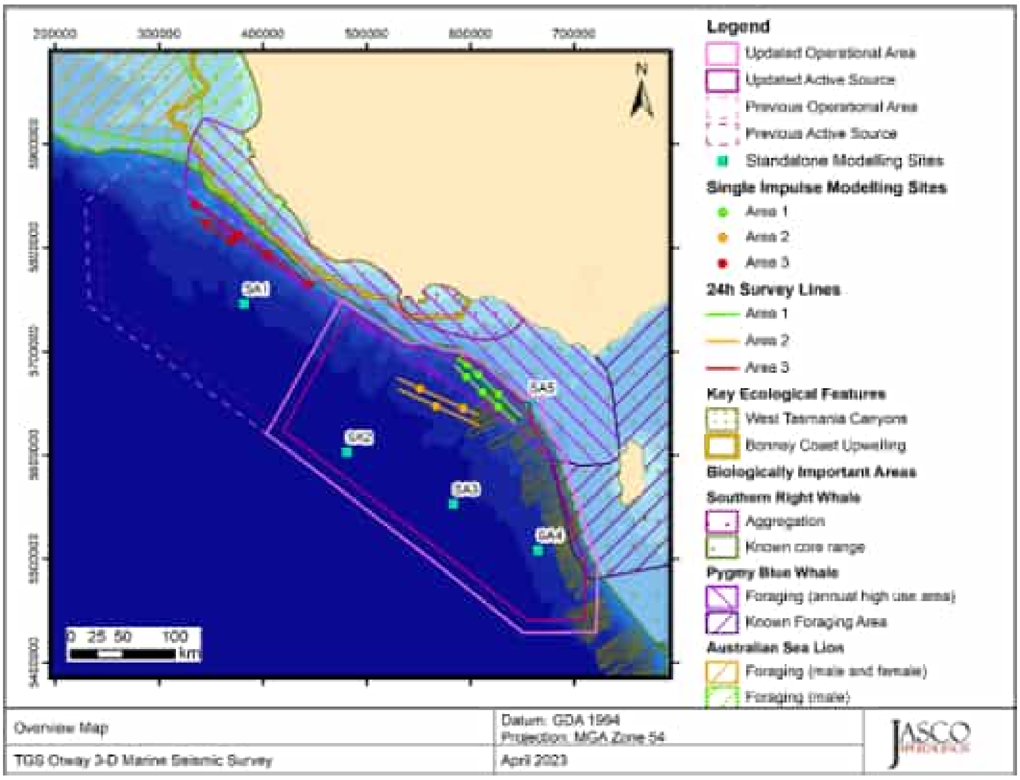

Figure 1. Overview of the modelled sites, acquisition lines, and features for the TGS Otway Basin 3-D Multi-client Marine Seismic Survey (MSS). Dotted lines show the previous Operational Area and Active Source Area while the corresponding solid lines show the updated lines with Assessment Area 3 excised. Modelling results will still be valid for locations with similar seismic source orientations and environmental properties.

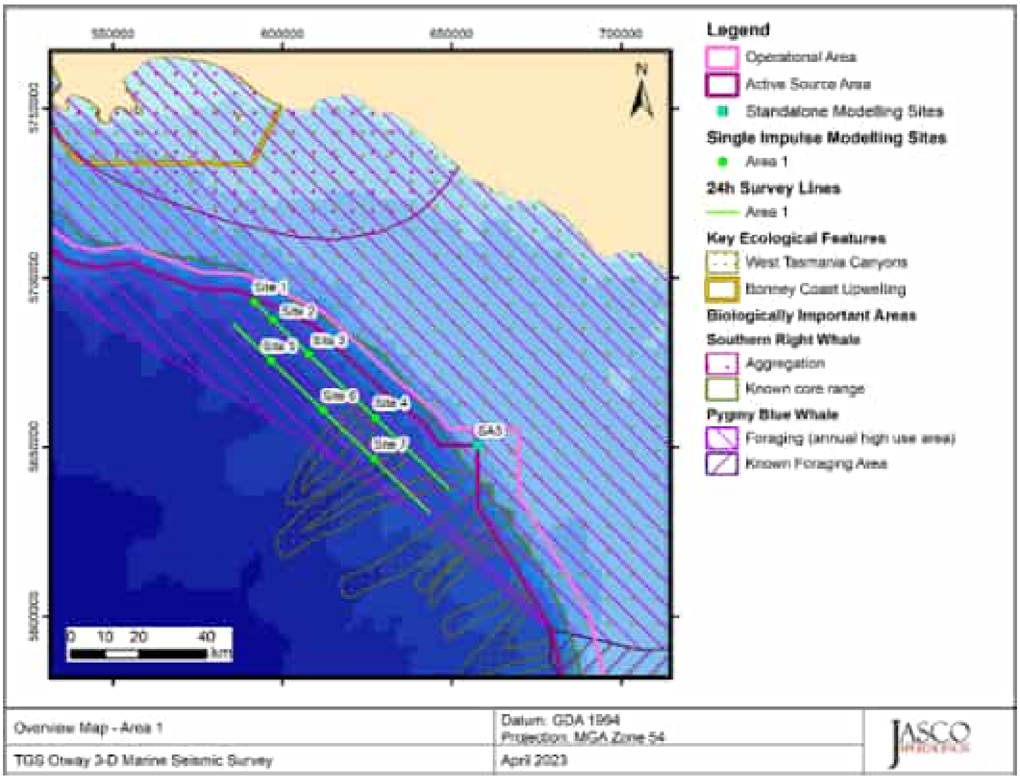

Figure 2. Area 1: Overview of the modelled sites, acquisition lines, and features for the TGS Otway Basin 3-D Multi-client Marine Seismic Survey (MSS).

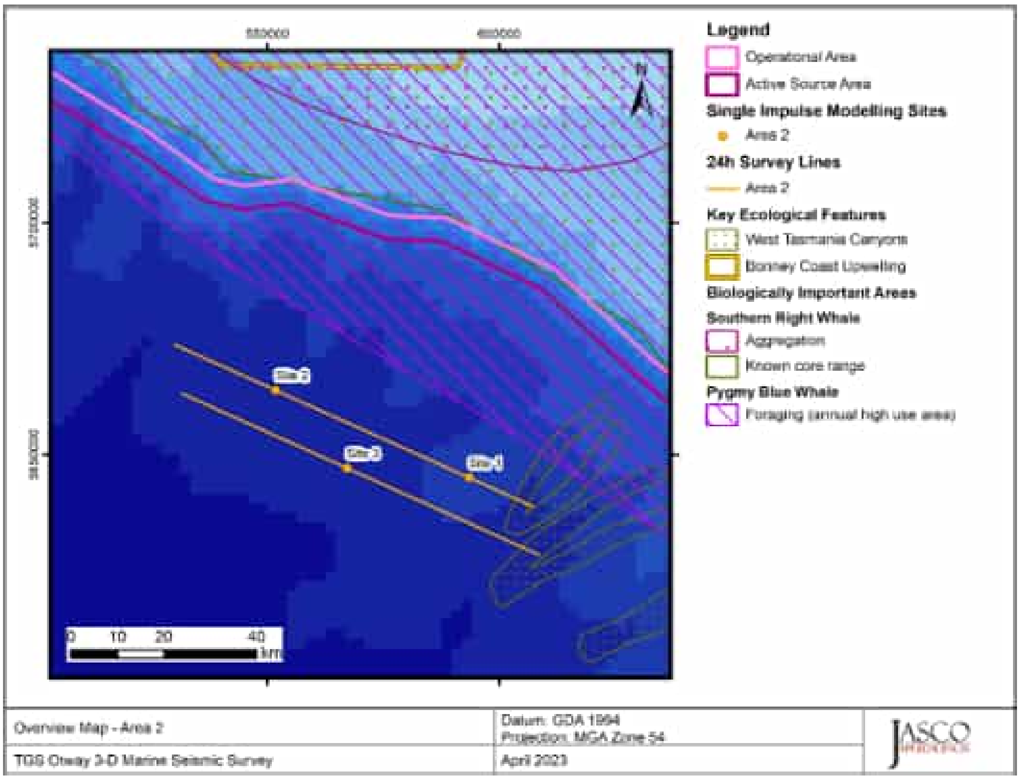

Figure 3. Area 2: Overview of the modelled sites, acquisition lines, and features for the TGS Otway Basin 3-D Multi-client Marine Seismic Survey (MSS).

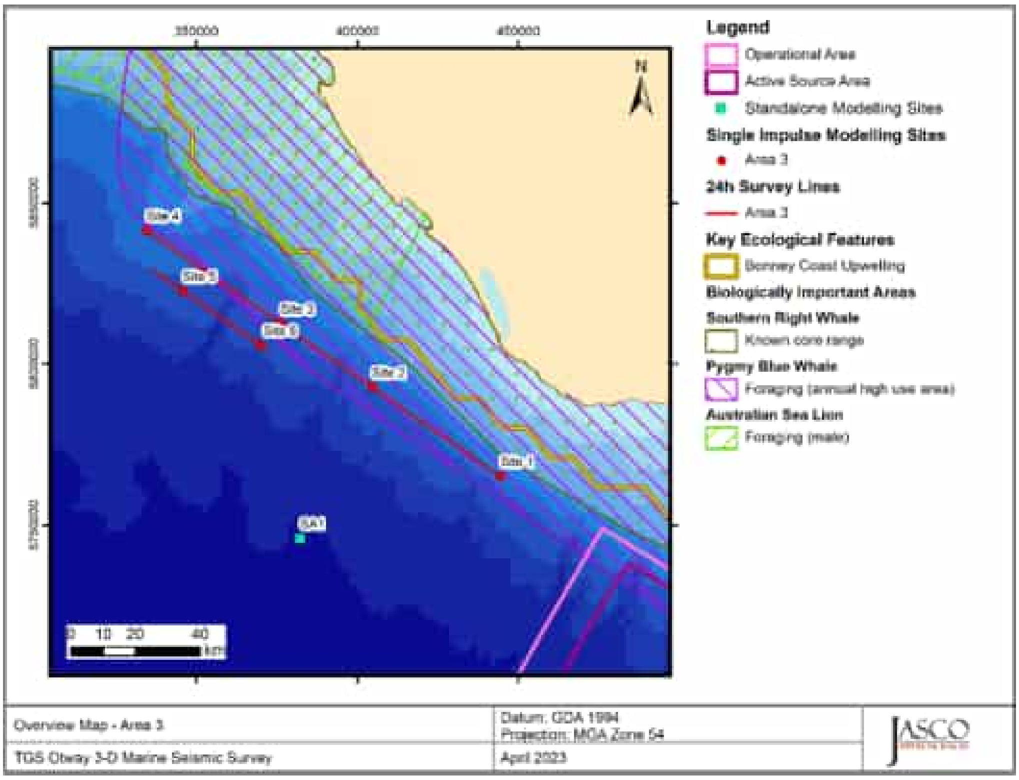

Figure 4. Area 3: Overview of the modelled sites, acquisition lines, and features for the TGS Otway Basin 3-D Multi-client Marine Seismic Survey (MSS). While the Assessment Area 3 modelling sites are not in the updated Operational Area the modelling results remain appropriate for locations with similar seismic source orientations and environmental properties.

Animal Movement modelling simulations were run for Assessment Area 1 for pygmy blue whales and southern right whales considering four scenarios, which are descripted in Table 7. In general, animats are randomly placed, or seeded, within the simulation boundary at a specified density (animats/km^2) within the species preferred depth range. During the simulation, if an animat's movement takes itself outside of its preferred depth range, it will begin to make movements (while still following the parameters within its species behaviour file) back towards its preferred depth range. For all simulations, animats were seeded at a nominal horizontal sampling density of 4 animats/km^2. Each of the animat simulations were run for a representative 24 h duration. The simulation area was selected to encompass a buffer of approximately 100 km from the centre, in any direction, with the same simulation extents being used for all four scenarios. Figure 5 shows an overview of the animat modelling simulation extents, along with the animat seeding areas for each scenario.

Table 7. JASMINE scenarios.

Scenario	Species	Description
1a	Pygmy Blue Whales, female	Unrestricted animat movements to ascertain exposure ranges to animats in all directions from the survey lines
	Pygmy Blue Whales, male	
1b	Pygmy Blue Whales, female	Restricted animat movements to the continental shelf to ascertain exposure ranges to animats on the continental shelf inboard from the survey lines
	Pygmy Blue Whales, male	
2a	Southern Right Whales, Mother & Calf	Restricted to known core range area to ascertain exposure ranges to animats on the continental shelf inboard from the survey lines
	Southern Right Whales, No Calf	
2b	Southern Right Whales, Mother & Calf	Restricted animat movements to the continental shelf to ascertain exposure ranges to animats on the continental shelf inboard from and including the survey lines
	Southern Right Whales, No Calf

3. Noise Effect Criteria

The perceived loudness of sound, especially impulsive noise such as from seismic airguns, is not generally proportional to the instantaneous acoustic pressure. Rather, perceived loudness depends on the pulse rise-time and duration, and the frequency content. Several sound level metrics, such as PK, SPL, and SEL, are commonly used to evaluate noise and its effects on marine life (Appendix A). The period of accumulation associated with SEL is defined, with this report referencing either a "per pulse" assessment or over 24 h. Appropriate subscripts indicate any applied frequency weighting; unweighted SEL is defined as required. The acoustic metrics in this report reflect the updated ISO standard for acoustic terminology, ISO/DIS 18405:2017 (2017).

Whether acoustic exposure levels might injure or disturb marine mammals is an active research topic. Since 2007, several expert groups have developed SEL-based assessment approaches for evaluating auditory injury, with key works including Southall et al. (2007), Finneran and Jenkins (2012), Popper et al. (2014), United States National Marine Fisheries Service (NMFS 2018), and Southall et al. (2019). The number of studies that have investigated the level of behavioural disturbance to marine fauna by anthropogenic sound has also increased substantially.

The following noise criteria and sound levels for this study were chosen because they include standard thresholds, thresholds suggested by the best available science, and sound levels presented in literature for species with no suggested thresholds (Sections 3.1–3.4 and Appendix A):

1. Peak pressure levels (PK; L_{pk}) and frequency-weighted accumulated sound exposure levels (SEL; $L_{E,24\text{h}}$) from (Southall et al. 2019) for the onset of Permanent Threshold Shift (PTS) and Temporary Threshold Shift (TTS) in marine mammals.
2. Marine mammal behavioural threshold based on the current US National Oceanic and Atmospheric Administration (NOAA 2019) criterion for marine mammals of 160 dB re 1 µPa (SPL; L_p) for impulsive sound sources.
3. Sound exposure guidelines for fish, fish eggs and larvae (including plankton) (Popper et al. 2014).
4. Peak pressure levels (PK; L_{pk}) and frequency-weighted accumulated sound exposure levels (SEL; $L_{E,24\text{h}}$) from Finneran et al. (2017) for the onset of permanent threshold shift (PTS) and temporary threshold shift (TTS) in turtles.
5. Sea turtle behavioural response threshold of 166 dB re 1 µPa (SPL; L_p) (NSF 2011), as applied by the US NMFS, along with a sound level associated with behavioural disturbance 175 dB re 1 µPa (SPL; L_p) (McCauley et al. 2000a, 2000b).
6. Peak-peak pressure levels (PK-PK; $L_{pk\text{-pk}}$) and particle acceleration (ms^{-2}) at the seafloor to help assess effects of noise on crustaceans through comparing to results in Day et al. (2016a), Day et al. (2019), Day et al. (2016b), Day et al. (2017) and Payne et al. (2008).
7. A sound level of 226 dB re 1 µPa (PK; L_{pk}) reported for comparing to Heyward et al. (2018) for sponges and corals.
8. An SPL human health assessment threshold of 145 dB re 1 µPa (SPL; L_p) for sound exposure to people swimming and diving derived from Parvin (2005), and considering Ainslie (2008).
9. An squid/octopus startle (inking) response sound level of 162 dB re 1 µPa^{2}s per-pulse SEL (L_E) (Fewtrell and McCauley 2012).

Additionally, to assess the size of the low-power zone required under the Australian Environment Protection and Biodiversity Conservation (EPBC) Act Policy Statement 2.1, Department of the Environment, Water, Heritage and the Arts (DEWHA 2008), the distance to an unweighted per-pulse SEL of 160 dB re 1 µPa^2·s (L_E) is reported.

The following subsections expand on the thresholds and sound levels for marine mammals, fish, sea turtles, fish eggs, fish larvae, and benthic invertebrates.

3.1. Marine Mammals

There are two categories of auditory threshold shifts or hearing loss: permanent threshold shift (PTS), an irreversible loss of hearing sensitivity, and Temporary Threshold Shift (TTS), a temporary reduction in an animal's hearing sensitivity as the result of receptor hair cells in the cochlea becoming fatigued.

To help assess the potential for the possible injury and hearing sensitivity changes in marine mammals, this report applies the criteria recommended by Southall et al. (2019), considering both PTS and TTS. These criteria, along with the applied behavioural criteria (NOAA 2019), are summarised in Table 8, with descriptions included in Appendix A.2.1 (auditory impairment) and Appendix A.2.2 (behavioural response), with frequency weighting explained in Appendix A.3. Of particular note, whilst the newly published Southall et al. (2021) provides recommendations and discusses nuances of assessing behavioural response, the authors do not recommend new numerical thresholds for onset of behavioural responses for marine mammals.

Table 8. Unweighted sound pressure level (SPL), 24 h sound exposure level (SEL_{24h}), and peak pressure (PK) thresholds for acoustic effects on marine mammals.

Hearing group	NOAA (2019)	Southall et al. (2019)			
	Behaviour	PTS onset thresholds[1] (received level)		TTS onset thresholds* (received level)	
	SPL (L_p; dB re 1 µPa)	Weighted SEL (L_E; dB re 1 µPa^2 s)	PK (L_{pk}; dB re 1 µPa)	Weighted SEL (L_E; dB re 1 µPa^2 s)	PK (L_{pk}; dB re 1 µPa)
Low-frequency cetaceans	160	183	219	168	213
High-frequency cetaceans		185	230	170	224
Very-high-frequency cetaceans		155	202	140	196
Otariid Seals		203	232	188	226

[1] Dual metric acoustic thresholds for impulsive sounds: Use whichever results in the largest isopleth for calculating PTS and TTS onset. If a non-impulsive sound has the potential of exceeding the peak sound pressure level thresholds associated with impulsive sounds, these thresholds should also be considered.
L_p-denotes sound pressure level period and has a reference value of 1 µPa.
L_{pk}, flat–peak sound pressure is flat weighted or unweighted and has a reference value of 1 µPa.
L_E - denotes cumulative sound exposure over a 24 h period and has a reference value of 1 µPa^{2}s.
Subscripts indicate the designated marine mammal auditory weighting.

To further assist in the assessment of potential behavioural responses by marine mammals, a graded probability of response for impulsive sounds using a frequency weighted SPL metric, as described in Wood et al. (2012), has been applied. Wood et al. (2012) defined behavioural response categories for sensitive species (including harbor porpoise and beaked whales), for migrating mysticetes, and all other species/behaviours. The migrating mysticete category has been applied in this analysis to southern right whales and pygmy blue whales, while all other species, including sperm whales, fall under "all other species/behaviour" category, to assess behavioural response to impulsive sounds (Table 9). The Wood et al. (2012) approach has been updated to consider the frequency weighting from Southall et al. (2019) for marine mammals as opposed to that from Southall et al. (2007).

Table 9. Behavioural response criteria used in this analysis marine mammals Probability of behavioural response frequency-weighted sound pressure level (SPL dB re 1 µPa). Probabilities are not additive. Adapted from Wood et al. (2012).

	Migrating mysticetes	All other species/behaviours
Frequency-weighted* SPL ($L_{p,LF}$; dB re 1 µPa)	Probability of response	
120	10%	
140	50%	10%
160	90%	50%
180		90%

* from Southall et al. (2019).

3.2. Fish, Fish Eggs, and Fish Larvae

In 2006, the Working Group on the Effects of Sound on Fish and Turtles was formed to continue developing noise exposure criteria for fish and turtles, work begun by a panel convened by NOAA two years earlier. The resulting guidelines included specific thresholds for different levels of effects and for different groups of species (Popper et al. 2014). These guidelines defined quantitative thresholds for three types of immediate effects:

- Mortality, including injury leading to death.
- Recoverable injury, including injuries unlikely to result in mortality, such as hair cell damage and minor haematoma.
- TTS.

Masking and behavioural effects can be assessed qualitatively, by assessing relative risk rather than by specific sound level thresholds. However, as these depend upon activity-based subjective ranges, these effects are not addressed in this report and are included in Table 10 for completeness only. Because the presence or absence of a swim bladder has a role in hearing, fish's susceptibility to injury from noise exposure varies depending on the species and the presence and possible role of a swim bladder in hearing. Thus, different thresholds were proposed for fish without a swim bladder (also appropriate for sharks and applied to whale sharks in the absence of other information), fish with a swim bladder not used for hearing, and fish that use their swim bladders for hearing. Turtles, fish eggs, and fish larvae are considered separately. Table 10 lists relevant effects thresholds from Popper et al. (2014).

The SEL metric integrates noise intensity over some period of exposure. Because the period of integration for regulatory assessments is not well defined for sounds that do not have a clear start or end time, or for very long-lasting exposures, it is required to define a time. Popper et al. (2014) recommend applying a standard period, where this is either defined as a justified fixed period or the duration of the activity; however, Popper et al. (2014) also included caveats about how long the fish will be exposed because they can move (or remain in location) and so can the source. Popper et al. (2014) summarises that in all TTS studies considered, fish that showed TTS recovered to normal hearing levels within 18–24 hours. Due to this, a period of accumulation of 24 hours has been applied in this study for SEL, which is similar to that applied for marine mammals in NMFS (2016, 2018) and Southall et al. (2019).

Additional information is provided in Appendix A.2.

Table 10. Criteria for seismic noise exposure for fish, adapted from Popper et al. (2014).

Type of animal	Mortality and Potential mortal injury	Impairment			Behaviour
		Recoverable injury	TTS	Masking	
Fish: No swim bladder (particle motion detection)	>219 dB SEL_{24h} or >213 dB PK	>216 dB SEL_{24h} or >213 dB PK	>>186 dB SEL_{24h}	(N) Low (I) Low (F) Low	(N) High (I) Moderate (F) Low
Fish: Swim bladder not involved in hearing (particle motion detection)	210 dB SEL_{24h} or >207 dB PK	203 dB SEL_{24h} or >207 dB PK	>>186 dB SEL_{24h}	(N) Low (I) Low (F) Low	(N) High (I) Moderate (F) Low
Fish: Swim bladder involved in hearing (primarily pressure detection)	207 dB SEL_{24h} or >207 dB PK	203 dB SEL_{24h} or >207 dB PK	186 dB SEL_{24h}	(N) Low (I) Low (F) Moderate	(N) High (I) High (F) Moderate
Fish eggs and fish larvae (relevant to plankton)	>210 dB SEL_{24h} or >207 dB PK	(N) Moderate (I) Low (F) Low	(N) Moderate (I) Low (F) Low	(N) Low (I) Low (F) Low	(N) Moderate (I) Low (F) Low

Peak sound level (PK) dB re 1 µPa; SEL_{24h} dB re 1µPa^2·s. All criteria are presented as sound pressure, even for fish without swim bladders, since no data for particle motion exist. Relative risk (high, moderate, or low) is given for animals at three distances from the source defined in relative terms as near (N), intermediate (I), and far (F).

3.3. Sea Turtles

There is a paucity of data regarding responses of turtles to acoustic exposure, and no studies of hearing loss due to exposure to loud sounds. Popper et al. (2014) suggested thresholds for onset of mortal injury (including PTS) and mortality for sea turtles and, in absence of taxon-specific information, adopted the levels for fish that do not hear well (suggesting that this likely would be conservative for sea turtles).

Finneran et al. (2017) presented revised thresholds for sea turtle injury and hearing impairment (TTS and PTS). Their rationale is that sea turtles have best sensitivity at low frequencies and are known to have poor auditory sensitivity (Bartol and Ketten 2006, Dow Piniak et al. 2012). Accordingly, TTS and PTS thresholds for turtles are likely more similar to those of fishes than to marine mammals (Popper et al. 2014).

McCauley et al. (2000b) observed the behavioural response of caged sea turtles—green (*Chelonia mydas*) and loggerhead (*Caretta caretta*)—to an approaching seismic airgun. For received levels above 166 dB re 1 µPa (SPL), the sea turtles increased their swimming activity, and above 175 dB re 1 µPa they began to behave erratically, which was interpreted as an agitated state. The 166 dB re 1 µPa level has been used as the threshold level for a behavioural response by NMFS and applied in the Arctic Programmatic Environment Impact Statement (PEIS) (NSF 2011). In addition the 175 dB re 1 µPa level from McCauley et al. (2000b) is recommended as a criterion for behavioural disturbance. The Recovery Plan for Marine Turtles in Australia (Department of the Environment and Energy et al. 2017) acknowledges the 166 dB re 1 µPa SPL reported by McCauley et al. (2000b) as the level that may result in a behavioural response to marine turtles. These thresholds are shown in Table 11.

Table 11. Acoustic effects of impulsive noise on sea turtles: Unweighted sound pressure level (SPL), 24 hour sound exposure level (SEL_{24h}), and peak pressure (PK) thresholds

Effect type	Criterion	SPL (L_p; dB re 1 µPa)	Weighted SEL_{24h} ($L_{E,24h}$; dB re 1 µPa²·s)	PK (L_{pk}; dB re 1 µPa)
Behavioural response	NSF (2011), McCauley et al. (2000b)	166	NA	
Behavioural disturbance		175		
PTS onset thresholds[1] (received level)	Finneran et al. (2017)	NA	204	232
TTS onset thresholds[1] (received level)			189	226

[1] Dual metric acoustic thresholds for impulsive sounds: Use whichever results in the largest isopleth for calculating PTS and TTS onset. If a non-impulsive sound has the potential of exceeding the peak sound pressure level thresholds associated with impulsive sounds, these thresholds should also be considered.
L_p denotes sound pressure level and has a reference value of 1 µPa.
$L_{pk,flat}$ denotes peak sound pressure and is flat weighted or unweighted and has a reference value of 1 µPa.
L_E denotes cumulative sound exposure over a 24 h period and has a reference value of 1 µPa²s.

3.4. Invertebrates

3.4.1. Benthic Invertebrates (Crustaceans and Bivalves)

Research is ongoing into the relationship between sound and its effects on crustaceans, including the relevant metrics for both effect and impact. Available literature suggests particle motion, rather than sound pressure, is a more important factor for crustacean and bivalve hearing. Water depth and seismic source size are related to the particle motion levels at the seafloor, with larger arrays and shallower water being related to higher particle motion levels, more likely relevant to effects on crustaceans and bivalves.

At the seafloor interface, crustaceans and bivalves are subject to particle motion stimuli from several acoustic or acoustically induced waves. These include the particle motion associated with an impinging sound pressure wave in the water column (the incident, reflected, and transmitted portions), substrate acoustic waves, and interface waves of the Scholte type. However, it is unclear which aspect(s) of these waves is/are most relevant to the animals, either when they normally sense the environment or their physiological responses to loud sounds so there is not enough information to establish similar criteria and thresholds as done for marine mammals and fish. Including recent research, such as Day et al. (2016b), current literature does not clearly define an appropriate metric or identify relevant levels (pressure or particle motion) for an assessment. This includes the consideration of what particle motion levels lead to a behavioural response, or mortality. Therefore, at this stage, we cannot propose authoritative thresholds to inform the impact assessment. However, levels can be determined for pressure metrics presented in literature to assist the assessment.

The pressure and acceleration examples provided in Day et al. (2016a)(Figures 11 and 12) indicate that the acceleration and pressure signals occurred simultaneously, which was interpreted as an indication that the waterborne sounds were responsible for the accelerations measured by the geophones. For clarity, it is important to distinguish that the acceleration from waterborne sound energy is *not* ground roll, which Day et al. (2016a) correctly define as the sound that propagates along the interface at a speed lower than the shear wave speed of the sediment. However, the report subsequently uses ground roll for all further discussions of particle acceleration. While Day et al. (2016a) discuss that they chose the simplest measure of ground roll, it should have been referring to as ‘the acceleration from waterborne sound energy’, or ‘waterborne acceleration’ for short.

For crustaceans, a PK-PK sound level of 202 dB re 1 µPa (Payne et al. 2008) is considered to be associated with no effect, and therefore applied in the assessment. Additionally for context related to different levels of potential impairment, the PK-PK sound levels determined for crustaceans in Day et al. (2016b), 209–212 dB re 1 µPa and 213 dB re 1 µPa from Day et al. (2019), are also included.

For bivalves, PK-PK sound levels of 212, and 213 are presented to allow comparison to the maximum sound levels measured in Day et al. (2016a) and Day et al. (2017) for scallops and pearl shell oyster.

Literature does not present a sound level associated with no impact, and as particle motion is the more relevant metric, particle acceleration from the seismic source has been presented for comparing the results in Table 7 of Day et al. (2016a). The maximum particle acceleration assessed for scallops was 37.57 ms^{-2}.

3.5. Human Health Assessment Threshold

Underwater, the human ear is about 20 dB less sensitive than it is in air at low frequencies (20 Hz), increasing to 40 dB at mid–frequencies (less than 1 kHz), and increasing to 70–80 dB less sensitive at higher frequencies (Parvin 1998). Divers who wear neoprene hoods have even higher hearing thresholds (lower sensitivity) above 500 Hz because the hood material absorbs high–frequency sounds (Sims et al. 1999). Exposure studies related to divers have typically focused on military sonar exposure, with little information on seismic surveys, and as such care is required when considering thresholds for recreational divers and swimmers, particularly for impulsive sounds such as seismic surveys (Ainslie 2008).

The auditory threshold of hearing under water was lowest at 1 kHz (70 dB re 1 µPa SPL) and increased for lower and higher frequencies to around 120 dB re 1 µPa at 20 Hz and at 20 kHz (Parvin 1998). Fothergill et al. (2000) and Fothergill et al. (2001) conducted controlled acoustic exposure experiments on military divers under fully controlled conditions at a US Ocean Simulation Facility and an US Open water test facility; in all tests, the diver were covered with soft or hard shell dive suits and their position and distance relative to sound source, signal characteristics and received levels were controlled and documented (Pestorius et al. 2009). A total of 89 male Navy divers were exposed to pure tone signals and sweeps between 160–320 Hz at SPLs up to 160 dB re 1 µPa. The divers were exposed to these sounds over 100 seconds at depths from 10 to 40 metres. The divers rated the sounds on a severity scale. For frequencies between 100 and 500 Hz, at a received SPL of 130 dB re 1 µPa, divers and swimmers detected body vibration. None of the divers tested rated levels of 140 dB re 1 µPa as “very severe”; however, at 157 dB re 1 µPa, sound was rated as “very severe” 19 % of the time. No physiological damage was observed at the highest levels tested: 160 dB re 1 µPa (Fothergill et al. 2001). In a subsequent study, recreational divers were exposed to tonal signals or 30 Hz sweeps at frequencies between 100 and 500 Hz at received levels of 130–157 dB re 1 µPa (Pestorius et al. 2009). Each exposure lasted for 7 s. Nine female and 17 male scuba divers were tested, all wearing full body neoprene wetsuits. Diver aversion and perception of body vibration were used as test parameters. The results showed no sex–specific differences. The results differed as a function of frequency – while test results showed a strong overall variation between subjects, signals at 100 Hz elicited the strongest aversion in all tests and even at 148 dB a few diver ratings indicated extreme aversion. Due to this and the strong variation between test subjects, the following exposure limit for both military and recreational divers was suggested as a conservative measure: For frequencies between 100 and 500 Hz, the maximum SPL should be 145 dB re 1 µPa over a maximum continuous exposure of 100 seconds or with a maximum duty cycle of 20 % and a maximum daily cumulative total of 3 h. The trading relation between the maximum SPL and duration was 4 dB per doubling of duration (e.g., 141 dB SPL for a 200 second exposure) (Pestorius et al. 2009).

Considering only frequencies between 100 and 500 Hz, Parvin (2005) suggested 145 dB re 1 µPa as a safety criterion for recreational divers and swimmers. Seismic impulses are broadband sources, and therefore, to be precautionary, the 145 dB re 1 µPa SPL suggested by Fothergill et al. (2001) and Parvin (2005) has been applied in this study as a broadband SPL and as a human health assessment threshold for recreational divers and swimmers. This does not imply that this level is associated with the onset of injury.

4. Methods

4.1. Parameter Overview

The specifications of the seismic sources and the environmental parameters used in the propagation models are described in detail in Appendix D. Individual sound speed profiles for September were considered for each area in this modelling study; this was identified as the seasonal period that would provide the farthest propagation (Appendix D.3.2) due to the presence of a slightly upward refracting sound speed profile.

Three distinct geological zones were identified within the Operational Area – shelf, slope, and deep. The shelf is generally characterised by varying layers of sand overlaying calcarenite, the slope by silty carbonate sand to semi-cemented limestone, and the deep by increasingly compacted clayey silt. Further details of the geoacoustic parameters are presented in Appendix D.3.3.

4.2. Acoustic Source Model

The pressure signature of the individual airguns and the composite decidecade-band point-source equivalent directional levels (i.e., source levels) of the 3480 in^3 seismic source were modelled with JASCO's Airgun Array Source Model (AASM). Although AASM accounts for notional pressure signatures of each seismic source with respect to the effects of surface-reflected signals on bubble oscillations and inter-bubble interactions, the surface-reflected signal (known as surface ghost) is not included in the far-field source signatures. The acoustic propagation models account for those surface reflections, which are a property of the propagating medium rather than the source.

AASM considers the following:

- Array layout,
- Volume, tow depth, and firing pressure of each airgun, and
- Interactions between different airguns in the array.

The seismic source was modelled over AASM's full frequency range, up to 25 kHz. Appendix B.1 details this model.

4.3. Sound Propagation Models

Three sound propagation models were used to predict the acoustic field around the seismic source:

- Combined range-dependent parabolic equation and Gaussian beam acoustic ray-trace model (MONM-BELLHOP, 5 Hz to 25 kHz).
- Full Waveform Range-dependent Acoustic Model (FWRAM, 5 to 1024 Hz).
- Wavenumber integration model (VSTACK, 10 to 1024 Hz).

The models were used in combination to characterise the acoustic fields at short and long ranges in terms of SEL, SPL, PK, and PK-PK. Appendix C details each model. MONM-BELLHOP was used to calculate SEL in a 360° area around each source location. FWRAM was used to model synthetic seismic pulses and to generate a generalised range-dependent SEL-to-SPL conversion function for the modelled sites. The range-dependent conversion function was applied to predicted per-pulse SEL results from MONM-BELLHOP to estimate SPL values. FWRAM was also used to calculate water column PK and PK-PK levels.

VSTACK was used to calculate close range PK, PK-PK, and particle motion levels along four transects at the seafloor along the endfire and broadside directions of the seismic source at nine water depths: 114, 220, 450, 569, 674, 870, 903, 1139, and 1216 m.

4.4. Accumulated SEL

During a seismic survey, new sound energy is introduced into an environment with each pulse from the seismic source. While some impact criteria are based on the per-pulse energy released, others, such as the marine mammal and fish SEL criteria used in this report (Sections 3.1–3.4), account for the total acoustic energy marine fauna is subjected to over a specified duration, defined in this report as 24 h. An accurate assessment of the accumulated sound energy depends not only on the parameters of each seismic impulse but also on the number of impulses delivered in a duration and the relative positions of the impulses.

When there are many seismic pulses, it becomes computationally prohibitive to perform sound propagation modelling for every single event. The distance between the consecutive seismic impulses is small enough, however, that the environmental parameters that influence sound propagation are virtually the same for many impulse points. The acoustic fields can, therefore, be modelled for a subset of seismic pulses and estimated at several adjacent ones. After sound fields from representative impulse locations are calculated, they are adjusted to account for the source position for nearby impulses.

Although estimating the accumulated sound field with the described approach is not as precise as modelling sound propagation at every impulse location, small-scale, site-specific sound propagation features tend to blur and become less relevant when sound fields from adjacent impulses are summed. Larger scale sound propagation features, primarily dependent on water depth, dominate the cumulative field. The accuracy of the present method acceptably reflects those large-scale features, thus providing a meaningful estimate of a wide area SEL field in a computationally feasible framework.

To produce the map of accumulated received sound level distributions and calculate distances to specified sound level thresholds within each Assessment Area, the maximum-over-depth level was calculated at each sampling point within the modelled Area. The radial grids of maximum-over-depth and seafloor sound levels for each impulse were then resampled (by linear triangulation) to produce a regular Cartesian grid. The sound field grids from all impulses were summed (Equation A-5) to produce the cumulative sound field grid with cell sizes of 20 m. The contours and threshold ranges were calculated from these flat Cartesian projections of the modelled acoustic fields. The single-impulse SEL fields were computed over model grids approximately 200 × 200 km, which encompasses the full area of the cumulative grid (the entire Assessment Area).

The unweighted (fish) and frequency-weighted SEL_{24h} results were rendered as contour maps, including contours that focus on the relevant criteria-based thresholds. Only contours at ranges larger than the nearfield of the seismic source were rendered.

4.5. Geometry and Modelled Regions

To assess sound levels with MONM-BELLHOP, the sound field modelling calculated propagation losses up to distances of 100 km from the source in each cardinal direction at each single impulse site, with a horizontal separation of 20 m between receiver points along the modelled radials. The sound fields were modelled with a horizontal angular resolution of $\Delta\theta = 2.5°$ for a total of N = 144 radial planes. Receiver depths were chosen to span the entire water column over the modelled areas, from 2 m to a maximum of 5635 m, with step sizes that increased with depth. To supplement the MONM results, high-frequency results for propagation loss were modelled using BELLHOP for frequencies from 1.25 to 25 kHz. The MONM and Bellhop results were combined to produce results for the full frequency range of interest.

FWRAM was run to 100 km, but only along four radials at the selected single impulse sites (fore and aft endfire, and port and starboard broadside) for computational efficiency. This was done to compute SEL-to-SPL conversions (see Appendix D.2) but also to quantify water column PK and PK-PK. The horizontal range step is dependent on frequency and ranges from 50 m at lower frequencies to 10 m above 800 Hz.

The maximum modelled range for VSTACK for each modelled water depth was 1000 m. A variable receiver range increment that increased away from the source was used, which increased from 10 to 25 m. Received levels were computed for receivers at 5 and 50 cm above the seafloor to assist in assessing invertebrates and fish, respectively.

4.6. Animal Movement and Exposure Modelling

4.6.1. Methodology

The JASCO Animal Simulation Model Including Noise Exposure (JASMINE) was used to predict the exposure of animats to sound arising from the seismic activity. JASMINE integrates the predicted sound field with biologically meaningful movement rules for each marine mammal species (pygmy blue whales and southern right whales for the current analysis) that results in an exposure history for each animat in the model. In JASMINE, the sound received by the animats is determined by the proposed seismic operations. As illustrated in Figure 6, animats are programmed to behave like the marine animals that may be present in an area. The parameters used for forecasting realistic behaviours (e.g., diving and foraging depth, swim speed, surface times) are determined and interpreted from marine mammal studies (e.g., tagging studies) where available, or reasonably extrapolated from related or comparable species. For cumulative metrics, an individual animat’s sound exposure levels are summed over a 24 h duration to determine its total received energy, and then compared to the relevant threshold criteria. For single-exposure metrics, the maximum exposure is evaluated against threshold criteria for each 24 h period. For additional information on JASMINE, see Appendix D.4.

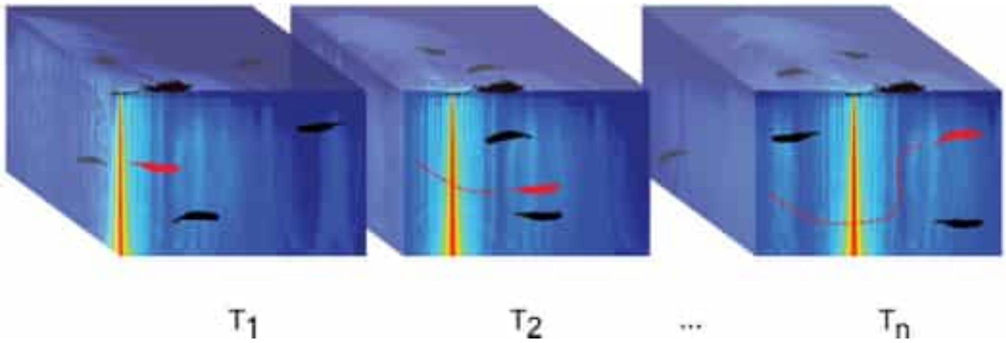

Figure 6. Depiction of animats in a moving sound field. Example animat (red) shown moving with each time step (T_n). The acoustic exposure of each animat is determined by where it is in the sound field, and its exposure history is accumulated as the simulation steps through time.

The simulation was run for a representative period of 24 h to coincide with the acoustic modelling effort. The exposure criteria for impulsive sounds (described in Section 3) were used to determine the number of animats that exceeded thresholds. To generate statistically reliable probability density functions, model simulations were run with animat sampling densities of 4 animats/km^2. The modelling results are not related to real-world density estimates for pygmy blue whales and southern right whales within the BIA or known core range area, as the number of animals potentially exposed is not calculated. The location of the acoustic source and the BIA/known core range BIA are shown in Figure 1. To evaluate PTS, TTS and behavioural response, exposure results were obtained using detailed behavioural information for pygmy blue whales and southern right whales (described in Section 4.6.3 and Section 4.6.4). Table 7 summarises the modelled scenarios. Figure 5 illustrates the differences between the corresponding seeding areas.

The seismic source was modelled as a vessel towing an airgun array at a speed of ~4.5 knots, with an impulse interval of 12.5 m. The simulated source tracks followed a racetrack configuration with acquisition not occurring on turns. At the time and location of each seismic pulse, the modelled source location with the most similar depth was selected for exposure modelling due to the variation of the bathymetry in that area. The track lines along with the acoustic modelling locations are shown in Figure 1.

Figure 7 shows an example animat track (generated for information purposes only and not related to the results presented in this report) with associated received levels from a stationary point source. The top panel displays the animat track relative to the point source, and the bottom panel displays the accumulation of SEL_{24h} for TTS and PTS criteria. At approximately 50 seconds, the animat is exposed so that the TTS threshold is exceeded, and at approximately 700 seconds the animat is exposed so that the PTS threshold is exceeded.

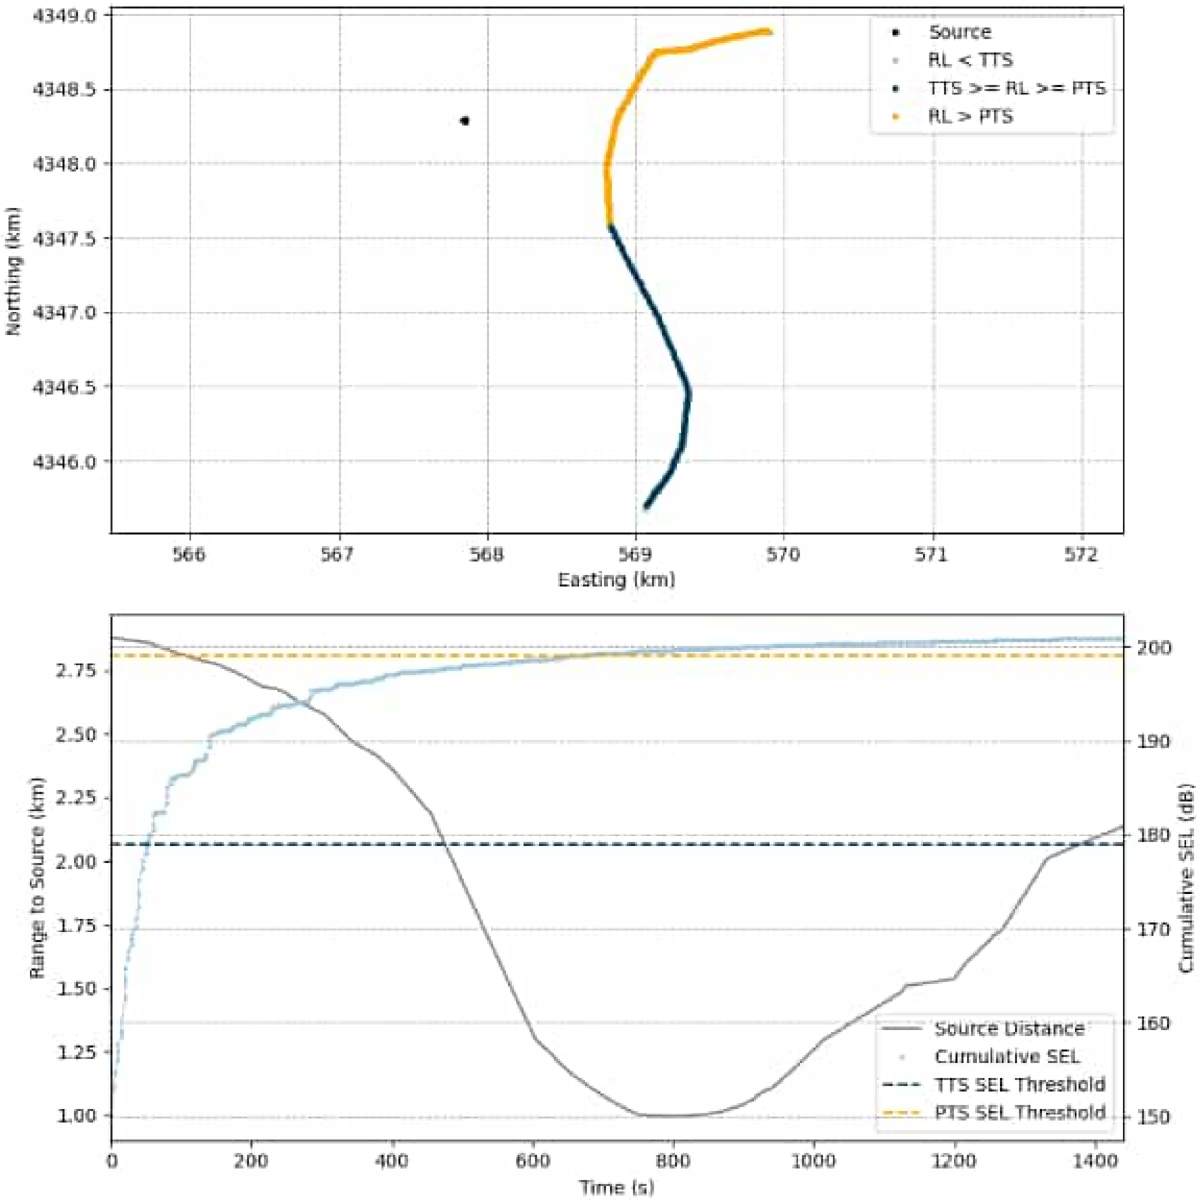

Figure 7. Animat track from an example simulation showing northward movement over a duration of 1400 seconds. The upper panel shows a plan view of both a stationary point source and a foraging animat. Animat steps are coloured to indicate whether the accumulated sound energy at that point has exceeded either TTS or PTS threshold criteria. The lower panel shows horizontal distance in kilometres to the source (grey line; left y-axis) and cumulative 24-h SEL ($L_{E,24h}$, dB re 1 µPa²·s; right y-axis) as a function of time. Note that this example does not use data from the current study.

4.6.2. Exposure–based Radial Distance Estimation

The results from the animal movement and exposure modelling provided a way to estimate radial distances to effect thresholds. The distance to the closest point of approach (CPA) for each of the animats was recorded. The $ER_{95\%}$ (95% Exposure Range) is the horizontal distance that includes 95% of the animat CPAs that exceeded a given effect threshold (see Section 3.1). Within the $ER_{95\%}$, there is generally some proportion of animats that do not exceed threshold criteria. This occurs for several reasons, including the spatial and temporal characteristics of the sound field and the way in which animats sample the sound field over time, both vertically and horizontally. The sound field varies as a function of range, depth, and azimuth based on a variety of factors such as bathymetry, sound speed profile, and geoacoustic parameters. The way the animats sample the sound field depends upon species-typical swimming and diving characteristics (e.g., swim speed, dive depth, surface intervals, and reversals). Furthermore, even within a particular species definition, these characteristics vary with behavioral state (e.g., feeding, migrating). As this results in some animats not exceeding threshold criteria even within the $ER_{95\%}$, the probability that an animat within that distance was exposed above threshold within the $ER_{95\%}$ was also computed (P_{exp}) to provide additional context.

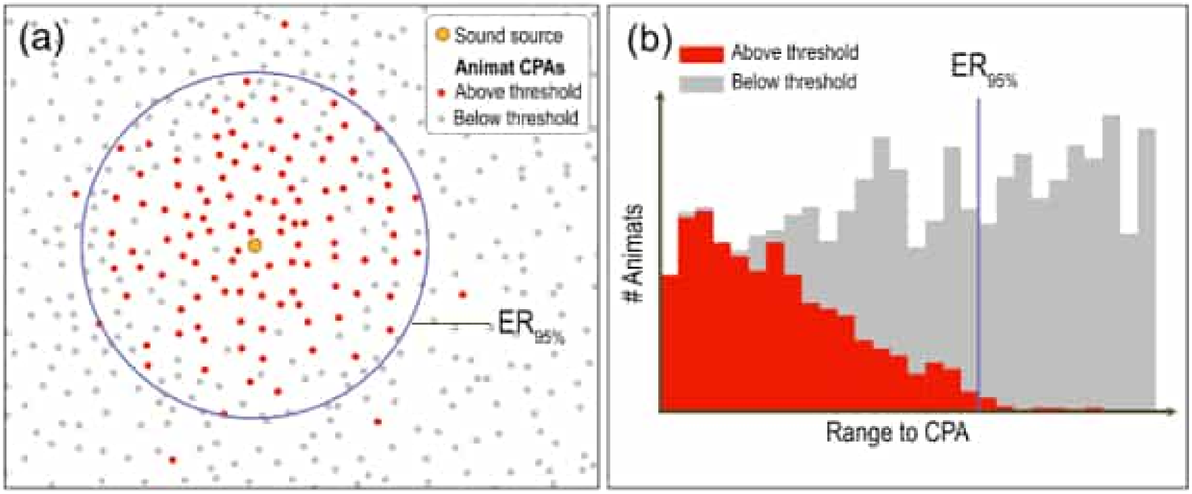

Figure 8. Example distribution of animat closest points of approach (CPAs). Panel (a) shows the horizontal distribution of animats near a sound source. Panel (b) shows the distribution of distances to animat CPAs. The 95% exposure range ($ER_{95\%}$) is indicated in both panels.

4.6.3. Pygmy Blue Whale Behaviour Profile

The project area partially overlaps with a possible foraging Biologically Important Area (BIA) for pygmy blue whales (DoE (AU) 2015-2025). Therefore, only foraging behaviours were considered in the species profile.

Data on fine-scale foraging behaviour are not currently available for pygmy blue whales. Therefore, data from multi-sensor tags deployed on blue whales from the North Pacific were used to inform the feeding behaviours. Irvine et al. (2019) used intermediate-duration archival tags (SPLASH MK10) attached to eight blue whales off the coast of California and was able to determine two feeding modes based on depth: shallow and deep. These two feeding behaviours differed further between males and females, with females generally diving deeper than males during both shallow and deep feeding. In order to account for these differences, female and male pygmy blue whales were modelled separately, with values derived from Irvine et al. (2019). The remaining parameters for feeding behaviour were primarily sourced from Goldbogen et al. (2011), who deployed 25 multi-sensor suction cup tags (DTAGs) on blue whales off the coast of California. The exception was the value for travel speed, which was derived from satellite tags deployed on pygmy blue whales off southern Australia (Möller et al. 2020).

4.6.4. Southern Right Whale Behaviour Profile

The project area is located near the known core range area for southern right whales.

September (the worst-case scenario indicated by the acoustic modelling) corresponds closest to the end of their calving/breeding season and the start of their migration (McCauley 2021). At this time, most pregnant females will likely have given birth, and sightings of mother/calf pairs have been documented in this area (Stamation et al. 2020). The behaviour of right whale mother/calf pairs can be dramatically different from other demographics, particularly in regards to the amount of time spent resting at the surface (Cusano et al. 2019, Nielsen et al. 2019). Therefore, separate behavioural profiles were modelled for mother/calf pairs and for all other demographics, with only migrating behaviours included. The behaviour of migrating southern right whales was modelled to reflect animats transiting through the known core range area on a 312º track for the northward migration. This represents the animals migrating along the west coast of Australia to their breeding grounds in Indonesia (Double et al. 2014, Thums and Ferreira 2021).

Fine-scale behavioural data on southern right whales are limited, however travel speed was derived from satellite-tagged southern right whales (Mackay et al. 2020). The remaining parameters used for the species profiles were primarily sourced from multi-sensor tags (DTAGs) deployed on North Atlantic right whales (Baumgartner and Mate 2003, Nousek McGregor 2010, Dombroski et al. 2021).

5. Results

5.1. Acoustic Source Levels and Directivity

AASM (Section 4.2) was used to predict the horizontal and vertical overpressure signatures and corresponding power spectrum levels for the seismic source, with results provided in Appendix B.3 along with the horizontal directivity plots for the selected source.

Table 12 shows the PK and per-pulse SEL source levels in the horizontal-plane broadside (perpendicular to the tow direction), endfire (along the tow direction), and vertical directions for the modelled triple 3480 in^3 seismic source. The vertical source level that accounts for the 'surface ghost' (the out of phase reflected pulse from the water surface) is also presented to make it easier to compare the output of other seismic source models.

Figure B-2 in Appendix B.3 shows the broadside, endfire, and vertical overpressure signature and corresponding power spectrum levels for the source. The signature consists of a strong primary peak, related to the initial release of high-pressure air, followed by a series of pulses associated with bubble oscillations. Most energy was produced at frequencies below 500 Hz. Frequency-dependent peaks and nulls in the spectrum result from interference among airguns in the source and correspond with the volumes and relative locations of the airguns to each other.

Table 12. Far-field source level specifications for the triple 3480 in^3 seismic source, for a 7 m tow depth. Source levels are for a point-like acoustic source with equivalent far-field acoustic output in the specified direction. Sound level metrics are per-pulse and unweighted.

Direction	Peak source pressure level ($L_{S,pk}$; dB re 1 µPa m)	Per-pulse source SEL ($L_{S,E}$; dB 1 µPa^{2}m^{2}s)	
		10–2000 Hz	2000–25000 Hz
Broadside	248.9	225.1	185.3
Endfire	247.7	224.9	190.4
Vertical	258.3	231.2	197.6
Vertical (surface affected source level)	258.3	233.8	200.6

5.2. Per-pulse Sound Fields

This section presents the per-pulse sound fields in terms of maximum-over-depth SPL, SEL, PK, and seafloor PK and PK-PK. The different metrics are presented for the following reasons:

- SPL sound fields were used to determine the distances to marine mammal and turtle behavioural thresholds (see Sections 3.1 and 3.3).
- Per-pulse SEL sound fields are used as inputs into the 24 h SEL scenario and to provide context for the range to 160 dB re 1 µPa^2·s, relevant for the EPBC Act Policy Statement 2.1 (DEWHA 2008).
- PK metrics within the water column are relevant to thresholds and guidelines for marine mammals, sea turtles, fish, fish eggs, and larvae (as well as plankton; see Sections 3.1–3.3).
- PK metrics at the seafloor are relevant to guidelines for fish, fish eggs, and larvae (see Section 3.3) and the sound level for no effect on corals and sponges.

- PK-PK metrics at the seafloor are relevant to sound levels used in assessing effects on benthic invertebrates (Section 3.4.1).

The maximum and 95% distances to per-pulse SEL and SPL metrics are presented in the following:

- Area 1 – Tables 13 and 14
- Area 2 – Tables 19 and 20
- Area 3 – Tables 22 and 23
- Standalone Sites – Tables 28 and 29

The threshold for diver human health assessment from Parvin (2005) are presented for inshore, offshore, and longshore directions in the following:

- Area 1 – Table 15
- Area 3 – Table 24

The SPL sound fields, and distances to relevant isopleths can be visualised on the contour maps presented in the following:

- Area 1 – Figures 9 to 15
- Area 2 – Figures 16 to 18
- Area 3 –Figures 19 to 24
- Standalone Sites – Figures 25 to 29

The SEL sound fields, and distances to relevant isopleths can be visualised on the contour maps presented in Appendix F.

The SPL sound fields are also presented as vertical slices for selected sites along the endfire and broadside directions out to 100 km, with the airgun array in the centre (Figures 30 to 32).

Maximum distances to maximum-over-depth water column PK thresholds were calculated for twelve modelled single impulse sites, and presented in Tables 16, 21, 25 and 30. Seafloor sound levels were assessed at nine different representative depths within the Operational Area and Tables 17, 18, 26, 27 and 31 to 33 present the PK and PK-PK results.

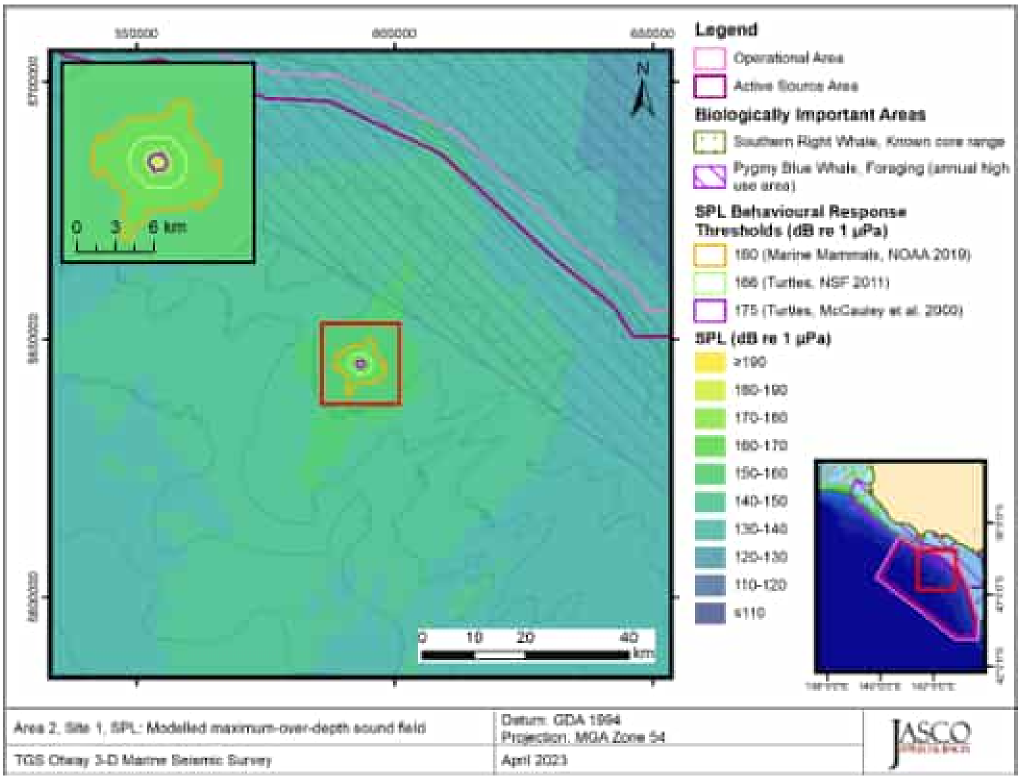

Figure 16. *Area 2, Site 1, triple 3480 in^3 source, tow azimuth 294°, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

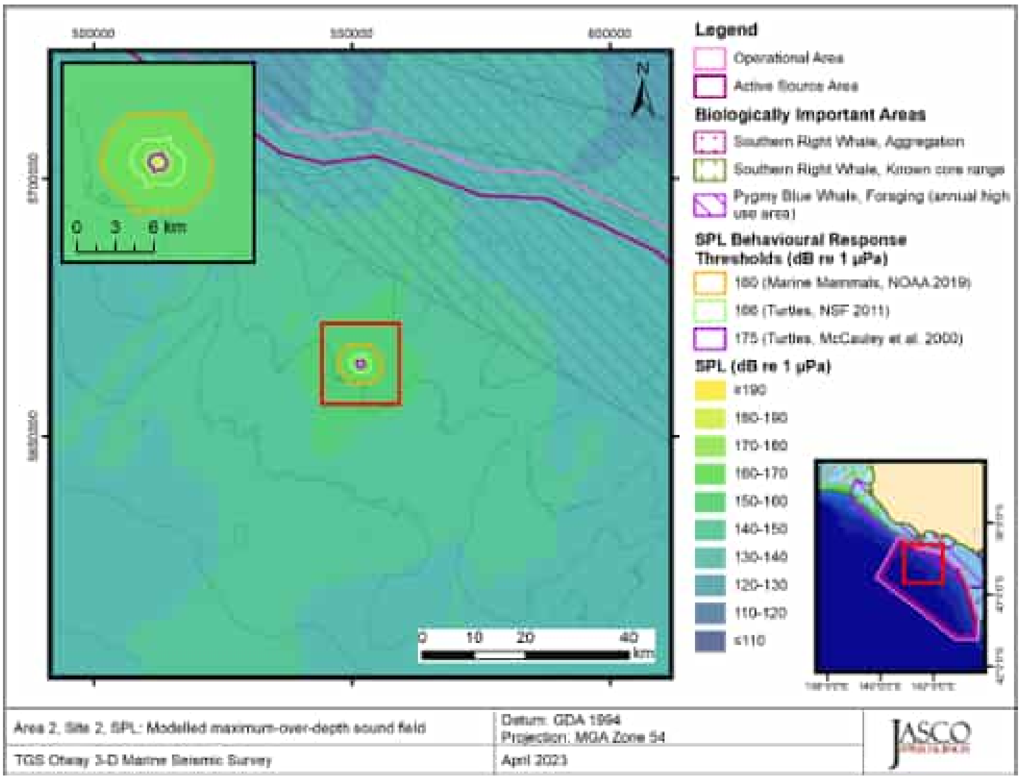

Figure 17. *Area 2, Site 2, triple 3480 in^3 source, tow azimuth 294°, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

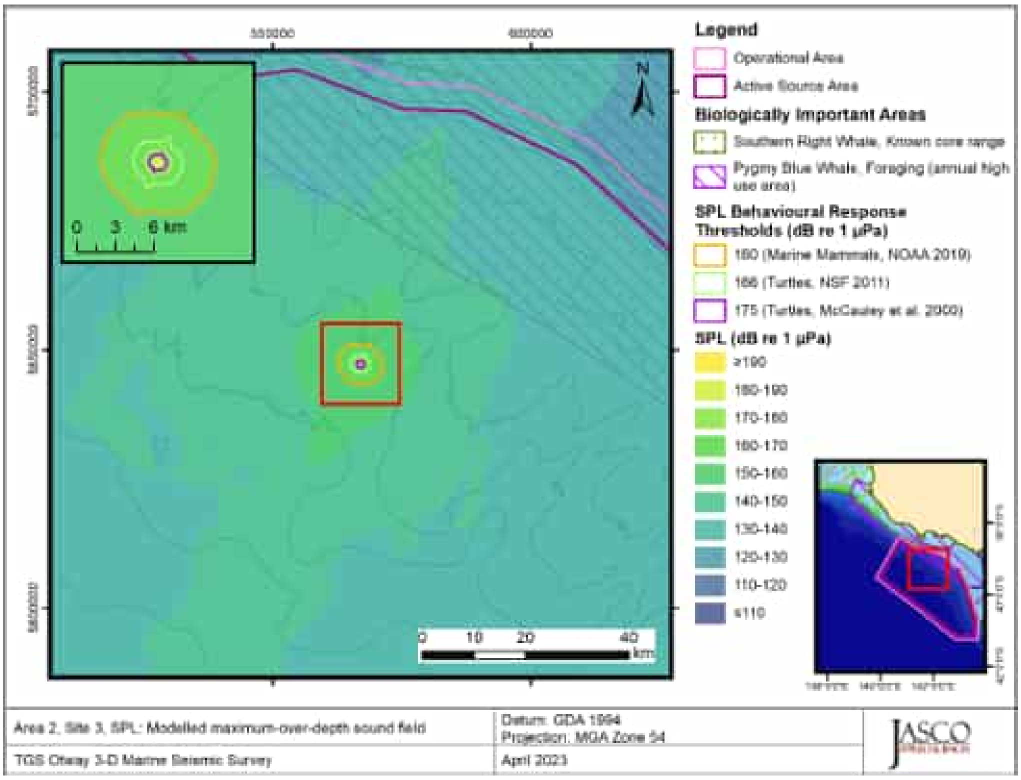

Figure 18. *Area 2, Site 3, triple 3480 in^3 source, tow azimuth 114°, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

5.2.2.3. Area 3

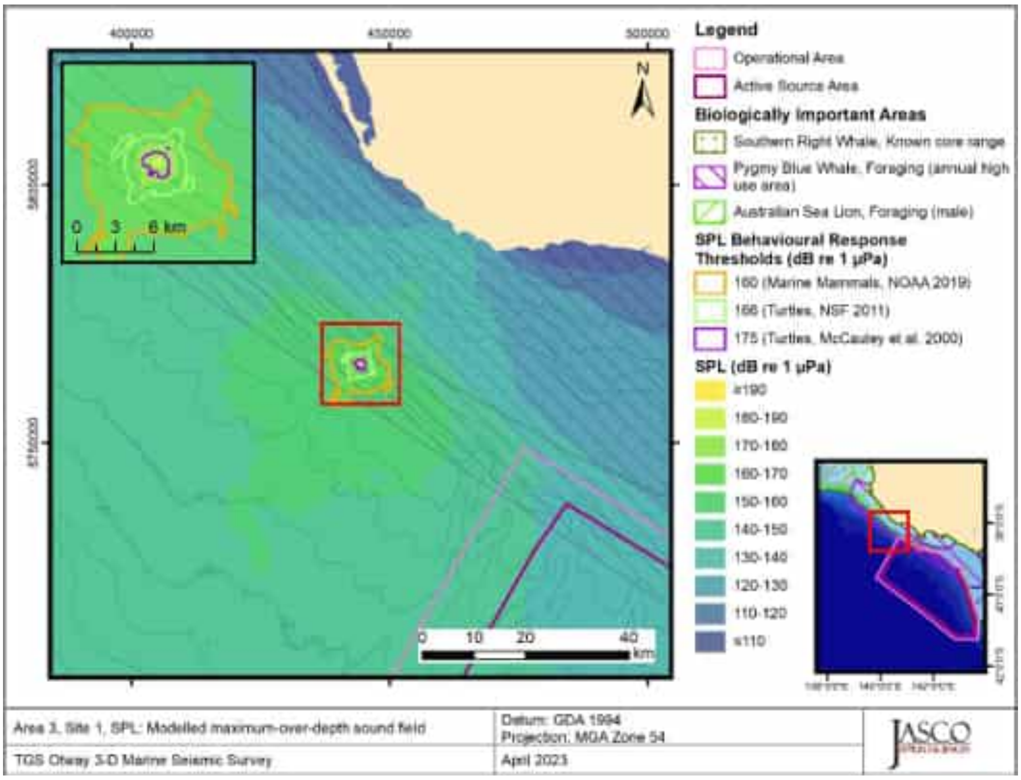

Figure 19. *Area 3, Site 1, triple 3480 in³ source, tow azimuth 305º, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

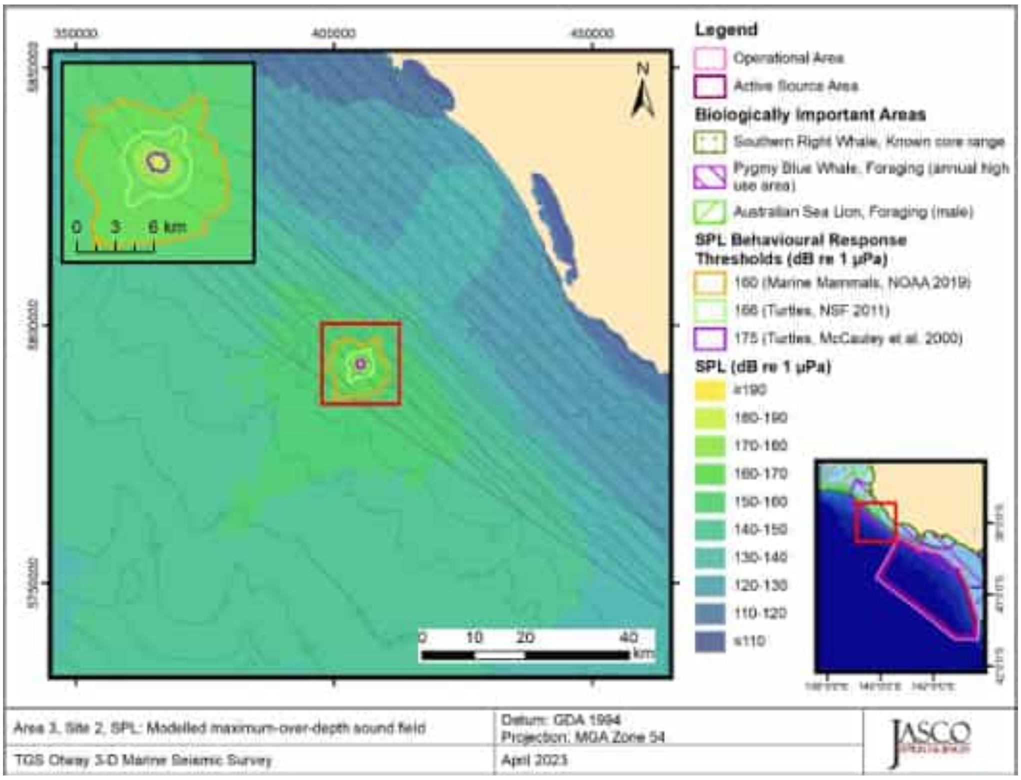

Figure 20. *Area 3, Site 2, triple 3480 in³ source, tow azimuth 305º, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

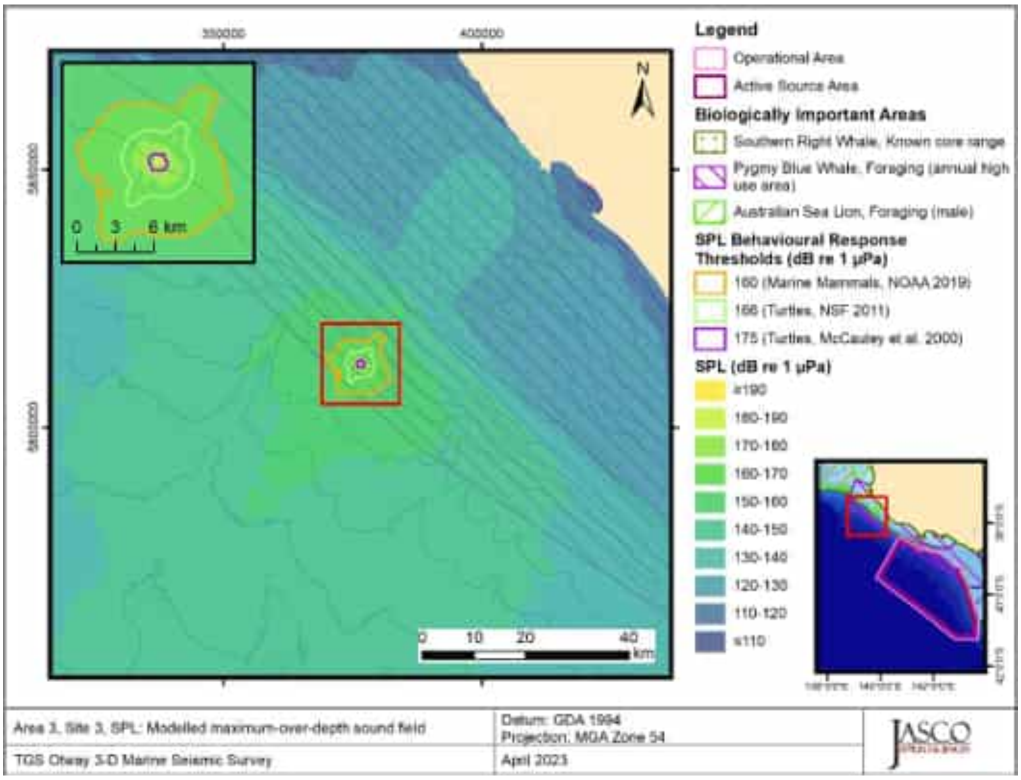

Figure 21. *Area 3, Site 3, triple 3480 in³ source, tow azimuth 305º, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

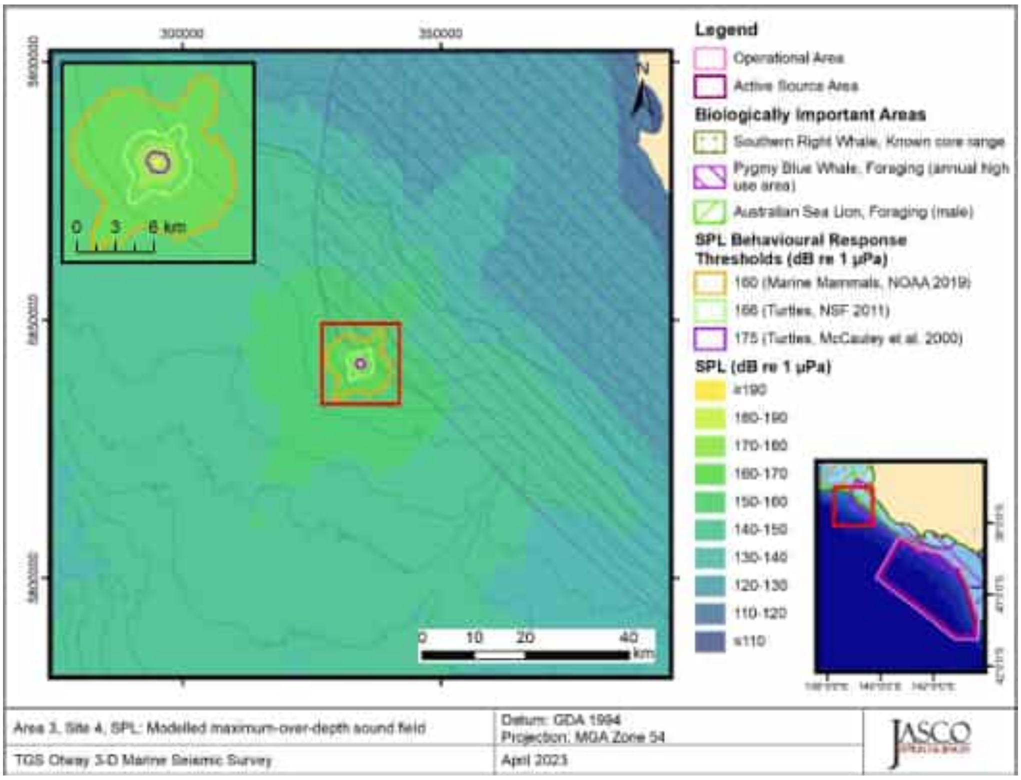

Figure 22. *Area 3, Site 4, triple 3480 in³ source, tow azimuth 305°, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

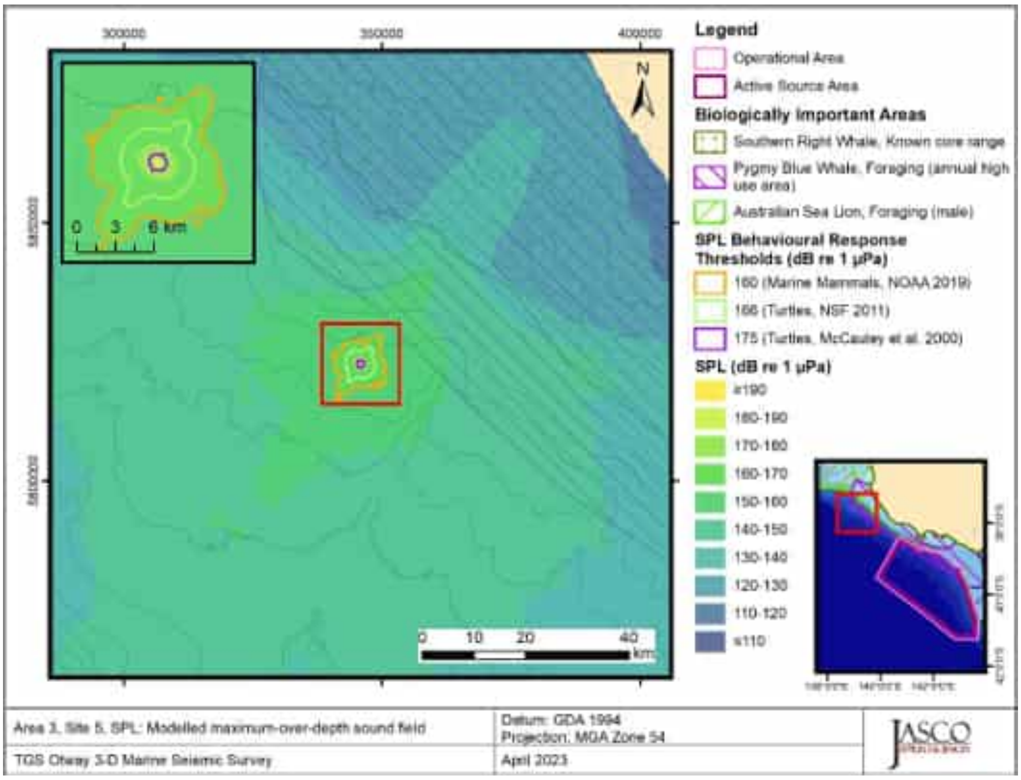

Figure 23. *Area 3, Site 5, triple 3480 in³ source, tow azimuth 125°, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

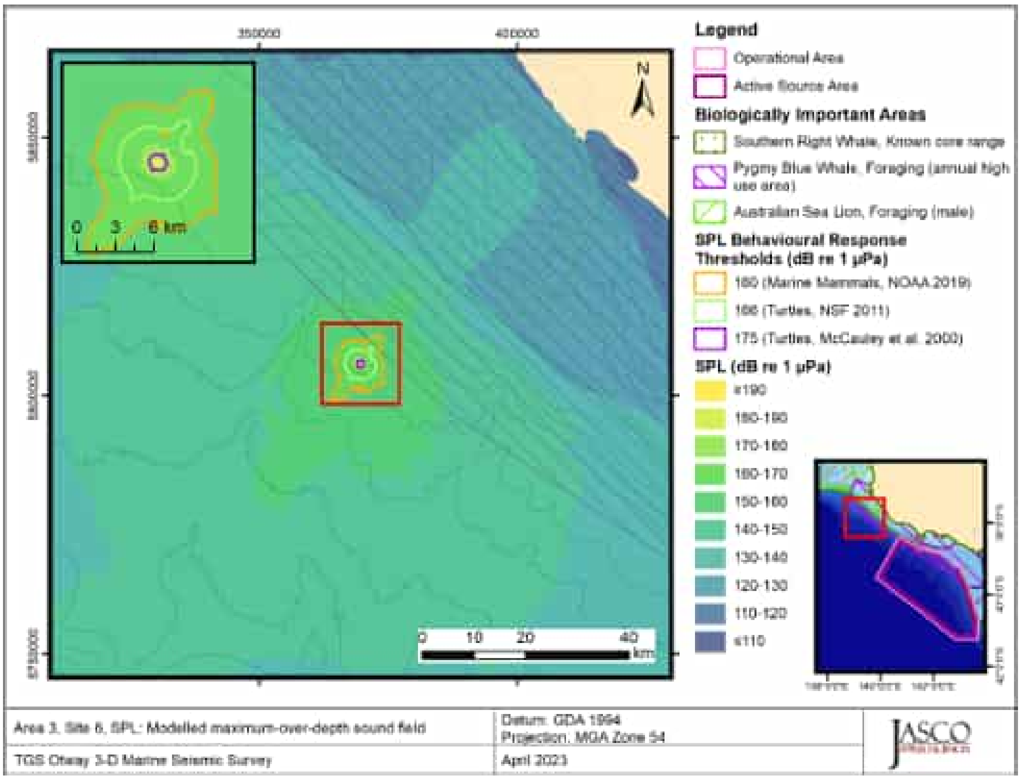

Figure 24. *Area 3, Site 6, triple 3480 in³ source, tow azimuth 125°, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

5.2.2.4. Standalone Sites

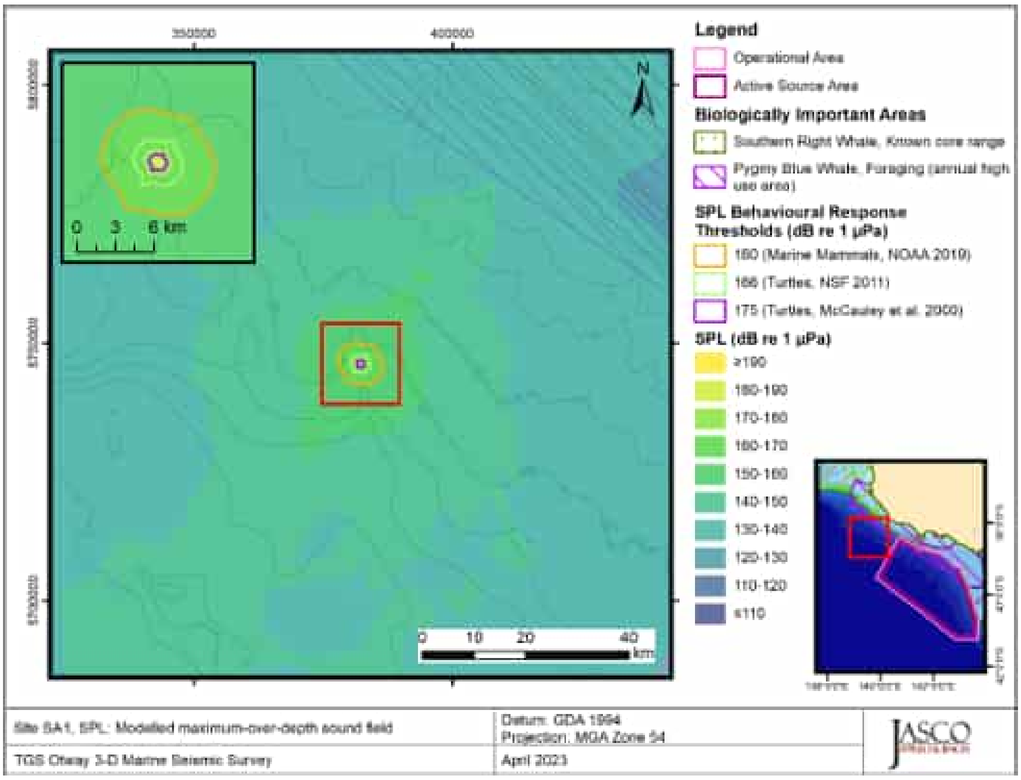

Figure 25. *Standalone Site 1, triple 3480 in³ source, tow azimuth 305º, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

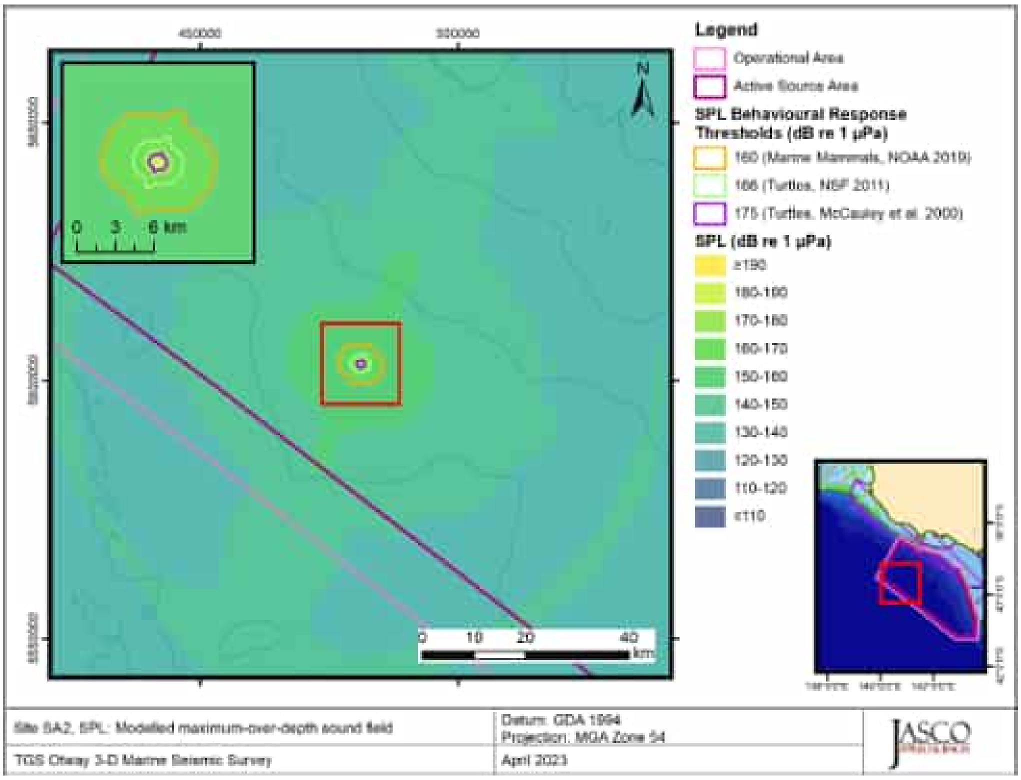

Figure 26. *Standalone Site 2, triple 3480 in³ source, tow azimuth 292º, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

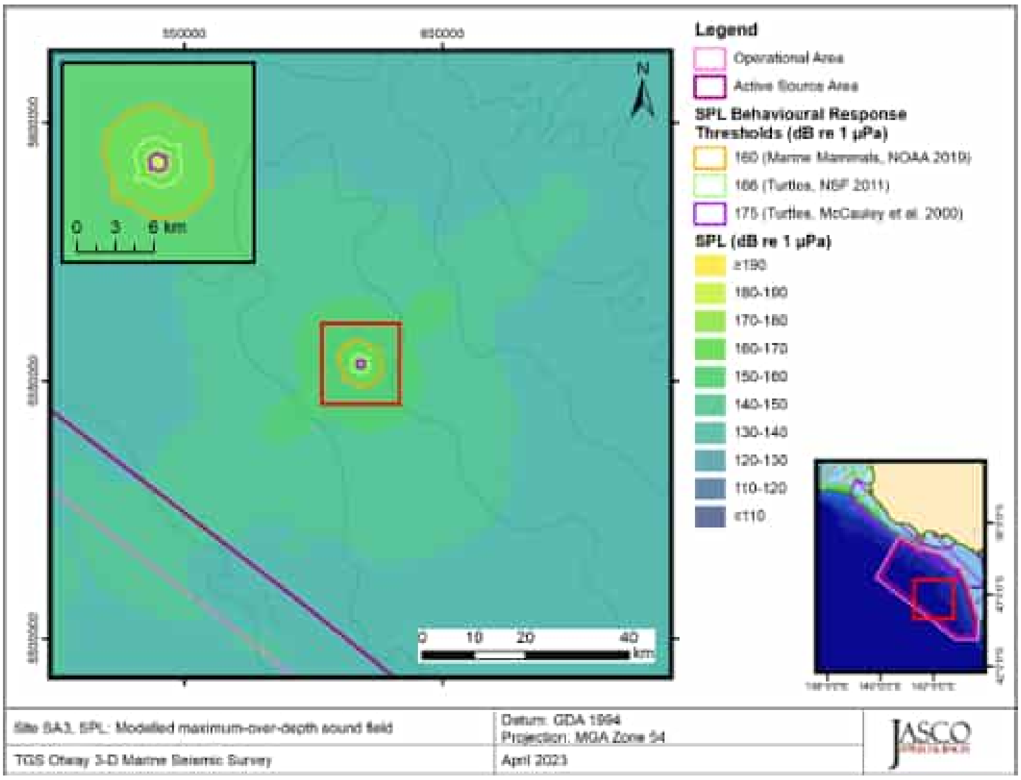

Figure 27. *Standalone Site 3, triple 3480 in³ source, tow azimuth 322º, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

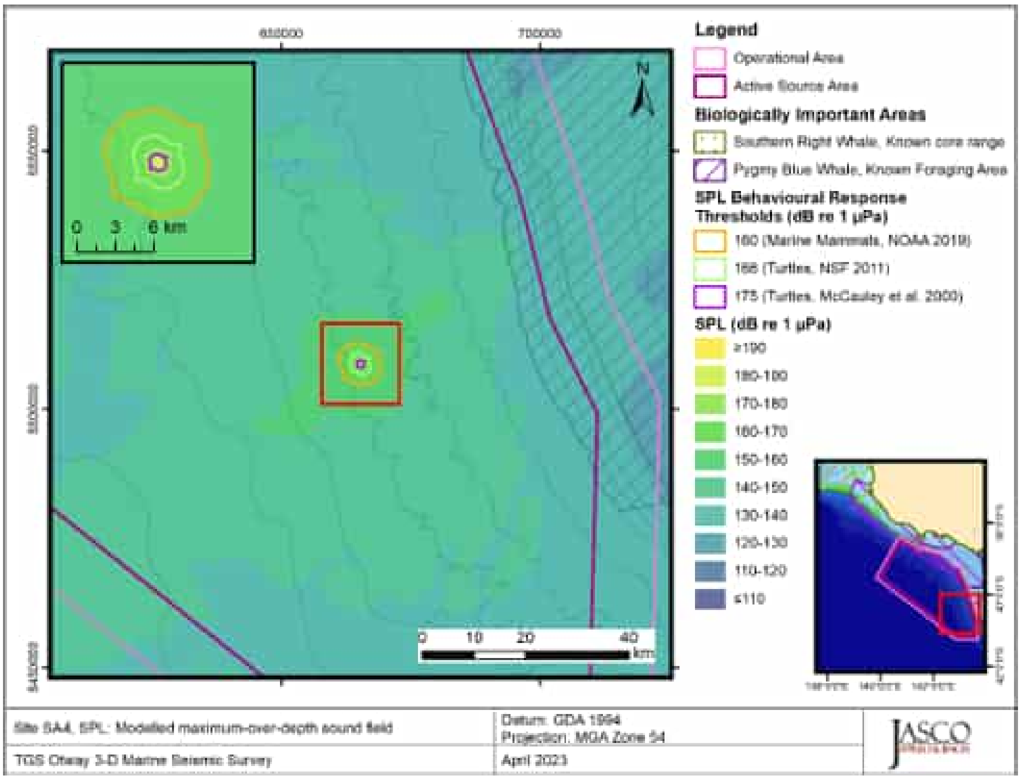

Figure 28. *Standalone Site 4, triple 3480 in³ source, tow azimuth 322°, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

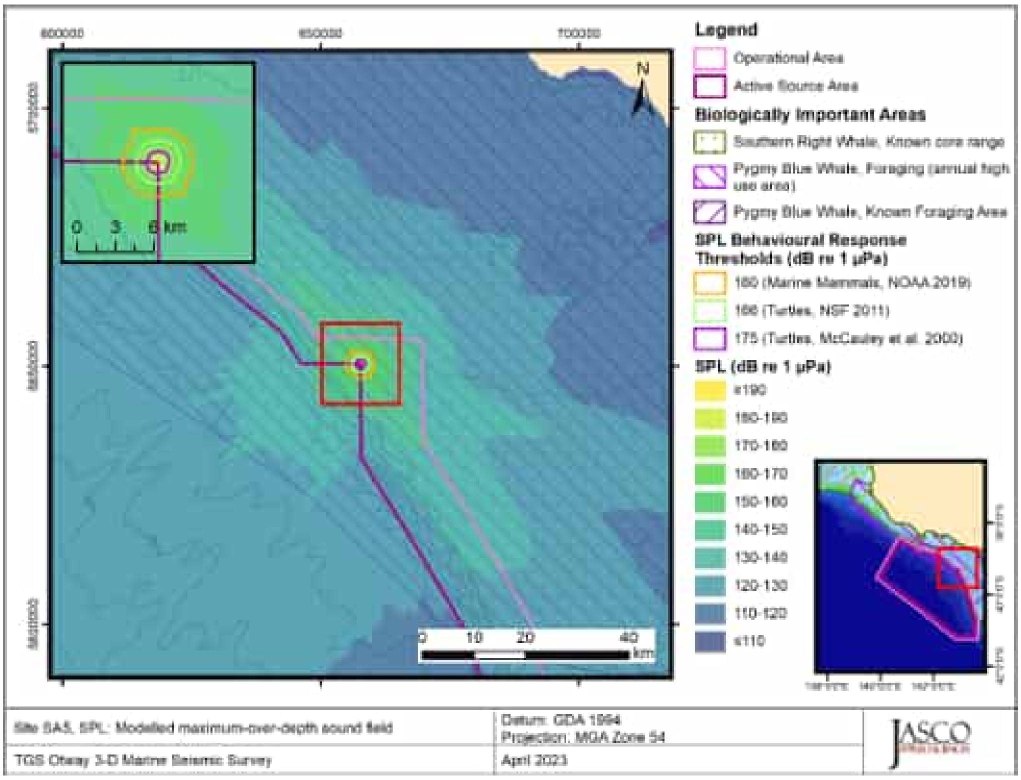

Figure 29. *Standalone Site 5, triple 3480 in³ source, tow azimuth 232°, SPL:* Sound level contour map showing the unweighted maximum-over-depth sound field in 10 dB steps, and the isopleth of behavioural response thresholds for marine mammals.

5.2.2.5. Vertical Slices of Modelled Sound Fields

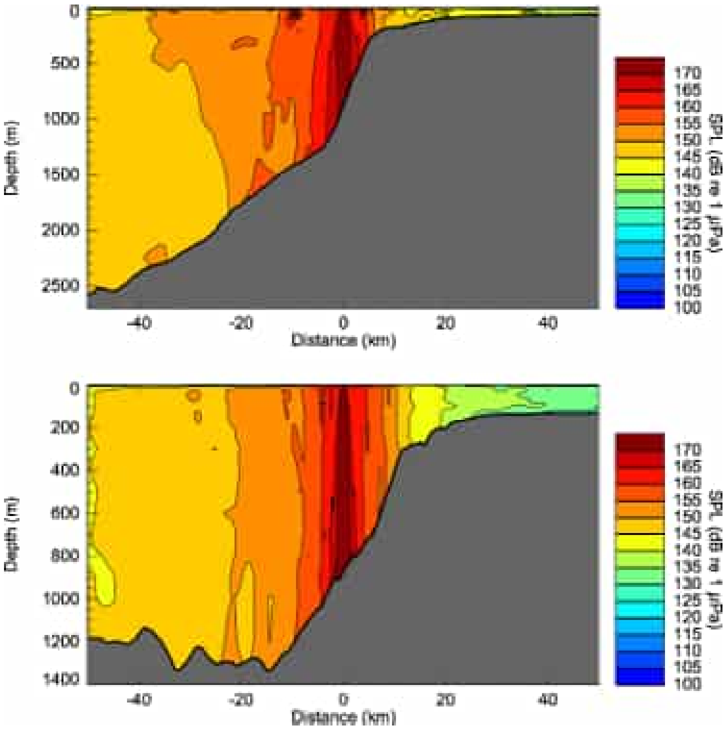

Figure 30. *Area 1*, *Site 1, tow azimuth 312°, 3480 in^3 array, SPL*: Sound level contours in vertical slice of the sound field, perpendicular to (broadside, top) and along the tow direction (endfire, bottom). The positive distance direction in each slice is 90° clockwise from the tow azimuth for broadside, and the tow azimuth for the endfire slice.

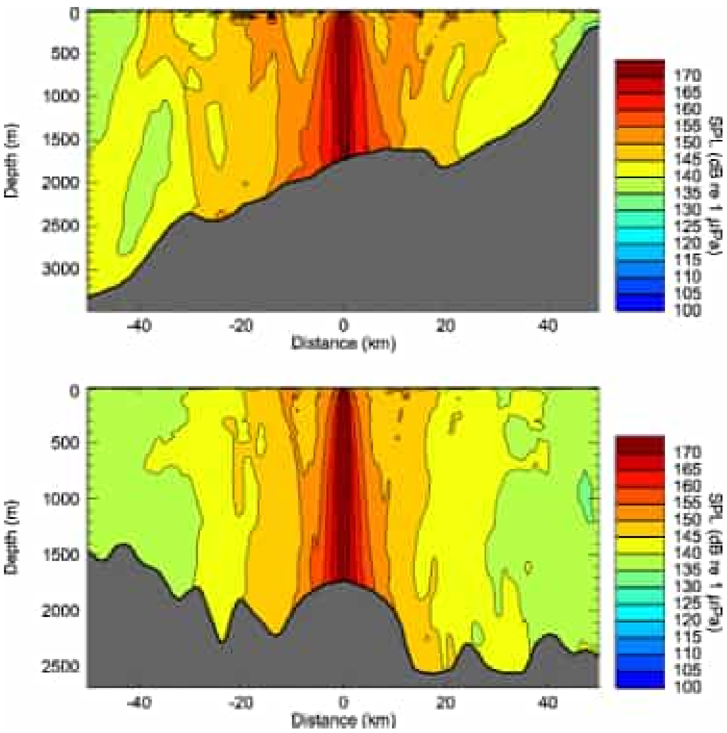

Figure 31. *Area 2, Site 1, tow azimuth 294°, 3480 in^3 array, SPL*: Sound level contours in vertical slice of the sound field, perpendicular to (broadside, top) and along the tow direction (endfire, bottom). The positive distance direction in each slice is 90° clockwise from the tow azimuth for broadside, and the tow azimuth for the endfire slice.

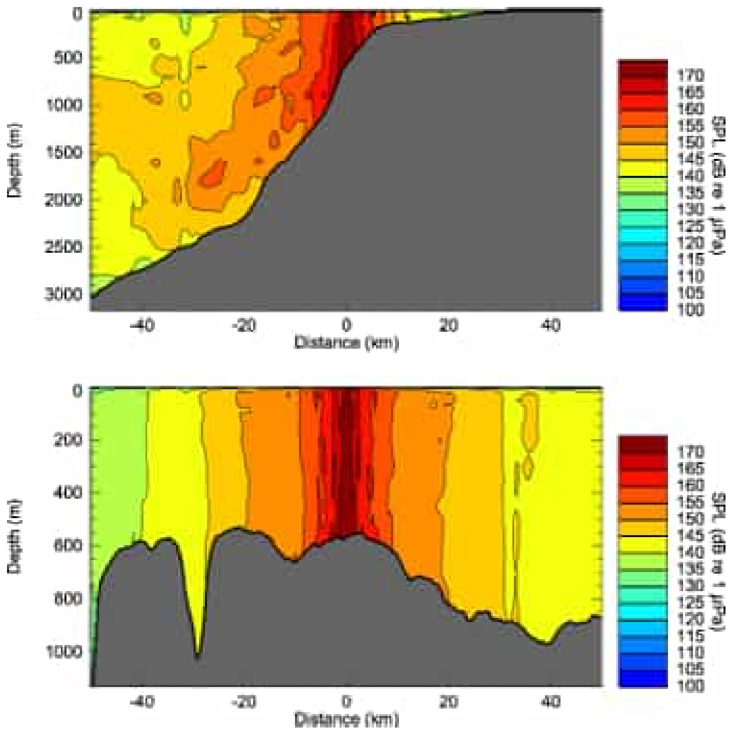

Figure 32. *Area 3, Site 1, tow azimuth 305°, 3480 in^3 array, SPL*: Sound level contours in vertical slice of the sound field, perpendicular to (broadside, top) and along the tow direction (endfire, bottom). The positive distance direction in each slice is 90° clockwise from the tow azimuth for broadside, and the tow azimuth for the endfire slice.

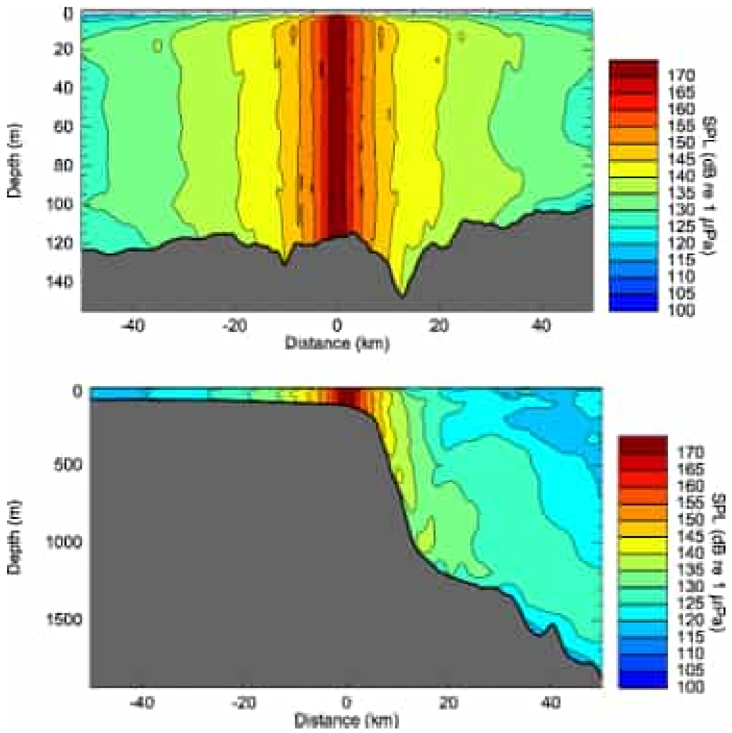

Figure 33. *Standalone Site 5, tow azimuth 232°, 3480 in^3 array, SPL*: Sound level contours in vertical slice of the sound field, perpendicular to (broadside, top) and along the tow direction (endfire, bottom). The positive distance direction in each slice is 90° clockwise from the tow azimuth for broadside, and the tow azimuth for the endfire slice.

5.2.3. Particle Motion

Figures 34 to 42 show modelled maximum particle acceleration as a function of horizontal range in four perpendicular directions from the centre of the triple 3480 in^3 seismic source at the seafloor sites (Table 5). The modelling considered a resolution of 10 m, and a receiver positioned 5 cm off the seafloor. The maximum distance to a particle acceleration of 37.57 ms^{-2} from (Day et al. 2016a) is not predicted to occur at any range for Site 1 in Area 1 and the ranges for all other sites is shown in Table 34.

Table 34. Maximum horizontal distances (m) from the triple 3480 in^3 seismic source to modelled maximum-over-depth and maximum over azimuth particle acceleration threshold (Day et al. (2016a)) from the modelled single impulse sites, with water depth indicated.

Particle acceleration (m/s^2)	Area 1			Area 3			Standalone and 2D tie-line		
	Site 1 (870 m)	Site 2 (1139 m)	Site 4 (1216 m)	Site 1 (569 m)	Site 2 (903 m)	Site 4 (674 m)	SA5 (114 m)	TL01 (220 m)	TL02 (450 m)
37.57	*	*	*	*	*	*	*	*	*

An asterisk indicates that the sound level was not reached.

5.2.3.1. Area 1

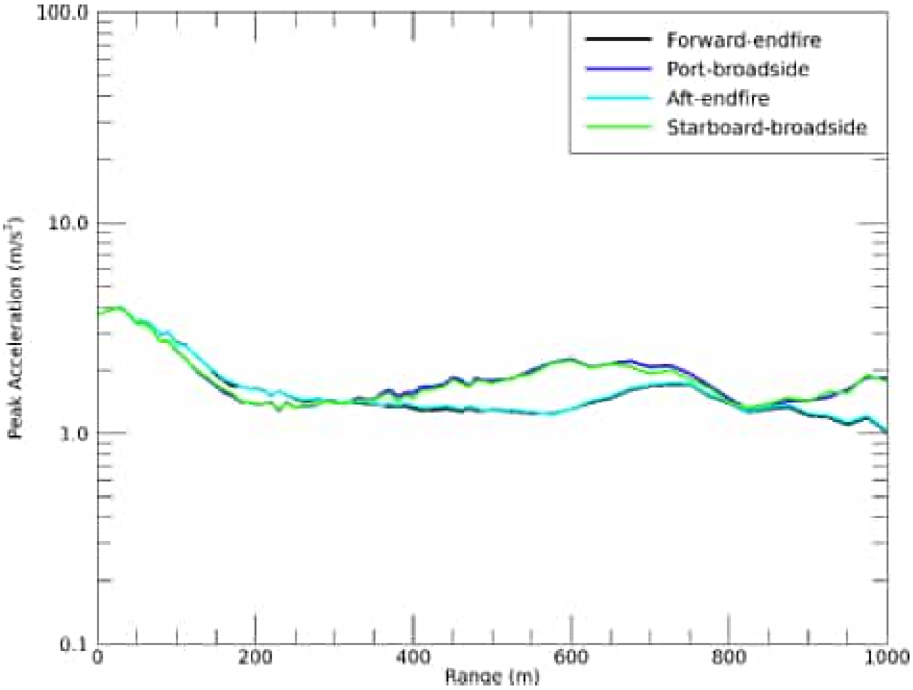

Figure 34. *Area 1, Site 1, triple 3480 in^3 seismic source at 870 m water depth*: Peak particle acceleration magnitude at the seafloor as a function of horizontal range from the centre of the seismic source along four directions.

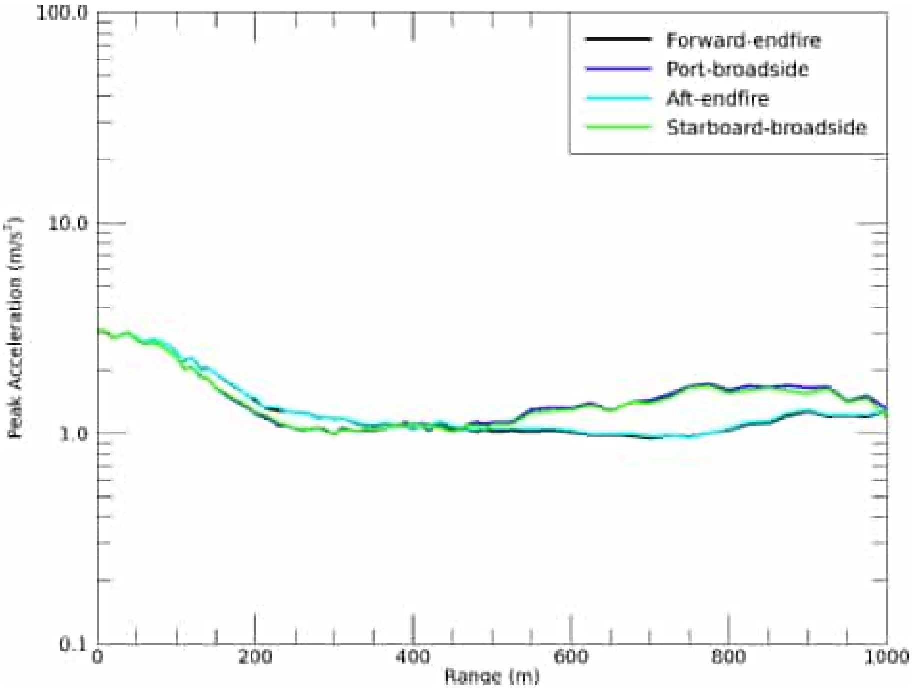

Figure 35. *Area 1, Site 2, triple 3480 in^3 seismic source at 1139 m water depth*: Peak particle acceleration magnitude at the seafloor as a function of horizontal range from the centre of the seismic source along four directions.

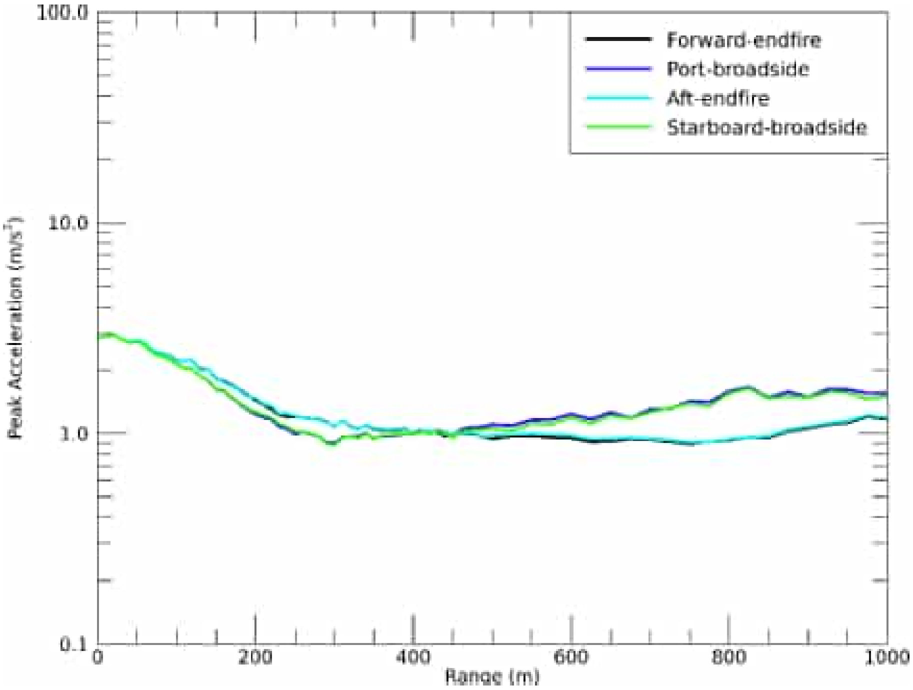

Figure 36. *Area 1, Site 4, triple 3480 in^3 seismic source at 1216 m water depth*: Peak particle acceleration magnitude at the seafloor as a function of horizontal range from the centre of the seismic source along four directions.

5.2.3.2. Area 3

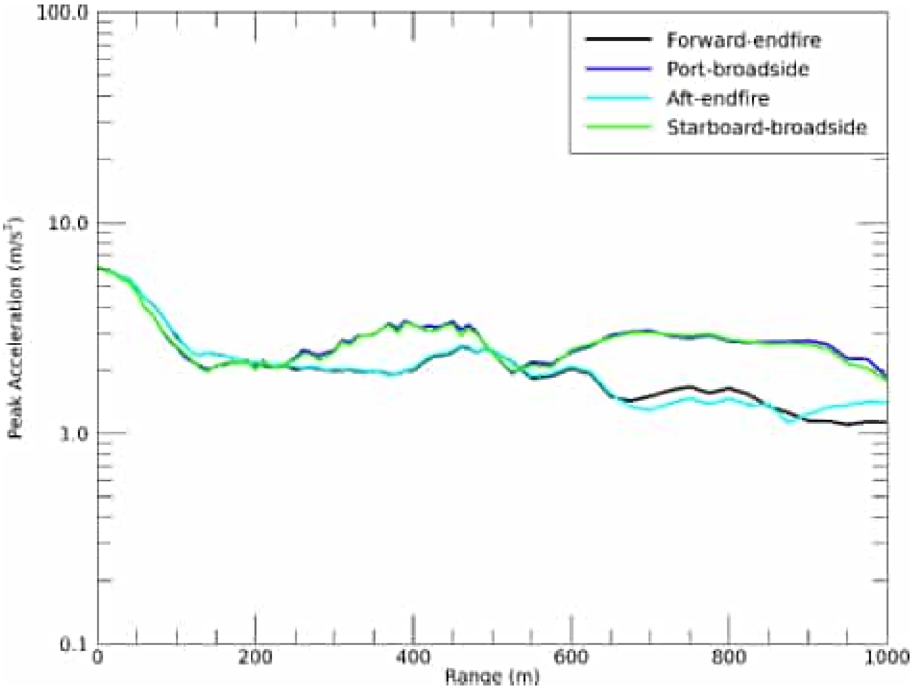

Figure 37. *Area 3, Site 1, triple 3480 in³ seismic source at 569 m water depth*: Peak particle acceleration magnitude at the seafloor as a function of horizontal range from the centre of the seismic source along four directions.

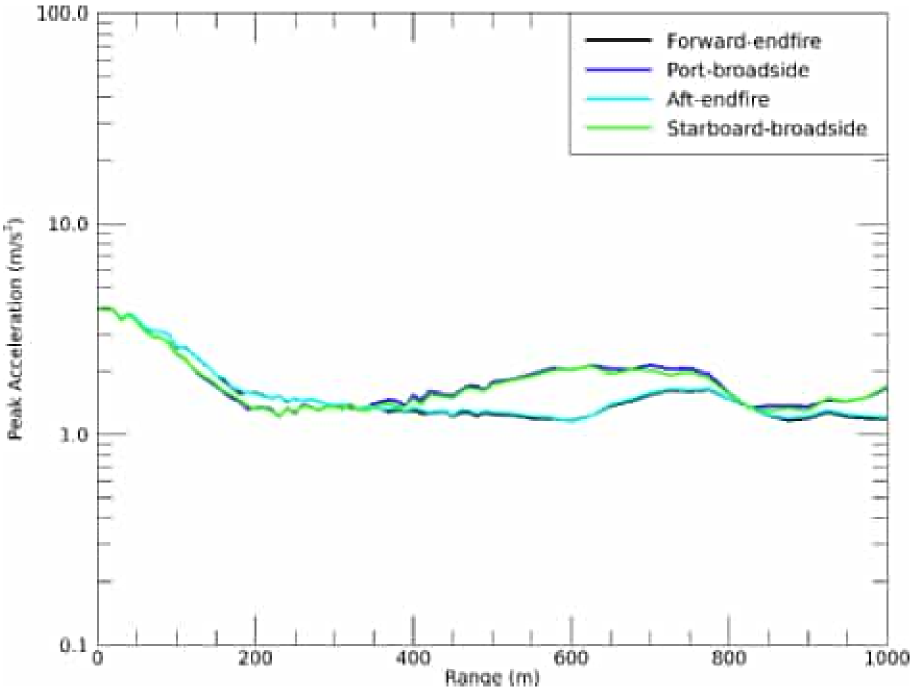

Figure 38. *Area 3, Site 2, triple 3480 in³ seismic source at 903 m water depth*: Peak particle acceleration magnitude at the seafloor as a function of horizontal range from the centre of the seismic source along four directions.

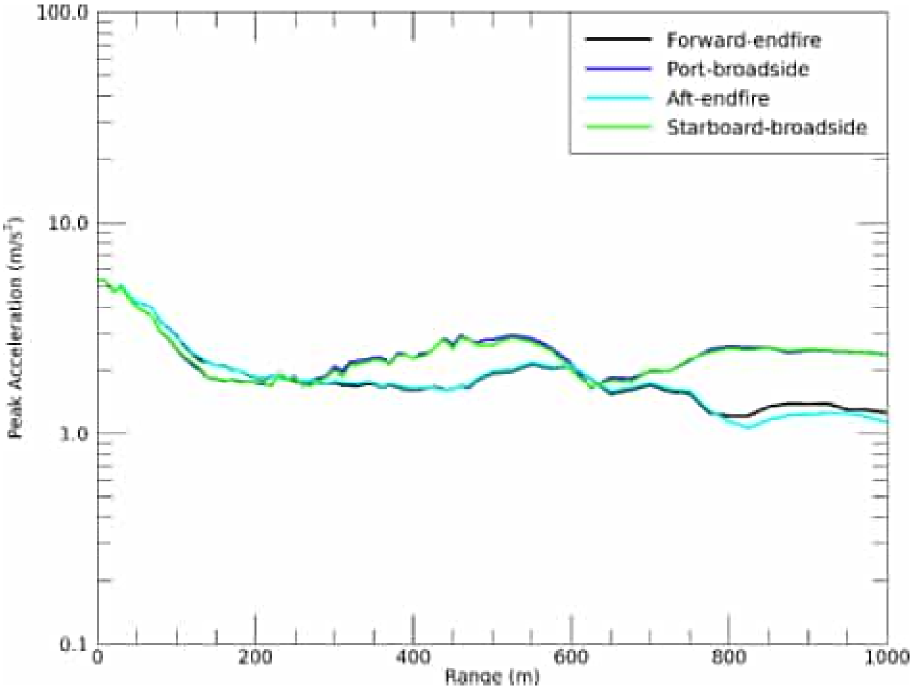

Figure 39. *Area 3, Site 4, triple 3480 in^3 seismic source at 674 m water depth*: Peak particle acceleration magnitude at the seafloor as a function of horizontal range from the centre of the seismic source along four directions.

5.2.3.3. Standalone Sites and 2D Tie-Line

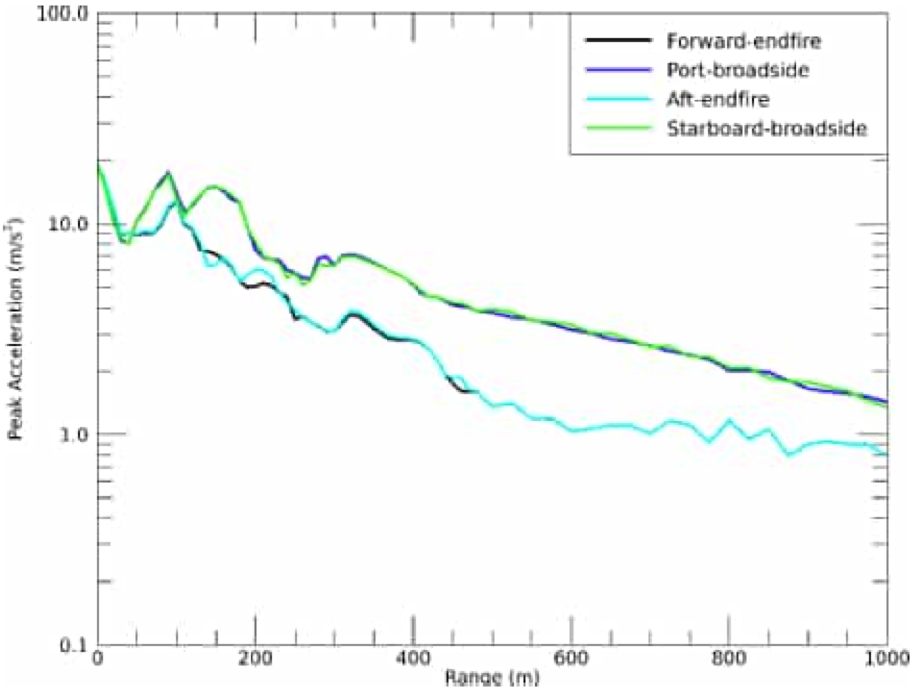

Figure 40. *Standalone Site 5, triple 3480 in^3 seismic source at 114 m water depth*: Peak particle acceleration magnitude at the seafloor as a function of horizontal range from the centre of the seismic source along four directions.

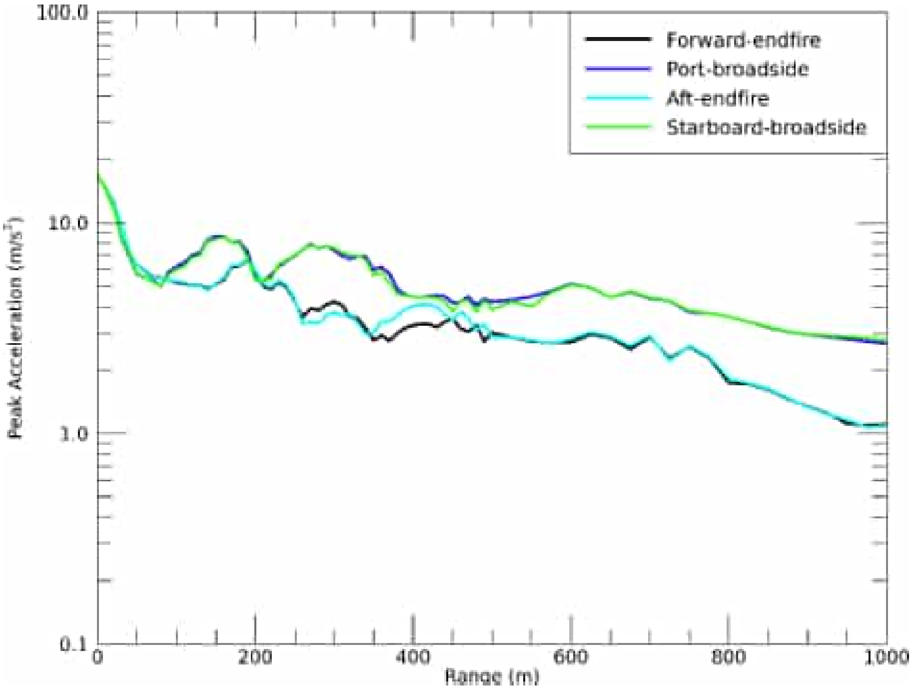

Figure 41. *2D Tie-Line, Site 1, triple 3480 in^3 seismic source at 220 m water depth*: Peak particle acceleration magnitude at the seafloor as a function of horizontal range from the centre of the seismic source along four directions.

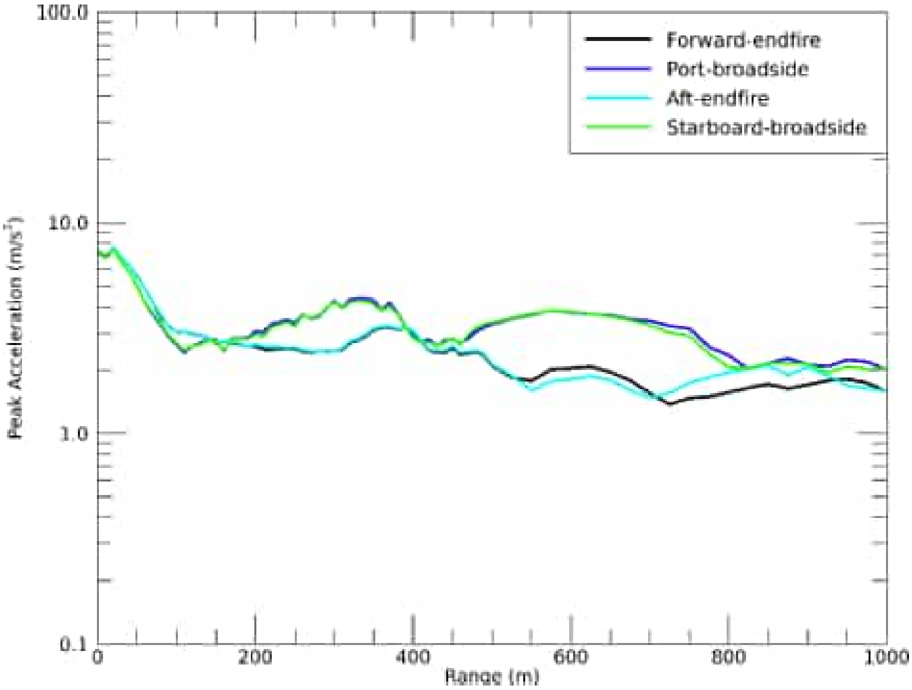

Figure 42. *2D Tie-Line, Site 2, triple 3480 in^3 seismic source at 450 m water depth*: Peak particle acceleration magnitude at the seafloor as a function of horizontal range from the centre of the seismic source along four directions.

5.2.4. SPL Receivers

Table 35 shows the received SPL level at the edge of the BIA closest to each modelling site. A range of points along the BIA was chosen and the maximum received SPL level was chosen.

Table 35. Received levels for cetaceans and pinnipeds at SPL receivers with locations shown in Table 6.

Receiver Location	Unweighted SPL (L_p; dB re 1 µPa)				LF-Weighted SPL (L_p; dB re 1 µPa)			
	Area 1	Area 2	Area 3	SA05	Area 1	Area 2	Area 3	SA05
Southern Right Whales – BIAs								
Migration and resting on migration – Victor Harbor to Portland	129.6	124.4	137.4	—	128.6	123.2	134.9	—
Aggregation - Breeding	143.8	137.3	118.7	124.0	141.5	135.3	117.8	121.7
Migration and resting on migration – East of Warrnambool to Philip Island area	135.0	121.2	—	111.2	132.9	118.8	—	110.3
Pygmy Blue Whales - BIAs								
Known foraging – Bonney Upwelling	—	—	162.8	—	—	—	159.1	—
Receiver Location	**Unweighted SPL (L_p; dB re 1 µPa)**				**OPW-Weighted SPL (L_p; dB re 1 µPa)**			
Australian sea lion - BIAs								
Foraging (males)	—	—	144.9	—	—	—	123.0	—

A dash indicates the receiver was not within the modelling bounds of any modelled site within the area.

5.3. Multiple Source Fields

5.3.1. Tabulated Results

Table 36. Maximum-over-depth distances (in km) to frequency-weighted 24 h sound exposure level (SEL24h) based permanent threshold shift (PTS) and temporary threshold shift (TTS) for marine mammals Southall et al. (2019) and sea turtles (Finneran et al. 2017) using the triple 3480 in^3 seismic source. Maximum extents are in the broadside direction.

Hearing group	Threshold for SEL$_{24h}$ ($L_{E,24h}$; dB re 1 µPa²·s)	Area 1		Area 2		Area 3	
		R_{max} (km)	Area (km^2)	R_{max} (km)	Area (km^2)	R_{max} (km)	Area (km^2)
PTS							
LF cetaceans	183	0.47	137	0.39	120	0.50	151
HF cetaceans	185	–	–	–	–	–	–

5.3.2. Sound Level Contour Maps

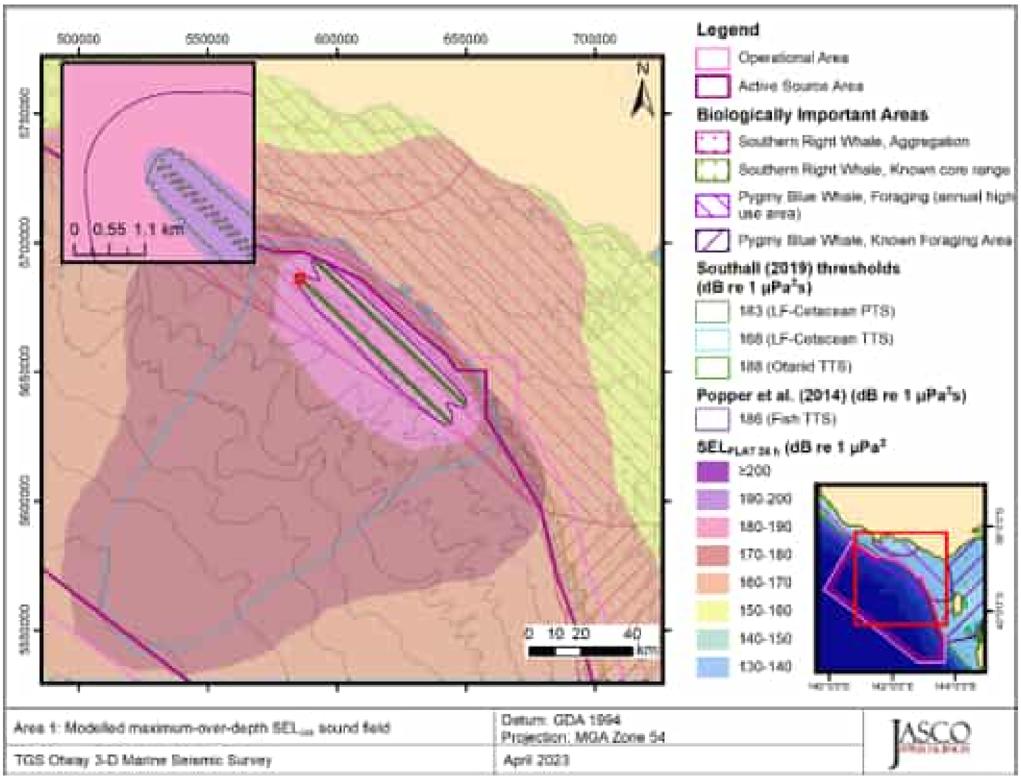

Figure 43. *Area 1*, *triple 3480 in^3 source*, Sound level contour map of unweighted maximum-over-depth SEL_{24h} results, along with isopleths for cetaceans and fish. Thresholds omitted here were not reached or not large enough to display graphically.

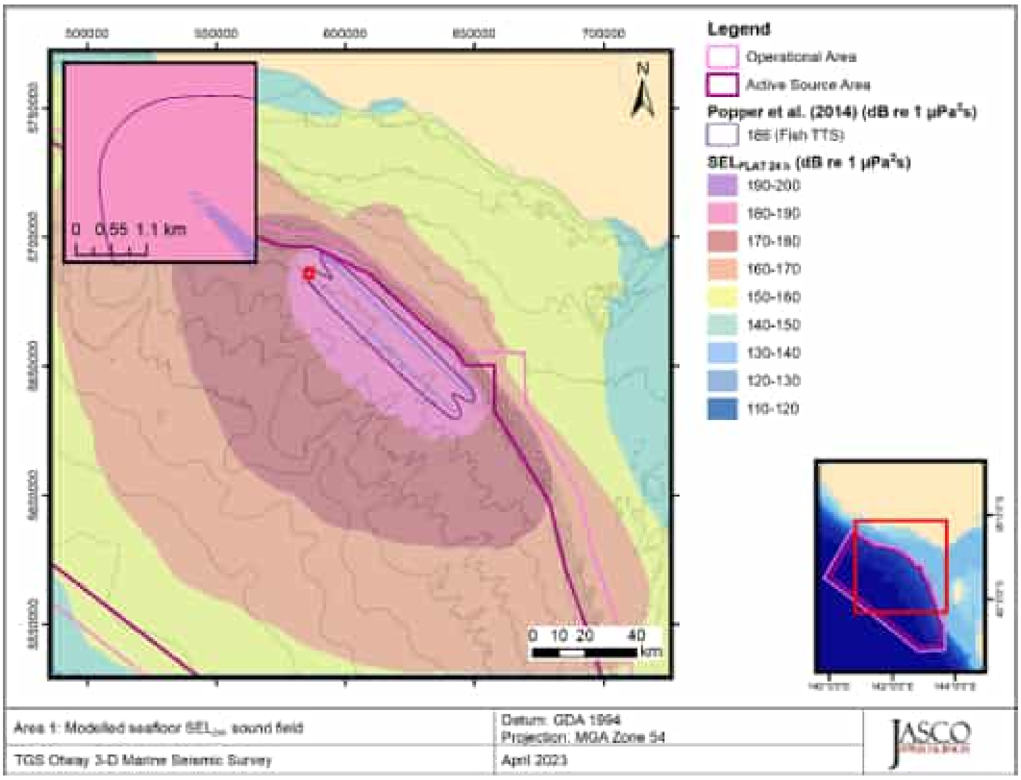

Figure 44. *Area 1*, *triple 3480 in³ source,* Sound level contour map of unweighted seafloor SEL_{24h} results along with the isopleth for fish temporary threshold shift (TTS).Thresholds omitted here were not reached or not large enough to display graphically.

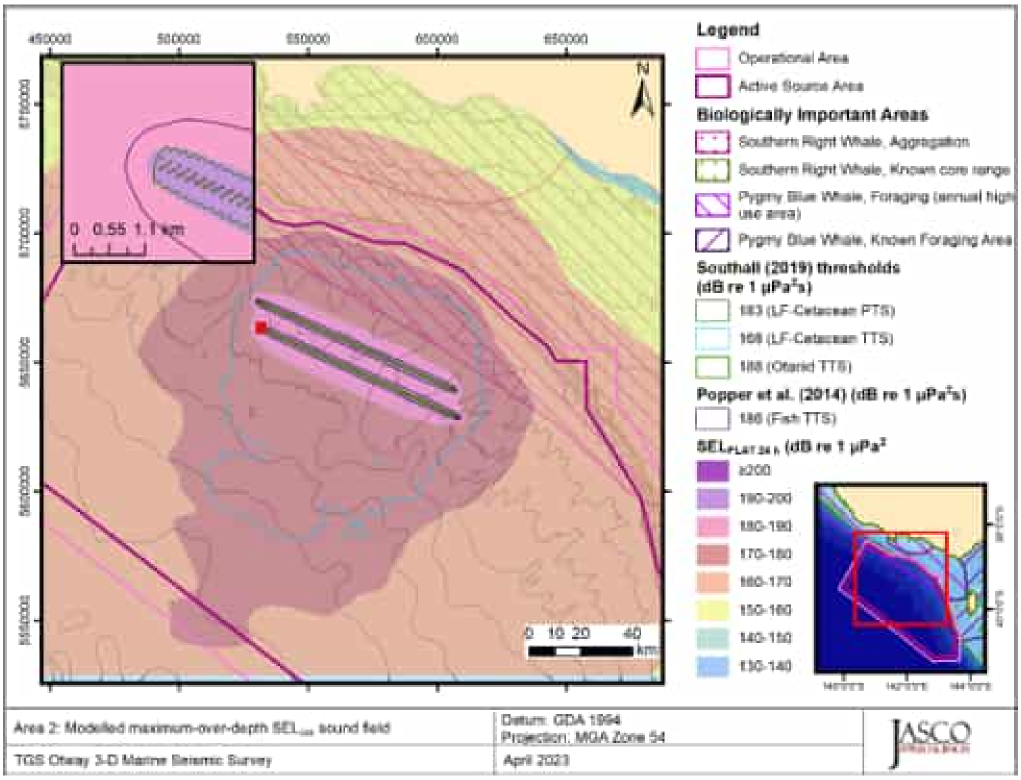

Figure 45. *Area 2*, *triple 3480 in³ source,* Sound level contour map of unweighted maximum-over-depth SEL_{24h} results, along with isopleths for cetaceans and fish. Thresholds omitted here were not reached or not large enough to display graphically.

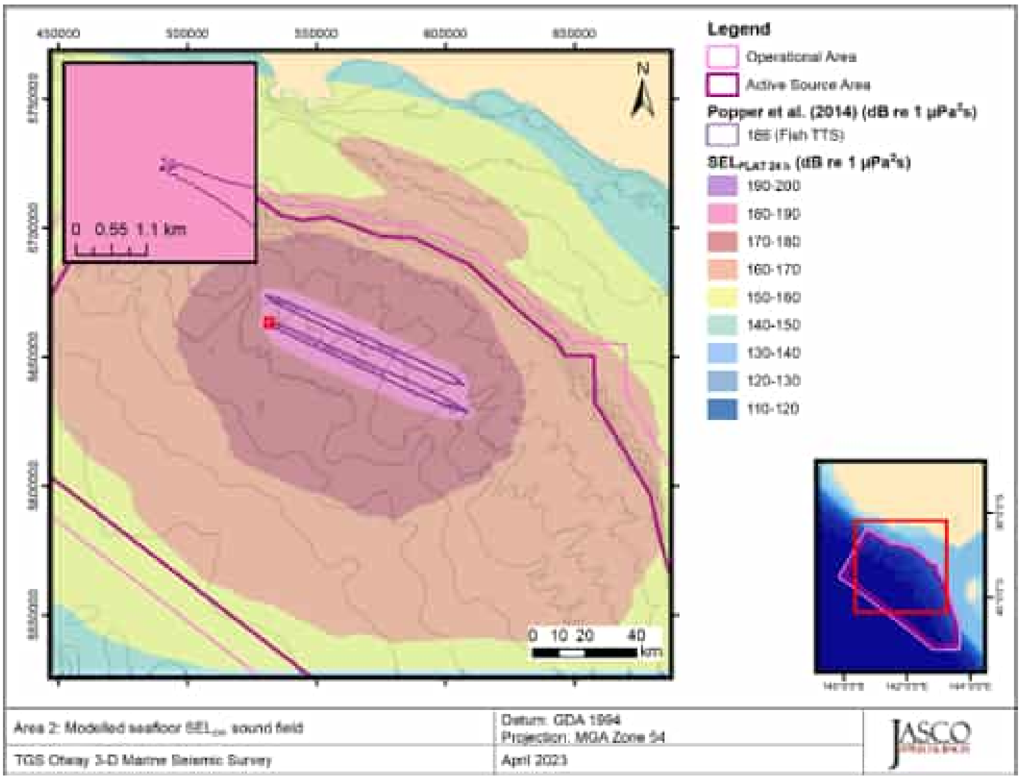

Figure 46. *Area 2*, *triple 3480 in³ source,* Sound level contour map of unweighted seafloor SEL_{24h} results along with the isopleth for fish temporary threshold shift (TTS).Thresholds omitted here were not reached or not large enough to display graphically.

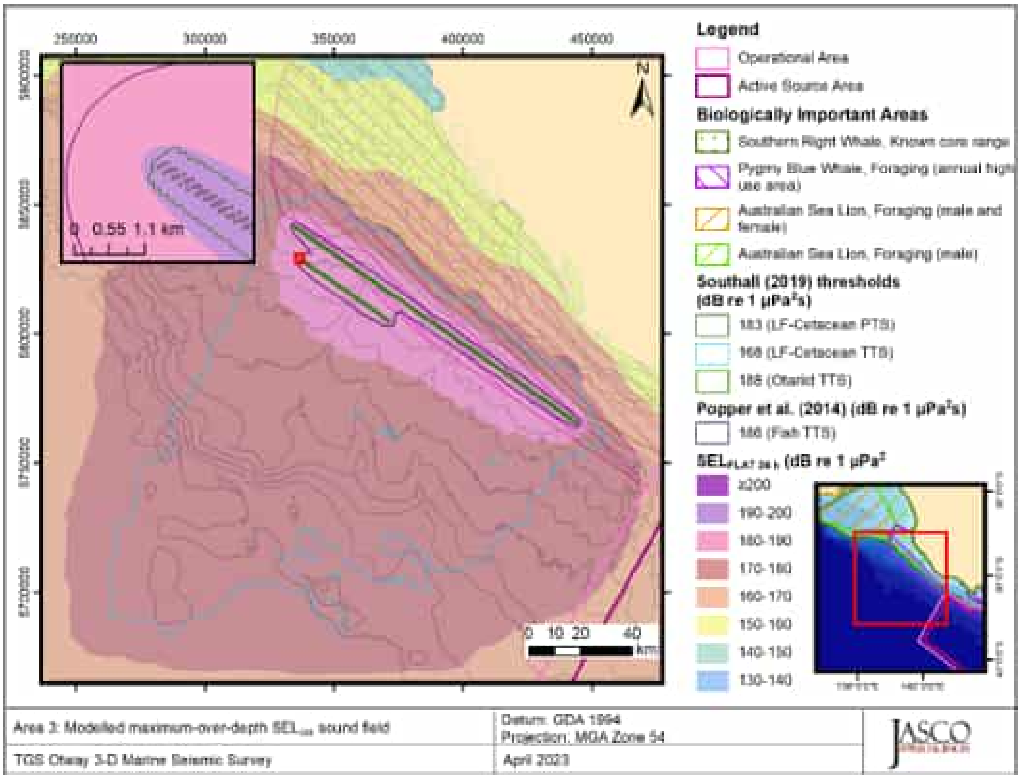

Figure 47. *Area 3*, *triple 3480 in³ source,* Sound level contour map of unweighted maximum-over-depth SEL_{24h} results, along with isopleths for cetaceans and fish. Thresholds omitted here were not reached or not large enough to display graphically.

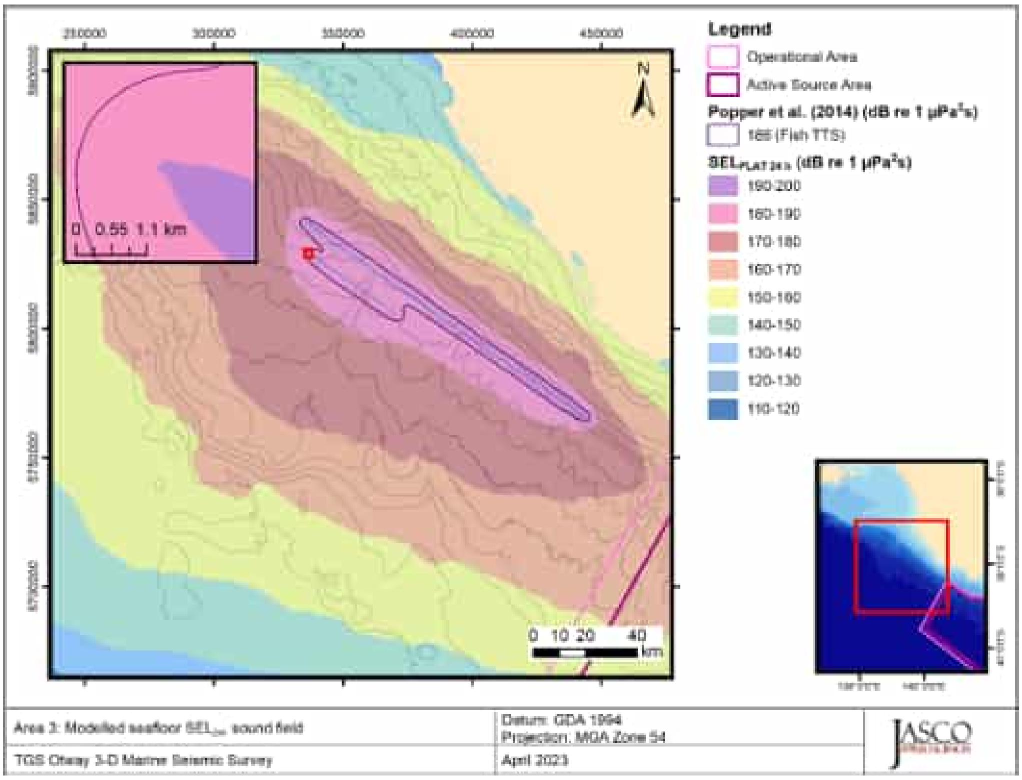

Figure 48. *Area* 3, *triple 3480 in³ source,* Sound level contour map of unweighted seafloor SEL_{24h} results along with the isopleth for fish temporary threshold shift (TTS).Thresholds omitted here were not reached or not large enough to display graphically.

5.4. Animal Movement Exposure Ranges

A summary of radial distances to exposure thresholds for pygmy blue whales and southern right whales, along with probability of exposure for each modelled scenario (Section 4.6.1) are included below. Table 40 shows results for Scenarios 1a and 1b for pygmy blue whales, whilst Table 41 shows results for Scenarios 2a and 2b for southern right whales. Results include $ER_{95\%}$ exposure ranges calculated for the 160 dB behavioural response threshold and SEL_{24h} thresholds for both TTS and PTS, and the probability of an animat being exposed above the threshold within the $ER_{95\%}$. Additionally, the 140 and 160 dB behavioural thresholds for weighted SPL results are also included for Scenarios 2a and 2b for southern right whale mother-calf pairs. Sections 5.4.1 and 5.4.2 include histograms of CPA ranges to SEL_{24h} PTS, TTS, and the behavioural response threshold for all scenarios with results in Tables 40 and 41. Exposure ranges for TTS and PTS PK thresholds were not included in the exposure analysis since acoustic modelling predicted no PTS PK exceedance and ranges of less than 100 m for TTS PK (see Table 16).

Table 40. Summary of animat simulation results for pygmy blue whales. The 95th percentile exposures ranges ($ER_{95\%}$) in km and probability of animats being exposed above threshold within the $ER_{95\%}$ (P_{exp} (%)) are provided. Dashes indicate no animats were exposed above threshold.

Threshold		Scenario 1a				Scenario 1b			
		Female		Male		Female		Male	
Description	Threshold level (dB)	$ER_{95\%}$ (km)	P_{exp} (%)	$ER_{95\%}$ (km)	P_{exp} (%)	$ER_{95\%}$ (km)	P_{exp} (%)	$ER_{95\%}$ (km)	P_{exp} (%)
PTS (SEL_{24h})[c]	183[a]	0.12	52	0.13	53	–	–	–	–
TTS (SEL_{24h})[c]	168[a]	31.7	46	27.9	50	15.4	32	15.3	33
Behavioural response (SPL)[d]	160[b]	6.05	83	6.21	80	7.01	41	6.82	51

[a] LF-weighted SEL_{24h} ($L_{E,24h}$; dB re 1 µPa²·s)
[b] SPL (L_p; dB re 1 µPa)
[c] Southall et al. (2019) criteria for marine fauna.
[d] NOAA (2019) recommended unweighted behavioural threshold for marine mammals.

Table 41. Summary of animat simulation results for southern right whales. The 95th percentile exposures ranges ($ER_{95\%}$) in km and probability of animats being exposed above threshold within the $ER_{95\%}$ (P_{exp} (%)) are provided.

Threshold		Scenario 2a				Scenario 2b			
		Mother & Calf		No Calf		Mother & Calf		No Calf	
Description	Threshold level (dB)	$ER_{95\%}$ (km)	P_{exp} (%)	$ER_{95\%}$ (km)	P_{exp} (%)	$ER_{95\%}$ (km)	P_{exp} (%)	$ER_{95\%}$ (km)	P_{exp} (%)
PTS (SEL_{24h})[c]	183[a]	–	–	–	–	0.04	98	0.04	97
TTS (SEL_{24h})[c]	168[a]	–	–	8.51	33	10.8	61	11.0	67
Behavioural response (SPL)[d]	160[b]	–	–	–	–	6.10	73	6.06	76

[a] LF-weighted SEL_{24h} ($L_{E,24h}$; dB re 1 µPa²·s).
[b] SPL (L_p; dB re 1 µPa).
[c] Southall et al. (2019) criteria for marine fauna.
[d] NOAA (2019) recommended unweighted behavioural threshold for marine mammals.

Table 42. Animat simulation results for southern right whales for the 140 dB and 160 dB behavioural threshold for LF-weighted SPL results. The 95th percentile exposures ranges ($ER_{95\%}$) in km and probability of animats being exposed above threshold within the $ER_{95\%}$ (P_{exp} (%)) are provided.

Threshold		Mother & Calf			
		Scenario 2a		Scenario 2b	
Description	Threshold level (dB)	$ER_{95\%}$ (km)	P_{exp} (%)	$ER_{95\%}$ (km)	P_{exp} (%)
Behavioural response (SPL)[b]	160[a]	–	–	0.59	59
Behavioural response (SPL)[b]	140[a]	31.5	61	30.0	81

[a] LF-weighted SPL (L_p; dB re 1 µPa).
[b] Weighted behavioural threshold.

5.4.1. Exposure Range Histograms: Pygmy Blue Whales

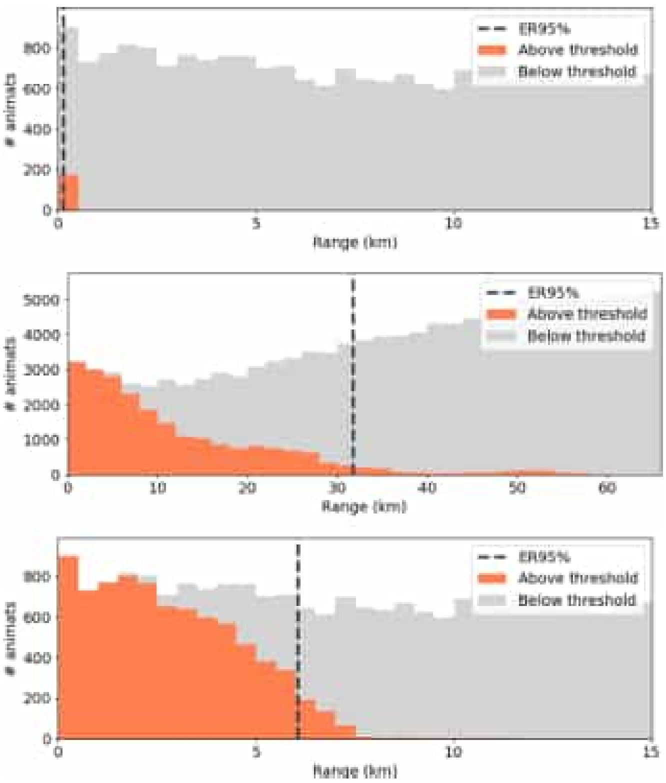

Figure 49. *Scenario 1a, female pygmy blue whales*: CPA range histogram for animats, SEL_{24h} PTS threshold (top panel), SEL_{24h} TTS threshold (middle panel, please note the adjusted maximum range on the x-axis), SPL behavioural threshold for unweighted SPL results (bottom panel). Bar colours indicate whether the animats exceeded the threshold.

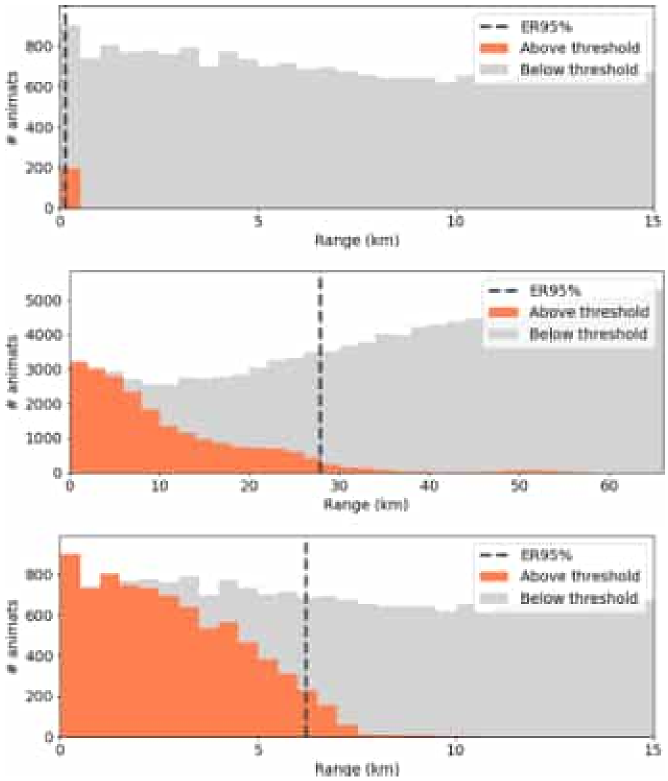

Figure 50. *Scenario 1a, male pygmy blue whales*: CPA range histogram for animats, SEL_{24h} PTS threshold (top panel), SEL_{24h} TTS threshold (middle panel, please note the adjusted maximum range on the x-axis), SPL behavioural threshold for unweighted SPL results (bottom panel). Bar colours indicate whether the animats exceeded the threshold.

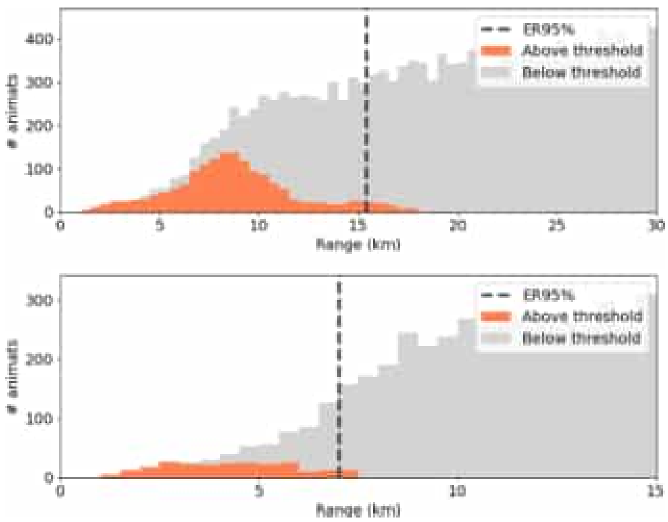

Figure 51. *Scenario 1b, female pygmy blue whales*: CPA range histogram for animats, SEL_{24h} TTS threshold (top panel), SPL behavioural threshold for unweighted SPL results (bottom panel, please note the adjusted maximum range on the x-axis). Bar colours indicate whether the animats exceeded the threshold.

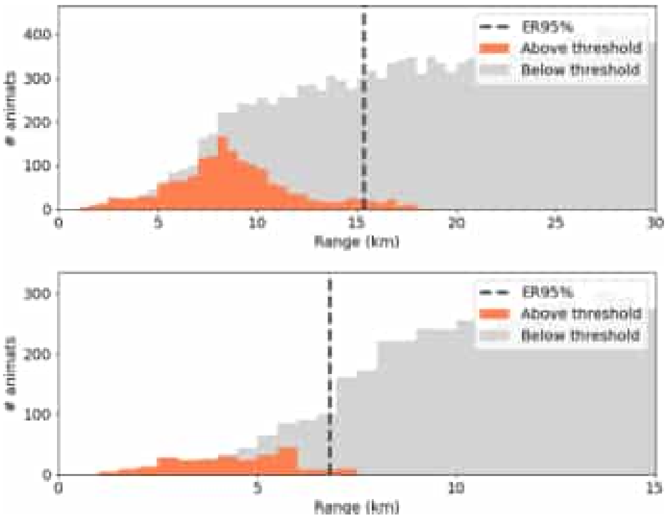

Figure 52. *Scenario 1b, male pygmy blue whales*: CPA range histogram for animats, SEL_{24h} TTS threshold (top panel,), SPL behavioural threshold for unweighted SPL results (bottom panel, please note the adjusted maximum range on the x-axis). Bar colours indicate whether the animats exceeded the threshold.

5.4.2. Exposure Range Histograms: Southern Right Whales

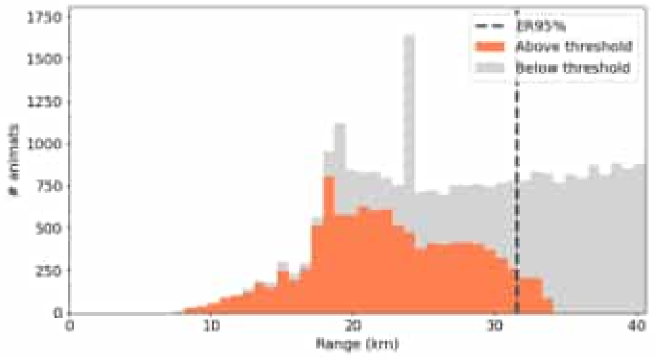

Figure 53. *Scenario 2a, southern right whales, mother & calf*: CPA range histogram for animats, 140 dB behavioural threshold for weighted SPL results Bar colours indicate whether the animats exceeded the threshold.

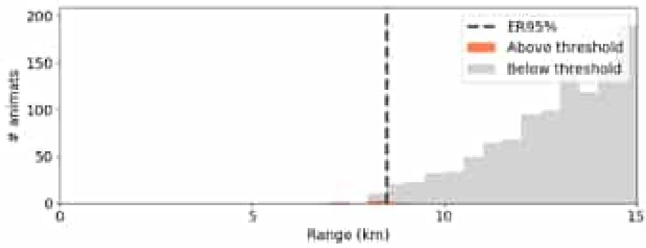

Figure 54. *Scenario 2a, southern right whales, no calf*: CPA range histogram for animats, SEL_{24h} TTS threshold. Bar colours indicate whether the animats exceeded the threshold.

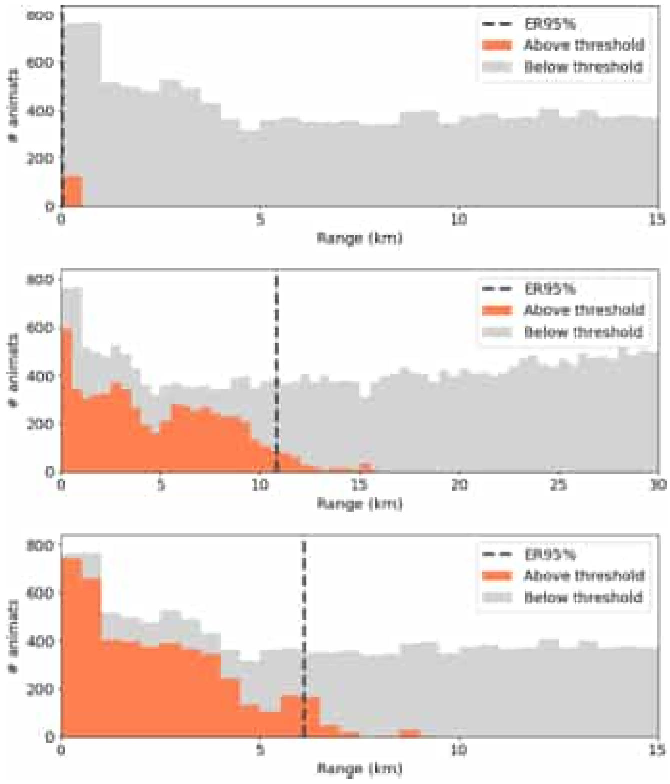

Figure 55. *Scenario 2b, southern right whales, mother & calf*: CPA range histogram for animats, SEL_{24h} PTS threshold (top panel), SEL_{24h} TTS threshold (middle panel, please note the adjusted maximum range on the x-axis), SPL behavioural threshold for unweighted SPL results (bottom panel). Bar colours indicate whether the animats exceeded the threshold.

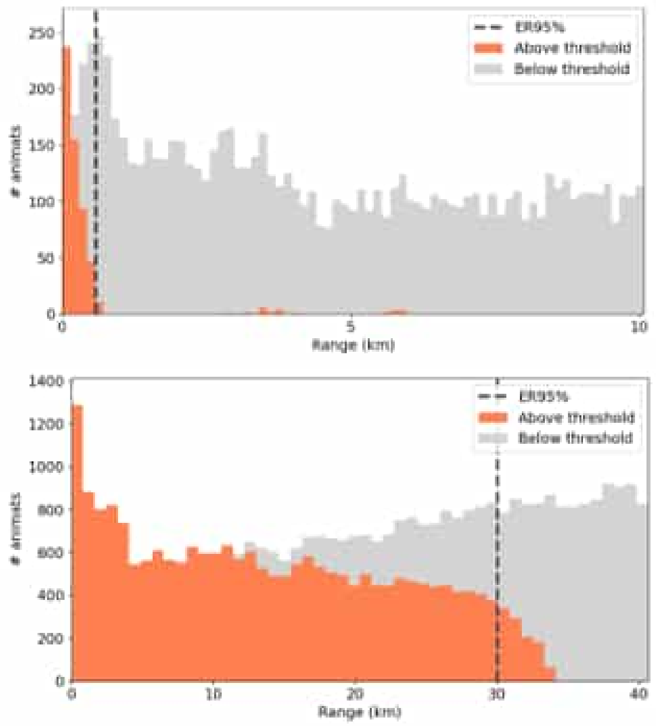

Figure 56. *Scenario 2b, southern right whales, mother & calf*: CPA range histogram for animats, 160 dB SPL behavioural threshold for weighted SPL results (top panel, please note the adjusted maximum range on the x-axis), 140 dB SPL behavioural threshold for weighted SPL results (bottom panel). Bar colours indicate whether the animats exceeded the threshold.

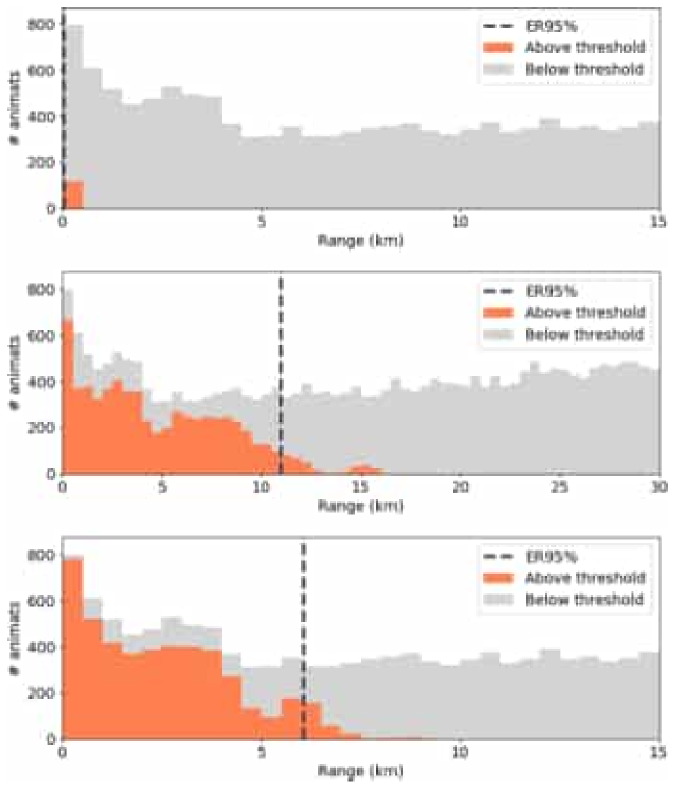

Figure 57. *Scenario 2b, southern right whales, no calf*: CPA range histogram for animats, SEL_{24h} PTS threshold (top panel), SEL_{24h} TTS threshold (middle panel, please note the adjusted maximum range on the x-axis), SPL behavioural threshold for unweighted SPL results (bottom panel). Bar colours indicate whether the animats exceeded the threshold.

6. Discussion and Conclusion

The modelling study predicted underwater sound levels associated with the planned TGS Otway 3-D MSS. The underwater sound field was modelled for a triple 3480 in^3 seismic source (see Appendix B.2). An analysis of seasonal sound speed profiles indicated that September was the month most conducive to sound propagation due to the presence of an upward refracting layer near the sea surface; as such it was selected to ensure a conservative estimation of distances to received sound level thresholds over the potential survey periods (see Appendix D.3.2). Modelling also accounted for site-specific bathymetric variations (see Appendix D.3.1) and local geoacoustic properties (see Appendix D.3.3).

Most acoustic energy from a seismic source is output at lower frequencies, in the tens to hundreds of hertz. The modelled array had a pronounced broadside directivity for decidecade bands between approximately 125 to 400 Hz (see Appendix B.3), which caused a noticeable axial bulge in the modelled acoustic footprints. The overall broadband (10–25000 Hz) unweighted per-pulse SEL and peak pressure source level of the seismic sources operating at 7 m depth are detailed in Table 12.

Since the original modelling was undertaken the Operational Area has been reduced with Assessment Area 3 now outside the Operational Area (as shown in Figure 1). Assessment Area 3 was characterized by sites with water depths between 569 and 1223 m, on the continental slope, with a geology of unconsolidated sediments which are increasingly consolidated with depth, and an seismic source orientation of 125/305°. Modelling results for Assessment Area 3 are still valid for locations within the Operational Area which have similar environmental parameters (see Appendix D.3 for detailed environmental parameters) and seismic source orientation (see Section 2).

6.1. Per-Pulse Sound Fields

The modelled sites encompassed water depths from 114 to 4252 m across three defined geological areas. At all single impulse sites, the distances to identified isopleths were greater in the broadside direction than the endfire direction. The array directionality and frequency content coupled with the bathymetry had a considerable effect on propagation at longer distances, with generally larger lobes of sound energy extending in the broadside direction, as shown in the sound footprint maps in Sections 5.2.2.1 to 5.2.2.4. Areas 1 and 3 are over a steep section of the continental slope which reflects sound energy offshore. Part of this sound energy combines with the direct path and is trapped in the deep sound channel which enables low-loss propagation driving the long ranges to impact thresholds offshore, away from the BIAs in the region.

The vertical slice plots (Section 5.2.2.5) assist in demonstrating the influence of the bathymetry, source location and sound speed profile on the sound field. Sources located in deeper water have a lower “cut-off frequency" (f_c) than sources in shallower water. The cut-off frequency is a single number that describes how much acoustic energy can propagate with minimal loss between then sea-surface and seafloor interfaces. For a given acoustic signal, frequencies below f_c are subject to higher loss compared to frequencies above the f_c since below this frequency sound energy is radiated directly into the seabed (Jensen et al. 2011). Deeper water has a lower f_c allowing more low-frequency energy to propagate when compared with shallower water on the continental shelf.

The sound speed profiles (Figures D-15 to D-17) were primarily downwards refracting apart from a small surface duct for all sites. The profiles had minimum sound speeds of approximately 1483 m/s where the sound channel axis begins to form. The shallow surface ducts (70–80 m deep) in the profiles shown in is not deep enough to trap energy below approximately 320–262 Hz (Equation 1.36 in Jensen et al. (2011)). The surface duct therefore can only trap the higher frequencies of the array effectively, which contribute less to the broadband source level than lower frequencies. However, when trapped, high frequencies can propagate with little loss and can produce higher levels near the sea-surface than scenarios where no surface duct is present.

The bathymetry varied greatly from north to south within the Operational Area, where the water depths increase as the continental shelf transitions into a deep-water environment. The combination of low-frequency content from the seismic source, the water depths within the survey area, and the downward refracting sound speed profile resulted in the sound field substantially interacting with the seabed for sites on or close to the continental shelf. The maximum-over-depth sound footprint maps and vertical slice plots (Section 5.2.2) assist in demonstrating the influence of the bathymetry and seabed composition on the sound field.

The distances to PK and PK-PK based criteria (Section 3.2 and 3.4) for fish, benthic crustaceans, and bivalves at the seafloor generally decreased with increasing water depth (Tables 17, 18, 26, 27 and 31 to 33). However, distances to these criteria did not always consistently change with increasing depth as any correlation between water depth and threshold distance is related to complex patterns of surface and seabed reflections that affect how sound propagates in shallow water. However, the number of modelled sites and water depths considered within the Operational Area provides a good representation of potential variability for seabed receptors.

Divers will primarily be inshore of the survey operations so the range to threshold was split into inshore, offshore, and longshore to estimate impacts more accurately for divers. The range to threshold was highly anisotropic with larger ranges extending offshore while sound travelling inshore was attenuated more.

6.2. Multiple Pulse Sound Fields

The accumulated SEL over 24 hours of seismic source operation was modelled considering three representative scenarios with realistic acquisition patterns. The modelling predicted the accumulation of sound energy, considering the change in location and the azimuth of the source at each pulse point, which was used to assess possible injury in marine mammals and the SEL_{24h} based fish and marine mammal criteria. The results were presented as maps of the accumulated exposure levels and tabulated values of ranges to threshold levels and exposure areas for the given effects criteria (Section 3).

The footprints and range maxima for all accumulated SEL thresholds are influenced by the seabed compositions along acquisition lines. The discussion above regarding ranges to isopleths also applies to the accumulated SEL calculations. The farthest ranges to thresholds for PTS and TTS were in the broadside direction, especially in the offshore direction, driven by the bathymetry and the sound speed profile.

6.3. Acoustic Results Summary

This section presents summary of the distances to the noise effect criteria applied in this study (Section 3) as relevant to the impact assessment. The effect criteria for impairment of marine mammals, fish and sea turtles use dual metrics (PK and SEL_{24h}), and the longest distance associated with either metric is required to be applied, and thus is presented in this summary.

The SEL_{24h} is a cumulative metric that reflects the dosimetric effect of noise levels within 24 h based on the assumption that an animal is consistently exposed to such noise levels at a fixed position. Where the corresponding SEL_{24h} radii are larger than those for peak pressure criteria, they often represent an unlikely worst-case scenario. More realistically, marine mammals, fish and sea turtles would not stay in the same location for 24 hours, but rather a shorter period, depending upon their behaviour and the proximity and movements of the source. Therefore, a reported radius for SEL_{24h}

criteria does not mean that marine fauna travelling within this radius of the source will be impaired, but rather that an animal could be exposed to the sound level associated with impairment (either PTS or TTS) if it remained in that location for 24 h.

6.3.1. Area 1

Marine mammals

Table 43 summarises the distances to criteria for marine mammals, note that these distances are associated with the broadside aspect of the array.

Table 43. *Area 1*, maximum (R_{max}) horizontal distances (in km) from modelled sites or scenarios to behavioural response thresholds and temporary threshold shift (TTS) and permanent threshold shift (PTS) for marine mammals (SPL levels from Table 14, PK values from Table 16, SEL_{24h} values from Table 36).

Hearing group	Modelled distance to effect threshold (R_{max})		
	Behavioural response[1]	Impairment: TTS[2]	Impairment: PTS[2]
LF cetaceans	12.2	149	0.47
HF cetaceans		0.10	–
VHF cetaceans		0.85	0.11
Otariid seals		0.10	–

Noise exposure criteria: [1] NOAA (2019) and [2] Southall et al. (2019)
A dash indicates the threshold was not reached within the limits of the modelling resolution (20 m).

Sea turtles

Table 44 summarises the distances to criteria for sea turtles.

Table 44. *Area 1*, maximum (R_{max}) horizontal distances (in km) from modelled sites or scenarios to behavioural response thresholds and temporary threshold shift (TTS) and permanent threshold shift (PTS) for sea turtles (SPL levels from Table 14, SEL_{24h} values from Table 36.

Hearing group	Modelled distance to effect threshold (R_{max})			
	Behavioural response[1]	Behavioural disturbance[2]	Impairment: TTS[3]	Impairment: PTS[3]
Sea turtles	4.18	0.81	0.26	0.10

Noise exposure criteria: [1] NSF (2011), [2] McCauley et al. (2000b), and [3] Finneran et al. (2017)

Fish, fish eggs, and fish larvae

This modelling study assessed the ranges at the seafloor and in the water column for quantitative criteria based on Popper et al. (2014) and considered both PK and SEL_{24h} metrics associated with mortality and potential mortal injury as well as impairment in the following groups:

- Fish without a swim bladder (also appropriate for sharks in the absence of other information)
- Fish with a swim bladder that do not use it for hearing
- Fish that use their swim bladders for hearing
- Fish eggs and fish larvae

Table 45 summarises the distances to injury criteria for fish, fish eggs, and fish larvae along with the relevant metric and the location of the information within this report.

Table 45. *Area 1*, summary of maximum fish, fish eggs, and larvae injury and temporary threshold shift (TTS) onset distances for single impulse and 24 h sound level exposure (SEL_{24h}) modelled scenarios (PK values from Tables 16 and 17, SEL_{24h} values from Table 37).

Relevant hearing group	Effect criteria	Water column		Seafloor	
		Metric associated with longest distance to criteria	R_{max} (km)	Metric associated with longest distance to criteria	R_{max} (km)
Fish: No swim bladder	Recoverable injury	SEL_{24h}	0.11	*	*
	TTS	SEL_{24h}	4.80	SEL_{24h}	4.50
Fish: Swim bladder not involved in hearing and Swim bladder involved in hearing	Recoverable injury	PK	0.14	*	*
	TTS	SEL_{24h}	4.80	SEL_{24h}	4.50
Fish eggs, and larvae	Injury	PK	0.14	*	*

An asterisk indicates the threshold was not reached

Invertebrates, Sponges, Coral, and Plankton

To assist with assessing the potential effects on these receptors, the following were determined:

- Crustaceans: The sound level of 202 dB re 1 µPa PK-PK from Payne et al. (2008) was considered for seafloor sound levels; the sound level was reached at ranges between 358 and 437 m from the source (Table 18), depending on the modelled site.
- Bivalves: The distance where a particle acceleration of 37.57 ms^{-2} at the seafloor could occur was determined for comparing to results presented in Day et al. (2016a). This particle acceleration was not reached at the considered sites.
- Sponges and coral: the PK sound level at the seafloor directly underneath the seismic source was estimated at several modelled sites and compared to the sound level of 226 dB re 1 µPa PK for sponges and corals (Heyward et al. 2018); it was not reached for the considered sites (Table 17).

Divers

An SPL human health assessment of 145 dB re 1 µPa (SPL; L_P) derived from was considered for people swimming and diving and the sound level was reached at ranges between 19.3 and 30.2 km for the inshore direction depending on the modelled site.

6.3.2. Area 2

Marine mammals

Table 46 summarises the distances to criteria for marine mammals, note that these distances are associated with the broadside aspect of the array.

Table 46. *Area 2*, maximum (R_{max}) horizontal distances (in km) from modelled sites or scenarios to behavioural response thresholds and temporary threshold shift (TTS) and permanent threshold shift (PTS) for marine mammals (SPL levels from Table 20, PK values from Table 21, SEL_{24h} values from Table 36).

Hearing group	Modelled distance to effect threshold (R_{max})		
	Behavioural response[1]	Impairment: TTS[2]	Impairment: PTS[2]
LF cetaceans	6.61	70.1	0.39
HF cetaceans		0.10	–

Fish, fish eggs, and fish larvae

This modelling study assessed the ranges at the seafloor and in the water column for quantitative criteria based on Popper et al. (2014) and considered both PK and SEL_{24h} metrics associated with mortality and potential mortal injury as well as impairment in the following groups:

- Fish without a swim bladder (also appropriate for sharks in the absence of other information)
- Fish with a swim bladder that do not use it for hearing
- Fish that use their swim bladders for hearing
- Fish eggs and fish larvae

Table 51 summarises the distances to injury criteria for fish, fish eggs, and fish larvae along with the relevant metric and the location of the information within this report.

Table 51. *Area 3*, summary of maximum fish, fish eggs, and larvae injury and temporary threshold shift (TTS) onset distances for single impulse and 24 h sound level exposure (SEL_{24h}) modelled scenarios (PK values from Tables 25 and 26, SEL_{24h} values from Table 39).

Relevant hearing group	Effect criteria	Water column		Seafloor	
		Metric associated with longest distance to criteria	R_{max} (km)	Metric associated with longest distance to criteria	R_{max} (km)
Fish: No swim bladder	Recoverable injury	SEL_{24h}	0.10	*	*
	TTS	SEL_{24h}	4.50	SEL_{24h}	4.50
Fish: Swim bladder not involved in hearing and Swim bladder involved in hearing	Recoverable injury	PK	0.14	*	*
	TTS	SEL_{24h}	4.50	SEL_{24h}	4.50
Fish eggs, and larvae	Injury	PK	0.14	*	*

An asterisk indicates that the threshold was not reached.

Invertebrates, Sponges, Coral, and Plankton

To assist with assessing the potential effects on these receptors, the following were determined:

- Crustaceans: The sound level of 202 dB re 1 µPa PK-PK from Payne et al. (2008) was considered for seafloor sound levels; the sound level was reached at a range of between 433 and 512 m from the source (Table 27) depending on the modelled site.

- Bivalves: The distance where a particle acceleration of 37.57 ms^{-2} at the seafloor could occur was determined for comparing to results presented in Day et al. (2016a). This particle acceleration was not reached at the considered sites.
- Sponges and coral: the PK sound level at the seafloor directly underneath the seismic source was estimated at several modelled sites and compared to the sound level of 226 dB re 1 µPa PK for sponges and corals (Heyward et al. 2018); it was not reached for the considered modelled sites (Table 26).

Divers

An SPL human health assessment of 145 dB re 1 µPa (SPL; L_P) derived from was considered for people swimming and diving and the sound level was reached at ranges between 12.5 and 27.3 km for the inshore direction depending on the modelled site.

6.3.4. Standalone Sites and 2D Tie-Line

For Standalone Sites 1-4, the results in Section 5.2.1.4 should be referred to, and for PTS and TTS ranges the closest applicable SEL_{24h} scenario should be referred to. Results for invertebrates at Standalone Site 5 and 2D Tie-Line Sites 1 and 2 were determined as follows:

- Crustaceans: The sound level of 202 dB re 1 µPa PK-PK from Payne et al. (2008) was considered for seafloor sound levels; the sound level was reached at a range of between 385 and 676 m from the source (Tables 32 and 33) depending on the modelled site.

6.4. Animal Movement Modelling

The estimated sound fields produced by source and propagation models for the planned TGS Otway Basin 3-D MSS were incorporated into a sound exposure model for pygmy blue whales and southern right whales to estimate the radial distance within which 95% of the exposure exceedances occur ($ER_{95\%}$), along with the probability that an animat with the closest point of approach within that distance would be exposed above the relevant threshold (P_{exp}).

For the exposure analysis, restricted seeding and unrestricted seeding were considered for pygmy blue whales as well as restricted seeding for migrating southern right whales (Section 4.6.1).

Of the four scenarios considered, only the seeding areas of Scenarios 1a and 2b had partial overlap with the Active Source Area of the seismic survey. The closest distance between the survey lines and the known core range area for southern right whales and the adjusted foraging pygmy blue whale BIA is 6.2 km and 1.1.km, respectively (Figure 5).

Sections 6.4.1 and 6.4.2 summarise the PTS, TTS, and behavioural exposure range results, with the tabulated results presented in Tables 40 and 41.

6.4.1. PTS and TTS

Exposure ranges from animal movement modelling for PTS and TTS criteria are typically shorter than those predicted using acoustic propagation modelling because of the shorter dwell time of the moving animats. In all scenarios, for both restricted and unrestricted cases, PTS and TTS exposure ranges were substantially shorter than acoustic ranges to threshold.

Both migrating southern right whale restricted seeding scenarios resulted in exposures above threshold, and therefore exposure ranges. The maximum $ER_{95\%}$ for SEL_{24h} thresholds was 11.0 km for

TTS and 0.04 km for PTS. The restricted seeding of foraging pygmy blue whales resulted in TTS and PTS exposures above threshold. The maximum $ER_{95\%}$ for SEL_{24h} thresholds of this scenario was 15.4 km for TTS. Unrestricted seeding of foraging pygmy blue whales caused exposures above threshold with much higher exposure ranges. The maximum $ER_{95\%}$ for SEL_{24h} thresholds was 31.7 km for TTS and 0.13 km for PTS. Exposure ranges are, on average, slightly longer for TTS and PTS for unrestricted vs restricted scenarios because unrestricted animats have more opportunities to be seeded in deeper water, where acoustic ranges will be longer.

The probability of exposure within $ER_{95\%}$ varied between 33 and 98% for migrating southern right whales restricted scenarios and 32-52% for foraging pygmy blue whales scenarios, indicating that some, but not all, animats exposed within the 95th percentile range were exposed above threshold. This is because animats can move in and out of the modelling range as well as their vertical position in the water column, thus potentially limiting the length of time they are within the exposure radius. For example, an animat might approach within the predicted exposure range but if they are traveling more quickly on average than other animats, they may not accumulate as much exposure, or they may be spending more time at depths with quieter sound levels.

6.4.2. Behavioural Effects

Exposure ranges ($ER_{95\%}$) for single exposure metrics, such as the SPL behavioural response criteria, are typically comparable to the predicted acoustic ranges. Acoustic ranges are conservatively calculated using the maximum-over-depth sound fields and assuming static receivers, while exposure ranges account for animats sampling the sound field vertically and horizontally based on species-specific diving parameters, so exposure ranges are generally slightly lower than the R_{max} acoustic ranges. The behavioural effects considering the unweighted SPL results are consistent with this pattern. For foraging pygmy blue whale scenarios, behavioural exposure ranges for unweighted SPL results were similar, at maximum 6.21 km and 7.01 km for the unrestricted and restricted seeding, respectively, with the probabilities of exposure being at maximum 83% and 51%. Migrating southern right whales seeded in their known core range area resulted in no exposures above the SPL behavioural response criteria. However, when the seeding area was adjusted to include the survey lines (see Figure 5), behavioural exposure ranges for the unweighted SPL results were to up to 6.10 km with the probability of exposure of up to 73%. This occurs because this seeding area overlaps with the survey lines and hence, this seeding allows more animats to get closer to source locations, thereby shifting the bulk of the distribution lower (e.g., Figures 55 and 57). The closest distance between the survey lines and the southern right whale known core range area is 6.2 km, which explains why there are no exposures above the SPL behavioural response criteria for southern right whales seeded in the known core range area.

In addition to the exposure ranges ($ER_{95\%}$) to the SPL behavioural response criteria for the unweighted SPL results, the 140 and 160 dB behavioural thresholds for weighted SPL results were also included for Scenarios 2a and 2b for southern right whale mother-calf pairs. The behavioural exposure ranges to the 140 and 160 dB threshold were up to 31.5 km and 0.59 km, respectively, with the probability of exposure of up to 61 and 59%.

Exposure ranges to the 160 dB behavioural threshold were significantly lower for the weighted SPL than the unweighted SPL results, as expected based on the vertical distribution of the sound field (see Figure 58). As shown in Figure 2, Area 2 is situated on the shelf edge, with a downslope propagation resulting in energy becoming trapped in the deep sound channel. Because of this, the maximum-over-depth threshold isopleths extent to larger ranges in the offshore (southwest) direction. Migrating southern right whale mother-calf pairs are expected to spend most of their time in a behavioural mode where most dives reach less than 30 m in depth. Figure 58 shows a vertical sound field slice beginning at the source location and extending towards the shallower water at an azimuth of 45°, while Figure 59 shows contour plots with weighted SPL isopleths based on the full water column and the upper 30 m only. The plots show how migrating southern right whale mother-calf pairs sample the upper portion of the water column, which is quieter for weighted SPL results, and results in exposure ranges that are shorter than exposure ranges for unweighted SPL results.

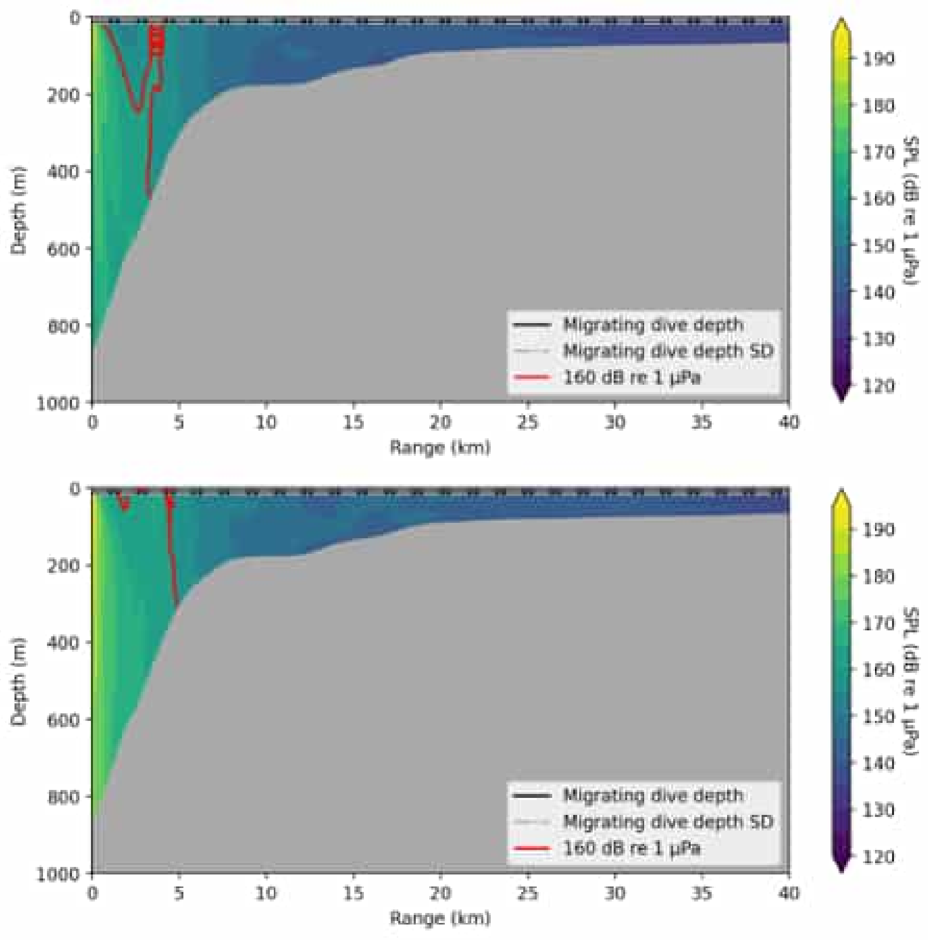

Figure 58. *Site 1:* Example SPL vertical slice from the seismic source to 40 km at an azimuth of 45° towards inshore, for the weighted (top) and unweighted (bottom) SPL. The 160 dB behavioural response threshold is highlighted in red, and the migrating southern right whale mother-calf pairs dive depth is indicated by horizontal lines.

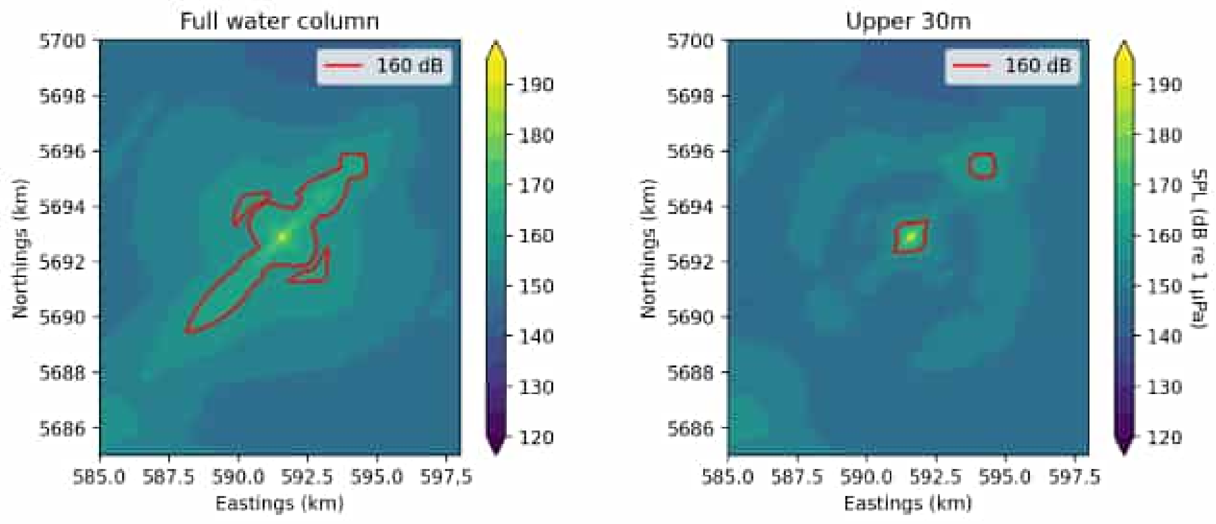

Figure 59. *Site 1:* Weighted SPL isopleth contour maps for the full water column (left) and the upper 30 m (right), highlighting the 160 dB behavioural response threshold.

Glossary

Unless otherwise stated in an entry, these definitions are consistent with ISO 80000-3 (2017).

1/3-octave

One third of an octave. *Note*: A one-third octave is approximately equal to one decidecade (1/3 oct ≈ 1.003 ddec).

1/3-octave-band

Frequency band whose bandwidth is one one-third octave. *Note*: The bandwidth of a one-third octave-band increases with increasing centre frequency.

A-weighting

Frequency-selective weighting for human hearing in air that is derived from the inverse of the idealized 40-phon equal loudness hearing function across frequencies.

absorption

The reduction of acoustic pressure amplitude due to acoustic particle motion energy converting to heat in the propagation medium.

attenuation

The gradual loss of acoustic energy from absorption and scattering as sound propagates through a medium.

auditory frequency weighting

The process of applying an auditory frequency weighting function. In human audiometry, C-weighting is the most commonly used function, an example for marine mammals are the auditory frequency weighting functions published by Southall et al. (2007).

auditory frequency weighting function

Frequency weighting function describing a compensatory approach accounting for a species' (or functional hearing group's) frequency-specific hearing sensitivity. Example hearing groups are low-, high-, and very-high-frequency cetaceans, phocid and otariid pinnipeds.

azimuth

A horizontal angle relative to a reference direction, which is often magnetic north or the direction of travel. In navigation it is also called bearing.

bandwidth

The range of frequencies over which a sound occurs. Broadband refers to a source that produces sound over a broad range of frequencies (e.g., seismic airguns, vessels) whereas narrowband sources produce sounds over a narrow frequency range (e.g., sonar) (ANSI S1.13-2005 (R2010)).

bar

Unit of pressure equal to 100 kPa, which is approximately equal to the atmospheric pressure on Earth at sea level. 1 bar is equal to 10^5 Pa or 10^{11} µPa.

boxcar averaging

A signal smoothing technique that returns the averages of consecutive segments of a specified width.

broadband level

The total level measured over a specified frequency range.

broadside direction

Perpendicular to the travel direction of a source. Compare with endfire direction.

cetacean

Any animal in the order Cetacea. These are aquatic species and include whales, dolphins, and porpoises.

compressional wave

A mechanical vibration wave in which the direction of particle motion is parallel to the direction of propagation. Also called primary wave or P-wave.

conductivity-temperature-depth (CTD)

Measurement data of the ocean’s conductivity, temperature, and depth; used to compute sound speed and salinity.

decade

Logarithmic frequency interval whose upper bound is ten times larger than its lower bound (ISO 80000-3:2006).

decidecade

One tenth of a decade. *Note*: An alternative name for decidecade (symbol ddec) is “one-tenth decade”. A decidecade is approximately equal to one third of an octave (1 ddec ≈ 0.3322 oct) and for this reason is sometimes referred to as a “one-third octave”.

decidecade band

Frequency band whose bandwidth is one decidecade. *Note*: The bandwidth of a decidecade band increases with increasing centre frequency.

decibel (dB)

Unit of level used to express the ratio of one value of a power quantity to another on a logarithmic scale. Unit: dB.

delphinid

Family of oceanic dolphins, or Delphinidae, composed of approximately thirty extant species, including dolphins, porpoises, and killer whales.

duty cycle

The time when sound is periodically recorded by an acoustic recording system.

endfire direction

Parallel to the travel direction of a source. Also see **broadside direction**.

energy source level

A property of a sound source obtained by adding to the sound exposure level measured in the far field the propagation loss from the acoustic centre of the source to the receiver position. Unit: decibel (dB). Reference value: 1 $\mu Pa^2 m^2 s$.

energy spectral density source level

A property of a sound source obtained by adding to the energy spectral density level of the sound pressure measured in the far field the propagation loss from the acoustic centre of the source to the receiver position. Unit: decibel (dB). Reference value: 1 $\mu Pa^2 m^2 s/Hz$.

ensonified

Exposed to sound.

far field

The zone where, to an observer, sound originating from an array of sources (or a spatially distributed source) appears to radiate from a single point.

Fourier transform (or Fourier synthesis)

A mathematical technique which, although it has varied applications, is referenced in the context of this report as a method used in the process of deriving a spectrum estimate from time-series data (or the reverse process, termed the inverse Fourier transform). A computationally efficient numerical algorithm for computing the Fourier transform is known as fast Fourier transform (FFT).

flat weighting

Term indicating that no frequency weighting function is applied. Synonymous with unweighted.

frequency

The rate of oscillation of a periodic function measured in cycles-per-unit-time. The reciprocal of the period. Unit: hertz (Hz). Symbol: f. 1 Hz is equal to 1 cycle per second.

frequency weighting

The process of applying a frequency weighting function.

frequency-weighting function

The squared magnitude of the sound pressure transfer function. For sound of a given frequency, the frequency weighting function is the ratio of output power to input power of a specified filter, sometimes expressed in decibels. Examples include the following:

- *Auditory frequency weighting function*: compensatory frequency weighting function accounting for a species' (or functional hearing group's) frequency-specific hearing sensitivity.
- *System frequency weighting function*: frequency weighting function describing the sensitivity of an acoustic acquisition system, typically consisting of a hydrophone, one or more amplifiers, and an analogue to digital converter.

geoacoustic

Relating to the acoustic properties of the seabed.

hearing group

Category of animal species when classified according to their hearing sensitivity and to the susceptibility to sound. Examples for marine mammals include very low-frequency (VLF) cetaceans, low-frequency (LF) cetaceans, mid-frequency (MF) cetaceans, high-frequency (HF) cetaceans, very high-frequency (VHF) cetaceans, otariid pinnipeds in water (OPW), phocid pinnipeds in water (PPW), sirenians (SI), other marine carnivores in air (OCA), and other marine carnivores in water (OCW) (NMFS 2018, Southall et al. 2019). See **auditory frequency weighting functions**, which are often applied to these groups. Examples for fish include species for which the swim bladder is involved in hearing, species for which the swim bladder is not involved in hearing, and species without a swim bladder (Popper et al. 2014).

hearing threshold

The sound pressure level for any frequency of the hearing group that is barely audible for a given individual for specified background noise during a specific percentage of experimental trials.

hertz (Hz)

A unit of frequency defined as one cycle per second.

high-frequency (HF) cetacean

See **hearing group**.

impulsive sound

Qualitative term meaning sounds that are typically transient, brief (less than 1 second), broadband, with rapid rise time and rapid decay. They can occur in repetition or as a single event. Examples of impulsive sound sources include explosives, seismic airguns, and impact pile drivers.

isopleth

A line drawn on a map through all points having the same value of some quantity.

knot

One nautical mile per hour. Symbol: kn.

level

A measure of a quantity expressed as the logarithm of the ratio of the quantity to a specified reference value of that quantity. Examples include sound pressure level, sound exposure level, and peak sound pressure level. For example, a value of sound exposure level with reference to 1 μPa^2 s can be written in the form *x* dB re 1 μPa^2 s.

low-frequency (LF) cetacean

See **hearing group**.

median

The 50th percentile of a statistical distribution.

mid-frequency (MF) cetacean

See **hearing group**.

monopole source level (MSL)

A source level that has been calculated using an acoustic model that accounts for the effect of the sea-surface and seabed on sound propagation, assuming a point-like (monopole) sound source.

M-weighting

See **auditory frequency weighting function** (as proposed by Southall et al. 2007).

mysticete

A suborder of cetaceans that use baleen plates to filter food from water. Members of this group include rorquals (Balaenopteridae), right whales (Balaenidae), and grey whales (*Eschrichtius robustus*).

non-impulsive sound

Sound that is not an impulsive sound. A non-impulsive sound is not necessarily a continuous sound.

octave

The interval between a sound and another sound with double or half the frequency. For example, one octave above 200 Hz is 400 Hz, and one octave below 200 Hz is 100 Hz.

odontocete

The presence of teeth, rather than baleen, characterizes these whales. Members of the Odontoceti are a suborder of cetaceans, a group comprised of whales, dolphins, and porpoises. The skulls of toothed whales are mostly asymmetric, an adaptation for their echolocation. This group includes sperm whales, killer whales, belugas, narwhals, dolphins, and porpoises.

otariid

A common term used to describe members of the Otariidae, eared seals, commonly called sea lions and fur seals. Otariids are adapted to a semi-aquatic life; they use their large fore flippers for propulsion. Their ears distinguish them from phocids. Otariids are one of the three main groups in the superfamily Pinnipedia; the other two groups are phocids and walrus.

otariid pinnipeds in water (OPW)

See **hearing group**.

other marine carnivores in air (OCA)

See **hearing group**.

other marine carnivores in water (OCW)

See **hearing group**.

parabolic equation method

A computationally efficient solution to the acoustic wave equation that is used to model propagation loss. The parabolic equation approximation omits effects of back-scattered sound, simplifying the computation of propagation loss. The effect of back-scattered sound is negligible for most ocean-acoustic propagation problems.

peak sound pressure level (zero-to-peak sound pressure level)

The level ($L_{p,pk}$ or L_{pk}) of the squared maximum magnitude of the sound pressure (p^2_{pk}). Unit: decibel (dB). Reference value (p_0^2) for sound in water: 1 µPa².

$$L_{p,\mathrm{pk}} := 10\log_{10}\left(p^2_{\mathrm{pk}}/p_0^2\right)\,\mathrm{dB} \; = 20\log_{10}\left(p_{\mathrm{pk}}/p_0\right)\,\mathrm{dB}$$

The frequency band and time window should be specified. Abbreviation: PK or L_{pk}.

peak-to-peak sound pressure

The difference between the maximum and minimum sound pressure over a specified frequency band and time window. Unit: pascal (Pa).

permanent threshold shift (PTS)

An irreversible loss of hearing sensitivity caused by excessive noise exposure. PTS is considered auditory injury.

phocid

A common term used to describe all members of the family Phocidae. These true/earless seals are more adapted to in-water life than are otariids, which have more terrestrial adaptations. Phocids use their hind flippers to propel themselves. Phocids are one of the three main groups in the superfamily Pinnipedia; the other two groups are otariids and walrus.

phocid pinnipeds in water (PPW)

See **hearing group**.

pinniped

A common term used to describe all three groups that form the superfamily Pinnipedia: phocids (true seals or earless seals), otariids (eared seals or fur seals and sea lions), and walrus.

point source

A source that radiates sound as if from a single point.

power spectral density source level

A property of a sound source obtained by adding to the power spectral density level of the sound pressure measured in the far field the propagation loss from the acoustic centre of the source to the receiver position. Unit: decibel (dB). Reference value: 1 $\mu Pa^2 m^2/Hz$.

pressure, acoustic

The deviation from the ambient pressure caused by a sound wave. Also called sound pressure. Unit: pascal (Pa).

pressure, hydrostatic

The pressure at any given depth in a static liquid that is the result of the weight of the liquid acting on a unit area at that depth, plus any pressure acting on the surface of the liquid. Unit: pascal (Pa).

propagation loss (PL)

Difference between a source level (SL) and the level at a specified location, $PL(x) = SL - L(x)$. Also see **transmission loss**.

received level

The level measured (or that would be measured) at a defined location. The type of level should be specified.

reference values

standard underwater references values used for calculating sound **levels**, e.g., the reference value for expressing sound pressure level in decibels is 1 μPa.

Quantity	Reference value
Sound pressure	1 μPa
Sound exposure	1 μPa^2 s
Sound particle displacement	1 pm
Sound particle velocity	1 nm/s
Sound particle acceleration	1 μm/s^2

rms

abbreviation for root-mean-square.

shear wave

A mechanical vibration wave in which the direction of particle motion is perpendicular to the direction of propagation. Also called a secondary wave or S-wave. Shear waves propagate only in solid media, such as sediments or rock. Shear waves in the seabed can be converted to compressional waves in water at the water-seabed interface.

sound

A time-varying disturbance in the pressure, stress, or material displacement of a medium propagated by local compression and expansion of the medium.

sound exposure

Time integral of squared sound pressure over a stated time interval. The time interval can be a specified time duration (e.g., 24 hours) or from start to end of a specified event (e.g., a pile strike, an airgun pulse, a construction operation). Unit: Pa^2 s.

sound exposure level

The level (L_E) of the sound exposure (E). Unit: decibel (dB). Reference value (E_0) for sound in water: 1 μPa^2 s.

$$L_E := 10\log_{10}(E/E_0)\,\mathrm{dB} \ = 20\log_{10}\left(E^{1/2}/E_0^{1/2}\right)\,\mathrm{dB}$$

The frequency band and integration time should be specified. Abbreviation: SEL.

sound exposure spectral density

Distribution as a function of frequency of the time-integrated squared sound pressure per unit bandwidth of a sound having a continuous spectrum. Unit: Pa^2 s/Hz.

sound field

Region containing sound waves.

sound intensity

Product of the sound pressure and the sound particle velocity. The magnitude of the sound intensity is the sound energy flowing through a unit area perpendicular to the direction of propagation per unit time.

sound particle acceleration

The rate of change of sound particle velocity. Unit: metre per second squared (m/s^2). Symbol: *a*.

sound particle motion

smallest volume of a medium that represents its mean physical properties.

sound particle displacement

Displacement of a material element caused by the action of sound, where a material element is the smallest element of the medium that represents the medium's mean density.

sound particle velocity

The velocity of a particle in a material moving back and forth in the direction of the pressure wave. Unit: metre per second (m/s). Symbol: *v*.

sound pressure

The contribution to total pressure caused by the action of sound.

sound pressure level (rms sound pressure level)

The level ($\mathrm{L_{p,rms}}$) of the time-mean-square sound pressure (p_{rms}^2). Unit: decibel (dB). Reference value (p_0^2) for sound in water: 1 μPa^2.

$$L_{p,\mathrm{rms}} := 10\log_{10}(p_{\mathrm{rms}}^2/p_0^2)\ \mathrm{dB}\ = 20\log_{10}(p_{\mathrm{rms}}/p_0)\ \mathrm{dB}$$

The frequency band and averaging time should be specified. Abbreviation: SPL or Lrms.

sound speed profile

The speed of sound in the water column as a function of depth below the water surface.

soundscape

The characterization of the ambient sound in terms of its spatial, temporal, and frequency attributes, and the types of sources contributing to the sound field.

source level (SL)

A property of a sound source obtained by adding to the sound pressure level measured in the far field the propagation loss from the acoustic centre of the source to the receiver position. Unit: decibel (dB). Reference value: 1 μPa^{2}m^2.

spectrum

An acoustic signal represented in terms of its power, energy, mean-square sound pressure, or sound exposure distribution with frequency.

surface duct

The upper portion of a water column within which the sound speed profile gradient causes sound to refract upward and therefore reflect off the surface resulting in relatively long-range sound propagation with little loss.

temporary threshold shift (TTS)

Reversible loss of hearing sensitivity. TTS can be caused by noise exposure.

thermocline

The depth interval near the ocean surface that experiences temperature gradients due to warming or cooling by heat conduction from the atmosphere and by warming from solar heating.

transmission loss (TL)

The difference between a specified level at one location and that at a different location, TL(x1,x2) = L(x1) − L(x2). Also see **propagation loss**.

unweighted

Term indicating that no frequency weighting function is applied. Synonymous with flat weighting.

very high-frequency (VHF) cetacean

See **hearing group**.

very low-frequency (VLF) cetacean

See **hearing group**.

wavelength

Distance over which a wave completes one cycle of oscillation. Unit: metre (m). Symbol: λ.

Appendix A. Acoustic Metrics

A.1. Pressure Related Acoustic Metrics

Underwater sound pressure amplitude is measured in decibels (dB) relative to a fixed reference pressure of p_0 = 1 μPa. Because the perceived loudness of sound, especially pulsed sound such as from seismic airguns, pile driving, and sonar, is not generally proportional to the instantaneous acoustic pressure, several sound level metrics are commonly used to evaluate sound and its effects on marine life. Here we provide specific definitions of relevant metrics used in the accompanying report. Where possible, we follow the American National Standard Institute and International Organization for Standardization definitions and symbols for sound metrics (e.g., ISO 2017, ANSI S1.1-2013), but these standards are not always consistent.

The zero-to-peak sound pressure, or peak sound pressure (PK or $L_{p,pk}$; dB re 1 µPa), is the decibel level of the maximum instantaneous acoustic pressure in a stated frequency band attained by an acoustic pressure signal, $\mathrm{p(t)}$:

$$L_{p,\mathrm{pk}} = 10\log_{10}\frac{\max|p^2(t)|}{p_0^2} = 20\log_{10}\frac{\max|p(t)|}{p_0} \tag{A-1}$$

PK is often included as a criterion for assessing whether a sound is potentially injurious; however, because it does not account for the duration of an acoustic event, it is generally a poor indicator of perceived loudness.

The peak-to-peak sound pressure (PK-PK or $L_{p,pk\text{-}pk}$; dB re 1 µPa) is the difference between the maximum and minimum instantaneous sound pressure, possibly filtered in a stated frequency band, attained by an impulsive sound, $\mathrm{p(t)}$:

$$L_{p,\mathrm{pk\text{-}pk}} = 10\log_{10}\frac{[\max(p(t)) - \min(p(t))]^2}{p_0^2} \tag{A-2}$$

The sound pressure level (SPL or L_p; dB re 1 µPa) is the root-mean-square (rms) pressure level in a stated frequency band over a specified time window (T; s). It is important to note that SPL always refers to an rms pressure level and therefore not instantaneous pressure:

$$L_p = 10\log_{10}\left(\frac{1}{T}\int_T g(t)\,p^2(t)\,dt \Big/ p_0^2\right) \tag{A-3}$$

where $\mathrm{g(t)}$ is an optional time weighting function. In many cases, the start time of the integration is marched forward in small time steps to produce a time-varying SPL function. For short acoustic events, such as sonar pulses and marine mammal vocalizations, it is important to choose an appropriate time window that matches the duration of the signal. For in-air studies, when evaluating the perceived loudness of sounds with rapid amplitude variations in time, the time weighting function $\mathrm{g(t)}$ is often set to a decaying exponential function that emphasizes more recent pressure signals. This function mimics the leaky integration nature of mammalian hearing. For example, human-based fast time-weighted SPL ($L_{p,fast}$) applies an exponential function with time constant 125 ms. A related simpler approach used in underwater acoustics sets $\mathrm{g(t)}$ to a boxcar (unity amplitude) function of width 125 ms; the results can be referred to as $L_{p,boxcar\ 125ms}$. Another approach, historically used to evaluate SPL of impulsive signals underwater, defines $\mathrm{g(t)}$ as a boxcar function with edges set to the times corresponding to 5% and 95% of the cumulative square pressure function encompassing the duration of an impulsive acoustic event. This calculation is applied individually to each impulse signal, and the results are referred to as 90% SPL ($L_{p,90\%}$).

The sound exposure level (SEL or L_E; dB re 1 µPa²·s) is the time-integral of the squared acoustic pressure over a duration (T):

$$L_E = 10\log_{10}\left(\int_T p^2(t)\,dt \Big/ T_0 p_0^2\right) \qquad \text{(A-4)}$$

where T_0 is a reference time interval of 1 s. SEL continues to increase with time when non-zero pressure signals are present. It is a dose-type measurement, so the integration time applied must be carefully considered for its relevance to impact to the exposed recipients.

SEL can be calculated over a fixed duration, such as the time of a single event or a period with multiple acoustic events. When applied to pulsed sounds, SEL can be calculated by summing the SEL of the N individual pulses. For a fixed duration, the square pressure is integrated over the duration of interest. For multiple events, the SEL can be computed by summing (in linear units) the SEL of the N individual events:

$$L_{E,N} = 10\log_{10}\sum_{i=1}^{N} 10^{\frac{L_{E,i}}{10}} \qquad \text{(A-5)}$$

If applied, the frequency weighting of an acoustic event should be specified, as in the case of weighted SEL (e.g., $L_{E,LF,24h}$; see Appendix A.3) or auditory-weighted SPL ($L_{p,ht}$). The use of fast, slow, or impulse exponential-time-averaging or other time-related characteristics should also be specified.

A.2. Marine Mammal Impact Criteria

It has been long recognised that marine mammals can be adversely affected by underwater anthropogenic noise. For example, Payne and Webb (1971) suggested that communication distances of fin whales are reduced by shipping sounds. Subsequently, similar concerns arose regarding effects of other underwater noise sources and the possibility that impulsive sources—primarily airguns used in seismic surveys—could cause auditory injury. This led to a series of workshops held in the late 1990s, conducted to address acoustic mitigation requirements for seismic surveys and other underwater noise sources (NMFS 1998, ONR 1998, Nedwell and Turnpenny 1998, HESS 1999, Ellison and Stein 1999). In the years since these early workshops, a variety of thresholds have been proposed for both injury and disturbance. The following sections summarize the recent development of thresholds; however, this field remains an active research topic.

A.2.1. Injury

In recognition of shortcomings of the SPL-only based injury criteria, in 2005 NMFS sponsored the Noise Criteria Group to review literature on marine mammal hearing to propose new noise exposure criteria. Some members of this expert group published a landmark paper (Southall et al. 2007) that suggested assessment methods similar to those applied for humans. The resulting recommendations introduced dual acoustic injury criteria for impulsive sounds that included peak pressure level thresholds and SEL_{24h} thresholds, where the subscripted 24h refers to the accumulation period for calculating SEL. The peak pressure level criterion is not frequency weighted whereas the SEL_{24h} is frequency weighted according to one of four marine mammal species hearing groups: low-, mid- and high-frequency cetaceans (LF, MF, and HF cetaceans, respectively) and Pinnipeds in Water (PINN). These weighting functions are referred to as M-weighting filters (analogous to the A-weighting filter for human; Appendix A.3). The SEL_{24h} thresholds were obtained by extrapolating measurements of onset levels of Temporary Threshold Shift (TTS) in belugas by the amount of TTS required to produce Permanent Threshold Shift (PTS) in chinchillas. The Southall et al. (2007) recommendations do not specify an exchange rate, which suggests that the thresholds are the same regardless of the duration of exposure (i.e., it implies a 3 dB exchange rate).

Wood et al. (2012) refined Southall et al.'s (2007) thresholds, suggesting lower injury values for LF and HF cetaceans while retaining the filter shapes. Their revised thresholds were based on TTS-onset levels in harbour porpoises from Lucke et al. (2009), which led to a revised impulsive sound PTS threshold for HF cetaceans of 179 dB re 1 µPa^2·s. Because there were no data available for baleen whales, Wood et al. (2012) based their recommendations for LF cetaceans on results obtained from MF cetacean studies. In particular they referenced Finneran and Schlundt (2010) research, which found mid-frequency cetaceans are more sensitive to non-impulsive sound exposure than Southall et al. (2007) assumed. Wood et al. (2012) thus recommended a more conservative TTS-onset level for LF cetaceans of 192 dB re 1 µPa^2·s.

As of present an optimal approach is not apparent. There is consensus in the research community that an SEL-based method is preferable either separately or in addition to an SPL-based approach to assess the potential for injuries. In August 2016, after substantial public and expert input into three draft versions and based largely on the above-mentioned literature (NOAA 2013, 2015, 2016), NMFS finalised technical guidance for assessing the effect of anthropogenic sound on marine mammal hearing (NMFS 2016). The guidance describes injury criteria with new thresholds and frequency weighting functions for the five hearing groups described by Finneran and Jenkins (2012). The latest revision to this work was published in 2018; with the criteria defined in NMFS (2018). The latest criteria are from Southall et al. (2019) which is applied in this report.

A.2.2. Behavioural response

Numerous studies on marine mammal behavioural responses to sound exposure have not resulted in consensus in the scientific community regarding the appropriate metric for assessing behavioural reactions. However, it is recognised that the context in which the sound is received affects the nature and extent of responses to a stimulus (Southall et al. 2007, Ellison and Frankel 2012, Southall et al. 2016).

For impulsive noise, NMFS currently uses step function thresholds of 160 dB re 1 µPa SPL (unweighted) to assess and regulate noise-induced behavioural impacts for marine mammals (NOAA 2018, NOAA 2019). The threshold for impulsive sound is derived from the High-Energy Seismic Survey (HESS) panel (HESS 1999) report that, in turn, is based on the responses of migrating mysticete whales to airgun sounds (Malme et al. 1984). The HESS team recognised that behavioural responses to sound may occur at lower levels, but significant responses were only likely to occur above a SPL of 140 dB re 1 µPa. Southall et al. (2007) found varying responses for most marine mammals between a SPL of 140 and 180 dB re 1 µPa, consistent with the HESS (1999) report, but lack of convergence in the data prevented them from suggesting explicit step functions.

A.3. Marine Mammal Frequency Weighting

The potential for noise to affect animals depends on how well the animals can hear it. Noises are less likely to disturb or injure an animal if they are at frequencies that the animal cannot hear well. An exception occurs when the sound pressure is so high that it can physically injure an animal by non-auditory means (i.e., barotrauma). For sound levels below such extremes, the importance of sound components at particular frequencies can be scaled by frequency weighting relevant to an animal's sensitivity to those frequencies (Nedwell and Turnpenny 1998, Nedwell et al. 2007).

A.3.1. Marine Mammal Frequency Weighting Functions

In 2015, a US Navy technical report by Finneran (2015) recommended new auditory weighting functions. The overall shape of the auditory weighting functions is similar to human A-weighting functions, which follows the sensitivity of the human ear at low sound levels. The new frequency-weighting function is expressed as:

$$G(f) = K + 10\log_{10}\left[\left(\frac{(f/f_{lo})^{2a}}{\left[1+(f/f_{lo})^2\right]^a\left[1+(f/f_{hi})^2\right]^b}\right)\right] \quad \text{(A-6)}$$

Finneran (2015) proposed five functional hearing groups for marine mammals in water: low-, mid- and high-frequency cetaceans (LF, MF, and HF cetaceans, respectively), phocid pinnipeds, and otariid pinnipeds. The parameters for these frequency-weighting functions were further modified the following year (Finneran 2016) and were adopted in NOAA's technical guidance that assesses acoustic impacts on marine mammals (NMFS 2018), and in the latest guidance by Southall (2019). The updates did not affect the content related to either the definitions of frequency-weighting functions or the threshold values. Table A-1 lists the frequency-weighting parameters for each hearing group. Figure A-1 shows the resulting frequency-weighting curves.

Table A-1. Parameters for the auditory weighting functions used in this project as recommended by Southall et al. (2019).

Hearing group	a	b	f_{lo} (Hz)	f_{hi} (kHz)	K (dB)
Low-frequency cetaceans (baleen whales)	1.0	2	200	19,000	0.13
High-frequency cetaceans (dolphins, plus toothed, beaked, and bottlenose whales)	1.6	2	8,800	110,000	1.20
Very-high-frequency cetaceans (true porpoises, *Kogia*, river dolphins, cephalorhynchid, *Lagenorhynchus cruciger* and *L. australis*)	1.8	2	12,000	140,000	1.36
Phocid seals in water	1.0	2	1,900	30,000	0.75
Otariid seals in water	2.0	2	940	25,000	0.64

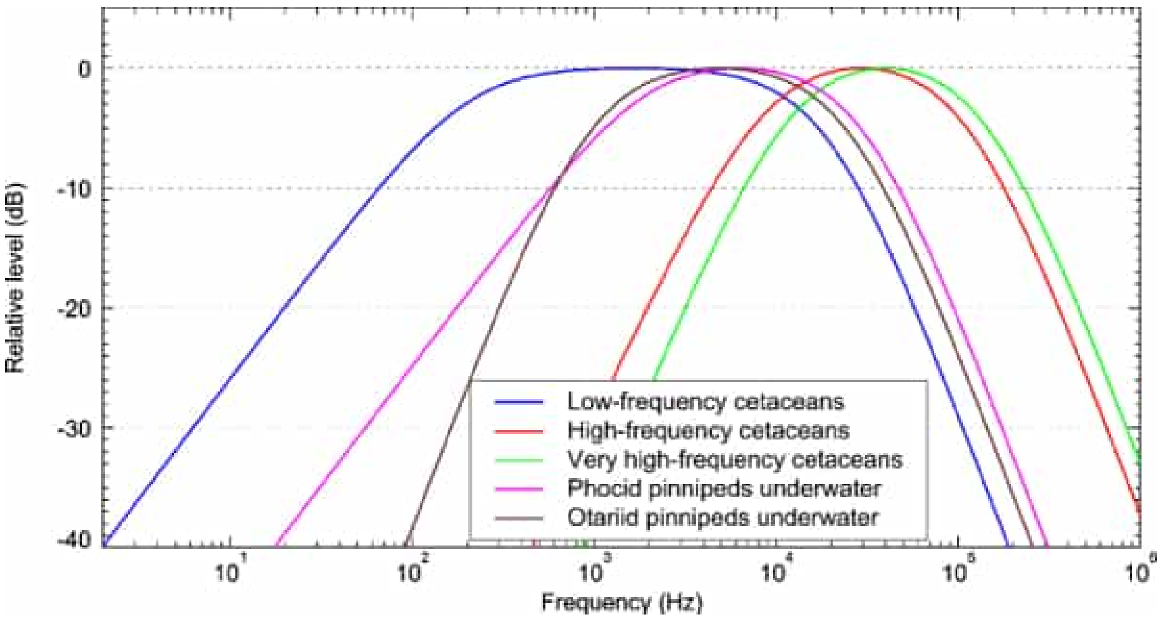

Figure A-1. Auditory weighting functions for functional marine mammal hearing groups used in this project as recommended by Southall et al. (2019).

Appendix B. Acoustic Source Model

B.1. Airgun Array Source Model

The source levels and directivity of the seismic source were predicted with JASCO's Airgun Array Source Model (AASM). AASM includes low- and high-frequency modules for predicting different components of the seismic source spectrum. The low-frequency module is based on the physics of oscillation and radiation of airgun bubbles, as originally described by Ziolkowski (1970), that solves the set of parallel differential equations that govern bubble oscillations. Physical effects accounted for in the simulation include pressure interactions between airguns, port throttling, bubble damping, and generator-injector (GI) gun behaviour discussed by Dragoset (1984), Laws et al. (1990), and Landrø (1992). A global optimisation algorithm tunes free parameters in the model to a large library of airgun source signatures.

While airgun signatures are highly repeatable at the low frequencies, which are used for seismic imaging, their sound emissions have a large random component at higher frequencies that cannot be predicted using a deterministic model. Therefore, AASM uses a stochastic simulation to predict the high-frequency (800−25,000 Hz) sound emissions of individual airguns, using a data-driven multiple-regression model. The multiple-regression model is based on a statistical analysis of a large collection of high quality seismic source signature data recently obtained from the Joint Industry Program (JIP) on Sound and Marine Life (Mattsson and Jenkerson 2008). The stochastic model uses a Monte-Carlo simulation to simulate the random component of the high-frequency spectrum of each airgun in an array. The mean high-frequency spectra from the stochastic model augment the low-frequency signatures from the physical model, allowing AASM to predict airgun source levels at frequencies up to 25,000 Hz.

AASM produces a set of "notional" signatures for each array element based on:

- Array layout
- Volume, tow depth, and firing pressure of each airgun
- Interactions between different airguns in the array

These notional signatures are the pressure waveforms of the individual airguns at a standard reference distance of 1 m; they account for the interactions with the other airguns in the array. The signatures are summed with the appropriate phase delays to obtain the far-field source signature of the entire array in all directions. This far-field array signature is filtered into decidecade-bands to compute the source levels of the array as a function of frequency band and azimuthal angle in the horizontal plane (at the source depth), after which it is considered a directional point source in the far field.

A seismic array consists of many sources and the point source assumption is invalid in the near field where the array elements add incoherently. The maximum extent of the near field of an array (R_{nf}) is:

$$R_{\mathrm{nf}} < \frac{l^2}{4\lambda} \tag{B-1}$$

where λ is the sound wavelength and l is the longest dimension of the array (Lurton 2002, §5.2.4). For example, a seismic source length of l = 21 m yields a near-field range of 147 m at 2 kHz and 7 m at 100 Hz. Beyond this R_{nf} range, the array is assumed to radiate like a directional point source and is treated as such for propagation modelling.

The interactions between individual elements of the array create directionality in the overall acoustic emission. Generally, this directionality is prominent mainly at frequencies in the mid-range between tens of hertz to several hundred hertz. At lower frequencies, with acoustic wavelengths much larger than the inter-airgun separation distances, the directionality is small. At higher frequencies, the pattern of lobes is too finely spaced to be resolved and the effective directivity is less.

B.2. Seismic Source

The layout of the triple 3480 in^3 seismic source used for modelling in this study is provided in Figure B-1 with details of the airgun parameters are provided in Table B-1.

For the modelled array, the layout is presented in a nominal cartesian coordinate system. In this coordinate system the direction of vessel travel determines the relative position of the array elements as plotted and tabulated. The layout used for acoustic modelling was produced by transforming the coordinates of client supplied layouts such that the resultant layouts correspond to a vessel travel direction along the positive X-axis and the array is centred on the X-Y origin. When used with an acoustic model the positive X-axis in this nominal coordinate system aligns with the vessel tow direction or survey line azimuth.

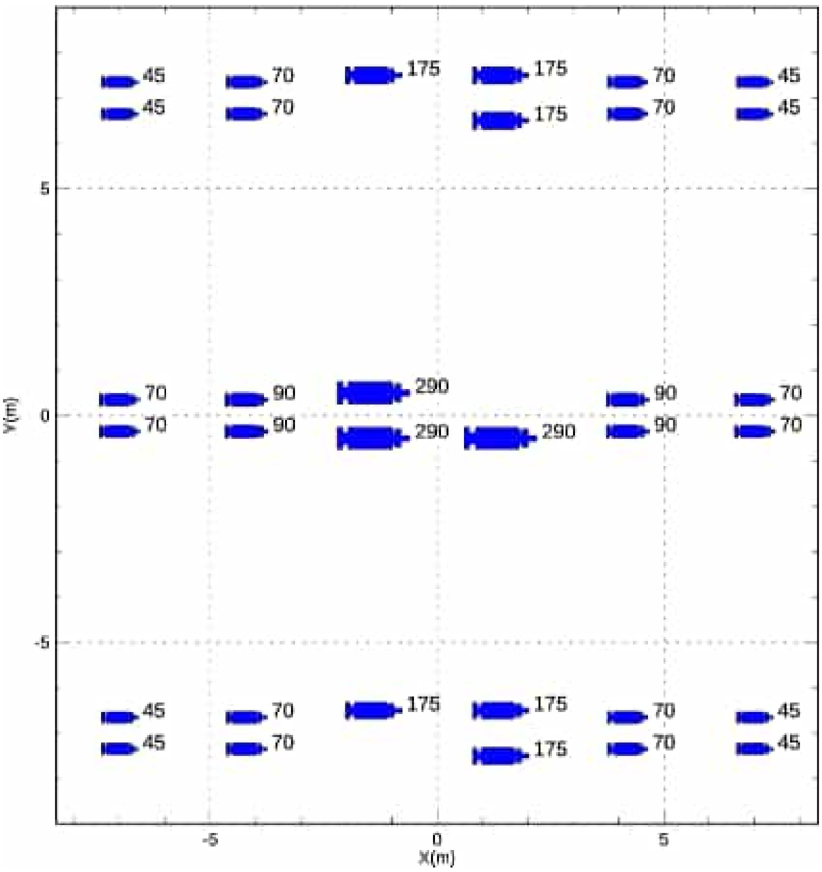

Figure B-1. Layout of the modelled triple 3480 in^3 seismic source where the plotted layout is such that the array is centred on the origin and vessel travel direction is in the positive x-direction. Tow depth is 7 m. The labels indicate the firing volume (in cubic inches) for each airgun. Also see Table B-1.

Table B-1. Layout of the modelled triple 3480 in^3 seismic source. Tow depth was 7 m. Firing pressure for all guns was 2000 psi. Also see Figure B-1. Greyed out values indicate spares.

B.3. Array Source Levels and Directivity

Figure B-2 shows the broadside (perpendicular to the tow direction), endfire (parallel to the tow direction) and vertical overpressure signature and corresponding power spectrum levels for the triple 3480 in^3 array (Appendix B.2). Horizontal decidecade-band source levels are shown as a function of band centre frequency and azimuth in Figure B-3.

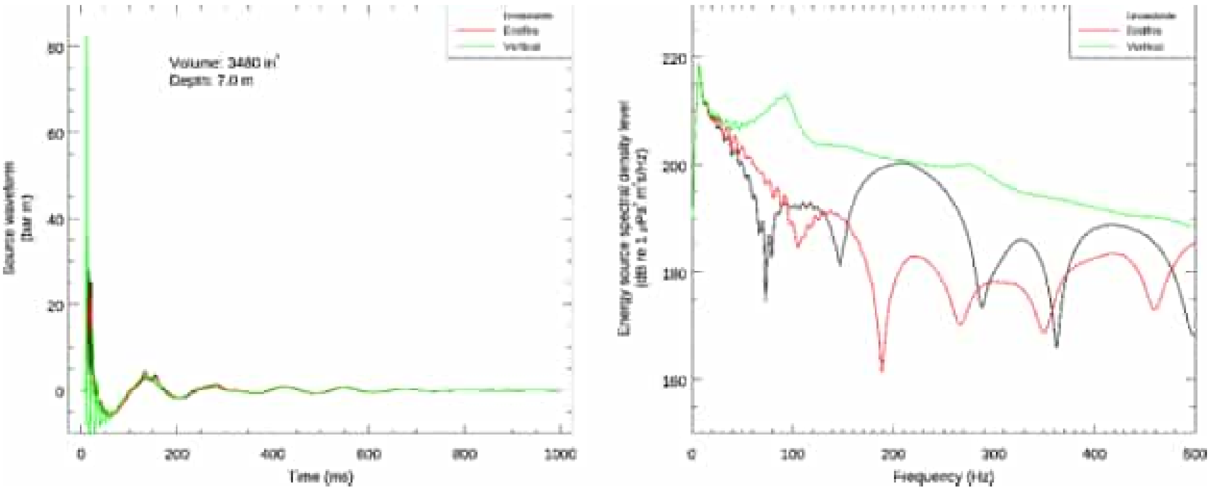

Figure B-2. Predicted source level details for the triple 3480 in^3 array at 7 m towed depth. (Left) the overpressure signature and (right) the power spectrum for in-plane horizontal (broadside), perpendicular (endfire), and vertical directions (no surface ghost).

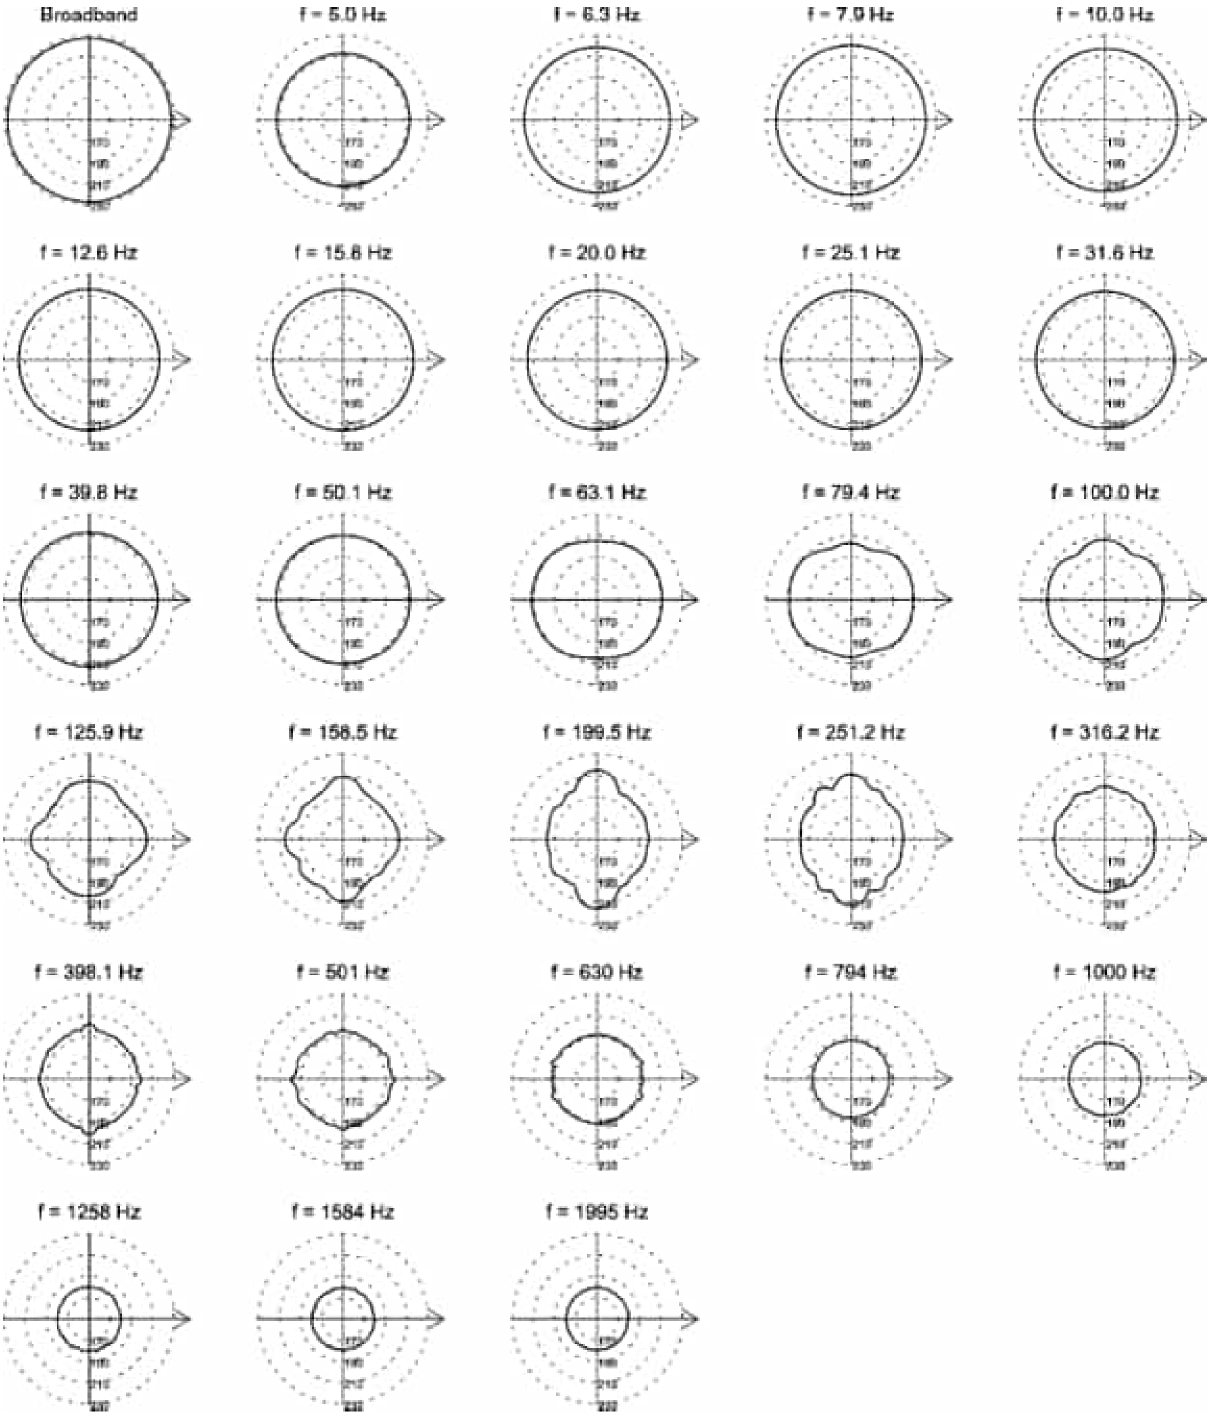

Figure B-3. Directionality of the predicted horizontal source levels for the triple 3480 in^3 seismic source, 5 Hz to 2 kHz. Source levels (in dB re 1 µPa^2·s m^2) are shown as a function of azimuth for the centre frequencies of the decidecade bands modelled; frequencies are shown above the plots. The perpendicular direction to the frame is to the right. Tow depth is 7 m (see Table B-1).

Appendix C. Sound Propagation Models

C.1. MONM-BELLHOP

Long-range sound fields were computed using JASCO's Marine Operations Noise Model (MONM). Compared to VSTACK (Appendix C.3), MONM less accurately predicts steep-angle propagation for environments with higher shear speed but is well suited for effective longer-range estimation. This model computes sound propagation at frequencies of 5 Hz to 1 kHz via a wide-angle parabolic equation solution to the acoustic wave equation (Collins 1993) based on a version of the US Naval Research Laboratory's Range-dependent Acoustic Model (RAM), which has been modified to account for a solid seabed (Zhang and Tindle 1995). MONM computes sound propagation at frequencies >1 kHz via the BELLHOP Gaussian beam acoustic ray-trace model (Porter and Liu 1994).

The parabolic equation method has been extensively benchmarked and is widely employed in the underwater acoustics community (Collins et al. 1996). MONM accounts for the additional reflection loss at the seabed, which results from partial conversion of incident compressional waves to shear waves at the seabed and sub-bottom interfaces, and it includes wave attenuations in all layers. MONM incorporates the following site-specific environmental properties: a bathymetric grid of the modelled area, underwater sound speed as a function of depth, and a geoacoustic profile based on the overall stratified composition of the seafloor.

This version of MONM accounts for sound attenuation due to energy absorption through ion relaxation and viscosity of water in addition to acoustic attenuation due to reflection at the medium boundaries and internal layers (Fisher and Simmons 1977). The former type of sound attenuation is significant for frequencies higher than 5 kHz and cannot be neglected without noticeably affecting the model results.

MONM computes acoustic fields in three dimensions by modelling transmission loss within two-dimensional (2-D) vertical planes aligned along radials covering a 360° swath from the source, an approach commonly referred to as N×2-D. These vertical radial planes are separated by an angular step size of $\Delta\theta$, yielding N = 360°/$\Delta\theta$ number of planes (Figure C-1).

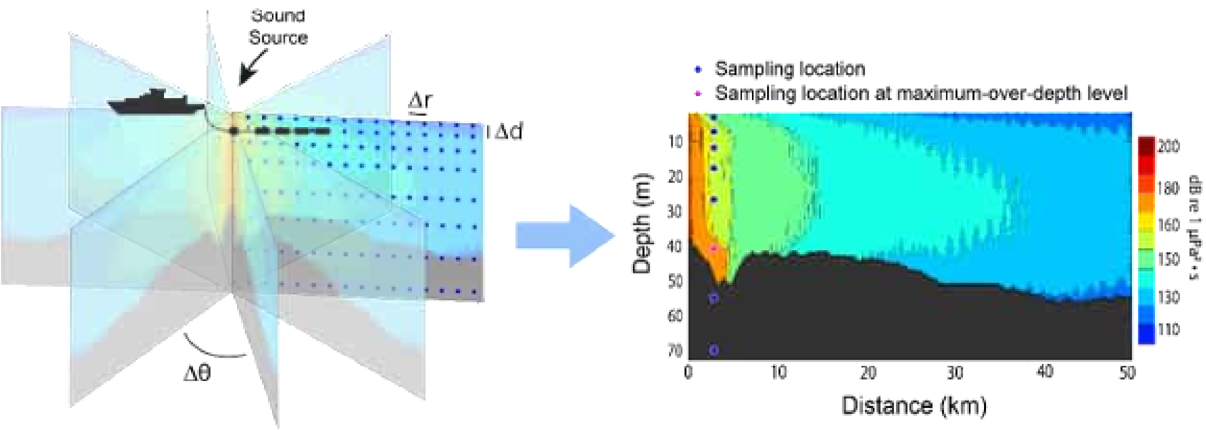

Figure C-1. The N×2-D and maximum-over-depth modelling approach used by MONM.

MONM treats frequency dependence by computing acoustic transmission loss at the centre frequencies of decidecade bands. Sufficiently many decidecade bands, starting at 5 Hz, are modelled to include most of the acoustic energy emitted by the source. At each centre frequency, the transmission loss is modelled within each of the N vertical planes as a function of depth and range from the source. The decidecade band received per-pulse SEL are computed by subtracting the band transmission loss values from the directional source level in that frequency band. Composite broadband received per-pulse SEL are then computed by summing the received decidecade band levels.

The received per-pulse SEL sound field within each vertical radial plane is sampled at various ranges from the source, generally with a fixed radial step size. At each sampling range along the surface, the sound field is sampled at various depths, with the step size between samples increasing with depth below the surface. The step sizes are chosen to provide increased coverage near the depth of the source and at depths of interest in terms of the sound speed profile. The maximum received per-pulse SEL at many sampling depths are taken over all samples within the water column, i.e., the maximum-over-depth received per-pulse SEL. These maximum-over-depth per-pulse SEL are presented as contours around the source.

C.2. Full Waveform Range-dependent Acoustic Model: FWRAM

For impulsive sounds from the seismic source, time-domain representations of the pressure waves generated in the water are required to calculate SPL and PK. Furthermore, the seismic source must be represented as a distributed source to accurately characterise vertical directivity effects in the near-field zone. For this study, synthetic pressure waveforms were computed using FWRAM, which is a time-domain acoustic model based on the same wide-angle parabolic equation (PE) algorithm as MONM. FWRAM computes synthetic pressure waveforms versus range and depth for range-varying marine acoustic environments, and it takes the same environmental inputs as MONM (bathymetry, water sound speed profile, and seafloor geoacoustic profile). Unlike MONM, FWRAM computes pressure waveforms via Fourier synthesis of the modelled acoustic transfer function in closely spaced frequency bands. FWRAM employs the array starter method to accurately model sound propagation from a spatially distributed source (MacGillivray and Chapman 2012).

Besides providing direct calculations of the PK and SPL, the synthetic waveforms from FWRAM can also be used to convert the SEL values from MONM to SPL.

C.3. Wavenumber Integration Model

Sound pressure levels near the seismic source were modelled using JASCO's VSTACK wavenumber integration model. VSTACK computes synthetic pressure waveforms versus depth and range for arbitrarily layered, range-independent acoustic environments using the wavenumber integration approach to solve the exact (range-independent) acoustic wave equation. This model is valid over the full angular range of the wave equation and can fully account for the elasto-acoustic properties of the sub-bottom. Wavenumber integration methods are extensively used in the field of underwater acoustics and seismology where they are often referred to as reflectivity methods or discrete wavenumber methods. VSTACK computes sound propagation in arbitrarily stratified water and seabed layers by decomposing the outgoing field into a continuum of outward-propagating plane cylindrical waves. Seabed reflectivity in the model is dependent on the seabed layer properties: compressional and shear wave speeds, attenuation coefficients, and layer densities. The output of the model can be post-processed to yield estimates of the SEL, SPL, and PK.

VSTACK accurately predicts steep-angle propagation in the proximity of the source, but it is computationally slow at predicting sound pressures at large distances due to the need for smaller wavenumber steps with increasing distance. Additionally, VSTACK assumes range-invariant bathymetry with a horizontally stratified medium (i.e., a range-independent environment) which is azimuthally symmetric about the source. VSTACK is thus best suited to modelling the sound field near the source.

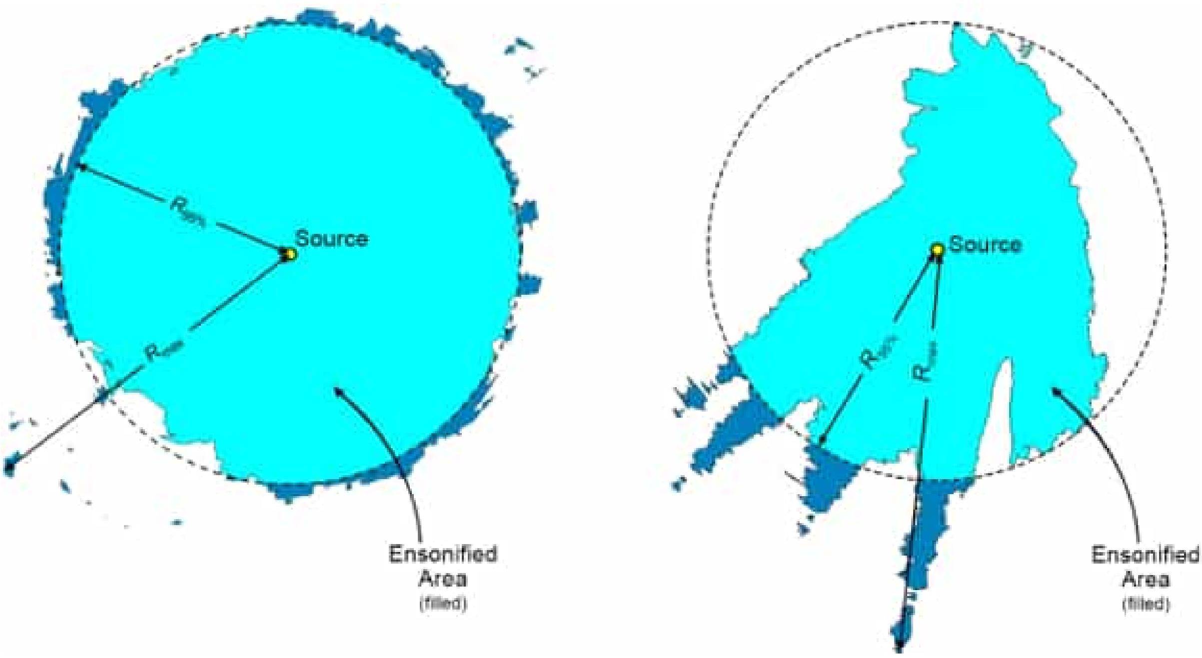
Appendix D. Methods and Parameters

This section details the environmental parameters used in the propagation models.

D.1. Estimating Range to Thresholds Levels

Sound level contours were calculated based on the underwater sound fields predicted by the propagation models, sampled by taking the maximum value over all modelled depths above the seafloor for each location in the modelled region. The predicted distances to specific levels were computed from these contours. Two distances relative to the source are reported for each sound level: 1) R_{max}, the maximum range to the given sound level over all azimuths, and 2) $R_{95\%}$, the range to the given sound level after the 5% farthest points were excluded (see examples in Figure D-1).

The $R_{95\%}$ is used because sound field footprints are often irregular in shape. In some cases, a sound level contour might have small protrusions or anomalous isolated fringes. This is demonstrated in the image in Figure D-1(a). In cases such as this, where relatively few points are excluded in any given direction, R_{max} can misrepresent the area of the region exposed to such effects, and $R_{95\%}$ is considered more representative. In strongly asymmetric cases such as shown in Figure D-1(b), on the other hand, $R_{95\%}$ neglects to account for significant protrusions in the footprint. In such cases R_{max} might better represent the region of effect in specific directions. Cases such as this are usually associated with bathymetric features affecting propagation. The difference between R_{max} and $R_{95\%}$ depends on the source directivity and the non-uniformity of the acoustic environment.



(a) (b)

Figure D-1. Sample areas ensonified to an arbitrary sound level with R_{max} and $R_{95\%}$ ranges shown for two scenarios. (a) Largely symmetric sound level contour with small protrusions. (b) Strongly asymmetric sound level contour with long protrusions. Light blue indicates the ensonified areas bounded by $R_{95\%}$; darker blue indicates the areas outside this boundary which determine R_{max}.

D.2. Estimating SPL from Modelled SEL Results

The per-pulse SEL of sound pulses is an energy-like metric related to the dose of sound received over a pulse's entire duration. The pulse SPL on the other hand, is related to its intensity over a specified time interval. Seismic pulses typically lengthen in duration as they propagate away from their source, due to seafloor and surface reflections, and other waveguide dispersion effects. The changes in pulse length, and therefore the time window considered, affect the numeric relationship between SPL and SEL. This study has applied a fixed window duration to calculate SPL (T_{fix} = 125 ms; see Appendix A.1), as implemented in Martin et al. (2017b). Full-waveform modelling was used to estimate SPL, but this type of modelling is computationally intensive, and can be prohibitively time consuming when run at high spatial resolution over large areas.

For the current study, FWRAM (Appendix C.2) was used to model synthetic seismic pulses over the frequency range 5–1024 Hz. This was performed along all broadside and endfire radials at three sites per Area, plus all Standalone Sites. FWRAM uses Fourier synthesis to recreate the signal in the time domain so that both the SEL and SPL from the source can be calculated. The differences between the SEL and SPL were extracted for all ranges and depths that corresponded to those generated from the high spatial-resolution results from MONM. A 125 ms fixed time window positioned to maximize the SPL over the pulse duration was applied. The resulting SEL-to-SPL offsets were averaged in 0.02 km range bins along each modelled radial and depth, and the 90th percentile was selected at each range to generate a generalised range-dependent conversion function for each site. The range-dependent conversion function was applied to predicted per-pulse SEL results from MONM to model SPL values. Figures D-2 to D-13 show the conversion offsets for several sites for the 3480 in^3 array; the spatial variation is caused by changes in the received airgun pulse as it propagates from the source. The conversion to SPL from SEL was conducted considering the water depth and seabed geology at a given modelled site.

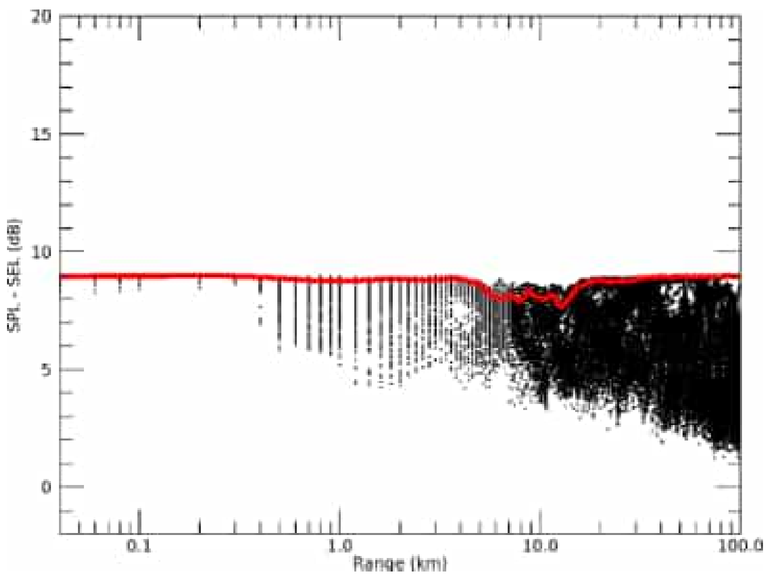


Figure D-2. *Area 1, Site 1, 3480 in^3 seismic source*: Range-and-depth-dependent conversion offsets for converting sound exposure level (SEL) to sound pressure level (SPL) for seismic pulses. Black lines are the modelled differences between SEL and SPL across different radials and receiver depths; the solid red line is the 90th percentile of the modelled differences at each range.

Black lines are the modelled differences between SEL and SPL across different radials and receiver depths; the solid red line is the 90th percentile of the modelled differences at each range.

D.3. Environmental Parameters

D.3.1. Bathymetry

Water depths throughout the modelled area were extracted from Australian Bathymetry and Topography Grid, a 9 arc-second grid rendered for Australian waters (Whiteway 2009). Bathymetry data was extracted and re-gridded onto a Map Grid of Australia (MGA) coordinate projection (Zone 51) with a regular grid spacing of 250 × 250 m to generate the bathymetry in Figure D-14.

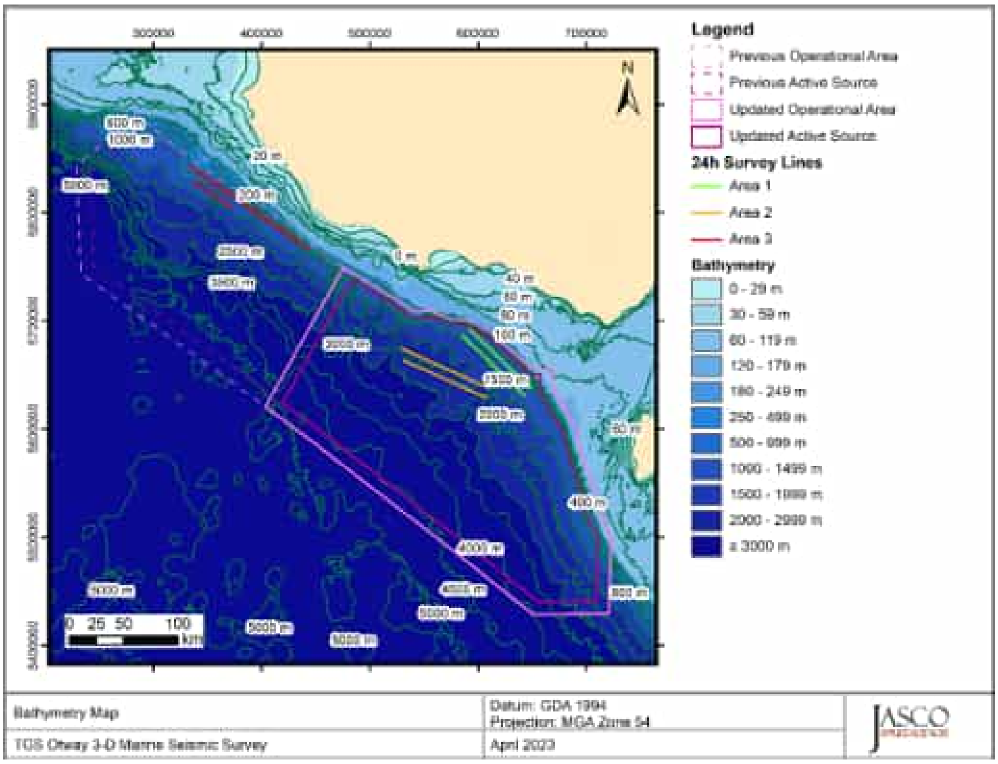

Figure D-14. Bathymetry map of the modelling region for the TGS Otway three-dimensional (3-D) Marine Seismic Survey (MSS).

D.3.2. Sound speed profile

The sound speed profiles for the modelled sites were derived from temperature and salinity profiles from the US Naval Oceanographic Office's Generalized Digital Environmental Model V 3.0 (GDEM; Teague et al. 1990, Carnes 2009). GDEM provides an ocean climatology of temperature and salinity for the world's oceans on a latitude-longitude grid with 0.25° resolution, with a temporal resolution of one month, based on global historical observations from the US Navy's Master Oceanographic Observational Data Set (MOODS). The climatology profiles include 78 fixed depth points to a maximum depth of 6800 m (where the ocean is that deep). The GDEM temperature-salinity profiles were converted to sound speed profiles according to Coppens (1981).

Mean monthly sound speed profiles were derived from the GDEM profiles within a 100 km box radius encompassing each of the three areas. To determine the sound speed profile that is expected to be most favourable to longer-range sound propagation during the proposed survey time frame, each month was modelled for each area and the ranges were compared. As such, September was selected for sound propagation modelling to ensure precautionary estimates of distances to received sound level thresholds. Figures D-15 to D-17 show the resulting profiles used as input to the sound propagation modelling.

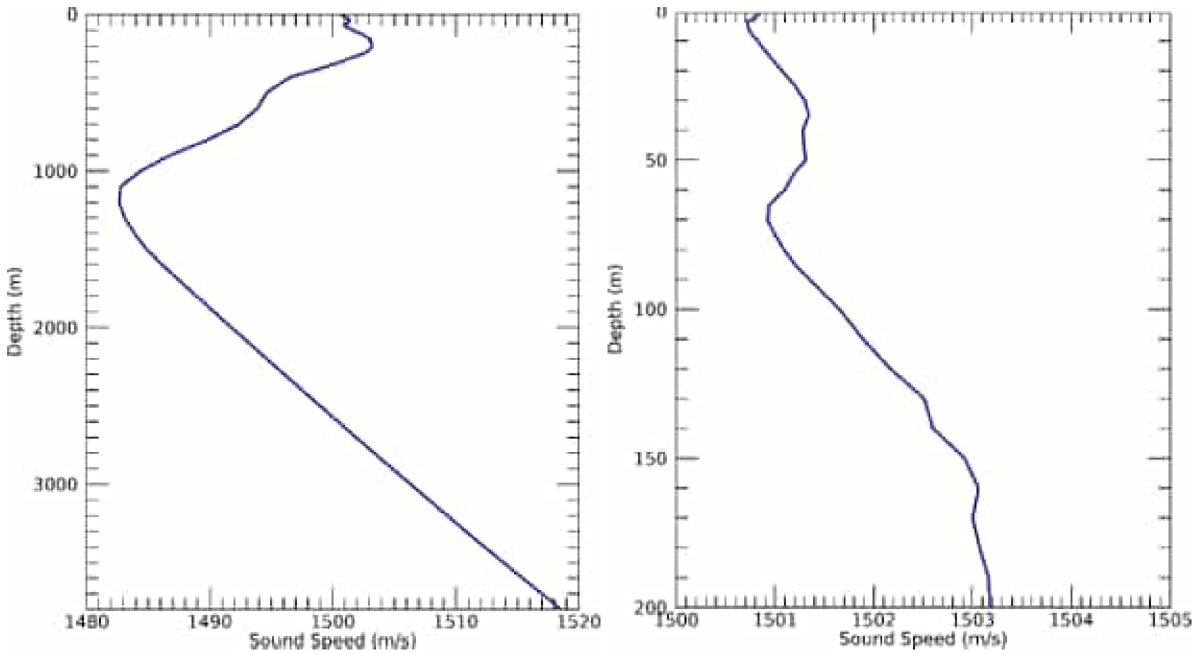

Figure D-15. *Area 1:* The sound speed profile (September) used for the modelling (also used for 2D tie-line sites) showing the entire water column (left) and the top 200 m within the profile (right). Profiles are calculated from temperature and salinity profiles from GDEM V 3.0 (GDEM; Teague et al. 1990, Carnes 2009).

Figure D-17. *Area 3:* The sound speed profile (September) used for the modelling showing the entire water column (left) and the top 200 m within the profile (right). Profiles are calculated from temperature and salinity profiles from GDEM V 3.0 (GDEM; Teague et al. 1990, Carnes 2009).

D.3.3. Geoacoustics

Due to the size of the Acquisition Area, the seafloor geology varies greatly necessitating three sets of geoacoustic parameters which were derived based on site locations. There are three general segments to the geology – continental shelf, deep and slope between the two. For details on the geoacoustic profiles see Appendices D.3.3.1 to D.3.3.3.

D.3.3.1. Slope – Areas 1 and 3, TL01, and TL02

Geoacoustic parameters used for modelling at all sites within Areas 1 and 3 were derived from sedimentary grain size measurements from the Australian Government's Marine Sediments (MARS) database (Heap 2009). On average, the surficial grain size indicates silty sand is present throughout the modelled area. Representative grain sizes were used in the grain-shearing model proposed by Buckingham (2005) to estimate the geoacoustic parameters required by the sound propagation models. Table D-1 lists the geoacoustic parameters used for modelling for Areas 1 and 3 and the two representative 2D tie-line sites (TL01 and TL02).

Table D-1. Geoacoustic profile for Areas 1 and 3, TL01, and TL02 – slope.

Depth below seafloor (m)	Predicted lithology	Density (g/cm^3)	Compressional wave		Shear wave	
			Speed (m/s)	Attenuation (dB/λ)	Speed (m/s)	Attenuation (dB/λ)
0–10	Silty carbonate sand to semi-cemented limestone	1.88	1605–1700	0.35–0.70	255	3.65
10–20		1.88–1.89	1700–1755	0.70–0.85		
20–50		1.89–1.90	1755–1850	0.85–1.15		
50–100		1.90–1.92	1850–1950	1.15–1.35		
100–200		1.92–1.96	1950–2100	1.35–1.60		
200–500		1.96–2.05	2100–2355	1.60–1.95		
>500		2.05	2355	1.95		

D.3.3.2. Deep Profile – Area 2, and Standalone Sites 1–4

Geoacoustic parameters used in acoustic transmission loss modelling for the deeper sites (deep-deep) were derived from sedimentary grain size measurements from the Australian Government's Marine Sediments (MARS) database (Heap 2009). Most of these samples were taken on or near the seafloor, although some are from sediment at greater depths. On average, the surficial grain size indicates clayey sand is present throughout the modelled area. As depth increases past ~200 m the sediment becomes lithified based on core logs from an IODP borehole (Feary 2000).

Representative grain sizes and porosity vary with depth following Athy (1930) and were used in the grain-shearing model proposed by Buckingham (2005) to estimate the geoacoustic parameters required by the sound propagation models.

Table D-2. Geoacoustic profile for Area 2, and Standalone Sites 1–4, deep, off-shelf.

Depth below seafloor (m)	Predicted lithology	Density (g/cm^3)	Compressional wave		Shear wave	
			Speed (m/s)	Attenuation (dB/λ)	Speed (m/s)	Attenuation (dB/λ)
0–10	Increasingly compacted clayey silt	1.63	1498–1560	0.08–0.36	118	3.65

>100	Well-cemented calcarenite	2.7	2600	0.50		

D.4. Animal Movement and Exposure Modelling

Animal movement and exposure modelling considers the movement of both sound sources (if mobile) and animals over time. Acoustic source and propagation modelling are used to generate 3-D sound fields that vary as a function of distance to source, depth, and azimuth. Sound sources are modelled at representative sites and the resulting sound fields are assigned to source locations using the minimum Euclidean distance. The sound received by an animal at any given time depends on its location relative to the source. Because the true locations of the animals within the sound fields are unknown, realistic animal movements are simulated using repeated random sampling of various behavioural parameters. The Monte Carlo method of simulating many animals within the operations area is used to estimate the sound exposure history of the population of simulated animals (animats).

Monte Carlo methods provide a heuristic approach for determining the probability distribution function (PDF) of complex situations, such as animals moving in a sound field. The probability of an event's occurrence is determined by the frequency with which it occurs in the simulation. The greater the number of random samples, in this case the more simulated animats, the better the approximation of the PDF. Animats are randomly placed, or seeded, within the simulation boundary at a specified density (animats/km^2). Higher densities provide a finer PDF estimate resolution but require more computational resources. To ensure good representation of the PDF, the animat density is set as high as practical allowing for computation time. The animat density is much higher than the real-world density to ensure good representation of the PDF. The resulting PDF is scaled using the real-world density.

Several models for marine mammal movement have been developed (Ellison et al. 1987, Frankel et al. 2002, Houser 2006). These models use an underlying Markov chain to transition from one state to another based on probabilities determined from measured swimming behaviour. The parameters may represent simple states, such as the speed or heading of the animal, or complex states, such as likelihood of participating in foraging, play, rest, or travel. Attractions and aversions to variables like anthropogenic sounds and different depth ranges can be included in the models.

The JASCO Animal Simulation Model Including Noise Exposure (JASMINE) was based on the open-source marine mammal movement and behaviour model (3MB, Houser 2006) and used to predict the exposure of animats to sound arising from the anthropogenic activities. Animats are programmed to behave like the species likely to be present in the survey area. The parameters used for forecasting realistic behaviours (e.g., diving, foraging, aversion, surface times, etc.) are determined and interpreted from marine species studies (e.g., tagging studies) where available, or reasonably extrapolated from related species. An individual animat's modelled sound exposure levels are summed over the total simulation duration to determine its total received energy, and then compared to the assumed threshold criteria.

JASMINE uses the same animal movement algorithms as 3MB (Houser, 2006), but has been extended to be directly compatible with JASCO's Marine Operations Noise Model (MONM) and Full Waveform Range-dependent Acoustic Model acoustic field predictions, for inclusion of source tracks, and importantly for animats to change behavioural states based on time and space dependent modelled variables such as received levels for aversion behaviour, although aversion was not considered in this study.

D.4.1. Animal Movement Parameters

JASMINE uses previously measured behaviour to forecast behaviour in new situations and locations. The parameters used for forecasting realistic behaviour are determined (and interpreted) from marine species studies (e.g., tagging studies). Each parameter in the model is described as a probability distribution. When limited or no information is available for a species parameter, a Gaussian or uniform distribution may be chosen for that parameter. For the Gaussian distribution, the user determines the mean and standard deviation of the distribution from which parameter values are drawn. For the uniform distribution, the user determines the maximum and minimum distribution from which parameter values are drawn. When detailed information about the movement and behaviour of a species are available, a user-created distribution vector, including cumulative transition probabilities, may be used (referred to here as a vector model; Houser 2006). Different sets of parameters can be defined for different behaviour states. The probability of an animat starting out in or transitioning into a given behaviour state can in turn be defined in terms of the animat's current behavioural state, depth, and the time of day. In addition, each travel parameter and behavioural state has a termination function that governs how long the parameter value or overall behavioural state persists in simulation.

The parameters used in JASMINE describe animal movement in both the vertical and horizontal planes. The parameters relating to travel in these two planes are briefly described below.

Travel sub-models

- **Direction**– determines an animat's choice of direction in the horizontal plane. Sub-models are available for determining the heading of animats, allowing for movement to range from strongly biased to undirected. A random walk model can be used for behaviours with no directional preference, such as feeding and playing. In a random walk, all bearings are equally likely at each parameter transition time step. A correlated random walk can be used to smooth the changes in bearing by using the current heading as the mean of the distribution from which to draw the next heading. An additional variant of the correlated random walk is available that includes a directional bias for use in situations where animals have a preferred absolute direction, such as migration. A user-defined vector of directional probabilities can also be input to control animat heading. For more detailed discussion of these parameters, see Houser (2006) and Houser and Cross (1999).

- **Travel rate**–defines an animat's rate of travel in the horizontal plane. When combined with vertical speed and dive depth, the dive profile of the animat is produced.

Dive sub-models

- **Ascent rate**–defines an animat's rate of travel in the vertical plane during the ascent portion of a dive.
- **Descent rate**–defines an animat's rate of travel in the vertical plane during the descent portion of a dive.
- **Depth**–defines an animat's maximum dive depth.
- **Reversals**–determines whether multiple vertical excursions occur once an animat reaches the maximum dive depth. This behaviour is used to emulate the foraging behaviour of some marine mammal species at depth. Reversal-specific ascent and descent rates may be specified.
- **Surface interval**–determines the duration an animat spends at, or near, the surface before diving again.

D.4.2. Exposure Integration Time

The interval over which acoustic exposure (L_E) should be integrated and maximal exposure (L_p) determined is not well defined. Both Southall et al. (2007) and the NMFS (2018) recommend a 24 h baseline accumulation period, but state that there may be situations where this is not appropriate (e.g., a high-level source and confined population). Resetting the integration after 24 h can lead to overestimating the number of individual animals exposed because individuals can be counted multiple times during an operation. The type of animal movement engine used in this study simulates realistic movement using swimming behaviour collected over relatively short periods (hours to days) and does not include large-scale movement such as migratory circulation patterns. For this study, a representative 24-hour period was simulated.

Ideally, a simulation area is large enough to encompass the entire range of a population so that any animal that could approach the source during an operation is included. However, there are limits to the simulation area, and computational overhead increases with area. For practical reasons, the simulation area is limited. In the simulation, every animat that reaches a border is replaced by another animat entering at the opposing border—e.g., an animat crossing the northern border of the simulation is replaced by one entering the southern border at the same longitude. When this action places the animat in an inappropriate water depth, the animat is randomly placed on the map at a depth suited to its species definition. The exposures of all animats (including those leaving the simulation and those entering) are kept for analysis. This approach maintains a consistent animat density and allows for longer integration periods with finite simulation areas.

D.4.3. Seeding Density and Scaling

Seeding density refers to the spatial sample rate, in units of animats/km^2, used in the simulation. It is not related to the real-world animal density, but rather is a model parameter that controls the how samples are drawn from the model space. The minimum required seeding density for any given project depends on several factors such as bathymetry, source characteristics, and the behavioural profile of the animats, with the main constraint being computation time and resources. Seeding density is adjusted as needed based on model conditions specific to a project or project area.

In the present study, the exposure criteria for continuous sounds were used to determine the number of animats exceeding exposure thresholds. To generate statistically reliable probability density functions, all simulations were seeded with an animat density of 4 animat/km^2 over the entire simulation area. The modelling results are not related to real-world animal densities and the number of real-world animals potentially exposed was not calculated.

Appendix E. Model Validation Information

Predictions from JASCO's Airgun Array Source Model (AASM) and propagation models (MONM, FWRAM and VSTACK) have been validated against experimental data from a number of underwater acoustic measurement programs conducted by JASCO globally, including the United States and Canadian Artic, Canadian and southern United States waters, Greenland, Russia and Australia (Hannay and Racca 2005, Aerts et al. 2008, Funk et al. 2008, Ireland et al. 2009, O'Neill et al. 2010, Warner et al. 2010, Racca et al. 2012a, Racca et al. 2012b, Matthews and MacGillivray 2013, Martin et al. 2015, Racca et al. 2015, Martin et al. 2017a, Martin et al. 2017b, Warner et al. 2017, MacGillivray 2018, McPherson et al. 2018, McPherson and Martin 2018).

In addition, JASCO has conducted measurement programs associated with a significant number of anthropogenic activities which have included internal validation of the modelling (including McCrodan et al. 2011, Austin and Warner 2012, McPherson and Warner 2012, Austin and Bailey 2013, Austin et al. 2013, Zykov and MacDonnell 2013, Austin 2014, Austin et al. 2015, Austin and Li 2016, Martin and Popper 2016).

TERMS AND ABBREVIATIONS

Terms	Meaning
°	Degrees
‘	Minutes
“	Seconds
µm	Micrometre (unit of length; 1 µm = 0.001 mm)
Actionable oil	Oil which is thick enough for the effective use of mitigation strategies
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
ANZECC	Australian and New Zealand Environment and Conservation Council
API	American Petroleum Institute gravity. A measure of how heavy or light a petroleum liquid is compared to water.
ASTM	American Society for Testing and Materials
Bonn Agreement	An agreement for cooperation in dealing with pollution of the North Sea by oil and other harmful substances, 1983, includes: Governments of the Kingdom of Belgium, the Kingdom of Denmark, the French Republic, the Federal Republic of Germany, the Republic of Ireland, the Kingdom of the Netherlands, the Kingdom of Norway, the Kingdom of Sweden, the United Kingdom of Great Britain and Northern Ireland and the European Union.
BP	Boiling point. The temperature at which the vapor pressure of the liquid is equal to the pressure exerted on it by the surrounding atmosphere
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes
˚C	degree Celsius (unit of temperature)
CFSR	Climate Forecast System Reanalysis
cm	Centimetre (unit of length)
cP	Centipoise (unit of dynamic viscosity)
Decay	The process where oil components are changed either chemically or biologically (biodegradation) to another compound. It includes breakdown to simpler organic carbon compounds by bacteria and other organisms, photo-oxidation by solar energy, and other chemical reactions.
Dynamic viscosity	The dynamic viscosity of a fluid expresses its resistance to shearing flows, where adjacent layers move parallel to each other with different speeds.
EP	Environmental Plan
Floating oil exposure	Contact by floating oil on the sea surface at concentrations equal to or exceeding defined threshold concentrations. The consequence will vary depending on the threshold and the receptors
g/m^2	Grams per square meter (unit of surface area density)
GODAE	Global Ocean Data Assimilation Experiment
HYCOM	Hybrid Coordinate Ocean Model. A data-assimilative, three-dimensional ocean model
HYDROMAP	Advanced ocean/coastal tidal model used to predict tidal water levels, current speed and current direction.
IBRA	Interim Biogeographic Regionalisation for Australia
IMCRA	Integrated Marine and Coastal Regionalisation of Australia
ITOPF	International Tanker Owners Pollution Federation Limited
KEF	Key Ecological Feature
km	Kilometre (unit of length)
km^2	Square Kilometres (unit of area)

Knots	unit of speed (1 knot = 0.514 m/s)
m	Meter (unit of length)
m^3	Cubic meter (unit of volume)
m/s	Meter per Second (unit of speed)
MAHs	Monoaromatic Hydrocarbons
MMA	Marine Management Area
MP	Marine Park
NASA	National Aeronautics and Space Administration (USA)
NCEP	National Centres for Environmental Prediction (USA)
nm	Nautical mile
NOAA	National Oceanic and Atmospheric Administration (USA)
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
NP	National Park
NR	Nature Reserve
NRC	National Research Council
OPEP	Oil Pollution Emergency Plan
PAH	Polynuclear Aromatic Hydrocarbons
Pour Point	The pour point of a liquid is the temperature below which the liquid loses its flow characteristics
ppb	Parts per billion (concentration)
psu	Practical salinity units
Ramsar site	A site listed under the Ramsar Convention on wetlands which is an international intergovernmental treaty that provides the framework for the conservation and wise use of wetlands and their resources.
RSB	Reefs, Shoals and Banks
Shoreline contact	Arrival of oil at or near shorelines at on-water concentrations equal to or exceeding defined threshold concentrations. Shoreline contact is judged for floating oil arriving within a 2 km buffer zone from any shoreline as a conservative measure
SIMAP	Spill Impact Model Application Package. SIMAP is designed to simulate the fate and effects of spilled hydrocarbons for surface or subsea releases
Single Oil spill modelling	Oil spill modelling involving a computer simulation of a single hypothetical oil spill event subject to a single sequence of wind, current and other sea conditions over time. Single oil spill modelling, also referred to as “deterministic modelling” provides a simulation of one possible outcome of a given spill scenario, subject to the metocean conditions that are imposed. Single oil spill modelling is commonly used to consider the fate and effects of ‘worst-case’ oil spill scenarios that are carefully selected in consideration of the nature and scale of the offshore petroleum activity and the local environment (NOPSEMA, 2017). Because the outcomes of a single oil spill simulation can only represent the outcome of that scenario under one sequence of metocean conditions, worst-case conditions are often identified from stochastic modelling. It is impossible to calculate the likelihood of any outcome from a single oil spill simulation. Single oil spill modelling is generally used for response planning, preparedness planning and for supporting oil spill response operations in the event of an actual spill
SRTM	Shuttle Radar Topography Mission
Stochastic oil spill modelling	Stochastic oil spill modelling is created by overlaying and statistically analysing the outcomes of many single oil-spill simulations of a defined spill scenario, where each simulation was subject to a different sequence of metocean conditions, selected objectively (typically by random selection) from a long sequence of historic conditions for the study area. Analysis of this larger set of simulations provides a more accurate indication of the environment that maybe affected (EMBA) and indicates which locations are more likely to be affected (as well as other statistics). Stochastic oil spill modelling avoids biases that affect single oil spill modelling (due to the reliance on only one possible sequence of conditions). However, when interpreting stochastic modelling, which is based

	on a wide range of potential conditions that might happen to occur, it is essential to understand that calculations will encompass a much larger area than could be affected in any single spill event, where a more limited set of conditions will occur. Consequently, it is misleading to imply that the region derived from stochastic modelling indicate the outcomes expected from a single spill event (NOPSEMA, 2017) Stochastic modelling is generally used for risk assessment and preparedness planning by indicating locations that could be exposed and may require response or subsequent impact assessment
TOPEX/Poseidon	A joint satellite mission between NASA and CNES to map ocean surface topography using an array of satellites equipped with detailed altimeters
USA	United States of America
World Ocean Atlas	A collection of objectively analysed quality controlled physicochemical parameters (e.g. temperature, salinity, oxygen, phosphate, silicate, and nitrate) based on profile data from the World Ocean Database established by NOAA's National Centers for Environmental Information (NCEI)
WGS 1984	World Geodetic System 1984 (WGS84); reference coordinate system

EXECUTIVE SUMMARY

Background

TGS-NOPEC Geophysical Company Pty Ltd (TGS) and Schlumberger (SLB) propose to undertake a marine seismic survey (MSS) in the proposed Environment Plan (EP) area in the Otway Basin.

To support the development of EP and oil pollution emergency plan (OPEP), a modelling study was undertaken that considered a hypothetical spill originating from a survey vessel tank rupture, releasing 1,066 m^3 of marine diesel oil (MDO) over 6 hours on the sea surface. The modelling results are presented as an annual assessment (combined seasons).

The modelling does not take into consideration any of the spill prevention, mitigation and response capabilities that would be implemented in response to the spill.

Methodology

The modelling study was carried out in stages. Firstly, a 10 year wind and current dataset (2010 – 2019) with the three-dimensional current data including the influence of ocean and tidal currents. Secondly, the currents, winds and detailed MDO properties were used as inputs in the three-dimensional oil spill model (SIMAP) to simulate the drift, spread, weathering and fate of the spilled hydrocarbons.

Due to the size of the EP Area, spill modelling was conducted from five release locations, which were carefully selected based on their proximity to shorelines and sensitive receptors. As spills can occur during any set of wind and current conditions, 100 spill simulations were modelled at each location (i.e. 500 simulations total), with the same spill information (volume, duration and composition of hydrocarbons) but different start times. This ensured that each simulation was exposed to a unique set of wind and current conditions.

Once all 100 simulations were run per location, the results were combined to determine the potential exposure to the surrounding waters, shorelines and sensitive receptors based on the thresholds outlined in the NOPSEMA Oil Spill Modelling Bulletin (NOPSEMA 2019).

Oil Properties

The MDO used in this study has a density of 829.1 kg/m^3 (API gravity of 37.6) and a dynamic viscosity of 4.0 cP at 25ºC, classifying it as a Group II light persistent oil according to the International Tankers Owners Pollution Federation (ITOPF, 2014) and USEPA/USCG classifications. MDO is characterised by a high percentage of volatile components (95%), which will evaporate when on the sea surface. It also contains 5% persistent hydrocarbons, which will not evaporate, though will decay over time. It is important to note that some heavy components contained in MDO have a strong tendency to physically entrain into the upper water column in the presence of moderate winds (i.e. >12 knots) and breaking waves but can re-float to the surface when the winds ease.

Results

- The maximum distance from a release site to low (1-10 g/m^2), moderate (10-50 g/m^2) and high (≥50 g/m^2) exposure levels were 243.2 km east (Release Location 1), 52.5 km east-southeast (Release Location 1) and 22.9 km south-southeast (Release Location 4), respectively.

- Floating oil exposure to Australian Marine Parks (AMPs) at the low threshold was predicted for Location 3 (Apollo 11%) and Location 4 (Zeehan 65%). Twelve spill simulations (12% probability) at the low threshold crossed into the Victorian state waters from Location 1. From Location 4, the probability of the spill simulations crossing the Tasmanian and Victorian state waters at the low threshold was 10% and 1%, respectively. The Discovery Bay and Twelve Apostles Marine Parks (MPs) were exposed by 2 and 1 simulations (2% and 1% probability), respectively from Location 1.

- The probability of accumulation on any shoreline at, or above, the low threshold (≥ 10 g/m^2) was greatest at Location 5 (65%), while the minimum time before shoreline accumulation was 1.7 days at Location 1. The maximum volume of oil ashore for a single spill above the low threshold was greatest at Location 1 (126.5 m^3) and lowest at Location 2 (28.7 m^3). The maximum lengths of shoreline contacted at the low and moderate thresholds were 65.0 km (Location 5) and 15.0 km (Locations 1 and 4), respectively. Additionally, the maximum lengths of oil accumulation on shorelines at the high threshold (≥1,000 g/m^2) was 2 km recorded at Location 1 and 4.

- Greatest probabilities of oil accumulation to shoreline sectors at the low threshold for a spill occurring from Locations 1, 2, 3, 4 and 5, was recorded at Corangamite (22%), Colac Otway (10%), King Island (9%), King Island (37%) and West Coast (42%) shorelines, respectively. The King Island shoreline also recorded the greatest probabilities of oil accumulation for the moderate and high thresholds from spills occurring at Location 4 (20% and 3%, respectively). Glenelg recorded the quickest time before oil accumulation at the low threshold at 1.67 days from a spill at Location 1. The Glenelg shoreline was also predicted to experience the greatest peak volume ashore of 123.6 m^3 from a spill occurring at Location 1.

- Dissolved hydrocarbon exposure to AMPs at the low threshold (≥10 ppb) in the 0-10 m depth layer was recorded at Apollo (4% Location 2, 9% Location 3 and 2% Location 4%), Boags (1% Location 5), Franklin (5% Location 5) and Zeehan (1% Location 3 and 29% Location 4).

- By incorporating the results from all five selected locations, a total of nine AMPs were predicted to be exposed by entrained hydrocarbons at the low threshold (≥ 10 ppb), with probabilities up to 40%. Apollo AMP was predicted to record the highest probabilities of exposure at 40% and 39% from spills originating from Location 3 and Location 1, respectively. Additionally, the Apollo AMP recorded the greatest probability of exposure at the high threshold (≥ 100 ppb) at 25% from spills originating from Location 3.

1 INTRODUCTION

1.1 Background

TGS-NOPEC Geophysical Company Pty Ltd (TGS) and Schlumberger proposes to undertake marine seismic survey (MSS) in the proposed Environment Plan (EP) area as shown in Figure 1.1.

In order to support the preparation of the EP and Oil pollution Emergency Plan (OPEP), SLR on behalf of TGS, commissioned RPS to undertake a comprehensive oil spill modelling study for the proposed MSS. The study assessed the risk and potential exposure to the surrounding waters and shoreline accumulation from a hypothetical spill originating from a survey vessel tank rupture, releasing 1,066 m^3 of marine diesel oil (MDO) over 6 hours on the sea surface.

Due to the size of the EP Area, spill modelling was conducted at five release locations, which were carefully selected based on their proximity to shorelines and sensitive receptors (shown in Table 1.1 and Figure 1.1).

The modelling results are presented as an annual assessment (i.e. any time of year).

The spill modelling was performed using an advanced three-dimensional trajectory and fates model; Spill Impact Model Application Package (SIMAP). The SIMAP model calculates the transport, spreading, entrainment and evaporation of spilled hydrocarbons over time, based on the prevailing wind and current conditions and the physical and chemical properties. The modelling does not take into consideration any of the spill prevention, mitigation and response capabilities that would be implemented in response to the spill.

The hydrocarbon spill model, the method and analysis applied herein uses modelling algorithms which have been peer reviewed and published in international journals. Further, RPS warrants that this work meets and exceeds the American Society for Testing and Materials (ASTM) Standard F2067-13 "*Standard Practice for Development and Use of Oil Spill Models*".

Table 1.1 Coordinates for the five selected oil spill release locations.

Release Locations	Latitude*	Longitude*
1	38° 24' 23.8" S	140° 43' 31.5" E
2	38° 45' 46.2" S	141° 38' 8.1" E
3	39° 14' 11.7" S	142° 57' 56.7" E
4	39° 43' 20.0" S	143° 13' 20.2" E
5	40° 57' 6.4" S	143° 38' 23.4" E

*Datum: WGS 1984

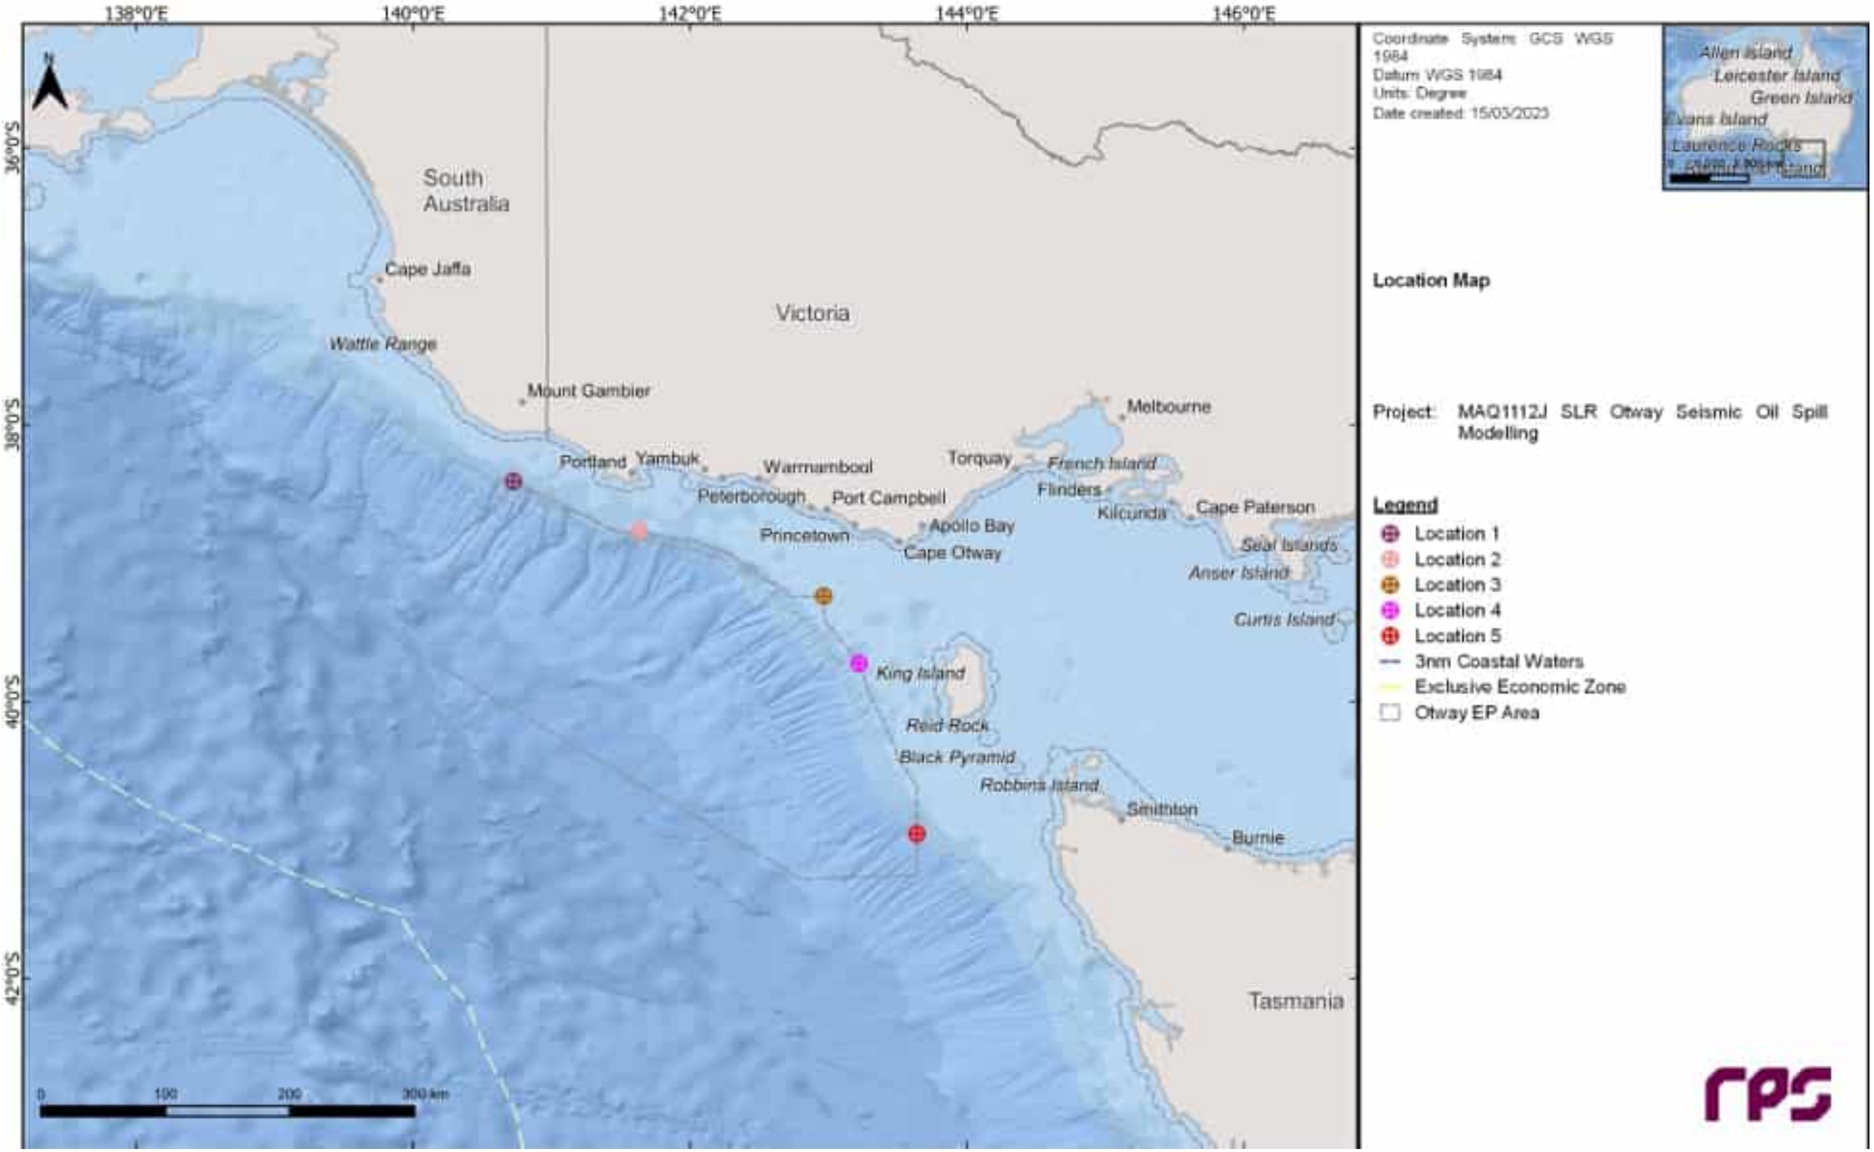

Figure 1.1 Locations of the five oil spill modelling release locations.

1.1 What is Oil Spill Modelling?

Oil spill modelling is a valuable tool widely used for risk assessment, emergency response and contingency planning where it can be particularly helpful to proponents and decision makers. By modelling a series of the most likely oil spill scenarios, decisions concerning suitable response measures and strategic locations for deploying equipment and materials can be made, and the locations at most risk can be identified. The two types of oil spill modelling often used are stochastic (Section 1.1.1) and deterministic (Section 1.1.2) modelling.

1.1.1 Stochastic Modelling (Multiple Spill Simulations)

Stochastic oil spill modelling is created by overlaying a great number (often hundreds) of individual, computer-simulated hypothetical spills (NOPSEMA, 2018; Figure 1.2).

Stochastic modelling is a common means of assessing the potential risks from oil spills related to new projects and facilities. Stochastic modelling typically utilises hydrodynamic data for the location in combination with historic wind data. Typically, 100 iterations of the model will be run utilising the data that is most relevant to the season or timing of the project.

The outcomes are often presented as a probability of exposure and is primarily used for risk assessment purposes in view to understand the range of environments that may be affected or impacted by a spill. Elements of the stochastic modelling can also be used in oil spill preparedness and planning.

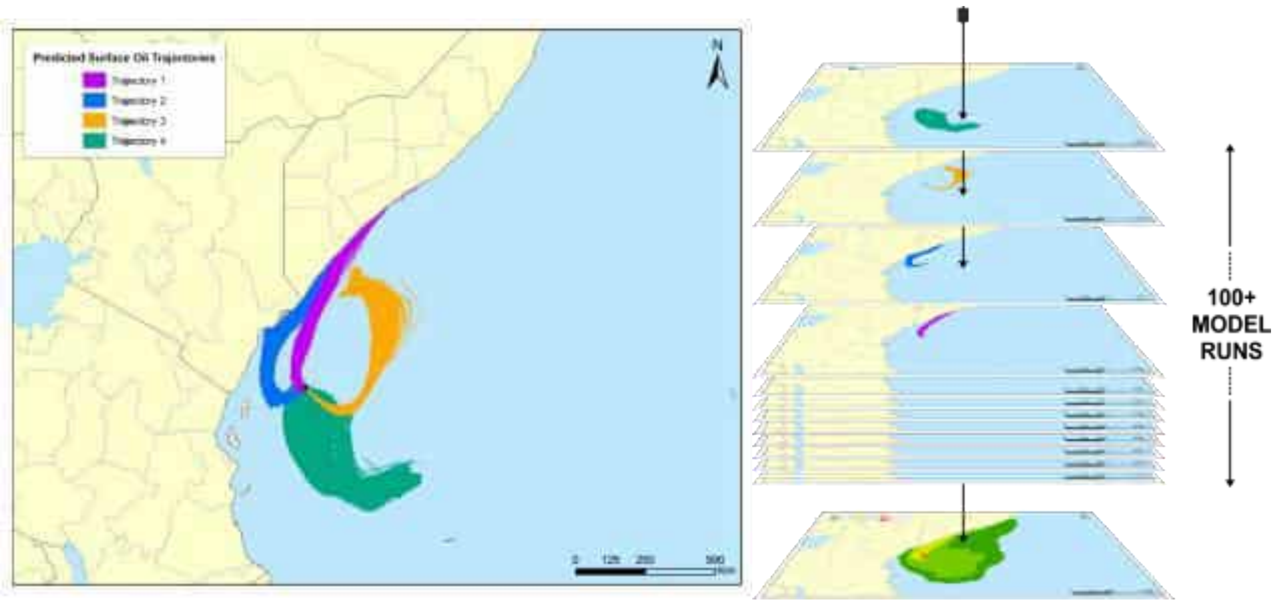

Figure 1.2 Examples of four individual spill trajectories (four replicate simulations) predicted by SIMAP for a spill scenario. The frequency of contact with given locations is used to calculate the probability of impacts during a spill. Essentially, all model runs are overlain (shown as the stacked runs on the right) and the number of times that trajectories contact a given location at a concentration is used to calculate the probability.

1.1.2 Deterministic Modelling (Single Spill Simulation)

Deterministic modelling is the predictive modelling of a single incident subject to a single sample of wind and weather conditions over time (NOPSEMA, 2018; Figure 1.3).

Deterministic modelling is often paired with stochastic modelling to place the large stochastic footprint into perspective. This deterministic analysis is generally a single run selected from the stochastic analysis and serves as the basis for developing the plans and equipment needs for a realistic spill response. Deterministic spills can be selected on based on parameters such as minimum time to shoreline, largest swept area, maximum volume ashore and longest length of shoreline contacted by hydrocarbons.

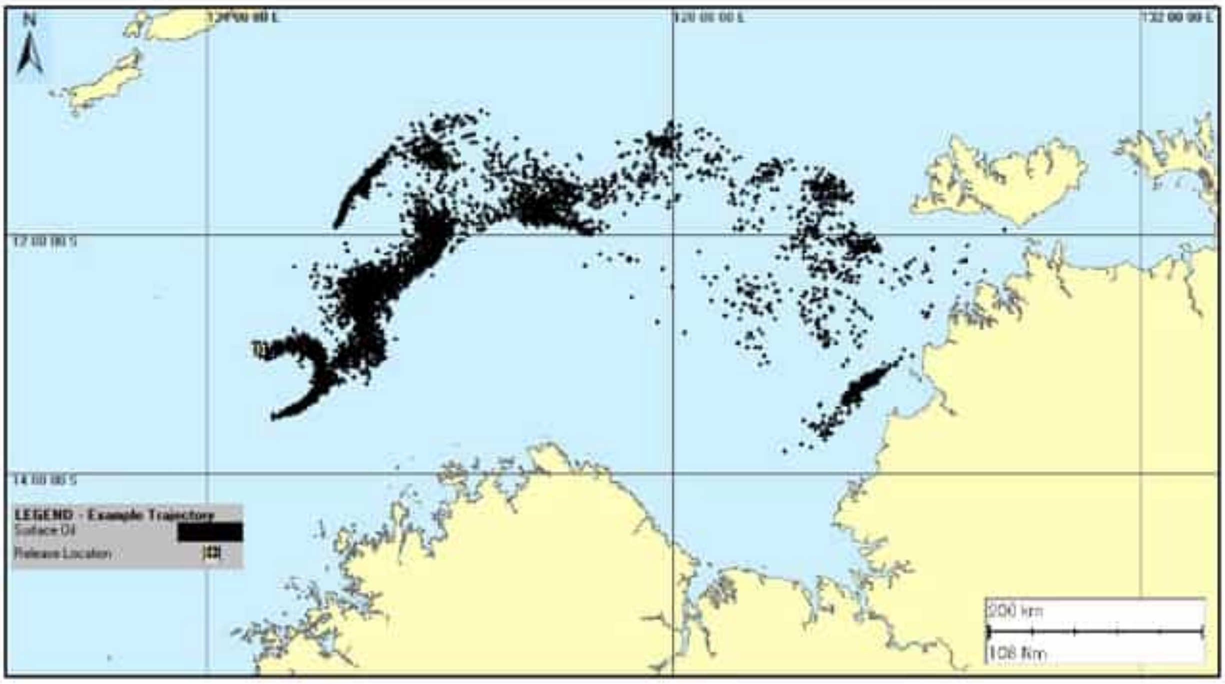

Figure 1.3 Example of an individual spill trajectory predicted by SIMAP for a spill scenario. Note, this image represents surface oil as spill and does not take any thresholds into consideration.

2 SCOPE OF WORK

The scope of work included the following components:

1. Generate ten years (2010 to 2019 (inclusive)) of wind and current data. The three-dimensional current data includes the combined influence of ocean and tidal currents;
2. Input the wind data, current data and MDO characteristics into the three-dimensional oil spill model SIMAP, to model the movement, spreading, weathering and shoreline accumulation by hydrocarbons over time;
3. One hundred simulations were run at each of the 5 selected locations (i.e. 500 simulations total), with each simulation having the same spill information (volume, duration and composition of hydrocarbons) but different start times to ensure unique set of wind and current conditions were sampled.
4. Combine the results and present the summaries including probabilities of exposure for each of the five selected locations and present the exposure from floating oil, shoreline accumulation and in-water exposure (dissolved and entrained hydrocarbons) based upon the NOPSEMA thresholds.
5. Present images illustrating the extent of the floating oil exposure, shoreline accumulation and in-water exposure (dissolved and entrained hydrocarbons) based on all 500 simulations.
6. Combine the results from the 500 spill simulations to assess the low threshold environment that maybe affected (EMBA); and
7. At each of the five selected locations identify and present the deterministic simulations resulting in the maximum volume of oil ashore. As well as the simulation resulting in the largest swept area above the low threshold of 1 g/m^2 from all 500 simulations was identified and presented. The results can be used to inform response planning.

3 REGIONAL CURRENTS

Bass Strait is a body of water separating Tasmania from the southern Australian mainland, specifically the state of Victoria. The strait is a relatively shallow area off the continental shelf, connecting the southeast Indian Ocean with the Tasman Sea. Currents within the straight are primarily driven by tides, winds, incident continental shelf waves and density driven flows; high winds and strong tidal currents are frequent within the area (Jones, 1980).

The varied geography and bathymetry of the region, in addition to the forcing of the south-eastern Indian Ocean and local meteorology lead to complex shelf and slope circulation patterns (Middleton & Bye, 2007). Figure 3.1 displays seasonal current trends within the Bass Strait. During winter there is a strong eastward water flow due to the strengthening of the South Australian Current (fed by the Leeuwin Current in the Northwest Shelf), which bifurcates with one extension moving though the Bass Strait, and another forming the Zeehan Current off western Tasmania (Sandery & Kampf, 2007). During summer, water flow reverses off Tasmania, King Island and the Otway Basin travelling eastward, as the coastal current develops due to south-easterly winds.

Therefore, to accurately account for the movement of an oil spill, which can move between the offshore and near shore region, ocean and tidal currents were combined as part of the study. The following sections provide a summary of the regional current data set.

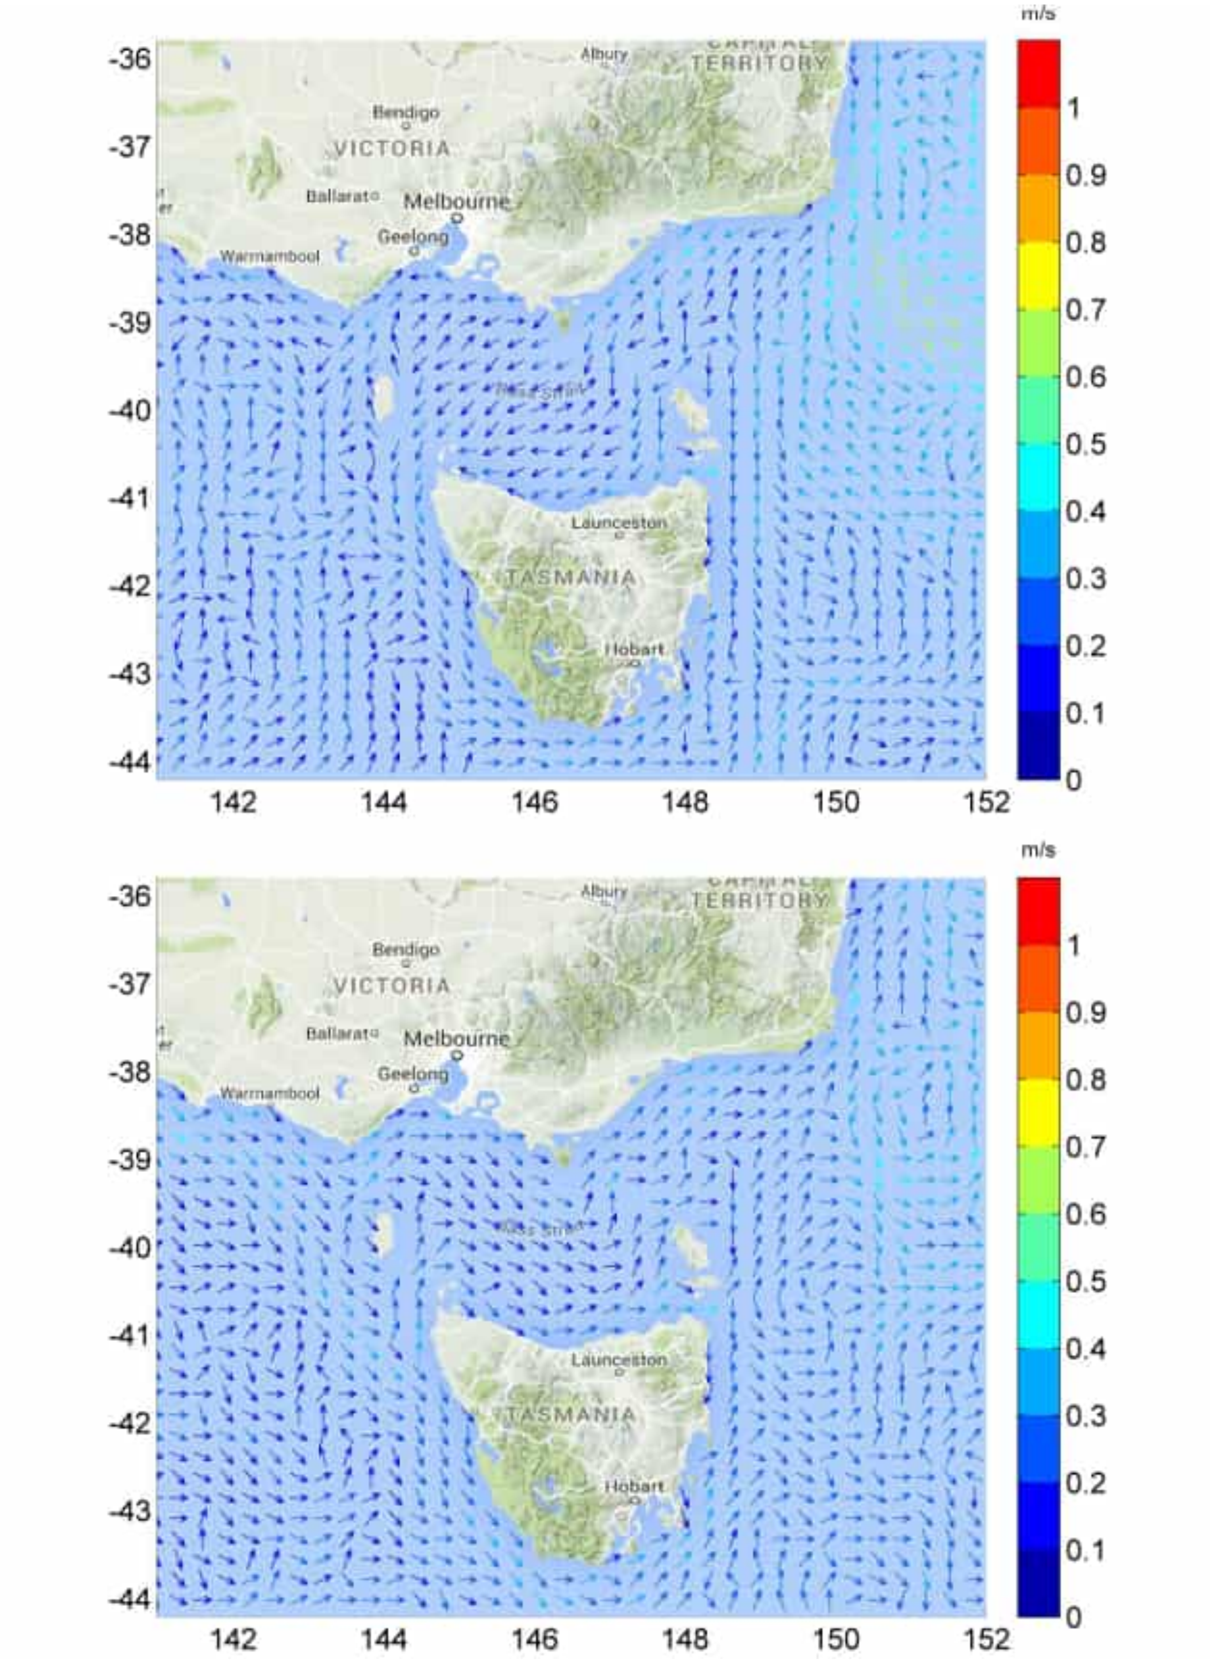

Figure 3.1 HYCOM averaged seasonal surface drift currents during summer (upper image) and winter (lower image).

3.1 Tidal Currents

Tidal current data was generated using RPS's advanced ocean/coastal model, HYDROMAP. The HYDROMAP model has been thoroughly tested and verified through field measurements throughout the world for more than 30 years (Isaji & Spaulding, 1984; Isaji, et al., 2001; Zigic, et al., 2003). HYDROMAP tidal current data has been used as input to forecast (in the future) and hindcast (in the past) pollutant spills in Australian waters and forms part of the Australian National Oil Spill Emergency Response System operated by Australian Maritime Safety Authority (AMSA).

HYDROMAP employs a sophisticated sub-gridding strategy, which supports up to six levels of spatial resolution, halving the grid cell size as each level of resolution is employed. The sub-gridding allows for higher resolution of currents within areas of greater bathymetric and coastline complexity, and/or of interest to a study.

The numerical solution methodology follows that of Davies (1977a and 1977b) with further developments for model efficiency by Owen (1980) and Gordon (1982). A more detailed presentation of the model can be found in Isaji and Spaulding (1984) and Isaji et al. (2001).

3.1.1 Grid Setup

The tidal model domain has been sub-gridded down to a resolution of 500 m for shallow and coastal regions, starting from an offshore (or deep water) resolution of 8 km. The finer grids were allocated in a step-wise fashion to resolve flows more accurately along the coastline, around islands and over regions with more complex bathymetry. Figure 3.2 shows the tidal model grid covering the study domain.

A combination of datasets was used and merged to describe the shape of the seabed within the grid domain (Figure 3.3). These included spot depths and contours which were digitised from nautical charts released by the hydrographic offices as well as Geoscience Australia database and depths extracted from the Shuttle Radar Topography Mission (SRTM30_PLUS) Plus dataset (see Becker et al., 2009).

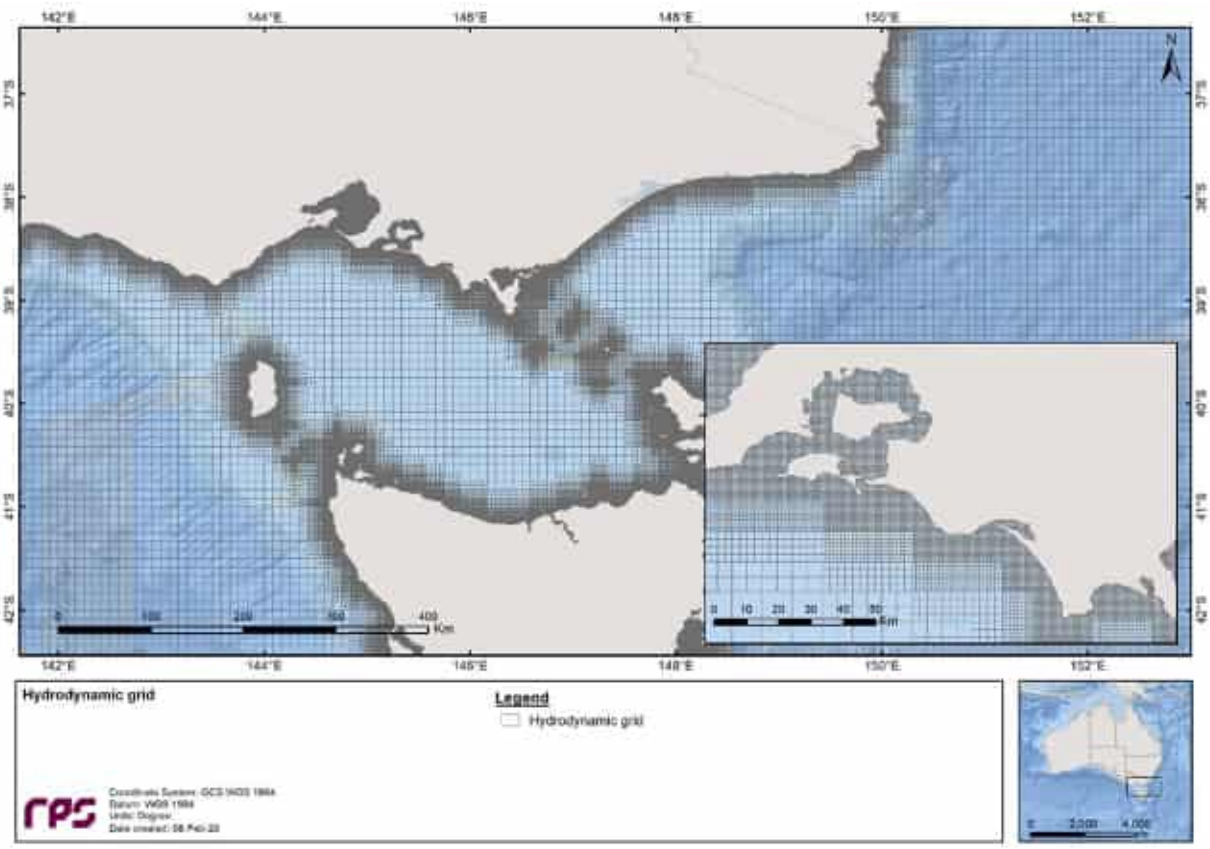

Figure 3.2 **Sample of the model grid used to generate the tidal currents for the study region. Higher resolution areas are shown by the denser mesh.**

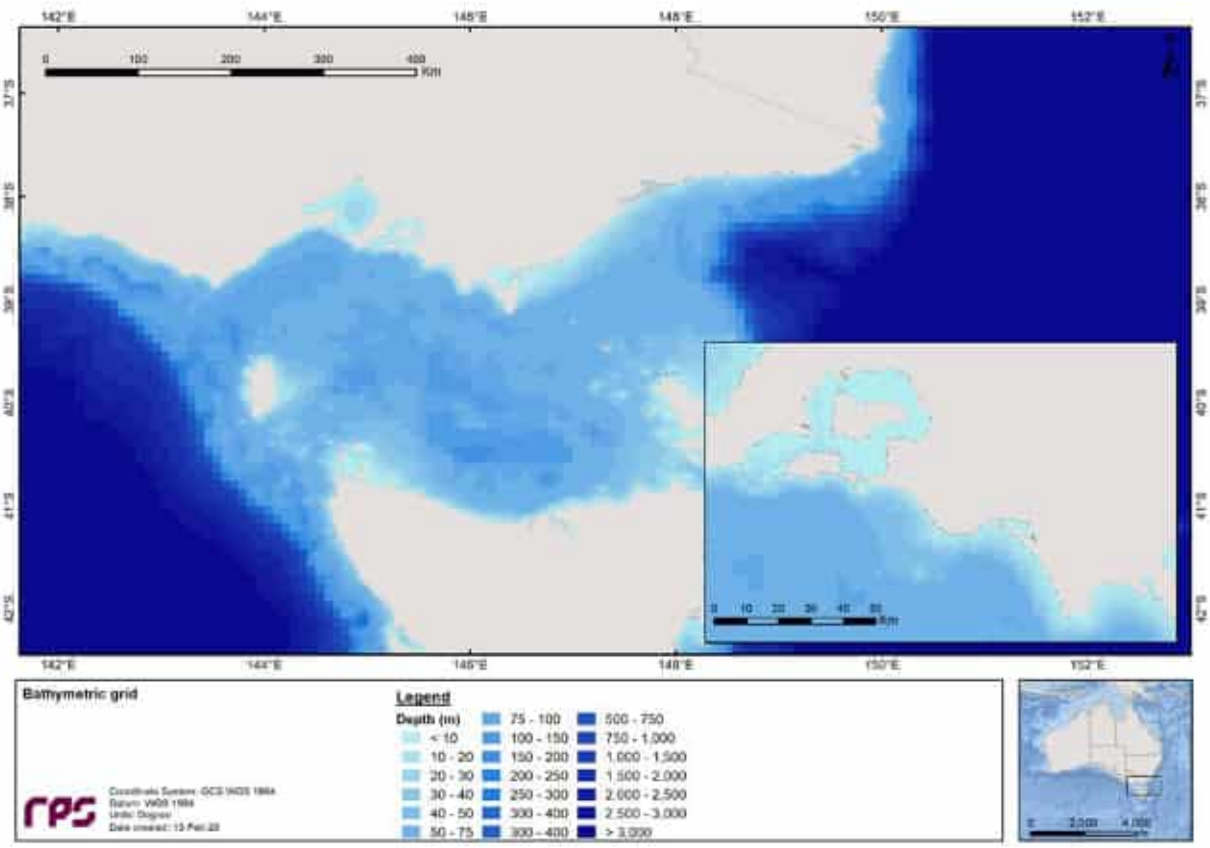

Figure 3.3 **Bathymetry defined throughout the tidal model domain.**

3.1.2 Tidal Conditions

The ocean boundary data for the regional model was obtained from satellite measured altimetry data (TOPEX/Poseidon 7.2) which provides estimates of the eight dominant tidal constituents at a horizontal scale of approximately 0.25 degrees. Using the tidal data, surface heights were firstly calculated along the open boundaries, at each time step in the model. The eight major tidal constituents used were K_2, S_2, M_2, N_2, K_1, P_1, O_1 and Q_1. Using the tidal data, surface heights were firstly calculated along the open boundaries, at each time step in the model.

The TOPEX/Poseidon satellite data is produced and quality controlled by the National Aeronautics and Space Administration (NASA). The satellites, equipped with two highly accurate altimeters that were capable of taking sea level measurements to an accuracy of less than 5 cm, measured oceanic surface elevations (and the resultant tides) for over 13 years (1992–2005; see Fu et al., 1994; NASA 2013a; 2013b). In total these satellites carried out 62,000 orbits of the planet.

The TOPEX/Poseidon tidal data has been widely used amongst the oceanographic community, being cited in more than 2,100 research publications (e.g. Andersen, 1995; Ludicone et al., 1998; Matsumoto et al., 2000, Kostianoy et al., 2003, Yaremchuk & Tangdong, 2004; Qiu & Chen, 2010). As such the Topex/Poseidon tidal data is considered accurate for this study.

To ensure that tidal predictions were accurate, predicted surface elevations were compared to measured data observed at multiple locations.

3.2 Ocean Currents

Data describing the flow of ocean currents was obtained from HYCOM (Hybrid Coordinate Ocean Model), (Chassignet et al., 2007), which is operated by the HYCOM Consortium, sponsored by the Global Ocean Data Assimilation Experiment (GODAE). HYCOM is a data-assimilative, three-dimensional ocean model that is run as a hindcast, assimilating time-varying observations of sea surface height, sea surface temperature and in-situ temperature and salinity measurements (Chassignet et al., 2009). The HYCOM predictions for drift currents are produced at a horizontal spatial resolution of approximately 8.25 km (1/12th of a degree) over the region, at a frequency of once per day. HYCOM uses isopycnal layers in the open, stratified ocean, but uses the layered continuity equation to make a dynamically smooth transition to a terrain-following coordinate in shallow coastal regions, and to z-level coordinates in the mixed layer and/or unstratified seas.

For this study, the HYCOM hindcast current dataset was obtained for the years 2010 to 2019 (inclusive). Figure 3.4 shows the spatial resolution of the HYCOM currents and example speeds and directions for a given time of day.

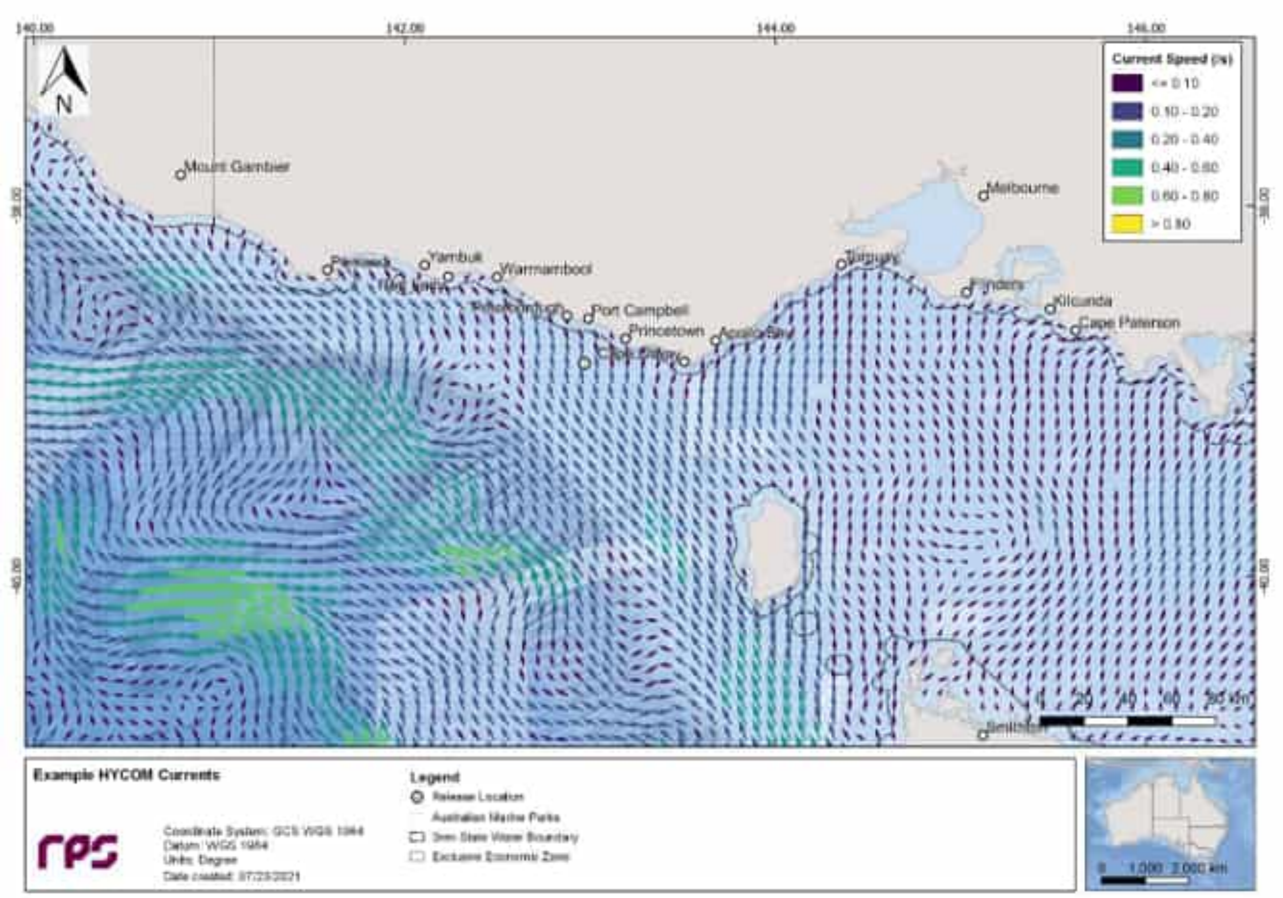

Figure 3.4 Map illustrating the spatial resolution of HYCOM surface ocean currents.

3.3 Surface Currents

Table 3.1 displays the average and maximum surface current speeds within the EP Area. Between March to June the currents generally flowed toward the east and northeast during July and August. The other months, the current directions were more variable. The monthly average speeds ranged between 0.20m/s (January and February) and 0.30 m/s (July). While the maximum speeds were between 0.66 m/s (January) and 1.15 m/s (July).

Figure 3.5 presents the monthly surface current rose distributions within the EP Area from the 2010-2019 dataset. Additionally, Figure 3.6 shows the variability of the annual surface current roses for Release Locations 1–5 and within the EP Area.

Note the convention for defining current direction is the direction the current flows towards, which is used to reference current direction throughout this report. Each branch of the rose represents the currents flowing to that direction, with north to the top of the diagram. Sixteen directions are used. The branches are divided into segments of different colour, which represent the current speed ranges for each direction. Speed intervals of 0.1 m/s are predominantly used in these current roses. The length of each coloured segment is relative to the proportion of currents flowing within the corresponding speed and direction.

Table 3.1 Summary of the predicted average and maximum surface current speeds within the EP Area derived from the 2010 to 2019 modelled dataset.

Month	Average current speed (m/s)	Maximum current speed (m/s)	General Direction (Towards)
January	0.20	0.66	Variable
February	0.20	0.94	Variable
March	0.21	0.77	East
April	0.21	0.75	East
May	0.24	0.74	East
June	0.25	0.71	East
July	0.30	1.15	Northeast
August	0.26	1.00	Northeast
September	0.22	0.82	Variable
October	0.23	0.78	Variable
November	0.24	0.83	Variable
December	0.23	0.85	Variable
Minimum	**0.20**	**0.66**	
Maximum	**0.30**	**1.15**	

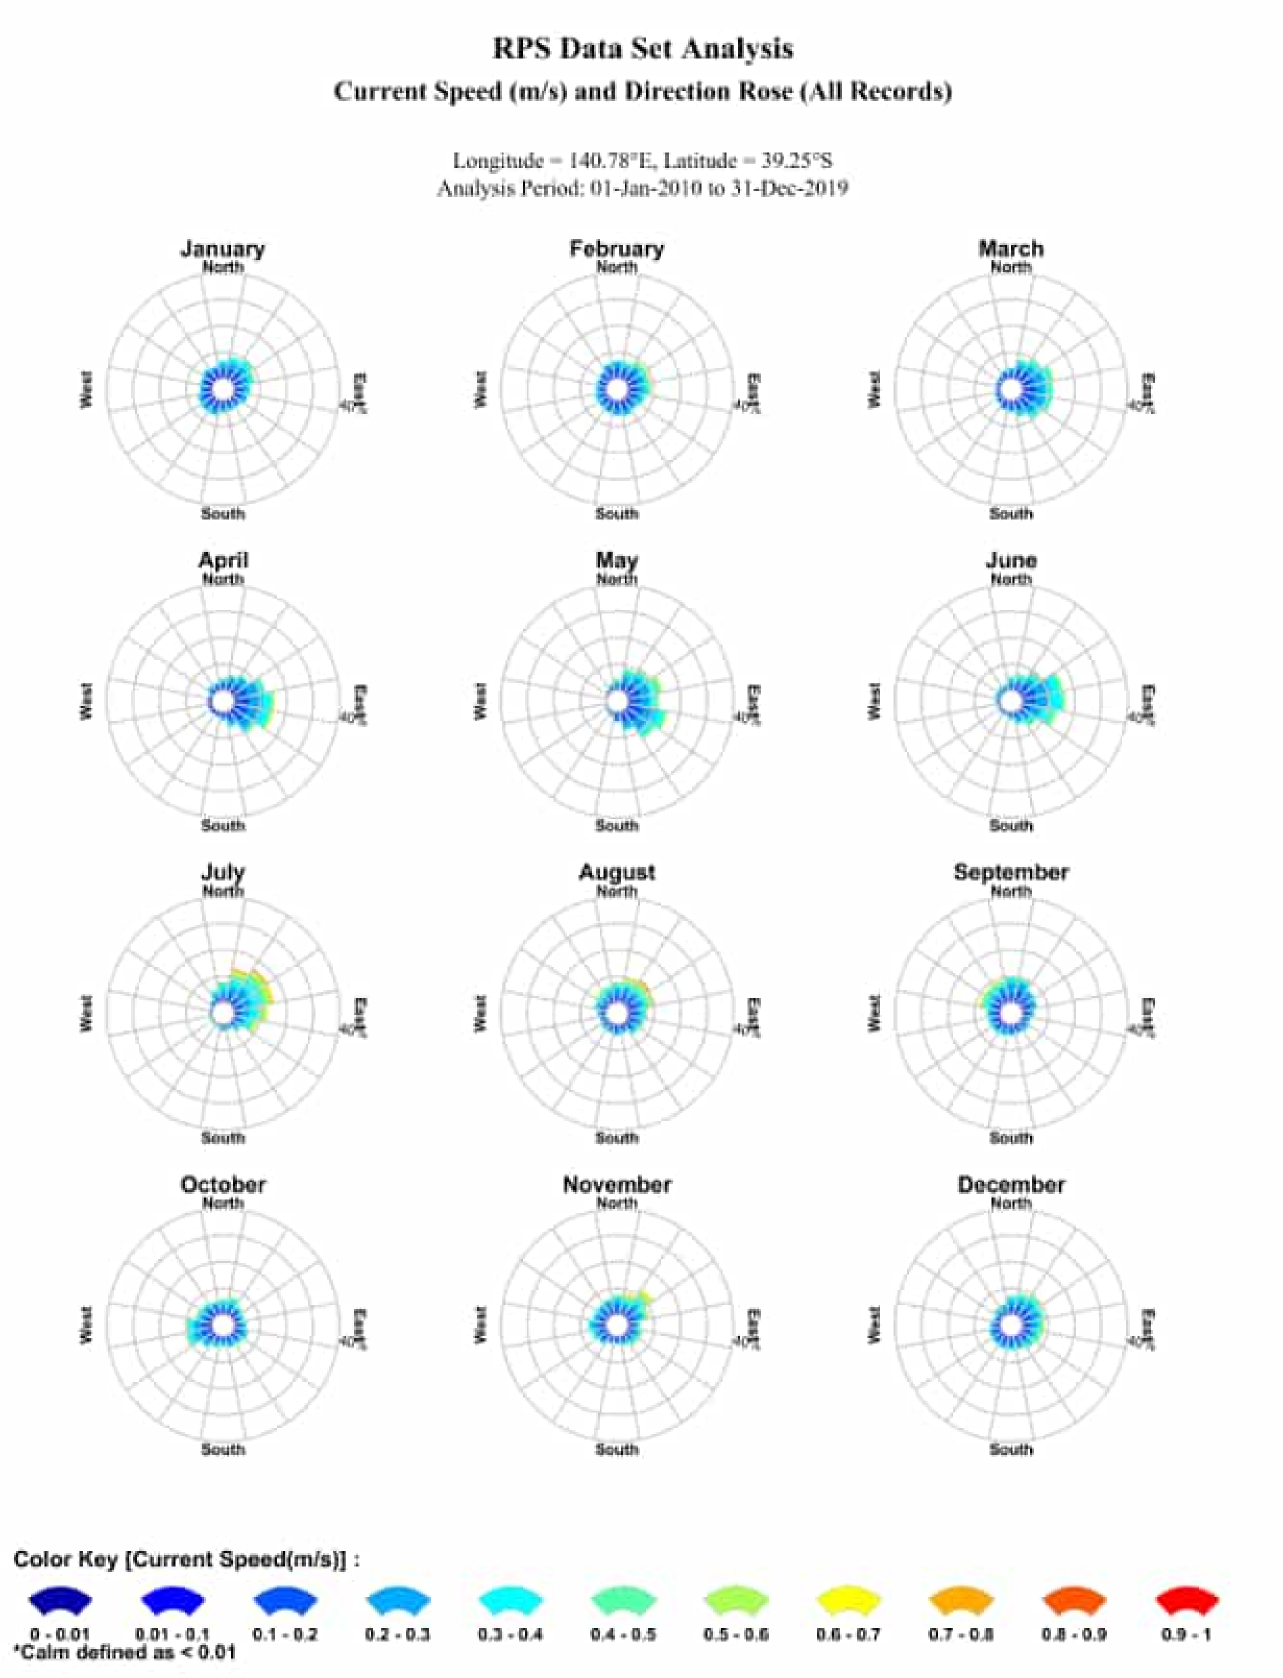

Figure 3.5 Predicted monthly surface current rose plots at the centre of the EP Area. Data was derived from the 2010-2019 data.

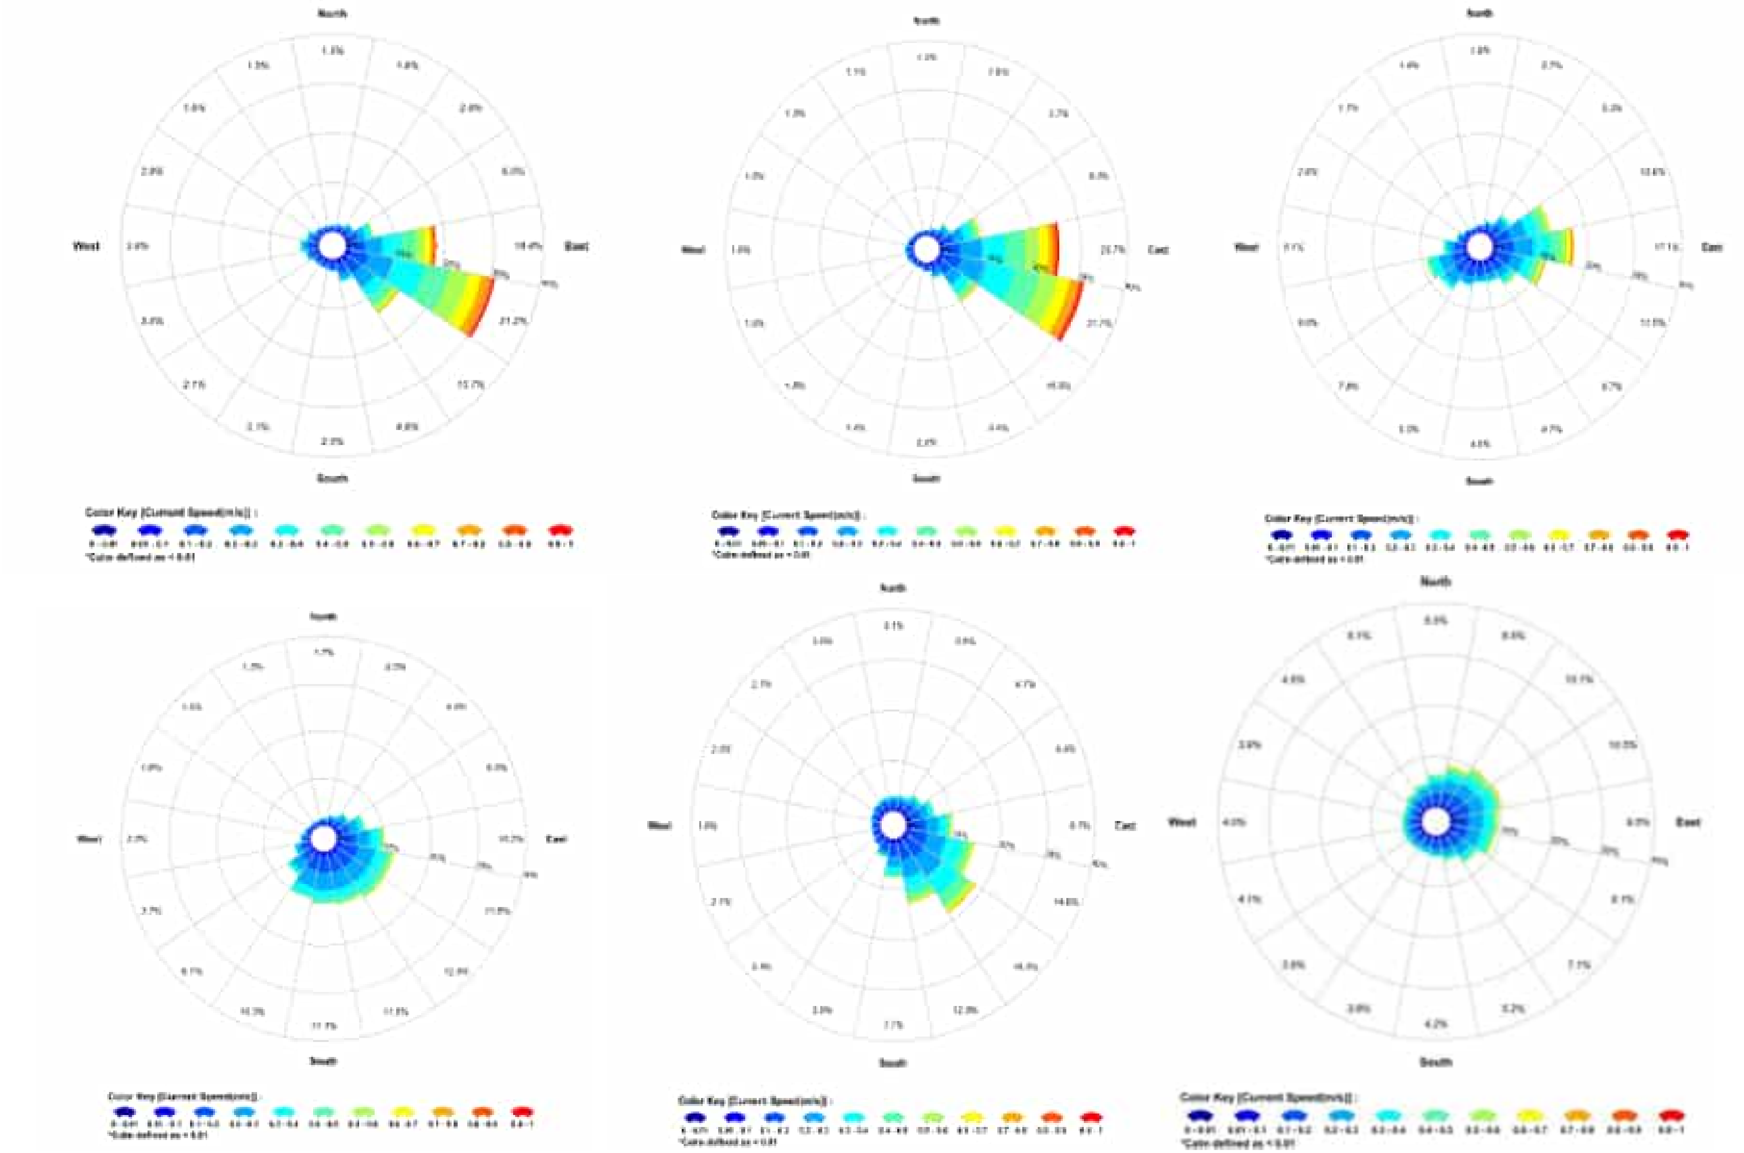

Figure 3.6 Annual surface current rose plots for Release Locations 1 (upper left), 2 (upper centre), 3 (upper right), 4 (lower left), 5 (lower centre) and within the EP Area (lower right). Data was derived by combining the HYCOM large-scale ocean currents and HYDROMAP nearshore tidal currents for 2010-2019 inclusive.

4 WIND DATA

To account for the influence of the wind on the hydrocarbons floating on the surface, wind data from 2010 to 2019 (inclusive) was sourced from the National Centre for Environmental Prediction (NCEP) Climate Forecast System Reanalysis dataset (CFSR; see Saha et al., 2010). The CFSR wind model includes observations from many data sources: surface observations, upper-atmosphere air balloon observations, aircraft observations and satellite observations. The model is capable of accurately representing the interaction between the earth's oceans, land and atmosphere. The gridded wind data output is available at a horizontal resolution of 0.25° (~33 km) and a temporal resolution of 1 hour.

Figure 4.1 illustrates the spatial resolution of the wind field used as input into the oil spill model.

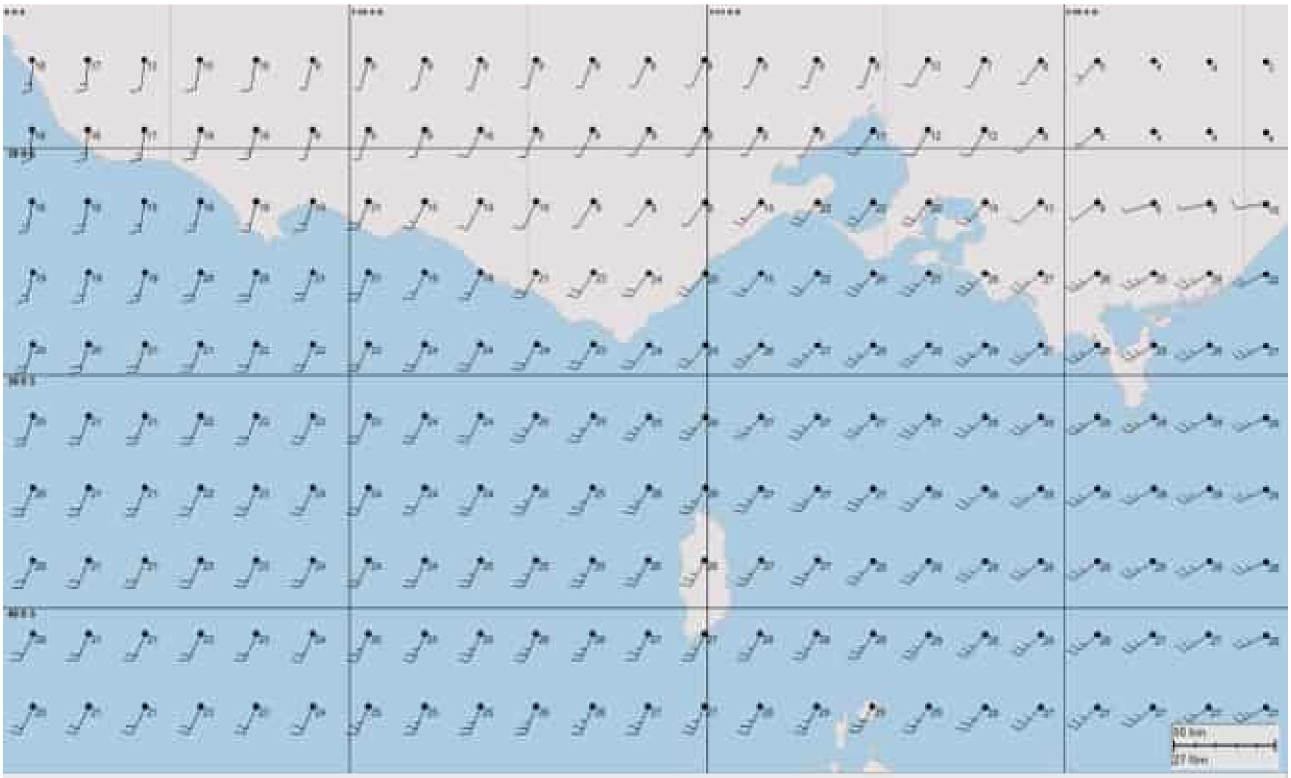

Figure 4.1 Spatial resolution of the CFSR modelled wind data used as input into the oil spill model.

Table 4.1 shows the monthly average and maximum winds within the EP Area. The average monthly wind speed were between 13.5 knots (January) and 19.6 knots (July). The maximum wind speeds reached 51.9 knots in August. Winds were shown to be predominantly from the western sector.

Figure 4.2 shows the monthly wind rose distributions within the EP Area. Additionally, Figure 4.3 illustrates total wind roses for Release Locations 1–5 and within the EP Area.

Note that the atmospheric convention for defining wind direction, that is, the direction the wind blows from, is used to reference wind direction throughout this report. Each branch of the rose represents wind coming from that direction, with north to the top of the diagram. Sixteen directions are used. The branches are divided into segments of different colour, which represent wind speed ranges from that direction. Speed ranges of 5 knots are predominantly used in these wind roses. The length of each segment within a branch is proportional to the frequency of winds blowing within the corresponding range of speeds from that direction.

Table 4.1 Predicted average and maximum wind speeds at the within the EP Area derived from the 2010 to 2019 modelled dataset.

Month	Average wind (knots)	Maximum wind (knots)	General direction (from)
January	13.5	36.0	Southeast and southwest
February	14.0	39.3	Southeast
March	14.3	43.0	West
April	14.3	47.6	West
May	16.6	44.1	West
June	17.3	47.1	West and north
July	19.6	49.4	West
August	19.0	51.9	West
September	17.0	48.4	West
October	16.0	44.3	West
November	14.7	36.8	West
December	14.2	39.2	West and east
Minimum	**13.5**	**36.0**	
Maximum	**19.6**	**51.9**	

Figure 4.2 Monthly wind rose plots in the centre of the EP Area derived from 2010-2019 modelled data.

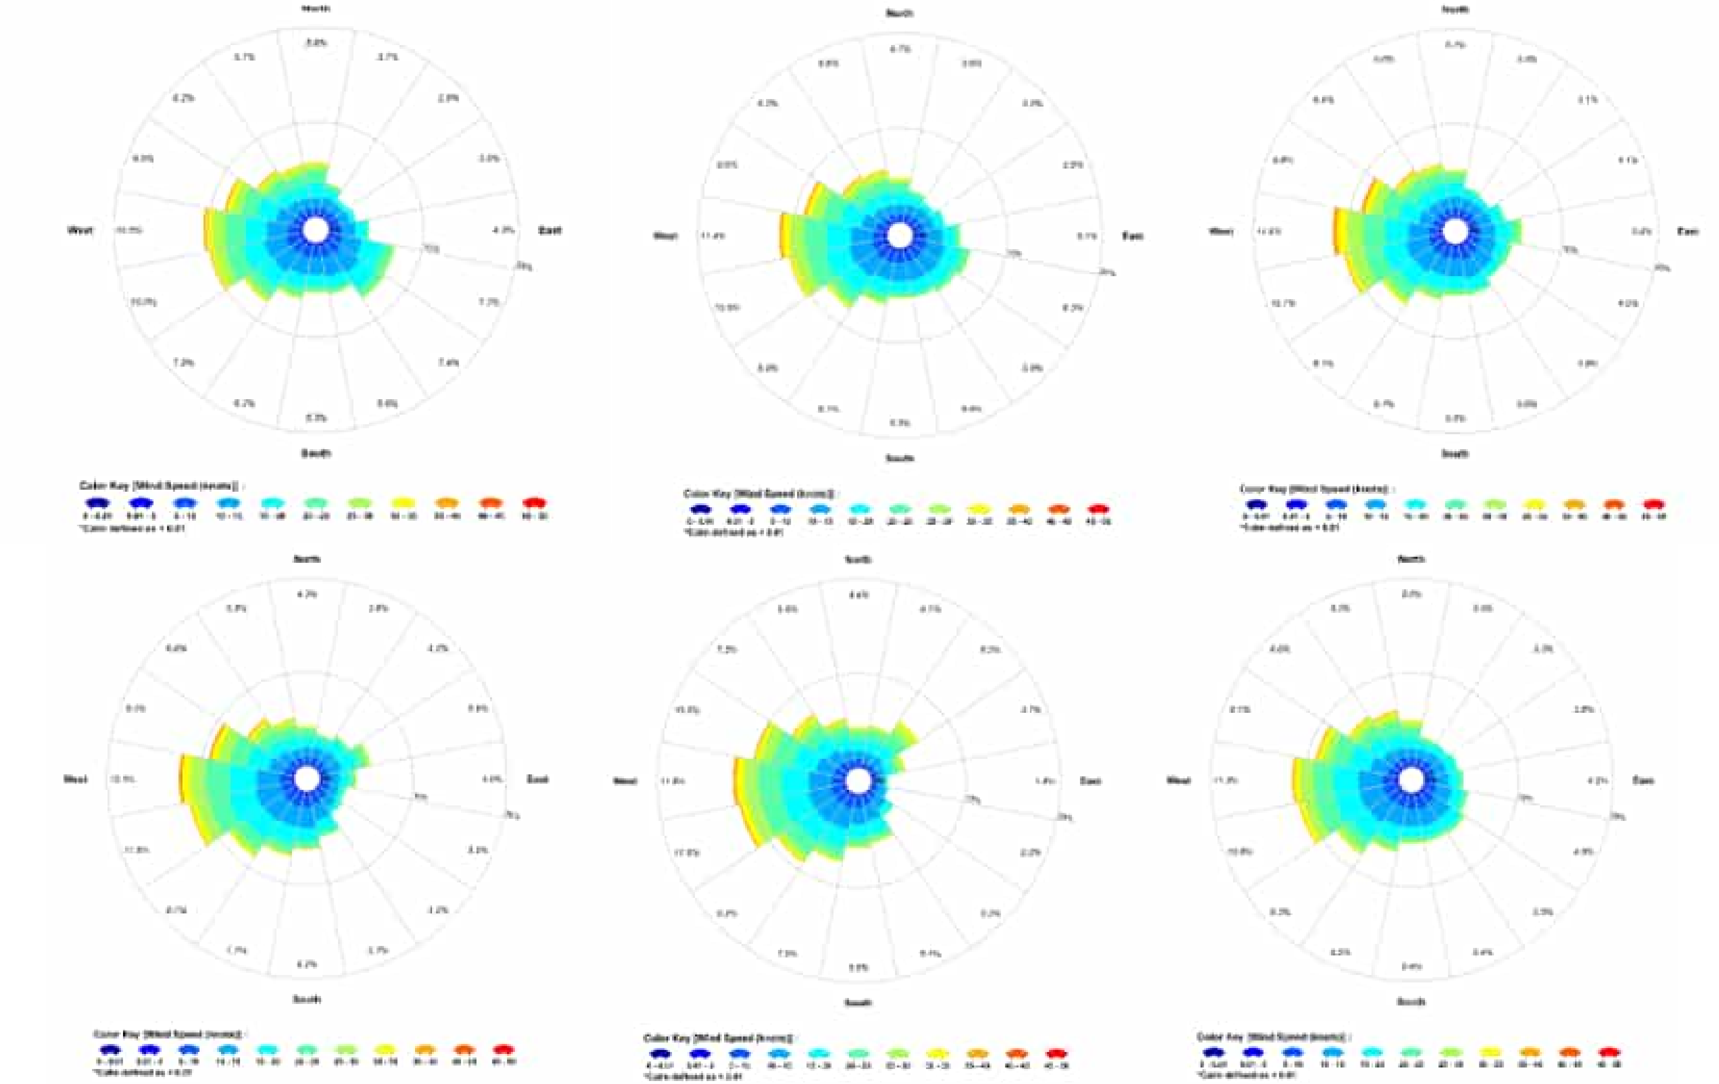

Figure 4.3 Total wind rose plots for Release Locations 1 (upper left), 2 (upper centre), 3 (upper right), 4 (lower left), 5 (lower centre) and within the EP Area (lower right). Derived from 2010-2019 modelled data.

5 WATER TEMPERATURE AND SALINITY

Monthly water temperature and salinity data was obtained from the World Ocean Atlas 2013 database produced by the National Oceanographic Data Centre (National Oceanic and Atmospheric Administration) and its co-located World Data Center for Oceanography (Levitus et al., 2013). The data is used to inform the weathering, movement and evaporative loss of hydrocarbon spills in the surface and subsurface layers.

Table 5.1 presents the sea temperature and salinity of the surface layer (0-5 m) within the EP Area. The monthly average sea surface temperatures ranged between 13.1°C (September) and 17.6°C (March). The monthly average salinity values remained stable around 35.3 psu.

Table 5.1 Monthly average sea surface temperature and salinity within the EP Area.

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Temperature (°C)	17.2	17.2	17.6	16.6	15.7	14.9	14.4	13.8	13.1	13.4	14.0	15.3
Salinity (psu)	35.3	35.4	35.3	35.3	35.3	35.3	35.4	35.4	35.3	35.3	35.4	35.3

6 OIL SPILL MODEL - SIMAP

The spill modelling was carried out using a purpose-developed oil spill trajectory and fates model, SIMAP (Spill Impact Mapping and Assessment Program). This model is designed to simulate the transport and weathering processes that affect the outcomes of hydrocarbon spills to the sea, accounting for the specific oil type, spill scenario, and prevailing wind and current circulation patterns.

SIMAP is the evolution of the United States Environmental Protection Agency (US EPA) Natural Resource Damage Assessment model (French et al., 1999) and is designed to simulate the fate and effects of spilled oils and fuels for both the surface slick and the three-dimensional plume that is generated in the water column. SIMAP includes algorithms to account for both physical transport and weathering processes. The latter are important for accounting for the partitioning of the spilled mass over time between the water surface (surface slick), water column (entrained oil and dissolved compounds), atmosphere (evaporated compounds) and land (stranded oil). The model also accounts for the interaction between weathering and transport processes.

The physical algorithms calculate transport and spreading by physical forces, including surface tension, gravity and wind and current forces for both surface slicks and oil within the water column. The fates algorithms calculate all the weathering processes known to be important for oil spilled to marine waters. These include droplet and slick formation, entrainment by wave action, emulsification, dissolution of soluble components, sedimentation, evaporation, bacterial and photo-chemical decay and shoreline interactions. These algorithms account for the specific oil type being considered.

Entrainment is the physical process where globules of oil are transported from the sea surface into the water column by wind and wave-induced turbulence or be generated subsea by a pressurised discharge at depth. It has been observed that entrained oil is broken into droplets of varying sizes. Small droplets spread and diffuse into the water column, while larger ones rise rapidly back to the surface (Delvigne & Sweeney, 1988; Delvigne, 1991).

Dissolution is the process by which soluble hydrocarbons enter the water from a surface slick or from entrained droplets. The lower molecular weight hydrocarbons tend to be both more volatile and more soluble than those of higher molecular weight.

The formation of water-in-oil emulsions, or mousse, which is termed ‘emulsification’, depends on oil composition and sea state. Emulsified oil can contain as much as 80% water in the form of micrometre-sized droplets dispersed within a continuous phase of oil (Daling & Brandvik, 1991; Bobra, 1991; Daling et al., 1997; Fingas, 1995).

Evaporation can result in the transfer of large proportions of spilled oil from the sea surface to the atmosphere, depending on the type of oil.

Evaporation rates vary over space and time dependent on the prevailing sea temperatures, wind and current speeds, the surface area of the slick and entrained droplets that are exposed to the atmosphere as well as the state of weathering of the oil. Evaporation rates will decrease over time, depending on the calculated rate of loss of the more volatile compounds. By this process, the model can differentiate between the fates of different oil types.

Decay (degradation) of hydrocarbons may occur as the result of photolysis, which is a chemical process energised by ultraviolet light from the sun, and by biological breakdown, termed biodegradation. Many types of marine organisms ingest, metabolise and utilise oil as a carbon source, producing carbon dioxide and water as by-products.

Entrainment, dissolution and emulsification rates are correlated to wave energy, which is accounted for by estimating wave heights from the sustained wind speed, direction and fetch (i.e. distance downwind from land barriers) at different locations in the domain. Dissolution rates are dependent upon the proportion of soluble, short-chained hydrocarbon compounds, and the surface area at the oil/water interface of slicks. Dissolution rates are also strongly affected by the level of turbulence. For example, dissolution rates will be relatively high at the site of the release for a deep-sea discharge at high pressure.

The SIMAP weathering algorithms include terms to represent these dynamic processes. Technical descriptions of the algorithms used in SIMAP and validations against real spill events are provided in French et al. (1999) and French-McCay (2004).

Input specifications for oil types include density, viscosity, pour-point, distillation curve (volume of oil distilled off versus temperature) and the aromatic/aliphatic component ratios within given boiling point ranges. The model calculates a distribution of the oil by mass into the following components:

- Surface-bound or floating oil;
- Entrained oil (non-dissolved oil droplets that are physically entrained by wave action);
- Dissolved hydrocarbons (principally the aromatic and short-chained aliphatic compounds);
- Evaporated hydrocarbons;
- Sedimented hydrocarbons; and
- Decayed hydrocarbons.

6.1 Stochastic Modelling

Stochastic modelling involves running numerous individual oil spill simulations using a range of prevailing wind and current conditions that are historically representative of the season and location of where the spill event may occur. Stochastic oil spill modelling is created by overlaying the simulated hypothetical oil spill results (See Section 1.1.1).

For the stochastic modelling presented herein, 100 simulations were run at each of the 5 selected locations (i.e. 500 simulations total; see Figure 1.1), with each simulation having the same spill information (volume, duration and composition of hydrocarbons) but varying start times. This ensured that each simulation was subjected to a unique set of wind and current conditions.

During each simulation, the model records whether any grid cells are exposed to any oil concentrations, the concentrations involved and the elapsed time before exposure. The results of the oil spill simulations were analysed to determine the following annualised statistics for every grid cell:

- Exposure load (concentrations and volumes);
- Minimum time before exposure;
- Probability of contact above defined concentrations;
- Volume of oil that may strand on shorelines from any single simulation;
- Concentration that might occur on sections of individual shorelines;
- Exposure to dissolved hydrocarbons in the water column; and
- Exposure to entrained hydrocarbons in the water column.

6.2 Floating, Shoreline and In-Water Thresholds

The thresholds and their relationship to exposure for the sea surface, shoreline and water column (entrained and dissolved hydrocarbons) are presented in Sections 6.2.1 to 6.2.3. Supporting justifications of the adopted thresholds applied during the study and additional context relating to the survey area are also provided. It is important to note that the thresholds herein are based on NOPSEMA (2019).

6.2.1 Floating Oil Exposure Thresholds

The modelling results can be presented to any levels; therefore, thresholds have been specified (based on scientific literature) to record floating oil exposure to the sea-surface at meaningful levels only, described in the following paragraphs.

The low threshold to assess the potential for floating oil exposure, was 1 g/m^2, which equates approximately to an average thickness of 1 µm, referred to as visible oil. Oil of this thickness is described as rainbow sheen in appearance, according to the Bonn Agreement Oil Appearance Code (Bonn Agreement, 2009; AMSA, 2014) (see Table 6.1). Figure 6.1 shows photographs highlighting the difference in appearance between a silvery sheen, rainbow sheen and metallic sheen. This threshold is considered below levels which would cause environmental harm and it is more indicative of the areas perceived to be affected due to its visibility on the sea surface and potential to trigger temporary closures of areas (i.e. fishing grounds) as a precautionary measure. Table 6.1 provides a description of the appearance in relation to exposure zone thresholds used to classify the zones of floating oil exposure.

Ecological impact has been estimated to occur at 10 g/m^2 (a film thickness of approximately 10 µm or 0.01 mm) according to French et al. (1996) and French-McCay (2009) as this level of fresh oiling has been observed to mortally impact some birds through adhesion of oil to their feathers, exposing them to secondary effects such as hypothermia. The appearance of oil at this average thickness has been described as a metallic sheen (Bonn Agreement, 2009). Concentrations above 10 g/m^2 is also considered the lower actionable threshold, where oil may be thick enough for containment and recovery as well as dispersant treatment (AMSA, 2015).

Scholten et al. (1996) and Koops et al. (2004) indicated that at oil concentrations on the sea surface of 25 g/m2 (or greater), would be harmful for all birds that have landed in an oil film due to potential contamination of their feathers, with secondary effects such as loss of temperature regulation and ingestion of oil through preening. The appearance of oil at this thickness is also described as metallic sheen (Bonn Agreement, 2009). For this study the high exposure threshold was set to 50 g/m^2 and above based on NOPSEMA (2019). This threshold can also be used to inform response planning.

Table 6.2 defines the thresholds used to classify the zones of floating oil exposure reported herein.

Table 6.1 The Bonn Agreement Oil Appearance Code

Code	Description Appearance	Layer Thickness Interval (g/m2 or µm)	Litres per km2
1	Sheen (silvery/grey)	0.04 – 0.30	40 – 300
2	Rainbow	0.30 – 5.0	300 – 5,000
3	Metallic	5.0 – 50	5,000 – 50,000
4	Discontinuous True Oil Colour	50 – 200	50,000 – 200,000
5	Continuous True Oil Colour	>200	>200,000

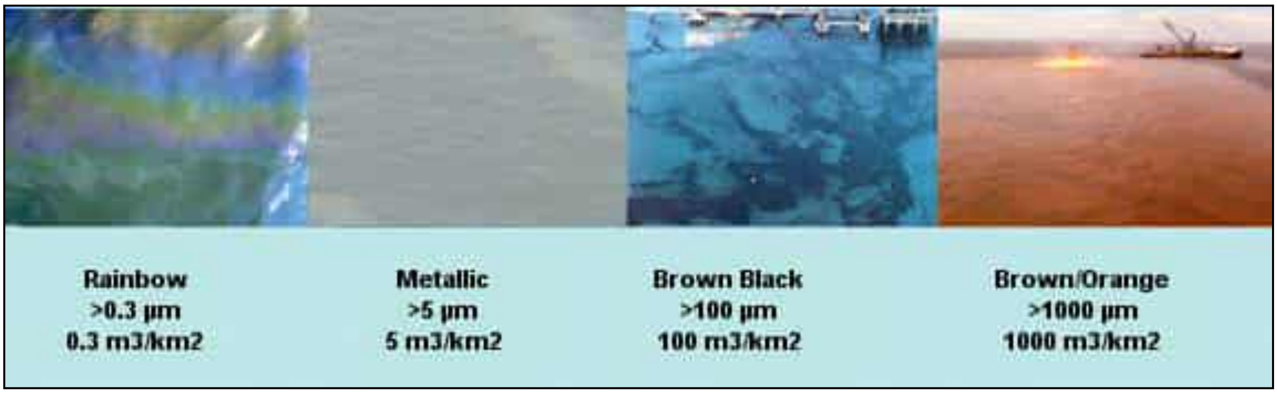

Figure 6.1 Photographs showing the difference between oil colour and thickness on the sea surface (source: Oil Spill Solutions, 2015)

Table 6.2 Floating oil exposure thresholds used in this report (in alignment with NOPSEMA (2019)).

Threshold level	Floating oil g/m^2	Description
Low	1	Approximates range of socioeconomic effects and establishes planning area for scientific monitoring
Moderate	10	Approximates lower limit for harmful exposures to birds and marine mammals
High	50	Approximates surface oil slick and informs response planning

6.2.2 Shoreline Accumulation Thresholds

There are many different types of shorelines, ranging from cliffs, rocky beaches, sandy beaches, mud flats and mangroves, and each of these influences the volume of oil that can remain stranded ashore and its thickness before the shoreline saturation point occurs. For instance, a sandy beach may allow oil to percolate through the sand, thus increasing its ability to hold more oil ashore over tidal cycles and various wave actions than an equivalent area of water; hence oil can increase in thickness onshore over time. A sandy beach shoreline was assumed as the default shoreline type for the modelling herein, as it allows for the highest carrying capacity of oil (of the available open/exposed shoreline types). Hence the results contained herein would be indicative of a worst-case scenario, where the highest volume of oil may be stranded on the shoreline (when compared to other shoreline types, such as exposed rocky shores).

In previous risk assessment studies, French-McCay et al. (2005a; 2005b) used a threshold of 10 g/m^2 to assess the potential for shoreline contact. This is a conservative threshold used to define regions of socio-economic impact, such as triggering temporary closures of adjoining fisheries or the need for shore clean-up on beaches or man-made features/amenities (breakwaters, jetties, marinas, etc.). It would equate to approximately 2 teaspoons of hydrocarbon per square meter of shoreline contacted. The appearance is described as a stain/film. On that basis, the 10 g/m^2 shoreline contact threshold has been selected to define the zone of potential "low shoreline accumulation".

French et al. (1996) and French-McCay (2009) have defined a hydrocarbon exposure threshold for shorebirds and wildlife (furbearing aquatic mammals and marine reptiles) on or along the shore at 100 g/m^2, which is based on studies for sub-lethal and lethal impacts. This threshold has been used in previous environmental risk assessment studies (see French-McCay, 2003; French-McCay et al., 2004; French-McCay et al., 2011; 2012; NOAA, 2013). Additionally, a shoreline concentration of 100 g/m^2, or above, is the minimum limit that the oil can be effectively cleaned according to the AMSA (2015) guideline. This threshold equates to approximately ½ a cup of oil per square meter of shoreline accumulation. The appearance is described as a thin oil coat. Therefore, 100 g/m^2 has been selected to define the zone of potential "moderate shoreline accumulation".

Observations by Lin & Mendelssohn (1996), demonstrated that loadings of more than 1,000 g/m^2 of hydrocarbon during the growing season would be required to impact marsh plants significantly. Similar thresholds have been found in studies assessing hydrocarbon impacts on mangroves (Grant et al., 1993; Suprayogi & Murray, 1999). Hence, 1,000 g/m^2 has been selected to define the zone of potential "high shoreline accumulation". It equates to approximately 1 litre of hydrocarbon per square meter of shoreline accumulation. The appearance is described as a hydrocarbon cover.

It is worth noting that the shoreline accumulation thresholds derived from extensive literature review (outlined in Table 6.3) agree with the commonly used threshold values for oil spill modelling specified in NOPSEMA (2019).

Table 6.3 Shoreline accumulation thresholds used in this report (in alignment with NOPSEMA (2019)).

Threshold level	Shoreline Concentration (g/m2)	Description
Low	10 – 100	Predicts potential for socioeconomic/sublethal impact
Moderate	100 - 1,000	Loading predicts area likely to require clean-up effort
High	> 1,000	Loading predicts area likely to require intensive clean-up effort

6.2.3 In-Water Exposure Thresholds

Oil is a mixture of thousands of hydrocarbons of varying physical, chemical, and toxicological characteristics, and therefore, demonstrate varying fates and impacts on organisms. As such, for in-water exposure, the SIMAP model provides separate outputs for dissolved and entrained hydrocarbons from oil droplets. The consequences of exposure to dissolved and entrained components will differ because they have different modes and magnitudes of effect.

Entrained hydrocarbon concentrations were calculated based on oil droplets that are suspended in the water column, though not dissolved. The composition of this oil would vary with the state of weathering (oil age) and may contain soluble hydrocarbons when the oil is fresh. Calculations for dissolved hydrocarbons specifically calculates oil components which are dissolved in water, which are known to be the primary source of toxicity exerted by oil.

6.2.3.1 Dissolved hydrocarbons

Laboratory studies have shown that dissolved hydrocarbons exert most of the toxic effects of oil on aquatic biota (Carls et al., 2008; Nordtug et al., 2011; Redman, 2015). The mode of action is a narcotic effect, which is positively related to the concentration of soluble hydrocarbons in the body tissues of organisms (French-McCay, 2002). Dissolved hydrocarbons are taken up by organisms directly from the water column by absorption through external surfaces and gills, as well as through the digestive tract. Thus, soluble hydrocarbons are termed “bioavailable”.

Hydrocarbon compounds vary in water-solubility and the toxicity exerted by individual compounds is inversely related to solubility, however bioavailability will be modified by the volatility of individual compounds (Nirmalakhandan & Speece, 1988; Blum & Speece, 1990; McCarty, 1986; McCarty et al., 1992a, 1992b; Mackay & Southwood, 1992; McCarty & Mackay, 1993; Verhaar et al., 1992, 1999; Swartz et al., 1995; French-McCay, 2002; McGrath & Di Toro, 2009). Of the soluble compounds, the greatest contributor to toxicity for water-column and benthic organisms are the lower-molecular-weight aromatic compounds, which are both volatile and soluble in water. Although they are not the most water-soluble hydrocarbons within most oil types, the polynuclear aromatic hydrocarbons (PAHs) containing 2-3 aromatic ring structures typically exert the largest narcotic effects because they are semi-soluble and not highly volatile, so they persist in the environment long enough for significant accumulation to occur (Anderson et al., 1974, 1987; Neff & Anderson, 1981; Malins & Hodgins, 1981; McAuliffe, 1987; NRC, 2003). The monoaromatic hydrocarbons (MAHs), including the BTEX compounds (benzene, toluene, ethylbenzene, and xylenes), and the soluble alkanes (straight chain hydrocarbons) also contribute to toxicity, but these compounds are highly volatile, so that their contribution will be low when oil is exposed to evaporation and higher when oil is discharged at depth where volatilisation does not occur (French-McCay, 2002).

French-McCay (2002) reviewed available toxicity data, where marine biota was exposed to dissolved hydrocarbons prepared from oil mixtures, finding that 95% of species and life stages exhibited 50% population mortality (LC_{50}) between 6 and 400 ppb total PAH concentration after 96 hrs exposure, with an average of 50 ppb. Hence, concentrations lower than 6 ppb total PAH value should be protective of 97.5% of species and life stages even with exposure periods of days (at least 96 hours). Early life-history stages of fish appear to be more sensitive than older fish stages and invertebrates.

Thresholds of 10, 50 or 400 ppb over a 1 hour timestep (see Table 6.4) were applied to indicate increasing potential for sub-lethal to lethal toxic effects (or low to high), based on NOPSEMA (2019).

6.2.3.2 Entrained hydrocarbons

Entrained hydrocarbons consist of oil droplets that are suspended in the water column and insoluble. As such, insoluble compounds in oil cannot be absorbed from the water column by aquatic organisms, hence are not bioavailable through absorption of compounds from the water. Exposure to these compounds would require routes of uptake other than absorption of soluble compounds. The route of exposure of organisms to whole oil alone include direct contact with tissues of organisms and uptake of oil by direct consumption, with potential for biomagnification through the food chain (NRC, 2005).

The 10 ppb threshold represents the very lowest concentration and corresponds generally with the lowest trigger levels for chronic exposure for entrained hydrocarbons in the ANZECC & ARMCANZ (2000) water quality guidelines. Due to the requirement for relatively long exposure times (>24 hours) for these concentrations to be significant, they are likely to be more meaningful for juvenile fish, larvae and planktonic organisms that might be entrained (or otherwise moving) within the entrained plumes, or when entrained hydrocarbons adhere to organisms or trapped against a shoreline for periods of several days or more.

This exposure zone is not considered to be of significant biological impact and is therefore outside the adverse exposure zone. This exposure zone represents the area contacted by the spill. This area does not define the area of influence as it is considered that the environment will not be affected by the entrained hydrocarbon at this level.

Thresholds of 10 ppb and 100 ppb were applied over a 1 hour time exposure (Table 6.4), to cover the range of thresholds outlined in ANZECC& ARMCANZ, (2000) water quality guidelines, the incremental change for greater potential effect and is per NOPSEMA (2019).

A complicating factor that should be considered when assessing the consequence of dissolved and entrained oil distributions is that there will be some areas where both physically entrained oil droplets and dissolved hydrocarbons co-exist. Higher concentrations of each will tend to occur close to the source where sea conditions can force mixing of relatively unweathered oil into the water column, resulting in more rapid dissolution of soluble compounds.

Table 6.4 Dissolved and entrained hydrocarbon exposure values assessed over a 1-hour time step (in alignment with NOPSEMA (2019)).

Phase	Exposure level	In-water threshold (ppb)	Description
Dissolved hydrocarbons	Low	10	Establishes planning area for scientific monitoring based on potential for exceedance of water quality triggers
	Moderate	50	Approximates potential toxic effects, particularly sublethal effects to sensitive species
	High	400	Approximates toxic effects including lethal effects to sensitive species
Entrained hydrocarbons	Low	10	Establishes planning area for scientific monitoring based on potential for exceedance of water quality triggers
	High	100	As appropriate given oil characteristics for informing risk evaluation

6.3 Dispersion

A horizontal dispersion coefficient of 10 m^2/s was used to account for dispersive processes acting at the surface that are below the scale of resolution of the input current field, based on typical values for open waters (Okubo, 1971). Dispersion rates within the water column (applicable for entrained and dissolved plumes of hydrocarbons) were specified at 1 m^2/s, based on empirical data for the dispersion of hydrocarbon plumes (King & McAllister, 1998).

7 OIL PROPERTIES

Table 7.1 and Table 7.2 present the physical properties and boiling point ranges of the MDO used in this study.

MDO is a light-persistent fuel oil used in the maritime industry. It has a density of 829.1 kg/m^3 (API of 37.6) and a low pour point of -14°C. The low viscosity (4 cP) indicates that this oil will spread quickly when released and will form a thin to low thickness film on the sea surface, increasing the rate of evaporation.

Generally, 6.0% of the MDO mass should evaporate within the first 12 hours (BP < 180°C); a further 34.6% should evaporate within the first 24 hours (180°C < BP < 265°C); and an additional 54.4% should evaporate over several days (265°C < BP < 380°C). Approximately 5% (by mass) of MDO will not evaporate at ambient temperatures and persist in the environment.

The oil is categorised as a group II oil (light-persistent) based on categorisation and classification derived from AMSA (2015a) guidelines. The classification is based on the specific gravity of hydrocarbons in combination with relevant boiling point ranges.

It is important to note that some heavy components contained in MDO have a strong tendency to physically entrain into the upper water column in the presence of moderate winds (i.e. >12 knots) and breaking waves but can re-float to the surface if these energies abate.

Table 7.1 Physical properties of the MDO.

Characteristic	Marine Diesel Oil (MDO
Density (kg/m^3)	829.1 (at 25 °C)
API	37.6
Dynamic viscosity (cP)	4.0 (at 25 °C)
Pour point (°C)	-14
Hydrocarbon property category	Group II
Hydrocarbon property classification	Light - Persistent

Table 7.2 Boiling point ranges of the MDO.

Oil Type	Component	Volatile (%)	Semi-volatile (%)	Low-volatility (%)	Residual (%)
	Boiling point (°C)	<180 C_4 to C_{10}	180-160 C_{11} to C_{15}	160-380 C_{16} to C_{20}	>380 $>C_{20}$
MDO	% of total	6.0	34.6	54.4	5.0

8 MODEL SETTINGS

Table 8.1 provides a summary of the oil spill model settings and the thresholds used.

The simulation length was carefully selected based on extensive sensitivity testing. During the sensitivity testing process, sample spill simulations were run for longer than intended durations. Upon completion of the spill simulations, the results were carefully assessed to examine the persistence of the hydrocarbon (i.e. whether the maximum evaporative loss has been achieved for the period of time modelled; and whether a substantial volume of hydrocarbons remain in the water column (if any)) in conjunction with the extent of floating oil exposure based on reporting thresholds. Once there was agreement between the two factors (i.e. the final fate of hydrocarbon is accounted for and the full exposure area is identified) the simulation length was deemed appropriate.

Table 8.1 Summary of the oil spill model settings used in this assessment.

Parameter	Vessel Collision Incident
Total number of spill simulations completed for the study	500
Assessment period	Annual
Oil Type	MDO
Spill Volume (m^3)	1,066
Release Type	Surface
Release duration (hrs)	6
Simulation length (days)	50
Floating oil exposure thresholds (g/m^2)	1 (low exposure) 10 (moderate exposure) 50 (high exposure)
Shoreline accumulation thresholds (g/m^2)	10 (low potential exposure) 100 (moderate potential exposure) 1,000 (high potential exposure)
Dissolved hydrocarbon exposure thresholds (ppb)	10 (10 ppb x 1 hr, potential low exposure) 50 (50 ppb x 1 hr, potential moderate exposure) 400 (400 ppb x 1 hr, potential high exposure)
Entrained hydrocarbon exposure thresholds (ppb)	10 (10 ppb x 1 hr, potential low exposure) 100 (100 ppb x 1 hr, potential high exposure)

9 CALCULATION OF EXPOSURE RISK

The stochastic sampling approach provides an objective measure of the possible outcomes of a spill because randomly selected environmental conditions with more simulations will tend to use the most commonly occurring conditions, while more unusual conditions will be represented less frequently.

During each simulation, the SIMAP model records the location (by latitude, longitude and depth) of each of the particles (representing a given mass of oil) on or in the water column, at regular time steps. For any particles that contact a shoreline, the model records the accumulation of oil mass that arrives on each section of shoreline over time, less any mass that is lost to evaporation and/or subsequent removal by current and wind forces.

The collective records from all simulations are then analysed by dividing the study region into a three-dimensional grid. For oil particles that are classified as being at the water surface (floating oil), the sum of the mass in all oil particles (including accounting for spreading and dispersion effects) located within a grid cell, divided by the area of the cell provides estimates of the concentration of oil in that grid cell, at each time step. For entrained and dissolved hydrocarbons particles, concentrations are calculated at each time step by summing the mass of particles within a grid cell and dividing by the volume of the grid cell.

The concentrations of oil calculated for each grid cell, at each time step, are then analysed to determine whether concentration estimates exceed defined threshold concentrations over time.

Risks are then summarised as follows:

- The probability of exposure to a location is calculated by dividing the number of spill simulations where any contact occurred above a specified threshold at that location by the total number of replicate spill simulations. For example, if contact occurred at a location (above a specified threshold) during 21 out of 100 simulations, a probability of exposure of 21% is indicated;

- The minimum potential time to a shoreline location is calculated by the shortest time over which oil at a concentration above a threshold was calculated to travel from the source to the location in any of the replicate simulations;

- The maximum potential concentration of oil predicted for each shoreline section is the greatest mass per m^2 of shoreline calculated to strand at any location within that section during any of the replicate simulations; and

- Similar treatments were undertaken for entrained and dissolved hydrocarbon exposures.

Thus, the minimum time to shoreline and the maximum potential concentration estimates indicate the worst potential outcome of the modelled spill scenario for each section of shoreline. However, the average over the replicates presents an average of the potential outcomes, in terms of hydrocarbons that could strand.

Note also that results quoted for sections of shoreline are derived for any individual location within that section, as a conservative estimate. Locations will represent shoreline lengths of the order of ~1 km, while sections or regions will represent shorelines spanning tens to hundreds of kilometres. The maximum potential concentrations quoted will not necessarily occur over the full extent of each section, therefore multiplying the maximum concentration estimates by the full area of the section is not recommended as this will greatly overestimate the total volume expected on that section.

10 INTERPRETING MODEL RESULTS

The results from the modelling study are presented in a number of tables and figures, which aim to provide an understanding of the predicted sea-surface and water column (subsurface) exposure and shoreline accumulation (if predicted).

10.1 Stochastic Analysis

The statistics are based on the following principles:

- The ***greatest distance travelled by a spill trajectory*** – is determined by a) recording the maximum and b) second greatest distance travelled (or 99th percentile) by a single simulation, within a scenario, from the release location to the identified exposure thresholds.
- The ***probability of oil exposure to a receptor*** – is determined by recording the number of spill trajectories to reach a specified sea surface or subsea threshold within a receptor polygon, divided by the total number of spill trajectories within that scenario.
- The ***minimum time before oil exposure to a receptor*** – is determined by ranking the elapsed time before sea surface exposure, at a specified threshold, to grid cells within a receptor polygon and recording the minimum value.
- The ***probability of oil accumulation at a receptor*** – is determined by recording the number of spill trajectories to reach a specified shoreline accumulation threshold within a receptor polygon, divided by the total number of spill trajectories.
- The ***maximum potential oil loading within a receptor*** – is determined by identifying the maximum loading to any grid cell within a receptor polygon.
- The ***dissolved and entrained hydrocarbon exposure*** – is determined by recording the maximum instantaneous concentrations to any grid cell within a receptor polygon.

10.2 Receptors Assessed

A range of environmental receptors and shorelines were assessed for floating oil exposure, shoreline contact and water column exposure (entrained and dissolved hydrocarbons) as part of the study (see Figure 10.1 to Figure 10.13). Receptor categories are shown in Table 10.1 which includes coastal and offshore islands grouped as shorelines. All other sensitive receptors other than submerged reefs, shoals and banks (RSB) were sourced from Australian Government Department of Agriculture, Water and the Environment (http://www.environment.gov.au/). Probabilities of exposure were separately calculated for each sensitive receptor area and have been tabulated.

Table 10.1 Summary of receptors assessed for potential oil exposure.

11 RESULTS - VESSEL FUEL TANK RUPTURE – 1,066 m^3 SURFACE RELEASE OF MDO

This scenario examined potential exposure following a 1,066 m^3 surface release of MDO over 6 hours from a hypothetical vessel fuel tank rupture. Due to the extent of the EP Area, 100 simulations were modelled at each of the 5 specified release locations and each simulation was tracked for a period of 50 days.

Section 11.1 presents the low threshold EMBA, Section 11.2 shows the stochastic results for predicted floating oil exposure, shoreline accumulation and water column exposure, whereas Section 11.3 presents in the results for the deterministic simulations.

11.1 EMBA

Figure 11.1 shows the full geographic EMBA which encompasses the cumulative extent from all 500 spill simulations using the ‘low’ threshold exposure values for each of the modelled oil components (1 g/m^2 floating, 10 ppb dissolved and entrained, 10 g/m^2 shoreline) and includes all probabilities of exposure. It should be noted that the EMBA does not represent the reach of an individual spill event.

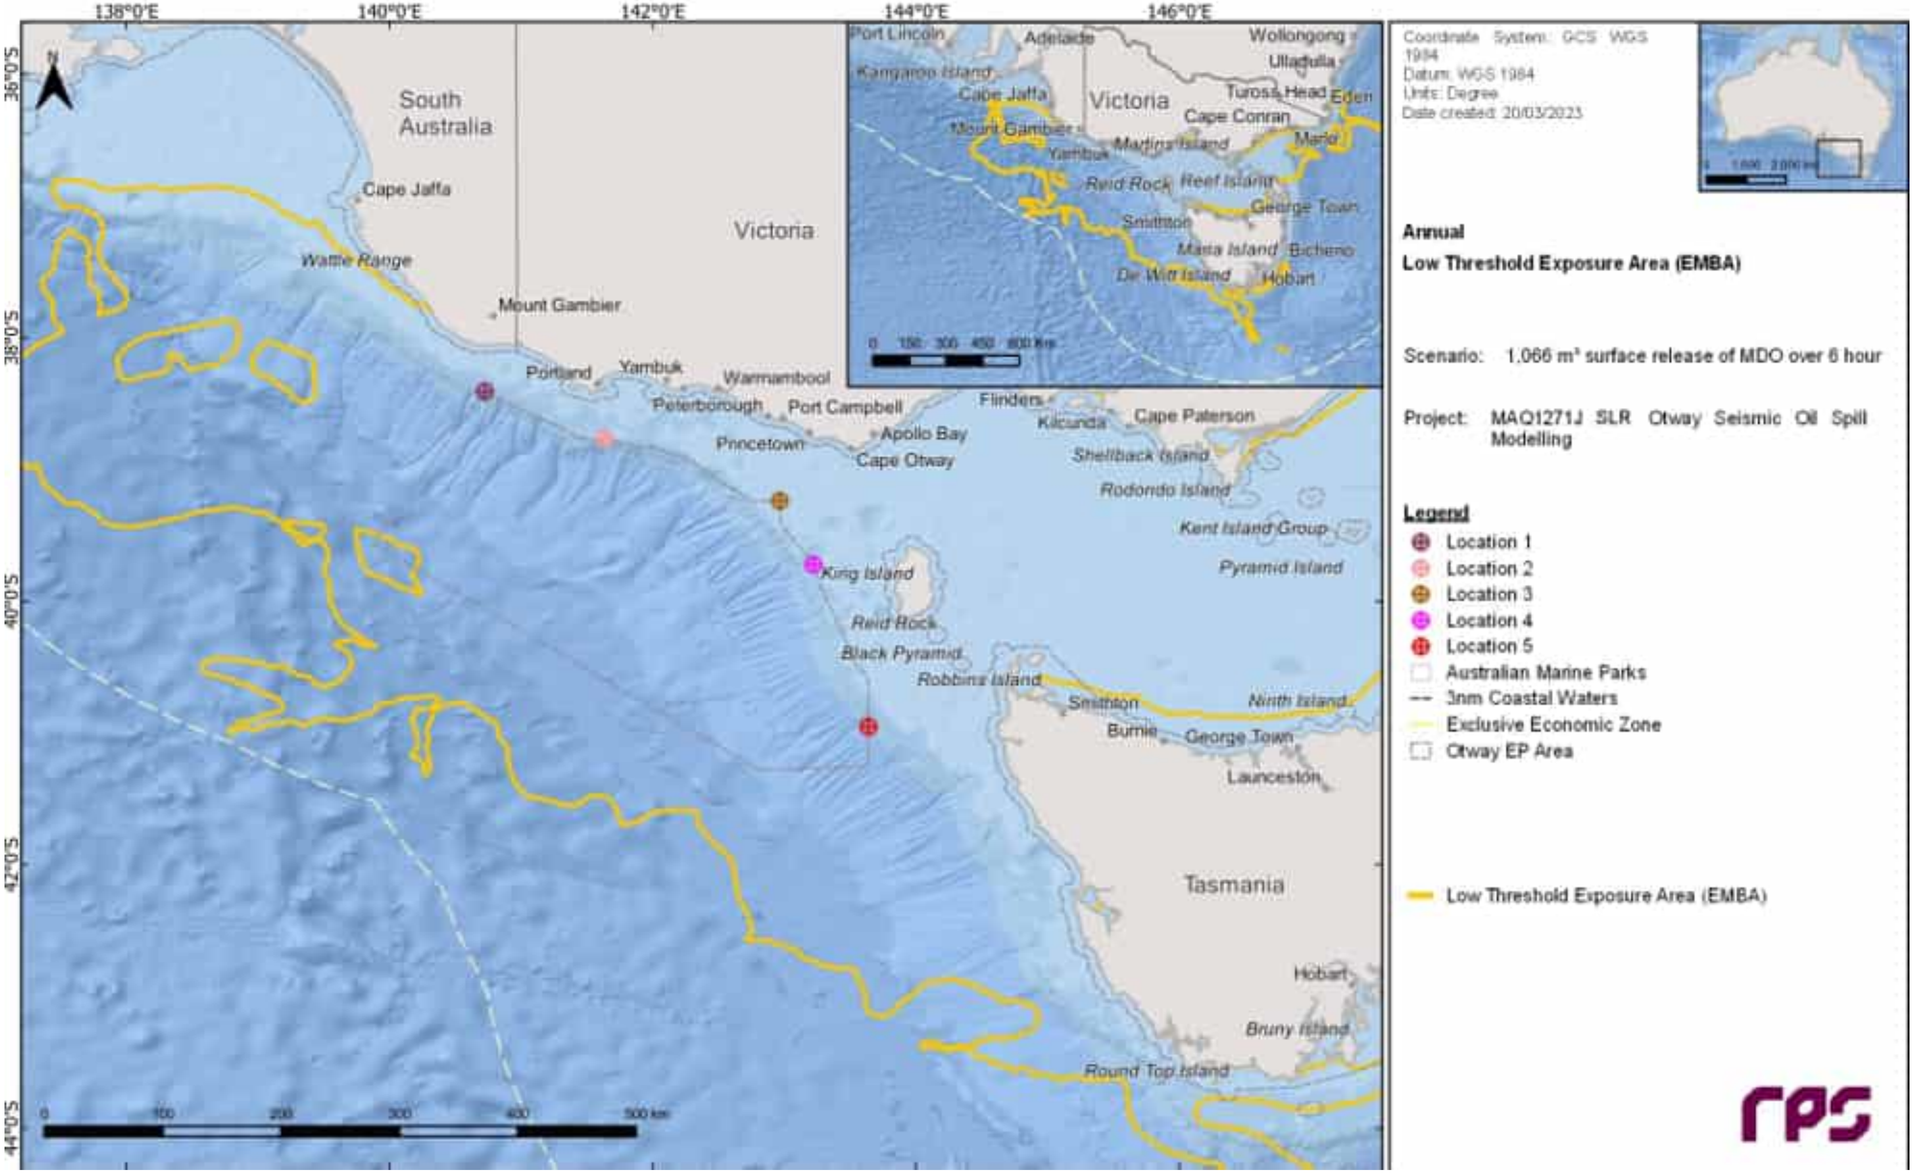

Figure 11.1 Predicted low threshold risk EMBA from an MDO survey vessel tank rupture. The results were derived from 500 spill simulations using the 'low' threshold exposure values for each of the modelled oil components and presented as an annual assessment.

11.2 Stochastic Analysis Results

11.2.1 Floating Oil Exposure

Table 11.1 summarises the maximum zones of floating oil exposure for the five selected release locations modelled. The maximum distance from a release site to low (1-10 g/m^2), moderate (10-50 g/m^2) and high (≥50 g/m^2) exposure levels were 243.2 km east (Release Location 1), 52.5 km east-southeast (Release Location 1) and 22.9 km south-southeast (Release Location 4), respectively.

Table 11.1 summarises the potential floating oil exposure to individual receptors for the five selected release locations modelled. Exposure to AMPs at the low threshold was predicted for Location 3 (Apollo 11%) and Location 4 (Zeehan 65%). Twelve spill simulations (or 12% probability) had crossed into the Victorian state waters from Location 1 at the low threshold. From Location 4, the probability of the spill simulations crossing the Tasmanian and Victorian state waters at the low threshold was 10% and 1%, respectively. The Discovery Bay and Twelve Apostles MPs were exposed by 2 and 1 simulation (2% and 1% probability), respectively from Location 1.

Figure 11.2 illustrate the extent of floating oil exposure receptors based on all 500 spill simulations.

Table 11.1 Maximum distances and directions travelled by floating oil for each exposure threshold from an MDO survey vessel tank rupture at the five selected release locations. The results were derived from 100 spill simulations per location and presented as an annual assessment.

Release locations	Distance and direction	Zones of potential sea surface exposure		
		Low (1-10 g/m^2)	Moderate (10-50 g/m^2)	High (>50 g/m^2)
1	Maximum distance from release site (km)	243.2	52.5	18.3
	Maximum distance from release site (km) (99th percentile)	176.6	50.1	17.6
	Direction	East	East-southeast	East-southeast
2	Maximum distance from release site (km)	141.5	44.5	21.8
	Maximum distance from release site (km) (99th percentile)	129	39.7	21.3
	Direction	East-southeast	South-southeast	East-southeast
3	Maximum distance from release site (km)	128.6	24.3	16.2
	Maximum distance from release site (km) (99th percentile)	111.2	22.6	15.1
	Direction	East-southeast	Southeast	East
4	Maximum distance from release site (km)	86.7	51.9	22.9
	Maximum distance from release site (km) (99th percentile)	74.2	49.1	19.6
	Direction	South-southeast	East-southeast	South-southeast
5	Maximum distance from release site (km)	140.8	30.0	15.4
	Maximum distance from release site (km) (99th percentile)	92.8	28.5	15.3
	Direction	East-southeast	East-southeast	East-southeast

11.2.2 Shoreline Accumulation

Table 11.3 presents a summary of the predicted shoreline accumulation for the five selected release locations modelled.

The probability of accumulation on any shoreline at, or above, the low threshold (≥ 10 g/m^2) was greatest at Location 5 (65%), while the minimum time before shoreline accumulation was 1.7 days at Location 1. The maximum volume of oil ashore for a single spill above the low threshold was greatest at Location 1 (126.5 m^3) and lowest at Location 2 (28.7 m^3). The maximum lengths of shoreline contacted at the low and moderate thresholds were 65.0 km (Location 5) and 15.0 km (Locations 1 and 4), respectively. Additionally, the maximum lengths of oil accumulation on shorelines at the high threshold (≥1,000 g/m^2) was 2 km recorded at Location 1 and 4.

Table 11.4 summarises the shoreline accumulation to shoreline sectors assessed for the five selected release locations.

The greatest probabilities of oil accumulation to shoreline sectors at the low threshold for a spill occurring from Locations 1, 2, 3, 4 and 5, was recorded at Corangamite (22%), Colac Otway (10%), King Island (9%), King Island (37%) and West Coast (42%) shorelines, respectively. The King Island shoreline also recorded the greatest probabilities of oil accumulation for the moderate and high thresholds from spills occurring at Location 4 (20% and 3%, respectively). Glenelg recorded the quickest time before oil accumulation at the low threshold at 1.67 days from a spill at Location 1. The Glenelg shoreline was also predicted to experience the greatest peak volume ashore of 123.6 m^3 from a spill occurring at Location 1.

Figure 11.3 presents the potential shoreline loading for the specified thresholds from all 500 simulations.

Table 11.3 Summary of oil accumulation on any shoreline from an MDO survey vessel tank rupture for the five selected release locations modelled. The results were derived from 100 spill simulations per location and presented as an annual assessment.

Shoreline Statistics	Location 1	Location 2	Location 3	Location 4	Location 5
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m^2)	47	46	51	53	65
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m^2)	1.7	6.8	3.5	3.4	3.2
Maximum volume of hydrocarbons ashore (m^3)	126.5	28.7	68.0	66.2	46.5
Average volume of hydrocarbons ashore (m^3)	12.1	2.9	2.9	7.2	3.8
Maximum length of the shoreline at **10 g/m^2** (km)	49.0	42.0	37.0	49.0	65.0
Average shoreline length at **10 g/m^2** (km)	18.5	13.7	11.5	18.5	20.4
Maximum length of the shoreline at **100 g/m^2** (km)	15.0	12.0	11.0	15.0	14.0
Average shoreline length at **100 g/m^2** (km)	7.2	4.7	4.6	6.8	5.0
Maximum length of the shoreline at **1,000 g/m^2** (km)	2.0	-	1.0	2.0	-
Average shoreline length at **1,000 g/m^2** (km)	2.0	-	1.0	1.3	-

Table 11.4 Summary of oil accumulation to shoreline sectors from an MDO survey vessel tank rupture at the five selected release locations. The annualised results were derived from 100 spill simulations per location.

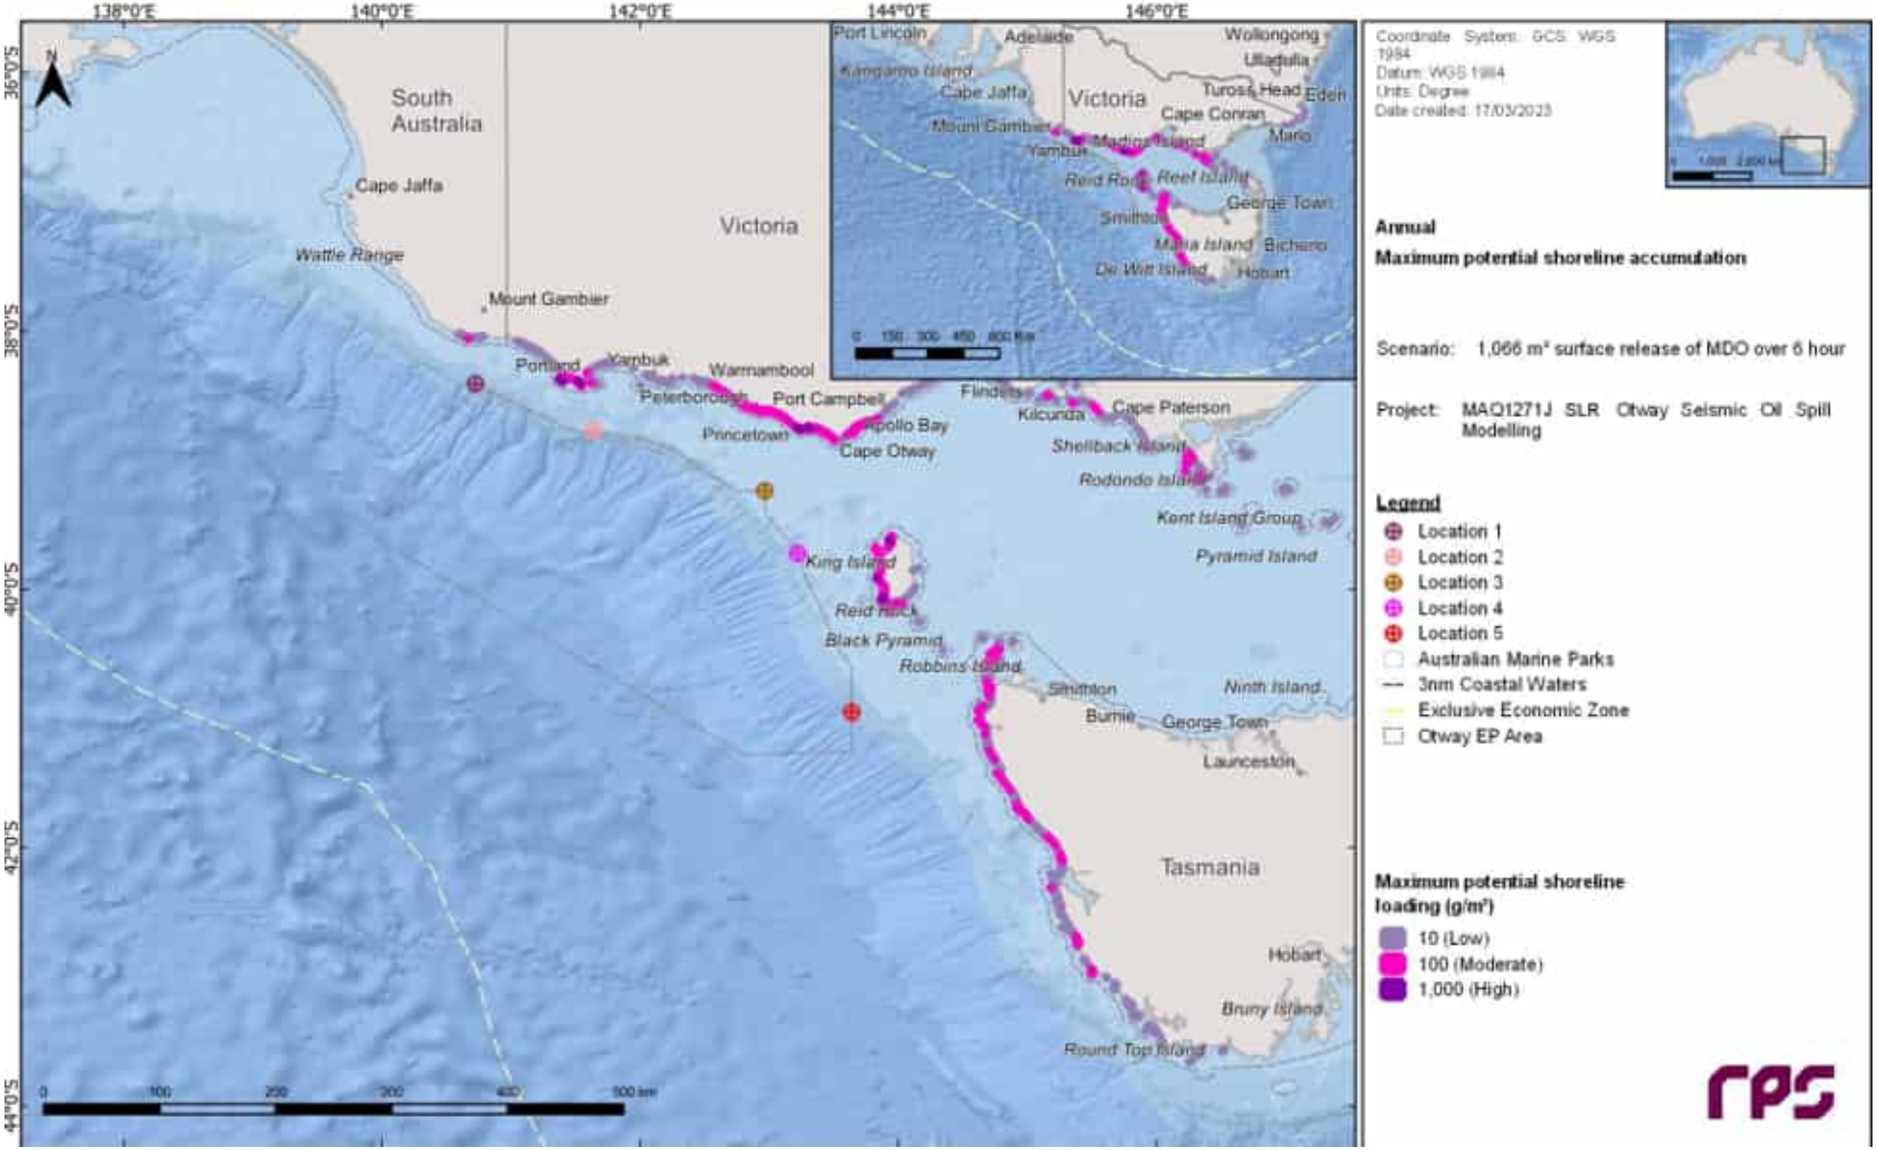

Figure 11.3 Maximum potential shoreline accumulation from an MDO survey vessel tank rupture derived. The results were derived from 100 spill simulations per location and presented as an annual assessment.

11.2.3 Water Column Exposure

11.2.3.1 Dissolved Hydrocarbons

Table 11.6 summarise the maximum dissolved hydrocarbon concentrations and probabilities of exposure to sensitive receptors in the 0-10 m depth layer from an MDO survey vessel tank rupture at the five selected release locations.

Exposure to AMPs at the low threshold (≥10 ppb) was recorded at Apollo (4% Location 2, 9% Location 3 and 2% Location 4%), Boags (1% Location 5), Franklin (5% Location 5) and Zeehan (1% Location 2 and 3; and 29% Location 4).

The greatest maximum instantaneous concentrations (ppb) in the 0-10 m depth layer was predicted to occur within the Otway IMCRA at Location 2 (358 ppb).

Figure 11.4 to Figure 11.6 illustrate the extent of the dissolved hydrocarbon exposure in the 0-10 m, 10-20 m and 20-30 m depth layers, based on all 500 spill simulations, respectively.

Table 11.6 Maximum dissolved hydrocarbon concentrations and probabilities of exposure to sensitive receptors in the 0-10 m depth layer from an MDO survey vessel tank rupture at the five selected release locations. The results were derived from 100 spill simulations per location and presented as an annual assessment.

11.2.3.2 Entrained Hydrocarbons

Table 11.7 and Table 11.8 summarises the maximum entrained hydrocarbon concentrations and probabilities of exposure to sensitive receptors in the 0-10 m and 10-20 m depth layers, respectively, from an MDO survey vessel tank rupture at the five selected release locations.

Across all five selected locations, a total of 10 AMPs were predicted to be exposed at the low threshold (≥ 10 ppb), with probabilities up to 40%. Apollo AMP was predicted to record the highest probabilities of exposure at 40% and 39% from spills originating from Location 3 and Location 1, respectively. Additionally, the Apollo AMP recorded the greatest probability of exposure at the high threshold (≥ 100 ppb) at 25% from spills originating from Location 3.

The maximum entrained hydrocarbon concentration was 30,878 ppb recorded for the Otway IMCRA from a spill originating at Location 3.

Table 11.8 Maximum entrained hydrocarbon concentrations and probabilities of exposure to sensitive receptors in the 10-20 m depth layer from an MDO survey vessel tank rupture at the five selected release locations. The results were derived from 100 spill simulations per location and presented as an annual assessment.

11.3 Deterministic Analysis

As previously mentioned, at each of the five selected locations (100 spill simulations per location) the deterministic runs resulting in the maximum volume of oil ashore were identified and presented in Sections 11.3.1 to 11.3.5, respectively. In addition, the single simulation that resulted in the largest swept area above the low threshold of 1 g/m^2 from all 500 simulations was identified and is presented in Section 11.3.6.

11.3.1 Location 1 maximum volume of oil ashore

The simulation that resulted in the maximum volume of oil ashore of 126.5 m^3 from Location 1 was identified as run number 89, which commenced at 5 am 13th July 2019.

Figure 11.9 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (50 days).

Figure 11.10 presents the area of floating oil over time for each threshold during the 50 day simulation. The moderate oil exposure dropped below the respective threshold of 10 g/m^2, 6 hours after the release duration.

Figure 11.11 presents the maximum volume ashore for each threshold. The maximum volume of oil ashore was 126.5 m^3, which occurred on day 20.

Figure 11.12 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-50), approximately 454 m^3 (43%) was lost to the atmosphere through evaporation. Additionally, approximately 410 m^3 (38%) decayed, <1 m^3 (<1%) remained on the surface and 99 m^3 (9%) was entrained within the water column. There was 113 m^3 (11%) remaining on the shorelines at the conclusion of the simulation.

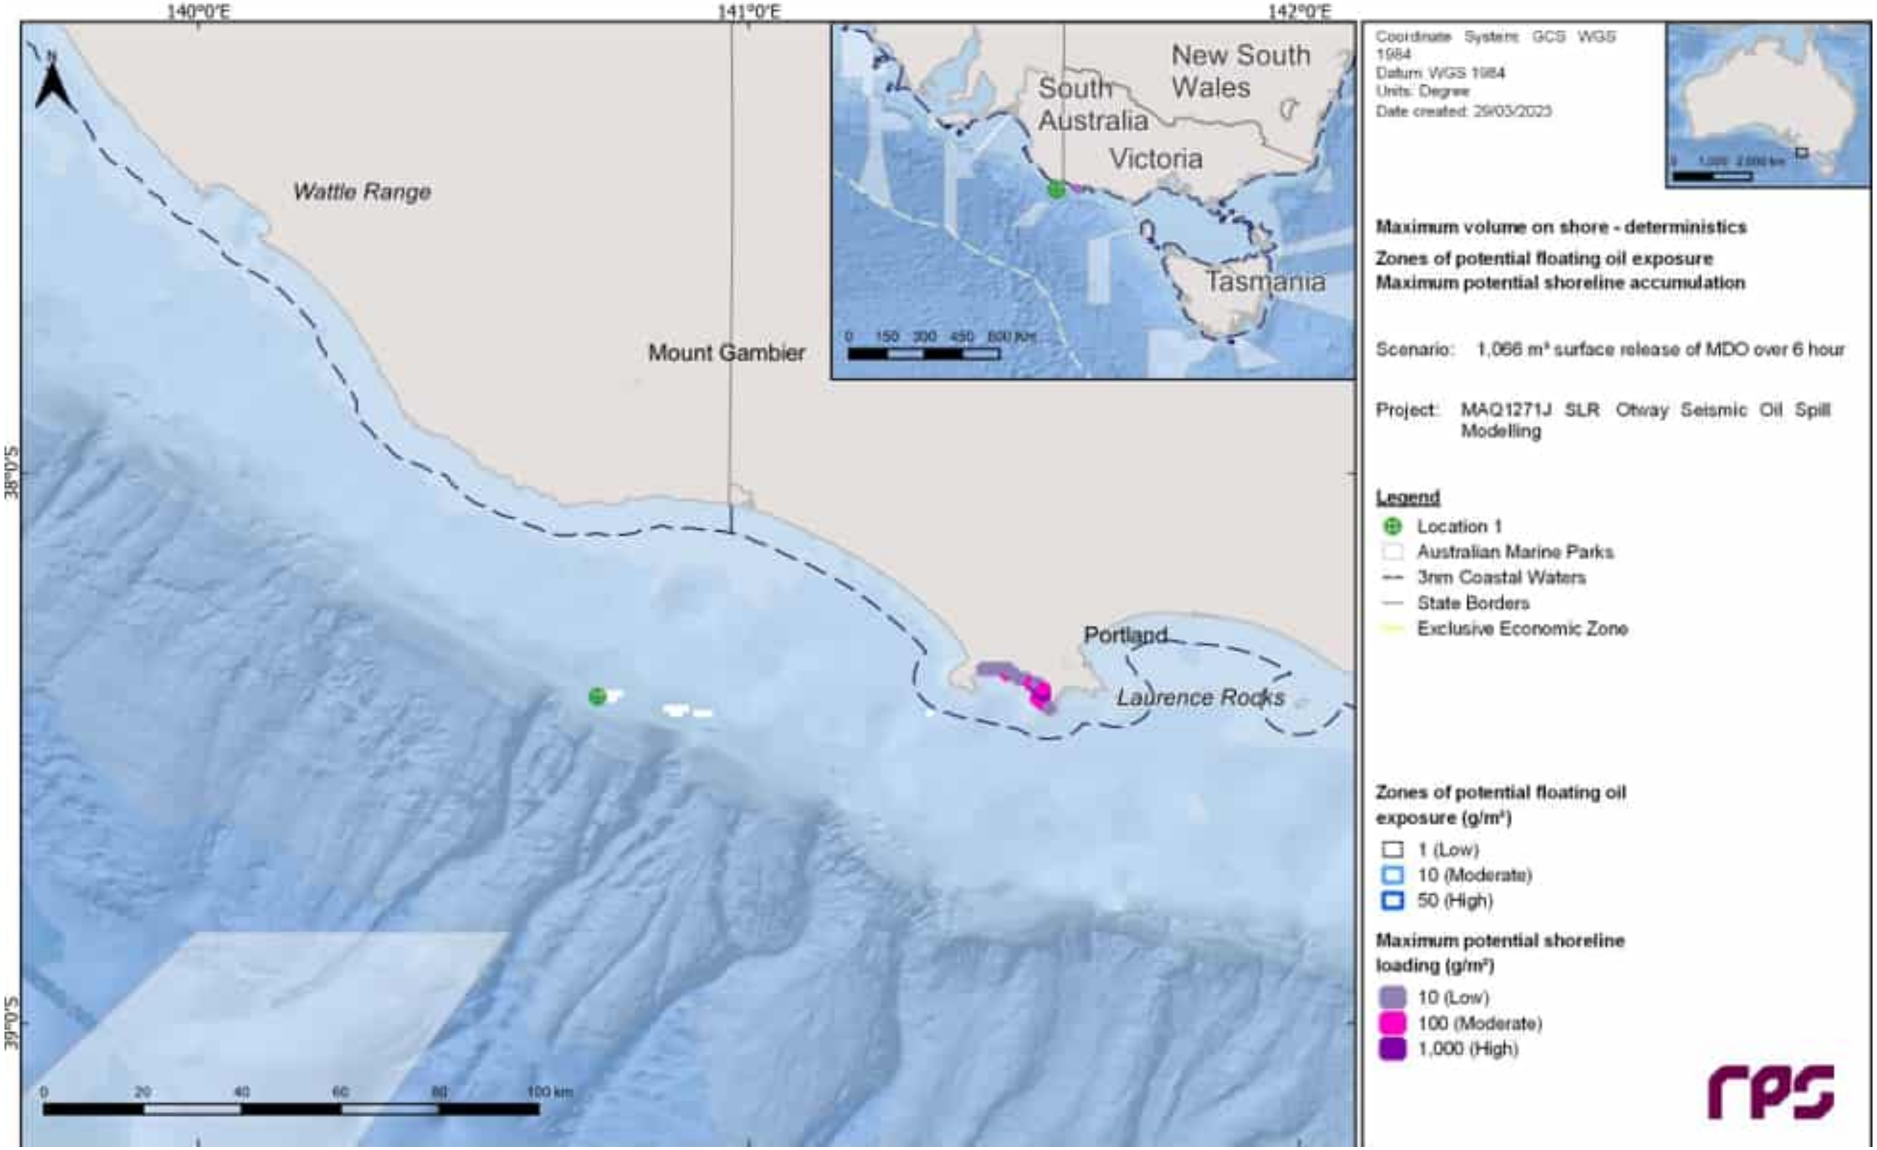

Figure 11.9 Predicted extent of the floating oil exposure and shoreline loading over the entire 50 days for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 1.

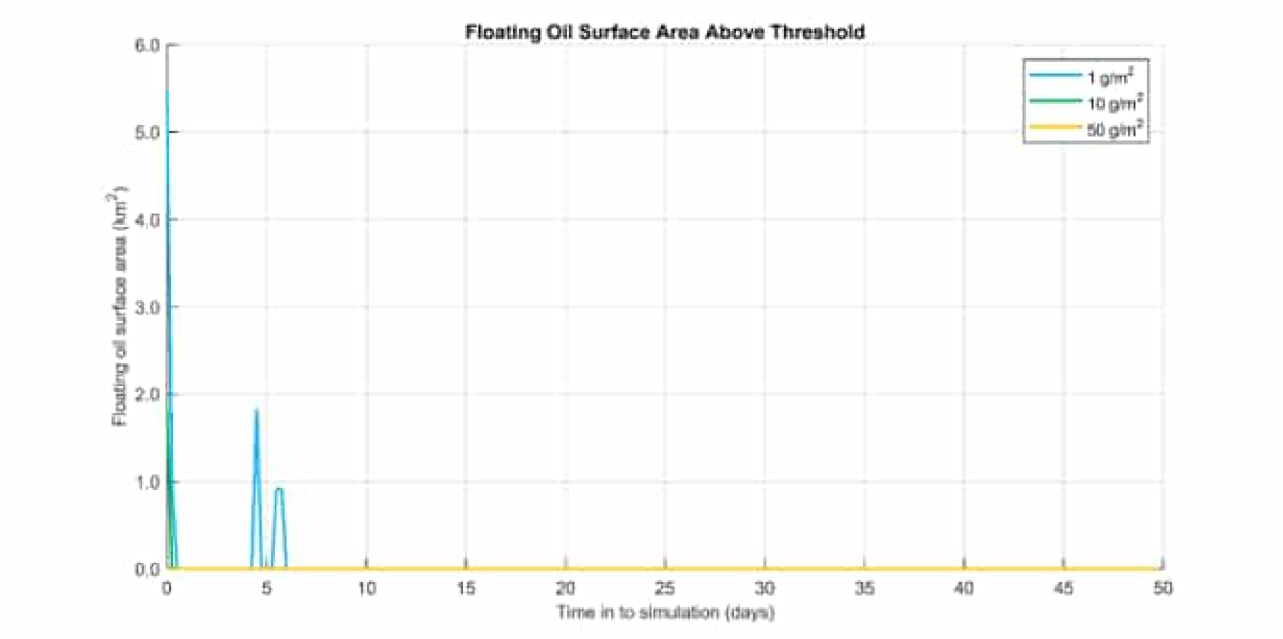

Figure 11.10 **Predicted area of floating oil for each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 1**

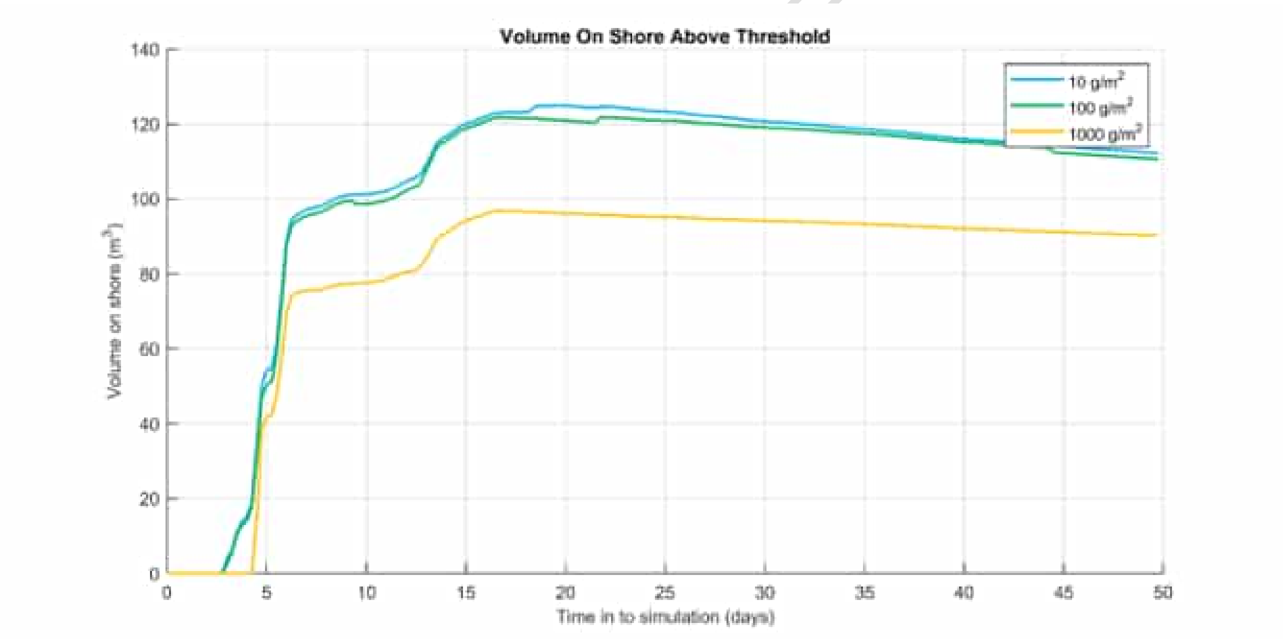

Figure 11.11 **Predicted volume of oil accumulating on shorelines at each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 1.**

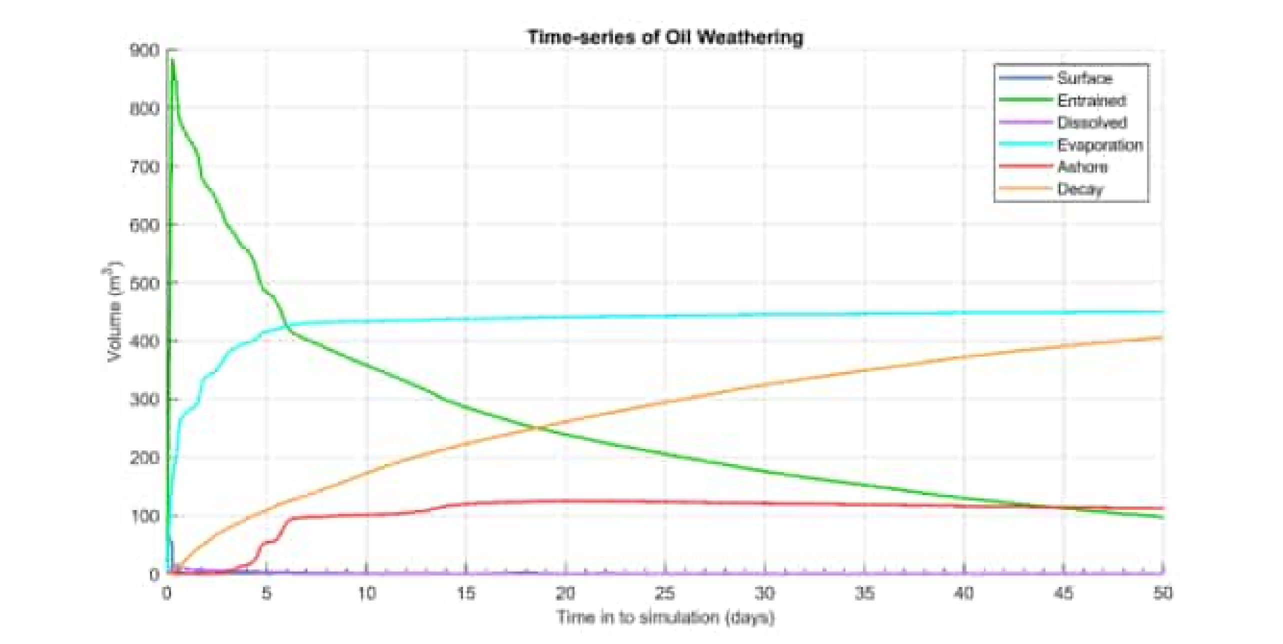

Figure 11.12 Predicted weathering and fates for the simulation that resulted in the maximum volume of oil ashore for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 1.

11.3.2 Location 2 maximum volume of oil ashore

The simulation that resulted in the maximum volume of oil ashore of 28.7 m^3 from Location 2 was identified as run number 49, which commenced at 7 am 24th May 2019.

Figure 11.13 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (50 days).

Figure 11.14 presents the area of floating oil over time for each threshold during the 50 day simulation. The floating oil exposure had dropped below the low threshold of 1 g/m^2 immediately after the 6 hour release duration.

Figure 11.15 presents the maximum volume ashore for each threshold. The maximum volume of oil ashore was 28.7 m^3, which occurred on day 14.

Figure 11.16 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-50), approximately 500 m^3 (47%) was lost to the atmosphere through evaporation. Additionally, approximately 436 m^3 (41%) decayed, <1 m^3 (<1%) remained on the surface and 113 m^3 (11%) was entrained within the water column. There was 16 m^3 (2%) remaining on the shorelines.

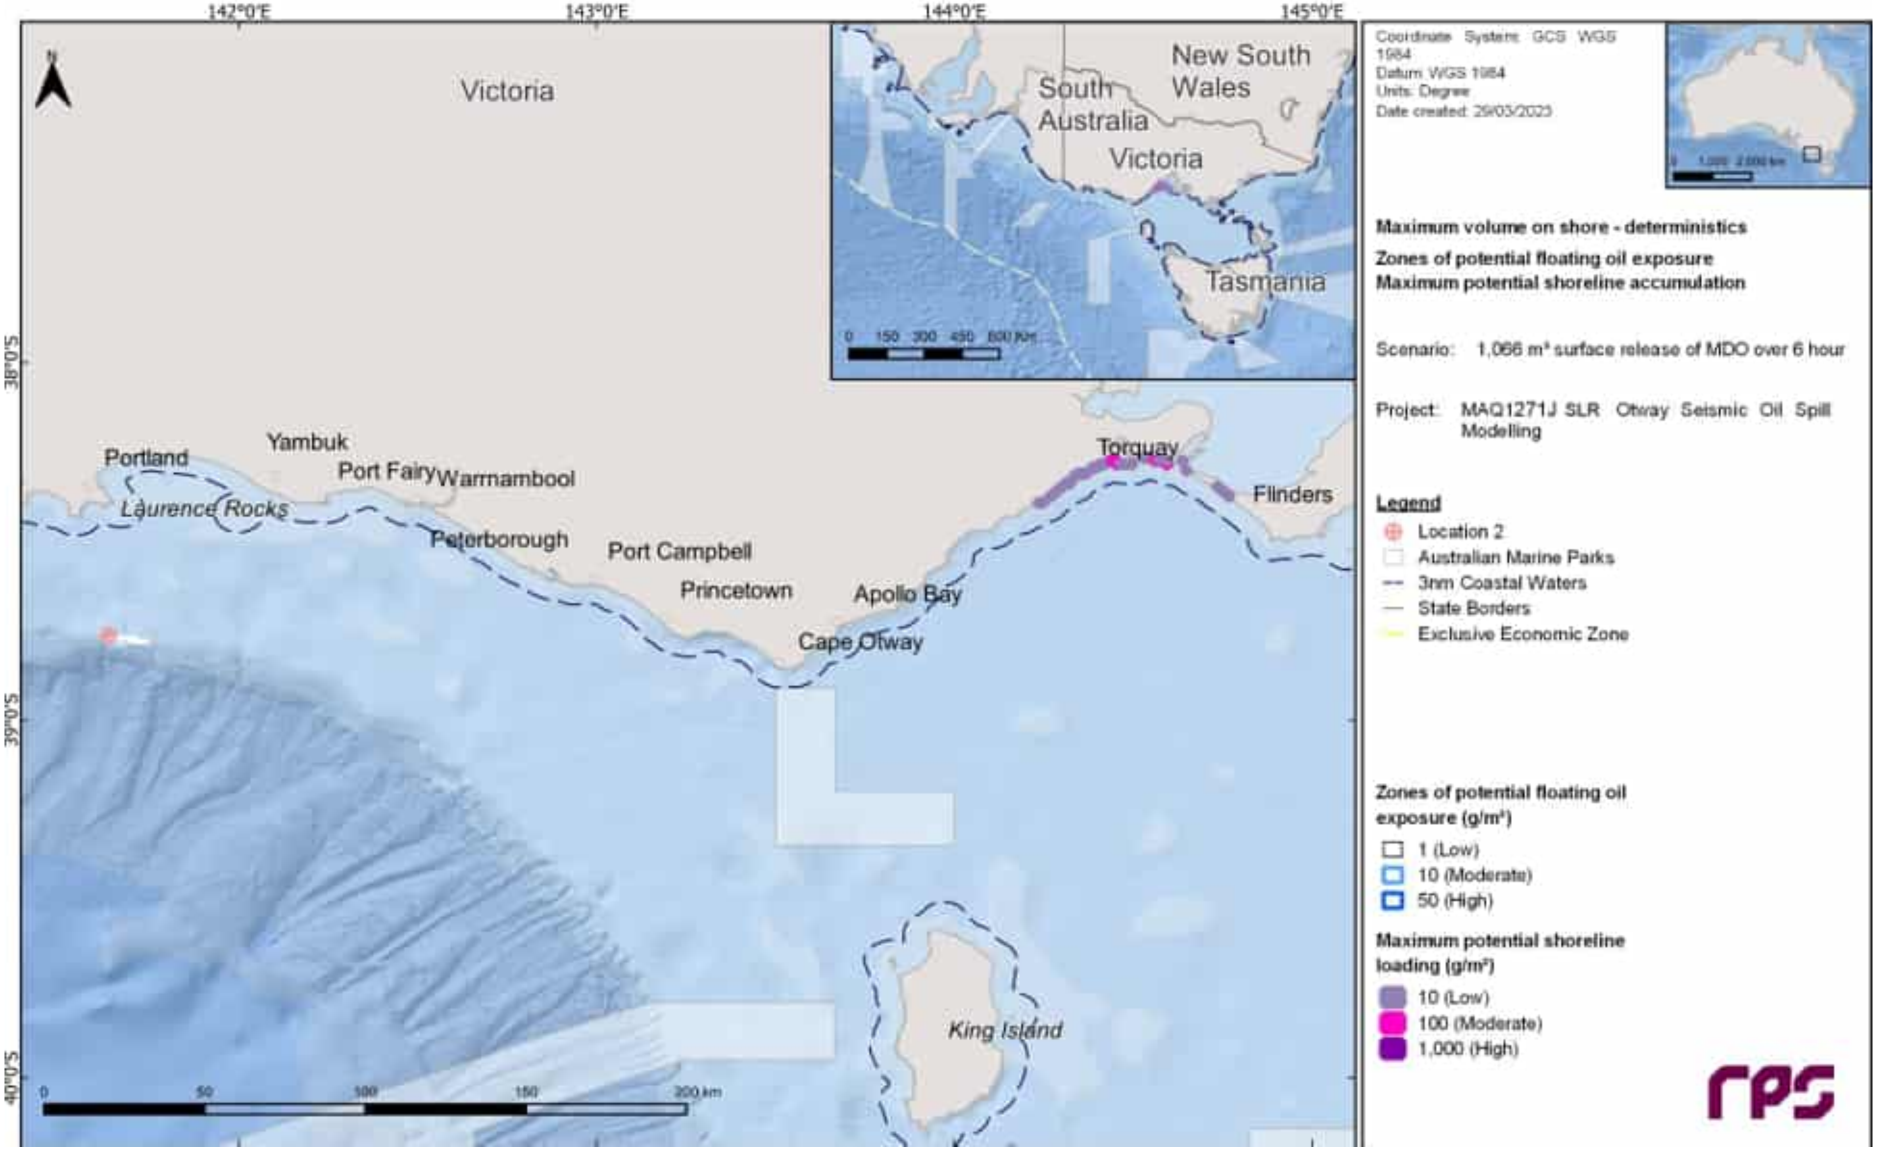

Figure 11.13 Predicted extent of the floating oil exposure and shoreline loading over the entire 50 days for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 2.

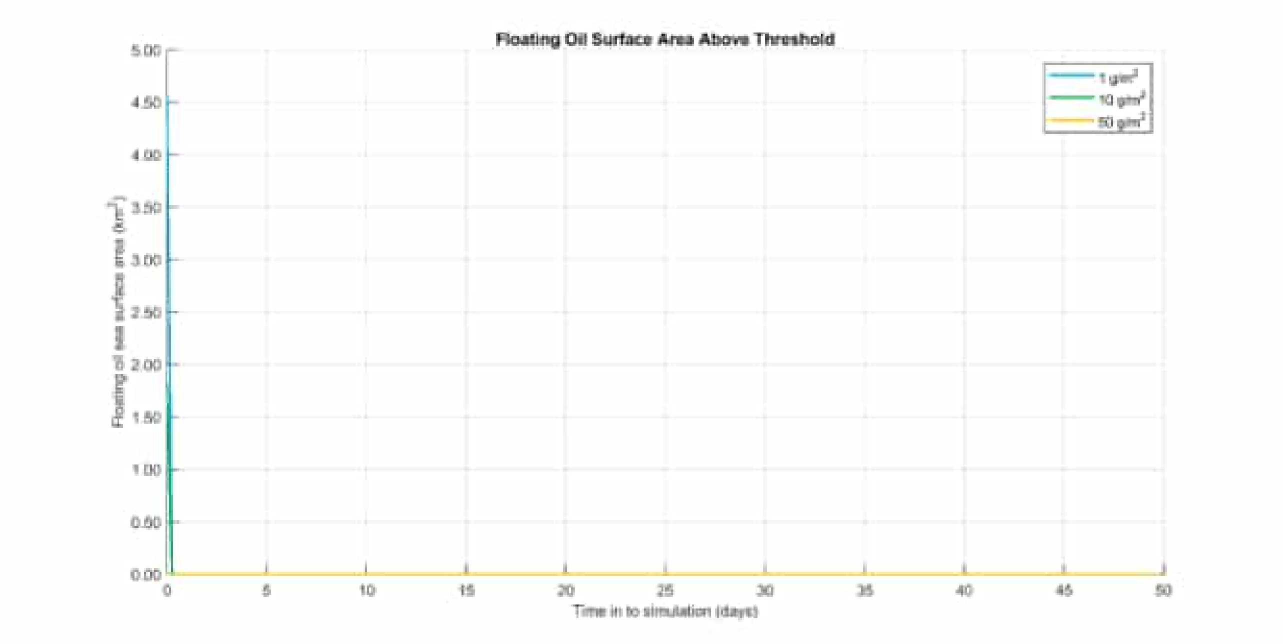

Figure 11.14 Predicted area of floating oil for each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 2.

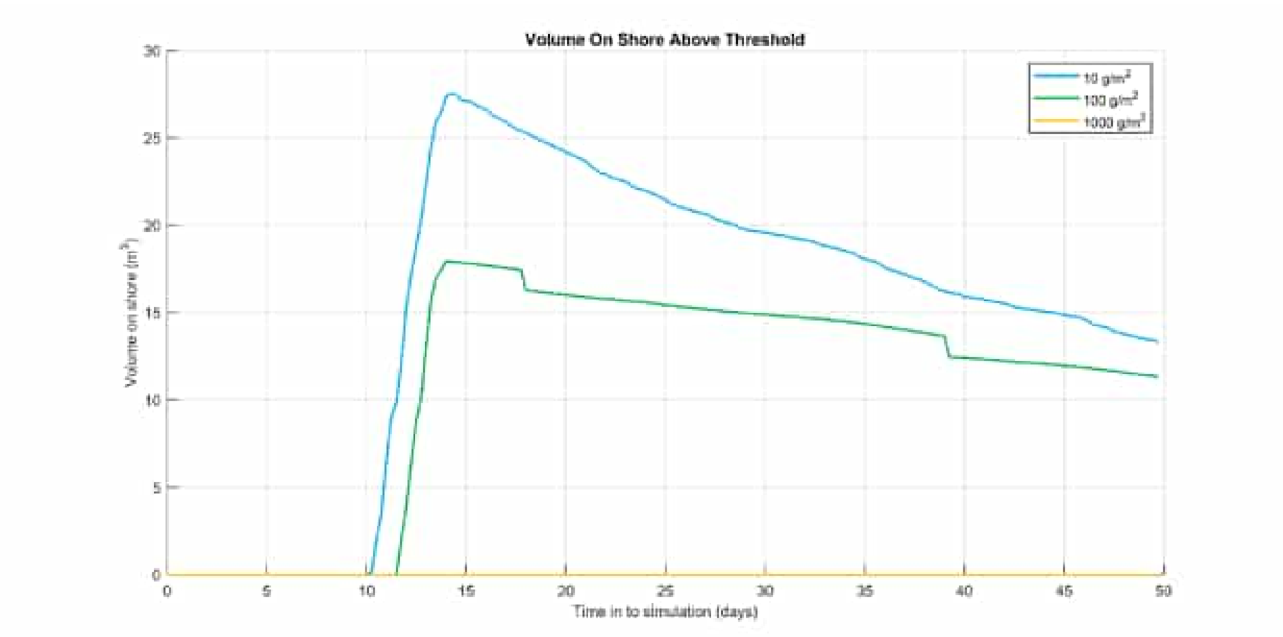

Figure 11.15 Predicted volume of oil accumulating on shorelines at each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 2.

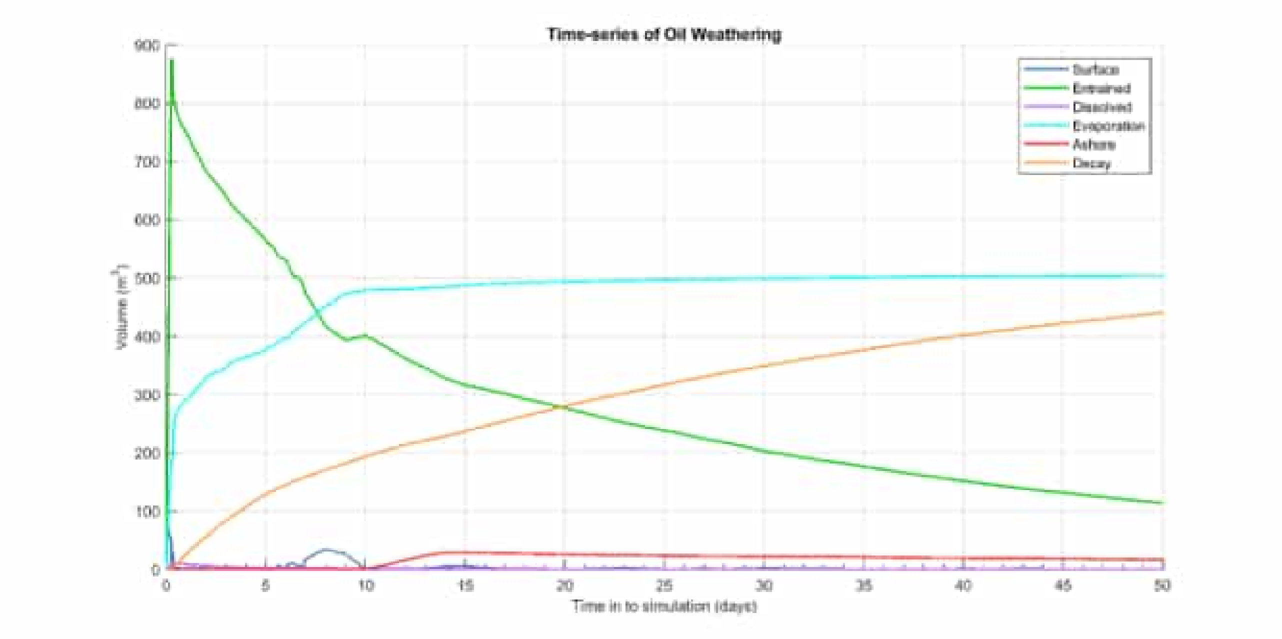

Figure 11.16 Predicted weathering and fates for the simulation that resulted in the maximum volume of oil ashore for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 2.

11.3.3 Location 3 maximum volume of oil ashore

The simulation that resulted in the maximum volume of oil ashore of 68 m^3 from Location 3 was identified as run number 43, which commenced at 12 pm 20th July 2019.

Figure 11.17 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (50 days).

Figure 11.18 presents the area of floating oil over time for each threshold during the 50 day simulation. The floating oil exposure had dropped below the low threshold of 1 g/m^2 immediately after the 6 hour release duration and spiked back up again around day 5.

Figure 11.19 presents the maximum volume ashore for each threshold. The maximum volume of oil ashore was 68 m^3, which occurred on day 19.

Figure 11.20 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-50), approximately 520 m^3 (49%) was lost to the atmosphere through evaporation. Additionally, approximately 398 m^3 (37%) decayed, <1 m^3 (<1%) remained on the surface and 93 m^3 (9%) was entrained within the water column. There was 53 m^3 (5%) remaining on the shorelines.

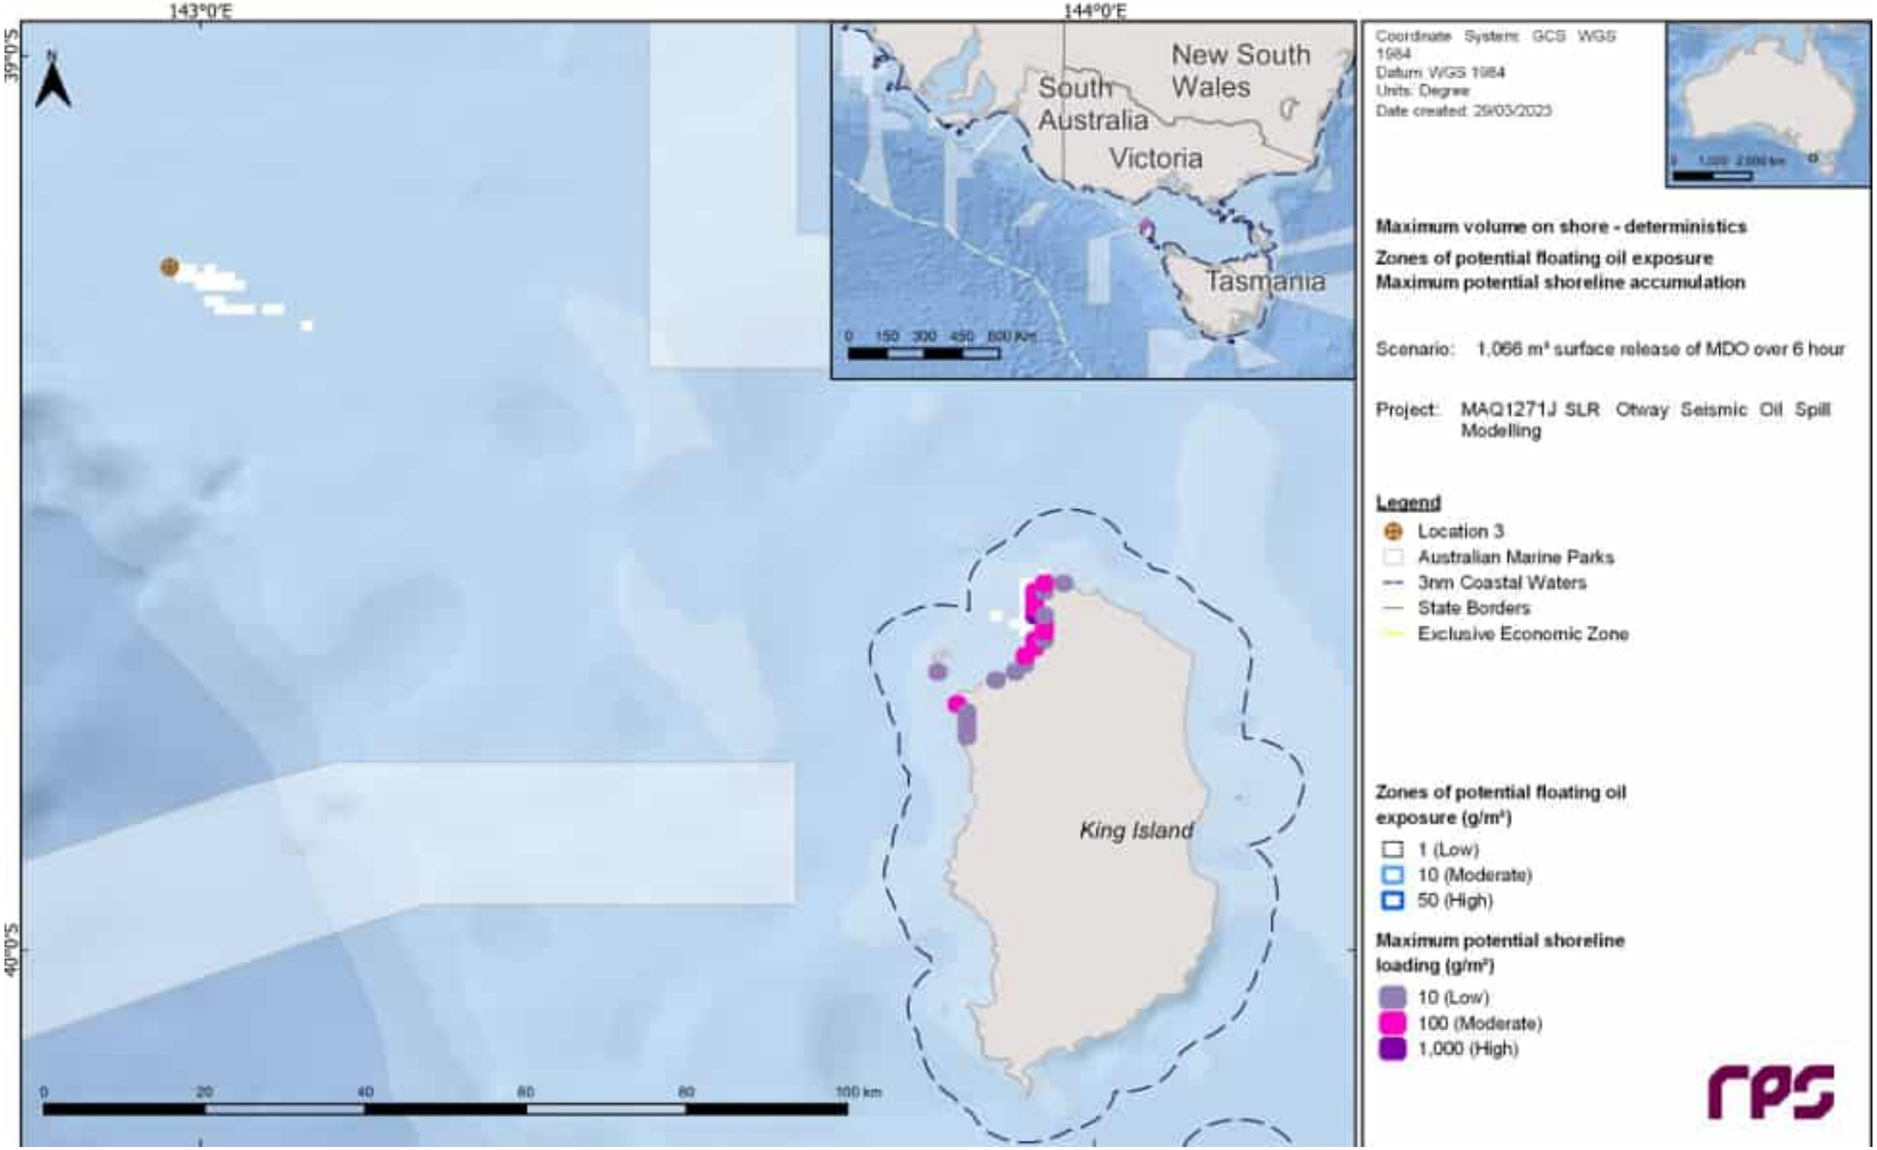

Figure 11.17 Predicted extent of the floating oil exposure and shoreline loading over the entire 50 days for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 3.

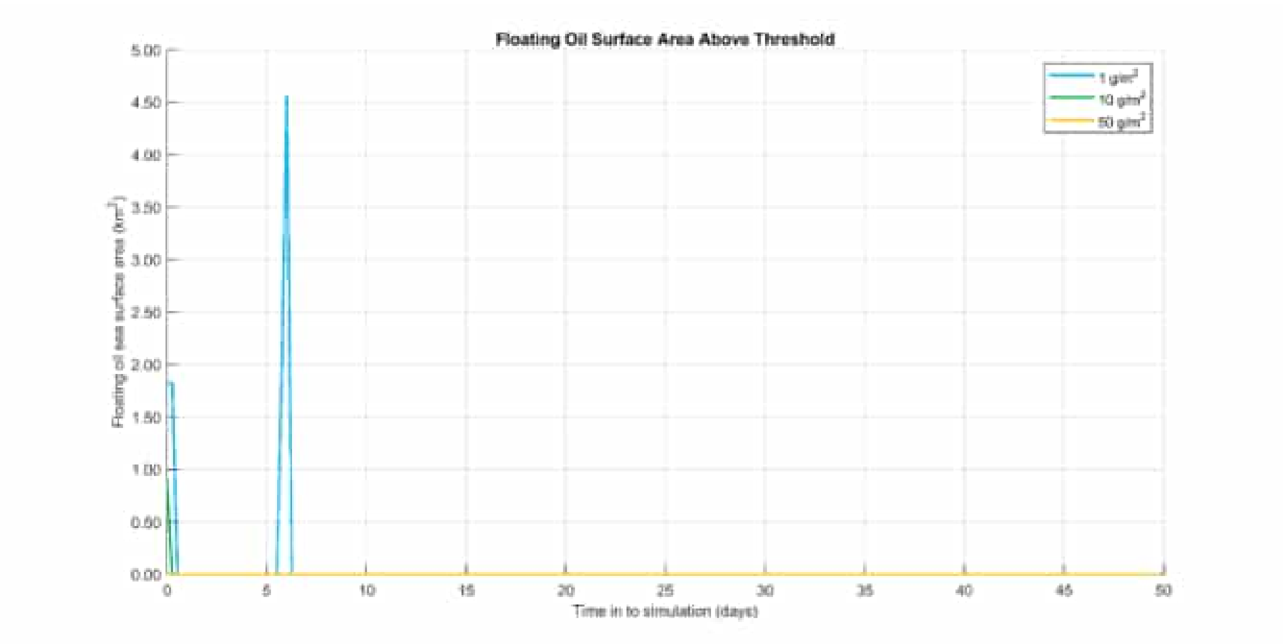

Figure 11.18 Predicted area of floating oil for each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 3.

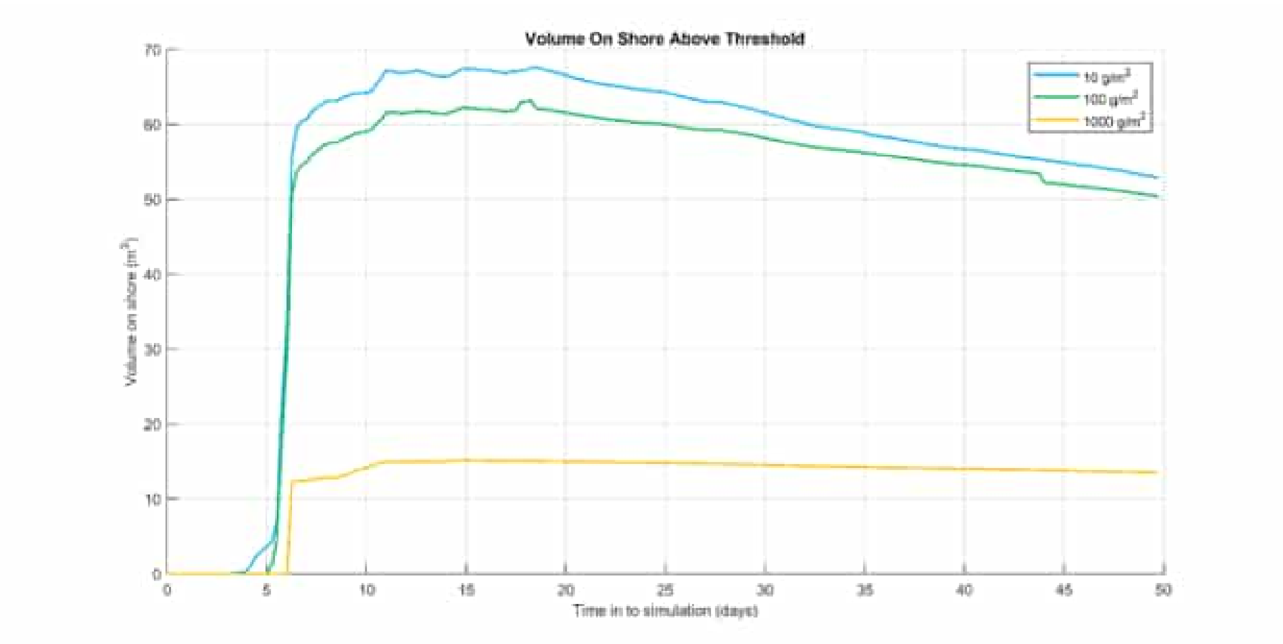

Figure 11.19 Predicted volume of oil accumulating on shorelines at each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 3.

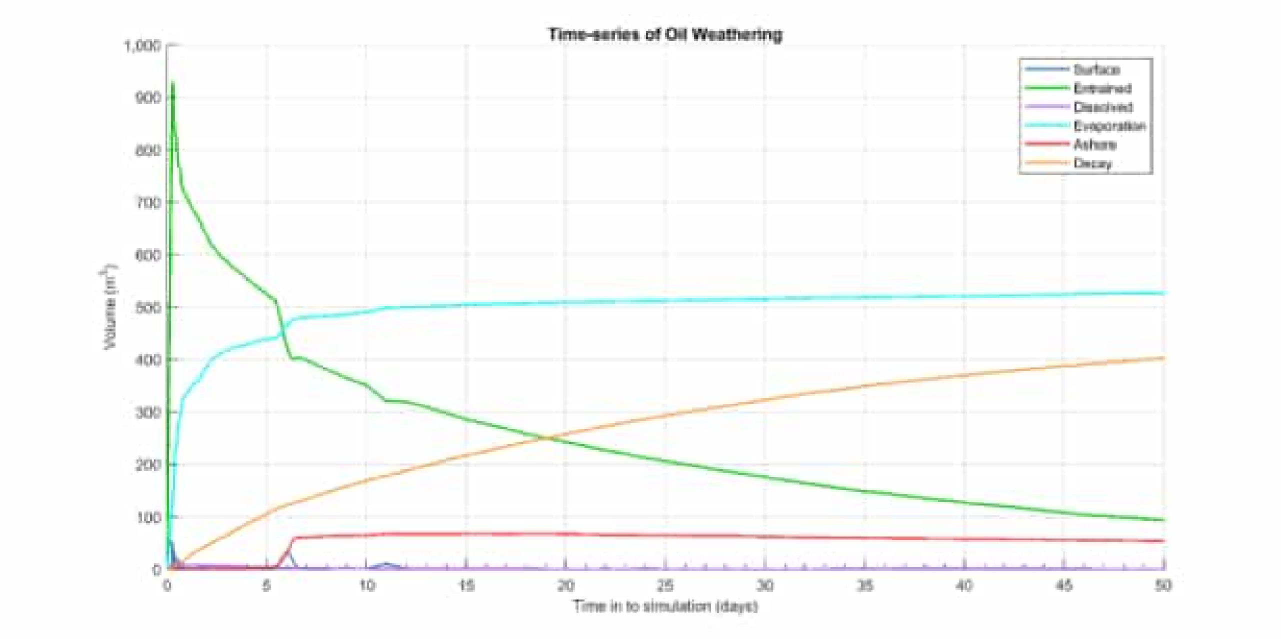

Figure 11.20 Predicted weathering and fates for the simulation that resulted in the maximum volume of oil ashore for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 3.

11.3.4 Location 4 maximum volume of oil ashore

The simulation that resulted in the maximum volume of oil ashore of 66.2 m^3 from Location 4 was identified as run number 41, which commenced at 4 pm 1st November 2016.

Figure 11.21 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (50 days).

Figure 11.22 presents the area of floating oil over time for each threshold during the 50 day simulation The floating oil exposure had dropped below the low threshold of 1 g/m^2 immediately after day-2 and spiked back up again around day 7 for an additional day.

Figure 11.23 presents the maximum volume ashore for each threshold. The maximum volume of oil ashore was 66.2 m^3, which occurred on day 10.

Figure 11.24 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-50), approximately 472 m^3 (44%) evaporated, 439 m^3 (41%) decayed, <0 m^3 (<1%) remained on the surface and 109 m^3 (10%) was entrained within the water column. There was 45 m^3 (4%) remaining on the shorelines.

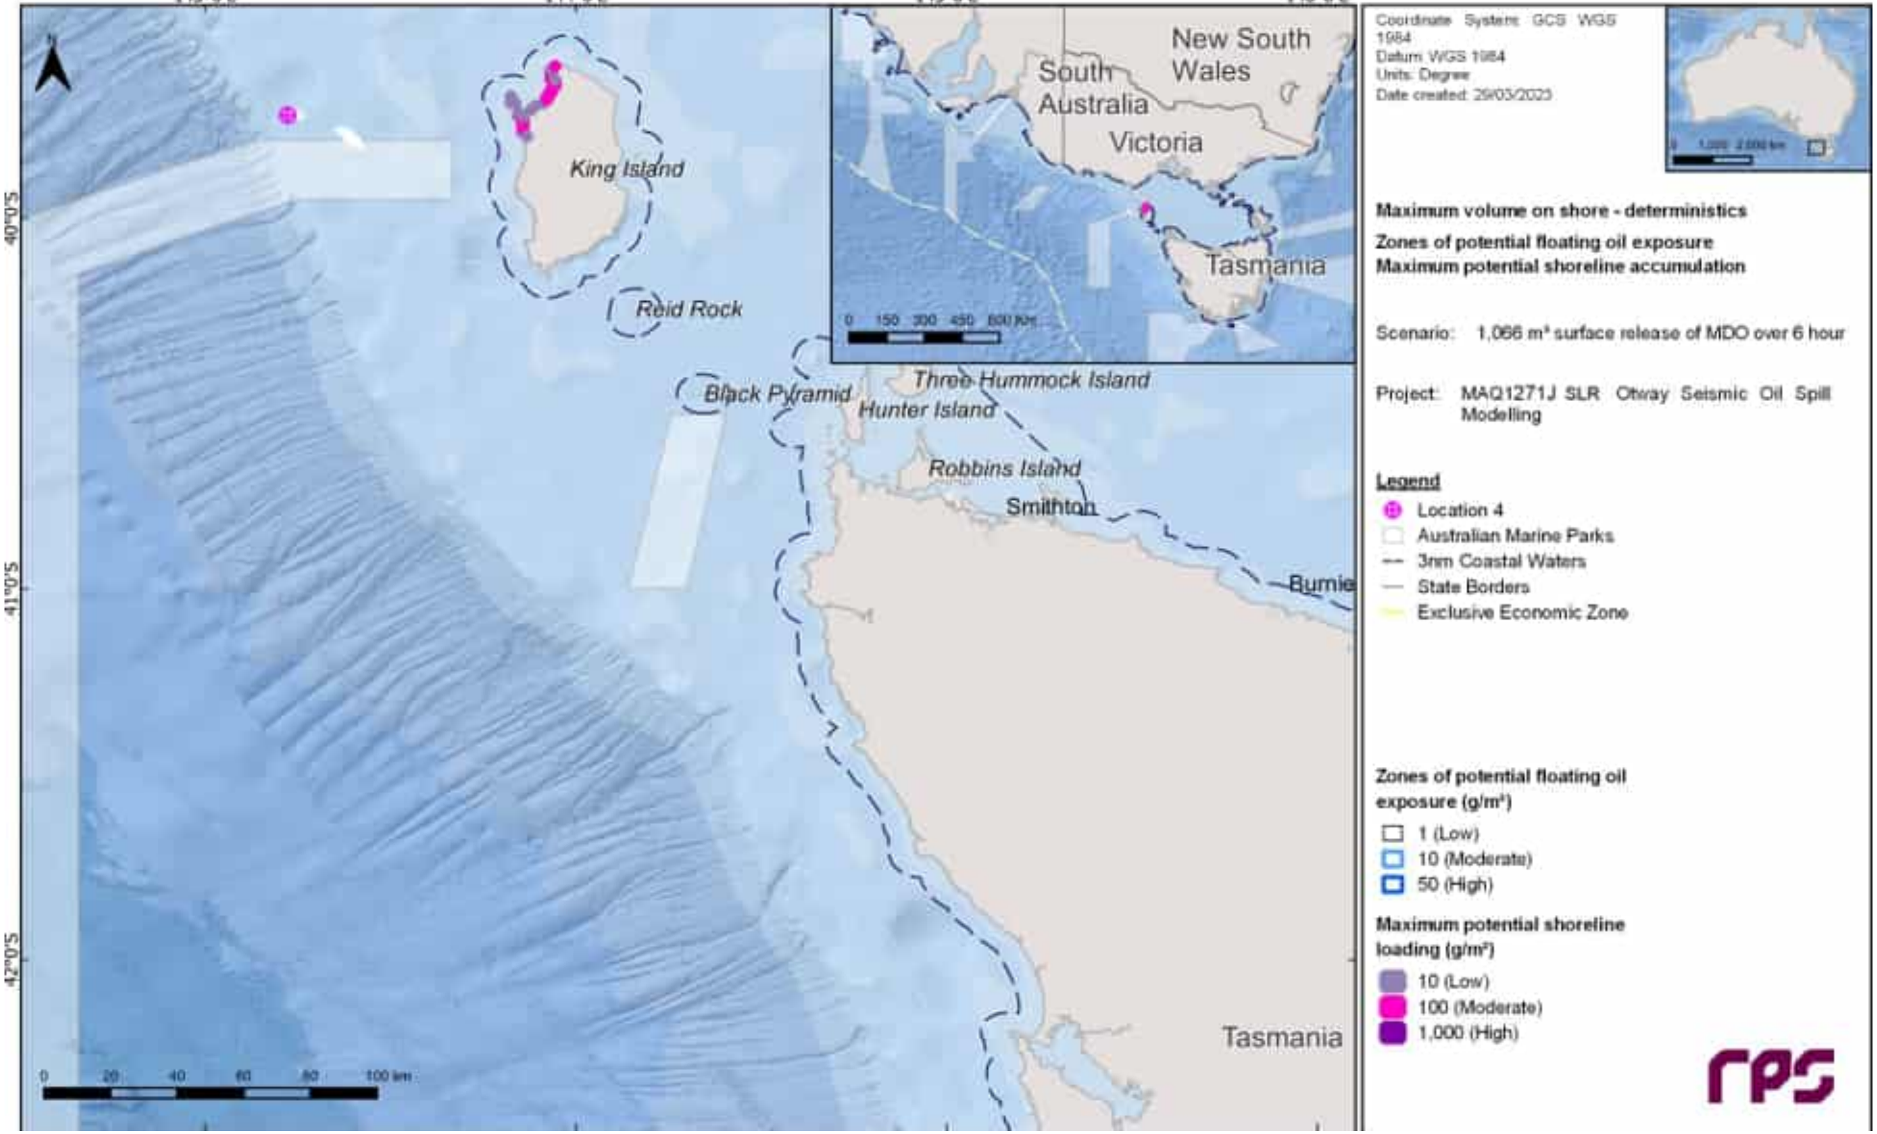

Figure 11.21 Predicted extent of the floating oil exposure and shoreline loading over the entire 50 days for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 4.

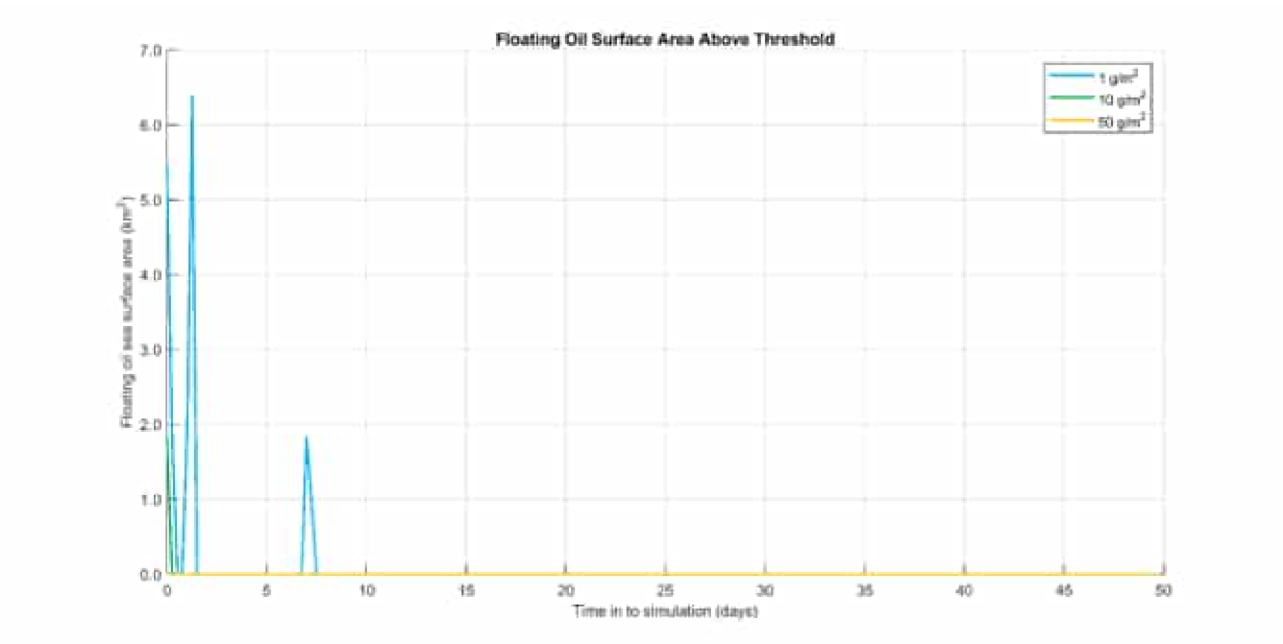

Figure 11.22 Predicted area of floating oil for each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 4.

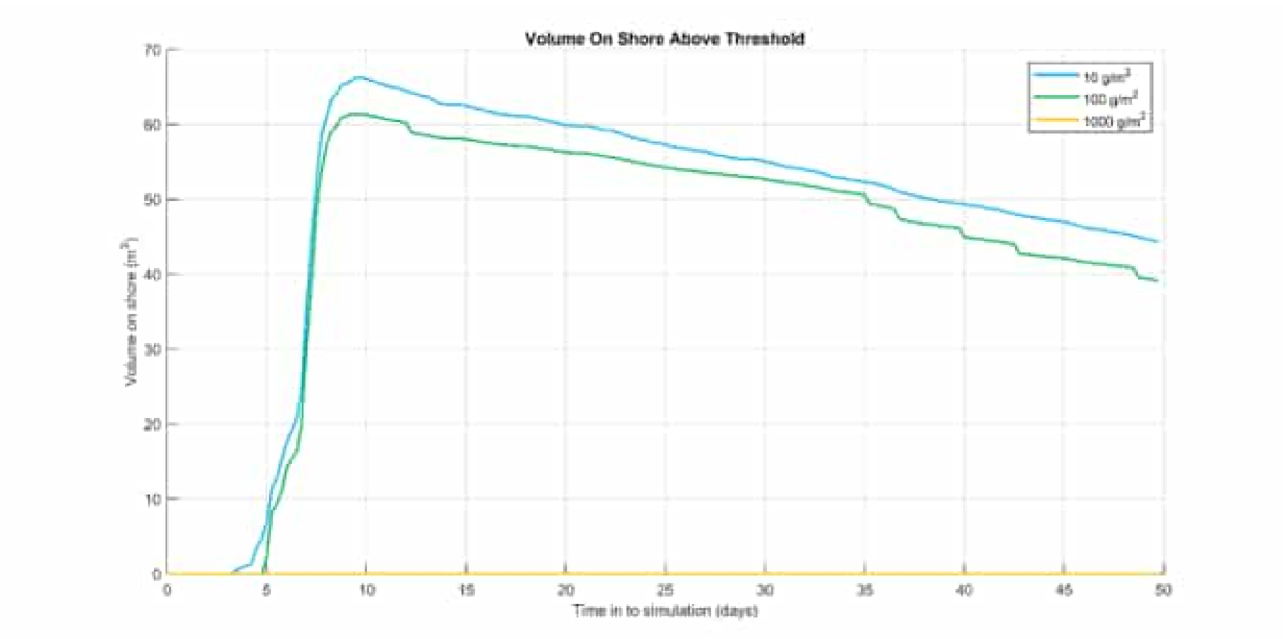

Figure 11.23 Predicted volume of oil accumulating on shorelines at each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 4.

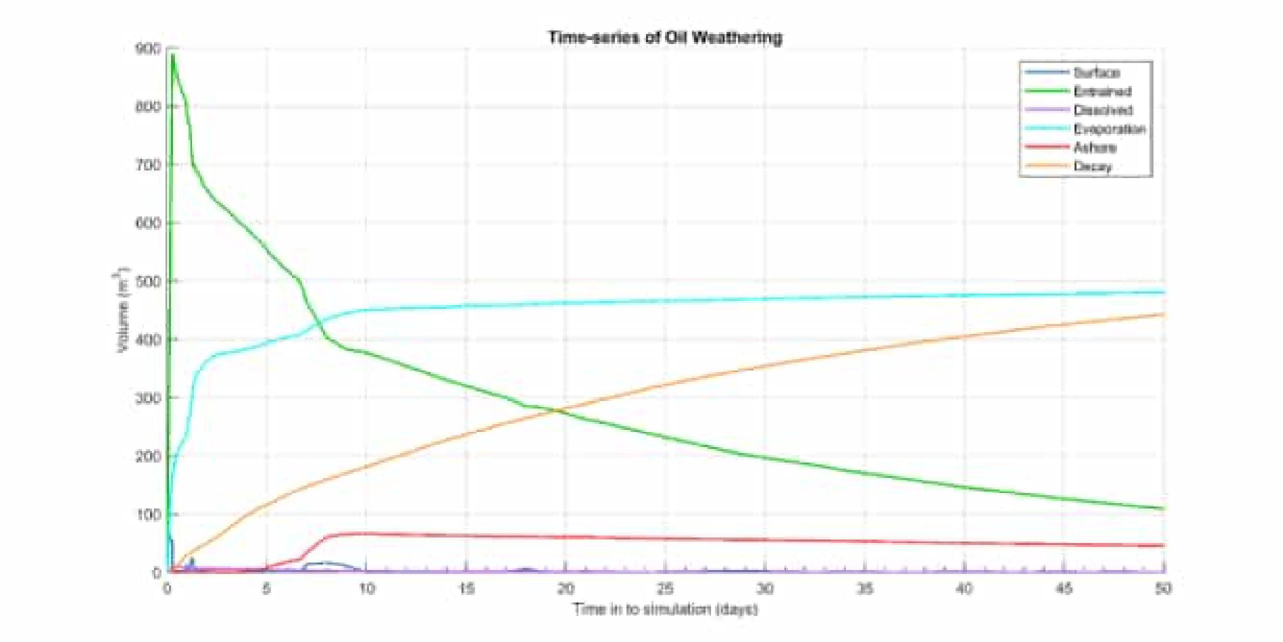

Figure 11.24 Predicted weathering and fates for the simulation that resulted in the maximum volume of oil ashore for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 4.

11.3.5 Location 5 maximum volume of oil ashore

The simulation that resulted in the maximum volume of oil ashore of 46.5 m^3 from Location 1 was identified as run number 28, which commenced at 9 pm 20th May 2019.

Figure 11.25 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (50 days).

Figure 11.26 presents the area of floating oil over time for each threshold during the 50 day simulation. The floating oil exposure had dropped below the low threshold of 1 g/m^2 less than 2 days after the initial release.

Figure 11.27 presents the maximum volume ashore for each threshold. The maximum volume of oil ashore was 46.5 m^3, which occurred on day 19.

Figure 11.28 presents the fates and weathering for the corresponding simulation At the conclusion of the simulation (day-50), approximately 494 m^3 (46%) evaporated, 439 m^3 (41%) decayed, <0 m^3 (<1%) remained on the surface and 106 m^3 (10%) was entrained within the water column. There was 26 m^3 (2%) remaining on the shorelines.

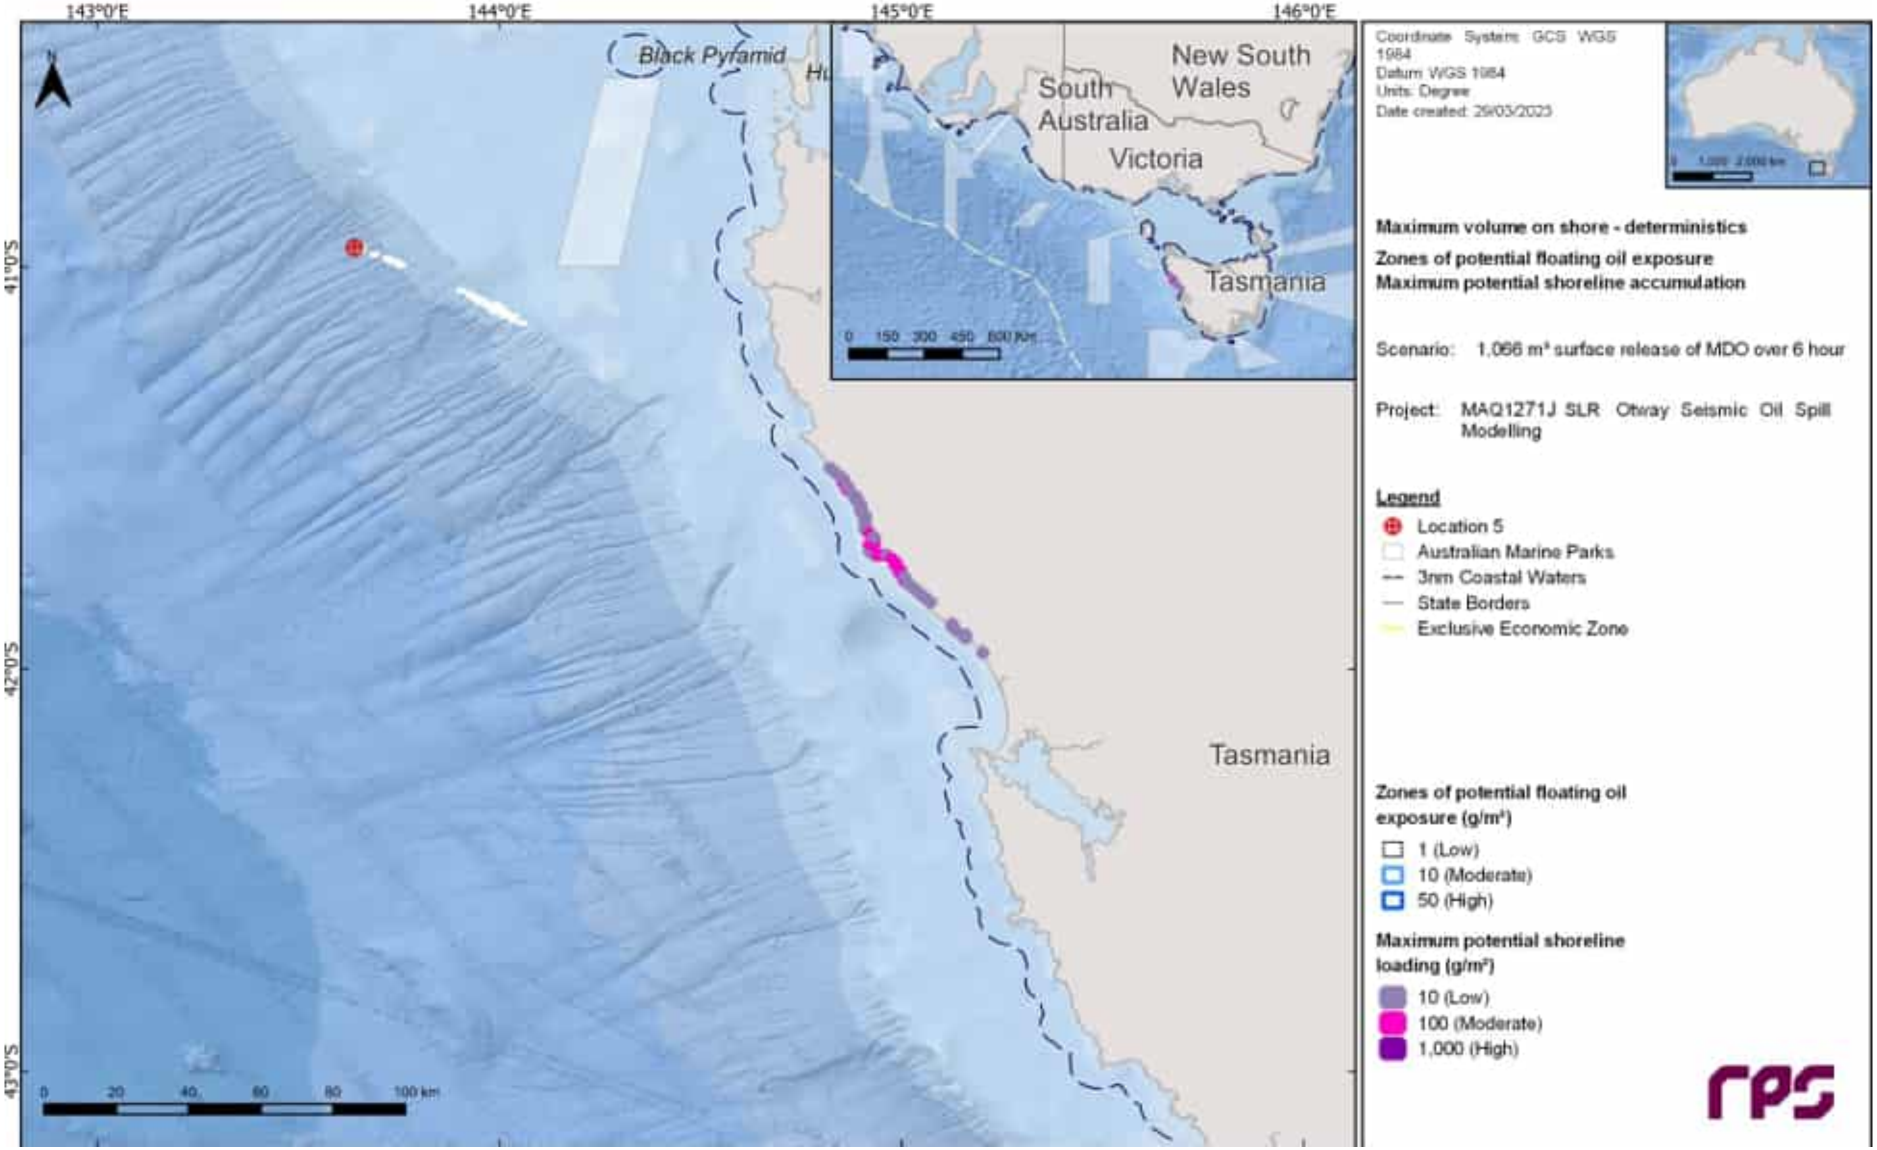

Figure 11.25 Predicted extent of the floating oil exposure and shoreline loading over the entire 50 days for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 5.

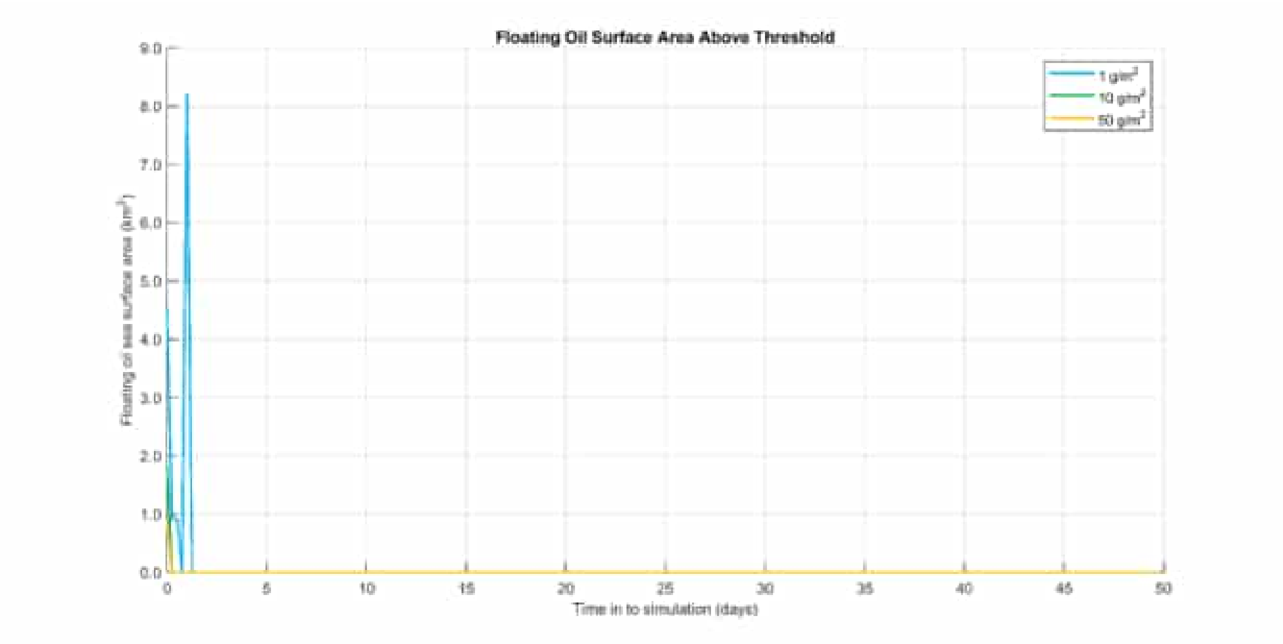

Figure 11.26 Predicted area of floating oil for each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 5.

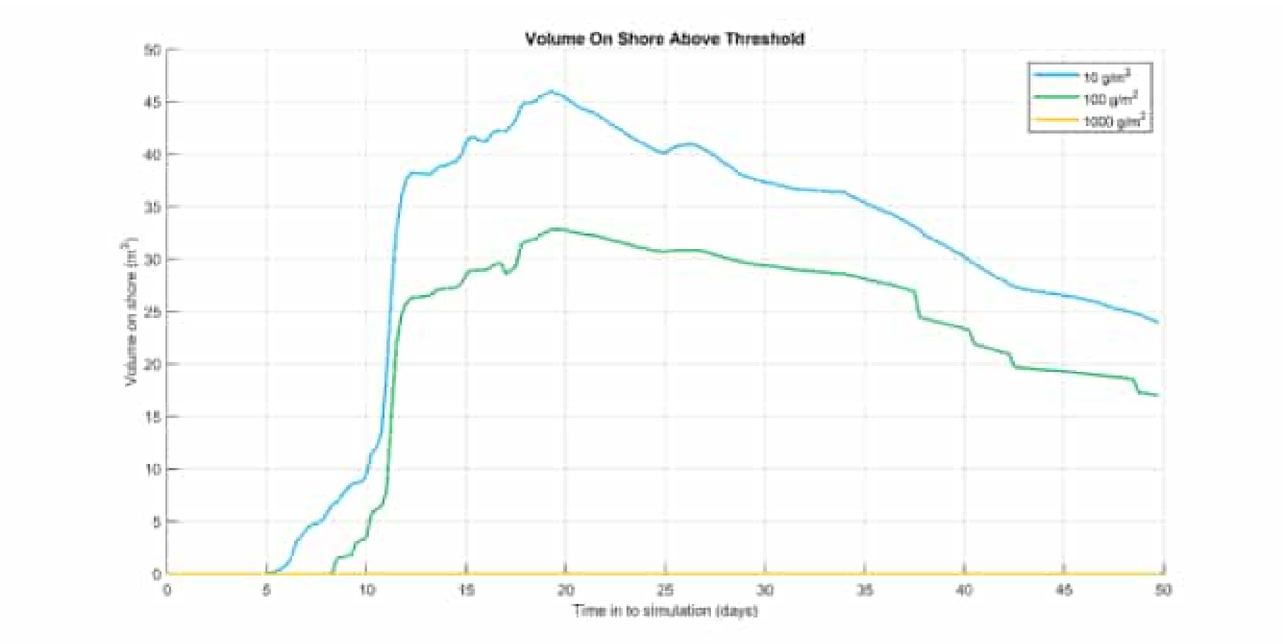

Figure 11.27 Predicted volume of oil accumulating on shorelines at each threshold for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 5.

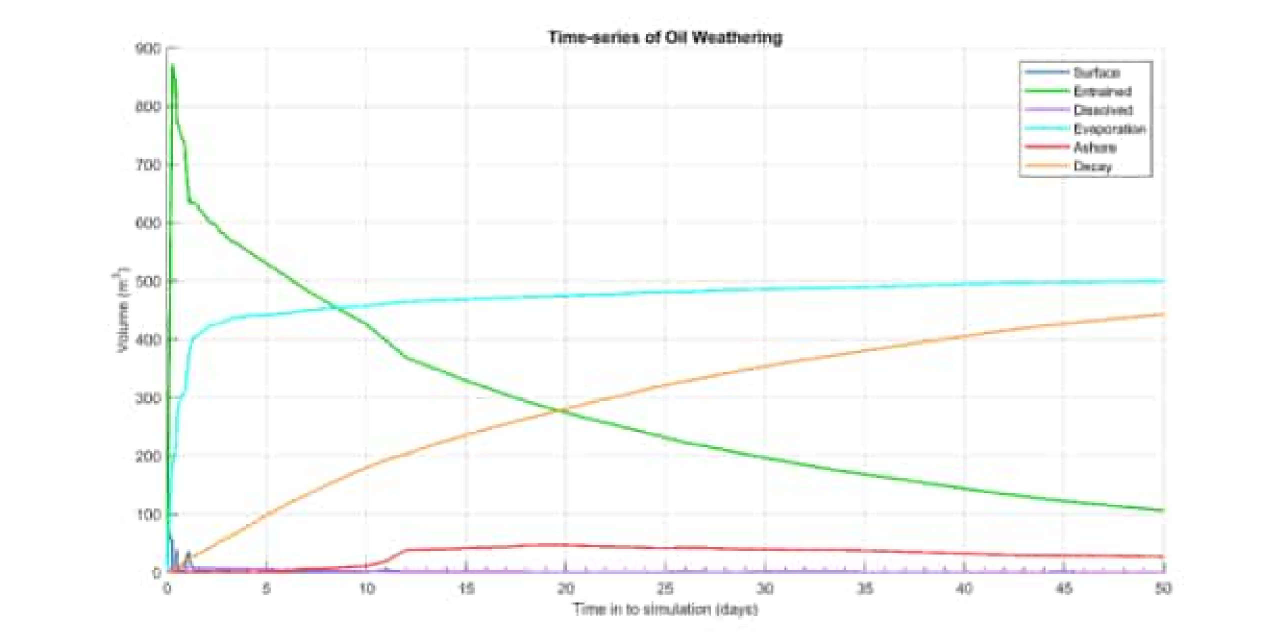

Figure 11.28 Predicted weathering and fates for the simulation that resulted in the maximum volume of oil ashore for the simulation that led to the maximum volume of oil ashore from an MDO survey vessel tank rupture at Location 5.

11.3.6 Maximum swept area above low threshold

The simulation that resulted in the maximum swept area above the low threshold of 1 g/m^2 from all 500 spill simulations (i.e. 100 simulations per five selected locations) was identified from Location 4 as run number 86, which commenced at 1 pm 14th May 2010.

Figure 11.29 shows screenshots of the predicted floating oil exposure on day 1, 2, 3 and 4 for the simulation.

Figure 11.30 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (50 days).

Figure 11.31 presents the area of floating oil over time for each threshold during the 50 day simulation. The floating oil exposure dropped below the moderate and high thresholds after 2.5 days from the commencement of the spill, whilst the exposure dropped below the low threshold before day-4.

Figure 11.32 presents the maximum volume ashore for each threshold.

Figure 11.33 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-50), approximately 673 m^3 (63%) evaporated, 291 m^3 (27%) decayed, <0 m^3 (<1%) remained on the surface and 108 m^3 (10%) was entrained within the water column. Additionally, 3 m^3 (<1%) remained on the shorelines.

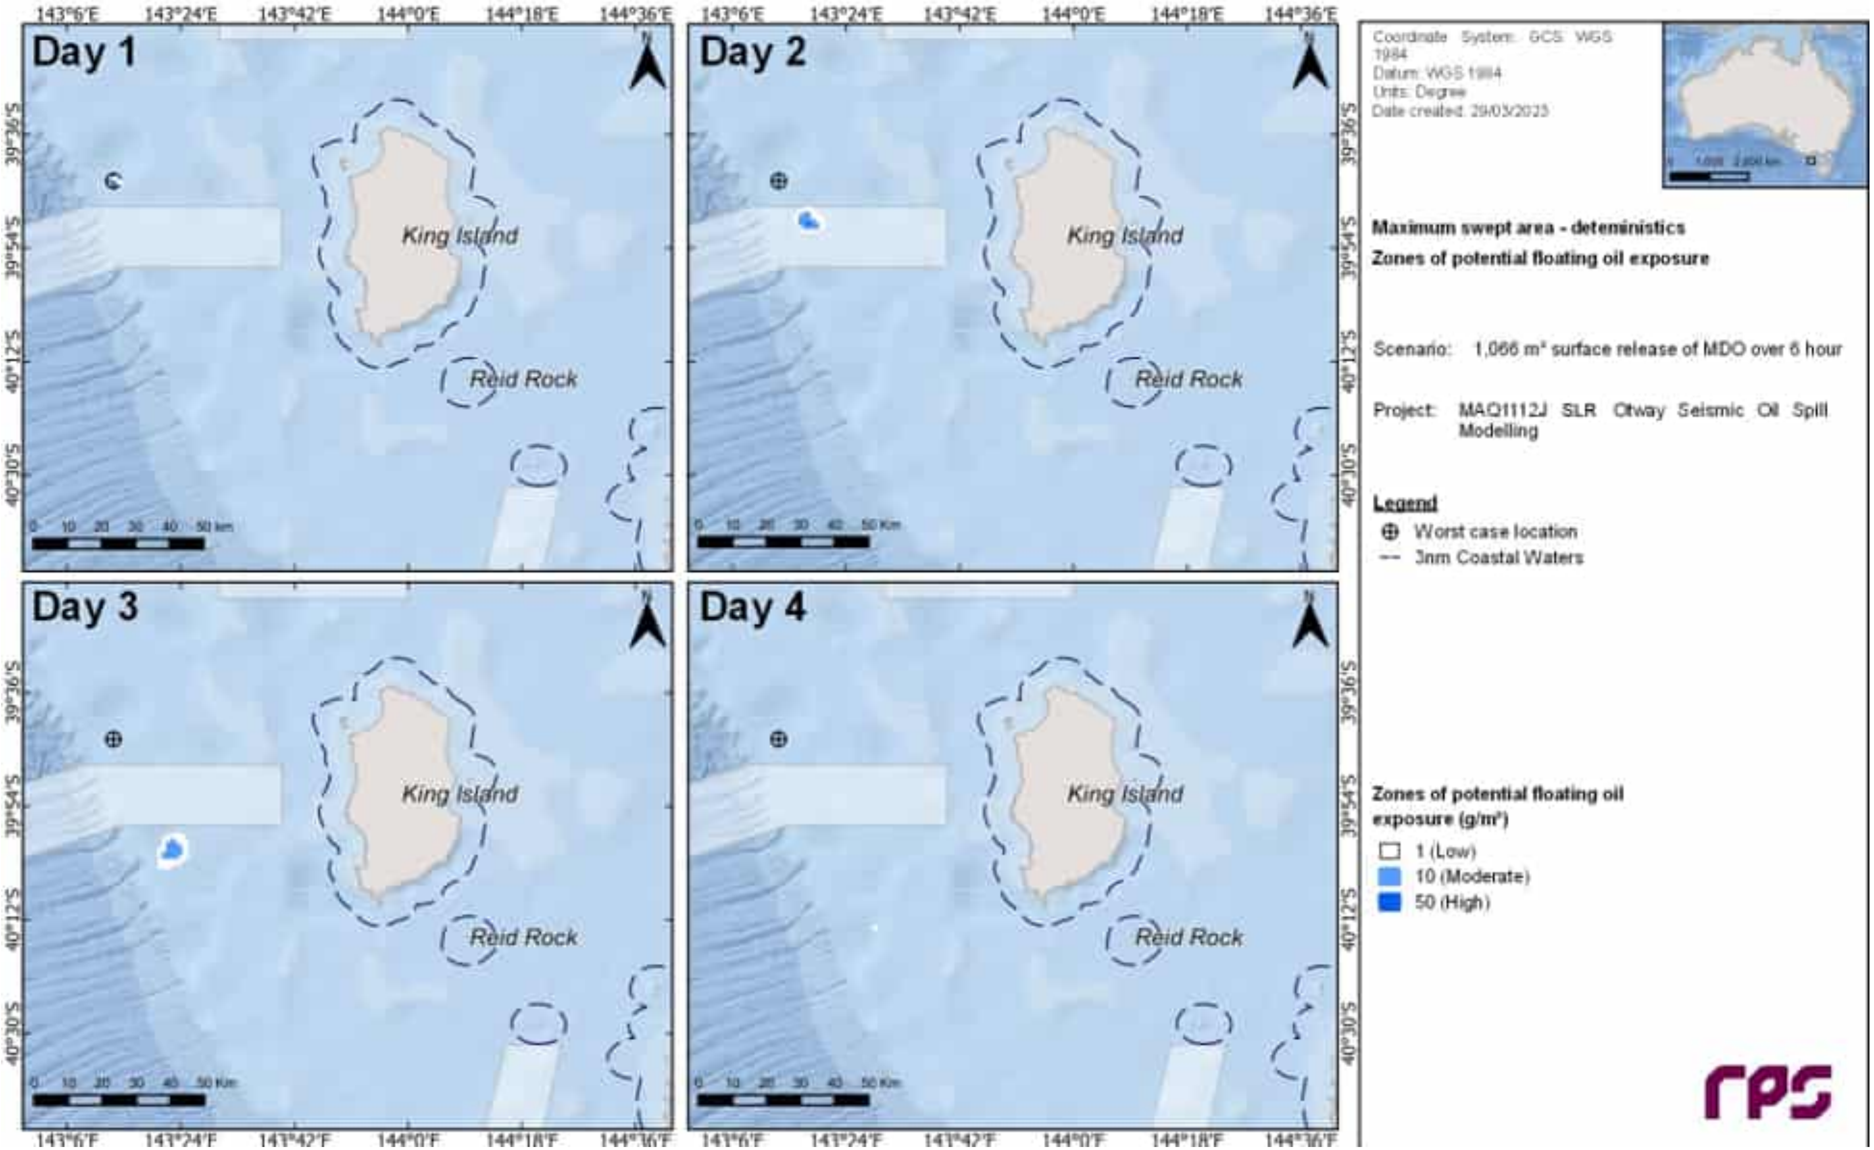

Figure 11.29 Predicted floating oil exposure at day 1, 2, 3 and 4 for the simulation that led to the maximum swept area of floating oil above 1 g/m² from all 500 simulations in the event of an MDO survey vessel tank rupture.

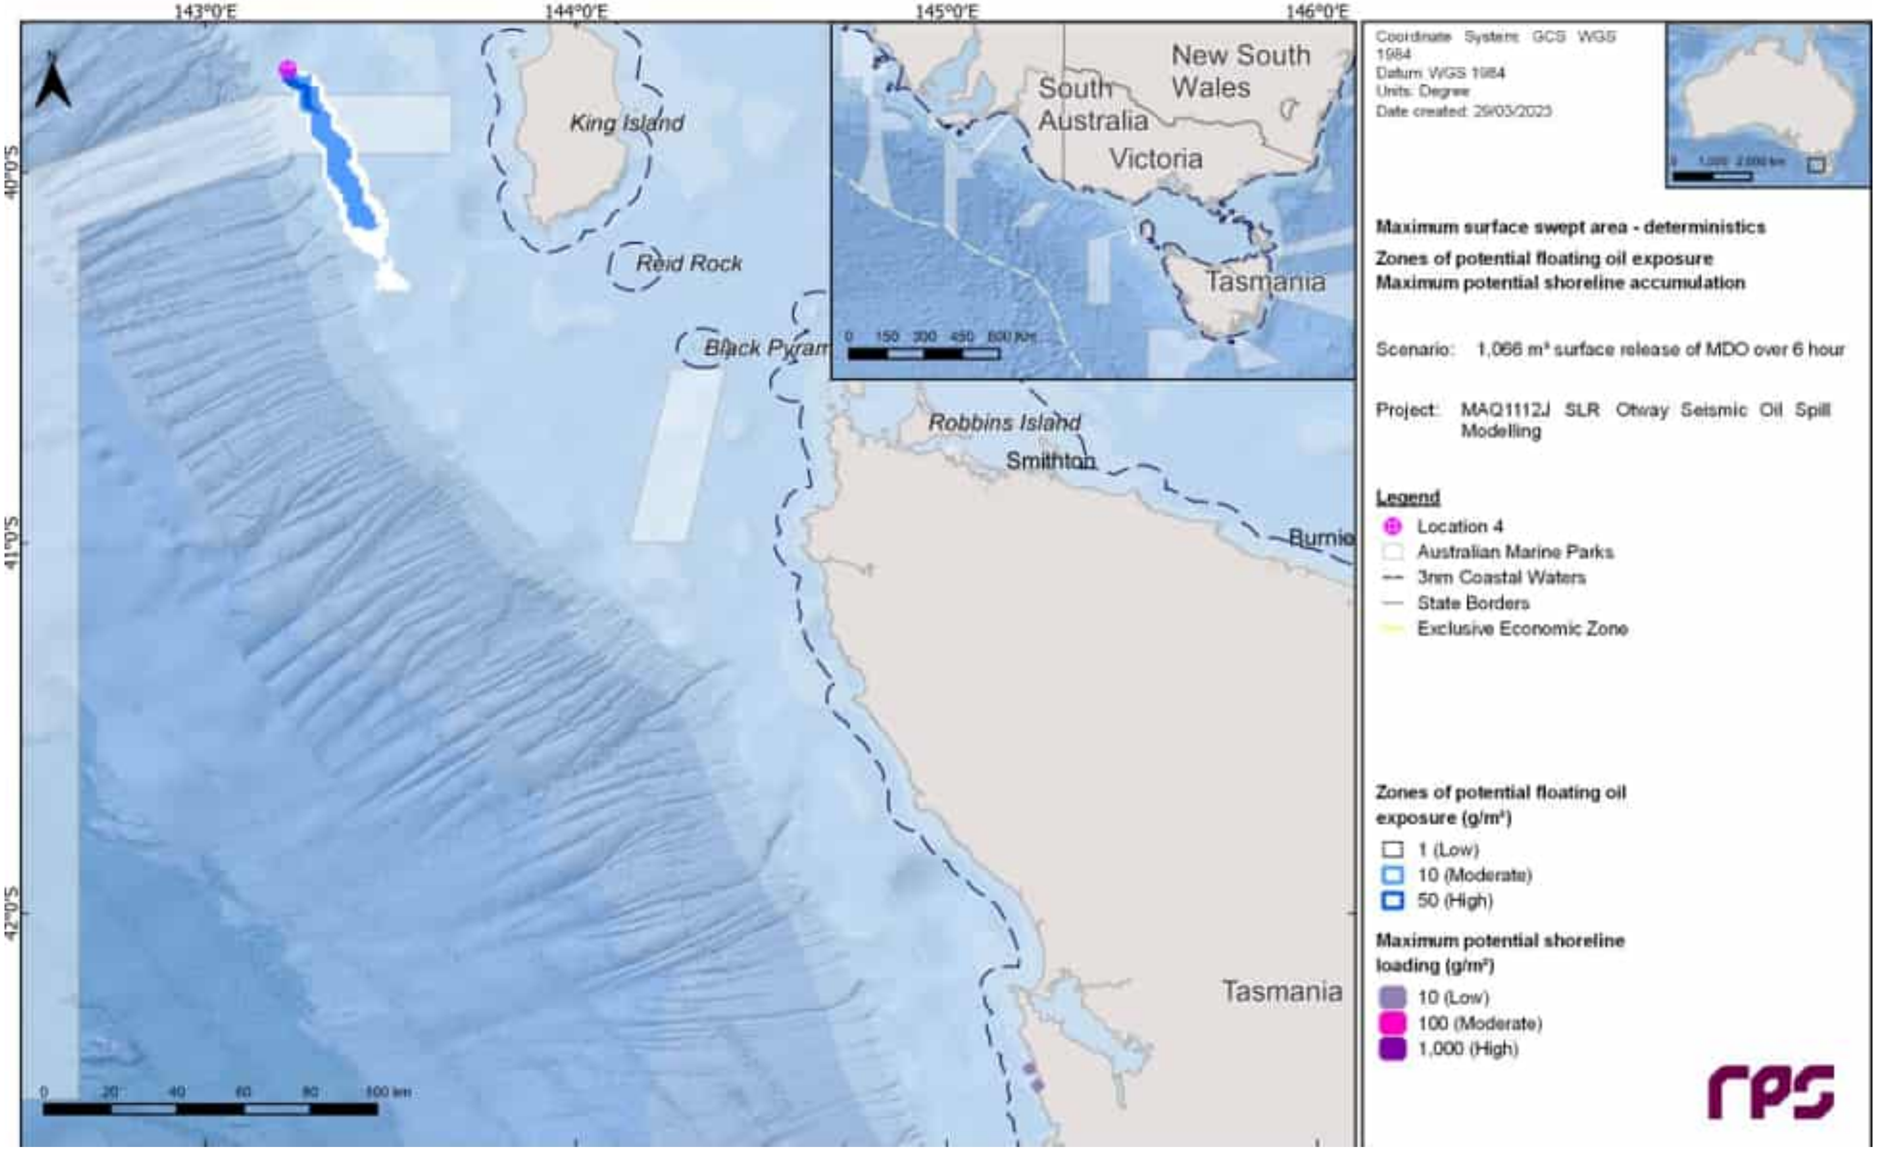

Figure 11.30 Predicted extent of the floating oil exposure and shoreline loading over the entire 50 days for the simulation that led to the maximum swept area of floating oil above 1 g/m² from all 500 simulations in the event of an MDO survey vessel tank rupture.

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 20-Mar-2023

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	1
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	39
Listed Migratory Species:	39

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	60
Whales and Other Cetaceans:	31
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	3
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	34
Key Ecological Features (Marine):	1
Biologically Important Areas:	22
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
EEZ and Territorial Sea

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Fregetta grallaria grallaria White-bellied Storm-Petrel (Tasman Sea), White-bellied Storm-Petrel (Australasian) [64438]	Vulnerable	Species or species habitat likely to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat may occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pterodroma leucoptera leucoptera Gould's Petrel, Australian Gould's Petrel [26033]	Endangered	Species or species habitat may occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
FISH		
Hoplostethus atlanticus		
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
Seriolella brama		
Blue Warehou [69374]	Conservation Dependent	Species or species habitat known to occur within area
Thunnus maccoyii		
Southern Bluefin Tuna [69402]	Conservation Dependent	Species or species habitat likely to occur within area
MAMMAL		
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Eubalaena australis		
Southern Right Whale [40]	Endangered	Species or species habitat known to occur within area
Neophoca cinerea		
Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat may occur within area
REPTILE		
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Species or species habitat likely to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
SHARK		
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Centrophorus uyato listed as Centrophorus zeehaani		
Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Galeorhinus galeus		
School Shark, Eastern School Shark, Snapper Shark, Tope, Soupfin Shark [68453]	Conservation Dependent	Species or species habitat may occur within area

Listed Migratory Species

[Resource Information]

Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Ardenna carneipes		
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna grisea		
Sooty Shearwater [82651]		Species or species habitat may occur within area
Diomedea antipodensis		
Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora		
Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans		
Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Migratory Marine Species		
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna grisea as Puffinus griseus Sooty Shearwater [82651]		Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phoebetria fusca		
Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pterodroma mollis		
Soft-plumaged Petrel [1036]	Vulnerable	Species or species habitat may occur within area
Stercorarius skua as Catharacta skua		
Great Skua [823]		Species or species habitat may occur within area
Thalassarche bulleri		
Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei as Thalassarche sp. nov.		
Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri		
Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta		
Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma		
Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche impavida		
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Fish		
Heraldia nocturna Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
Hippocampus abdominalis Big-belly Seahorse, Eastern Potbelly Seahorse, New Zealand Potbelly Seahorse [66233]		Species or species habitat may occur within area
Hippocampus breviceps Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
Histiogamphelus briggsii Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area
Histiogamphelus cristatus Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
Hypselognathus rostratus Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area
Kaupus costatus Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Mitotichthys semistriatus Halfbanded Pipefish [66261]		Species or species habitat may occur within area
Mitotichthys tuckeri Tucker's Pipefish [66262]		Species or species habitat may occur within area
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus robustus Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area
Solegnathus spinosissimus Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Stipecampus cristatus Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Vanacampus phillipi Port Phillip Pipefish [66284]		Species or species habitat may occur within area
Vanacampus poecilolaemus Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Mammal		
Arctocephalus forsteri Long-nosed Fur-seal, New Zealand Fur-seal [20]		Species or species habitat may occur within area
Arctocephalus pusillus Australian Fur-seal, Australo-African Fur-seal [21]		Species or species habitat may occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat may occur within area
Reptile		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area

Whales and Other Cetaceans [Resource Information]

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Berardius arnuxii Arnoux's Beaked Whale [70]		Species or species habitat may occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat known to occur within area

Current Scientific Name	Status	Type of Presence
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Globicephala melas Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Hyperoodon planifrons Southern Bottlenose Whale [71]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima as Kogia simus Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lissodelphis peronii Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat known to occur within area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Mesoplodon hectori Hector's Beaked Whale [76]		Species or species habitat may occur within area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Tasmacetus shepherdi Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat may occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
West Tasmania Canyons	South-east

Biologically Important Areas

Scientific Name	Behaviour	Presence
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Foraging	Likely to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Known to occur
Diomedea exulans (sensu lato) Wandering Albatross [1073]	Foraging	Known to occur
Diomedea exulans antipodensis Antipodean Albatross [82269]	Foraging	Known to occur
Morus serrator Australasian Gannet [1020]	Foraging	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Foraging	Known to occur
Pelecanoides urinatrix Common Diving-petrel [1018]	Foraging	Known to occur
Thalassarche bulleri Bullers Albatross [64460]	Foraging	Known to occur
Thalassarche cauta cauta Shy Albatross [82345]	Foraging likely	Likely to occur
Thalassarche chlororhynchos bassi Indian Yellow-nosed Albatross [85249]	Foraging	Known to occur
Thalassarche melanophris Black-browed Albatross [66472]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Thalassarche melanophris impavida Campbell Albatross [82449]	Foraging	Known to occur
Sharks		
Carcharodon carcharias White Shark [64470]	Distribution	Likely to occur
Carcharodon carcharias White Shark [64470]	Distribution	Known to occur
Carcharodon carcharias White Shark [64470]	Distribution (low density)	Likely to occur
Carcharodon carcharias White Shark [64470]	Known distribution	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging (annual high use area)	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Known Foraging Area	Known to occur
Eubalaena australis Southern Right Whale [40]	Aggregation	Known to occur
Eubalaena australis Southern Right Whale [40]	Known core range	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 21-Mar-2023

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	1
National Heritage Places:	6
Wetlands of International Importance (Ramsar	7
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	17
Listed Threatened Species:	195
Listed Migratory Species:	86

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	81
Commonwealth Heritage Places:	14
Listed Marine Species:	142
Whales and Other Cetaceans:	34
Critical Habitats:	1
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	15
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	339
Regional Forest Agreements:	5
Nationally Important Wetlands:	37
EPBC Act Referrals:	342
Key Ecological Features (Marine):	6
Biologically Important Areas:	64
Bioregional Assessments:	1
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

World Heritage Properties [Resource Information]

Name	State	Legal Status
Tasmanian Wilderness	TAS	Declared property

National Heritage Places [Resource Information]

Name	State	Legal Status
Historic		
Recherche Bay (North East Peninsula) Area	TAS	Listed place
Great Ocean Road and Scenic Environs	VIC	Listed place
Point Nepean Defence Sites and Quarantine Station Area	VIC	Listed place
Quarantine Station and Surrounds	VIC	Within listed place
Indigenous		
Western Tasmania Aboriginal Cultural Landscape	TAS	Listed place
Natural		
Tasmanian Wilderness	TAS	Listed place

Wetlands of International Importance (Ramsar Wetlands) [Resource Information]

Ramsar Site Name	Proximity
Corner inlet	Within Ramsar site
Gippsland lakes	Within 10km of Ramsar site
Glenelg estuary and discovery bay wetlands	Within Ramsar site
Lavinia	Within Ramsar site
Piccaninnie ponds karst wetlands	Within Ramsar site
Port phillip bay (western shoreline) and bellarine peninsula	Within Ramsar site
Western port	Within Ramsar site

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

EEZ and Territorial Sea

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Alpine Sphagnum Bogs and Associated Fens	Endangered	Community likely to occur within area
Assemblages of species associated with open-coast salt-wedge estuaries of western and central Victoria ecological community	Endangered	Community likely to occur within area
Brogo Vine Forest of the South East Corner Bioregion	Endangered	Community likely to occur within area
Giant Kelp Marine Forests of South East Australia	Endangered	Community likely to occur within area
Grassy Eucalypt Woodland of the Victorian Volcanic Plain	Critically Endangered	Community known to occur within area
Karst springs and associated alkaline fens of the Naracoorte Coastal Plain Bioregion	Endangered	Community likely to occur within area
Littoral Rainforest and Coastal Vine Thickets of Eastern Australia	Critically Endangered	Community likely to occur within area
Lowland Grassy Woodland in the South East Corner Bioregion	Critically Endangered	Community likely to occur within area
Lowland Native Grasslands of Tasmania	Critically Endangered	Community likely to occur within area
Natural Damp Grassland of the Victorian Coastal Plains	Critically Endangered	Community likely to occur within area
Natural Temperate Grassland of the Victorian Volcanic Plain	Critically Endangered	Community likely to occur within area
River-flat eucalypt forest on coastal floodplains of southern New South Wales and eastern Victoria	Critically Endangered	Community likely to occur within area
Seasonal Herbaceous Wetlands (Freshwater) of the Temperate Lowland Plains	Critically Endangered	Community likely to occur within area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area

Community Name	Threatened Category	Presence Text
Tasmanian Forests and Woodlands dominated by black gum or Brookers gum (Eucalyptus ovata / E. brookeriana)	Critically Endangered	Community likely to occur within area
Tasmanian white gum (Eucalyptus viminalis) wet forest	Critically Endangered	Community likely to occur within area
White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland	Critically Endangered	Community likely to occur within area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Acanthiza pusilla magnirostris listed as Acanthiza pusilla archibaldi		
King Island Brown Thornbill, Brown Thornbill (King Island) [91709]	Endangered	Species or species habitat known to occur within area
Acanthornis magna greeniana		
King Island Scrubtit, Scrubtit (King Island) [82329]	Critically Endangered	Species or species habitat known to occur within area
Anthochaera phrygia		
Regent Honeyeater [82338]	Critically Endangered	Species or species habitat known to occur within area
Aquila audax fleayi		
Tasmanian Wedge-tailed Eagle, Wedge-tailed Eagle (Tasmanian) [64435]	Endangered	Breeding likely to occur within area
Botaurus poiciloptilus		
Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area
Calidris canutus		
Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris tenuirostris		
Great Knot [862]	Critically Endangered	Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Callocephalon fimbriatum Gang-gang Cockatoo [768]	Endangered	Species or species habitat known to occur within area
Calyptorhynchus banksii graptogyne South-eastern Red-tailed Black-Cockatoo [25982]	Endangered	Foraging, feeding or related behaviour known to occur within area
Calyptorhynchus lathami lathami South-eastern Glossy Black-Cockatoo [67036]	Vulnerable	Species or species habitat known to occur within area
Ceyx azureus diemenensis Tasmanian Azure Kingfisher [25977]	Endangered	Breeding known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Dasyornis brachypterus Eastern Bristlebird [533]	Endangered	Species or species habitat known to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea antipodensis gibsoni Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Fregetta grallaria grallaria White-bellied Storm-Petrel (Tasman Sea), White-bellied Storm-Petrel (Australasian) [64438]	Vulnerable	Species or species habitat likely to occur within area
Grantiella picta Painted Honeyeater [470]	Vulnerable	Species or species habitat known to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
Lathamus discolor Swift Parrot [744]	Critically Endangered	Breeding known to occur within area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Vulnerable	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat known to occur within area
Pardalotus quadragintus Forty-spotted Pardalote [418]	Endangered	Species or species habitat known to occur within area
Pedionomus torquatus Plains-wanderer [906]	Critically Endangered	Species or species habitat likely to occur within area
Pezoporus occidentalis Night Parrot [59350]	Endangered	Species or species habitat may occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Platycercus caledonicus brownii Green Rosella (King Island) [67041]	Vulnerable	Species or species habitat known to occur within area
Pterodroma leucoptera leucoptera Gould's Petrel, Australian Gould's Petrel [26033]	Endangered	Species or species habitat may occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Breeding known to occur within area
Pycnoptilus floccosus Pilotbird [525]	Vulnerable	Species or species habitat known to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area
Strepera fuliginosa colei Black Currawong (King Island) [67113]	Vulnerable	Breeding likely to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche salvini		
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Thinornis cucullatus cucullatus		
Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area
Tyto novaehollandiae castanops (Tasmanian population)		
Masked Owl (Tasmanian) [67051]	Vulnerable	Breeding known to occur within area
CRUSTACEAN		
Astacopsis gouldi		
Giant Freshwater Crayfish, Tasmanian Giant Freshwater Lobster [64415]	Vulnerable	Species or species habitat likely to occur within area
Engaeus martigener		
Furneaux Burrowing Crayfish [67220]	Endangered	Species or species habitat may occur within area
Euastacus bispinosus		
Glenelg Spiny Freshwater Crayfish, Pricklyback [81552]	Endangered	Species or species habitat known to occur within area
FISH		
Brachionichthys hirsutus		
Spotted Handfish [64418]	Critically Endangered	Species or species habitat may occur within area
Brachiopsilus ziebelli		
Ziebell's Handfish, Waterfall Bay Handfish [83757]	Vulnerable	Species or species habitat likely to occur within area
Epinephelus daemelii		
Black Rockcod, Black Cod, Saddled Rockcod [68449]	Vulnerable	Species or species habitat may occur within area
Galaxiella pusilla		
Eastern Dwarf Galaxias, Dwarf Galaxias [56790]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Hoplostethus atlanticus		
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
Nannoperca obscura		
Yarra Pygmy Perch [26177]	Vulnerable	Species or species habitat known to occur within area
Nannoperca variegata		
Variegated Pygmy Perch, Ewens Pygmy Perch, Golden Pygmy Perch [26178]	Vulnerable	Species or species habitat known to occur within area
Prototroctes maraena		
Australian Grayling [26179]	Vulnerable	Species or species habitat known to occur within area
Rexea solandri (eastern Australian population)		
Eastern Gemfish [76339]	Conservation Dependent	Species or species habitat likely to occur within area
Seriolella brama		
Blue Warehou [69374]	Conservation Dependent	Species or species habitat known to occur within area
Thunnus maccoyii		
Southern Bluefin Tuna [69402]	Conservation Dependent	Species or species habitat likely to occur within area
Thymichthys politus		
Red Handfish [83756]	Critically Endangered	Species or species habitat may occur within area
FROG		
Heleioporus australiacus		
Giant Burrowing Frog [1973]	Vulnerable	Species or species habitat known to occur within area
Litoria aurea		
Green and Golden Bell Frog [1870]	Vulnerable	Species or species habitat known to occur within area
Litoria raniformis		
Growling Grass Frog, Southern Bell Frog, Green and Golden Frog, Warty Swamp Frog, Golden Bell Frog [1828]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Litoria watsoni		
Watson's Tree Frog [91509]	Endangered	Species or species habitat known to occur within area
Mixophyes balbus		
Stuttering Frog, Southern Barred Frog (in Victoria) [1942]	Vulnerable	Species or species habitat may occur within area
INSECT		
Antipodia chaostola leucophaea		
Tasmanian Chaostola Skipper, Heath-sand Skipper [77672]	Endangered	Species or species habitat may occur within area
Oreisplanus munionga larana		
Marrawah Skipper, Alpine Sedge Skipper, Alpine Skipper [77747]	Vulnerable	Species or species habitat known to occur within area
Synemon plana		
Golden Sun Moth [25234]	Vulnerable	Species or species habitat may occur within area
MAMMAL		
Antechinus minimus maritimus		
Swamp Antechinus (mainland) [83086]	Vulnerable	Species or species habitat known to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dasyurus maculatus maculatus (SE mainland population)		
Spot-tailed Quoll, Spotted-tail Quoll, Tiger Quoll (southeastern mainland population) [75184]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Dasyurus maculatus maculatus (Tasmanian population)		
Spotted-tail Quoll, Spot-tailed Quoll, Tiger Quoll (Tasmanian population) [75183]	Vulnerable	Species or species habitat known to occur within area
Dasyurus viverrinus		
Eastern Quoll, Luaner [333]	Endangered	Species or species habitat known to occur within area
Eubalaena australis		
Southern Right Whale [40]	Endangered	Breeding known to occur within area
Isoodon obesulus obesulus		
Southern Brown Bandicoot (eastern), Southern Brown Bandicoot (south-eastern) [68050]	Endangered	Species or species habitat known to occur within area
Mastacomys fuscus mordicus		
Broad-toothed Rat (mainland), Tooarrana [87617]	Vulnerable	Species or species habitat known to occur within area
Miniopterus orianae bassanii		
Southern Bent-wing Bat [87645]	Critically Endangered	Breeding known to occur within area
Mirounga leonina		
Southern Elephant Seal [26]	Vulnerable	Breeding may occur within area
Neophoca cinerea		
Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Perameles gunnii gunnii		
Eastern Barred Bandicoot (Tasmania) [66651]	Vulnerable	Species or species habitat likely to occur within area
Perameles gunnii Victorian subspecies		
Eastern Barred Bandicoot (Mainland) [88020]	Endangered	Translocated population known to occur within area
Petauroides volans		
Greater Glider (southern and central) [254]	Endangered	Species or species habitat may occur within area
Petaurus australis australis		
Yellow-bellied Glider (south-eastern) [87600]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Phascolarctos cinereus (combined populations of Qld, NSW and the ACT)		
Koala (combined populations of Queensland, New South Wales and the Australian Capital Territory) [85104]	Endangered	Species or species habitat likely to occur within area
Potorous longipes		
Long-footed Potoroo [217]	Endangered	Species or species habitat likely to occur within area
Potorous tridactylus trisulcatus		
Long-nosed Potoroo (southern mainland) [86367]	Vulnerable	Species or species habitat known to occur within area
Pseudomys fumeus		
Smoky Mouse, Konoom [88]	Endangered	Species or species habitat may occur within area
Pseudomys novaehollandiae		
New Holland Mouse, Pookila [96]	Vulnerable	Species or species habitat known to occur within area
Pseudomys shortridgei		
Heath Mouse, Dayang, Heath Rat [77]	Endangered	Species or species habitat known to occur within area
Pteropus poliocephalus		
Grey-headed Flying-fox [186]	Vulnerable	Roosting known to occur within area
Sarcophilus harrisii		
Tasmanian Devil [299]	Endangered	Species or species habitat likely to occur within area
OTHER		
Hyridella glenelgensis		
Glenelg Freshwater Mussel [82953]	Critically Endangered	Species or species habitat may occur within area
Megascolides australis		
Giant Gippsland Earthworm [64420]	Vulnerable	Species or species habitat may occur within area
PLANT		
Acacia constablei		
Narrabarba Wattle [10798]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Amphibromus fluitans River Swamp Wallaby-grass, Floating Swamp Wallaby-grass [19215]	Vulnerable	Species or species habitat known to occur within area
Astelia australiana Tall Astelia [10851]	Vulnerable	Species or species habitat may occur within area
Caladenia calcicola Limestone Spider-orchid [10065]	Vulnerable	Species or species habitat likely to occur within area
Caladenia caudata Tailed Spider-orchid [17067]	Vulnerable	Species or species habitat may occur within area
Caladenia colorata Coloured Spider-orchid, Small Western Spider-orchid, Painted Spider-orchid [54999]	Endangered	Species or species habitat known to occur within area
Caladenia dienema Windswept Spider-orchid [64858]	Endangered	Species or species habitat known to occur within area
Caladenia hastata Melblom's Spider-orchid [16118]	Endangered	Species or species habitat likely to occur within area
Caladenia insularis French Island Spider-orchid [24372]	Vulnerable	Species or species habitat known to occur within area
Caladenia lindleyana Lindley's Spider-orchid [9305]	Critically Endangered	Species or species habitat known to occur within area
Caladenia orientalis Eastern Spider Orchid [83410]	Endangered	Species or species habitat known to occur within area
Caladenia ornata Ornate Pink Fingers [76213]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Caladenia robinsonii Frankston Spider-orchid [24375]	Endangered	Species or species habitat likely to occur within area
Caladenia tensa Greencomb Spider-orchid, Rigid Spider-orchid [24390]	Endangered	Species or species habitat may occur within area
Caladenia tessellata Thick-lipped Spider-orchid, Daddy Long-legs [2119]	Vulnerable	Species or species habitat known to occur within area
Calochilus pulchellus Pretty Beard Orchid, Pretty Beard-orchid [84677]	Endangered	Species or species habitat may occur within area
Centrolepis pedderensis Pedder Centrolepis, Pedder Bristlewort [12647]	Endangered	Species or species habitat likely to occur within area
Colobanthus curtisiae Curtis' Colobanth [23961]	Vulnerable	Species or species habitat may occur within area
Correa lawrenceana var. genoensis Genoa River Correa [66626]	Endangered	Species or species habitat may occur within area
Corunastylis brachystachya Short-spiked Midge-orchid, Rocky Cape Midge Orchid [76410]	Endangered	Species or species habitat known to occur within area
Craspedia preminghana Preminghana Billybutton [77046]	Endangered	Species or species habitat likely to occur within area
Cryptostylis hunteriana Leafless Tongue-orchid [19533]	Vulnerable	Species or species habitat known to occur within area
Dianella amoena Matted Flax-lily [64886]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Diuris lanceolata Snake Orchid [10231]	Endangered	Species or species habitat known to occur within area
Dodonaea procumbens Trailing Hop-bush [12149]	Vulnerable	Species or species habitat may occur within area
Epacris virgata Pretty Heath, Dan Hill Heath [20375]	Endangered	Species or species habitat known to occur within area
Eucalyptus strzeleckii Strzelecki Gum [55400]	Vulnerable	Species or species habitat known to occur within area
Euphrasia amphisysepala Shiny Cliff Eyebright [4534]	Vulnerable	Species or species habitat known to occur within area
Euphrasia collina subsp. muelleri Purple Eyebright, Mueller's Eyebright [16151]	Endangered	Species or species habitat known to occur within area
Euphrasia fragosa Shy Eyebright, Southport Eyebright [64901]	Critically Endangered	Species or species habitat may occur within area
Euphrasia gibbsiae subsp. psilantherea Swamp Eyebright [21507]	Critically Endangered	Species or species habitat known to occur within area
Euphrasia semipicta Peninsula Eyebright [9986]	Endangered	Species or species habitat known to occur within area
Euphrasia sp. Bivouac Bay (W.R.Barker 7626 et al.) Masked Eyebright, Masked Cliff Eyebright [82044]	Endangered	Species or species habitat known to occur within area
Glycine latrobeana Clover Glycine, Purple Clover [13910]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Grevillea infecunda Anglesea Grevillea [22026]	Vulnerable	Species or species habitat known to occur within area
Haloragis exalata subsp. exalata Wingless Raspwort, Square Raspwort [24636]	Vulnerable	Species or species habitat known to occur within area
Hiya distans listed as Hypolepis distans Scrambling Ground-fern [92548]	Endangered	Species or species habitat known to occur within area
Ixodia achillaeoides subsp. arenicola Sand Ixodia, Ixodia [21474]	Vulnerable	Species or species habitat known to occur within area
Lachnagrostis adamsonii Adamson's Blown-grass, Adamson's Blowngrass [76211]	Endangered	Species or species habitat known to occur within area
Leiocarpa gatesii Wrinkled Buttons [76212]	Vulnerable	Species or species habitat likely to occur within area
Lepidium aschersonii Spiny Peppercress [10976]	Vulnerable	Species or species habitat known to occur within area
Lepidium hyssopifolium Basalt Pepper-cress, Peppercress, Rubble Pepper-cress, Pepperweed [16542]	Endangered	Species or species habitat known to occur within area
Leucochrysum albicans subsp. tricolor Hoary Sunray, Grassland Paper-daisy [89104]	Endangered	Species or species habitat may occur within area
Lomatia tasmanica King's Lomatia [3745]	Critically Endangered	Species or species habitat known to occur within area
Persicaria elatior Knotweed, Tall Knotweed [5831]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phaius australis		
Lesser Swamp-orchid [5872]	Endangered	Species or species habitat may occur within area
Pimelea spinescens subsp. spinescens		
Plains Rice-flower, Spiny Rice-flower, Prickly Pimelea [21980]	Critically Endangered	Species or species habitat likely to occur within area
Pomaderris halmaturina subsp. halmaturina		
Kangaroo Island Pomaderris [21964]	Vulnerable	Species or species habitat known to occur within area
Pomaderris parrisiae		
Parris' Pomaderris [22119]	Vulnerable	Species or species habitat known to occur within area
Prasophyllum apoxychilum		
Tapered Leek-orchid [64947]	Endangered	Species or species habitat known to occur within area
Prasophyllum atratum		
Three Hummock Leek-orchid [82677]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum castaneum		
Chestnut Leek-orchid [64948]	Critically Endangered	Species or species habitat likely to occur within area
Prasophyllum diversiflorum		
Gorae Leek-orchid [13210]	Endangered	Species or species habitat likely to occur within area
Prasophyllum favonium		
Western Leek-orchid [64949]	Critically Endangered	Species or species habitat likely to occur within area
Prasophyllum frenchii		
Maroon Leek-orchid, Slaty Leek-orchid, Stout Leek-orchid, French's Leek-orchid, Swamp Leek-orchid [9704]	Endangered	Species or species habitat known to occur within area
Prasophyllum litorale listed as Prasophyllum littorale		
Coastal Leek Orchid [55234]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Prasophyllum pulchellum Pretty Leek-orchid [64953]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum secutum Northern Leek-orchid [64954]	Endangered	Species or species habitat likely to occur within area
Prasophyllum spicatum Dense Leek-orchid [55146]	Vulnerable	Species or species habitat known to occur within area
Pseudocephalozia paludicola Alpine Leafy Liverwort [66441]	Vulnerable	Species or species habitat likely to occur within area
Pterostylis chlorogramma Green-striped Greenhood [56510]	Vulnerable	Species or species habitat known to occur within area
Pterostylis cucullata Leafy Greenhood [15459]	Vulnerable	Species or species habitat known to occur within area
Pterostylis rubenachii Arthur River Greenhood [64536]	Endangered	Species or species habitat known to occur within area
Pterostylis tenuissima Swamp Greenhood, Dainty Swamp Orchid [13139]	Vulnerable	Species or species habitat known to occur within area
Pterostylis ziegeleri Grassland Greenhood, Cape Portland Greenhood [64971]	Vulnerable	Species or species habitat likely to occur within area
Rutidosis leptorhynchoides Button Wrinklewort [67251]	Endangered	Species or species habitat may occur within area
Senecio macrocarpus Large-fruit Fireweed, Large-fruit Groundsel [16333]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Senecio psilocarpus Swamp Fireweed, Smooth-fruited Groundsel [64976]	Vulnerable	Species or species habitat known to occur within area
Taraxacum cygnorum Coast Dandelion, Native Dandelion [2508]	Vulnerable	Species or species habitat known to occur within area
Thelymitra epipactoides Metallic Sun-orchid [11896]	Endangered	Species or species habitat known to occur within area
Thelymitra jonesii Sky-blue Sun-orchid [76352]	Endangered	Species or species habitat known to occur within area
Thelymitra matthewsii Spiral Sun-orchid [4168]	Vulnerable	Species or species habitat known to occur within area
Thesium australe Austral Toadflax, Toadflax [15202]	Vulnerable	Species or species habitat likely to occur within area
Xerochrysum palustre Swamp Everlasting, Swamp Paper Daisy [76215]	Vulnerable	Species or species habitat known to occur within area
REPTILE		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Carinascincus palfreymani Pedra Branca Skink, Pedra Branca Cool-skink, Red-throated Skink [90203]	Vulnerable	Species or species habitat known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Delma impar Striped Legless Lizard, Striped Snake-lizard [1649]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area
Tympanocryptis pinguicolla		
Victorian Grassland Earless Dragon [66727]	Endangered	Species or species habitat known to occur within area
SEASTAR		
Parvulastra vivipara		
Tasmanian Live-bearing Seastar [85451]	Vulnerable	Species or species habitat may occur within area
SHARK		
Carcharias taurus (east coast population)		
Grey Nurse Shark (east coast population) [68751]	Critically Endangered	Species or species habitat likely to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Centrophorus harrissoni		
Harrisson's Dogfish, Endeavour Dogfish, Dumb Gulper Shark, Harrison's Deepsea Dogfish [68444]	Conservation Dependent	Species or species habitat likely to occur within area
Centrophorus uyato listed as Centrophorus zeehaani		
Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Galeorhinus galeus		
School Shark, Eastern School Shark, Snapper Shark, Tope, Soupfin Shark [68453]	Conservation Dependent	Species or species habitat likely to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Zearaja maugeana Maugean Skate, Port Davey Skate [83504]	Endangered	Species or species habitat known to occur within area

Listed Migratory Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
Ardenna grisea Sooty Shearwater [82651]		Breeding known to occur within area
Ardenna tenuirostris Short-tailed Shearwater [82652]		Breeding known to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]		Breeding known to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche impavida		
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini		
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Migratory Marine Species		
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Caperea marginata		
Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus		
Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Eubalaena australis as Balaena glacialis australis		
Southern Right Whale [40]	Endangered	Breeding known to occur within area
Isurus oxyrinchus		
Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus		
Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus		
Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area
Phocoena dioptrica Spectacled Porpoise [66728]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Terrestrial Species		
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
Monarcha melanopsis Black-faced Monarch [609]		Species or species habitat known to occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat known to occur within area
Myiagra cyanoleuca Satin Flycatcher [612]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Rhipidura rufifrons		
Rufous Fantail [592]		Species or species habitat known to occur within area
Symposiachrus trivirgatus as Monarcha trivirgatus		
Spectacled Monarch [83946]		Species or species habitat known to occur within area
Migratory Wetlands Species		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat known to occur within area
Arenaria interpres		
Ruddy Turnstone [872]		Roosting known to occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]		Roosting known to occur within area
Calidris alba		
Sanderling [875]		Roosting known to occur within area
Calidris canutus		
Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos		
Pectoral Sandpiper [858]		Species or species habitat known to occur within area
Calidris ruficollis		
Red-necked Stint [860]		Roosting known to occur within area
Calidris tenuirostris		
Great Knot [862]	Critically Endangered	Roosting known to occur within area
Charadrius bicinctus		
Double-banded Plover [895]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting known to occur within area
Limicola falcinellus Broad-billed Sandpiper [842]		Roosting known to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Philomachus pugnax Ruff (Reeve) [850]		Roosting known to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting known to occur within area
Pluvialis squatarola Grey Plover [865]		Roosting known to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Roosting known to occur within area
Tringa glareola Wood Sandpiper [829]		Roosting known to occur within area
Tringa incana Wandering Tattler [831]		Roosting known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area
Xenus cinereus Terek Sandpiper [59300]		Roosting known to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Anseranas semipalmata Magpie Goose [978]		Species or species habitat may occur within area overfly marine area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
Ardenna grisea as Puffinus griseus Sooty Shearwater [82651]		Breeding known to occur within area
Ardenna tenuirostris as Puffinus tenuirostris Short-tailed Shearwater [82652]		Breeding known to occur within area
Arenaria interpres Ruddy Turnstone [872]		Roosting known to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]		Roosting known to occur within area
Calidris alba Sanderling [875]		Roosting known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris tenuirostris		
Great Knot [862]	Critically Endangered	Roosting known to occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans		
Black-eared Cuckoo [83425]		Species or species habitat known to occur within area overfly marine area
Charadrius bicinctus		
Double-banded Plover [895]		Roosting known to occur within area overfly marine area
Charadrius leschenaultii		
Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus		
Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Charadrius ruficapillus		
Red-capped Plover [881]		Roosting known to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae		
Silver Gull [82326]		Breeding known to occur within area
Diomedea antipodensis		
Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea antipodensis gibsoni as Diomedea gibsoni		
Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora		
Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans		
Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Eudyptula minor Little Penguin [1085]		Breeding known to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area overfly marine area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting known to occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Breeding known to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting known to occur within area overfly marine area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding known to occur within area
Larus dominicanus Kelp Gull [809]		Breeding known to occur within area
Larus pacificus Pacific Gull [811]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Lathamus discolor Swift Parrot [744]	Critically Endangered	Breeding known to occur within area overfly marine area
Limicola falcinellus Broad-billed Sandpiper [842]		Roosting known to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area overfly marine area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Monarcha melanopsis Black-faced Monarch [609]		Species or species habitat known to occur within area overfly marine area
Morus capensis Cape Gannet [59569]		Breeding known to occur within area
Morus serrator Australasian Gannet [1020]		Breeding known to occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Myiagra cyanoleuca Satin Flycatcher [612]		Breeding known to occur within area overfly marine area
Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area overfly marine area
Neophema chrysostoma Blue-winged Parrot [726]		Species or species habitat known to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding known to occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area
Pelagodroma marina White-faced Storm-Petrel [1016]		Breeding known to occur within area
Pelecanoides urinatrix Common Diving-Petrel [1018]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phalacrocorax fuscescens Black-faced Cormorant [59660]		Breeding known to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Roosting known to occur within area
Philomachus pugnax Ruff (Reeve) [850]		Roosting known to occur within area overfly marine area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting known to occur within area
Pluvialis squatarola Grey Plover [865]		Roosting known to occur within area overfly marine area
Pterodroma macroptera Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Breeding known to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting known to occur within area overfly marine area
Rhipidura rufifrons Rufous Fantail [592]		Species or species habitat known to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Stercorarius skua as Catharacta skua Great Skua [823]		Species or species habitat may occur within area
Sterna striata White-fronted Tern [799]		Breeding known to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]		Breeding known to occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding known to occur within area
Stiltia isabella Australian Pratincole [818]		Roosting known to occur within area overfly marine area
Symposiachrus trivirgatus as Monarcha trivirgatus Spectacled Monarch [83946]		Species or species habitat known to occur within area overfly marine area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei as Thalassarche sp. nov. Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding known to occur within area
Thinornis cucullatus as Thinornis rubricollis Hooded Plover, Hooded Dotterel [87735]		Species or species habitat known to occur within area overfly marine area
Thinornis cucullatus cucullatus as Thinornis rubricollis rubricollis Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Tringa brevipes as Heteroscelus brevipes Grey-tailed Tattler [851]		Roosting known to occur within area
Tringa glareola Wood Sandpiper [829]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Tringa incana as Heteroscelus incanus Wandering Tattler [831]		Roosting known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area overfly marine area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area overfly marine area
Xenus cinereus Terek Sandpiper [59300]		Roosting known to occur within area overfly marine area
Fish		
Acentronura australe Southern Pygmy Pipehorse [66185]		Species or species habitat may occur within area
Acentronura tentaculata Shortpouch Pygmy Pipehorse [66187]		Species or species habitat may occur within area
Campichthys tryoni Tryon's Pipefish [66193]		Species or species habitat may occur within area
Cosmocampus howensis Lord Howe Pipefish [66208]		Species or species habitat may occur within area
Heraldia nocturna Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
Hippocampus abdominalis Big-belly Seahorse, Eastern Potbelly Seahorse, New Zealand Potbelly Seahorse [66233]		Species or species habitat may occur within area
Hippocampus breviceps Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus minotaur Bullneck Seahorse [66705]		Species or species habitat may occur within area
Histiogamphelus briggsii Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area
Histiogamphelus cristatus Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
Hypselognathus rostratus Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area
Kaupus costatus Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area
Kimblaeus bassensis Trawl Pipefish, Bass Strait Pipefish [66247]		Species or species habitat may occur within area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Mitotichthys mollisoni Mollison's Pipefish [66260]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Mitotichthys semistriatus Halfbanded Pipefish [66261]		Species or species habitat may occur within area
Mitotichthys tuckeri Tucker's Pipefish [66262]		Species or species habitat may occur within area
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus robustus Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area
Solegnathus spinosissimus Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Stipecampus cristatus Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Vanacampus phillipi Port Phillip Pipefish [66284]		Species or species habitat may occur within area
Vanacampus poecilolaemus Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Vanacampus vercoi Verco's Pipefish [66286]		Species or species habitat may occur within area
Mammal		
Arctocephalus forsteri Long-nosed Fur-seal, New Zealand Fur-seal [20]		Breeding known to occur within area
Arctocephalus pusillus Australian Fur-seal, Australo-African Fur-seal [21]		Breeding known to occur within area
Mirounga leonina Southern Elephant Seal [26]	Vulnerable	Breeding may occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Reptile		

Scientific Name	Threatened Category	Presence Text
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area

Whales and Other Cetaceans [Resource Information]

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata		
Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Berardius arnuxii Arnoux's Beaked Whale [70]		Species or species habitat may occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding known to occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Globicephala melas Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Hyperoodon planifrons Southern Bottlenose Whale [71]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Kogia sima as Kogia simus Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lissodelphis peronii Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Mesoplodon hectori Hector's Beaked Whale [76]		Species or species habitat may occur within area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area
Phocoena dioptrica Spectacled Porpoise [66728]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Tasmacetus shepherdi Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Critical Habitats [Resource Information]

Name	Type of Presence
Thalassarche cauta (Shy Albatross) - Albatross Island, The Mewstone, Pedra Branca	Listed Critical Habitat

Australian Marine Parks [Resource Information]

Park Name	Zone & IUCN Categories
Huon	Habitat Protection Zone (IUCN IV)
Murray	Marine National Park Zone (IUCN II)

Park Name	Zone & IUCN Categories
Tasman Fracture	Marine National Park Zone (IUCN II)
Apollo	Multiple Use Zone (IUCN VI)
Beagle	Multiple Use Zone (IUCN VI)
Boags	Multiple Use Zone (IUCN VI)
East Gippsland	Multiple Use Zone (IUCN VI)
Franklin	Multiple Use Zone (IUCN VI)
Huon	Multiple Use Zone (IUCN VI)

Key Ecological Features

[Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Big Horseshoe Canyon	South-east
Bonney Coast Upwelling	South-east
Canyons on the eastern continental slope	Temperate east
Seamounts South and east of Tasmania	South-east
Upwelling East of Eden	South-east
West Tasmania Canyons	South-east

Biologically Important Areas

Scientific Name	Behaviour	Presence
Dolphins		
Tursiops aduncus Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Likely to occur
Seabirds		
Ardenna carneipes Flesh-footed Shearwater [82404]	Foraging	Known to occur
Ardenna grisea Sooty Shearwater [82651]	Breeding	Known to occur
Ardenna grisea Sooty Shearwater [82651]	Foraging	Likely to occur

Scientific Name	Behaviour	Presence
Ardenna grisea Sooty Shearwater [82651]	Foraging	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Foraging	Likely to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Breeding	Known to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Likely to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Known to occur
Diomedea exulans (sensu lato) Wandering Albatross [1073]	Foraging	Likely to occur
Diomedea exulans (sensu lato) Wandering Albatross [1073]	Foraging	Known to occur
Diomedea exulans antipodensis Antipodean Albatross [82269]	Foraging	Known to occur
Eudyptula minor Little Penguin [1085]	Breeding	Known to occur
Eudyptula minor Little Penguin [1085]	Foraging	Known to occur
Macronectes giganteus Southern Giant Petrel [1060]	Foraging	Known to occur
Macronectes halli Northern Giant Petrel [1061]	Foraging	Known to occur
Morus serrator Australasian Gannet [1020]	Aggregation	Known to occur
Morus serrator Australasian Gannet [1020]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Oceanites oceanites Wilsons Storm Petrel [1034]	Migration	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Breeding	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Foraging	Known to occur
Pelecanoides urinatrix Common Diving-petrel [1018]	Breeding	Known to occur
Pelecanoides urinatrix Common Diving-petrel [1018]	Foraging	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Breeding	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Foraging	Likely to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Foraging	Known to occur
Procellaria parkinsoni Black Petrel [1048]	Foraging	Likely to occur
Pterodroma macroptera Great-winged Petrel [1035]	Foraging	Likely to occur
Pterodroma mollis Soft-plumaged Petrel [1036]	Breeding	Known to occur
Pterodroma mollis Soft-plumaged Petrel [1036]	Foraging	Known to occur
Sterna striata White-fronted Tern [799]	Foraging	Known to occur
Thalassarche bulleri Bullers Albatross [64460]	Foraging	Known to occur
Thalassarche cauta cauta Shy Albatross [82345]	Breeding	Known to occur

Scientific Name	Behaviour	Presence
Thalassarche cauta cauta Shy Albatross [82345]	Foraging likely	Likely to occur
Thalassarche cauta steadi White-capped Albatross [82344]	Foraging	Known to occur
Thalassarche chlororhynchos bassi Indian Yellow-nosed Albatross [85249]	Foraging	Known to occur
Thalassarche chlororhynchos bassi Indian Yellow-nosed Albatross [85249]	Foraging likely	Likely to occur
Thalassarche melanophris Black-browed Albatross [66472]	Foraging	Known to occur
Thalassarche melanophris impavida Campbell Albatross [82449]	Foraging	Known to occur
Thalassarche melanophris impavida Campbell Albatross [82449]	Foraging	Likely to occur
Thalasseus bergii Crested Tern [83000]	Foraging	Likely to occur
Seals		
Neophoca cinerea Australian Sea Lion [22]	Foraging (male)	Known to occur
Neophoca cinerea Australian Sea Lion [22]	Foraging (male and female)	Known to occur
Sharks		
Carcharias taurus Grey Nurse Shark [64469]	Foraging	Known to occur
Carcharias taurus Grey Nurse Shark [64469]	Migration	Known to occur
Carcharodon carcharias White Shark [64470]	Breeding (nursery area)	Known to occur
Carcharodon carcharias White Shark [64470]	Distribution	Likely to occur

Scientific Name	Behaviour	Presence
Carcharodon carcharias White Shark [64470]	Distribution	Known to occur
Carcharodon carcharias White Shark [64470]	Distribution (low density)	Likely to occur
Carcharodon carcharias White Shark [64470]	Foraging	Known to occur
Carcharodon carcharias White Shark [64470]	Known distribution	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging (abundant food source)	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging (annual high use area)	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Known Foraging Area	Known to occur
Eubalaena australis Southern Right Whale [40]	Aggregation	Known to occur
Eubalaena australis Southern Right Whale [40]	Breeding likely	Known to occur
Eubalaena australis Southern Right Whale [40]	Connecting habitat	Known to occur
Eubalaena australis Southern Right Whale [40]	Known core range	Known to occur

Scientific Name	Behaviour	Presence
Eubalaena australis Southern Right Whale [40]	Migration and resting on migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Foraging	Known to occur
Physeter macrocephalus Sperm Whale [59]	Foraging likely (abundant food source)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

- -Office of Environment and Heritage, New South Wales
- -Department of Environment and Primary Industries, Victoria
- -Department of Primary Industries, Parks, Water and Environment, Tasmania
- -Department of Environment, Water and Natural Resources, South Australia
- -Department of Land and Resource Management, Northern Territory

Electroma papilionacea	Bivalvia	Ostreida	Pteriidae	Electroma	Wing Shell
Tawera lagopus	Bivalvia	Cardiida	Veneridae	Tawera	Venus Cockle
Saccella crassa	Bivalvia	Nuculanida	Nuculanidae	Saccella	Heavy Nut Shell
Cardiolucina crassilirata	Bivalvia	Lucinida	Lucinidae	Cardiolucina	Densely Striated Lucina
Venerupis (Paphirus) anomala	Bivalvia	Cardiida	Veneridae	Venerupis	Venus Cockle
Gari (Psammobia) livida	Bivalvia	Cardiida	Psammobiidae	Gari	Bivalve
Arthritica semen	Bivalvia	Cardiida	Lasaeidae	Arthritica	
Mactra (Nannomactra) jacksonensis	Bivalvia	Cardiida	Mactridae	Mactra	Clam
Musculus (Modiolarca) cumingianus	Bivalvia	Mytilida	Mytilidae	Musculus	Mussel
Spisula trigonella	Bivalvia	Cardiida	Mactridae	Spisula	Clam
Tellinota albinella	Bivalvia	Cardiida	Tellinidae	Tellinota	Little White Tellen
Gari (Gari) modesta	Bivalvia	Cardiida	Psammobiidae	Gari	Bivalve
Lissarca rhomboidalis	Bivalvia	Arcida	Philobryidae	Lissarca	Rhomboid Lissarca
Bassina (Bassina) pachyphylla	Bivalvia	Cardiida	Veneridae	Bassina	Faint-frilled Venus Shell
Gaimardia tasmanica	Bivalvia		Gaimardiidae	Gaimardia	Bivalve
Notochlamys hexactes	Bivalvia	Pectinida	Pectinidae	Notochlamys	Scallop
Atrina (Atrina) tasmanica	Bivalvia	Ostreida	Pinnidae	Atrina	Tasmanian Razor Shell
Limopsis (Glycilima) penelevis	Bivalvia	Arcida	Limopsidae	Limopsis	Bivalve
Xenostrobus securis	Bivalvia	Mytilida	Mytilidae	Xenostrobus	Little Brown Mussel
Gibbomodiola albicostus	Bivalvia	Mytilida	Mytilidae	Gibbomodiola	Narrow Horse Mussel
Lissarca rubricata	Bivalvia	Arcida	Philobryidae	Lissarca	Bivalve
Mactra (Mactra) australis	Bivalvia	Cardiida	Mactridae	Mactra	Southern Trough Shell
Glycymeris (Glycymeris) grayana	Bivalvia	Arcida	Glycymerididae	Glycymeris	Shiny Dog Cockle
Trichomya hirsuta	Bivalvia	Mytilida	Mytilidae	Trichomya	Hairy Mussel
Glycymeris (Tucetilla) mayi	Bivalvia	Arcida	Glycymerididae	Glycymeris	Dog Cokle
Condylocardia notoaustralis	Bivalvia	Carditida	Condylocardiidae	Condylocardia	Bivalve
Hiatula alba	Bivalvia	Cardiida	Psammobiidae	Hiatula	Bivalve
Notocallista kingii	Bivalvia	Cardiida	Veneridae	Notocallista	King's Venus Shell
Eumarcia fumigata	Bivalvia	Cardiida	Veneridae	Eumarcia	Shining Venus Shell
Vulsella ovata	Bivalvia	Ostreida	Pteriidae	Vulsella	Southern Sponge Finger
Hyridella (Hyridella) narracanensis	Bivalvia	Unionida	Hyriidae	Hyridella	Freshwater Mussel
Cuna delta	Bivalvia	Carditida	Condylocardiidae	Cuna	Bivalve
Paphies (Amesodesma) elongata	Bivalvia	Cardiida	Mesodesmatidae	Paphies	Narrow Wedge Shell
Irus (Irus) crenatus	Bivalvia	Cardiida	Veneridae	Irus	Boring Venus Shell
Cleidothaerus albidus	Bivalvia		Cleidothaeridae	Cleidothaerus	White Cleidothaerus
Purpurocardia purpurata	Bivalvia	Carditida	Carditidae	Purpurocardia	Cockle
Atactodea cuneata	Bivalvia	Cardiida	Mesodesmatidae	Atactodea	Surf Clam
Xenostrobus inconstans	Bivalvia	Mytilida	Mytilidae	Xenostrobus	Variable Brown Mussel
Cuna concentrica	Bivalvia	Carditida	Condylocardiidae	Cuna	Bivalve
Glycymeris (Glycymeris) radians	Bivalvia	Arcida	Glycymerididae	Glycymeris	The Radiating Pectunculus
Vimentum dilectum	Bivalvia	Carditida	Carditidae	Vimentum	Cockle
Gomphina undulosa	Bivalvia	Cardiida	Veneridae	Gomphina	Waved Venus
Scintillula solida	Bivalvia	Cardiida	Galeommatidae	Scintillula	
Dosinia (Bonartemis) victoriae	Bivalvia	Cardiida	Veneridae	Dosinia	Venus Cockle
Cunanax compressa	Bivalvia	Carditida	Condylocardiidae	Cunanax	Bivalve
Barnea (Anchomasa) obturamentum	Bivalvia	Myida	Pholadidae	Barnea	Tongue-shaped Angel's Wing
Semipallium aktinos	Bivalvia	Pectinida	Pectinidae	Semipallium	Atkins' Fan Scallop

Purpurocardia cavatica	Bivalvia	Carditida	Carditidae	Purpurocardia	Cockle
Gaimardia rostellata	Bivalvia		Gaimardiidae	Gaimardia	Bivalve
Dosinia (Asa) caerulea	Bivalvia	Cardiida	Veneridae	Dosinia	Surf Clam
Montacuta semiradiata	Bivalvia	Cardiida	Lasaeidae	Montacuta	Bivalve
Limopsis (Versipella) soboles	Bivalvia	Arcida	Limopsidae	Limopsis	Bivalve
Magallana gigas	Bivalvia	Ostreida	Ostreidae	Magallana	Pacific Oyster
Barnea (Barnea) australasiae	Bivalvia	Myida	Pholadidae	Barnea	Piddock
Reloncavia mactroides	Bivalvia		Cyamiidae	Reloncavia	Bivalve
Lima (Lima) nimbifer	Bivalvia	Limida	Limidae	Lima	File Clam
Myllita (Myllita) tasmanica	Bivalvia	Cardiida	Lasaeidae	Myllita	Tasmanian Myllita
Pseudarcopagia victoriae	Bivalvia	Cardiida	Tellinidae	Pseudarcopagia	Victorian Tellen
Solemya (Austrosolemya) australis	Bivalvia	Solemyida	Solemyidae	Solemya	Date Shell
Poroleda spathula	Bivalvia	Nuculanida	Nuculanidae	Poroleda	Spathula Nut Shell
Mesopeplum fenestratum	Bivalvia	Pectinida	Pectinidae	Mesopeplum	Scallop
Pisidium (Euglesa) tasmanicum	Bivalvia		Sphaeriidae	Pisidium	Freshwater Cockle
Anapella cycladea	Bivalvia	Cardiida	Mesodesmatidae	Anapella	Surf Clam
Equichlamys bifrons	Bivalvia	Pectinida	Pectinidae	Equichlamys	Common Scallop
Myadora complexa	Bivalvia		Myochamidae	Myadora	Bivalve
Atactodea erycinaea	Bivalvia	Cardiida	Mesodesmatidae	Atactodea	Surf Clam
Monia (Monia) zelandica	Bivalvia	Pectinida	Anomiidae	Monia	Jingle Shell
Saccostrea cucullata	Bivalvia	Ostreida	Ostreidae	Saccostrea	
Myrtea botanica	Bivalvia	Lucinida	Lucinidae	Myrtea	
Katelysia peronii	Bivalvia	Cardiida	Veneridae	Katelysia	Peron's Venerid
Corbicula (Corbiculina) australis	Bivalvia	Cardiida	Cyrenidae	Corbicula	Freshwater Cockle
Cunanax subradiata	Bivalvia	Carditida	Condylocardiidae	Cunanax	Bivalve
Condylocuna projecta	Bivalvia	Carditida	Condylocardiidae	Condylocuna	Bivalve
Bathycardita raouli	Bivalvia	Carditida	Carditidae	Bathycardita	Cockle
Sunetta (Sunemeroe) vaginalis	Bivalvia	Cardiida	Veneridae	Sunetta	Venus Cockle
Condylocardia rectangularis	Bivalvia	Carditida	Condylocardiidae	Condylocardia	Bivalve
Dosinia (Asa) crocea	Bivalvia	Cardiida	Veneridae	Dosinia	
Diplodonta (Zemysina) tasmanica	Bivalvia		Ungulinidae	Diplodonta	Tasmanian Globe Shell
Pseudarcopagia botanica	Bivalvia	Cardiida	Tellinidae	Pseudarcopagia	
Laternula (Laternula) tasmanica	Bivalvia		Laternulidae	Laternula	Lantern Shell
Notopaphia grisea	Bivalvia	Cardiida	Veneridae	Notopaphia	Venus Cockle
Musculium (Sphaerinova) tasmanicum	Bivalvia		Sphaeriidae	Musculium	
Gari (Psammobia) kenyoniana	Bivalvia	Cardiida	Psammobiidae	Gari	Bivalve
Corbula tunicata	Bivalvia	Myida	Corbulidae	Corbula	Swollen Little Basket Shell
Veprichlamys perillustris	Bivalvia	Pectinida	Pectinidae	Veprichlamys	Scallop
Corbula smithiana	Bivalvia	Myida	Corbulidae	Corbula	Cockle
Myadora brevis	Bivalvia		Myochamidae	Myadora	Bivalve
Cyamium communis	Bivalvia		Cyamiidae	Cyamium	Bivalve
Felaniella (Zemysia) globularis	Bivalvia		Ungulinidae	Felaniella	Bivalve
Saccella dohrni	Bivalvia	Nuculanida	Nuculanidae	Saccella	Beaked Cockle
Thracia (Eximiothracia) lincolnensis	Bivalvia		Thraciidae	Thracia	Bivalve
Delectopecten fosterianus	Bivalvia	Pectinida	Pectinidae	Delectopecten	Scallop
Propeleda (Propeleda) ensicula	Bivalvia	Nuculanida	Nuculanidae	Propeleda	Sword Nut Shell
Limea (Gemellima) austrina	Bivalvia	Limida	Limidae	Limea	File Clam
Laternula (Laternula) creccina	Bivalvia		Laternulidae	Laternula	Lantern Clam
Zygochlamys delicatula	Bivalvia	Pectinida	Pectinidae	Zygochlamys	Scallop
Tellinides margaritinus	Bivalvia	Cardiida	Tellinidae	Tellinides	Bivalve

Mactrotoma antecedens	Bivalvia	Cardiida	Mactridae	Mactrotoma	Oval-shaped Trough Shell
Condylocardia pectinata	Bivalvia	Carditida	Condylocardiidae	Condylocardia	Bivalve
Divalucina cumingi	Bivalvia	Lucinida	Lucinidae	Divalucina	Cockle
Cuspidaria exarata	Bivalvia		Cuspidariidae	Cuspidaria	Spout-like Cuspidaria
Anomia trigonopsis	Bivalvia	Pectinida	Anomiidae	Anomia	Jingle Shell
Poromya illevis	Bivalvia		Poromyidae	Poromya	Bivalve
Mytilus planulatus	Bivalvia	Mytilida	Mytilidae	Mytilus	Edible Mussel
Solemya (Solemyarina) velesiana	Bivalvia	Solemyida	Solemyidae	Solemya	Date Shell

Parathyasira resupina	Bivalvia	Lucinida	Thyasiridae	Parathyasira	Bivalve
Cuspidaria latesulcata	Bivalvia		Cuspidariidae	Cuspidaria	Bivalve

Warrana cessens	Bivalvia	Carditida	Condylocardiidae	Warrana	Bivalve
Acesta (Acesta) saginata	Bivalvia	Limida	Limidae	Acesta	File Clam
Saccella caloundra	Bivalvia	Nuculanida	Nuculanidae	Saccella	Beaked Cockle
Proxichione materna	Bivalvia	Cardiida	Veneridae	Proxichione	
Cyclochlamys nepeanensis	Bivalvia	Pectinida	Cyclochlamydidae	Cyclochlamys	Deepwater Scallop
Timoclea scabra	Bivalvia	Cardiida	Veneridae	Timoclea	Rough Venus
Pandora (Frenamya) aversus	Bivalvia		Pandoridae	Pandora	Bivalve
Pinguitellina robusta	Bivalvia	Cardiida	Tellinidae	Pinguitellina	Robust Tellen
Pisidium (Afropisidium) aslini	Bivalvia		Sphaeriidae	Pisidium	Freshwater Cockle
Hunkydora australica	Bivalvia		Myochamidae	Hunkydora	Bivalve
Propeamussium meridionale	Bivalvia	Pectinida	Propeamussiidae	Propeamussium	Deepwater Scallop
Tridacna (Chametrachea) maxima	Bivalvia	Cardiida	Cardiidae	Tridacna	Giant Clam
Samacar strabo	Bivalvia	Arcida	Arcidae	Samacar	Ark Shell
Carditella subtrigona	Bivalvia	Carditida	Condylocardiidae	Carditella	Bivalve
Channelaxinus adelaideanus	Bivalvia	Lucinida	Thyasiridae	Channelaxinus	
Modiolus peronianus	Bivalvia	Mytilida	Mytilidae	Modiolus	Mussel
Limatula powelli	Bivalvia	Limida	Limidae	Limatula	File Clam
Lamellileda typica	Bivalvia	Nuculanida	Nuculanidae	Lamellileda	Beaked Cockle
Micropolia typica	Bivalvia	Cardiida	Neoleptonidae	Micropolia	Bivalve
Lasaea purpurata	Bivalvia	Cardiida	Lasaeidae	Lasaea	
Ciboticola lunata	Bivalvia	Mytilida	Mytilidae	Ciboticola	Shell-clinging Mussel
Talabrica carnea	Bivalvia	Carditida	Crassatellidae	Talabrica	Cockle
Barbatia (Cucullaearca) foliata	Bivalvia	Arcida	Arcidae	Barbatia	Ark Shell
Vermitexta garrardi	Bivalvia	Cardiida	Galeommatidae	Vermitexta	Bivalve
Dosinia (Fallartemis) sculpta	Bivalvia	Cardiida	Veneridae	Dosinia	Sculptured Dosinia
Jolya arata	Bivalvia	Mytilida	Mytilidae	Jolya	The Furrowed Modiola
Pulvinites exempla	Bivalvia	Ostreida	Pulvinitidae	Pulvinites	Bivalve
Tucetona broadfooti	Bivalvia	Arcida	Glycymerididae	Tucetona	Dog Cokle
Ennucula flindersi	Bivalvia	Nuculida	Nuculidae	Ennucula	
Cunanax pisum	Bivalvia	Carditida	Condylocardiidae	Cunanax	Bivalve
Arcuatula glaberrima	Bivalvia	Mytilida	Mytilidae	Arcuatula	Mussel
Rhinoclama simulans	Bivalvia		Cuspidariidae	Rhinoclama	Bivalve
Cunanax crassidentata	Bivalvia	Carditida	Condylocardiidae	Cunanax	Bivalve
Nuculana (Nuculana) ramsayi	Bivalvia	Nuculanida	Nuculanidae	Nuculana	Beaked Cockle
Felaniella (Zemysia) sublateralis	Bivalvia		Ungulinidae	Felaniella	Bivalve
Solamen spectabilis	Bivalvia	Mytilida	Mytilidae	Solamen	Mussel
Neotrigonia strangei	Bivalvia	Trigoniida	Trigoniidae	Neotrigonia	Strange's Trigonia
Benthocardiella burtonae	Bivalvia	Carditida	Condylocardiidae	Benthocardiella	Bivalve
Gafrarium (Gafrarium) pectinatum	Bivalvia	Cardiida	Veneridae	Gafrarium	Comb Circe
Donax (Deltachion) brazieri	Bivalvia	Cardiida	Donacidae	Donax	Brazier's Wedge Shell
Nototodarus gouldi	Cephalopoda	Teuthida	Ommastrephidae	Nototodarus	Red Arrow Squid
Sepioteuthis australis	Cephalopoda	Teuthida	Loliginidae	Sepioteuthis	Southern Calamari
Euprymna tasmanica	Cephalopoda	Sepiolida	Sepiolidae	Euprymna	Southern Bobtail Squid
Sepia apama	Cephalopoda	Sepiida	Sepiidae	Sepia	Giant Cuttlefish
Hapalochlaena maculosa	Cephalopoda	Octopoda	Octopodidae	Hapalochlaena	Southern Blue-ringed Octopus
Xipholeptos notoides	Cephalopoda	Sepiolida	Idiosepiidae	Xipholeptos	Southern Pygmy Squid
Octopus pallidus	Cephalopoda	Octopoda	Octopodidae	Octopus	Pale Octopus
Sepia hedleyi	Cephalopoda	Sepiida	Sepiidae	Sepia	King Cuttlefish
Sepia novaehollandiae	Cephalopoda	Sepiida	Sepiidae	Sepia	Cuttlefish
Sepia braggi	Cephalopoda	Sepiida	Sepiidae	Sepia	Bragg's Cuttlefish

Octopus berrima	Cephalopoda	Octopoda	Octopodidae	Octopus	Octopus
Argonauta nodosus	Cephalopoda	Octopoda	Argonautidae	Argonauta	Argonaut
Macroctopus maorum	Cephalopoda	Octopoda	Octopodidae	Pinnoctopus	Maori Octopus
Octopus kaurna	Cephalopoda	Octopoda	Octopodidae	Octopus	Southern Sand Octopus
Sepia cultrata	Cephalopoda	Sepiida	Sepiidae	Sepia	Knifebone Cuttlefish
Sepiadarium austrinum	Cephalopoda	Sepiida	Sepiadariidae	Sepiadarium	Southern Bottletail Squid
Spirula spirula	Cephalopoda	Sepiida	Spirulidae	Spirula	Rams-horn Squid
Octopus maorum	Cephalopoda	Octopoda	Octopodidae	Octopus	Maori Octopus
Austrorossia australis	Cephalopoda	Sepiolida	Sepiolidae	Austrorossia	Dumpling Squid
Abraliopsis gilchristi	Cephalopoda	Teuthida	Enoploteuthidae	Abraliopsis	Armed Squid
Callistoctopus bunurong	Cephalopoda	Octopoda	Octopodidae	Callistoctopus	Southern White-spot Octopus
Architeuthis dux	Cephalopoda	Teuthida	Architeuthidae	Architeuthis	Giant Squid
Opisthoteuthis persephone	Cephalopoda	Octopoda	Opisthoteuthidae	Opisthoteuthis	Jelly Octopod
Histioteuthis atlantica	Cephalopoda	Teuthida	Histioteuthidae	Histioteuthis	Squid
Lycoteuthis lorigera	Cephalopoda	Teuthida	Lycoteuthidae	Lycoteuthis	Squid
Enoploteuthis galaxias	Cephalopoda	Teuthida	Enoploteuthidae	Enoploteuthis	Squid
Neorossia leptodons	Cephalopoda	Sepiolida	Sepiolidae	Neorossia	Dumpling Squid
Teuthowenia pellucida	Cephalopoda	Teuthida	Cranchiidae	Teuthowenia	Squid
Octopus superciliosus	Cephalopoda	Octopoda	Octopodidae	Octopus	Frilled Pygmy Octopus
Octopus warringa	Cephalopoda	Octopoda	Octopodidae	Octopus	Club Pygmy Octopus
Pinnoctopus cordiformis	Cephalopoda	Octopoda	Octopodidae	Pinnoctopus	
Octopus australis	Cephalopoda	Octopoda	Octopodidae	Octopus	Southern Octopus
Pyroteuthis margaritifera	Cephalopoda	Teuthida	Pyroteuthidae	Pyroteuthis	Squid
Uroteuthis (Aestuariolus) noctiluca	Cephalopoda	Teuthida	Loliginidae	Uroteuthis	Luminous Bay Squid
Heteroteuthis (Stephanoteuthis) serventyi	Cephalopoda	Sepiolida	Sepiolidae	Heteroteuthis	Dumpling Squid
Todarodes filippovae	Cephalopoda	Teuthida	Ommastrephidae	Todarodes	Southern Ocean Arrow Squid
Ocythoe tuberculata	Cephalopoda	Octopoda	Ocythoidae	Ocythoe	Argonautoid Octopod
Histioteuthis miranda	Cephalopoda	Teuthida	Histioteuthidae	Histioteuthis	Squid
Brachioteuthis riisei	Cephalopoda	Teuthida	Brachioteuthidae	Brachioteuthis	Squid
Octopus tetricus	Cephalopoda	Octopoda	Octopodidae	Octopus	Gloomy Octopus
Histioteuthis macrohista	Cephalopoda	Teuthida	Histioteuthidae	Histioteuthis	Jewel Squid
Chiroteuthis veranyi	Cephalopoda	Teuthida	Chiroteuthidae	Chiroteuthis	Squid
Onykia robsoni	Cephalopoda	Teuthida	Onychoteuthidae	Onykia	Squid
Sepiolina nipponensis	Cephalopoda	Sepiolida	Sepiolidae	Sepiolina	Dumpling Squid
Pholidoteuthis massyae	Cephalopoda	Teuthida	Pholidoteuthidae	Pholidoteuthis	Squid
Moroteuthis ingens	Cephalopoda	Teuthida	Onychoteuthididae	Moroteuthis	
Mesonychoteuthis hamiltoni	Cephalopoda	Teuthida	Cranchiidae	Mesonychoteuthis	Antarctic Cranch Squid
Ancistrocheirus lesueuri	Cephalopoda	Teuthida	Ancistrocheiridae	Ancistrocheirus	Sharpear Enope Squid
Cranchia scabra	Cephalopoda	Teuthida	Cranchiidae	Cranchia	Squid
Amphitretus pelagicus	Cephalopoda	Octopoda	Amphitretidae	Amphitretus	Telescope Octopus
Helicocranchia pfefferi	Cephalopoda	Teuthida	Cranchiidae	Helicocranchia	Squid
Opisthoteuthis pluto	Cephalopoda	Octopoda	Opisthoteuthidae	Opisthoteuthis	Jelly Octopod
Lepidoteuthis grimaldii	Cephalopoda	Teuthida	Lepidoteuthidae	Lepidoteuthis	Scaled Squid
Mastigoteuthis agassizii	Cephalopoda	Teuthida	Mastigoteuthidae	Mastigoteuthis	
Ommastrephes bartramii	Cephalopoda	Teuthida	Ommastrephidae	Ommastrephes	Red Ocean Squid
Pholidoteuthis boschmai	Cephalopoda	Teuthida	Pholidoteuthidae	Pholidoteuthis	
Bathothauma lyromma	Cephalopoda	Teuthida	Cranchiidae	Bathothauma	Squid
Mastigoteuthis cordiformis	Cephalopoda	Teuthida	Mastigoteuthidae	Mastigoteuthis	
Sepia grahami	Cephalopoda	Sepiida	Sepiidae	Sepia	Ken's Cuttlefish
Todaropsis eblanae	Cephalopoda	Teuthida	Ommastrephidae	Todaropsis	Lesser Flying Squid

Histioteuthis bonnellii	Cephalopoda	Teuthida	Histioteuthidae	Histioteuthis	Squid
Grimpella thaumastocheir	Cephalopoda	Octopoda	Octopodidae	Grimpella	Velvet Octopus
Vampyroteuthis infernalis	Cephalopoda	Vampyromorpha	Vampyroteuthidae	Vampyroteuthis	Vampire Squid
Pterygioteuthis gemmata	Cephalopoda	Teuthida	Pyroteuthidae	Pterygioteuthis	Squid
Sepioloidea lineolata	Cephalopoda	Sepiida	Sepiadariidae	Sepioloidea	Striped Pyjama Squid
Argonauta argo	Cephalopoda	Octopoda	Argonautidae	Argonauta	Argonaut
Histioteuthis eltaninae	Cephalopoda	Teuthida	Histioteuthidae	Histioteuthis	Squid
Octopoteuthis rugosa	Cephalopoda	Teuthida	Octopoteuthidae	Octopoteuthis	Squid
Nautilus macromphalus	Cephalopoda	Nautilida	Nautilidae	Nautilus	Chambered Nautilus
Onykia loennbergii	Cephalopoda	Teuthida	Onychoteuthidae	Onykia	Hooked Squid
Discoteuthis laciniosa	Cephalopoda	Teuthida	Cycloteuthidae	Discoteuthis	Squid
Abraliopsis tui	Cephalopoda	Teuthida	Enoploteuthidae	Abraliopsis	Armed Squid
Onychoteuthis aequimanus	Cephalopoda	Teuthida	Onychoteuthidae	Onychoteuthis	Squid
Cirroteuthis muelleri	Cephalopoda	Octopoda	Cirroteuthididae	Cirroteuthis	
Chtenopteryx sicula	Cephalopoda	Teuthida	Chtenopterygidae	Chtenopteryx	Comb-finned Squid
Moroteuthis robsoni	Cephalopoda	Teuthida	Onychoteuthididae	Moroteuthis	
Histioteuthis meleagroteuthis	Cephalopoda	Teuthida	Histioteuthidae	Histioteuthis	Squid
Gonatus antarcticus	Cephalopoda	Teuthida	Gonatidae	Gonatus	Squid
Eucleoteuthis luminosa	Cephalopoda	Teuthida	Ommastrephidae	Eucleoteuthis	Squid
Megalocranchia abyssicola	Cephalopoda	Teuthida	Cranchiidae	Megalocranchia	Squid
Pterygioteuthis giardi	Cephalopoda	Teuthida	Pyroteuthidae	Pterygioteuthis	Squid
Sandalops melancholicus	Cephalopoda	Teuthida	Cranchiidae	Sandalops	Squid
Mastigoteuthis hjorti	Cephalopoda	Teuthida	Mastigoteuthidae	Mastigoteuthis	
Onychoteuthis banksii	Cephalopoda	Teuthida	Onychoteuthidae	Onychoteuthis	
Sepia plangon	Cephalopoda	Sepiida	Sepiidae	Sepia	Cuttlefish
Sepia papuensis	Cephalopoda	Sepiida	Sepiidae	Sepia	Papuan Cuttlefish
Sepia mestus	Cephalopoda	Sepiida	Sepiidae	Sepia	Reaper Cuttlefish

Dentimargo kemblensis	Gastropoda	Hypsogastropoda	Marginellidae	Dentimargo	Marginella
Alaba pulchra	Gastropoda	Cerithimorpha	Litiopidae	Alaba	Gastropod
Hedleytriphora fasciata	Gastropoda	Hypsogastropoda	Triphoridae	Hedleytriphora	Creeper
Gibberula subbulbosa	Gastropoda	Hypsogastropoda	Cystiscidae	Gibberula	Toothed Margin Shell
Anabathron (Anabathron) lene	Gastropoda	Hypsogastropoda	Anabathridae	Anabathron	Gastropod
Flabellina poenicia	Gastropoda	Nudibranchia	Flabellinidae	Flabellina	
Rissoina (Rissoina) angasii	Gastropoda	Hypsogastropoda	Rissoinidae	Rissoina	Rissoid
Prietocella barbara	Gastropoda	Stylommatophora	Hygromiidae	Prietocella	Small Pointed Snail
Clanculus aloysii	Gastropoda		Trochidae	Clanculus	Top Shell
Phyllodesmium macphersonae	Gastropoda	Nudibranchia	Facelinidae	Phyllodesmium	Nudibranch
Herpetopoma scabriuscula	Gastropoda		Chilodontidae	Herpetopoma	Scurfy Bead Shell
Deroceras reticulatum	Gastropoda	Stylommatophora	Agriolimacidae	Deroceras	Grey Field Slug
Melanochlamys queritor	Gastropoda	Cephalaspidea	Aglajidae	Melanochlamys	Sea Slug
Crassitoniella erratica	Gastropoda	Hypsogastropoda	Eatoniellidae	Crassitoniella	Gastropod
Onchidella patelloides	Gastropoda	Systellommatophora	Onchidiidae	Onchidella	
Rissoina (Rissoina) rhyllensis	Gastropoda	Hypsogastropoda	Rissoinidae	Rissoina	Rissoid
Tugali cicatricosa	Gastropoda		Fissurellidae	Tugali	Shield Limpet
Badepigrus pupoideus	Gastropoda	Hypsogastropoda	Anabathridae	Badepigrus	

Fossarina (Fossarina) petterdi	Gastropoda		Trochidae	Fossarina	Petterd's Top Shell
Cantharidella picturata	Gastropoda		Trochidae	Cantharidella	Top Shell
Bulla quoyii	Gastropoda	Cephalaspidea	Bullidae	Bulla	Bubble Shell
Diala megapicalis	Gastropoda	Cerithimorpha	Dialidae	Diala	Gastropod
Cumia bednalli	Gastropoda	Hypsogastropoda	Colubrariidae	Cumia	Whelk
Limax maximus	Gastropoda	Stylommatophora	Limacidae	Limax	Leopard Slug
Elsothera funerea	Gastropoda	Stylommatophora	Charopidae	Elsothera	Grim Reaper Pinwheel Snail
Verconia verconis	Gastropoda	Nudibranchia	Chromodorididae	Verconia	Nudibranch
Splendrillia woodsi	Gastropoda	Hypsogastropoda	Drilliidae	Splendrillia	Turrid Shell
Emarginula (Emarginula) bajula	Gastropoda		Fissurellidae	Emarginula	Delicate Slit-limpet
Tritia ephamilla	Gastropoda	Hypsogastropoda	Nassariidae	Tritia	Dog Whelk
Emmalena tumidula	Gastropoda	Stylommatophora	Rhytididae	Emmalena	Limestone Coast Carnivorous Snail
Tubulophilinopsis lineolata	Gastropoda	Cephalaspidea	Aglajidae	Tubulophilinopsis	Sea Slug
Zemira australis	Gastropoda	Hypsogastropoda	Pseudolividae	Zemira	Gastropod
Scelidoropa officeri	Gastropoda	Stylommatophora	Charopidae	Scelidoropa	Circular Head Pinwheel Snail
Opalia granosa	Gastropoda	Hypsogastropoda	Epitoniidae	Opalia	Granose Wentletrap
Madrella sanguinea	Gastropoda	Nudibranchia	Madrellidae	Madrella	Nudibranch
Sinum zonale	Gastropoda	Hypsogastropoda	Naticidae	Sinum	Sand Snail
Elysia coodgeensis	Gastropoda		Plakobranchidae	Elysia	Sea Slug
Neverita aulacoglossa	Gastropoda	Hypsogastropoda	Naticidae	Neverita	Sand Snail
Cumia mestayerae	Gastropoda	Hypsogastropoda	Colubrariidae	Cumia	Whelk
Reticunassa compacta	Gastropoda	Hypsogastropoda	Nassariidae	Reticunassa	Dog Whelk
Noumea haliclona	Gastropoda	Nudibranchia	Chromodorididae	Noumea	
Dentimargo mayii	Gastropoda	Hypsogastropoda	Marginellidae	Dentimargo	Marginella
Hoplodoris nodulosa	Gastropoda	Nudibranchia	Discodorididae	Hoplodoris	
Sydaphera undulata	Gastropoda	Hypsogastropoda	Cancellariidae	Sydaphera	Waved Cross-barred Shell
Gabrielona nepeanensis	Gastropoda		Turbinidae	Gabrielona	Gastropod
Costatophora granifera	Gastropoda	Hypsogastropoda	Triphoridae	Costatophora	Creeper
Turbo (Carswellena) gruneri	Gastropoda		Turbinidae	Turbo	Turban Shell
Gazameda tasmanica	Gastropoda	Cerithimorpha	Turritellidae	Gazameda	Screw Shell
Cirsonella weldii	Gastropoda		Skeneidae	Cirsonella	Stout Shiny Liotia
Cernuella virgata	Gastropoda	Stylommatophora	Hygromiidae	Cernuella	Vineyard Snail
Anabathron (Anabathron) contabulatum	Gastropoda	Hypsogastropoda	Anabathridae	Anabathron	Gastropod
Ethminolia vitiliginea	Gastropoda		Trochidae	Ethminolia	Top Shell
Aclophoropsis festiva	Gastropoda	Hypsogastropoda	Triphoridae	Aclophoropsis	Creeper
Polinices (Glossaulax) incei	Gastropoda	Hypsogastropoda	Naticidae	Polinices	Ince's Moon Snail
Charisma josephi	Gastropoda		Trochidae	Charisma	Joseph's Charisma
Facelina hartleyi	Gastropoda	Nudibranchia	Facelinidae	Facelina	Nudibranch
Retusa pelyx	Gastropoda	Cephalaspidea	Retusidae	Retusa	Bubble Shell
Sukashitrochus pulcher	Gastropoda		Scissurellidae	Sukashitrochus	Beautiful Slit Shell
Bathytoma (Micantapex) agnata	Gastropoda	Hypsogastropoda	Borsoniidae	Bathytoma	Gastropod
Colpospira (Acutospira) atkinsoni	Gastropoda	Cerithimorpha	Turritellidae	Colpospira	Screw Shell
Hedleytriphora basimacula	Gastropoda	Hypsogastropoda	Triphoridae	Hedleytriphora	Creeper
Neodoris chrysoderma	Gastropoda	Nudibranchia	Dorididae	Neodoris	
Phasianotrochus apicinus	Gastropoda		Trochidae	Phasianotrochus	Pointed Kelp Shell
Cystiscus obesulus	Gastropoda	Hypsogastropoda	Cystiscidae	Cystiscus	Marginella
Austrosassia parkinsonia	Gastropoda	Hypsogastropoda	Cymatiidae	Sassia	Triton Shell
Doriopsilla peculiaris	Gastropoda	Nudibranchia	Dendrodorididae	Doriopsilla	Nudibranch
Petaloconchus caperatus	Gastropoda	Hypsogastropoda	Vermetidae	Petaloconchus	Worm Shell
Rissoina (Rissoina) elegantula	Gastropoda	Hypsogastropoda	Rissoinidae	Rissoina	Rissoid

Nevia spirata	Gastropoda	Hypsogastropoda	Cancellariidae	Nevia	Spirate Cross-barred Shell
Brookula angeli	Gastropoda			Brookula	Gastropod
Mesoginella inconspicua	Gastropoda	Hypsogastropoda	Marginellidae	Mesoginella	Marginella
Vexillum (Costellaria) acromiale	Gastropoda	Hypsogastropoda	Costellariidae	Vexillum	Costellate Mitre Shell
Argobuccinum pustulosum	Gastropoda	Hypsogastropoda	Cymatiidae	Argobuccinum	
Putilla porcellana	Gastropoda			Putilla	Gastropod
Edenttellina typica	Gastropoda		Juliidae	Edenttellina	
Hydrococcus brazieri	Gastropoda	Hypsogastropoda	Hydrococcidae	Hydrococcus	Snail
Austromitra tasmanica	Gastropoda	Hypsogastropoda	Costellariidae	Austromitra	Costellate Mitre Shell

Vitreolina commensalis	Gastropoda	Hypsogastropoda	Eulimidae	Vitreolina	Eulima
Austrorhytida glaciamans	Gastropoda	Stylommatophora	Rhytididae	Austrorhytida	Kosciuszko Carnivorous Snail
Mesoginella stilla	Gastropoda	Hypsogastropoda	Marginellidae	Mesoginella	Marginella
Microvoluta miranda	Gastropoda	Hypsogastropoda	Volutomitridae	Microvoluta	Volutomitrid
Ringicula semisculpta	Gastropoda	Ringiculida	Ringiculidae	Ringicula	Bubble Shell
Pisinna nitida	Gastropoda	Hypsogastropoda	Anabathridae	Pisinna	Gastropod
Colpospira (Ctenocolpus) guillaumei	Gastropoda	Cerithimorpha	Turritellidae	Colpospira	
Brookula denselaminata	Gastropoda			Brookula	
Peculator verconis	Gastropoda	Hypsogastropoda	Volutomitridae	Peculator	Volutomitrid
Eurytrochus strangei	Gastropoda		Trochidae	Eurytrochus	Top Shell
Pseudorissoina tasmanica	Gastropoda		Pyramidellidae	Pseudorissoina	Gastropod
Koloonella moniliformis	Gastropoda		Murchisonellidae	Koloonella	Gastropod
Austropyrgus niger	Gastropoda	Hypsogastropoda	Tateidae	Austropyrgus	Hydrobiid Snail
Sabinella munita	Gastropoda	Hypsogastropoda	Eulimidae	Sabinella	Eulima
Nozeba topaziaca	Gastropoda	Hypsogastropoda	Iravadiidae	Nozeba	Gastropod

Mysticoncha wilsoni	Gastropoda	Hypsogastropoda	Velutinidae	Mysticoncha	Wilson's Lamellaria
Phyllocoma (Galfridus) speciosa	Gastropoda	Hypsogastropoda	Muricidae	Phyllocoma	Coral Shell
Omegapilla australis	Gastropoda	Stylommatophora	Pupillidae	Omegapilla	Bronze Pupasnail
Echinopsole breviceratae	Gastropoda	Nudibranchia	Facelinidae	Echinopsole	Nudibranch
Tasmaphena sinclairi	Gastropoda	Stylommatophora	Rhytididae	Tasmaphena	Sinclair's Carnivorous Snail
Pedicamista coesus	Gastropoda	Stylommatophora	Punctidae	Pedicamista	
Pterochelus duffusi	Gastropoda	Hypsogastropoda	Muricidae	Pterochelus	Duffuse Murex
Merica purpuriformis	Gastropoda	Hypsogastropoda	Cancellariidae	Merica	Nutmeg Shell
Colpospira (Acutospira) smithiana	Gastropoda	Cerithimorpha	Turritellidae	Colpospira	Screw Shell
Atagema albata	Gastropoda	Nudibranchia	Dorididae	Atagema	Nudibranch
Onoba (Ovirissoa) rubicunda	Gastropoda	Hypsogastropoda	Rissoidae	Onoba	Rissoid
Naricava vincentiana	Gastropoda	Hypsogastropoda	Vanikoridae	Naricava	Gastropod
Scalaronoba kryptopleurakia	Gastropoda	Hypsogastropoda	Eulimidae	Scalaronoba	Gastropod
Pisinna vincula	Gastropoda	Hypsogastropoda	Anabathridae	Pisinna	Gastropod
Australaria fusiformis	Gastropoda	Hypsogastropoda	Fasciolariidae	Australaria	
Natica subcostata	Gastropoda	Hypsogastropoda	Naticidae	Natica	
Scelidoropa tamarensis	Gastropoda	Stylommatophora	Charopidae	Scelidoropa	Tamar River Pinwheel Snail
Granulina nympha	Gastropoda	Hypsogastropoda	Cystiscidae	Granulina	Marginella
Rissoella (Rissoella) fallax	Gastropoda		Rissoellidae	Rissoella	Gastropod
Filodrillia mucronata	Gastropoda	Hypsogastropoda	Borsoniidae	Filodrillia	Turrid Shell
Pelycidion eukyrtos	Gastropoda	Hypsogastropoda	Pelycidiidae	Pelycidion	Gastropod
Cominella filicea	Gastropoda	Hypsogastropoda	Buccinidae	Cominella	Whelk
Berthelinia australis	Gastropoda		Juliidae	Berthelinia	Bivalved Gastropod
Dentimargo jaffa	Gastropoda	Hypsogastropoda	Marginellidae	Dentimargo	Marginella
Pollia bednalli	Gastropoda	Hypsogastropoda	Buccinidae	Pollia	Whelk
Astele rubiginosa	Gastropoda		Calliostomatidae	Astele	Top Shell
Propilidium tasmanicum	Gastropoda		Lepetidae	Propilidium	Limpet
Doriopsilla miniata	Gastropoda	Nudibranchia	Dendrodorididae	Doriopsilla	Nudibranch
Hydroginella mixta	Gastropoda	Hypsogastropoda	Marginellidae	Hydroginella	Marginella
Mexichromis macropus	Gastropoda	Nudibranchia	Chromodorididae	Mexichromis	Nudibranch
Trinchesia kuiteri	Gastropoda	Nudibranchia	Trinchesiidae	Trinchesia	
Melibe australis	Gastropoda	Nudibranchia	Tethydidae	Melibe	Nudibranch
Meredithena dandenongensis	Gastropoda	Stylommatophora	Charopidae	Meredithena	Dandenong Ranges Pinwheel Snail
Microcarina surgerea	Gastropoda			Microcarina	
Microxeromagna lowei	Gastropoda	Stylommatophora	Hygromiidae	Microxeromagna	Citrus Snail
Tasmaphena ruga	Gastropoda	Stylommatophora	Rhytididae	Tasmaphena	Coarse-ribbed Carnivorous Snail
Puncturella (Cranopsis) corolla	Gastropoda		Fissurellidae	Puncturella	The Crown Puncturella
Solatisonax injussa	Gastropoda		Architectonicidae	Solatisonax	Staircase Shell
Trocholaoma parvissima	Gastropoda	Stylommatophora	Punctidae	Trocholaoma	Tiny Pinhead Snail
Dermomurex (Dermomurex) goldsteini	Gastropoda	Hypsogastropoda	Muricidae	Dermomurex	Goldstein's Trophon
Syrnola tincta	Gastropoda		Pyramidellidae	Syrnola	Gastropod
Chromodoris tinctoria	Gastropoda	Nudibranchia	Chromodorididae	Chromodoris	
Gemixystus recurvatus	Gastropoda	Hypsogastropoda	Muricidae	Gemixystus	Recurved Benthoxystus
Dendropoma nucleocostatum	Gastropoda	Hypsogastropoda	Vermetidae	Dendropoma	Worm Shell
Leucotina casta	Gastropoda		Amathinidae	Leucotina	Gastropod
Paradrillia garrardi	Gastropoda	Hypsogastropoda	Horaiclavidae	Paradrillia	
Powellisetia simillima	Gastropoda	Hypsogastropoda	Rissoidae	Powellisetia	Rissoid
Onoba (Subestea) supracostata	Gastropoda	Hypsogastropoda	Rissoidae	Onoba	
Siphonaria denticulata	Gastropoda		Siphonariidae	Siphonaria	Air-breathing Limpet
Socienna trisculpta	Gastropoda	Hypsogastropoda	Cerithiopsidae	Socienna	Creeper

Epideira candida	Gastropoda	Hypsogastropoda	Pseudomelatomidae	Epideira	Turrid Shell
Exomilus telescopialis	Gastropoda	Hypsogastropoda	Raphitomidae	Exomilus	Turrid Shell
Rissoina (Moerchiella) dorbignyi	Gastropoda	Hypsogastropoda	Rissoinidae	Rissoina	Rissoid
Colpospira (Colpospira) decoramen	Gastropoda	Cerithimorpha	Turritellidae	Colpospira	Screw Shell
Calliostoma (Fautor) comptum	Gastropoda		Calliostomatidae	Calliostoma	Top Shell
Scelidoropa gatliffi	Gastropoda	Stylommatophora	Charopidae	Scelidoropa	Gatliffâ€™s Pinwheel Snail
Dendrodoris maugeana	Gastropoda	Nudibranchia	Dendrodorididae	Dendrodoris	Nudibranch
Nepotilla carinata	Gastropoda	Hypsogastropoda	Raphitomidae	Nepotilla	Turrid Shell
Lironoba unilirata	Gastropoda	Hypsogastropoda	Rissoidae	Lironoba	Rissoid
Onoba (Ovirissoa) perpolita	Gastropoda	Hypsogastropoda	Rissoidae	Onoba	Rissoid
Badepigrus badia	Gastropoda	Hypsogastropoda	Anabathridae	Badepigrus	Gastropod
Melanochlamys handrecki	Gastropoda	Cephalaspidea	Aglajidae	Melanochlamys	Sea Slug
Eatonina (Eatonina) condita	Gastropoda	Hypsogastropoda	Cingulopsidae	Eatonina	Gastropod
Aesopus jaffaensis	Gastropoda	Hypsogastropoda	Columbellidae	Aesopus	Dove Shell
Guraleus incrusta	Gastropoda	Hypsogastropoda	Mangeliidae	Guraleus	Turrid Shell
Berthelinia typica	Gastropoda		Juliidae	Berthelinia	Bivalved Gastropod
Limacina lesueurii	Gastropoda	Pteropoda	Limacinidae	Limacina	Shelled Pteropod
Digidentis arbuta	Gastropoda	Nudibranchia	Chromodorididae	Digidentis	
Orbitestella decorata	Gastropoda		Orbitestellidae	Orbitestella	Gastropod
Rissoella (Jeffreysiella) fretterae	Gastropoda		Rissoellidae	Rissoella	Gastropod
Limacus flavus	Gastropoda	Stylommatophora	Limacidae	Limacus	Yellow Cellar Slug
Pseudorissoina capiticava	Gastropoda		Pyramidellidae	Pseudorissoina	Gastropod
Ollaphon molorthus	Gastropoda	Hypsogastropoda	Muricidae	Ollaphon	Whelk
Dendrodoris albopurpura	Gastropoda	Nudibranchia	Dendrodorididae	Dendrodoris	Nudibranch
Aesopus solidus	Gastropoda	Hypsogastropoda	Columbellidae	Aesopus	Dove Shell
Oxymeris albida	Gastropoda	Hypsogastropoda	Terebridae	Oxymeris	Auger Shell
Dolicholatirus spiceri	Gastropoda	Hypsogastropoda	Fasciolariidae	Dolicholatirus	Sapphire Spindle Shell
Icuncula torcularis	Gastropoda	Hypsogastropoda	Capulidae	Icuncula	Gastropod
Fossarina (Fossarina) patula	Gastropoda		Trochidae	Fossarina	Top Shell
Guraleus flaccidus	Gastropoda	Hypsogastropoda	Mangeliidae	Guraleus	Turrid Shell
Excellaoma retipora	Gastropoda	Stylommatophora	Charopidae	Excellaoma	
Alaginella ochracea	Gastropoda	Hypsogastropoda	Marginellidae	Alaginella	Marginella
Acanthodoris nanega	Gastropoda	Nudibranchia	Onchidorididae	Acanthodoris	Nudibranch
Semicassis (Semicassis) labiata	Gastropoda	Hypsogastropoda	Cassidae	Semicassis	Helmet Shell
Teleochilus royanus	Gastropoda	Hypsogastropoda	Raphitomidae	Teleochilus	Turrid Shell
Cylichnatys campanula	Gastropoda	Cephalaspidea	Haminoeidae	Cylichnatys	Bubble Shell
Oocorys sulcata	Gastropoda	Hypsogastropoda	Cassidae	Oocorys	Helmet Shell
Zaclys semilaevis	Gastropoda	Hypsogastropoda	Cerithiopsidae	Zaclys	Creeper
Fusceulima perexigua	Gastropoda	Hypsogastropoda	Eulimidae	Fusceulima	
Tonna tankervillii	Gastropoda	Hypsogastropoda	Tonnidae	Tonna	Tun Shell
Mesoginella consobrina	Gastropoda	Hypsogastropoda	Marginellidae	Mesoginella	Marginella
Austropyrgus foris	Gastropoda	Hypsogastropoda	Tateidae	Austropyrgus	Hydrobid Snail
Phos (Phos) senticosus	Gastropoda	Hypsogastropoda	Nassariidae	Phos	Whelk
Clanculus floridus	Gastropoda		Trochidae	Clanculus	Top Shell
Liotella johnstoni	Gastropoda			Liotella	Gastropod
Guraleus cuspis	Gastropoda	Hypsogastropoda	Mangeliidae	Guraleus	Turrid Shell
Macroschisma producta	Gastropoda		Fissurellidae	Macroschisma	Keyhole Limpet
Rissoina (Rissoina) ferruginea	Gastropoda	Hypsogastropoda	Rissoinidae	Rissoina	Rissoid
Hinemoa suprasculpta	Gastropoda		Pyramidellidae	Hinemoa	
Scissurella cyprina	Gastropoda		Scissurellidae	Scissurella	Venus Slit Shell

Clanculus brunneus	Gastropoda		Trochidae	Clanculus	Top Shell
Asperdaphne (Aspertilla) legrandi	Gastropoda	Hypsogastropoda	Raphitomidae	Asperdaphne	Turrid Shell
Chrysallida mayii	Gastropoda		Pyramidellidae	Chrysallida	Gastropod
Noalda exigua	Gastropoda	Cephalaspidea	Aglajidae	Noalda	Sea Slug
Daphnella (Daphnella) botanica	Gastropoda	Hypsogastropoda	Raphitomidae	Daphnella	Botany Bay Turrid
Austroginella praetermissa	Gastropoda	Hypsogastropoda	Marginellidae	Austroginella	Marginella
Fusinus (Fusinus) australis	Gastropoda	Hypsogastropoda	Fasciolariidae	Fusinus	Southern Spindle
Nanula tasmanica	Gastropoda		Trochidae	Nanula	Top Shell
Amblychilepas omicron	Gastropoda		Fissurellidae	Amblychilepas	Keyhole Limpet
Enixotrophon carduelis	Gastropoda	Hypsogastropoda	Muricidae	Enixotrophon	Murex Shell
Sassia garrardi	Gastropoda	Hypsogastropoda	Cymatiidae	Sassia	
Rissoella (Zelaxitas) micra	Gastropoda		Rissoellidae	Rissoella	Gastropod
Euterebra assecla	Gastropoda	Hypsogastropoda	Terebridae	Euterebra	Auger Shell
Polinices (Glossaulax) didyma	Gastropoda	Hypsogastropoda	Naticidae	Polinices	Bladder Moon Snail
Nepotilla triseriata	Gastropoda	Hypsogastropoda	Raphitomidae	Nepotilla	Turrid Shell
Filodrillia lacteola	Gastropoda	Hypsogastropoda	Borsoniidae	Filodrillia	Turrid Shell
Eubranchus rubeolus	Gastropoda	Nudibranchia	Eubranchidae	Eubranchus	Nudibranch
Colpospira (Acutospira) yarramundi	Gastropoda	Cerithimorpha	Turritellidae	Colpospira	Screw Shell
Liotella compacta	Gastropoda			Liotella	Gastropod
Rissoina (Rissoina) royana	Gastropoda	Hypsogastropoda	Rissoinidae	Rissoina	Rissoid
Splendrillia lygdina	Gastropoda	Hypsogastropoda	Drilliidae	Splendrillia	Turrid Shell
Retizafra multicostata	Gastropoda	Hypsogastropoda	Columbellidae	Retizafra	Dove Shell
Volvulella rostrata	Gastropoda	Cephalaspidea	Retusidae	Volvulella	Bubble Shell
Narvaliscala dorysa	Gastropoda	Hypsogastropoda	Epitoniidae	Narvaliscala	Wentletrap
Epitonium (Epitonium) bellicosum	Gastropoda	Hypsogastropoda	Epitoniidae	Epitonium	Wentletrap
Turrella morologus	Gastropoda	Hypsogastropoda	Clathurellidae	Turrella	Turrid Shell
Isotriphora vercoi	Gastropoda	Hypsogastropoda	Triphoridae	Isotriphora	Creeper
Tugali parmophoidea	Gastropoda		Fissurellidae	Tugali	Flat False Limpet
Naccula parva	Gastropoda		Nacellidae	Naccula	Limpet
Conuber controversa	Gastropoda	Hypsogastropoda	Naticidae	Conuber	Sand Snail
Argobuccinum tumidum	Gastropoda	Hypsogastropoda	Cymatiidae	Argobuccinum	Triton Shell
Gibberula pulchella	Gastropoda	Hypsogastropoda	Cystiscidae	Persicula	Marginella
Sacoproteus yhiae	Gastropoda		Limapontiidae	Sacoproteus	Sea Slug
Scyllaea fulva	Gastropoda	Nudibranchia	Scyllaeidae	Scyllaea	Nudibranch
Rissoina (Rissoina) iredalei	Gastropoda	Hypsogastropoda	Rissoinidae	Rissoina	Rissoid
Isotriphora nivea	Gastropoda	Hypsogastropoda	Triphoridae	Isotriphora	Creeper
Cochlicella acuta	Gastropoda	Stylommatophora	Hygromiidae	Cochlicella	
Onoba (Subestea) australiae	Gastropoda	Hypsogastropoda	Rissoidae	Onoba	
Retusa protumida	Gastropoda	Cephalaspidea	Retusidae	Retusa	Bubble Shell
Austropyrgus procerus	Gastropoda	Hypsogastropoda	Tateidae	Austropyrgus	Hydrobid Snail
Pillomena meraca	Gastropoda	Stylommatophora	Charopidae	Pillomena	
Paradrillia suavis	Gastropoda	Hypsogastropoda	Horaiclavidae	Paradrillia	
Conassiminea zheni	Gastropoda	Hypsogastropoda	Assimineidae	Conassiminea	Gastropod
Conasprella (Endemoconus) howelli	Gastropoda	Hypsogastropoda	Conidae	Conasprella	Cone Snail
Specula turbonilloides	Gastropoda	Hypsogastropoda	Cerithiopsidae	Specula	Creeper
Guraleus brazieri	Gastropoda	Hypsogastropoda	Mangeliidae	Guraleus	Turrid Shell
Okenia echinata	Gastropoda	Nudibranchia	Goniodorididae	Okenia	Nudibranch
Propescala translucida	Gastropoda	Hypsogastropoda	Epitoniidae	Propescala	Wentletrap
Apicalia brazieri	Gastropoda	Hypsogastropoda	Eulimidae	Apicalia	Brazier's Stilifer
Embletonia gracilis	Gastropoda	Nudibranchia	Embletoniidae	Embletonia	Nudibranch

Cirsonella reflecta	Gastropoda		Skeneidae	Cirsonella	Gastropod
Cryptassiminea glenelgensis	Gastropoda	Hypsogastropoda	Assimineidae	Cryptassiminea	Gastropod
Aclophoropsis maculosa	Gastropoda	Hypsogastropoda	Triphoridae	Aclophoropsis	Splashed Sinistral Creeper
Eulima acutissima	Gastropoda	Hypsogastropoda	Eulimidae	Eulima	Eulima

APPENDIX F

Threatened Seabirds Potentially Occurring in OA

Common Name(s) Scientific Name	EPBC Act Protection Status	Distribution, Habitat and Life Stages	Potential to occur within OA and EMBA
Antipodean albatross *Diomedea antipodensis*	V	Although endemic to New Zealand, the Antipodean albatross forages widely in open waters of the south-west Pacific Ocean, Southern Ocean, and the Tasman Sea. Satellite tracking of birds breeding at the Auckland Islands (south of New Zealand) mostly forage west of New Zealand across the Tasman Sea and south of Australia. Breeding pairs return to breeding colonies at the Auckland Islands in December. Fledglings depart the Auckland Islands between the end of January and mid-March following a year spent at the nest. Antipodean albatrosses prefer to forage at the outer shelf edge and over seamounts, particularly in areas where there are strong currents or eddies and enhanced productivity.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA
Southern royal albatross *Diomedea epomophora*	V	Southern royal albatrosses have a circumpolar distribution within the Southern Ocean. They range over the waters off southern Australia at all times of the year, but particularly between July and October. In Australia, they have been recorded from Byron Bay in the east to south-western Western Australia. Most records are from the shelf-break areas off eastern and southern TAS and around VIC.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA
Wandering albatross *Diomedea exulans*	V	Wandering albatross breed on Macquarie Island and feeds throughout the Southern Ocean. In the Australian region it forages inshore, offshore and in pelagic waters. Wandering albatrosses return to breeding sites from November, with chicks fledging from mid-November to mid-December the following year. Juveniles may forage separately to adults; however, their ranges overlap with that of adults. Wandering albatrosses of all ages have been sighted at feeding concentrations near eastern NSW, particularly between July and November, however, birds only stay for a short period.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA
Northern royal albatross *Diomedia sanfordi*	E	Northern royal albatross forage over the Southern Ocean, with individuals present over Australian waters off south-eastern Australia. This species regularly feeds in TAS and South Australian waters, and less frequently in NSW waters.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA
White-bellied storm petrel *Fregetta grallaria*	V	White-bellied storm petrels breed on small offshore islets and rocks in the Lord Howe Island group. Its pelagic distribution is poorly known, but it has been recorded over near-shore waters off the coasts of QLD and TAS.	Species or species habitat LIKELY occur within OA and EMBA
Blue petrel *Halobaena caerulea*	V		Species or species habitat MAY occur within OA and EMBA
Southern giant petrel *Macronectes giganteus*	E	Southern Giant-Petrel breeds on six subantarctic and Antarctic islands in Australian territory; Macquarie Island, Heard Island and McDonald Island in the Southern Ocean, and Giganteus Island, Hawker Island, and Frazier Island in the Australian Antarctic Territories. They are widespread throughout the Southern Ocean, concentrating in waters above 50°S in winter months before returning to breeding colonies in August and September.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA

Common Name(s) Scientific Name	EPBC Act Protection Status	Distribution, Habitat and Life Stages	Potential to occur within OA and EMBA
Northern giant petrel *Macronectes halli*	V	Northern giant petrels breed on sub-Antarctic islands, foraging in Australian waters during winter months (May – October). During this time immatures and some adult birds are commonly seen in inshore and offshore waters from around Fremantle (Western Australia) to around Sydney (NSW). Northern giant petrel often forage on carrion and will often follow ships for offal and food scraps.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA
Fairy prion *Pachyptila turtur*	V	Blue petrels have been recorded from mainland Australia, usually between July and September.	Species or species habitat MAY occur within OA Species or species habitat KNOWN to occur within EMBA
Sooty albatross *Phoebetria fusca*	V	Sooty albatrosses are rare, but regular migrants to Australia, mostly in the autumn – winter months. They occur north to south-east QLD, NSW, VIC, TAS and South Australia. During the breeding season (summer), this species has a maximum foraging range of 2,150 km, but most adults are found within 600 km of breeding sites (islands in the Indian and Atlantic Oceans).	Species or species habitat LIKELY to occur within OA or EMBA
Gould's petrel *Pterodroma leucoptera*	E	Gould's petrel breed on Cabbage Tree Island, 1.4 km offshore from Port Stephens, NSW; the sole breeding location for this species with the exception of a few birds that potentially nest on nearby Boondelbah Island. Outside of breeding, this species predominantly forages within the Tasman Sea. Description taken from the Recovery Plan for this species.	Species or species habitat MAY occur within OA or EMBA
Soft-plumaged petrel *Pterodroma mollis*	V	Soft-plumaged petrel are found over temperate and subantarctic waters in the South Atlantic, southern Indian and western South Pacific Oceans. Although a regular visitor to southern Australian seas, it is more common in the west than in the south and south-east. In Australia, this species breeds on Maatsuyker Island off southern TAS. Sightings off south-east Australia are mostly south of TAS, between September – April.	Species or species habitat MAY occur within OA Breeding KNOWN to occur within EMBA
Australian fairy tern *Sternual nereis nereis*	V	Within Australian waters, fairy terns occur along the coast of VIC, TAS, South Australia, and Western Australia. They may migrate within southern Western Australia and TAS, where they are seen less frequently during winter months. They are more sedentary in the north of Western Australia, South Australia, and VIC.	Foraging, feeding or related behaviour LIKELY to occur within OA Species or species habitat KNOWN to occur within area
Buller's albatross *Thalassarche bulleri*	V	Buller's albatross are regular visitors to Australian waters from New Zealand breeding grounds. They are frequently seen from the coast from Coffs Harbour, south to TAS and west to Eyre Peninsula, but are most common off south-east TAS between January and April. In Australia, the species is seen over inshore, offshore, and pelagic waters where they tend to congregate over currents where the water temperature exceeds 16 °C. Buller's albatrosses take food by surface-seizing, with most of the feeding occurring during the day.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA

Common Name(s) Scientific Name	EPBC Act Protection Status	Distribution, Habitat and Life Stages	Potential to occur within OA and EMBA
Northern buller's albatross *Thalassarche bulleri platei*	V	This species of albatross is a non-breeding visitor to Australian waters. Foraging birds are mostly limited to the Pacific Ocean and Tasman Sea, however, birds reach the east coast of the Australian mainland. The foraging distribution of this species is not well known, however, in New Zealand, is has been observed in association with fishing boats close inshore and over waters of 180 – 360 m depth. In Australia, it occurs over inshore, offshore and pelagic waters, and off the coast of south-east TAS, particularly over waters of the East Australia Current where sea-surface temperatures are greater than 16.5 °C.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA
Indian yellow-nosed albatross *Thalassarche carteri*	V	Indian yellow-nosed albatrosses forage in the southern Indian Ocean. It concentrates over the productive waters of continental shelves, often at coastal upwellings, and at the boundaries of currents. In Australia, is occupies inshore and offshore waters, particularly in areas were the sea and winds are calm. Indian yellow-nosed albatrosses are most abundant in waters off southern Western Australia and South Australia between March and May. Large numbers occur in the Tasman Sea, off southern NSW in May to June. Birds more northwards along the coast where they favour inshore waters. Immature birds return south in September to October.	Species or species habitat LIKELY occur within OA and EMBA
Shy albatross *Thalassarche cauta*	E	The shy albatross is the only species of albatross endemic to Australia where it has three breeding colonies all located off TAS; Albatross Island (western Bass Strait), the Mewstone, and Pedra Branca, in southern TAS waters. Adults predominantly occur in waters adjacent to TAS and southern Australia, whereas the range of juveniles extends across the Indian Ocean to southern Africa. Description taken from Conservation Advice for this species.	Foraging, feeding or related behaviour LIKELY to occur within OA Breeding KNOWN to occur within EMBA
Grey-headed albatross *Thalassarche chryostoma*	E	The grey-headed albatross breeds in Australian waters on the southern and western flanks of Petrel Peak, Macquarie Island; an area classified as a World Heritage Area and Tasmanian Nature Reserve (managed by the Tasmanian Parks and Wildlife Service. Birds disperse widely across the Southern Ocean, at more southerly latitudes in summer than in water, when they frequent waters off southern Australia and New Zealand. Most Australian observations have been recorded south and west of TAS, and occasionally in VIC waters.	Species or species habitat MAY occur within OA Foraging, feeding or related behaviour LIKELY to occur within EMBA
Campbell albatross *Thalassarche impavida*	V	Campbell Albatrosses are non-breeding visitors to Australian waters where they are commonly seen foraging over the oceanic continental slopes of TAS, VIC, and NSW. After breeding, birds move north.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA
Black-browed albatross *Thalassarche melanophris*	V	During the breeding season (September – April), this species is an uncommon visitor to the continental shelf-break of southern Australia – reaching South Australia, TAS and western and easter Bass Strait. Outside of the breeding season, birds move north, and it is during the non-breeding season when this species is common at the continental shelf and shelf-break around South Australia, VIC, TAS, western and eastern Bass Strait, and NSW.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA

Common Name(s) Scientific Name	EPBC Act Protection Status	Distribution, Habitat and Life Stages	Potential to occur within OA and EMBA
Salvin's albatross *Thaslasarche salvini*	V	Slavin's albatrosses are a non-breeding visitor to Australian waters. Little is known of their offshore distribution, but they are thought to roam widely during winter months.	Foraging, feeding or related behaviour LIKELY to occur within OA and EMBA
White-capped albatross *Thalassarche steadi*	V	White-capped albatross are common throughout the year off the east-coast of Australia. It occurs in inshore and offshore waters, where it enters harbour and bays, but is scarce in pelagic waters.	Foraging, feeding or related behaviour KNOWN to occur within OA and EMBA
Gibson's albatross *Diomedea antipodensis gibsoni*		In Australia, Gibson's albatrosses have been recorded foraging between Coffs Harbour (NSW), and Wilson's Promontory (VIC). Males and females forage separately, with females frequenting the Tasman Sea in the vicinity of 40 °S, with males dispersing westwards at lower latitudes or north-east towards the mid-Pacific Ocean.	Foraging, feeding or related behaviour LIKELY to occur within EMBA
Chatham albatross *Thalasarche eremita*		The principal foraging range for the Chatham albatross is in coastal waters off eastern and southern New Zealand, and TAS. It is a rare vagrant to southeast Australian waters.	Foraging, feeding or related behaviour MAY occur within EMBA.
Red knot *Calidris canutus*	E	Although this species has been identified as present within the OA based on the results of the EPBC Act Protected Matters Report, this is typically a coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill. Red knot are common in all main suitable wader habitats around the Australian coast. They arrive to south Australia and TAS from August – September, before departing to breeding grounds from February – May.	Species or species habitat MAY occur within OA. Species of species habitat KNOWN to occur within EMBA
Curlew sandpiper *Calidris ferruginea*	CE	Although this species has been identified as present within the OA based on the results of the EPBC Act Protected Matters Report, this is typically a coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill. Curlew sandpiper occur around coastal Australia, and are also widespread inland. They are present in Australia during the non-breeding period, with non-breeding one year old birds also remaining throughout the non-breeding season. Birds arrive to south-east Australia in late August (majority arriving in September), departing again in March.	Species or species habitat MAY occur within OA Species of species habitat KNOWN to occur within EMBA
Tasmanian wedge-tailed eagle *Aquila audax fleayi*	E	Although this species has been identified as present within the EMBA based on the results of the EPBC Act Protected Matters Report, this is typically a coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill. This species is only found in TAS and on nearby islands, where is occurs in coastal and inland regions and on large offshore islands (Flinders, Three Hummock, Schouten, Maria, and Bruny Islands). Breeding has been recorded throughout its range, with breeding occurring from late winter to summer.	Breeding LIKELY to occur within EMBA

Common Name(s) Scientific Name	EPBC Act Protection Status	Distribution, Habitat and Life Stages	Potential to occur within OA and EMBA
Australasian bittern *Botaurus poiciloptilus*	E	Although this species has been identified as present within the EMBA based on the results of the EPBC Act Protected Matters Report, this is typically a coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill. Australasian bittern inhabit wetlands around the south-east coast of Australia, including VIA, NSW, QLD, and TAS.	Species or species habitat KNOWN to occur within EMBA
Great knot *Calidris tenuirostris*	CE	Although this species has been identified as present within the EMBA based on the results of the EPBC Act Protected Matters Report, this is typically a coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill. Great knots are migratory and have been recorded around the Australian coast. It is uncommon in south-west Australia, South Australia, VIC and TAS. They arrive in late August – early September, returning in March – April. Habitats for this species include large intertidal mudflats or sandflats.	Roosting KNOWN to occur within EMBA
Greater sand plover *Charadrius leschenaultii*	V	Although this species has been identified as present within the EMBA based on the results of the EPBC Act Protected Matters Report, this is typically a coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill. Greater sand plovers occur in all states across Australia during the summer non-breeding season.	Species or species habitat KNOWN to occur within EMBA
Lesser sand plover *Charadrius mongolus*	E	Although this species has been identified as present within the EMBA based on the results of the EPBC Act Protected Matters Report, this is typically a coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill. Lesser sand plovers are summer migrants to coastal Australia. They have been recorded across all Australian states where they are present mostly between September and April/May.	Roosting KNOWN to occur within EMBA
Nunivak bar-tailed godwit *Limosa lapponica baueri*	V	Although this species has been identified as present within the EMBA based on the results of the EPBC Act Protected Matters Report, this is typically a coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill. Nunivak bar-tailed godwits are migratory, spending summer months in all Australian states.	Species or species habitat KNOWN to occur within EMBA
Eastern curlew *Numenius madagascariensis*	CE	Although this species has been identified as present within the OA based on the results of the EPBC Act Protected Matters Report, this is a typically coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill. This species is migratory, returning to Australia from breeding sites (in Russia and north-eastern China) in August.	Species or species habitat MAY occur within OA Species or species habitat KNOWN to occur within EMBA
Eastern hooded plover *Thinornis cucullatus cucullatus*	V	Although this species has been identified as present within the EMBA based on the results of the EPBC Act Protected Matters Report, this is typically a coastal species and is therefore not expected to be encountered during the Otway Basin 3D MC MSS but is of relevance to an unplanned fuel oil spill.	Species or species habitat KNOWN to occur within EMBA

Common Name(s) Scientific Name	EPBC Act Protection Status	Distribution, Habitat and Life Stages	Potential to occur within OA and EMBA
		Eastern hooded plovers are small Australian beach nesting birds that are widely dispersed on or near sandy beaches in south-eastern Australia, including TAS and its offshore islands.

Otway Basin 3D Multi-client Marine Seismic Survey

TGS Schlumberger

TGS and Schlumberger are proposing to undertake a three-dimensional (3D) multi-client marine seismic survey (MSS) in the Otway Basin, in Commonwealth waters offshore from Victoria (VIC), Tasmania (TAS) and South Australia (SA).

In accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009, TGS and Schlumberger are preparing an Environment Plan (EP) for the survey for assessment by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

TGS and Schlumberger welcome your feedback on the proposed survey activity.

PROPOSED ACTIVITY

Marine seismic surveying is used to improve the understanding of subsurface geology in marine environments. During marine seismic surveys, seismic data is acquired using a purpose-built seismic survey vessel towing an acoustic source and multiple cables of hydrophones, also known as streamers. Streamers are towed with a tail buoy, radar reflectors and lights to mark the end of the array. The streamers will be up to 9 km long to adequately record the necessary information. Both the source and streamers are towed beneath the surface (**Figure 1**). Acoustic energy from the acoustic source is detected by the streamers and recorded on board the vessel. The recorded signals are then processed to provide information about geological formations below the seabed.

When recording the data, the seismic vessel traverses the survey area along a series of pre-determined sail lines at a speed of approximately 4 – 5 knots (7.5 – 9.5 km/hr). The level of acoustic emissions can be adjusted to provide low-power 'soft start' or 'fauna alert' procedures, at any point during the survey or maintenance operations.

Support vessels will work with the seismic vessel to assist in communicating with other vessels that have entered the area of operations and to support the overall operations, such as providing food and supplies.

Table 1 on the following page provides a summary of the Otway Basin 3D Multi-client MSS.

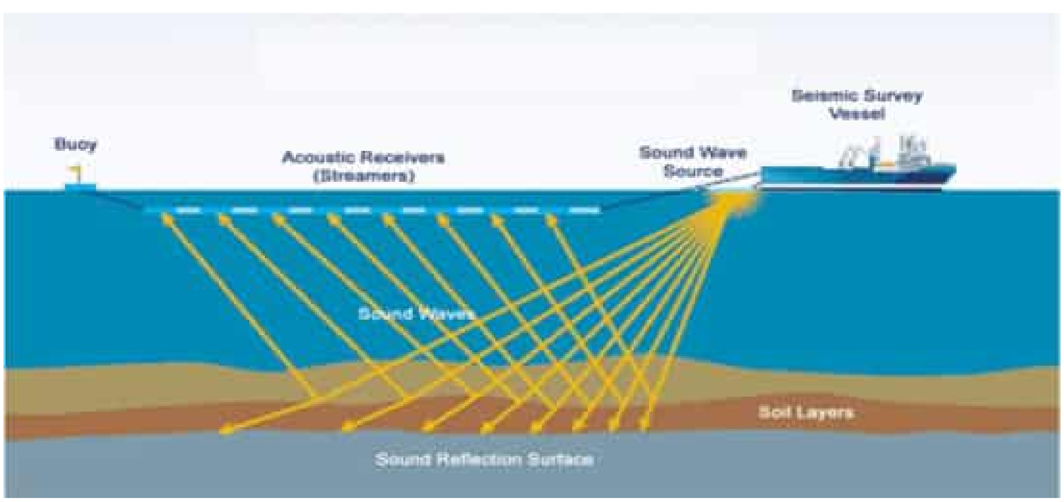

Figure 1 – Schematic illustrating a typical marine seismic survey

SURVEY AREAS

The proposed Otway Basin 3D Multi-client MSS comprises the following areas (Figure 2):

- An 'Active Source Area'; and
- A broader 'EP Area'.

The Active Source Area includes areas where prospective clients may be interested in acquiring seismic data in the foreseeable future. It includes the space where data acquisition may occur, plus additional space for the survey vessel to "run-in" to or "run-out" of sail lines while the acoustic source is active.

The Active Source Area includes the main '3D Active Source Area' where 3D seismic data may be acquired. During 3D seismic data acquisition, the seismic vessel travels back and forth along pre-determined parallel sail lines which are acquired in a "race track" pattern, whereby the vessel turns at the end of each sail line and returns in the opposite direction along a different sail line. 3D sail lines will be orientated approximately parallel with the seabed contours (approximately north-west/south-east).

The 3D Active Source Area includes water depths between approximately 510 m and 5,650 m, therefore, the acoustic source will not be operated in shallower continental shelf waters during 3D seismic data acquisition.

In addition, up to three single 2D lines may be acquired to "tie-in" to existing geophysical data in the region. The 2D tie-in lines will be acquired approximately perpendicular to the seabed contours (approximately south-west/north-east). Each tie-in line will be up to a maximum of 150 km in length (less than a day of acquisition time). The tie-in lines will overlap with 3D data acquisition in the 3D Active Source Area, however, one of the 2D tie-in lines may need to extend onto the continental shelf. Consequently, a '2D Tie-line Active Source Area Extension' is included in addition to the primary 3D Active Source Area. Operation of the acoustic source in the 2D Tie-line Active Source Area Extension will be limited only to a single 2D tie-in line. At the shallowest point, the 2D Tie-line Active Source Area Extension is approximately 115 m. The 3D Active Source Area, 2D Tie-line Active Source Area Extension and indicative 2D tie-in line are presented in Figure 2.

The broader EP Area includes space required for vessel turns and other vessel operations that may be required beyond the extent of the Active Source Area. It includes waters depths from approximately 95 m to 5,650 m.

Table 1 – Otway Basin 3D Multi-client MSS Summary

Earliest commencement	1 December 2022 (pending regulatory approvals, environmental sensitivities and vessel availability).	
Estimated completion	Pending acceptance by NOPSEMA, the EP will be valid until 30 November 2027.	
Estimated survey duration	Depends upon the areas of interest from petroleum titleholders in the region. The survey may be acquired in multiple survey mobilisations over the duration of the EP. In any year, the maximum acquisition time is expected to be 200 days, but it may be less. This includes some contingency time for potential vessel or equipment downtime and adverse weather conditions. Survey timing will take into account the seasonality of environmental and socio-economic sensitivities wherever practicable and to reduce potential impacts to an acceptable level.	
Water depth	Approximately 510 m to 5,650 m in the 3D Active Source Area, reducing to Approximately 115 m in the 2D Tie-line Active Source Area Extension. The EP Area includes water depths from 95 m to 5,650 m.	
Vessels	One purpose-built seismic survey vessel, plus additional support vessels. Vessel details have not yet been confirmed.	
Survey vessel speed	Approximately 4 – 5 knots (7.5 – 9.5 km/hour).	
Length and spread of towed equipment	Approx. 8 – 10 km length. Approx. 800 m – 1.6 km wide.	
Area of avoidance	3 nautical miles requested around the survey vessel and streamers.	
Proximity to key locations	**Location**	**Approximate Distance to EP Area**
	Portland (VIC)	48 km
	Warrnambool (VIC)	61 km
	Arthur River (TAS)	85 km
	King Island	39 km
	Robe (SA)	64 km

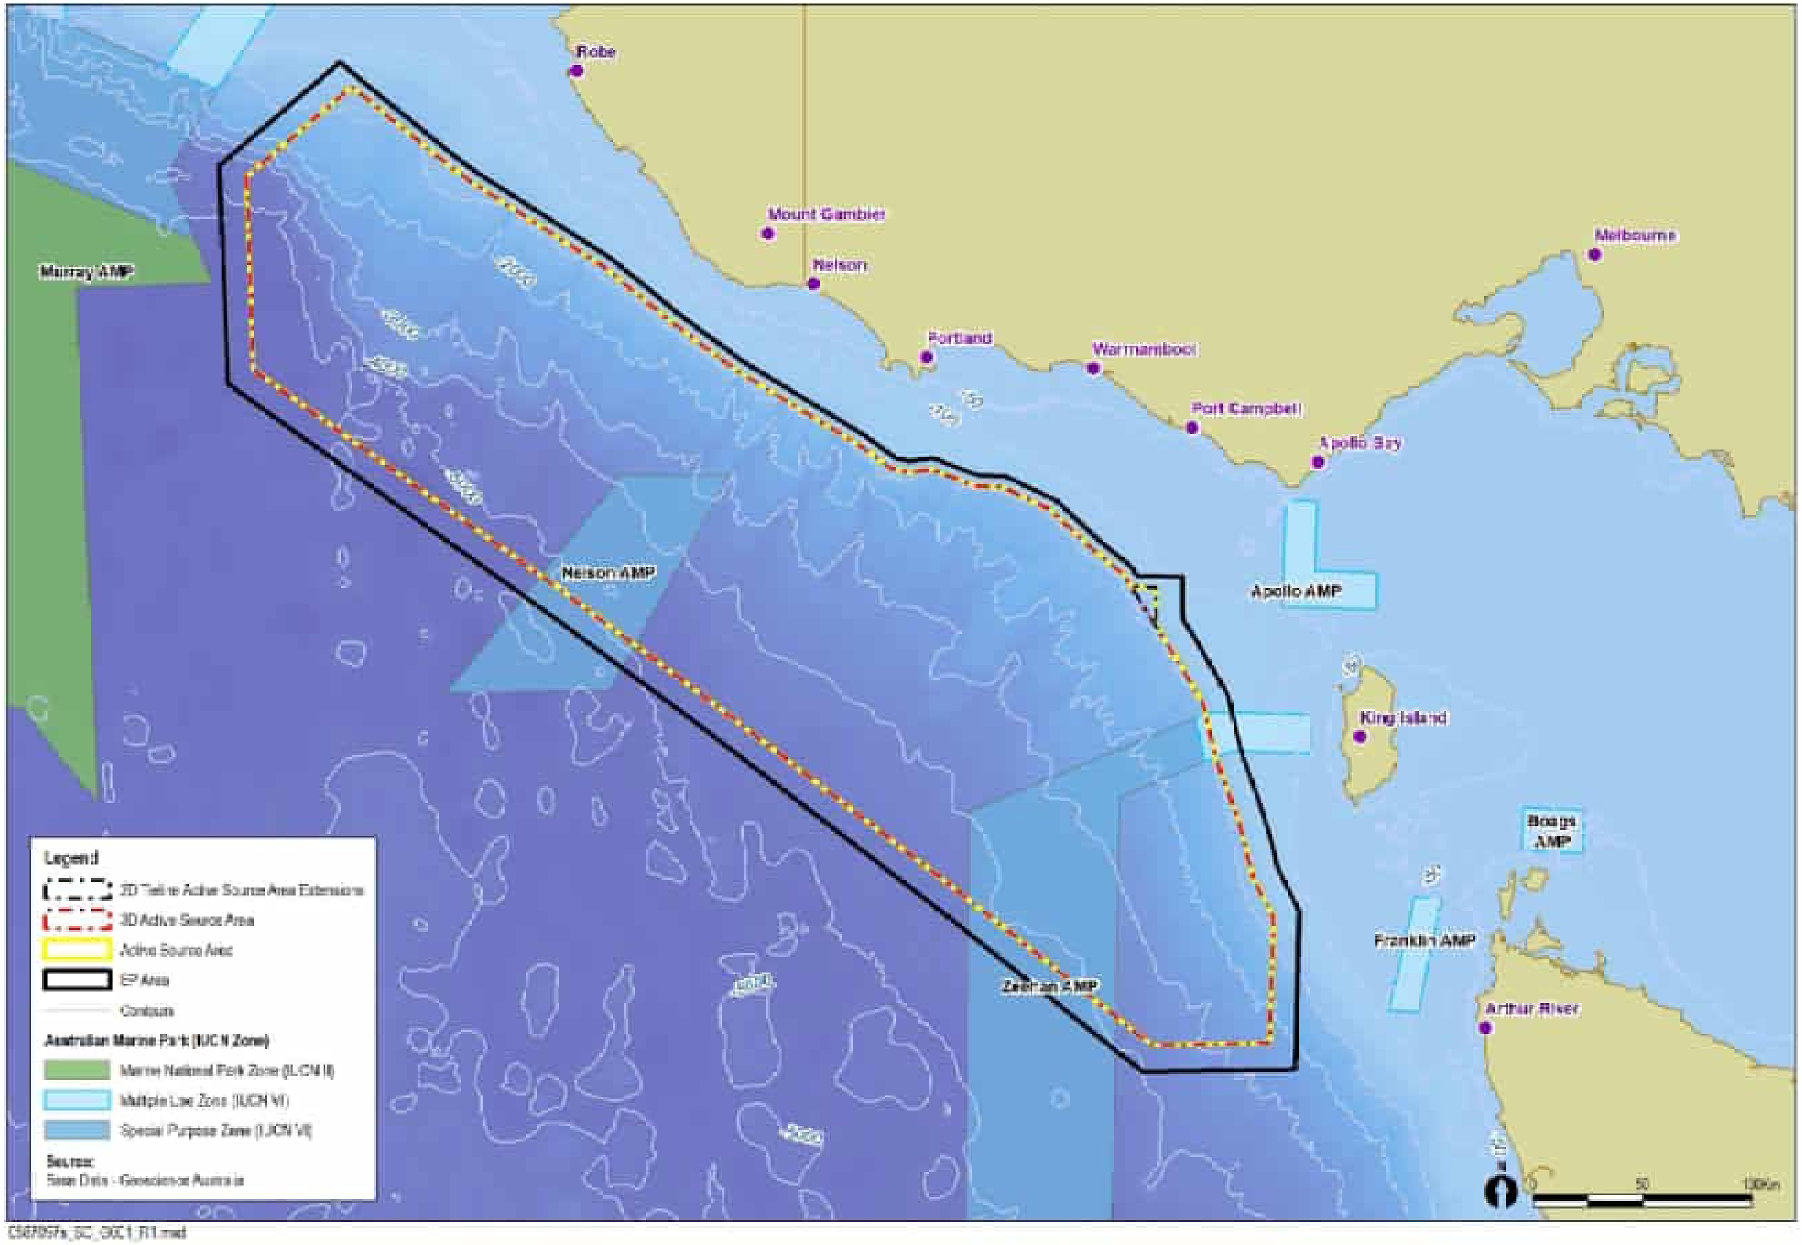

Figure 2 – Location of the proposed Otway Basin 3D Multi-client MSS

ENVIRONMENTAL PERFORMANCE

TGS and Schlumberger have a reputation for implementing high standards of environmental protection in environmentally sensitive areas to mitigate and minimise impacts on the surrounding marine environment and stakeholders. TGS and Schlumberger are committed to working with all interested parties to ensure risks are identified and reduced to as low as reasonably practicable before activities begin.

A summary of key environmental management measures associated with the Otway Basin 3D Multi-client MSS are summarised below. These management measures will be implemented as a minimum. Additional management measures may also be identified during stakeholder engagement and development of the EP.

UNDERWATER NOISE

- Precaution zones, pre-start observations, soft-start procedures, low-power and shut-down procedures, in accordance with EPBC Policy Statement 2.1.
- Marine fauna observers will be present on the survey vessel.
- Passive Acoustic Monitoring (PAM).
- Operation of the seismic source in water depths less than 500 m will be limited to a few hours for a single 2D tie-in line.
- Subject to the outcomes of acoustic modelling and further assessment, additional control measures and adaptive management procedures will be considered.

INTERACTIONS WITH MARINE FAUNA

- Vessels will not exceed a speed of 6 knots or actively approach within the caution zone of a cetacean in accordance with EPBC Regulations 2000 - Part 8 Division 8.1.
- Caution zones and speed restrictions will also be implemented for marine turtles.
- Tail buoys on streamers will be of a design that reduces the risk of entrapment.

INTERACTIONS WITH FISHERIES

- Seismic data acquisition in water depths less than 500 m will be limited to a single 2D tie-in line to minimise interaction with most fisheries.
- Notifications will be provided to fisheries stakeholders 4 weeks prior to commencement of the survey, indicating the location and expected timing.
- Daily look-ahead reports, detailing upcoming survey activities within the next 48 hours, will be available via email to fisheries stakeholders who register for this service.
- Access to seismic vessel tracking information via Google Earth, will be made available to fisheries stakeholders who register for this service.
- Notifications will be provided to fisheries stakeholders upon completion of the survey.

INTERACTION WITH OTHER MARINE USERS

- Notice to Mariners and notification to the AMSA Joint Rescue Coordination centre (JRCC) will be issued prior to survey commencement.
- Vessels will maintain appropriate lighting, signals, navigation and communication at all times, in compliance with the *Navigation Act 2012* and associated Marine Orders.
- Tail buoys on streamers will be fitted with lights and radar reflectors.
- At least one support vessel will accompany the survey vessel during seismic operations.

VESSEL MANAGEMENT

- Vessel emissions, discharges and waste management will comply with the requirements of the International Convention for the Prevention of Pollution from Ships (MARPOL), the *Protection of the Sea (Prevention of Pollution from Ships) Act 1983* and associated Marine Orders.
- Vessels will meet the requirements of the *Biosecurity Act 2015* and will manage ballast water in accordance with the Australian Ballast Water Management Requirements.
- TGS will develop an Oil Pollution Emergency Plan (OPEP) for the survey.
- All vessels will have Shipboard Oil Pollution Emergency Plans (SOPEPs).

Frequently Asked Questions

Q. WHAT IS A 'MULTI-CLIENT' SEISMIC SURVEY?

Seismic surveys are conducted on either a multi-client or proprietary basis. Proprietary surveys are acquired for an individual petroleum titleholder, and the coverage of the survey is usually limited to the titleholder's petroleum permit area. In contrast, multi-client surveys are acquired by a geophysical survey company and are generally collected over larger areas where there may be future interest in oil and gas prospects.

Geophysical companies (in this case, TGS and Schlumberger) collect the data which is then licensed to multiple clients (i.e. multiple titleholders). Although multi-client surveys may cover large areas, a key advantage of a multi-client seismic survey is that the data may be acquired by a single seismic survey, and so fewer seismic surveys are likely to be required in the region.

Q. WILL THE SEISMIC SURVEY OCCUR OVER THE ENTIRE EP AREA?

The defined Active Source Area and EP Area represent the maximum area where TGS and Schlumberger will apply for permission to acquire the Otway Basin 3D Multi-client MSS. The actual area that will be surveyed will depend on the level and areas of interest received from petroleum titleholders in the region, and if TGS and Schlumberger are engaged to acquire seismic data on their behalf. Therefore, there may be areas that are never surveyed, but the EP and stakeholder consultation consider the maximum area for the purposes of environmental management.

When specific survey areas are identified, the areas and proposed commencement dates will be communicated to stakeholders will be communicated to stakeholders.

Q. WHAT HAVE TGS AND SCHLUMBERGER DONE TO AVOID ENVIRONMENTALLY SENSITIVE AREAS IN SHALLOW WATERS?

TGS and Schlumberger have made a conscious effort to limit survey overlap with the continental shelf and shallow nearshore waters. The 3D Active Source Area does not extend into waters shallower than 510 m; only one 2D tie-in line will require the use of the acoustic source in shallower waters. The decision was made to limit activities to deeper, offshore waters in order to reduce the potential effects on marine fauna and commercial fisheries in nearshore waters.

Q. WHAT MARINE FAUNA MIGHT BE AFFECTED?

A number of whale and dolphin species occur in the region. These include pygmy blue whales, which are typically present in the region to forage during the summer and autumn months. The presence of the Bonny Upwelling provides nutrient rich waters, and the continental shelf is known as a biologically important area for the foraging by this species. The Active Source Area has been designed to limit overlap with these foraging areas.

Coastal and continental shelf waters also support species such as southern right whales, fur seals, sea lions and little penguins. However, given that the 3D Active Source Area is limited to waters greater than 510 m water depth, limited disturbance to these species and their habitats in nearshore waters is expected.

Various fish and shellfish species may also be present in the survey area, including commercially significant fish species, rock lobster and giant crab. Potential impacts to these species and stock recruitment will be considered in the EP.

Acoustic modelling and a detailed impact assessment will be undertaken to understand the potential impacts to marine fauna and identify appropriate management measures.

Frequently Asked Questions

Q. WILL COMMERCIAL FISHERIES BE AFFECTED?

The Active Source Area and EP Area have limited overlap with commercial fisheries. Most commercial fishing activity occurs on the continental shelf and along the continental shelf break, which lie on the periphery of the Active Source Area and EP Area. While many fishing activities will be avoided, there is still the potential for some interaction with some State-managed fish, rock lobster and giant crab fisheries, the Commonwealth Trawl Sector, and the Southern Bluefin Tuna Fishery, in the event that the seismic vessel operates near the edge of the continental shelf. TGS and Schlumberger will consult with commercial fishing stakeholders to improve understanding of these fisheries and identify suitable measures to manage impacts.

Q. HOW WILL INTERACTIONS WITH FISHERIES BE MANAGED?

It is TGS and Schlumberger's intention to carry out the Otway Basin 3D Multi-client MSS in a manner that does not interfere with fishing or the resources of the sea, to a greater extent than is necessary. However, it is noted that there is the potential for the survey to interact with fishing activities.

TGS and Schlumberger cannot restrict fishing access to the Operational Area and will consider concurrent operational planning options with commercial fishers. TGS will also provide notifications to fishers prior to the commencement of the survey as well as regular updates during survey activities. Open radio communications will also be maintained with fishing vessels.

Q. WILL TGS COMPENSATE FISHERS FOR INTERRUPTION TO THEIR FISHING ACTIVITIES?

TGS and Schlumberger believe that commercial fishers and fishing charter boat operators should not be unfairly disadvantaged by the Otway Basin 3D Multi-client MSS .

Should fishers be genuinely impacted by the Otway Basin 3D Multi-client MSS, TGS and Schlumberger will consider claims on a case-by-case basis.

YOUR FEEDBACK

TGS and Schlumberger are seeking your feedback regarding this proposed activity before making a formal EP submission to NOPSEMA. If you would like to comment on the survey, request additional information, or meet with us to discuss the survey, please contact us as soon as possible.

All communications will be logged, assessed and acknowledged with a response, and incorporated into the EP. In accordance with regulatory requirements, full copies of correspondence with stakeholders will be provided to NOPSEMA. However, this information and any other information determined to be sensitive will not be made public. Stakeholders are also advised to inform TGS if any information provided is confidential and not to be published in the EP.

In addition, once the EP is submitted to NOPSEMA, it will be published on the NOPSEMA website for a 30-day public comment period. TGS and Schlumberger will provide relevant stakeholders with a notification of the commencement of the public comment period.

If you would like to provide comment or request further information on the Otway Basin 3D Multi-client MSS, please contact:

STAKEHOLDER CONSULTATION INFORMATION SHEET

Otway Basin 3D Multi-client Marine Seismic Survey

TGS

TGS is proposing to undertake a three-dimensional (3D) multi-client marine seismic survey (MSS) in the Otway Basin, in Commonwealth waters offshore of Victoria and Tasmania.

In accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009, TGS are preparing an Environment Plan (EP) for the survey for assessment by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

TGS welcomes your feedback on the proposed survey activity

PROPOSED ACTIVITY

Marine seismic surveying is used to improve the understanding of subsurface geology in marine environments. During marine seismic surveys, seismic data is acquired using a purpose-built seismic survey vessel towing an acoustic source and multiple cables of hydrophones, also known as streamers. Streamers are towed with a tail buoy, radar reflectors and lights to mark the end of the array. The streamers will be up to 9 km long to adequately record the necessary information. Both the source and streamers are towed beneath the surface of the water (Figure 1). Acoustic energy from the acoustic source is detected by the streamers and recorded on board the vessel. The recorded signals are then processed to provide information about geological formations below the seabed.

When recording the data, the seismic vessel traverses the survey area along a series of pre-determined sail lines at a speed of approximately 4 – 5 knots (7.5 – 9.5 km/hr). The level of acoustic emissions can be adjusted to provide low-power ‘soft start’ or ‘fauna alert’ procedures, at any point during the survey or maintenance operations.

Support vessels will work with the seismic vessel to assist in communicating with other vessels that have entered the area of operations and to support the overall operations, such as providing food and supplies.

Table 1 on the following page provides a summary of the Otway Basin 3D Multi-client MSS.

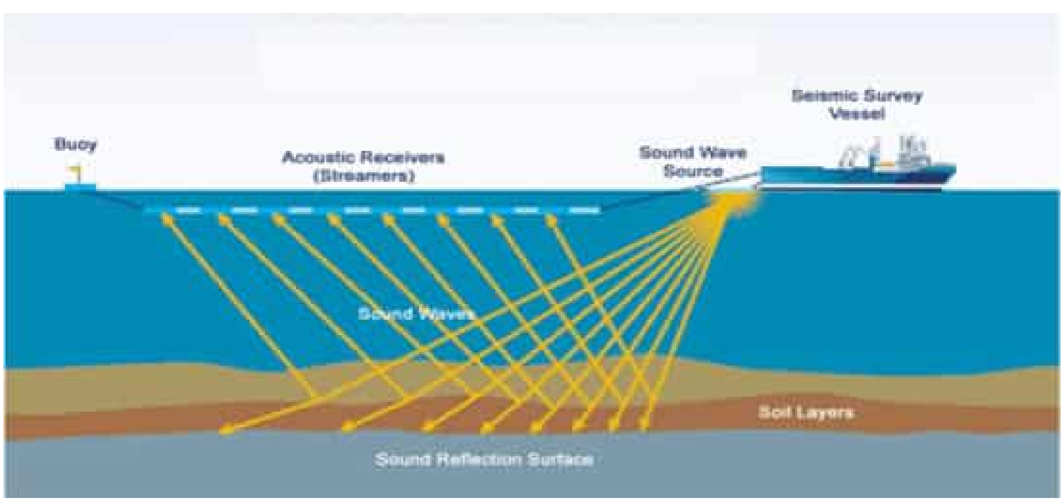

Figure 1 – Schematic illustrating a typical marine seismic survey

SURVEY AREAS

The proposed Otway Basin 3D Multi-client MSS comprises the following areas (**Figure 2**):

- An 'Active Source Area'; and
- A broader 'EP Area'.

The Active Source Area includes areas where prospective clients may be interested in acquiring seismic data in the foreseeable future. It includes the space where data acquisition may occur, plus additional space for the survey vessel to "run-in" to or "run-out" of sail lines while the acoustic source is active.

The Active Source Area includes the main '3D Active Source Area' where 3D seismic data may be acquired. During 3D seismic data acquisition, the seismic vessel travels back and forth along pre-determined parallel sail lines which are acquired in a "race track" pattern, whereby the vessel turns at the end of each sail line and returns in the opposite direction along a different sail line. 3D sail lines will be orientated approximately parallel with the seabed contours (approximately north-west/south-east).

The 3D Active Source Area includes water depths between approximately 510 m and 5,650 m, therefore, the acoustic source will not be operated in shallower continental shelf waters during 3D seismic data acquisition.

In addition, up to five single 2D lines may be acquired to "tie-in" to existing geophysical data in the region. The 2D tie-in lines will be acquired approximately perpendicular to the seabed contours (approximately south-west/north-east). Each tie-in line will be up to a maximum of 150 km in length (less than a day of acquisition time). The tie-in lines will overlap with 3D data acquisition in the 3D Active Source Area; however, one of the 2D tie-in lines may need to extend onto the continental shelf. Consequently, a '2D Tie-line Active Source Area Extension' is included in addition to the primary 3D Active Source Area. Operation of the acoustic source in the 2D Tie-line Active Source Area Extension will be limited only to a single 2D tie-in line. At the shallowest point, the 2D Tie-line Active Source Area Extension is approximately 115 m. The 3D Active Source Area, 2D Tie-line Active Source Area Extension and indicative 2D tie-in line are presented in **Figure 2**.

The broader EP Area includes space required for vessel turns and other vessel operations that may be required beyond the extent of the Active Source Area. It includes waters depths from approximately 95 m to 5,650 m.

Table 1 – Otway Basin 3D Multi-client MSS Summary

Earliest commencement	1 October 2023 (pending regulatory approvals, environmental sensitivities and vessel availability).	
Estimated completion	Pending acceptance by NOPSEMA, the EP will be valid until 30 September 2027.	
Estimated survey duration	Depends upon the areas of interest from petroleum titleholders in the region. The survey may be acquired in multiple survey mobilisations over the duration of the EP. In any year, the maximum acquisition time is expected to be 200 days, but it may be less. This includes some contingency time for potential vessel or equipment downtime and adverse weather conditions. Survey timing will take into account the seasonality of environmental and socio-economic sensitivities wherever practicable and to reduce potential impacts to an acceptable level.

ENVIRONMENTAL PERFORMANCE

TGS has a reputation for implementing high standards of environmental protection in environmentally sensitive areas to mitigate and minimise impacts on the surrounding marine environment and stakeholders. TGS is committed to working with all interested parties to ensure concerns and risks are identified and reduced to as low as reasonably practicable before activities begin and throughout the project duration.

A summary of key environmental management measures associated with the Otway Basin 3D Multi-client MSS are summarised below. These management measures will be implemented as a minimum. Additional management measures may also be identified during stakeholder engagement and development of the EP.

UNDERWATER NOISE

- TGS will implement precaution zones, pre-start observations and soft-start, low-power and shut-down procedures in accordance with EPBC Policy Statement 2.1 – Interaction with whales.
- Marine fauna observers will be present on the survey vessel throughout the survey duration.
- Operation of the seismic source in water depths < 500 m will be limited to a few hours for a single 2D tie-in line.
- Subject to the outcomes of acoustic modelling and further assessment, additional control measures and adaptive management procedures will be considered.

INTERACTIONS WITH FISHERIES

- Seismic data acquisition in water depths less than 500 m will be limited to a single 2D tie-in line to minimise interaction with most fisheries.
- Fisheries stakeholders will be notified four weeks prior to commencement of the survey, providing the location and expected timing.
- Daily look-ahead reports, detailing upcoming survey activities within the next 48 hours, will be emailed to fisheries stakeholders who register for this service.
- Fisheries stakeholders will be notified upon completion of the survey.

INTERACTIONS WITH MARINE FAUNA

- Vessels will not exceed a speed of 6 knots or actively approach within the caution zone of a cetacean in accordance with EPBC Regulations 2000 - Part 8 Division 8.1.
- Strict caution zones and speed restrictions also apply for marine turtles.
- Tail buoys on streamers will be designed to reduce the risk of entrapment.

INTERACTION WITH OTHER MARINE USERS

- Notice to Mariners and notification to the AMSA Joint Rescue Coordination centre (JRCC) will be issued prior to survey commencement.
- Vessels will maintain appropriate lighting, signals, navigation and communication at all times, in compliance with the *Navigation Act 2012* and associated Marine Orders.
- Tail buoys on streamers will be fitted with lights and radar reflectors.
- At least one support vessel will accompany the survey vessel during seismic operations.

VESSEL MANAGEMENT

- Vessel emissions, discharges and waste management will comply with the requirements of the International Convention for the Prevention of Pollution from Ships (MARPOL), the *Protection of the Sea (Prevention of Pollution from Ships) Act 1983* and associated Marine Orders.
- Vessels will manage ballast water in accordance with the Australian Ballast Water Management Requirements and the *Biosecurity Act 2015.*
- TGS will implement an Oil Pollution Emergency Plan (OPEP) for the duration of the survey.
- All vessels will have Shipboard Oil Pollution Emergency Plans (SOPEPs).

FURTHER CONSULTATION

WE WANT TO HEAR FROM YOU

We are contacting you because our assessment of values and sensitivities show there may be overlap with areas that are important to you. Therefore, we would like to understand the following:

- Do you have any functions, interests or activities that may be affected by the proposed activities to be carried out under the Environment Plan?
- Do you want to meet with TGS, either in person or via video conference to discuss the proposed activities to be carried out under the Environment Plan?

OUR COMMITMENT

- TGS is committed to maintaining regular communication with all relevant persons throughout the duration of the survey and works with communities in a transparent manner. This will be supported with the supply of 48-hour operational detail lookahead plans which will be distributed every 24 hours, with notification being provided to relevant persons during operations.
- If you wish to receive these notifications or specific information regarding this survey, please advise as soon as possible.

YOUR FEEDBACK

TGS is seeking your feedback regarding this proposed activity before making a formal EP submission to NOPSEMA. If you would like to comment on the survey, request additional information, or meet with us to discuss the survey, please contact us as soon as possible.

All communications will be logged, assessed and acknowledged with a response, and incorporated into the EP. In accordance with regulatory requirements, full copies of correspondence with stakeholders will be provided to NOPSEMA. However, this information and any other information determined to be sensitive will not be made public. Stakeholders are advised to inform TGS if any information provided is confidential and not to be published in the EP.

In addition, once the EP is submitted to NOPSEMA, it will be published on the NOPSEMA website for a 30-day public comment period. TGS will provide relevant stakeholders with a notification of the commencement of the public comment period.

If you would like to provide comment or request further information on the Otway Basin 3D Multi-client MSS, please contact TGS:

TGS

INFORMATION SHEET

Otway Basin Marine Seismic Survey

TGS is proposing to undertake a three-dimensional (3D) marine seismic survey (MSS) in the Otway Basin, in Commonwealth waters offshore of Victoria and Tasmania.

TGS is preparing an Environment Plan (EP) for the survey to provide to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for assessment. As part of EP, we need to identify potential risks and impacts of the proposed survey and provide the measures TGS will implement to address those risk and impacts.

Why are we contacting you?

TGS is contacting you because our assessment of values and sensitivities show the survey activity and area may be important to you. TGS wish to speak with you to understand what your key sensitivities and concerns might be as a traditional custodian of the area.

Let's talk…

We would like to meet with you and your members to fully explain the proposed project and what is involved in a marine seismic survey. We want to provide you an opportunity to ask any questions or discuss any queries you may have, and this will hopefully help you determine if there is likely to be any impact to you and your community. It is very important that TGS understands any concerns you may have and help identify appropriate measures to minimise any impacts. We can set up a meeting style to accommodate your group, which may involve a small online meeting or involve a larger community townhall type meeting.

Communication commitment

TGS has a reputation for implementing high standards of environmental protection in environmentally sensitive areas to mitigate and minimise impacts on the surrounding marine environment and communities. TGS is committed to:

- working with all local communities to ensure their concerns are identified and potential risks to the environment managed before activities begin and throughout the project duration.
- maintaining regular, ongoing communication with interested parties throughout the duration of the survey and work with communities in a transparent manner.

Please be aware that all communications will be logged, assessed and acknowledged with a response from TGS. In accordance with regulatory requirements, full copies of all correspondence will be provided to NOPSEMA within the EP. However, any information determined to be sensitive will not be made public. Please inform TGS if any information provided is confidential and not to be made available to the public.

Once submitted, NOPSEMA will publish the EP on the NOPSEMA website for a 30-day public comment period. TGS will provide all interested parties with a notification of the commencement of the public comment period.

However, we can't do it without you as we don't know what we don't know! Here is some basic information about marine surveys and our proposal to get started…

What is a Marine Seismic Survey?

Marine seismic surveying is used to understand the geological (rock and soil) layers beneath the sea floor. A survey vessel tows an acoustic source and multiple cables, also known as streamers (**Figure 1**) under the surface of the water. The acoustic source releases a pulse of sound energy (sound waves) into the water column directed downwards. The sound waves pass through the different rock layers and bounce back towards the surface. The streamers receive the sound waves that are reflected back and from these reflections a picture of the rock layer geology is produced across the survey area.

The streamers can be up to 9 km long and are towed with a tail buoy, radar reflectors and lights for easy identification. The seismic vessel moves within a specific survey area (see below) along a series of lines at a speed of approximately 7.5 – 9.5 km/hr. The level of sound energy is adjusted prior to commencement, slowly ramped up to warn any nearby marine mammals, fish or other fauna to move away. This occurs with continuous monitoring and advice from the marine fauna observers onboard the survey vessel and in support vessels accompanying the survey vessel.

Support vessels work with the seismic vessel to communicate with other vessels that have entered the survey area and to assist with overall operations, such as providing food and supplies.

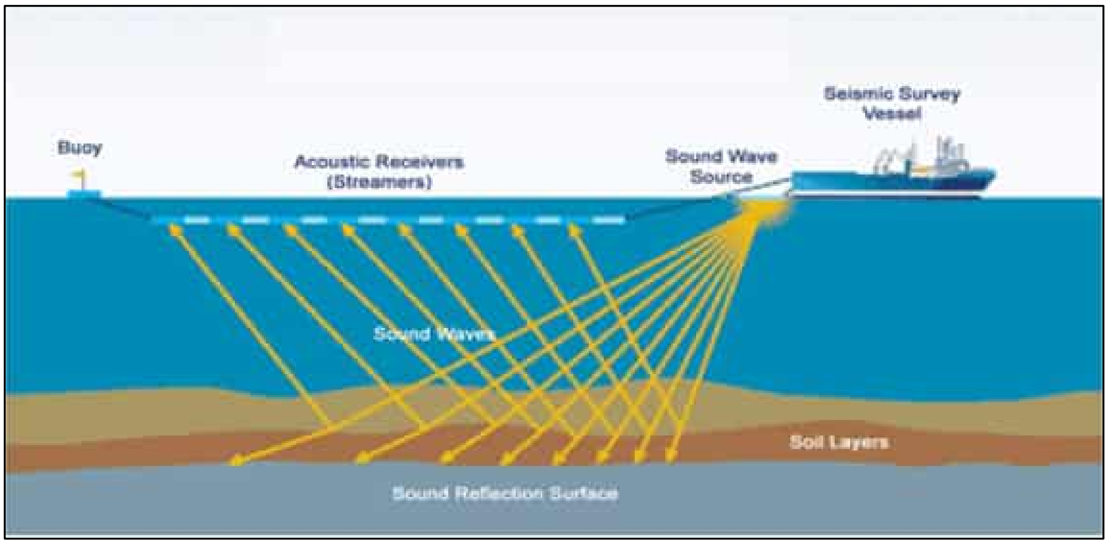

Figure 1 – Schematic illustrating a typical marine seismic survey

Survey Area

There are two key areas within the seismic survey area (**Figure 2** over the page):

- An *operational area* (OA) – the largest area where all survey activities must take place within, e.g. maintenance, refuelling, vessel manoeuvring and streamer deployment; and
- An *acquisition area* (AA) – smaller area within the OA where seismic data is acquired. This is the only area where the active source (sound wave generator) can be used at full power.

Within the AA, the seismic vessel travels back and forth along parallel sail lines in a “race track” pattern, whereby the vessel turns at the end of each sail line and returns in the opposite direction along a different sail line. Water depths within the AA range between approximately 510 m and 5,650 m which means the survey avoids the shallower continental shelf area.

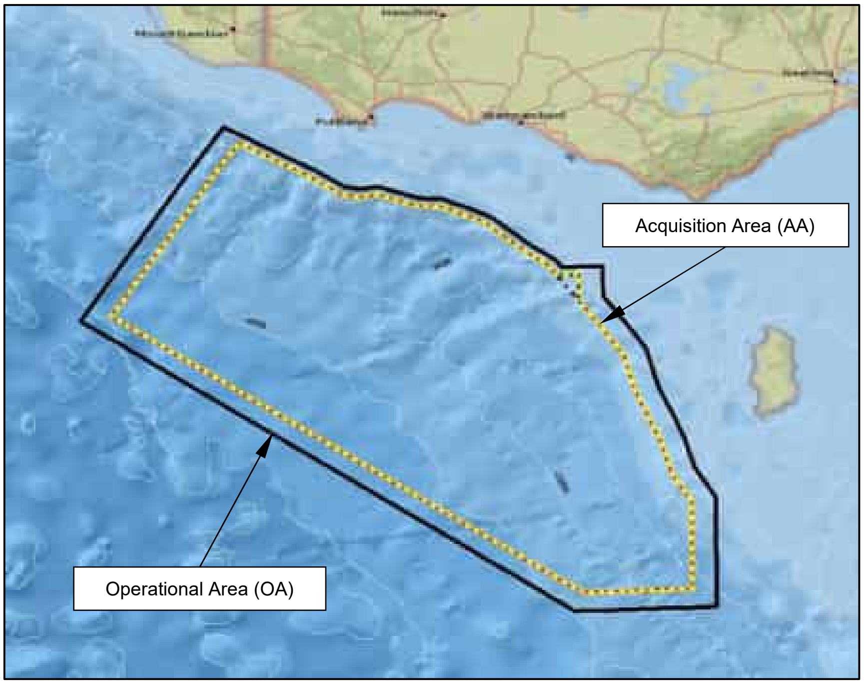

Figure 2 – Location of the proposed marine seismic survey and the two defined areas: Operational Area (OA) and Acquisition Area (AA)

Flora and Fauna Sensitivities

TGS has undertaken a thorough analysis of marine flora and fauna sensitivities in the Operational Area through the development of the EP, enabling TGS to identify and incorporate control measures to account for these sensitivities and minimize potential environmental risks. Multiple whale species (Blue, Southern Right, Sei and Fin) in particular, have been identified in the early analysis as being some of the key sensitivities in the area. The EP has focused on these species and introduced additional control measures to minimise disturbance as a result of the proposed seismic activities.

There will be two dedicated Marine Mammal Observers (MMOs) onboard the survey vessel who will visually monitor precaution zones and observation zones, during daylight hours in accordance with the Environment Protection and Biodiversity Conservation Act. There will also be Passive Acoustic Monitoring (PAM) operating 24 hours a day to detect any marine mammals in the vicinity of the survey vessel. Mitigation measures such as restricting survey operations in certain areas at certain times of peak mammal activity, extended shut down zones, soft start procedures and adaptive management procedures (such as relocation should more whales be detected in an area than is expected) will be implemented to minimize any potential for disturbance to whales during the survey.

Fuel Spill Mitigation and Response

As part of the environmental planning and approval process, TGS has conducted a modeling study to identify the area of potential impact from an accidental fuel spill from the seismic vessel fuel tank. This helps TGS identify measures for:

- preventing a spill occurring;
- planning how best to respond to an incident to minimise the impact of a spill occurring; and
- identifying whom to notify should a spill occur.

It is important to note, the modelling is highly conservative and provides the maximum potential area for a spill to reach resulting from a collision with another vessel, using multiple spill locations within the OA. This type of event has a very low likelihood of occurring and has never occurred within Australian waters. However, TGS use the fuel dispersal model to identify the environment that may be affected (EMBA) (Figure 3) and guide whom they may need to consult about the proposed survey.

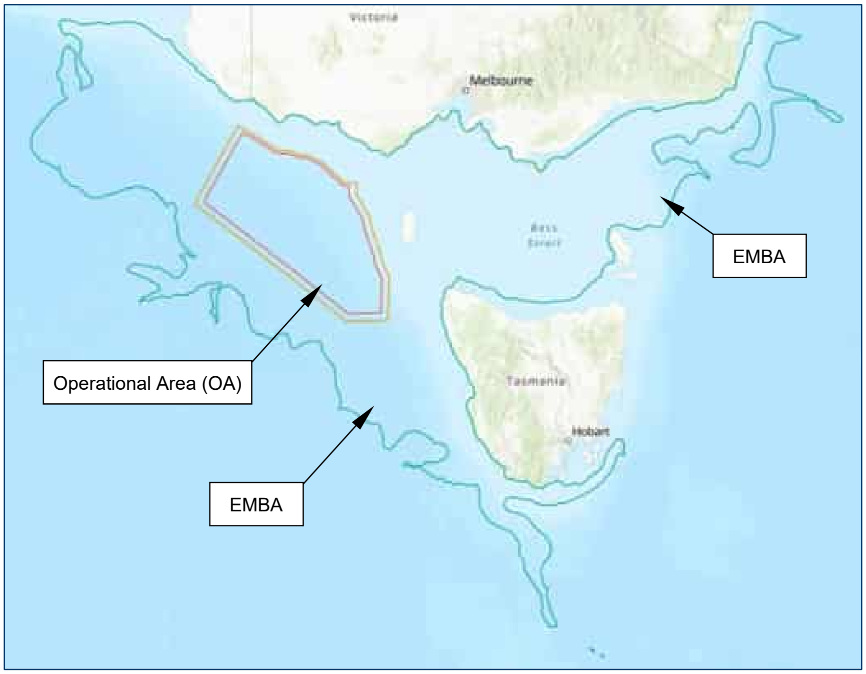

Figure 3 – Accidental fuel dispersion modelling showing environment that may be affected (EMBA)

Modern seismic vessels mitigate the risk of fuel spills via physical design features such as double hull configuration and having multiple compartmentalized fuel tanks of reduced size instead of one large fuel tank. The vessel that will be contracted for this project will have these features and will have worked in Australian waters previously.

The seismic vessel provider has safety procedures in place and documented actions to take if an incident were to occur. As a subcontractor of TGS, the vessel provider also has to comply with TGS' rigorous QHSE standards and commitments made within the Environment Plan which forms part of the regulatory approval process. At least one support vessel will work alongside the seismic vessel during the survey.

Concerned parties should note that the EP also provides an Oil Pollution Emergency Plan (OPEP) which is a legal requirement for all seismic vessels of a certain size to develop and implement. The OPEP provides detailed measures and procedures for preventing and responding to a seismic vessel fuel oil spill.

Tell us what is important to you

TGS values your feedback to help identify and address any of your concerns so please share them with us. We want to know about your spiritual, physical and cultural connections with the land and sea country so we can understand how best to respect and provide for them.

Please get in touch so we can arrange a meeting that suits you and your group and let us know if you need any information in the meantime.

TGS would like to acknowledge the Traditional Custodians of the land and sea country in which the Otway Marine Seismic Survey will be carried out. We recognise their continuing connection to the land, waters and culture. We pay our respects to their Elders past, present and emerging.

If you would like to provide comment or request further information on the Otway Basin Marine Seismic Survey, please contact TGS:

TGS

TGS is proposing to undertake a three-dimensional (3D) multi-client marine seismic survey (MSS) in the Otway Basin, in Commonwealth waters offshore of Victoria and Tasmania.

In accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009, TGS are preparing an Environment Plan (EP) for the survey for assessment by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

TGS welcomes your feedback on the proposed survey activity

PROPOSED ACTIVITY

Marine seismic surveying is used to improve the understanding of subsurface geology in marine environments. During marine seismic surveys, seismic data is acquired using a purpose-built seismic survey vessel towing an acoustic source and multiple cables of hydrophones, also known as streamers. Streamers are towed with a tail buoy, radar reflectors and lights to mark the end of the array. The streamers will be up to 9 km long to adequately record the necessary information. Both the source and streamers are towed beneath the surface of the water (**Figure 1**). Acoustic energy from the acoustic source is detected by the streamers and recorded on board the vessel. The recorded signals are then processed to provide information about geological formations below the seabed.

When recording the data, the seismic vessel traverses the survey area along a series of pre-determined sail lines at a speed of approximately 4 – 5 knots (7.5 – 9.5 km/hr). The level of acoustic emissions can be adjusted to provide low-power ‘soft start’ or ‘fauna alert’ procedures, at any point during the survey or maintenance operations.

Support vessels will work with the seismic vessel to assist in communicating with other vessels that have entered the area of operations and to support the overall operations, such as providing food and supplies.

Table 1 on the following page provides a summary of the Otway Basin 3D Multi-client MSS.

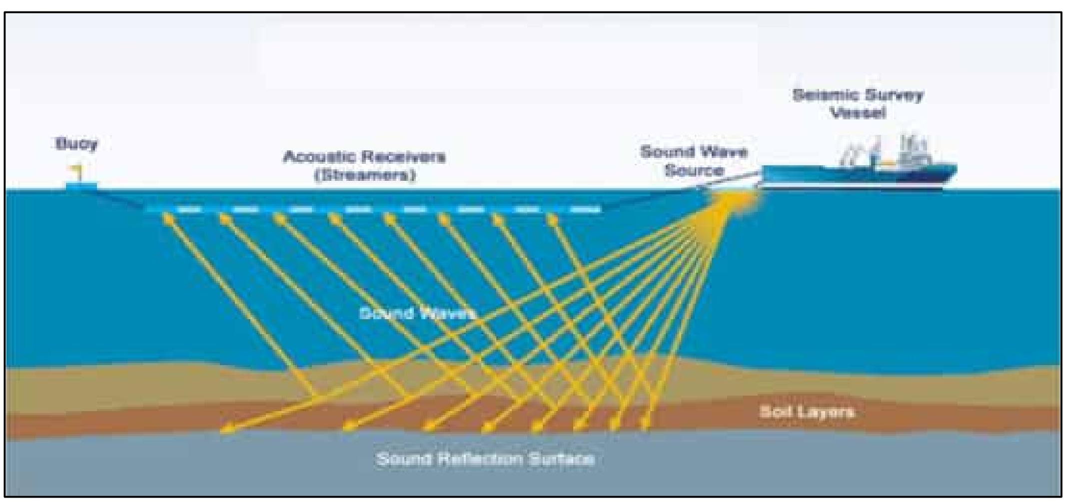

Figure 1 – Schematic illustrating a typical marine seismic survey

SURVEY AREAS

The proposed Otway Basin 3D Multi-client MSS comprises the following areas (**Figure 2**):

- An *operational area* (OA) – the largest area where all survey activities must take place within, e.g. maintenance, refuelling, vessel manoeuvring and streamer deployment; and
- An *acquisition area* (AA) – smaller area within the OA where seismic data is acquired. This is the only area where the active source can be used at full power.

The AA includes areas where prospective clients may be interested in acquiring seismic data in the foreseeable future. It includes the space where data acquisition may occur, plus additional space for the survey vessel to "run-in" to or "run-out" of sail lines while the acoustic source is active.

During 3D seismic data acquisition, the seismic vessel travels back and forth along pre-determined parallel sail lines which are acquired in a "race track" pattern within the AA, where the vessel turns at the end of each sail line and returns in the opposite direction along a different sail line. Sail lines will be orientated approximately parallel with the seabed contours (approximately north-west/south-east).

The AA includes water depths between approximately 510 m and 5,650 m, therefore, the acoustic source will not be operated in shallower continental shelf waters during 3D seismic data acquisition.

In addition, up to five single 2D lines may be acquired to "tie-in" to existing geophysical data in the region. The 2D tie-in lines will be acquired approximately perpendicular to the seabed contours (approximately south-west/north-east). Each tie-in line will be up to a maximum of 150 km in length (less than a day of acquisition time). The tie-in lines will overlap with 3D data acquisition in the AA; however, one of the 2D tie-in lines may need to extend onto the continental shelf. Consequently, a '2D Tie-line Active Source Area Extension' is included in addition to the AA (also included within Figure 2). Operation of the acoustic source in the 2D Tie-line Active Source Area Extension will be limited only to a single 2D tie-in line. At the shallowest point, this 2D Tie-line Active Source Area Extension is approximately 115 m.

The broader OA includes space required for vessel turns and other vessel operations that may be required beyond the extent of the AA. It includes waters depths from approximately 95 m to 5,650 m.

Table 1 – Otway Basin 3D Multi-client MSS Summary

Earliest commencement	1 October 2023 (pending regulatory approvals, environmental sensitivities and vessel availability).	
Estimated completion	Pending acceptance by NOPSEMA, the EP will be valid until 30 September 2027.	
Estimated survey duration	Total acquisition is 400 days over 5 year period, however maximum of 200 days per year. Allows flexibility to accommodate adverse weather, equipment maintenance etc.	
Water depth	Predominantly 510 m to 5,650 m, reducing to approximately 115 m for a single 2D tie-line within the Active Source Area Extension (see Figure 2).	
Vessels	One purpose-built seismic survey vessel, plus additional support vessels. Vessel details have not yet been confirmed.	
Acoustic array	Acoustic source 3,500 in^3 with maximum of 14 streamers up to 9 km length.	
Survey vessel speed	Approximately 4 – 5 knots (7.5 – 9.5 km/hour).	
Dimensions of towed equipment	Approximately 8 – 10 km length and approximately 800 m – 1.6 km wide.	
Area of avoidance	3 nautical miles requested around the survey vessel and streamers.	
Proximity to key locations	**Location**	**Approximate Distance to OA**
	Portland (VIC)	48 km
	Warrnambool (VIC)	61 km
	Arthur River (TAS)	85 km
	King Island (TAS)	39 km
	Robe (SA)	64 km

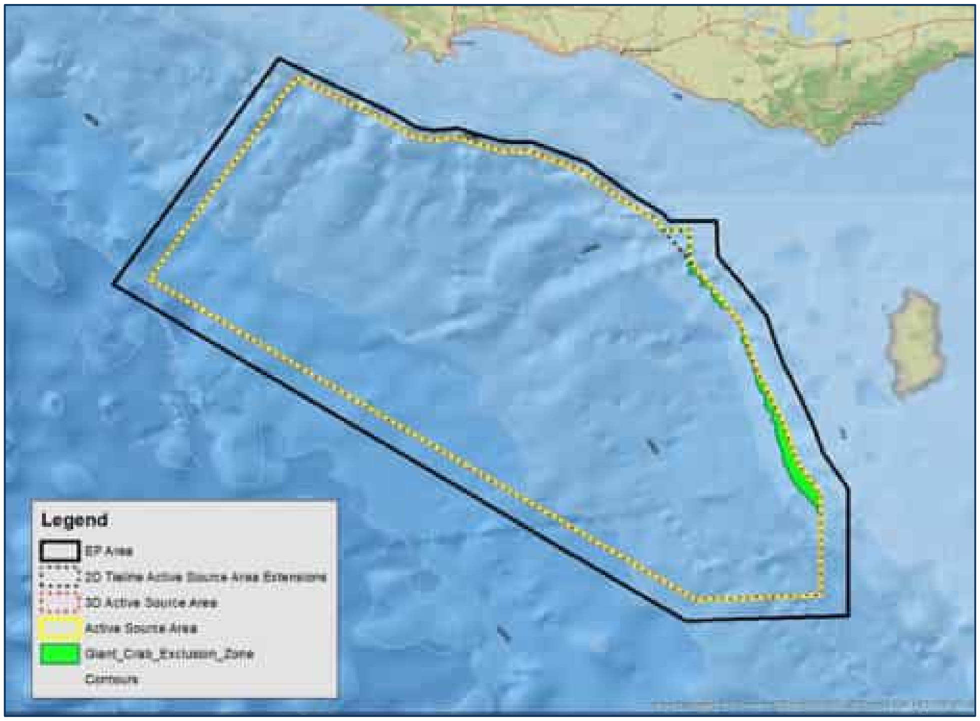

Figure 2 – Location of the proposed Otway Basin 3D Multi-client MSS

ENVIRONMENTAL PERFORMANCE

TGS has a reputation for implementing high standards of environmental protection in environmentally sensitive areas to mitigate and minimise impacts on the surrounding marine environment and stakeholders. TGS is committed to working with all interested parties to ensure concerns and risks are identified and reduced to as low as reasonably practicable before activities begin and throughout the project duration.

A summary of key environmental management measures associated with the Otway Basin 3D Multi-client MSS are summarised below. These management measures will be implemented as a minimum. Additional management measures may also be identified during relevant person engagement and development of the EP.

FLORA AND FAUNA SENSITIVITIES

TGS has undertaken a thorough analysis of marine flora and fauna sensitivities in the Operational Area through the development of the EP, enabling TGS to identify and incorporate control measures to account for these sensitivities and minimize potential environmental risks. Multiple whale species (Blue, Southern Right, Sei and Fin) in particular, have been identified in the early analysis as being some of the key sensitivities in the area. The EP has focused on these species and introduced additional control measures to minimise disturbance as a result of the proposed seismic activities.

There will be two dedicated Marine Mammal Observers (MMOs) onboard the survey vessel who will visually monitor precaution zones and observation zones, during daylight hours in accordance with the Environment Protection and Biodiversity Conservation Act. There will also be Passive Acoustic Monitoring (PAM) operating 24 hours a day to detect any marine mammals in the vicinity of the survey vessel. Mitigation measures such as restricting survey operations in certain areas at certain times of peak mammal activity, extended shut down zones, soft start procedures and adaptive management procedures (such as relocation should more whales be detected in an area than is expected) will be implemented to minimize any potential for disturbance to whales during the survey.

FUEL SPILL MITIGATION AND RESPONSE

As part of the environmental planning and approval process, TGS has conducted a modeling study to identify the area of potential impact from an accidental fuel spill from the seismic vessel fuel tank. This helps TGS identify measures for:

- preventing a spill occurring;
- planning how best to respond to an incident to minimise the impact of a spill occurring; and
- identifying whom to notify should a spill occur.

It is important to note, the modelling is highly conservative and provides the maximum potential area for a spill to reach resulting from a collision with another vessel, using multiple spill locations within the OA. This type of event has a very low likelihood of occurring and has never occurred within Australian waters. However, TGS use the fuel dispersal model to identify the environment that may be affected (EMBA) (**Figure 3**) and guide whom they may need to consult about the proposed survey.

Modern seismic vessels mitigate the risk of fuel spills via physical design features such as double hull configuration and having multiple compartmentalized fuel tanks of reduced size instead of one large fuel tank. The vessel that will be contracted for this project will have these features and will have worked in Australian waters previously.

The seismic vessel provider has safety procedures in place and documented actions to take if an incident were to occur. As a subcontractor of TGS, the vessel provider also has to comply with TGS' rigorous QHSE standards and commitments made within the Environment Plan which forms part of the regulatory approval process. At least one support vessel will work alongside the seismic vessel during the survey.

Concerned parties should note that the EP also provides an Oil Pollution Emergency Plan (OPEP) which is a legal requirement for all seismic vessels of a certain size to develop and implement. The OPEP provides detailed measures and procedures for preventing and responding to a seismic vessel fuel oil spill.

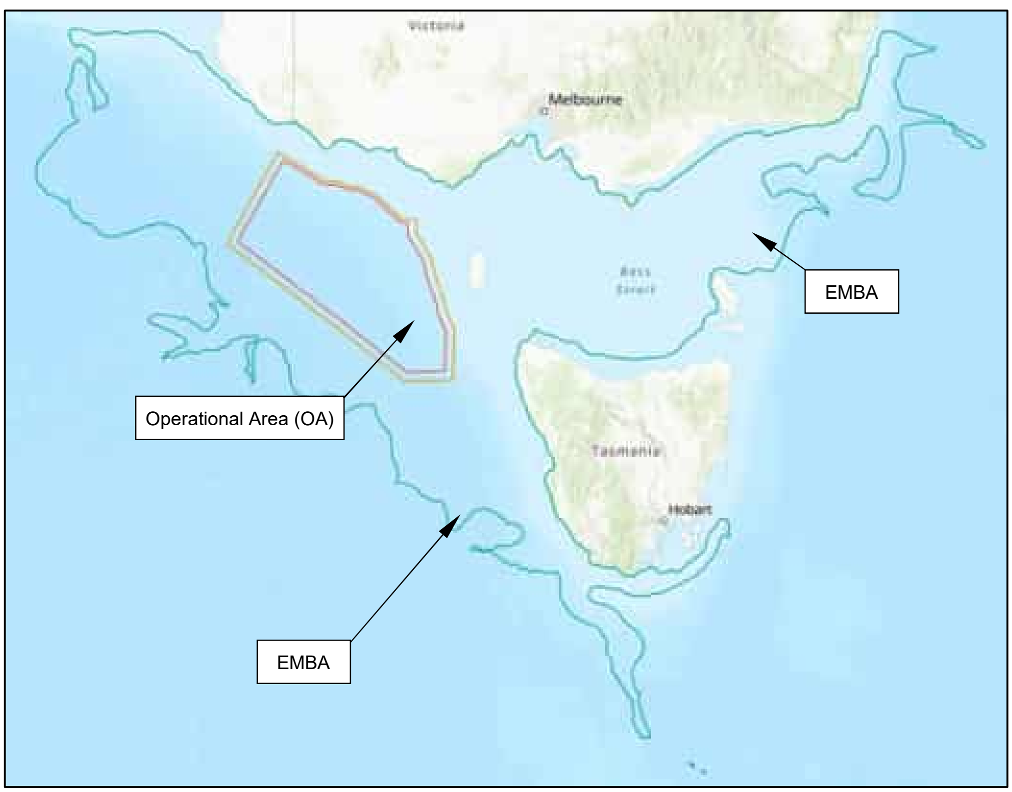

Figure 3 – Accidental fuel dispersion modelling showing environment that may be affected (EMBA)

KEY CONTROL MEASURES

INTERACTIONS WITH FISHERIES

- Seismic data acquisition in water depths less than 500 m will be limited to a single 2D tie-in line to minimise interaction with most fisheries.
- Fisheries relevant persons will be notified four weeks prior to commencement of the survey, providing the location and expected timing.
- Daily look-ahead reports, detailing upcoming survey activities within the next 48 hours, will be emailed to fisheries relevant persons who register for this service.
- Fisheries relevant persons will be notified upon completion of the survey.

UNDERWATER NOISE

- TGS will implement precaution zones, pre-start observations and soft-start, low-power and shut-down procedures in accordance with EPBC Policy Statement 2.1 – Interaction with whales.
- Marine fauna observers will be present on the survey vessel throughout the survey duration.
- Operation of the seismic source in water depths < 500 m will be limited to a few hours for a single 2D tie-in line.
- Subject to the outcomes of acoustic modelling and further assessment, additional control measures and adaptive management procedures will be considered.

INTERACTIONS WITH MARINE FAUNA

- Vessels will not exceed a speed of 6 knots or actively approach within the caution zone of a cetacean in accordance with EPBC Regulations 2000 - Part 8 Division 8.1.
- Strict caution zones and speed restrictions also apply for marine turtles.
- Tail buoys on streamers will be designed to reduce the risk of entrapment.

INTERACTION WITH OTHER MARINE USERS

- Notice to Mariners and notification to the AMSA Joint Rescue Coordination centre (JRCC) will be issued prior to survey commencement.
- Vessels will maintain appropriate lighting, signals, navigation and communication at all times, in compliance with the *Navigation Act 2012* and associated Marine Orders.
- Tail buoys on streamers will be fitted with lights and radar reflectors.
- At least one support vessel will accompany the survey vessel during seismic operations.

VESSEL MANAGEMENT

- Vessel emissions, discharges and waste management will comply with the requirements of the International Convention for the Prevention of Pollution from Ships (MARPOL), the *Protection of the Sea (Prevention of Pollution from Ships) Act 1983* and associated Marine Orders.
- Vessels will manage ballast water in accordance with the Australian Ballast Water Management Requirements and the *Biosecurity Act 2015.*
- TGS will implement an Oil Pollution Emergency Plan (OPEP) for the duration of the survey.
- All vessels will have Shipboard Oil Pollution Emergency Plans (SOPEPs).

FURTHER CONSULTATION

WE WANT TO HEAR FROM YOU

We are contacting you because our assessment of values and sensitivities show there may be overlap with areas that are important to you. Therefore, we would like to understand the following:

- Do you have any functions, interests or activities that may be affected by the proposed activities to be carried out under the Environment Plan?
- Do you want to meet with TGS, either in person or via video conference to discuss the proposed activities to be carried out under the Environment Plan?

OUR COMMITMENT

- TGS is committed to maintaining regular communication with all relevant persons throughout the duration of the survey and works with communities in a transparent manner. This will be supported with the supply of 48-hour operational detail lookahead plans which will be distributed every 24 hours, with notification being provided to relevant persons during operations.
- If you wish to receive these notifications or specific information regarding this survey, please advise as soon as possible.

YOUR FEEDBACK

TGS is seeking your feedback regarding this proposed activity before making a formal EP submission to NOPSEMA. If you would like to comment on the survey, request additional information, or meet with us to discuss the survey, please contact us as soon as possible.

All communications will be logged, assessed and acknowledged with a response, and incorporated into the EP. In accordance with regulatory requirements, full copies of correspondence with relevant persons will be provided to NOPSEMA. However, this information and any other information determined to be sensitive will not be made public. Relevant persons are advised to inform TGS if any information provided is confidential and not to be published in the EP.

In addition, once the EP is submitted to NOPSEMA, it will be published on the NOPSEMA website for a 30-day public comment period. TGS will provide relevant persons with a notification of the commencement of the public comment period.

TGS would like to acknowledge the Traditional Custodians of the land and sea country in which the Otway Marine Seismic Survey will be carried out. We recognise their continuing connection to the land, waters and culture. We pay our respects to their Elders past, present and emerging.

If you would like to provide comment or request further information on the Otway Basin 3D Multi-client MSS, please contact TGS:

TGS

FREQUENTLY ASKED QUESTIONS

Q. WHAT IS A 'MULTI-CLIENT' SEISMIC SURVEY?

Seismic surveys are conducted on either a multi-client or proprietary basis. Proprietary surveys are acquired for an individual petroleum titleholder, and the coverage of the survey is usually limited to the titleholder's petroleum permit area. In contrast, multi-client surveys are acquired by a geophysical survey company and are generally collected over larger areas where there may be future interest in oil and gas prospects.

Geophysical companies (in this case, TGS) collect the data which is then licensed to multiple clients (i.e. multiple titleholders). Although multi-client surveys may cover large areas, a key advantage of a multi-client seismic survey is that the data may be acquired by a single seismic survey, and so fewer seismic surveys are likely to be required in the region.

Q. WILL THE SEISMIC SURVEY OCCUR OVER THE ENTIRE EP AREA?

The defined Acquisition Area (AA) and Operational Area (OA) represent the maximum area where TGS will apply for permission to acquire the Otway Basin 3D Multi-client MSS. The actual survey area that will be surveyed will depend on the level and areas of interest received from petroleum titleholders in the region, and if TGS are engaged to acquire seismic data on their behalf. Therefore, there may be areas within the OA that are never surveyed, but the EP and relevant person consultation consider the maximum area for the purposes of environmental management.

When specific survey areas are confirmed, the areas and proposed commencement dates will be communicated to relevant persons.

Q. WHAT HAS TGS DONE TO AVOID ENVIRONMENTALLY SENSITIVE AREAS?

TGS has made a conscious effort to limit survey overlap with the continental shelf and shallow nearshore waters. The 3D AA does not extend into waters shallower than 510 m; only one 2D tie-in line will require the use of the acoustic source in shallower waters. The decision was made to limit activities to deeper, offshore waters in order to reduce the potential effects on marine fauna and commercial fisheries in nearshore waters.

Q. WHAT MARINE FAUNA MIGHT BE AFFECTED?

A number of whale and dolphin species occur in the region. These include pygmy blue whales, which are typically present in the region to forage during the summer and autumn. The presence of the Bonney Upwelling provides nutrient rich waters, and the continental shelf is known as a biologically important area for the foraging by this species. The AA has been designed to minimise overlap with these foraging areas.

Coastal and continental shelf waters also support species such as southern right whales, fur seals, sea lions and little penguins. However, given that the AA is limited to waters greater than 510 m water depth, limited disturbance to these species and their habitats in nearshore waters is expected.

Various fish and shellfish species may also be present in the survey area, including commercially significant fish species, rock lobster and giant crab. Potential impacts to these species and stock recruitment will be considered in the EP.

Acoustic modelling and a detailed impact assessment will be undertaken to understand the potential impacts to marine fauna and identify appropriate management measures.

FREQUENTLY ASKED QUESTIONS

Q. WILL COMMERCIAL FISHERIES BE AFFECTED?

The OA and AA have limited overlap with commercial fisheries. Most commercial fishing activity occurs on the continental shelf and along the continental shelf break, which lie on the periphery of the AA and OA. While many fishing activities will be avoided, there is still the potential for some interaction with some State-managed fish, rock lobster and giant crab fisheries, the Commonwealth Trawl Sector, and the Southern Bluefin Tuna Fishery, in the event that the seismic vessel operates near the edge of the continental shelf. TGS will consult with commercial fishing groups to improve understanding of these fisheries and identify suitable measures to manage impacts.

Q. HOW WILL INTERACTIONS WITH FISHERIES BE MANAGED?

It is TGS's intention to carry out the Otway Basin 3D Multi-client MSS in a manner that does not interfere with fishing or the resources of the sea, to a greater extent than is necessary.

However, it is acknowledged that there is the potential for the survey to interact with fishing activities.

TGS cannot restrict fishing access to the survey area and will consider concurrent operational planning options with commercial fishers. TGS will also provide notifications to fishers prior to the commencement of the survey as well as regular updates during survey activities. Open radio communications will also be maintained with fishing vessels.

Q. WILL TGS COMPENSATE FISHERS FOR INTERRUPTION TO THEIR FISHING ACTIVITIES?

TGS believes that commercial fishers and fishing charter boat operators should not be unfairly disadvantaged by the Otway Basin 3D Multi-client MSS .

Should fishers be genuinely impacted by the Otway Basin 3D Multi-client MSS, TGS will consider claims on a case-by-case basis.

If you would like to provide comment or request further information on the Otway Basin 3D Multi-client MSS, please contact TGS:

TGS

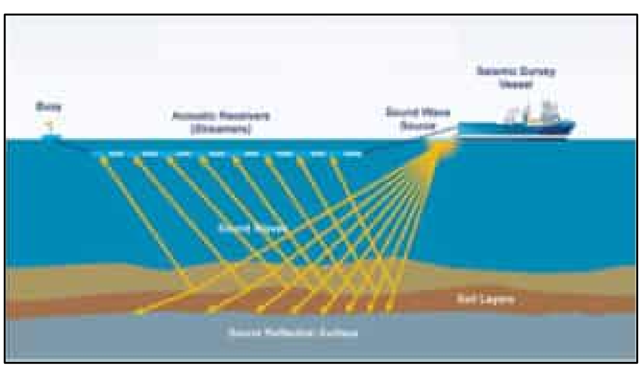
TGS Otway Basin 3D Marine Seismic Survey

TGS is proposing to undertake a three-dimensional (3D) marine seismic survey (MSS) in the Otway Basin, in Commonwealth waters offshore of Victoria and Tasmania commencing October 2023.

Approximate distance to survey area	
Portland (VIC)	48 km
Warrnambool (VIC)	61 km
Arthur River (TAS)	85 km
King Island (TAS)	39 km
Robe (SA)	64 km

What is marine seismic surveying?

Marine seismic surveying is used to improve the understanding of marine subsurface geology. A purpose-built seismic survey vessel tows an acoustic source and multiple cables of hydrophones (streamers) positioned beneath the surface of the water (*image below*). Acoustic energy is discharged from the acoustic source which is then detected by the streamers and recorded on board the vessel. The recorded signals are then processed to provide data about geological formations below the seabed.



Summary of survey details	
Estimated survey duration	Total acquisition is 400 days over 5 year period, with maximum of 200 days per year.
Water depth	Predominantly 510 m to 5,650 m, reducing to approximately 115 m for a single 2D tie-line.
Vessels	One purpose-built seismic survey vessel, plus additional support vessels.
Acoustic array	Acoustic source 3,500 in^3 with maximum of 14 streamers.
Survey vessel speed	Approximately 4 – 5 knots (7.5 – 9.5 km/hour).
Dimensions of towed equipment	Approximately 8 – 10 km length and 800 m – 1.6 km wide.
Area of avoidance	3 nautical miles around the survey vessel and streamers.

Why we need to hear from you

We are currently working through the preliminary phase of our consultation process. This involves identifying all relevant persons that could have functions, interests or activities potentially impacted by the proposed survey. Typically this was based on proximity to the survey operational area but now must consider a wider environment that may be affected, for example from an unplanned fuel spill.

Then, we need to ensure our relevant persons have sufficient information to understand what is proposed so they can determine if and how, the survey may impact them. Our approach varies depending on the group and may require a meeting to explain the process and provide the opportunity to discuss any queries or concerns, or may simply require an information sheet detailing the high-level specifics of the survey.

Your input matters

The information we receive from consultation assists with planning our survey to ensure we are aware of and consider our relevant person's values and sensitivities. This information is incorporated within our extensive assessment of potential impacts to all existing environmental values and sensitivities (physical, biological, socio-economic, cultural etc) within and around the survey area.

TGS would like to acknowledge the Traditional Custodians of the land and sea country in which the Otway Marine Seismic Survey will be carried out. We recognise their continuing connection to the land, waters and culture. We pay our respects to their Elders past, present and emerging.

Determining control measures

TGS then identifies key control measures that will be implemented to avoid, mitigate or minimise those impacts to as low as reasonably practicable. Some examples of control measures include:

- Acquisition exclusion zones to protect important foraging or fishing areas (*see images to the right*).
- Acoustic source shutdown triggers for important fauna species.
- Underwater passive acoustic monitoring to detect any nearby marine mammals.
- Daily 48 hour lookahead reports distributed to other marine users.
- Extensive compliance monitoring to ensure procedures and policies are being implemented.

In addition to extensive literature reviews and research, this phase involves substantial engagement with our relevant persons, including technical experts and subject matter specialists.

Once the control measures have been finalised, TGS details their information within an Environmental Plan (EP).

Giant crab fishery exclusion zone

Pygmy Blue Whale foraging area with buffer

NOPSEMA – public consultation and EP approval

Once the EP has been drafted, TGS will submit their EP to NOPSEMA to determine if it meets all of the regulatory requirements. Once NOPSEMA accepts the EP as complete, the EP will be available for public review for a period of 30 days. Any person or group is welcome to make a submission on the EP content at that stage.

When the public consultation period closes, TGS reviews and assesses all relevant submissions. New information is incorporated in to the survey planning and EP as required, before TGS re-submits the EP to NOPSEMA. NOPSEMA will then commence their assessment for EP approval, which may require further information from TGS. If NOPSEMA is satisfied with the EP, the EP will be approved and the proposed activity can commence in accordance with the approved EP.

Right now, we need to know:

- Do you have any functions, interests or activities that may be affected by the proposed marine seismic survey?
- Do you need further information from TGS to understand more about the proposed survey?

If you would like to meet with us to discuss the proposed survey further or raise any concerns you have please get in touch with me directly via the contact details below. We look forward to meeting with you.

Tanya Johnstone

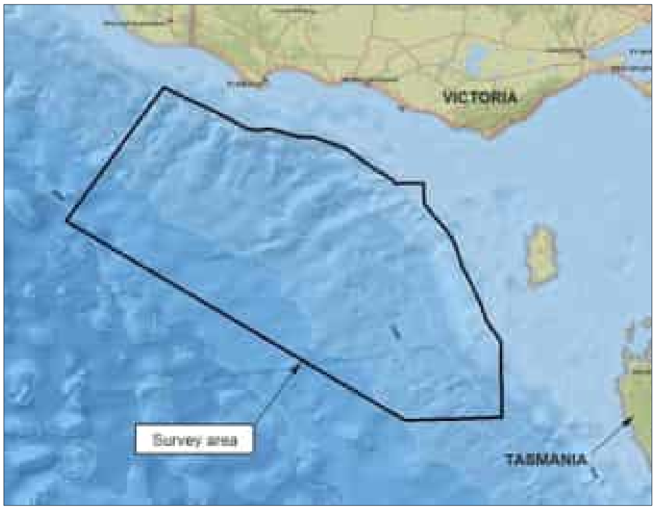
TGS

TGS Marine Seismic Survey – Otway Basin

TGS welcomes you to a community information session regarding their marine seismic survey located in Commonwealth waters offshore of Victoria and Tasmania commencing October 2023. TGS will provide an overview of the proposed survey followed by an opportunity to discuss any queries or concerns.



Please join us:

Date: Tuesday 30 May 2023

Time: 3 pm

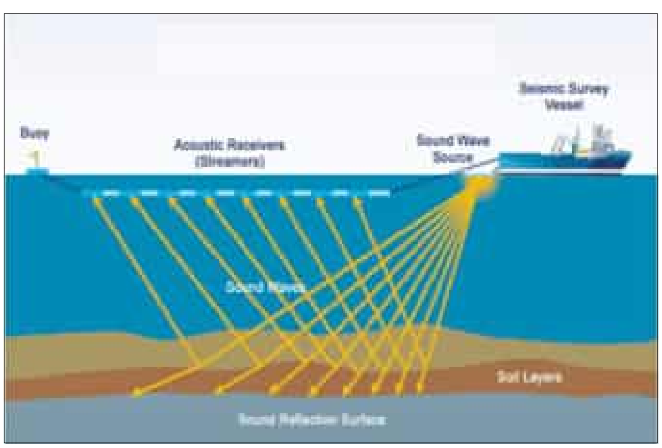
Location: BLALC Community Hub

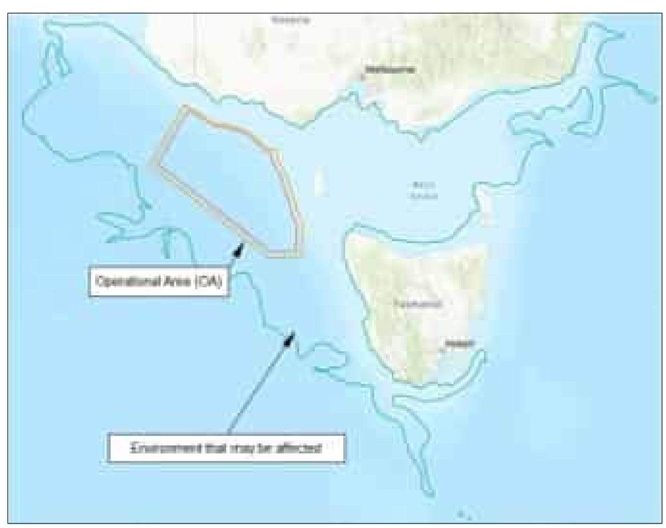
What is marine seismic surveying?

Marine seismic surveying is used to understand the geological (rock and soil) layers beneath the sea floor. A survey vessel tows an acoustic source and multiple cables, also known as streamers under the surface of the water. The acoustic source releases a pulse of sound energy (sound waves) into the water column directed downwards. The sound waves pass through the different rock layers and bounce back towards the surface. The streamers receive the sound waves that are reflected back and from these reflections a picture of the rock layer geology is produced across the survey area.

But it's so far away – is it relevant?

TGS is required to contact persons and organisations that may be impacted by the project's worst-case scenario of an unplanned activity. For this project that is likely to be a release of the survey vessel's fuel from a collision within the survey area. TGS has carried out modelling to identify the environment that may be affected by a release (below). With tides, currents and wind, a fuel release could travel further than the survey area to the southern coast of NSW. **PLEASE NOTE**: the modelling is very conservative and the actual likelihood of a collision occurring and travelling that far is very low, however TGS use this information to guide their consultation.





TGS would like to acknowledge the Traditional Custodians of the land and sea country in which the Otway Marine Seismic Survey and consultation is being carried out. We recognise their continuing connection to the land, waters and culture. We pay our respects to their Elders past, present and emerging.

Marine Seismic Survey – Otway Basin please contact Tanya TGS: **Email:** Otway@tgs.com • **Phone:** +61 (08) 9480 0000 •

TGS OTWAY BASIN MARINE SEISMIC SURVEY - COMMUNITY INFORMATION SESSION

TGS welcomes you to a community information session regarding their proposed marine seismic survey within the Otway Basin. TGS would like to understand how their proposed survey may impact the local community. This information will assist TGS with their survey planning and development of their environmental plan. TGS will provide an overview of the proposed survey followed by an opportunity to discuss any queries or concerns.

Please join us on 29th May between 6:00 – 7:00 pm at the BIG4 Port Fairy Function Venue, 115 Princes Highway, Port Fairy.

20/05/2023 - public notices

Not To Be Missed

The film 'Sonic Sea' will be screened at the lecture hall, Port Fairy on Saturday 27th May at 6pm

The film will also be screened at the Capital

Moyne Shire Council
Community Update

Ordinary Council Meeting
Will be held at the Council Offices, Jamieson Avenue, Mortlake on 23 May 2023 from 2pm. A link to the meeting will be on Council's Facebook page and website. The public participation section of the meeting is held at the beginning of the meeting. Any person wishing to address the Council during public participation must submit details of the nature of the issue/question they wish to raise, in writing by 12 noon 22 April 2023.

Public EV charging point - Port Fairy
Evie Networks is proposing to install a public access electric vehicle charging point in Port Fairy. Under an agreement, Council will provide suitable land and Evie Networks will install and maintain the charging point.
A preferred site has been chosen in Bank Street, near Fisherman's Walk. The community is now invited to have their say on the preferred location. Visit www.moyne.vic.gov.au/your-say and fill in the online survey.

Port Fairy Norfolk Island Pine leaf/branchlet litter collection
The next collection will take place on the week commencing Monday 5th June 2023 - Friday 9th June 2023.
Please pile all branchlets that you would like collected on the nature-strip in the week leading up to this.

South Warrnambool Flood Investigation

Community Drop-In Session

South Warrnambool residents are invited to a community information session on the progress of the South Warrnambool Flood Investigation.

The session is at 6pm, Wednesday 7 June 2023 at the Merrivale Football Netball Club. It will include a presentation of the flood modelling and mapping so far, after which residents will be encouraged to provide feedback on the draft maps.

From 31 May to 14 June residents will also have an opportunity to contribute to the flood investigation online at **www.yoursaywarrnambool.com.au**

The flood investigation of riverine and storm tide (coastal) flooding for South Warrnambool is a joint project between Council and the Glenelg Hopkins Catchment Management Authority (GHCMA) with consultants Venant Solutions engaged to provide specialist expertise and advice.

Feedback wanted: Draft Budget 2023-2024

You are invited to provide feedback on Council's draft Budget.

The draft budget is available online at corangamite.vic.gov.au/draftbudget or call us on 5593 7100 for a hardcopy.

You can provide feedback before midday, Wednesday 7 June by:

- Completing the online form at corangamite.vic.gov.au/draftbudget
- Emailing shire@corangamite.vic.gov.au
- Writing to the Chief Executive Officer, Corangamite Shire, PO Box 84, Camperdown, 3260.

Anyone providing feedback can make a presentation to a committee of Council on Tuesday 20 June. Council will consider adopting the Budget on Tuesday 27 June, 7 pm at the Killara Centre, Camperdown.

Moyne Shire Council Community Update

Port Fairy Norfolk Island Pine leaf/branchlet litter collection

The next collection will take place on the week commencing Monday 5 June 2023 - Friday 9 June 2023.

Please pile all branchlets that you would like collected on the nature strip in the week leading up to this.

Road Closure

The Sisters - Garvoc Road will be closed between the Princes Highway and the Framlingham - Garvoc Road until June 9 due to bridge repair works following a traffic accident.

There will be no vehicle access to the bridge while repair works are undertaken in the coming weeks.

Rail Trail re-sheeting works

Due to the re-sheeting of the surface of the Port Fairy – Warrnambool Rail Trail between the Princes Highway in Port Fairy and Leddy Lane in Rosa sections of the trail will be progressively closed to all trail users. It is anticipated that the work will commence in Early June and be completed in early August.

Detour signage indicating the route around the closed section will be placed at either end of the section. The detours will necessitate riding on local roads.

The project is being managed by the Port Fairy - Warrnambool Rail Trail Committee with funding support from the Local Road and Community Infrastructure Fund.

2023-24 Draft Budget

Council hereby gives public notice that:

1. It has prepared its budget for the financial year commencing 1 July 2023 and ending 30 June 2024.
2. It intends to adopt the budget at the Ordinary Council meeting to be held on Tuesday 27 June 2023.

Copies of the proposed budget are available for inspection during normal office hours at:

- Moyne Shire Council offices – Princes Street, Port Fairy; 1 Jamieson Avenue, Mortlake
- Or can be downloaded from www.moyne.vic.gov.au

Any person proposing to make a written submission on a proposal contained in the budget must do so before 4pm on Tuesday 6 June 2023.

Submissions must be addressed to:

The Chief Executive Officer
Moyne Shire Council
PO Box 51
Port Fairy Vic 3284

Any person or persons may present their budget submission to council workshop on Friday the 9th of June 2023 at the Port Fairy Council Office.

22/05/2023 - public notices

Conflict comes home

The previous year, 1939 had seen a resurgence in football but with the war breaking out in Europe, this was certainly going to change. The community prepared to farewell Australian conscripts and volunteers and the dynamics of most people's lives changed drastically. With this background, the KIFA had real difficulty in getting a quorum for the AGM as the clubs kept holding off with their AGM.

At the Grassy Football Club Player Revue held in the 1940s GFC stalwart and 1940 club secretary Eddie Henderson, far right, took to the stage.

TROY SMITH

WHEN a quorum was finally gained it was found that people had taken some dodgy liberties with the KIFA president L C Ross stores during the KIFA dinner.

Mr Ross (and it appears a few others) had quite fairly had enough and wrote letters to the King Island News admonishing the "lack of respect and bad sportsmanship" shown to him.

A lot of the goodwill that had advanced the game so much the previous year went missing.

Mr Ross resigned but eventually came back to the president's role in an effort to get the season moving. The press reported that "the mountain laboured and brought forth a mouse."

To add to this, a motion was presented to the KIFA and passed to revert to district football with Currie gaining the immediate Currie area while Grassy and North shared the North and South.

This motion and others were passed and then subsequently rescinded at the next meeting due to perceived "preferential treatment". To make matters worse the KIFA secretary Mr J C Dwyer had left the island, as had the Grassy Football Club founding figure president/captain/coach and star player, the Reverend Gil W Duthie. Both of these gentlemen were instrumental in the energy and focus of the successful previous season.

The newspaper football writer was also gone and the write-ups we rely on today were very short and inconsistent.

To the association's credit, the season got underway, even if it was somewhat subdued. The Grassy football club appointed a new president Mr F Brennan, the vice president was Mr I Edwards whilst the secretary remained the redoubtable Mr Eddie Henderson. The new captain was Frank Elliot. No references were found to the other 2 clubs' AGM, but M Scott was the new NFC secretary and Keith Reville was their captain again.

The crowd for the opening game was described somewhat sarcastically. "The Currie oval certainly had no difficulty in coping with the influx of spectators". North was strong from the get-go thrashing Grassy by booting 15 goals, whilst Grassy remained goalless.

Ron Stillman and Watty Scott getting some kudos alongside the brilliant McHughs and Begie. Whilst Bill Fisher did his best to "infuse some system into Grassy's play".

North then beat Currie by 27 points with Reville and the McHughs getting mentions. Grassy copped another pasting when North kicked 16-16-112 to Grassy's 1-9-15. The brilliant Frank (Pop) Elliot was wasted up forward whilst the Williams and McHughs were prominent for North.

North won their first 5 games with Currie pushing them at Yarrabacoona to get within 4 points.

The only glitch for North came when a player was reported for striking the central umpire (W Lansing). No tribunal result was found for this most serious charge.

Grassy then got within 2 points of Currie and pushed North to a 6-point loss late in the season kicking 9 goals in that game. North also dealt with Currie by 6 points with the McHughs and Williams again prominent whilst Lofty Darley and Whitty did some good work for Currie.

While more of the local boys were being feted and farewelled as they shipped out to training camps and to Europe, North went on their merry way recording strong victories over all and sundry. The NFC recorded 9 wins to Curries 4 wins and Grassy was winless.

The last game between Currie and Grassy was not played and although we couldn't find the results of one North v Currie match it was reported that North were undefeated for the season. The best players mentioned throughout the season were for North: Bob and Max McHugh, Keith Reville, Lindsay Williams, Max Williams, Watty Scott, Fred Summers, Watson and William Begie. For the CFC: Lofty Darley, Pat and Phil Farrell, Len Barnes, Jim Graham, Bill Groom and Jack Marshall. Grassy was best served by: Frank Elliot, F Brennan, Monty Yeomans, Plant, Alf Moles, Bill Fisher & Towns.

Grassy hadn't qualified for the finals so we were straight off to another North and Currie Grand final. The first quarter was very even with both sides kicking 4 goals and the second followed the script with the play being mainly held in the centre of the ground and at half time Currie had worried North with a 3-point lead. The pace was telling on the older Currie players in the third term and North took advantage, building a 14-point lead at the last change. Two quick goals to North made it look like it was all over, but Currie matched those goals. North again goaled and ran out 21-point winners in a great match.

The best players for North were Lindsay & Max Williams, Jack Coulter, Watty Scott, Bob McHugh, Watson, Jack Summers and Tom Wiltshire. Jack Coulter kicked 4 goals, Alf Moles 3, Jack Summers, Watty Scott and Bob McHugh 1 each.

Currie was best served by Len Morrison, Jack Marshall, E (Ted) Curtishley, Len Barnes, Earl Smith and the Farrells - Phil and young Dave.

The Currie goals came courtesy of Dave Farrell, Len Barnes, Bill Groom and Drake. Jack Summers was declared the winner of the best junior trophy but there was no mention of best players and goal kickers nor were any junior or schoolboy football games recorded.

Throughout the year there were ongoing King Island War Service fundraisers from balls through luncheons and sporting events to raise money for the fund and for Comfort parcels, containing socks, balaclavas, handkerchiefs and similar. These were sent regularly to King Island 'sons' in camps and to those deployed overseas and by mid-year more fundraising and weekly wages donations were called for as "the number of parcels was growing large."

nteresting game

LEFT:
Bailey Rainbow with firm hands goes for a big kick, with Alex Goldsmith, Rory Taylor, Ned Hunter, and Brandon Bloomfield.

LEFT: Loose slippery ball Matthew Button. Luke Graham, Ryan Frosi Jeramy Summers, Jack Noseda

BELOW: It's straight through Marty Monson. David Vellekoop and Jack Noseda.

George Freeman has a long reach, with Les Bonner on his tail in the juniors.

North
Goals: Jeramy Summers 2, M. Button 2
Best: A. Goldsmith, Justin Summers, M. Button, Jeramy Summers, D. Ellis, T. Cook

APPENDIX K

Summary of Feedback Received from Relevant Persons

*To avoid unnecessary repetition in relation to the 'Reference to Location within EP' column, all unedited correspondence is provided within Appendix H and meeting minutes and phone records are provided in Appendix I, and the different versions of the information sheet provided can be viewed in Appendix J.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
3D Oil	01-06-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
3D Oil	01-06-2022	Email FROM relevant person	Automatic reply notifying receipt of email and that the stakeholder contacted will be out of office from the 1st to the 6th of June.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
3D Oil	15-02-2023	Email FROM relevant person	Reply email from 3D Oil agreeing with previous email from TGS.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
3D Oil	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
3D Oil	15-02-2023	Email TO relevant person	Reply email to 3D Oil thanking them for their email and advising would be good to continue engagement as there may be overlaps and synergies with their plans in the Otway. TGS said they would keep them up to date with EP progress.	N	N/A	* (see note above table)	Continuing consultation.
3D Oil	15-02-2023	Email FROM relevant person	Reply email from 3D Oil advising they have no interest in the survey which may change but unlikely.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
AB Hunter Fisheries	12-08-2022	Email FROM relevant person	The stakeholder explained that they represent clients who wish to supply a chase vessel for the planned Otway Basin survey.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
AB Hunter Fisheries	18-08-2022	Email TO relevant person	TGS/Schlumberger explained that they are currently in the early stages of submitting the Environment Plan (EP) for assessment by the regulator, NOPSEMA. Subject to the EP being approved, actual survey phases over the 5-year period covered by the EP will depend on TGS and SLB securing interest from petroleum companies in the region. TGS/Schlumberger explained that exact survey timing has not been confirmed, and that operation and management of survey vessels is done internally. Further information was requested on the vessel and the specific projects it has previously been contracted to support in the region.	N	N/A	* (see note above table)	Continuing consultation.
AB Hunter Fisheries	23-08-2022	Email FROM relevant person	The stakeholder listed the occasions when the [vessel name] has worked as a support vessel, and attached vessel details.	Y - Vessel details	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
AB Hunter Fisheries	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AB Hunter Fisheries	20-02-2023	Email FROM relevant person	ABH emailed TGS to provide an expression of interest for their chase vessel to assist with the project and provided details of the chase vessel.	Y - Details of chase vessel for consideration.	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
AB Hunter Fisheries	20-02-2023	Email TO relevant person	TGS responded to ABH email sent earlier that day lodging expression of interest for their chase vessle to assist the project.	N	N/A	* (see note above table)	Continuing consultation.
Abalone Council Victoria	15-02-2023	Email TO relevant person	Reconnected with specific ACV representative to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Abalone Council Victoria	16-02-2023	Email TO relevant person	TGS emailed ACV general email address to advise of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Abalone Council Victoria	17-04-2023	Email TO relevant person	TGS emailed ACV general email address to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked ACV to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Abalone Council Victoria	26-04-2023	Email TO relevant person	TGS emailed ACV (specific ACV representative) to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked ACV to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Abalone Council Victoria	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Abalone Council Victoria	22-05-2023	Phone call TO relevant person	SLB called ACV to follow up on previous unanswered emails regarding their proposed marine seismic survey however there was no answer. SLB left ACV a message to return their call as soon as possible.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Abalone Council Victoria	23-05-2023	Phone call TO relevant person	SLB called ACV to follow up on phone call and message left the day before regarding their proposed marine seismic survey however there was no answer. SLB left ACV a message to return their call at a convenient time.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Abalone Council Victoria	26-05-2023	Phone call TO relevant person	SLB called ACV to follow up on phone call and message left the day before regarding their proposed marine seismic survey. The ACV reception asked SLB to leave their contact details and they would get the relevant ACV representative to call them back. SLB left their contact details and ACV confirmed they would pass their details on.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Abalone Council Victoria	26-05-2023	Email TO relevant person	TGS replied to ACV's email received earlier that day thanking ACV for their reply. TGS asked ACV to let them know if they would like to set up a meeting to discuss [their proposed marine seismic survey] in more detail, providing phone contact details if they would like to have a call instead.	N	N/A	* (see note above table)	Continuing consultation.
Abalone Council Victoria	26-05-2023	Email FROM relevant person	ACV replied to TGS' earlier communications regarding their proposed marine seismic surveys and advised their emails had been going to their junk folders. ACV advised they have forwarded the information to their CEO (details provided).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Abalone Victoria Central Zone	28-04-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 05/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Abalone Victoria Central Zone	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Abalone Victoria Central Zone	1-06-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but following feedback from others realise their email may have been diverted to a junk folder. TGS attached the information sheet and included the previous email sent to the general AVCZ email address on 28/04/2023. TGS added they would like to understand AVCZ's functions, activities and interests that may be impacted by the proposed activity and whether AVCZ has received sufficient information to determine if there are likely to be any impacts. TGS asked AVCZ to let them know prior to 06/06/2023 if they have any input so they can consider their information within their survey planning and development of the environmental plan before submitting to NOPSEMA mid-June. TGS also attached guidance from NOPSEMA to help with providing feedback about the survey and asked AVCZ to let them know if they have any queries about their consultation program so they can make sure they can effectively participate in the process. TGS closed the email by stating if they had any questions or would like more information to call or email to discuss further.	Y - Information sheet and NOPSEMA consultation guidance	N/A	* (see note above table)	Continuing consultation.
Abalone Victoria Central Zone	1-06-2023	Email FROM relevant person	AVCZ replied to TGS' email sent earlier that day asking what the response date is proposed now.	N	N/A	* (see note above table)	Continuing consultation.
Abalone Victoria Central Zone	1-06-2023	Email TO relevant person	TGS replied to AVCZ's email received earlier that day thanking them for their reply. TGS said as they are finalising their draft environment plan for NOPSEMA submission end of the following week, as soon as they can would be appreciated so TGS can address any concerns before submission. TGS added if that is too tight, TGS can include AVCZ's preliminary concerns and address detailed concerns within the public consultation period following their first submission to NOPSEMA and asked AVCZ if that would work?	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Council Tasmania	4-05-2023	Email FROM relevant person	AHCT replied to TGS' email sent earlier that day thanking them for the email and information sheet. AHCT advised the council's next meeting is 26/05/2023 and they will send the email and information sheet to the Chair for consideration. AHCT continued they will be preparing the agenda for the May meeting in the next couple of weeks and will advise TGS if an online meeting will work.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised. Continuing consultation	* (see note above table)	No action required. Continuing consultation.
Aboriginal Heritage Council Tasmania	4-05-2023	Email FROM relevant person	AHCT replied to TGS' email sent earlier that day thanking TGS and said they will let the Chair know TGS can visit if an online meeting won't work.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised. Continuing consultation	* (see note above table)	No action required. Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Aboriginal Heritage Council Tasmania	4-05-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS asked AHCT to advise if they'd like to discuss further to get in touch and as that all comments ae provided by 12/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Council Tasmania	4-05-2023	Email TO relevant person	TGS replied to AHCT's email received earlier that day thanking them for their quick reply. TGS confirmed with AHCT they can visit on 26/05/2023 if an online meeting won't work.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Council Tasmania	15-05-2023	Email TO relevant person	AHCT replied to TGS' email sent 04/05/2023 thanking TGS for the offer to brief them on their proposed marine seismic survey and the opportunity to provide feedback. AHCT advised the information provided in the information sheet and email was sufficient for council at that stage. AHCT closed their email advising if the council finds there is a need to discuss the survey further they will keep TGS' offer in mind to get in contact.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Council Tasmania	23-05-2023	Email TO relevant person	TGS emailed AHCT acknowledging their response sent 15/05/2023 and asked them to get in contact if they any additional information.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	24-04-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 02/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	26-04-2023	Phone call TO relevant person	TGS called AHT to follow up on email and information sheet TGS sent on 24/02/2023 and to request a meeting with AHT next week while TGS will be visiting Tasmania. The receptionist said they would find the best person to speak to and call TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Heritage Tasmania	26-04-2023	Email TO relevant person	TGS emailed AHT following phone call earlier that day confirming TGS will be visiting Tasmania next week and would welcome the opportunity to meet to discuss their plans and hear if they have any concerns. TGS advised that if a meeting is not convenient next week, then TGS can arrange an online meeting at their convenience.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	27-04-2023	Email FROM relevant person	AHT replied to TGS' email sent 26/04/2023 advising the following: - AHT administers the Aboriginal Heritage Act 1975 and are occupied predominantly with the tangible heritage of Tasmanian Aboriginal people. - the Tasmanian Aboriginal Register does not record offshore Aboriginal heritage and AHT is unaware of any work been undertaken in Tasmania to identify any underwater sites. AHT advised that given the project appears focused on the waters of Bass Strait, they do not feel their staff could add value to the project at this time. AHT continued if TGS is seeking cultural perspective, or an intangible heritage viewpoint, then AHT suggested contacting one of the Aboriginal community organisations listed on the ORIC (Office of the Registrar of Indigenous Corporations).	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Aboriginal Heritage Tasmania	3-05-2023	Email FROM relevant person	AHT replied to TGS' email sent earlier that day saying if TGS is visiting then they would meet to discuss, as might be easier than via email. AHT added that if there was an oil spill that reaches land then they would have an interest and they are assuming this type of event should trigger an EPA response and they have recently worked with EPA to devise a process by which the EPA alert AHT in such events. AHT advised they are free Thursday from 10:00 am but not Friday.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised. Continuing consultation	* (see note above table)	No action required. Continuing consultation.
Aboriginal Heritage Tasmania	3-05-2023	Email TO relevant person	TGS emailed AHT thanking them for their response received 27/04/2023. TGS advised they were checking if they consider themselves a relevant person based on the area that may be impacted. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS advised they have undertaken modelling to identify where that may be to help direct who they need to consult and why AHT was triggered as a potential relevant person as the area that may be affected overlaps with the west coast of Tasmania. TGS asked AHT to confirm whether they believe they are a relevant person based on this information and if so, if they require more information and TGS will get in contact about the best way to do that. TGS advised they would be visiting Hobart tomorrow and Friday if they'd like to meet to discuss further. TGS also advised they are liaising with the Aboriginal Land Council of Tasmania who have provided a detailed submission and queries.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	3-05-2023	Email TO relevant person	TGS replied to AHT's email received earlier that day agreeing would be much easier to meet and suggested a meeting time and location on Thursday.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	3-05-2023	Email TO relevant person	TGS emaiiled AHT a meeting invite for 04/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	4-05-2023	Meeting with relevant person	TGS, SLR and SLB met with AHT to provide information about the proposed survey, to identify any potential impacts to AHT's functions, interests or activities and discuss any queries AHT has with the proposed survey. The meeting's key comments and queries included: - Interest around history, purpose and occurrance of marine seismic surveys. - NOPSEMA governing body to approve environment plan. - Fuel spill - acting authority, likelihood of beaching, national response plan. - Consultation process and suggested other relevant persons. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Aboriginal Heritage Tasmania	16-05-2023	Email TO relevant person	TGS emailed AHT a copy of the minutes and presentation from their meeting held 04/05/2023. TGS also provided literature reference as discussed during meeting.	Y - Meeting minutes, copy of presentation and literature reference	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	22-05-2023	Email TO relevant person	TGS emailed AHT asking if they had contact details for Six Rivers Aboriginal Corporation as TGS is not able to make contact with them.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	22-05-2023	Email FROM relevant person	AHT replied to TGS' email sent earlier that day providing contact details for Six Rivers Aboriginal Corporation.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	22-05-2023	Email TO relevant person	TGS replied to AHT's email received earlier that day thanking them but advised the contact details they provided for Six Rivers Aboriginal Corporation were the same details they had already.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Heritage Tasmania	23-05-2023	Email FROM relevant person	AHT replied to TGS' email the day before providing additional contact details for Six Rivers Aboriginal Corporation, including a postal address.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Land Council of Tasmania	29-03-2023	Email TO relevant person	TGS emailed ALCT to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS asked if ALCT could advise the name of groups TGS may need to speak to in the lower NSW area to refine the list of who they contact, closing the email by advising any information would be very much appreciated.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Aboriginal Land Council of Tasmania	29-03-2023	Email TO relevant person	TGS emailed ALCT immediately following the previous email to apologise as had provided reference to lower NSW, not Tasmania as it should've read.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Land Council of Tasmania	4-04-2023	Phone call TO relevant person	TGS called ALCT to follow up on their email sent 29/03/2023 regarding their proposed marine seismic survey within the Otway Basin, however there was no answer. TGS left a message to advise they were calling about the proposed marine seismic survey in the Otway Basin and they had sent an email on 29/03/2023 and to call them back (contact details provided).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Land Council of Tasmania	11-04-2023	Phone call TO relevant person	TGS called ALCT to follow up on their phone call from 04/04/2023 and email sent 29/03/2023 regarding their proposed marine seismic survey within the Otway Basin, however there was no answer. TGS left a message to advise they were calling about the proposed marine seismic survey, phone call from 04/04/2023 and email from 29/03/2023 and left contact details to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Land Council of Tasmania	11-04-2023	Email TO relevant person	TGS emailed ALCT to follow up on the email sent 29/03/2023 (copy provided) explaining they would really appreciate their help with identifying traditional owner groups in Tasmania. TGS provided their direct mobile contact details and closed the email by thanking them.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Land Council of Tasmania	17-04-2023	Phone call FROM relevant person	ALCT called TGS back following voicemail message left earlier in the day. ALCT asked TGS to send the information sheet to an alternative email address provided. TGS emailed the information sheet and called ALCT to ensure they had received it. ALCT confirmed they had received the information sheet and advised they have forwarded to the manager who is not in the office today. ALCT advised TGS should call back on Wednesday when the manager will be back in the office.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised. Continuing consultation.	* (see note above table)	No action required. Continuing consultation.
Aboriginal Land Council of Tasmania	17-04-2023	Phone call TO relevant person	TGS called ALCT to follow up on the email sent 11/04/2023 but there was no answer. TGS left a message for ALCT to call TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Land Council of Tasmania	17-04-2023	Email TO relevant person	TGS emailed ALCT following their phone call earlier that day. TGS thanked ALCT for returning their call and asked if they could please help with some information. TGS advised they propose to carry out a marine seismic survey off the coast of Tasmania and Victoria and were wanting to speak to traditional owner groups that may be interested in sea country that overlaps the EMBA (image provided). TGS asked if they could advise the names of the groups TGS may need to speak to in Tasmania. TGS closed the email stating that any help would be very much appreciated to refine the list so they are not contacting every group in Tasmania and burdening them unnecessarily.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Aboriginal Land Council of Tasmania	19-04-2023	Email FROM relevant person	ALCT replied to the email TGS sent 17/04/2023 providing information about TGS' proposed marine seismic survey. ALCT advised they stand opposed to the seismic testing in the Bass Strait, explaining that ALCT are saltwater people and the survival of their culture depends on the health of the ocean. ALCT's main concerns are summarised below: - impact to zooplankton as the food source which underpins the entire ocean ecosystem. - mutton birds are a very important cultural animal to Tasmanian Aboriginal people - reference to the impacts at the bottom of the food chain impacting mutton birds. - suggested testing zone within whale migratory route and mitigation measures would not satisfy the Tasmanian Aboriginal Community (TAC). - the TAC has witnessed numerous mass whale strandings on the west coast of Tasmania in 2022. ALCT commented that Aboriginal people have cared for the coast of Tasmania for thousands of years and monitor the occurrence of strandings over time. TAC stated although TAC cannot say with certainty that seismic testing and the increase in mass whale strandings are interconnected, TAC is not prepared to discount their connection with any confidence. TAC closed their offering they are happy to discuss should TGS wish.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Various objections or claims regarding impacts to zooplankton, invertebrates as food chain supply, and testing zone/whale migratory pathways were raised regarding the seismic survey. Impacts from acoustic disturbance on sensitive receptors has been outlined with **Section 7.2.2.2.** Specific impacts on matters raised by ALCT have been discussed within: **Section 7.2.2.2.1** (Plankton), **Section 7.2.2.2.2** (Benthic Invertebrates), **Section 7.2.2.2.7 & 7.2.2.3.6** (Marine Mammals), with appropriate control measures listed in **Section 7.2.5**.	Continuing consultation.
Aboriginal Land Council of Tasmania	19-04-2023	Phone call TO relevant person	TGS called ALCT to follow up email and phone call from 17/04/2023, however the ALCT manager was unavailable. The receptionist advised she would forward the email to the manager again with a message that TGS would welcome a meeting with ALCT and to let TGS know if they would like a meeting.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Land Council of Tasmania	19-04-2023	Phone call TO relevant person	TGS called ALCT following email received earlier that day. ALCT suggested TGS respond to their email with additional information that they will pass on to the council, when they can then have a meeting to discuss. ALCT said they would be happy to facilitate a meeting but won't be a warm reception. ALCT closed the call by explaining that coastal people rely on the ocean being healthy and have recently been outraged by a windfarm development because of the direct impact on mutton birds.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Aboriginal Land Council of Tasmania	26-04-2023	Email TO relevant person	TGS replied to ALCT's email received 19/04/2023 providing a formal submission about their proposed survey with the following summarised information: - TGS has undertaken a detailed assessment of the potential impacts of the survey on zooplankton including an underwater acoustic modelling study which assesses the noise impacts on different receptors, using sound thresholds for mortality and mortal injury. - TGS is preparing the environment plan using the available literature on potential impacts to plankton from seismic survey as part of their risk assessment. - TGS can provide ALCT a summary of their EP's assessment of the potential seismic acoustic impacts on plankton. - TGS do not expect there to be any impact to birds on top or above the water from seismic activities (reasons provided). - TGS has extensive control measures in place to avoid impacts on marine mammals (examples provided). - TGS believe there is no association between any seismic survey and marine mammals stranding events across the world. TGS closed the email advising TGS and their environmental consultant will be visiting Tasmania next week and would like to meet with ALCT or alternatively can meet online and to advise TGS what they would prefer. Refer to Appendix H for more detailed submission.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Land Council of Tasmania	1-05-2023	Phone call TO relevant person	TGS called ALCT to request a meeting later that week to discuss their feedback on their proposed mairine seismic survey, while TGS was visiting Tasmania but there was no answer. TGS left a message regarding having a meeting this week and asked ALCT to call back and advised they would send a follow up email also.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Land Council of Tasmania	1-05-2023	Email TO relevant person	TGS emailed ALCT following up on their planned trip to Tasmania advising they would be in Hobart on Thursday and Friday and would welcome a meeting with ALCT. TGS advised alternatively they could meet online and to just let them know what they prefer.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Land Council of Tasmania	11-05-2023	Email TO relevant person	TGS emailed ALCT following up on their previous emails sent 01/05/2023 and 26/04/2023 to see if ALCT would like to meet to discuss their proposed marine seismic survey further. TGS closed their email stating they would welcome the opportunity to provide more details in an online meeting.	N	N/A	* (see note above table)	Continuing consultation.
Aboriginal Launceston	1-03-2023	Online enquiry form submitted	TGS submitted an online enquiry form advising TGS is planning to undertake marine seismic survey in Otway Basin and seeking to engage with AL as a potential relevant person in accordance with government consultation requirements. TGS advised that if AL provide an appropriate contact, they will provide more information. TGS also advised they would like to knowwhether AL has any interests or activities that may be affected by the survey so TGS can learn what these might be and discuss how any impacts may be avoided or mitigated. TGS also invited AL to let them know if they would like to ask any questions or meet in person to go over the proposed survey.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Launceston	13-03-2023	Online enquiry form submitted	SLB submitted another online enquiry form asking for a contact person to discuss the seismic survey with.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Launceston	14-03-2023	Phone call TO relevant person	SLB called AL to follow up on the online enquiry form submitted 13/03/2023 requesting a contact person to provide more information related to the Otway Basin 3D Marine Survey. AL requested SLB forward an email request and they will forward to management for further contact and discussion. SLB suggested they will send the factsheet specifically developed for Traditional Owner groups and AL confirmed this would be good. SLB thanked AL and confirmed that would send factsheet today and look forward to futher communications in the future.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Launceston	24-03-2023	Email TO relevant person	SLB emailed AL following phone call earlier advising they would provide a factsheet of information about their proposed marine seismic survey in the Otway Basin. The factsheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Aboriginal Launceston	31-03-2023	Email TO relevant person	SLB emailed AL to resend email from 22/03/2023 asking if they received this email and had a chance to discuss with their manager regarding who SLB could connect with online to discuss the proposed project. SLB attached the updated TO factsheet again.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Aboriginal Launceston	5-04-2023	Phone call TO relevant person	SLB called AL to follow up on previous correspondence regarding their marine seismic survey in the Otway Basin and spoke to the AL receptionist. The receptionist advised the previous AL representative that SLB had been corresponding with no longer works for AL. SLB updated the receptionist on the past conversations with AL and asked if the receptionist could forward and discuss the information sheet and email to their CEO. The receptionist confirmed they would do this and asked SLB to resend the information sheet. SLB confirmed they would resend the information sheet and be in contact after the Easter weekend to follow up.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Launceston	5-04-2023	Email TO relevant person	SLB emailed an alternative contact with AL forwarding the previous emails sent to AL on 24/03//2023 and 31/03/2023 about the proposed marine seismic survey in the Otway Basin and attempting to arrange a meeting with AL to discuss further. SLB asked AL to let them know if they receive this email and the information has been passed on to their manager as they would like to discuss further in order to understand all potential concerns AL may have. SLB advised they could arrange an online meeting at their convenience and attached the information sheet.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Aboriginal Launceston	14-04-2023	Phone call TO relevant person	SLB called AL's landline but AL contact was not available.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Launceston	17-04-2023	Phone call TO relevant person	SLB called AL to follow up on previous phone call made on 14/04/2023. AL advised they had not received the factsheet sent to their reception email and requested it be sent direct to them. AL advised they would then send the factsheet to their CEO. SLB confirmed they would resend the factsheet and would follow up once sent.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Launceston	17-04-2023	Email TO relevant person	SLB emailed AL as discussed earlier in the day via phone call to provide a copy of the information sheet. SLB asked AL could pass on the information sheet to their management team and let SLB know if AL would like to discuss with them online. SLB continued that if not required and there are no further concerns outside what is explained on the factsheet, could AL let them know by return email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Aboriginal Launceston	21-04-2023	Phone call TO relevant person	SLB called AL to follow up on previous correspondence and spoke to receptionist who advised the AL representative SLB needs to speak to will call back this afternoon.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Aboriginal Launceston	27-04-2023	Phone call TO relevant person	SLB called AL to follow up on previous correspondence and spoke to receptionist who advised the AL representative SLB needs to speak to was out of the office until the weekend.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
AFMA SESSF Commonwealth Trawl Manager and SPF Manager	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA SESSF Demersal and Midwater Trawl, SSJF, ETBF and BSCZSF Manager	14-02-2023	Email TO relevant person	Out of office reply with alternative contact while on long term leave.	N	N/A	* (see note above table)	Continuing consultation.
AFMA SESSF Demersal and Midwater Trawl, SSJF, ETBF and BSCZSF Manager	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA SESSF Demersal and Midwater Trawl, SSJF, ETBF and BSCZSF Manager	20-02-2023	Email TO relevant person	Forwarded original email forwarded to AMFA SESSF Demersal on 15/02/2023 advising changes to survey and updated information sheet.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA SESSF Gillnet Hook and Trap Manager	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA Shark Resource Assessment Group	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA Small Pelagic Fishery (SPF) Resource assessment group	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA Small Pelagic Fishery (SPF) Resource assessment group	20-02-2023	Email FROM relevant person	Automated reply to email address advising undeliverable.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
AFMA Small Pelagic Fishery (SPF) Resource assessment group	14-03-2023	Email TO relevant person	Resent email to an alternative email address obtained from another consultation database as email sent 14/02/2023 was undeliverable. Requested feedback be provided before 26/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA South East Management Advisory Committee (SEMAC)	20-02-2023	Email FROM relevant person	Automated reply to email address advising undeliverable.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
AFMA South East Management Advisory Committee (SEMAC)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA South East Management Advisory Committee (SEMAC)	14-03-2023	Email TO relevant person	Resent email to an alternative email address obtained from another consultation database as email sent 14/02/2023 was undeliverable. Requested feedback be provided before 26/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA South East Management Advisory Committee (SEMAC)	12-05-2023	Email FROM relevant person	Automated reply to email address advising of an alternative contact within the organisation.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
AFMA South East Resource Assessment Group (SERAG)	13-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA South East Resource Assessment Group (SERAG)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA Southern and Eastern Scalefish and Shark Fishery Resource Assessment Group	14-02-2023	Email TO relevant person	TGS responded to previous email regarding not having received correspondence before and advised there has been a change in contact email address for the project. TGS invited them to get in contact if any questions or concerns regarding the activity being proposed.	N	N/A	* (see note above table)	Continuing consultation.
AFMA Southern and Eastern Scalefish and Shark Fishery Resource Assessment Group	13-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
AFMA Southern and Eastern Scalefish and Shark Fishery Resource Assessment Group	13-02-2023	Email FROM relevant person	Stakeholder queried previous email from TGS as never received correspondence in past.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
AFMA Southern Bluefin Tuna Fishery (SBTF) Management Advisory Committee	13-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA Southern Bluefin Tuna Fishery (SBTF) Management Advisory Committee	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA Southern Bluefin Tuna Fishery (SBTF) Management Advisory Committee	21-02-2023	Email FROM relevant person	Relevant person responded to email TGS sent 14/03/2023 advising they are aware ASBTIA is in consultation with TGS on this [project].	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
AFMA Southern Bluefin Tuna Fishery (SBTF) Management Advisory Committee	14-03-2023	Email TO relevant person	Resent email to an alternative email address obtained from another consultation database as email sent 14/02/2023 was undeliverable. Requested feedback be provided before 26/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA Southern Squid Jig Fishery (SSJF) resource assessment group	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
AFMA Southern Squid Jig Fishery (SSJF) resource assessment group	20-02-2023	Email FROM relevant person	Automated reply to email address advising undeliverable.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
AFMA Southern Squid Jig Fishery (SSJF) resource assessment group	14-03-2023	Email TO relevant person	Resent email to an alternative email address obtained from another consultation database as email sent 14/02/2023 was undeliverable. Requested feedback be provided before 26/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Anglesea, Aireys Inlet Society for the Preservation of Flora and Fauna (ANGAIR)	17-04-2023	Email TO relevant person	TGS emailed ANGAIR to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked ANGAIR to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Anglesea, Aireys Inlet Society for the Preservation of Flora and Fauna (ANGAIR)	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Anglesea, Aireys Inlet Society for the Preservation of Flora and Fauna (ANGAIR)	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Anglesea, Aireys Inlet Society for the Preservation of Flora and Fauna (ANGAIR)	25-05-2023	Email FROM relevant person	ANGAIR replied to TGS' email sent 22/05/2023 thanking TGS for their email invitation. ANGAIR said they feel this is not in their field of area or expertise.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Anglesea, Aireys Inlet Society for the Preservation of Flora and Fauna (ANGAIR)	25-05-2023	Email TO relevant person	TGS replied to ANGAIR's email received earlier that day thanking them for their response. TGS asked if ANGAIR would like more information about the project or do they feel the survey is not relevant or of interest. TGS continued they are happy to provide more information or alternatively they can remove ANGAIR from the consultation program if they do not wish to receive any more communications.	N	N/A	* (see note above table)	Continuing consultation.
Anglesea, Aireys Inlet Society for the Preservation of Flora and Fauna (ANGAIR)	25-05-2023	Email TO relevant person	TGS replied to ANGAIR's email received earlier that day acknowledging their request to be removed from the consultation list and offered for ANGAIR to get in contact if they have any queries.	N	N/A	* (see note above table)	Continuing consultation.
Anglesea, Aireys Inlet Society for the Preservation of Flora and Fauna (ANGAIR)	25-05-2023	Email FROM relevant person	ANGAIR replied to TGS' email sent earlier that day advising they wish to be removed from the consultation list.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Apollo Bay Fisherman's Cooperative	17-03-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 24/03/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Fisherman's Cooperative	20-03-2023	Email TO relevant person	TGS emailed ABFC as previous email sent on 17/03/2023 did not have the [information sheet] attached and this email was providing the [information sheet].	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Fisherman's Cooperative	22-03-2023	Phone call TO relevant person	SLB called ABFC to follow up on unanswered emails regarding their proposed marine seismic survey however there was no answer. SLB left ABFC a message to return their call at a convenient time.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Apollo Bay Fisherman's Cooperative	17-04-2023	Email TO relevant person	TGS emailed ABFC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked ABFC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Fisherman's Cooperative	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Fisherman's Cooperative	25-05-2023	Phone call TO relevant person	SLB called ABFC to follow up on phone call and message left 22/05/2023 regarding their proposed marine seismic survey however there was no answer. SLB left ABFC a message to return their call at a convenient time.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Apollo Bay Fisherman's Cooperative	30-05-2023	Phone call TO relevant person	SLB called ABFC to follow up on previous attempts to communicate with them regarding their proposed marine seismic survey within Otway Basin. ABFC advised they had forwarded the email containing the information sheet to all of their six members. SLB advised they would be visiting the area if there was anyone from ABFC that wanted to meet and discuss the project further. The ABFC member advised they would check whether the Director/Chairman would like to meet. ABFC added there is not much more they can do if the members are not getting back to SLB, however confirmed they had received enough information and had no concerns from their side. SLB provided contact details for ABFC to call back.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Apollo Bay Fisherman's Cooperative	31-05-2023	Meeting with relevant person	SLB, TGS and SLR visited ABFC to see if they wanted to meet and discuss the proposed marine seismic survey within the Otway Basin, however the appropriate representatives were no available. SLB left their contact details for them to call if they wanted to meet.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Apollo Bay Landcare	20-03-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 27/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Landcare	17-04-2023	Email FROM relevant person	ABL replied to TGS' email sent earlier that day regarding their proposed marine seismic survey within the Otway Basin. APL explained they are quite concerned about a number of elements of this project and would like a meeting to discuss. APL mentioned their concerns with affecting marine life including threatened species (e.g. blue whales) and fishing industries which the community relies on. APL continued that searching for fossil fuels when APL knows they are destroying lives and causing extinctions around the world seems counterintuitive to them. APL advised they would like to convene a meeting as they don't think this is an appropriate development and have many questions to ask.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are adressed in the following sections: Blue whales: **Sections 7.2.2.3.6** and **7.2.2.4.2**, with control measures specific for marine mammals listed in **Table 84**. Commercial fishing industry: Imapcts of the seismic survey activity for commercial fishers, specifically in relation to underwater noise are discussed in detail in **Section 7.2.3.1.** Other specific impatcs are discussed in detail in **Section 7.2.2.3.2** (bony fish / tuna behavioural impacts), and **Section 7.2.2.2.1.2** (duration and extent of zooplankton exposure), **Section 7.2.2.2.1.4** (rock lobster larvae) and **Section 7.2.2.2.3.2** (bony fish larvae). Other aspects regarding use of data in relation to the Oil and Gas Industry are outside the scope of the NOPSEMA regulations for the purpose of this EP.	Continuing consultation.
Apollo Bay Landcare	17-04-2023	Email TO relevant person	TGS emailed ABL to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked ABL to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Apollo Bay Landcare	21-04-2023	Email TO relevant person	TGS replied to ABL's email received 17/04/2023 expressing their concerns with their proposed marine seismic survey. TGS advised they are available to meet with them and discuss their concerns and provide an overview of what is proposed, discuss the work in the environment plan and control measures that will be implemented to avoid or mitigate impacts on the marine environment. TGS asked if ABL would be available to meet on 27/04/2023 and to advise if this date is not suitable and provide a date that would work better. TGS asked who would be attending and to pass on names of those attending to include in the meeting invite. TGS also asked if ABL could provide a summary of questions to ensure they have the people at the meeting required to address their questions.	N	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Landcare	22-05-2023	Email TO relevant person	TGS emailed ABL to advise they would be visiting the area next week if they were available 31/05/2023 afternoon to discuss their queries and concerns raised in their email dated 17/04/2023. TGS asked ABL to advise if they were available and confirm a time.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Landcare	24-05-2023	Phone call TO relevant person	TGS called ABL to follow up on the email TGS sent 22/05/2023 but there was no answer. TGS left a message for ABL to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Apollo Bay Landcare	24-05-2023	Email TO relevant person	TGS emailed ABL a meeting invite for 31/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Landcare	24-05-2023	Phone call FROM relevant person	ABL called TGS back following their call and message left earlier that day. ABL confirmed they could meet on 31/05/2023 at 15:00 hrs. TGS advised they would send out a meeting invite.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Apollo Bay Landcare	31-05-2023	Meeting with relevant person	TGS, SLB and SLR met with ABL to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with ABL: - impacts on marine mammals and control measures; - impacts on plankton; and - survey purpose and contributing to the effects of climate change. ABL advised they would discuss the information shared today and from previous communications with other team members and contact TGS if they have additional questions. SLR explained the next stage with NOPSEMA's completion check and release for public consultation as an opportunity to provide feedback. TGS advised they would provide ABL with minutes and copy of presentation. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are adressed in the following sections: Acoustic impacts on marine mammals and control measures: **Sections 7.2.2.3.6** and **7.2.2.4.2,** with control measures specific for marine mammals listed in **Table 84.** Acoustic impacts on plankton: **Sections 7.2.2.2.1** (plankton), and **7.2.2.2.3.2** (fish eggs and larvae mortality), with control measures listed in **Table 84.** Other aspects regarding use of data in relation to the Oil and Gas Industry are outside the scope of the NOPSEMA regulations for the purpose of this EP.	Continuing consultation.
Apollo Bay Landcare	1-06-2023	Email TO relevant person	TGS emailed ABL to thank them for their meeting the day before and provide ABL with a copy of the presentation. TGS added they will send out the meeting minutes next week but to contact them if there are any further questions in the meantime.	Y - Copy of meeting presentation	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Landcare	9-06-2023	Email TO relevant person	TGS emailed ABL a copy of the meeting minutes for their record and review and asked ABL to advise if they would like anything changed or removed. TGS thanked ABL for their time and information and advised they have noted their concerns and queries. TGS asked ABL to advise if they would like to be kept updated with their progress and remain on consultation list or be removed from the consultation program. TGS asked ABL to let them know if they need any information going forward.	Y - Meeting minutes and copy of presentation	N/A	* (see note above table)	Continuing consultation.
Apollo Bay Landcare	16-06-2023	Email FROM relevant person	ABL replied to TGS' email sent 09/06/2023 providing a copy of the minutes for meeting held 31/05/2023 with amenments to the minutes. ABL also advised they presented TGS' story to the CoM and they unanimously voted they are against any further seismic testing in the waters off the coast of the Otways due to the harm it causes marine life and the potential for increased carbon emissions as a result of the surveying. ABL asked for this to be noted in the minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Australian Coastal Society Ltd - South Australian Chapter	20-03-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 27/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Coastal Society Ltd - South Australian Chapter	17-04-2023	Email TO relevant person	TGS emailed ACSL to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked ACSL to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Coastal Society Ltd - South Australian Chapter	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Communication and Media authority (ACMA)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Australian Communication and Media authority (ACMA)	16-05-2022	Email FROM relevant person	Automatic reply notifying receipt of email.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Communication and Media authority (ACMA)	17-05-2022	Email FROM relevant person	The email acknowledges that the ACMA received the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS. Relevant person advised that the enquiry has been escalated for an expert response.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Communication and Media authority (ACMA)	08-06-2022	Email FROM relevant person	The ACMA communicated that Schedule 3A to the Telecommunications Act 1997 (link provided) provides for submarine cable protection zones to be declared around telecommunications submarine cables that are considered to be of national significance. As the proposed survey area is not in the vicinity of any existing protection zones, the ACMA had no comments regarding the proposal. The ACMA linked a map of the international submarine cables landing in Australia. Although none of the cables in the map appear to travel through the proposed area, the stakeholder encouraged TGS/Schlumberger to contact domestic submarine cable operators to discuss the proposed survey. The ACMA also noted that they do not generally provide contact details for the operators of any submarine cables in Australian waters and encouraged TGS/Schlumberger to make their own enquiries.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Communication and Media authority (ACMA)	8-06-2022	Email FROM relevant person	Relevant person emailed to confirm that none of their cables, as shown in their map, appear to travel through the area specified in email of 16/05/2022.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Communication and Media authority (ACMA)	14-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Communication and Media authority (ACMA)	14-03-2023	Email TO relevant person	Resent email to an alternative email address obtained from another consultation database as email sent 14/02/2023 was undeliverable. Requested feedback be provided before 26/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Communication and Media authority (ACMA)	17-03-2023	Email FROM relevant person	ACMA acknowledged email TGS sent to them on 14/03/2023. ACMA advised their role to regulate the submarine cable regime (providing a link to their website for more information about their role). ACMA encourage TGS to contact the owners of any submarine cables in the vicinity of the survey area if they haven't already. ACMA advised that from the information TGS had provided, the survey area overlaps the Indigo Central submarine cable system, owned by the Indigo Consortium (provided a link to Indigo website). ACMA recommended contacting the AHO for further assistance with identifying submarine cables near the survey area as they maintain records of geospatial coordinates submarine cables.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Communication and Media authority (ACMA)	27-03-2023	Email TO relevant person	TGS responded to ACMA's email sent 17/03/2023 thanking them for their information regarding contacting AHO and Superloop.	N	N/A	* (see note above table)	Continuing consultation.
Australian Communication and Media authority (ACMA)	16-05-2023	Email FROM relevant person	Automatic reply notifying receipt of email.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Conservation Foundation	27-02-2023	Online enquiry form submitted	TGS submitted an online enquiry form advising TGS is planning to undertake marine seismic survey in Otway Basin and seeking to engage with ACF as a potential relevant person in accordance with government consultation requirements. TGS advised that if ACF provide an appropriate contact, they will provide more information. TGS also advised they would like to know whether ACF has any interests or activities that may be affected by the survey so TGS can learn what these might be and discuss how any impacts may be avoided or mitigated. TGS also invited ACF to let them know if they would like to ask any questions or meet in person to go over the proposed survey.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Conservation Foundation	27-02-2023	Email FROM relevant person	Automated reply from ACF to TGS' online enquiry form submitted 27/02/2023 acknowledging the submission, advising they will read the message ASAP.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Conservation Foundation	17-04-2023	Email TO relevant person	TGS emailed ACF to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked ACF to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Conservation Foundation	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Fisheries Management Authority - South East Management Advisory Committee (AFMA)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Fisheries Management Authority - South East Management Advisory Committee (AFMA)	20-02-2023	Email FROM relevant person	Automated reply to email address advising undeliverable.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Australian Fisheries Management Authority (AFMA) - Southern and Eastern Scalefish and Shark Fishery Resource Assessment Group	13-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Fisheries Management Authority (AFMA)	11-05-2022	Email FROM relevant person	Automatic email from stakeholder advising that they is currently on leave. An alternative contact was provided.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Fisheries Management Authority (AFMA)	12-05-2022	Email TO relevant person	TGS state that they are contacting AFMA to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, information sheet, maps and a summary of the Commonwealth fisheries	N/A	* (see note above table)	Continuing consultation
Australian Fisheries Management Authority (AFMA)	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Maps of the Commonwealth fisheries that operate in the region	N/A	* (see note above table)	Continuing consultation.
Australian Fisheries Management Authority (AFMA)	12-05-2022	Email FROM relevant person	Email undeliverable - Unable to determine addresses involved. Note, other AFMA contacts were successfully emailed.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Fisheries Management Authority (AFMA)	31-05-2022	Email TO relevant person	TGS/Schlumberger invited AFMA to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Australian Fisheries Management Authority (AFMA)	05-07-2022	Email FROM relevant person	The relevant person expressed that they have no specific comment on the proposal, but noted that it is important to consult with all operators who have entitlements to fish within the proposed area. The relevant person explained that once relevant operators have been identified, individual contact details can be requested. There is a cost associated with this service and the total price will depend on the complexity of the request. The stakeholder has not raised any objections to the proposal.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised. Given the number of fisheries and operators, and the costs and time associated with postal consultation, TGS and SLB will consult via the relevant fishing industry associations.	* (see note above table)	No action required. Continuing consultation.
Australian Fisheries Management Authority (AFMA)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Fisheries Management Authority (AFMA)	15-03-2023	Email FROM relevant person	AFMA responded to email from TGS dated 15/02/2023 advising the fishery managers are currently reviewing the revised survey proposal. AFMA said they would value an online meeting with TGS to further understand the project and whom TGS has already consulted, especially the Commonwealth Fishing Industry.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Fisheries Management Authority (AFMA)	22-03-2023	Email TO relevant person	TGS replied to AFMA apologising for delay in responding to their email dated 15/03/2023. TGS advised they would welcome a meeting with AFMA and to please advise when in convenient for them.	N	N/A	* (see note above table)	Continuing consultation.
Australian Fisheries Management Authority (AFMA)	27-03-2023	Email FROM relevant person	AFMA emailed TGS with meeting invite for 04/04/2023 at 12:30 pm.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Fisheries Management Authority (AFMA)	29-03-2023	Email TO relevant person	TGS replied to AFMA's meeting invite asking to move the proposed meeting from 04/04/2023 to 05/04/2023 as the same time.	N	N/A	* (see note above table)	Continuing consultation.
Australian Fisheries Management Authority (AFMA)	29-03-2023	Email FROM relevant person	AFMA replied to TGS' email earlier that day regarding moving the proposed meeting time, advising the person TGS has been liaising with has gone on leave so will need to decline original meeting invite and an alternative contact will resend the invite for the following day (05/04/2023).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Fisheries Management Authority (AFMA)	29-03-2023	Email FROM relevant person	AFMA emailed TGS with an alternative meeting invite for 05/04/2023 at 12:30 (AEDT).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Fisheries Management Authority (AFMA)	30-03-2023	Email TO relevant person	TGS responded to AFMA thanking them for their previous email and meeting invite.	N	N/A	* (see note above table)	Continuing consultation.
Australian Fisheries Management Authority (AFMA)	30-03-2023	Email FROM relevant person	AFMA responded to TGS' email earlier that day, saying no problem [in response to TGS thanking them for their previous email].	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Fisheries Management Authority (AFMA)	5-04-2023	Meeting with relevant person	TGS, SLB and SLR met with AFMA to discuss the proposed survey. TGS and SLR provided a presentation discussing the survey details, existing environment and environmental values, examples of control measures, past commercial fishing effort, and cumulative impacts. The group then discussed consultation with AFMA clarifying that AFMA is a government body regulating Commonwealth commercial fishing. They can provide data on fisheries but don't represent fishers as such. AFMA recommended consulting just those fisheries that are relevant and keeping AFMA informed so they can anticipate what is happening with each fishery. The meeting closed with AFMA explaining how the fishers are experiencing significant consultation fatigue and increasing pressure with spatial competition. AFMA also commented seismic is very sensitive within the fishing industry. Refer to Appendix I for a copy of the full meeting minutes.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Fishing Trade Assn	17-04-2023	Email TO relevant person	TGS emailed AFTA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked AFTA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Fishing Trade Assn	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Fishing Trade Assn	25-05-2023	Email TO relevant person	TGS emailed AFTA seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from AFTA to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked AFTA to reply prior to 31/05/2023 and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Fishing Trade Assn	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Hydrographic Office (AHO)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Australian Hydrographic Office (AHO)	18-05-2022	Email FROM relevant person	"The email acknowledges that the AHO received the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS and will review the survey details. It was advised that data supplied would be registered, assessed, prioritised and validated in preparation for updating the Navigational Charting products.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Hydrographic Office (AHO)	19-05-2022	Email TO relevant person	TGS/Schlumberger thanked AHO for their reply. TGS/Schlumberger highlighted that the survey is in its preliminary stages. TGS/Schlumberger noted that details will be provided to AHO for inclusion in Notice to Mariners, and that this is subject to the acceptance of the EP and surveys going ahead. TGS/Schlumberger indicated to AHO that they do not believe that temporary vessel and survey activities will require including on navigational charts.	N	N/A	* (see note above table)	Continuing consultation.
Australian Hydrographic Office (AHO)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Hydrographic Office (AHO)	15-02-2023	Email FROM relevant person	Reply email to acknowledge email was received by AHO and advising the data provided will now be registered, assessed, prioritised and validated for updating navigational charting products. The reply email was from a personalised email address rather than the general email addressed being previously used.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Hydrographic Office (AHO)	6-06-2023	Email TO relevant person	TGS emailed AHO to provide an update on progress developing environmental plan and to ask AHO if there are any other submarine cables that overlap the survey operational area, or just the one they have already identified (image provided).	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Australian Hydrographic Office (AHO)	7-06-2023	Email FROM relevant person	Reply email to acknowledge email was received by AHO and advising the data provided will now be registered, assessed, prioritised and validated for updating navigational charting products. The reply email was from a personalised email address rather than the general email addressed being previously used.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Hydrographic Office (AHO)	8-06-2023	Email FROM relevant person	AHO replied to TGS' email sent 06/06/2023 confirming their records show only one cable exists within the OA.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Hydrographic Office (AHO)	8-06-2023	Email TO relevant person	TGS replied to AHO's reply received earlier that day thanking them for providing confirmation there is only one submarine cable.	N	N/A	* (see note above table)	Continuing consultation.
Australian Institute of Marine Science (AIMS)	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Institute of Marine Science (AIMS)	17-04-2023	Email TO relevant person	TGS emailed AIMS to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked AIMS to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Institute of Marine Science (AIMS)	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	22-12-2022	Email FROM relevant person	The relevant person provided a consultation letter with the following key points: - Summarised TGS' legal consultation requirements; - Proponent has not contacted AMCS and had to contact proponent direct; - Concerned TGS does not undrestand the extent to which their interests, functions and activities may be affected; - Details of how the project may affect their functions, interest and activity; - Encourage TGS to reflect on the consultation regime purpose which benefits TGS and the environment by improving the EP; and - Interested in receiving information to comment on.	Y - Consultation letter	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Marine Conservation Society	4-01-2023	Email TO relevant person	TGS acknowledged letter and apologised for delay in responding. TGS advised the EP area is being modified and will send out an updated information sheet once modifications had been made. TGS also advised they would welcome a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	15-02-2023	Email TO relevant person	TGS reconnected with AMCS to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	24-03-2023	Email FROM relevant person	AMCS emailed TGS following up from recent community consultation where questions were raised as to whether SLB is still involved with this project. AMCS would also like further information on who will be preparing the environmental report for the seismic testing proposed and their qualifications pertaining to marine habitat and wildlife of the Otway basin.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Marine Conservation Society	31-03-2023	Email TO relevant person	TGS replied to AMCS' email dated 24/03/2023 requesting further information about the proposed survey. TGS confirmed the following in summary: - SLB is involved with the project although TGS is leading the acquisition; and - SLR is preparing the EP. TGS then elaborated on their history with SLR and SLR's experience. TGS closed the email by thanking AMCS for their time.	N	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	27-04-2023	Email FROM relevant person	AMCS replied to TGS' response emailed 31/03/2023 thanking TGS for clarification. AMCS asked if there up and coming consultation processes TGS can advise of. AMCS added that given the history of seismic testing across the Bonney Upwelling and Zeehan Marine protected area undertaken in 2019, AMCS is interested in the proposals for these areas as they intersect multiple areas of concern for marine and EPBC species.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Marine Conservation Society	2-05-2023	Email FROM relevant person	AMCS sent another email following their email received 27/04/2023 clarifying their query was regarding the Otway proposal for TGS and SLB.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Marine Conservation Society	5-05-2023	Email TO relevant person	TGS replied to AMCS' emails 27/04/2023 and 02/05/2023 thanking them for their message. TGS advised they have been working on a reply but suggested an online meeting to discuss their queries directly. TGS continued they can provide an overview of the proposed survey, consultation process and explain how they are developing the environmental plan (EP). TGS said they would like to ensure they have sufficient information to make an informed decision on how the proposed survey may impact their functions, interests and activities and then discuss any queries or concerns AMCS has to make sure TGS is addressing them within the survey planning and EP. TGS asked AMCS to provide a suitable date and time to meet and they can arrange a meeting invite. TGS closed their email thanking AMCS for their patience advising their EP is constantly changing as they receive new information during their consultation program which is causing some delay with a draft EP and responses to their stakeholders. TGS attached the information sheet to their email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	25-05-2023	Email TO relevant person	TGS emailed AMCS to see if they received TGS' email sent 05/05/2023 regarding a meeting to discuss their concerns with TGS' proposed marine seismic survey. TGS said they want to ensure they are providing AMCS sufficient opportunity to discuss AMCS' concerns and for TGS to provide an overview of their project. TGS continued they want to better understand AMCS' functions, interests and activities and how they can address AMCS' concerns going forward. TGS advised AMCS they are planning on submitting their EP to NOPSEMA for their completeness check soon and would like to include further feedback from AMCS in to their survey planning before then. TGS also noted the public consultation period and opportunity to provide feedback then. TGS asked AMCS if they provide a date and time when they could meet.	N	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	25-05-2023	Email FROM relevant person	Automated reply from AMCS advising they are not checking their emails regularly to please call if urgent.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Marine Conservation Society	29-05-2023	Email FROM relevant person	AMCS replied to TGS' email sent 25/05/2023 regarding the proposed marine seismic survey. AMCS advised they have been looking for information that would help prepare for a meeting with TGS. AMCS asked for TGS to provide the following information: - existing seismic data for the proposed area from the past 15 odd years of seismic operations in the basin, and what the reason is for needing to again conduct seismic surveys. - the projected cumulative impacts of seismic surveys in this proposal are with the historical seismic operation on key Rare, Threatened and Endangered Species including the southern right whale, and blue whale. - commitments on how TGS will reduce the damaging impact to the marine environment and wildlife. AMCS closed their email saying they would like to arrange a meeting within 5 working days of receiving the information from TGS to provide them sufficient time to understand information and provide feedback.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Marine Conservation Society	1-06-2023	Email TO relevant person	TGS replied to AMCS' email received 29/05/2023 addressing their queries within that email with the following summarised information: - Reason for survey is to provide subsurface geology to multiple resource companies for to interpret and determine the potential resource availability (usually for oil and gas). - TGS is a data acquisition company and survey and environment plan purpose is to acquire data about the area - the project is not for extraction or drilling. - EP contains detatiled information about the controls and commitments TGS will implement to avoid and minimise impacts to the marine environment. - TGS could explain the EP process in a meeting and then encourage them to review it once NOPSEMA accept as complete and release it for public consultation. TGS then provided examples of some of the comittments they will be implementing to avoid or minimise acoustic disturbance on blue whales and southern right whales. TGS closed their email by thanking AMCS for their ongoing queries as highlights the community's concerns and what they need to do to address them in their survey planning. TGS asked AMCS to advise a date and time that would suit to meet and discuss further.	Y - Maps showing past 15 years of 2D and 3D seismic surveys	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	2-06-2023	Email FROM relevant person	AMCS replied to TGS' email thanking them for their information and asked TGS to supply the environmental plan they refer to, to help AMCS understand any references TGS would make at a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	7-06-2023	Email FROM relevant person	AMCS emailed TGS seeking clarification on whether TGS/SLB has pulled out of proposed community consultations and why TGS is not progressing with these community consultation events.	N	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	8-06-2023	Email TO relevant person	TGS replied to AMCS' email received 07/06/2023 thanking them for their email and queries regarding community consultation. TGS confirmed they have cancelled and declined invitations to attend three community organised events advising they don't feel their attendance would be appropriate and have offered an online meeting as an alternative. TGS advised their environmental plan is currently being drafted and will be provided to NOPSEMA for a completion check and once accepted as complete will be widely available for public consultation. TGS closed the email asking AMCS to advise if they would like to proceed with an online meeting with suitable dates and time to arrange an invite.	N	N/A	* (see note above table)	Continuing consultation.
Australian Marine Conservation Society	8-06-2023	Email FROM relevant person	AMCS replied to TGS' email sent earlier that day thanking TGS for confirming TGS is removing themselves from public consultation processes. AMCS added they are concerned TGS is attempting to fast track the development of the environment plan to send to NOPSEMA, limiting opportunities for informed consultation for AMCS or concerned communities seeking public consulation processes. AMCS explained TGS' barrier to meaningful consultation and are interested to know whether SLB is proposing to join online consultation with limited and select parties now that TGS has refused public consultation processes.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Australian Marine Conservation Society	9-06-2023	Email TO relevant person	TGS replied to AMCS' email received the day before advising the following: - TGS is not removing themselves from or refusing public consultation processes. - The document AMCS requested is not yet complete so can't provide them a copy yet, however have provided extracts (previous email). - TGS is not trying to fast track the EP development (has been a work in progress since 2021). - SLB has attended most (98%) of online or in-person meetings and likely to be present at any future meetings. TGS explained their understanding of meaningful consultation and the remaining process for developing the EP including submitting to NOPSEMA for their initial completion check, followed by public consultation and TGS reviewing the EP to incorporating any relevant submissions - demonstrating the opportunities for AMCS and concerned communities to seek informed or public consultation. TGS also attached NOPSEMA's guidelines for providing feedback on environmental plan and asked AMCS to let them know if they'd like to proceed with an online meeting. TGS closed the email suggesting they can wait until the public consultation period as an alternative.	Y - NOPSEMA consultation guideline	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Australian Marine Conservation Society	15-06-2023	Email FROM relevant person	AMSC replied to TGS' email sent 09/06/2023 with the following queries: - map of 2D and 3D acquisition within AA over last 15 years; - clarification if this project is being sought under SPA or other permit; - what changes in practices will take place in light of the current investigations into previous breaches by SLB; - a map showing the changes in proposed boundaries are in the latest EP for seismic operations; - details on what if any of those changes are due to BIA data of the proposed location; - information on what measures SLB/TGS be putting in place for mammal observations by way of extra staff, vessels, aircraft or time frame constraints; - what does SLB/TGS propose as their public consultation process should the EP be accepted by NOPSEMA in light of SLB/TGS declining recent community consultation sessions; - what specific issues are SLB/TGS pointing to as reasons for declining community consultation sessions; and - what changes in practices is SLB/TGS making to work plans based on feedback from Traditional Owners in the region on impact to cultural heritage, with a focus on southern right whale.	N	N/A	* (see note above table)	Continuing consultation.
Australian Maritime Safety Authority (AMSA)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Australian Maritime Safety Authority (AMSA)	01-06-2022	Email FROM relevant person	Stakeholder asked that timely and relevant Maritime Safety Information (MSI) is promulgated for the area and nature of operations through 3 steps. 1. Contact the Australian Hydrographic Office no less than four weeks before operations, with details relevant to the operations. 2. Notify AMSA's Joint Rescue Coordination Centre (JRCC) by e-mail or phone for promulgation of radio-navigation warnings at least 24-48 hours before operations commence. 3. Plan to provide updates to both the Australian Hydrographic Office and the JRCC on progress and, importantly, any changes to the intended operations. The stakeholder advised that to obtain a vessel traffic plot showing Automatic Identification System (AIS) traffic data for the area of interest, please visit AMSA's spatial data gateway and Spatial@AMSA portal to download digital data sets and maps. A form for requesting customised information and data is also available via the portal (fees may apply).	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Maritime Safety Authority (AMSA)	10-06-2022	Email FROM relevant person	AMSA communicated that the Nautical Advice Inbox is no longer monitored, and provided TGS/Schlumberger/ERM with the preferred contact email for all future communications regarding the proposal.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Maritime Safety Authority (AMSA)	17-06-2022	Email TO relevant person	TGS/Schlumberger thanked AMSA for the update to their details.	N	N/A	* (see note above table)	Continuing consultation.
Australian Maritime Safety Authority (AMSA)	30-06-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for providing the survey information. They noted that the survey area is an area where vessels converge as they travel to and from along traffic routes between WA, SA, TAS, Victoria, NSW and New Zealand. The stakeholder highlighted that before a survey, the vessel is required to notify AMSA's Rescue Centre (ARC) for promulgation of radio-navigation warnings 24-48 hours before operations commence. In addition, the Australian Hydrographic Office is to be contacted no less than four working weeks before operations commence for the promulgation of related notices to mariners. The stakeholder encouraged TGS/Schlumberger to visit AMSA's spatial data gateway and Spatial@AMSA portal to download digital data sets and maps in the future. They also communicated that a form for requesting customised information and data is available via the Spatial@AMSA portal.	Y - Vessel traffic plot for area of interest.	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Maritime Safety Authority (AMSA)	15-02-2023	Email FROM relevant person	Reply email from AMSA advising had replied the previous day requesting the ESRI ArcGIS shapefile information so the GIS team can overlay the AIS data for analysis.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Maritime Safety Authority (AMSA)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Maritime Safety Authority (AMSA)	15-02-2023	Email TO relevant person	TGS replied to previous email providing the shapefile data requested within the previous email.	Y - Shapefile data as requested	N/A	* (see note above table)	Continuing consultation.
Australian Maritime Safety Authority (AMSA)	20-02-2023	Email FROM relevant person	Response email from AMSA advising the requirement for timely and relevant Maritime Safety Information (MSI) to be promulgated for the area and nature of operations by: 1. Contacting the AHO no less than 4 weeks prior to operations whom will send out Notice to Mariners; 2. Notifying AMSA's JRCC at least 24-48 hrs prior to operations; and 3. Planning to provide updates to AHO and JRCC on progress and any changes to operations.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Recreational Fishing Foundation (ARFF)	19-05-2023	Email TO relevant person	TGS emailed ARFF seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from ARFF to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked ARFF to reply before 26/05/2023 and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Recreational Fishing Foundation (ARFF)	20-05-2023	Email FROM relevant person	Automated reply advising email sent to ARFF the day before was underliverable.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Recreational Fishing Foundation (ARFF)	25-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 31/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Maps of the Commonwealth fisheries that operate in the region	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	13-05-2022	Email TO relevant person	TGS state they are contacting ASBTIA to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, information sheet and maps and a summary of the Commonwealth fisheries	N/A	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	26-05-2022	Email FROM relevant person	ASBTIA thanked TGS/Schlumberger for making contact and acknowledged receiving the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS. ASBTIA confirmed that active fishing takes place in the area covered by the proposed survey, and that this fishing activity is highly seasonal - taking place in the austral summer and autumn. The stakeholder recognised historic communications with both TGS and Schlumberger on similar projects, and indicated a desire to work through the potential impacts of the current survey.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	31-05-2022	Email TO relevant person	TGS thanks ASBTIA for their reply and informs them that they have just sent out an invite for a briefing call to which ASBTIA are invited, other sessions, or aseperate meeting will be available should ASBTIA not be able to attend.	N	N/A	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	31-05-2022	Email TO relevant person	TGS/Schlumberger invited AFMA to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	02-06-2022	Meeting with relevant person	TGS/Schlumberger/ERM presented an overview of the survey, and of the commercial fishing effort for relevant Commonwealth and State managed fisheries based on available data. The stakeholder questioned if the survey effort will be focused on where acreage has been released. TGS/Schlumberger confirmed this is the case. The EP will seek approval for the full 3D Active Source Area, but acquisition will be phased according to acreage release, among other factors. ASBTIA also raised concerns regarding impacts to pelagic resources. The Murray Marine Park is closed to the SBTF for 2 years, is subject to temporal closures and has a small area to fish. The stakeholder requested TGS/Schlumberger avoid surveying between December and March. The stakeholder had questions regarding the timing and phasing of areas of acquisition under the EP. TGS explained that waters towards Tasmania and Victoria are in the current acreage release that is awaiting announcement and that areas in the south-eastern half of the survey area were most likely to attract interest first. There is no current acreage release proposed for South Australia, but there is likely to be in the coming years. TGS/Schlumberger pointed out that the fishing industry also has the opportunity to comment on future acreage releases through NOPTA. ASBTIA noted that they require a condition to be included in petroleum licences such that petroleum activities must not affect the migration of Bluefin tuna, which needs to be considered for this activity. TGS/Schlumberger confirmed they would like to schedule a targeted meeting with ASBTIA to discuss. TGS / Schlumberger sought the groups' suggestions on best approach for ongoing engagement, whether it be with each organisation separately or if they wanted to nominate a main representative. Attendees suggested ongoing consultation with each industry association.	N	Stakeholder has raised an objection, claim or concern. The objection or claim is addressed in the EP. Request to avoid acquisition December-March included in ALARP assessment in the EP. Not considered practicable given that December to March is likely to provide the most favourable weather and sea conditions, and impacts to SBT are not considered to be significant. Localised voidance by SBT is most likely impact. Potential for activity to affect the migration of SBT is assessed in the EP. Given the limited sensitivity of tuna to sound pressure, behavioural effects will be localised. Evidence from previous studies, plus steady historical SBT catch rates in the GAB and Tasman Sea, indicate that SBT migration continues regardless of past seismic surveys.	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	03-06-2022	Email TO relevant person	TGS/Schlumberger invited ASBTIA to a briefing call on Friday June 10th with other fishing stakeholders.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	10-06-2022	Email FROM relevant person	ASBTIA apologised for not responding to the meeting invitation for June 10th and noted that it must have been accidentally deleted. They highlighted that the survey represents an important issue for them.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	17-06-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholders for their attendance and participation in the meeting on June 2nd. TGS/Schlumberger highlighted that the attached 2019 report includes a summary of the proportion of historical catch in each fishery that was overlapped by that survey area, and that the current Otway Basin 3D MSS area is similar. TGS/Schlumberger also noted that the stakeholder from SETFIA pointed out there are areas where overlap is expected to be significantly reduced. TGS and Schlumberger informed the stakeholders that they have engaged SETFIA to compile similar information for the Otway Basin 3D MSS.	Y - Summary meeting notes - Copy of the 2019 Schlumberger Otway 2D Seismic Survey report prepared by SETFIA	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	17-06-2022	Email TO relevant person	TGS/Schlumberger offered to organise a call between TGS/Schlumberger/ERM and ASBTIA to discuss issues specifically relating to Southern Blue Fin Tuna fishing activities, and address any queries before ASBTIA finalises a response to the original email. TGS provided days that would suit for a meeting to be held.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	17-06-2022	Email FROM relevant person	Email undeliverable to one stakeholder email account.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	29-06-2022	Email TO relevant person	TGS/Schlumberger requested a meeting before ASBTIA submits a formal response, and advised that a representative would be in Adelaide during the week of the 4th of July and would be happy to arrange a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	29-06-2022	Text message TO relevant person	TGS advised the stakeholder that a representative would be in Adelaide the week of the 4th of July and requested a meeting with ASBTIA.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	29-06-2022	Meeting with relevant person	ASBTIA joined at the end of the call to provide an update on the status of ASBTIA's response.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	30-06-2022	Text message FROM relevant person	ASBTIA explained that they would be away for the first half of the week and would be available for a meeting on either the 7th or 8th of July.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	30-06-2022	Text message TO relevant person	TGS agreed to a meeting on the 7th July and asked the stakeholder to give options for a suitable time.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	06-07-2022	Text message FROM relevant person	The stakeholder suggested 10:00 am as a suitable meeting time and the CBD or surrounds as a meeting place.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	06-07-2022	Text message TO relevant person	TGS agreed to 10:00 am and suggested a location for the meeting.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	06-07-2022	Text message FROM relevant person	The stakeholder accepted this location.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	07-07-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for the meeting discussion and have the following follow-up details from ASBTIA's perspective. (1)To re-emphasise – ASBTIA are resource utilisation and evidence-driven people, but the proposed area is a major problem. (2)ASBTIA will follow up the catch data. (3)ASBTIA understand the SA acreage release – and will confirm the actual timetable tomorrow. (4)ASBTIA understand that the EP may aim at acquiring data in the southern area from Q1 2023. (5)TGS/Schlumberger are aiming to get the EP to NOPSEMA around August 2022. (6)TGS/Schlumberger would like to investigate joint spotting for Blue Whales. (7)As ASBTIA raised, attached are the Conditions covering tuna from a PGS approval.	Y - Conditions covering tuna from a PGS approval	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	07-07-2022	Text message TO relevant person	TGS notified the stakeholder that a representative from Schlumberger would also be attending the meeting.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	07-07-2022	Text message FROM relevant person	The stakeholder acknowledged this and agreed.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	29-07-2022	Email TO relevant person	TGS/Schlumberger confirmed that acquisition in the south-eastern part of the EP area is most likely to commence first with the north-western section dependant on acreage release and interest from title holders. TGS/Schlumberger went on to outline both the standard communications protocol, and specific southern bluefin tuna protocol (SBTF Assessment Area) to reduce impacts to fishers. It was also noted that observers on boats and in aircraft will record aggregations of tuna and share sightings data with the stakeholder daily. TGS/Schlumberger also requested that ASBTIA share marine mammal sightings data with them to supplement observations during the survey.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	10-08-2022	Email TO relevant person	TGS emailed ASBTIA regarding invoicing from ASBTIA.	N	N/A	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	15-02-2023	Email TO relevant person	Reply email to ASBTIA acknowledging their previous email.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	15-02-2023	Email FROM relevant person	ASBTIA acknowledge previous email provided by TGS and advised they will respond prior to date specified.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	22-03-2023	Email TO relevant person	TGS followed up previous email sent ASBTIA on 15/02/2023 advising TGS is happy to set up a meeting with ASBTIA if they would like to discuss further.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	22-03-2023	Email TO relevant person	TGS replied to ASBTIA's previous email sent earlier that day, providing requested boundary co-ordinates data for revised area.	Y - Shape files of boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	22-03-2023	Email FROM relevant person	ASBTIA replied to TGS previous email sent earlier in the day apologising for not replying advising they are exceptionally busy and understaffed. ASBTIA asked TGS to forward the boundary co-ordinates for the revised area (DDM in Excel preferred although can deal with shape files if that is the format TGS has).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	4-04-2023	Email FROM relevant person	ASBTIA emailed TGS to advise that while the revised scope is welcomed, the proposed survey remains a significant concern for SBT and they remain opposed to the activity and will outline their concerns in formal correspondence. ASBTIA requested TGS to provide detail on how the survey will meet the newly passed SafeGuards mechanism and the interaction and data sharing arrangements between the TGS survey and the CGG Reggia survey.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	13-04-2023	Email TO relevant person	TGS replied to ASBTIA's email received 04/04/2023, acknowledging their email and their concerns. TGS said they would like to work with them to try to reduce some of their concerns and look forward to their formal correspondence to further discuss each of their concerns. TGS explained they have been liaising with CGG regarding potential cumulative impacts regarding timing of surveys and at this stage the proposed active source areas are far enough apart that data sharing is not required or appropriate. TGS thanked ASBTIA for providing updated contact details.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	14-04-2023	Email TO relevant person	TGS emailed ASBTIA to provide them with an answer to their query regarding the SafeGuard Mechanism, advising this framework applies to fixed facilities with Scope 1 emissions of greater than 100,000 tonnes of CO_2 equivalent per year. TGS also commented that all TGS' emissions for all vessels did not reach that total in a year, let alone for a single survey.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	4-05-2023	Email TO relevant person	TGS emailed ASBTIA asking if they were available for a phone call either today or next week to discuss the survey and the concerns you have.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	10-05-2023	Email TO relevant person	TGS emailed ASBTIA advising they will be in Adelaide next week and would be great to catch up and asked if they would be available.	N	N/A	* (see note above table)	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	24-05-2023	Email TO relevant person	TGS emailed ASBTIA following up on unanswered emails sent 10/05/2023 and 04/05/2023 regarding their proposed marine seismic survey within the Otway Basin. TGS provided the information sheet and stated that if ASBTIA has any input about their proposed survey to please let TGS know before 01/06/2023 that they can consider that additional information within the development of their environmental plan before submitting to NOPSEMA soon. TGS provided their contact details for if they would like further detail or have any questions.	N	N/A	* (see note above table)	Continuing consultation
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	31-05-2023	Email FROM relevant person	ASBTIA emailed TGS providing a formal submission on their proposed marine seismic survey. Comments from the submission are summarised below: - ASBTIA acknowledged the reduction in survey area which no longer overlaps with where fishing vessels operate. - Experience of long lasting consequences on migratory species from 3D marine seismic survey activities. - Behavioural changes and fishery displacement is not confined to the period the survey was operating, effects have impacted their fishery for a decade. - No indication the Great Australian Bight area has recovered [from previous survey actvity]. - Fish swim through the area of the previous survey area (2012-2015) and do not stop to feed. - The Bight including Otway is single most important feeding grounds for juvenile tuna and feeding area now reduced after previous survey. - Deep-sea canyons and deep ocean basin is critically important for adult SBT and displaced juveniles as they forage prior to their migration to the single spawing ground near Indonesia. - The proposed survey undermines international efforts to rebuild the SBT population. - There is no legitimate reason to subject the breeding population to undue stress. - ASBTIA suggested consulted Tuna Australia and the Commission for the Conservation of SBT. - ASBTIA can only accept a very small survey area to be developed within the next few years [to meet Australia's net zero carbon emissions committment]. ASBTIA closed their submission by advising they request that noise mitigation measures be implemented on the airgun array and that NOPSEMA impose noise control measures to confine elevated noise to within the EP area. Refer to Appendix H for detailed submission.	Y - Formal submission	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points raised by ASBTIA are discussed in the following sections of the EP: Southern Bluefin Tuna fisheries: **Section 7.1.3.1.1.6** (Southern Bluefin Tuna Fishery) regarding an assessment of the effects of the physical presence of the Seismic Survey; Aspects regarding recovery periods and previous surveys are addressed in **Section 9 Cumulative Effects**. Further to this, outcomes of concurrent Cumulative Imapct Assessment workshops will be incorporated as frameworks become finalised and available for incorporation into this EP. Ongoing consultation with ASBTIA will be undertaken in accordance with the methods set out in Section 5 to ensure ASBTIA have had both sufficient information, and sufficient time to engage in the consultation programme.	Continuing consultation.
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	8-06-2023	Email TO relevant person	TGS replied to ASBTIA's email and formal submission received 31/05/2023 thanking ASBTIA for their time and letter. TGS advised ASBTIA they not their comments and concerns and advised they have been in contact with the relevant persons they suggested contacting. TGS also advised they are not planning on acquiring data from the entire acquisition area as there will be discrete surveys with the first phase likely to comprise of 6000 - 7000 km2 which is likely to take approximately 5 months (pending delays). TGS added there is also a maximum of 400 days acquisition over te 4 year period and a maximum of 200 days in any given year. TGS closed the email by inviting ASBTIA to contact them if they need additional information or have additional comments or would like to arrange a meeting to discuss their project further.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Bass Coast Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bass Coast Shire Council	16-02-2023	Email FROM relevant person	Automated reply from BCSC acknowledging receipt of email and advising will be in touch as soon as possible.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bass Coast Shire Council	17-04-2023	Email TO relevant person	TGS emailed BCSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked BCSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bass Coast Shire Council	17-04-2023	Email FROM relevant person	Automated reply from BCSC acknowledging receipt of email and advising will be in touch as soon as possible.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bass Coast Shire Council	4-05-2023	Phone call TO relevant person	SLB called BCSC and explained the call was to ask for feedback on the marine seismic survey proposed for the Otway Basin that TGS recently emailed the council including an information sheet. The BCSC representative could not find the email and asked the email to be resent with the addition of a contact name and number for them to contact TGS back. SLB confirmed they would resend the factsheet.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bass Coast Shire Council	8-05-2023	Email TO relevant person	TGS emailed BCSC to provide a copy of the existing emails sent to BCSC on 17/04/2023 and 16/02/2023 with the latest information sheet attached. TGS advised they would call over the next few days to check they had received and whether they had any queies or further information.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Bass Coast Shire Council	8-05-2023	Email FROM relevant person	Automated reply from BCSC acknowledging receipt of email and advising will be in touch as soon as possible.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bass Coast Shire Council	9-05-2023	Email FROM relevant person	BSCS replied to TGS' email sent 08/05/2023 thanking TGS for contacting them and providing details about their proposed project. BSCS advised that based on the information provided, they are confident the project will not impact the functions, interests or activities of the Bass Coast Shire Council. BSCS closed their email advising they can be removed from their stakeholder further consultation list.	N	N/A - no impact on their functions, interests or activities - advised can be removed from consultation list.	N/A	Consultation closed
Bass Strait Scallop Industry Association	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Maps of the Commonwealth fisheries that operate in the region	N/A	* (see note above table)	Continuing consultation.
Bass Strait Scallop Industry Association	31-05-2022	Email TO relevant person	TGS/Schlumberger invited the stakeholder to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Bass Strait Scallop Industry Association	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bass Strait Scallop Industry Association	17-04-2023	Email TO relevant person	TGS emailed BSSIA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked BSSIA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bass Strait Scallop Industry Association	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Beach Energy	01-06-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Beach Energy	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Beach Energy	15-02-2023	Email FROM relevant person	Automated reply to email address advising undeliverable to one stakeholder account.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Beach Energy	21-02-2023	Email TO relevant person	Forwarded email to an alternative email address for Beach to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/06/2022.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Beach Energy	22-02-2023	Email FROM relevant person	BE replied to TGS' email delivered 21/02/2023 providing information about the Otway Basin Marine Seismic Survey. BE asked TGS to provide shape files for the EP area and the Active Source Area and distances to sound exposure levels for TTS and behaviour for low frequency whales (blue, southern right whales).	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised. Continuing consultation.	* (see note above table)	No action required. Continuing consultation.
Beach Energy	24-02-2023	Email TO relevant person	TGS replied to BE's email received 22/02/2023 providing shape files and information relating to the sound exposure levels requested.	Y - Shape files and information relating to distances for sound exposure levels.	N/A	* (see note above table)	Continuing consultation.
Beach Patrol 3280	20-03-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 27/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Beach Patrol 3280	17-04-2023	Email TO relevant person	TGS emailed BP3280 to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked BP3280 to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Beach Patrol 3280	17-04-2023	Email FROM relevant person	Another BeachPatrol unit (BP3270) replied to TGS' email sent earlier that day. BP3270 advised they have forwarded to their Warrnambool group leaders to assess their interest and closed the email thanking TGS for their follow up email.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Beach Patrol 3280	27-04-2023	Email FROM relevant person	BeachPatrol3280 emailed TGS regarding their proposed marine seismic survey advising the best contact details [as original email was distributed to an administrative BeachPatrol address]. BP3280 advised they operate out of Warrnambool and explained their main role is to collect marine debris along the beaches and want to be assured TGS activities will not result in increased rubbish washing up on beaches as the dominant form of rubbish BP3280 collects is from international shipping and fishing boats. BP3280 asked to see the survey's waste management plan and have assurances that TGS will commit to zero rubbish disposed at sea. BP3280 also advised they are concerned with fuel spillage as they collect balls of crude oil and asked if TGS how to dispose of them and whether TGS has a plan for their disposal. BP3280 also asked if TGS will carry out crude oil testing if they find crude oil washing up increases during TGS' activities. BP3280 concluded their email stating given their concern is protecting the natural environment and impacts that human activities have on marine life, they have great concerns about the impacts of seismic blasting on marine animals, particularly the Southern Right Whale who have a nursery in Warrnambool.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Aspects related to waste management are addressed in detail in **Section 7.3.** Control Measures specific for waste management are listed in **Table 90.** Other aspects regarding use of data in relation to the Oil and Gas Industry are outside the scope of the NOPSEMA regulations for the purpose of this EP. Aspects of the concerns related to crude oil are not in th scope of this EP.	Continuing consultation.
Beach Patrol 3280	27-04-2023	Email TO relevant person	TGS replied to an email received 17/04/2023 from another BeachPatrol unit (3270) advising TGS had received an email from BeachPatrol3280 so will liaise directly with them. TGS acknowledged their email the following day.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Beach Patrol 3280	3-05-2023	Email TO relevant person	TGS replied to BP3280's email received 27/05/2023. In summary, TGS thanked BP3280 for their email and raising their concerns and advised they have noted their email address and updated their consultation register. In summary, TGS replied with the following: - TGS is part of the Energeo Alliance Ghost Net and Marine Debris removal initiative. - TGS operates under strict regulatory requirements and will have a waste management plan (WMP) which will state the appropriate handling and disposal of waste (managed in accordance with relevant legislation). TGS provided some examples of waste management measures from the WMP. - TGS has made a committment to not have any discharges within the marine parks. - The survey vessel will be using marine gas oil confirming the survey will not result in crude oil reaching the beaches and therefore TGS would not cover crude oil testing as not from any activities TGS would be undertaking. - TGS is aware of the sensitivities in the area and control measures will be implemented to minimise any potential impacts on those sensitive receptors (examples included restrictions on the area where data can be acquired during important periods of the year for certain whales species, marine mammal observers, buffer zones, shutdown periods, aerial surveys). - Refuelling will take place offshore in accordance with strict operational procedures (examples provided). - Survey is a significant distance offshore and beyond the continental shelf edge, avoiding more sensitive near shore and continental shelf habitats. Refer to Appendix H for detailed submission.	N	N/A	* (see note above table)	Continuing consultation.
Beach Patrol 3280	30-05-2023	Email FROM relevant person	BP3280 emailed TGS with the following additional queries regarding their proposed marine seismic survey: - Will TGS be running any public consultation meetings in Warrnambool. - Who are the multi-clients. - Is the testing happening up to 200 days per year over several years. - Provide more specific details about where the testing is taking place. - Do you have an environmental plan they can view. - Are the other groups [names provided] carrying out seismic activities working with TGS or separately. - Clarification on who is who (regarding the other companies working in the area).	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised. Continuing consultation.	* (see note above table)	Continuing consultation.
Beach Patrol 3280	1-06-2023	Email TO relevant person	TGS replied to BP3280's email received the day before with the following summarised information: - Currently no community session planned for Warrnambool however TGS asked them to let them know if they want to meet and discuss their queries. TGS advised they plan to submit their environment plan (EP) to NOPSEMA mid-June and then once accepted as complete, NOPSEMA will make the EP available for public comment and will let you know when plan is available for public comment. - TGS can't confirm who the multi-clients will be and depends on who is interested in data. - TGS clarified the survey timing as maximum of 200 days per year with maximum 400 days between 2023 and 2027 (pending approval).TGS also corrected BP3820's use of 'surveying' rather than 'testing'. - TGS advised they can't be specific with acquisition area at this stage as depends on when works commence and avoiding sensititivities and will also depend on weather, and equipment/vessel availability. - TGS advised the EP will be available for review during the public consultation process. - TGS confirmed their proposed survey is indepedent of ConocoPhillips, Regia, Beach Energy and Cooper Energy's activities and accordingly cannot comment on their activities. TGS closed their email asking for BP3820 to contact them if they need any other information or would like to arrange a meeting. TGS provided a copy of the updated information sheet for their record.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	12-04-2023	Email TO relevant person	TGS emailed BLALC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback by 19/04/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	20-04-2023	Phone call TO relevant person	TGS emailed BLALC to follow up email sent 12/04/2023 but there was no response. TGS left a message to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Local Aboriginal Land Council	20-04-2023	Email TO relevant person	TGS emailed BLALC to follow up on email sent 12/04/2023 and phone call earlier that day. TGS explained they would really like to meet online with BLALC and those within their organisation that would be interested to hear about TGS' plans and hear any concerns BLALC may have. TGS suggested they could arrange an online meeting at their convenience to discuss. TGS closed the email thanking them.	N	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	1-05-2023	Phone call TO relevant person	TJ called BLALC regarding their proposed marine seismic survey within the Otway Basin and spoke with the receptionist who advised hadn't spoken with the CEO yet but suggested an alternative contact (project manager) as the best person to speak with. The receptionist asked TGS to email information through to their administration email address and said they would forward information and contact details to the project manager.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Local Aboriginal Land Council	1-05-2023	Email TO relevant person	TGS emailed BLALC following a phone call earlier that day. TGS asked if this email could be forwarded to another contact within BLALC, advising TGS would really like to meet online to discuss their proposed marine seismic survey within the Otway Basin. TGS included the information sheet.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	9-05-2023	Phone call TO relevant person	TGS called BLALC regarding their proposed marine seismic survey within the Otway Basin following a suggestion from another nearby Aboriginal land council but there was no answer. TGS left a message explaining the reason for their call and asked BLALC to return their call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Local Aboriginal Land Council	11-05-2023	Phone call TO relevant person	TGS called the BLALC CEO regarding their proposed marine seismic survey within the Otway Basin. BLALC advised how to consult with their community which involves sending them an information flyer and they will distribute it to the community. BLALC continued that once the information was distributed to hold a community meeting where the community will decide if they wisht to attend or not. BLALC provided the appropriate email address to send the information flyer to.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Local Aboriginal Land Council	11-05-2023	Email TO relevant person	TGS emailed BLALC to follow up from phone call with BLACL earlier that day advising they had spoken with a BLALC contact whom asked TGS to forward an email to them to share the attached information sheet with their community. TGS asked what day would be best for a community engagement session at the Hub or whether there is an opportunity to present their project in an online forum.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	11-05-2023	Email TO relevant person	TGS replied to BLALC's email received earlier that day confirming TGS would like BLALC to forward their email and information to the BLALC community hub worker. TGS asked if the community hub worker could call TGS (mobile phone details provided) to confirm a date for a community meeting.	N	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	11-05-2023	Email FROM relevant person	BLALC responded to TGS' email sent earlier that day confirming they could circulate the information sheet. BLALC advised the appropriate contact for the community hub worker within BLALC who can help arrange the community engagement session and asked if TGS would like their email forwarded to them.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Local Aboriginal Land Council	22-05-2023	Phone call TO relevant person	TGS called BLALC to speak with the community hub worker about arrangement a meeting to discuss their proposed marine seismic survey with their community. BLALC advised the information sheet emailed 11/05/2023 has been posted in the BLALC social media group and confirmed a community meeting for 25/05/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Local Aboriginal Land Council	25-05-2023	Message FROM relevant person	BLALC advised they have sent an email to reschedule today's meeting and to please send through a date and time for a new meeting.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Local Aboriginal Land Council	25-05-2023	Message TO relevant person	TGS replied to BLALC's message received earlier that day asking to reschedule today's meeting. TGS asked if 30/05/2023 would be ok and advised they can do a flyer with that time if that would help.	N	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	25-05-2023	Email TO relevant person	TGS replied to BLALC's email received earlier that day advising no problem at all to reschedule their meeting and agreed with 30/05/2023. TGS attached a flyer about the meeting for them to distribute and advised they would send BLALC a meeting invite.	Y - Meeting flyer	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	25-05-2023	Email TO relevant person	TGS emailed online meeting invite to BLALC for 30/05/2023.	Y - Meeting flyer	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	25-05-2023	Email FROM relevant person	BLALC emailed TGS advising they have to reschedule today's meeting apologising for any inconvenience. BLALC asked if they could email through a date and time that suited.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Local Aboriginal Land Council	25-05-2023	Meeting with relevant person	TGS, SLB and SLR arranged a community meeting with BLALC but no one from BLALC arrived so the meeting was cancelled.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Local Aboriginal Land Council	30-05-2023	Meeting with relevant person	TGS, SLB and SLR met with BLALC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with BLALC: - waste discharge and treatment; - impacts to sensitive sites along coastline; - impacts to fauna and flora; - clarification of who NOPSEMA is and process for EP submission; and - aerial surveys. BLALC concluded meeting advising they thought TGS had it all covered and wil get in contact with other questions. TGS advised they would provide BLALC with minutes and copy of presentation. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are adressed in the following sections: Waste discharge and treatment: **Section 7.3**, with control measures specific for waste management listed in **Table 90.** Impacts to sensitive sites along coastline: relevant spects relate to unplanned oil spill events that may reach near shore or shoreline areas. Specific aspects adressing sensitive sites are discussed in **Section 8.3.3.4**, with control measures listed in **Table 126**. Impacts to fauna and flora: various sensitive receptors are discussed in Section 7.2 (for acoustic impacts), **Section 7.3** (routine permissible waste discharge), **Section 7.4** (atmospheric emissions), **Section 7.5** (artificial light emissions), **Section 8.1** (IMS), **Section 8.2** (streamer loss), **Section 8.**3 (vessel collision and hydrocarbon spill), and **Section 8.5** (accidental release of hazardous and non-hazardous material). Aerial surveys: Control Measures for cetacean monitoring includes the use of period aeriall surveys (refer to **Table 87** and **88** for EPO and control measures for acoustic disturbance , and aerial surveys may also be a tool applied under any emergency OPEP response (**Section 10.10**).	Continuing consultation.
Bega Local Aboriginal Land Council	9-06-2023	Email TO relevant person	TGS emailed BLALC the minutes and a copy of the presentation from their meeting held on 30/06/2023 and asked BLALC to advise of any changes or text to be removed. TGS said they appreciate and respect BLALC's time and information and have incorporated their comments and queries within their environmental and consultation planning and will update their environmental plan to reflect the information provided. TGS asked if BLALC would like to keep updated with the survey progress and remain on their consultation list or prefer to be removed from the consultation program and to let them know either way.	Y - Meeting minutes and presentation	N/A	* (see note above table)	Continuing consultation.
Bega Local Aboriginal Land Council	12-06-2023	Email FROM relevant person	BLALC replied to TGS' email from 30/05/2023 thanking TGS for providing the meeting minutes. BLALC queried the engagement process as thought the connection with the community hub worker was to assist a process for meeting community members. BLALC asked TGS to send them information that explains the survey and potential impacts as a useful tool to circulate to their community.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Bega Valley Shire Council	4-05-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS advised they have undertaken modelling to identify where that may be to help direct who they need to consult and why BVSC was triggered as a potential relevant person as the area that may be affected overlaps with the southern NSW coast. TGS asked BVSC to adivise if they'd like to discuss further or would like further or more information, providing an offer to arrange an online meeting, or alternatively to let them know if the survey is not of interest or relevant to them and they will remove them from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Bega Valley Shire Council	4-05-2023	Email FROM relevant person	Automated reply email acknowledging TGS' email sent earlier that day advising the email will be forwarded to the responsible area wihtin the Council for the attention and response as per the Council's Customer Service Policy.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bega Valley Shire Council	10-05-2023	Phone call TO relevant person	TGS called BVSC to follow up on an email TGS sent on 04/05/2023 regarding their proposed marine seismic survey within the Otway Basin. The BVSC advised the environment group had looked at the information but did not consider the project relevant to them. TGS explained how they had identified the environment that may be affected (EMBA), which caused TGS to contact BVSC, however they reiterated that it was not relevant.	N	N/A - not considered relevant to them.	N/A	Consultation closed
Blue Whale Study Inc	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	18-05-2022	Email FROM relevant person	The email acknowledges that the Blue Whale Study Inc. received the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS. The stakeholder noted that they have studied Pygmy Blue Whales (PBWs) in the survey region since 1998, and most sightings of PGWs are made on the continental shelf. The stakeholder acknowledged that the 3D survey appears to be planned to avoid shelf waters, which would minimise disturbance to foraging PGWs in that area. However they advised that research has determined the Presence of PBWs south of the shelf area (within the survey area). They attached 2 papers which note the Presence of PBWs within the survey area during the summer foraging season. However it was noted that the area is poorly understood due to its remoteness. The stakeholder requested more information in regards to PBW sightings during a 2D survey of the region in 2019-20.	Y - 2 scientific papers relating to the detection and distribution of Pygmy Blue Whales	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	20-05-2022	Email TO relevant person	TGS/Schlumberger thanked BWS Inc. for bringing the two scientific papers to their attention, and noted that the EP does look at the presence of PBWs in deeper waters. It was advised that TGS/Schlumberger would investigate the query regarding sightings during the 2D survey and provide further information to BWS Inc. the following week.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	02-06-2022	Email TO relevant person	TGS/Schlumberger attached a report extraction from the Schlumberger Otway 2D regarding mammal detections with data tables and map. TGS/Schlumberger also asked the Blue Whale Study Inc. what the status is of their annual aerial surveys in this region- If they are going ahead each year and what period do they typically cover.	Y - Report extraction from the Schlumberger Otway 2D	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	05-06-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for the information and suggested that they may soon have more queries. They advised that aerial surveys ideally cover the period between November and May, depending on available funding.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	5-06-2022	Email FROM relevant person	BWS thanked TGS for information sent regarding the Schlumberger Otway 2D and mammal detections.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	15-06-2022	Email FROM relevant person	The stakeholder requested positions and dates of the blue whale sightings as referenced in the previously attached report on June 2nd. They explained that this information would better help them understand the distribution of Blue Whales in the region and how they move between shelf and offshore areas.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	23-06-2022	Email TO relevant person	TGS/Schlumberger attached Blue Whale sightings data from the 2020 Otway 2D seismic survey with the dates and positions included. TGS/Schlumberger asked if the stakeholder could provide more information regarding the timing and frequency of surveys in the area over the next few seasons.	Y-PBW data attached including dates and positions	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	24-06-2022	Email FROM relevant person	BWS Inc. thanked TGS/Schlumberger for sending through the data, but identified that latitudes were missing from vessel 2 sightings records. They asked if these could also be sent through and noted that they will respond shortly with the information TGS/Schlumberger requested on survey details.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	24-06-2022	Email TO relevant person	TGS/Schlumberger attached the blue whale sighting data which included the missing records.	Y - Blue Whale Sighting Data excel sheet from the 2019 2D Survey	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	29-06-2022	Email FROM relevant person	The stakeholder asked for an update on the missing records and if these had been located.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	29-06-2022	Email FROM relevant person	BWS thanked TGS for providing the missing latitudes.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	29-06-2022	Email FROM relevant person	BWS asked TGS if they had located the missing latitudes.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	29-06-2022	Email TO relevant person	TGS/Schlumberger attached the blue whale sighting data which included the missing records.	Y - Blue Whale Sighting Data excel sheet from the 2019 2D Survey	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	30-06-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for sending through the 2020 seismic survey data. A letter response to the survey was attached detailing the interests and potential affects for the stakeholder.	Y - Letter outlining Blue Whale Study's interest in the survey and the potential effects.	Stakeholder has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP. Stakeholder identified the significance of PBWs utilising deep offshore waters in the STC. This information is captured in the EP and impact assessment.	* (see note above table)	Continuing consultation
Blue Whale Study Inc	13-07-2022	Email TO relevant person	TGS/Schlumberger thanked BWS Inc. for their letter response, and attached the MMO/PAM report from the Otway MC2D campaign as requested by the stakeholder. TGS acknowledged the comment from the stakeholder regarding Blue Whale foraging in deeper waters, and confirmed that the EP does consider foraging in the deeper water areas. TGS explained that the EP will assess the potential impacts to blue whales from sound propagating into the BIAs, and also potential impacts to foraging animals outside of the BIAs. A range of management options are currently being considered.	Y - MMO/PAM report from their Otway MC2D campaign in 2019-20	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	16-07-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for sending through the MMO report, and noted the comments which referred to possible effects on blue whales outside the BIA. The stakeholder expressed interest in understanding the management strategy options that would be put forward, and whether BW monitoring would be undertaken prior to or during the proposed survey.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	01-08-2022	Email TO relevant person	TGS/Schlumberger sent through the requested shapefile to the stakeholder. It was communicated that the details of the marine fauna observations and management strategy are still being decided. TGS/Schlumberger explained that there is an intention to include aerial surveys and marine fauna observers as part of this strategy. TGS/Schlumberger expressed a desire to share data and asked the stakeholder if they would be open to sharing their sightings data during the survey. TGS/Schlumberger explained that they are happy to call and discuss further with the stakeholder.	Y - Shapefile of project area	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	01-08-2022	Email FROM relevant person	The stakeholder requested a shapefile of the project area.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	02-08-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for sending through the shapefiles. The stakeholder strongly recommended that aerial surveys form part of the marine mammal management strategy. They explained that due to limited resources, their surveys take place mostly in the shelf and upper slope waters. The stakeholder explained that if TGS/Schlumberger wanted full coverage of the survey area, then longer-range surveys and specialised aircraft would be required. The stakeholder explained that they would be able to conduct these longer range surveys on a consulting basis, and would then provide all the data to TGS/Schlumberger.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	10-08-2022	Email TO relevant person	TGS/Schlumberger apologised for their slow reply and explained that they would appreciate discussing aerial survey options and data sharing. It is not anticipated that that long-range aerial surveys would be conducted over the entire area. However, TGS/Schlumberger explained that they would be open to discuss this, and inquired as to a convenient time for the stakeholder to have this discussion.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	11-08-2022	Email TO relevant person	TGS/Schlumberger advised that the proposed time would not work, and proposed a new day as Monday August 15th.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	11-08-2022	Email FROM relevant person	The stakeholder advised they would be available for a call between 10-11 am on the 12th of August.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	12-08-2022	Email FROM relevant person	The stakeholder accepted this option, and provided 08:30 am AWST as a potential starting time.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	15-08-2022	Meeting with relevant person	The stakeholder explained that their aerial survey effort over the last ~20 years has been focussed on the continental shelf due to likely foraging associated with the Bonney Upwelling system and other upwelling systems. However, there is an increasing amount of evidence to support that the Subtropical Convergence (STC) offshore in deep waters is also significant for the blue whales. The stakeholder detailed research that suggest Blue Whale activity in areas south of the EP area. The stakeholder suggested TGS/Schlumberger could contract BWS to conduct aerial surveys over the PBW BIA and further offshore in the EP Area to detect blue whales for the purposes of mitigating impacts from the MSS.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised. Engagement with stakeholder regarding aerial surveys is continuing.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	24-08-2022	Email TO relevant person	TGS/Schlumberger explained that they still intend to prioritise aerial survey effort over the defined foraging BIAs (plus some additional buffer offshore to account for sound propagation from offshore activities towards the BIAs). TGS/Schlumberger expressed a desire to continue discussions with the stakeholder surrounding engaging them to undertake the aerial surveys, following an assessment of the EP by NOPSEMA.	Y - Meeting notes from 15/08/2022	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	30-08-2022	Email FROM relevant person	The stakeholder agreed to continued discussion regarding aerial surveys, and questioned when NOPSEMA's first round of assessment would be complete.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	31-08-2022	Email TO relevant person	TGS/Schlumberger explained that NOPSEMA's first round assessment is expected to be completed in early November.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Blue Whale Study Inc	1-09-2022	Email FROM relevant person	Request from BWS to use their formal email rather than their informal email, which they had inadvertently used in their previous correspondence.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	01-09-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for the information.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	1-09-2022	Email TO relevant person	Acknowledgement of formal email to use when corresponding.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	14-09-2022	Email FROM relevant person	The stakeholder attached a letter outlining some questions about proposed mitigation methods for Blue Whales, and requested a copy of the EP.	Y - Blue Whale Study Letter to TGS/Schlumberger DRAFT	Stakeholder has provided information and/or requested additional information.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	19-12-2022	Email FROM relevant person	BWS reconnected with TGS as had not heard from them or seen an EP on NOPSEMA website and asked if they were interested in engaging with BWS to do aerial surveys during the current upwelling season.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	4-01-2023	Email TO relevant person	TGS replied to BWS previous email apologising for delay and confirming they would still like to talk with them. TGS also advised they plan on resubmitting EP end of Feb but looking at modifications and would be in touch soon.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	8-02-2023	Email FROM relevant person	BWS acknowledged TGS' previous email.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	13-02-2023	Email TO relevant person	TGS emailed BWS updated information sheet and advised would be good to catch up over next few weeks to continue discussion.	Y - updated information sheet	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	18-02-2023	Email FROM relevant person	BWS note significant reduction in the survey area, however their interests are still likely to be affected by operations and they would be happy to discuss over the next few weeks and asked if there was a preferred time.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	20-02-2023	Email FROM relevant person	BWS responded to previous email suggesting a meeting date and time of Wednesday 22/02/2023 at 10:30 EST with TGS.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	20-02-2023	Email TO relevant person	TGS suggested a meeting time later this week between 10:30 - 2:00 pm and asked BWS to confirm a time. TGS also advised SLR area assisting with EP and they would be attending also.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	21-02-2023	Email TO relevant person	TGS responded to BWS' suggested meeting date and time of 22/02/2023 at 10:30 am EST and asked if 11:00 am EST would be possible to meet with BWS.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	21-02-2023	Email FROM relevant person	BWS confirmed at meeting date and time of 22/02/2023 at 11:00 am EST with TGS.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	22-02-2023	Meeting with relevant person	TGS provided BWS with an update on the revised survey including a reduced operational area (OA) and updated factsheet prior to the meeting. BWS enquired why the OA was reduced. TGS explained the initial area was large and permits had not been released across the larger area. BWS asked about the survey timing (commencement and duration) and TGS responded ideally Q4 2023 pending EP approval and first phase would take approximately 3-4 months. The group then had an open discussion about the survey (timing, control measures likely to be implemented etc). SLR advised they will develop a summary document that details all of the proposed control measures for marine mammals and provide to BWS for review and feedback. BWS confirmed the aerial survey aircraft company can fly to survey area and can be used to identify hot spots (based on upwelling of krill) potentially informing where whales may appear. BWS advised that blue whales are likely to be feeding in the area based on previous surveys and are keen to be involved with TGS aerial surveys. The group agreed another meeting will be convened following the distribution of proposed control measures to discuss and confirm final control measures to be included within the EP. BWS advised the IA framework for threatened species is under reveiw and based on offshore whale sightings, the current Otway Basin BIA is likely to be further extended offshore.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	22-02-2023	Email TO relevant person	TGS forwarded a meeting invite to BWS for 22/02/2023 at 13:00 hrs to discuss the proposed survey.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	4-04-2023	Email TO relevant person	TGS emailed BWS to advise they were still working on the PBW mitigation measures and once a draft was ready, they would sent to BWS and appreciate another meeting to discuss. TGS advised they would be in touch shortly.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	5-04-2023	Email FROM relevant person	BWS replied to TGS' email sent the previous day providing an update on progress with drafting marine mammal mitigation measures. BWS advised to get in touch when ready.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	20-04-2023	Email FROM relevant person	BWS emailed TGS advising the following summarised information: - the Commonwealth has initiated a review of the Biologically Important Areas for threatened marine species including blue whales, including nominations for new areas of interest (submission to DCCEEW by 28/04/2023). - BWS appreciate TGS-SLB sharing blue whale sighting data from aerial survey in 2020. [Comments were provided about blue whale behaviour etc]. BWS would like to know if TGS/SLB intend to contribute to the BIA process and if not, BWS feel it is their duty to nominate the area using the TGS-SLB data which was freely provided. BWS commented they realise this is a difficult issue for TGS-SLB due to their proposed operations in the area but commented this is an iconic endangered species and a rare opportunity to redefine critical aspects of their distribution and ecology. Refer to Appendix H for the detailed submission.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Aspects related to the claims about BIA and marine mammals are discussed in detail in the following sections of the EP: **Section 4.4.4** (Existing environment and BIAs), and **Section 4.5.6** (Marine mammals). Remaining concerns will be subject to ongoing consultation. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Blue Whale Study Inc	21-04-2023	Email TO relevant person	TGS replied to BWS' email sent the day before advising the data acquired in the 2019/2020 in the Otway was an SLB survey that TGS was not involved with. TGS included SLB recipients in the email and advised SLB can respond.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	2-05-2023	Email TO relevant person	TGS emailed BWS to provide them with a draft summary of the proposed marine mammal control measures for them to review. TGS closed the email requesting a meeting with BWS the following week if they are available.	Y - Proposed marine mammal control measures	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	2-05-2023	Email TO relevant person	TGS replied to BWS' email received earlier that day and suggested a meeting for either the Wednesday or Friday the following week and asked BWS to confirm which date and a time would best suit them and TGS will set up the meeting.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	2-05-2023	Email FROM relevant person	BWS replied to TGS' email sent the previous day providing a draft summary of the proposed marine mammal control measures, thanking TGS for sending that through. BWS said they will check their availability for a meeting next week.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	3-05-2023	Email FROM relevant person	BWS replied to TGS' email sent the previous day suggesting a meeting date and advised Wednesday morning would be best.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	4-05-2023	Email TO relevant person	TGS emailed BWS a meeting invite for 10/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	5-05-2023	Email TO relevant person	SLB emailed BWS apologising for the delay in their response to their email received 21/05/2023 regarding the cetacean sighting data acquired during the 2019/2020 Otway 2D survey. SLB confirmed that when requested, SLB provided the data to BWS to give them access to a better understanding of the blue whale population and movement in the area and confirmed SLB is happy for BWS to use going forward. SLB confirmed they would not be participating in the BIA process for reasons outlined within BWS email from 20/04/2023.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	10-05-2023	Email FROM relevant person	BWS emailed TGS providing feedback on the information provided to them for review in email sent from TGS 02/05/2023 of which they discussed during their meeting earlier that day. BWS advised they would work on the scoping document for the aerial surveys.	Y - Feedback on proposed marine mammal control measures and image	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Blue Whale Study Inc	10-05-2023	Meeting with relevant person	TGS, SLR. BWS and RPS met to discuss marine mammal control measures for the proposed marine seismic survey. Refer to Appendix I for detailed meeting minutes.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	25-05-2023	Email TO relevant person	SLR replied to BWS' email received earlier that day advising they have forwarded their email to TGS as they don't have the information they requested and confirmed their assumption regarding aerial survey around and ahead of the vessel is correct.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	25-05-2023	Email TO relevant person	TGS replied to BWS' email received earlier that day and advised the majority of the lines are parallel to the coast. TGS continued they are still finalising the first season's polygon and therefore not in a position to share the information so have provided an indicative 3D line.	Y - Indicative survey lines	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	25-05-2023	Email TO relevant person	TGS replied to BWS's email requesting information about the survey vessel's average speed, confirming it is approximately 4-5 knots.	N	N/A	* (see note above table)	Continuing consultation.
Blue Whale Study Inc	25-05-2023	Email FROM relevant person	BWS emailed SLR requesting the shapefiles the seismic lines TGS plan to follow to help with their survey design. BWS asked TGS if they would prefer BWS conduct aerial surveys around the area where the seismic vessel is operating and immediately ahead of it.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Blue Whale Study Inc	25-05-2023	Email FROM relevant person	BWS replied to TGS' reply sent earlier that day regarding suvey lines and asked if TGS could provide an indication of the survey vessel's average speed.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Boating Industry Association of SA	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Boating Industry Association of SA	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Boating Industry Association of SA	16-02-2023	Email FROM relevant person	BIA responded to previous email from TGS to advise the BIA has no competence in this area and noted vessel operations are to be at least 40 km offshore and therefore out of range of interest to the vast majority of their members' customers.	N	N/A - out of range of interest	N/A	Consultation closed
Boating Industry Association of SA	20-02-2023	Email TO relevant person	Acknowledged BIA's response email 16/02/2023.	N	N/A	N/A	Consultation closed

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Bodalla Local Aboriginal Land Council	17-04-2023	Online enquiry form submitted	TGS submitted an online query form regarding their proposed marine seismic survey within the Otway Basin.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bodalla Local Aboriginal Land Council	20-04-2023	Phone call TO relevant person	TGS called BLALC to follow up from the online form submitted on 17/04/2023 and was diverted to an answer machine where TGS left a message to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bodalla Local Aboriginal Land Council	1-05-2023	Letter to relevant person	TGS posted a registered letter to BLALC advising of TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS enclosed an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 12/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Bodalla Local Aboriginal Land Council	9-05-2023	Email TO relevant person	TGS emailed BLALC seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from BLALC to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked BLALC to reply and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Bodalla Local Aboriginal Land Council	22-05-2023	Phone call TO relevant person	TGS called BLALC to follow up on email sent 09/05/2023 regarding their proposed marine seismic survey however there was no answer. TGS left a message advising the purpose of their call and asked BLALC to call back, leaving contact details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bodalla Local Aboriginal Land Council	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Bodalla Local Aboriginal Land Council	31-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 06/06/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email. TGS also attached guidance from NOPSEMA to help with providing feedback about the survey and asked BLALC to let them know if they have any queries about their consultation program so they can make sure they can effectively participate in the process. TGS closed the email by stating if they had any questions or would like more information to call or email to discuss further.	Y- Information sheet and NOPSEMA guidelines for providing feedback	N/A	* (see note above table)	Continuing consultation.
Bunurong Land Council Aboriginal Corporation	27-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bunurong Land Council Aboriginal Corporation	14-03-2023	Email TO relevant person	SLB emailed BLCAC to introduce themselves and advise they are partnering with TGS to conduct a marine seismic survey in the Otway Basin to commence later in the year. SLB advised they had sent a fact sheet to the general admin email and they called earlier today to follow up on that email and were provided two additional points of contact within the Bunurong Council. SLB advised they attached the factsheet, however are working on a shorter version which they are planning to send in the next few days. SLB said they hoped this would prompt further discussions with them regarding any concerns they may have regarding the proposed survey. SLB asked the BLCAC representatives to let them know if they had time to discuss (phone or online meeting) and said they were looking forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bunurong Land Council Aboriginal Corporation	14-03-2023	Phone call TO relevant person	SLB called the main office for BLCAC whom advised to forward information to two BLCAC representatives (names and contact details provided) for their review and potential further discussion. SLB confirmed they would send the factsheet and offer to call back in future.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	20-03-2023	Email TO relevant person	SLB emailed BLCAC to provide a simplified and shorter version of the proposed survey factsheet, which provides an explanation of why SLB/TGS is wanting to consult with them in regards to the planned project. SLB also state the factsheet highlights the aspects of what a MSS is and the potential affects on the environment, the measures SLB/TGS has in place to limit the potential effects and also what safeguards will be in place should an unexpected event occur. SLB said they would like to get some time online with BLCAC and whoever else from the Land Council BLCAC think might be interested to hear about the plans and more importantly they would like to hear if BLCAC has any concerns SLB closed the email by stating they could arrange an online meeting at their convenience to discuss further, thanked BLCAC and said they look forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bunurong Land Council Aboriginal Corporation	24-03-2023	Phone call TO relevant person	SLB called BLCAC following up on emails SLB had sent the previous two weeks that had not been responded to but did not get an answer. SLB left a voice mail message advising they had difficulty getting a response to previous emails.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	27-03-2023	Phone call TO relevant person	SLB called BLCAC following up on emails SLB had sent the previous weeks that had not been responded to but did not get an answer. SLB outlined the purpose of the call and BLCAC apologised for not responding to previous emails due to workload. BLCAC mentioned the EMBA and noted how the spill modelling indicated potential impact to the shoreline. SLB discussed the high level nature of the modelling and low likelihood of an event occurring. SLB advised it would be good if their environmental consultants (SLR) could help explain the modelling in a future meeting. BLCAC advised SLB they would review and discuss the factsheet internally this week and follow up with SLB regarding arranging an online call to discuss further. SLB thanked BLCAC for their time and advised they look forward to further discussions.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	31-03-2023	Email TO relevant person	SLB emailed BLCAC to follow up on call from start of the week and asked if they had time to review the factsheet (attached). SLB advised they would be happy to arrange an online meeting with them and others from BLCAC to present and discuss the project in more detail so SLB may better understand any concerns or sensitivities they may have.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bunurong Land Council Aboriginal Corporation	5-04-2023	Phone call TO relevant person	SLB called BLCAC to follow up on previous correspondence and spoke to the receptionist whom confirmed SLB had the correct BLCAC representatives to provide feedback but they were not available today. The receptionist suggested SLB resend the factsheet via email so they are at the top of their inbox and they would speak to the representatives tomorrow and took SLB's contact details to get them to call them.	Y - Updated information sheet	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	5-04-2023	Email TO relevant person	SLB emailed BLCAC following a phone call earlier to follow up on previous correspondence as advised by the BLCAC receptionist. SLB attached the information sheet again and advised BLCAC that the receptionist would touch base with them tomorrow to let them know that SLB had called. SLB said it would be great to get some feedback from BLCAC regarding the planned seismic survey as mentioned previously. SLB closed the email stating they are always available to meet online at BLCAC's convenience to discuss further if that was preferred and thanked BLCAC.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bunurong Land Council Aboriginal Corporation	14-04-2023	Phone call TO relevant person	SLB called BLCAC to follow up on previous correspondence and spoke to the receptionist whom transferred SLB to one of the BLCAC representatives that SLB had been emailing. BLCAC apologised for not getting back to SLB with feedback but indicated on review of the factsheet it would be better for consultation to be with the representative from the Land Use division and would email a connection to SLB on Monday 17/04/2023 when back in the office. SLB thanked BLCAC for his continued support in helping consultation move along.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	21-04-2023	Phone call TO relevant person	SLB called BLCAC to follow up on previous contact with BLCAC. SLB asked if BLCAC had connected them to a representative within their Land Use division. BLCAC confirmed they had and forwarded them the factsheet and they would get back to SLB next week, noting how busy BLCAC is with their current workload. SLB thanked BLCAC for their support.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	21-04-2023	Email TO relevant person	SLB replied to BLCAC's email received earlier that day thanking them for getting back to them. SLB advised BLCAC, they are partners with TGS who are leading the proposed seismic survey in the Otway and as part of the consultation process had been engaging with BLCAC to progress discussion primarily to explain the survey, listen to any concerns BLCAC may have and adapt their plan accordingly. SLB said it would be great to arrange an online meeting with BLCAC and others in the Land Council they believe would have an interest. SLB closed the email advising they would call BLCAC on Monday to discuss a plan. SLB included the updated information sheet within the email.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Bunurong Land Council Aboriginal Corporation	21-04-2023	Email FROM relevant person	BLCAC emailed SLB regarding email sent to BLCAC on 05/04/2023 advising SLB to call regarding their email (contact details provided), alternatively happy to have a quick Teams meeting. BLCAC closed the email advising they would be happy to discuss with SLB.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	24-04-2023	Phone call TO relevant person	SLB called BLCAC to follow up on previous attempts to discuss proposed marine seismic survey within the Otway Basin but there was no answer. SLB left a message advising they would call back on Wednesday.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	27-04-2023	Phone call TO relevant person	SLB called BLCAC to follow up on previous correspondence to discuss proposed marine seismic survey within the Otway Basin but the appropriate contact was not available. SLB left a message for the BLCAC to call them back when they were available.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	3-05-2023	Email TO relevant person	SLB emailed BLCAC thanking them for getting back to them and advised they would send a meeting invite for 29/05/2023 at 11:00 hrs (AEST). SLB advised the meeting will have TGS and SLR on the call and take approximately 40 - 60 mins to present an overview of the project and work they have been doing with regards to the defined environment and sensitivities.	N	N/A	* (see note above table)	Continuing consultation.
Bunurong Land Council Aboriginal Corporation	3-05-2023	Email TO relevant person	SLB emailed an online meeting invite to BLCAC for 29/05/2023 at 11:00 hrs (AEST), thanking them for the meeting slot.	N	N/A	* (see note above table)	Continuing consultation.
Bunurong Land Council Aboriginal Corporation	3-05-2023	Email FROM relevant person	BLCAC replied to SLB's previous emails and phonecalls apologising if SLB has been trying to call regarding the proposed marine seismic survey stating it would be better to discuss at an online meeting. BLCAC advised their next availability is 29/05/2023 and asked SLB to send a meeting invite through to confirm a date and time. BLCAC closed the email asking SLB to understand they are under pressure with many requests to review and discuss and aske to be patient when waiting for a response.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Bunurong Land Council Aboriginal Corporation	29-05-2023	Meeting with relevant person	SLB, TGS, SLR met with BLCAC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with BLCAC: - clarification of the EMBA; - clarificationon the purpose and main reason and outcome of the survey; and - consideration of intangible, historical cultural information that may not wished to be shared with proponents. BLCAC acknowledged TGS' efforts to consult with TOs and hoped they concentrated their effort with TO groups closer to activity. TGS concluded meeting advising they they would provide BLCAC with minutes and copy of presentation. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Bunurong Land Council Aboriginal Corporation	1-06-2023	Email TO relevant person	TGS emailed the minutes from meeting held 29/05/2023.	Y - Meeting minutes	N/A	* (see note above table)	Continuing consultation.
Burnie Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Burnie Council	16-02-2023	Email FROM relevant person	Automated reply acknowledging email and advising will be directed to appropriate department.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Burnie Council	17-04-2023	Email TO relevant person	TGS emailed BC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked BC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A - out of survey or EMBA range	N/A	Consultation closed
Burrandies Aboriginal Corporation	29-03-2023	Email TO relevant person	TGS emailed BAC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided by 05/04/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Burrandies Aboriginal Corporation	4-04-2023	Phone call TO relevant person	TGS called BAC to follow up on their email sent 29/03/2023 regarding their proposed marine seismic survey within the Otway Basin, however there was no answer. TGS left a message to advise they were calling about the proposed marine seismic survey in the Otway Basin and they had sent an email on 29/03/2023 and to call them back (contact details provided).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Burrandies Aboriginal Corporation	4-04-2023	Phone call TO relevant person	TGS returned BAC's message left earlier in the day regarding their proposed marine seismic survey within the Otway Basin, however there was no answer. TGS left a message to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Burrandies Aboriginal Corporation	4-04-2023	Phone call FROM relevant person	BAC returned TGS's phone message left earlier in the day regarding their proposed marine seismic survey within the Otway Basin, however there was no answer. BAC left a message advising they were returning TGS's call and left contact details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Burrandies Aboriginal Corporation	11-04-2023	Phone call TO relevant person	TGS called BAC to follow up missed calls from the 04/04/2023. BAC advised they are best to contact their lawyer that represents them (email address provided) at South Australian Native Title Services.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Burrandies Aboriginal Corporation	22-05-2023	Email TO relevant person	TGS emailed BAC to follow up on emails and phone calls from 27/04/2023 regarding their proposed marine seismic survey. TGS said that if BAC has any input about the proposed survey to advise them before 26/05/2023 so the information can be considered within the development of the environment plan before submitting to NOPSEMA soon. TGS closed their email advising BAC to contact them if they have any questions or would like any futher detail or reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Burrandies Aboriginal Corporation	22-05-2023	Email FROM relevant person	BAC replied to TGS' email sent earlier that day advising the email was provided and instructions were sought and they will continue to seek instructions.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Burrandies Aboriginal Corporation	22-05-2023	Email TO relevant person	TGS replied to BAC's email received earlier that day, thanking them.	N	N/A	* (see note above table)	Continuing consultation.
Burrandies Aboriginal Corporation	29-05-2023	Email TO relevant person	TGS emailted BAC to follow up on their email received 29/05/2023 and whether they had any feedback from BAC.	N	N/A	* (see note above table)	Continuing consultation.
Cape Barren Island Aboriginal Association Inc	4-05-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS asked CBIAA to advise if they'd like to discuss further or would like further or more information, providing an offer to arrange an online meeting, or alternatively to let them know if the survey is not of interest or relevant to them and they will remove them from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Cape Barren Island Aboriginal Association Inc	11-05-2023	Phone call TO relevant person	TGS called CBIAAI to follow up email sent 04/05/2023 regarding their proposed marine seismic survey within the Otway Basin and there was no answer. TGS left a message advising they were following up on their email sent 04/05/2023 and asked them to call TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Cape Barren Island Aboriginal Association Inc	15-05-2023	Phone call TO relevant person	TGS called CIBAAI to follow up on previous correspondence. CIBAAI confirmed they had received the information. Both parties agreed TGS would call back in a week once CIBAAI had reviewed the information.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Cape Barren Island Aboriginal Association Inc	15-05-2023	Email TO relevant person	TGS forwarded email TGS sent to CBIAA on 04/05/2023 following request during phone call earlier that day. TGS advised they would call in a week's time once they had a chance to review the information.	N	N/A	* (see note above table)	Continuing consultation.
Cape Barren Island Aboriginal Association Inc	22-05-2023	Phone call TO relevant person	TGS called CBIAA to follow up on phone call and email to CBIAA made 15/05/2023 regarding their proposed marine seismic survey within the Otway Basin but there was no answer. TGS left a message to return their call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Cape Barren Island Aboriginal Association Inc	24-05-2023	Phone call TO relevant person	TGS called CBIAA to follow up on phone call and message left 22/05/2023 regarding their proposed marine seismic survey within the Otway Basin but there was no answer. TGS left a message to return their call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Cape Barren Island Aboriginal Association Inc	26-05-2023	Phone call TO relevant person	TGS called CBIAA to follow up on phone call and message left 24/05/2023 regarding their proposed marine seismic survey within the Otway Basin but there was no answer. TGS left a message to return their call and advised they'd send an email also.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Cape Barren Island Aboriginal Association Inc	26-05-2023	Email TO relevant person	TGS emailed CBIAA following their unanswered phone call earlier that day. TGS advised they had been unable to reach CBIAA so were following up with an email. TGS advised CBIAA the were finalising their environment plan (EP) before submitting to NOPSEMA for their completion check and once NOPSEMA advise the EP is complete it will be released for public consultation and hope to incorporate any feedback CBIAA may have from a meeting prior to their submission. TGS continued that if they are not available for a meeting and they have information they would like TGS to consider to let them know before 02/06/2023, alternatively they can provide feedback during the public consultation period.	N	N/A	* (see note above table)	Continuing consultation.
Cape Barren Island Aboriginal Association Inc	6-06-2023	Email TO relevant person	TGS emailed CBAAI advising NOPSEMA has advised they should provide a copy of the attached brochure to help relevant persons provide feedback on the proposed survey, explaining their rights and TGS' obligations through the consultation process. TGS asked CBAAI to advise if they have any queries about their consultation program so they can make sure CBAAI can actively participate in the process. TGS advised they are about to submit their environmental plan (EP) to NOPSEMA for their completeness check and once accepted as complete will release their EP for public consultation where CBAAI has the opportunity to reveiw the draft EP and provide feedback before TGS resubmit to NOPSEMA for their overall assessment. TGS closed the email asking CBAAI to call or email if they have any questions or would like additional information. Alternatively to advise if they wish to be removed from the consultation program and TGS will stop sending them communications.	Y - NOPSEMA consultation guideline	N/A	* (see note above table)	Continuing consultation.
Central Coast Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Central Coast Council	16-02-2023	Email FROM relevant person	Automated reply from CCC thanking TGS for their email and advising query will be referred to relevant department for appropriate action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Central Coast Council	17-04-2023	Email TO relevant person	TGS emailed CCC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked CCC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Central Coast Council	17-04-2023	Email FROM relevant person	Automated reply from CCC thanking TGS for their email and advising query will be referred to relevant department for appropriate action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Central Coast Council	5-05-2023	Email FROM relevant person	CCC replied to TGS' email sent 17/04/2023 advising that at this stage, they have no further queries regarding the proposed marine seismic survey within the Otway Basin.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Central Coast Council	8-05-2023	Email TO relevant person	TGS replied to CCC's email received 05/05/2023 noting their comments that CCC has no further queries regarding the proposed survey and asked if CCC would still like to remain on the consultation list.	N	N/A	* (see note above table)	Continuing consultation.
Central Coast Council	8-05-2023	Email TO relevant person	TGS replied to CCC's email received earlier that day advising TGS would update their records and offered to please get in contact if they have any queries.	N	N/A	* (see note above table)	Continuing consultation.
Central Coast Council	8-05-2023	Email FROM relevant person	CCC replied to TGS' email sent earlier that day advising they'd like to be removed from the mailing list.	N	N/A - requested to be removed from consultation list.	N/A	Consultation closed
Centre for Whale Research	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Centre for Whale Research	16-05-2023	Email FROM relevant person	Automated email advising the email could not be delivered.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Centre for Whale Research	22-05-2023	Online enquiry form submitted	TGS submitted an online enquiry regarding their proposed marine seismic survey within the Otway Basin advising they are seeking to engage with CWR as a potentially relevant person. TGS advised they would like to know whether they have any interests or activities that may be affected by the proposed survey. TGS requested CWR contact them if they have any questions or would like to meeting in person to go through the survey.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
CGG	24-03-2023	Email TO relevant person	TGS emailed CGG following a group meeting to discuss cumulative impacts within the Otway Basin. TGS said they think it would be worthwhile to meet up to discuss the TGS and CGG marine seismic surveys, in particular whether they can agree to surveys happening sequentially rather than at the same time and asked them to provide a time next week which is convenient.	N	N/A	* (see note above table)	Continuing consultation.
CGG	30-03-2023	Email TO relevant person	TGS emailed CGG to ask if they are available to meeting regarding the proposed Otway surveys.	N	N/A	* (see note above table)	Continuing consultation.
CGG	30-03-2023	Email TO relevant person	TGS responded to CGG's email sent earlier in the day suggesting to meet next week following the cumulative impacts meeting.	N	N/A	* (see note above table)	Continuing consultation.
CGG	30-03-2023	Email FROM relevant person	CGG replied to TGS' email sent earlier in the day, requesting to meet to discuss the proposed Otway surveys. CGG advised they think it would be good to meet next week if TGS is available and they are happy to plan a meeting earlier in the day to meet NZ time, though can't do Monday or Friday.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
CGG	30-03-2023	Email FROM relevant person	CGG replied to TGS' email sent earlier in the day, agreeing to meeting time following the cumulative impacts meeting next week.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
CGG	6-04-2023	Meeting with relevant person	TGS, SLB and SLR met with CGG to discuss ideas, plans and issues with their proposed marine seismic surveys within the Otway Basin. Topics discussed included consultation, survey timing and duration, proposed marine mammal control measures and information sharing.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
CGG	11-04-2023	Email TO relevant person	TGS emailed minutes from meeting held on 06/04/2023 with them, TGS, SLB and SLR.	N	N/A	* (see note above table)	Continuing consultation.
CGG	11-04-2023	Email FROM relevant person	TGS received out of office replies from CGG members that attended the meeting on 06/04/2023 advising on leave until 13 and 17 April.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Aboriginal Corporation (Tas)	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Circular Head Aboriginal Corporation (Tas)	14-03-2023	Phone call TO relevant person	SLB called the main office for CHAC whom advised them to resent the factsheet which will then be forwarded to the Corporation members. CHAC asked for SLB's phone number so she could respond with any feedback in due course. SLB confirmed they would resend the factsheet and offer to call back again in the near future.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Aboriginal Corporation (Tas)	14-03-2023	Email TO relevant person	SLB emailed CHAC following a phone call earlier that day. SLB introduced themselves and advise they are partnering with TGS to conduct a marine seismic survey in the Otway Basin to commence later in the year. SLB advised they had sent a fact sheet to the general admin email and they called earlier to follow up on that email. SLB attached the factsheet to this email, as requested by CHAC and advised they were working on a shorter version to be distributed in the coming days. SLB said they hoped this factsheet would prompt further discussions with CHAC regarding any concerns they may have with the proposed survey. SLB asked CHAC to provide this information onwards and let them know if representatives had time to discuss (phone call or online meeting). SLB closed the email stating they look forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Circular Head Aboriginal Corporation (Tas)	16-03-2023	Email TO relevant person	SLB replied to CHAC's email sent to SLB earlier in the day requesting a meeting. SLB advised TGS are leading the project data acquisition and with environmental consultants SLR, would be more than happy to get together to discuss over a presentation. SLB asked if they had a preferred day and time where CHAC would be available and advised SLB were flexible and would send an invite once arranged. SLB closed the email to thank them for responding.	N	N/A	* (see note above table)	Continuing consultation.
Circular Head Aboriginal Corporation (Tas)	16-03-2023	Email FROM relevant person	CHAC emailed SLB to request a meeting be arranged so they could better understand the potential impacts of the survey.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Aboriginal Corporation (Tas)	20-03-2023	Phone call TO relevant person	SLB called CHAC to follow up on phone call from 14/03/2023 and asked CHACH availability for an online meeting to discuss the proposed project and listen to any of their concerns. CHAC confirmed Thursday 23/03/2023 would best suit them for a meeting. SLB confirmed meeting timing and sent a meeting invite.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Aboriginal Corporation (Tas)	20-03-2023	Email TO relevant person	SLB emailed a meeting invite to CHAC for 23/03/2023 between 15:00 and 16:00 hrs to brief CHAC of their offshore Otway project to listen to their questions and concerns. SLB advised CHAC to forward internally to their members as they see fit.	N	N/A	* (see note above table)	Continuing consultation.
Circular Head Aboriginal Corporation (Tas)	23-03-2023	Meeting with relevant person	TGS, SLB and SLR met with CHAC to provide a presentation detailing the proposed survey, listen to feedback and discuss any questions that had. CHAC's key queries included: - whether the survey posed any elevated risk of dolphin strandings; - survey duration; - impacts to their cultural and commercial kelp harvesting; and - what happens if the data shows there is a resource in the area. CHAC advised the main concern for CHAC is about the environment and caring for the country. They also advised they would take the meeting information back to their members and distribute the factsheet to them also. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Circular Head Aboriginal Corporation (Tas)	29-03-2023	Email TO relevant person	TGS emailed CHAC meeting minutes from their meeting on 23/03/2023 for their review and to advise whether there was any sensitive information they do not wish to make available to public. TGS advised they would provide the fuel oil spill and underwater acoustic modelling reports once they have been finalised. TGS closed the email by thanking CHAC once again and offering to get in contact if they have any queries.	Y - Minutes from meeting held 23/03/2023.	N/A	* (see note above table)	Continuing consultation.
Circular Head Aboriginal Corporation (Tas)	14-04-2023	Email TO relevant person	TGS emailed copies of the underwater acoustic and fuel oil spill modelling reports as promised in the meeting held with CHAC on 23/03/2023.	Y - underwater acoustic and oil spill modelling reports	N/A	* (see note above table)	Continuing consultation.
Circular Head Aboriginal Corporation (Tas)	14-04-2023	Email FROM relevant person	Automated email advising the email was not delivered - due to large attachment size.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Aboriginal Corporation (Tas)	19-04-2023	Email TO relevant person	TGS emailed copies of the underwater acoustic and fuel oil spill modelling reports as promised in the meeting held with CHAC on 23/03/2023 as two separate emails to resolve the excessive attachment size.	Y - underwater acoustic and oil spill modelling reports	N/A	* (see note above table)	Continuing consultation.
Circular Head Aboriginal Corporation (Tas)	19-04-2023	Email FROM relevant person	Automated email advising one of the CHAC representatives that received the email was out of the office until 20/04/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Circular Head Council	16-02-2023	Email FROM relevant person	Automated reply from CHAC acknowledging email had been received and if after 10 working days TGS has not received a reply to contact CHC by phone.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Council	27-04-2023	Email TO relevant person	TGS emailed CHC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information other than an attached automated response. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked CHC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet and copy of automated email response	N/A	* (see note above table)	Continuing consultation.
Circular Head Council	4-05-2023	Phone call TO relevant person	SLB called CHC and explained the call was to ask for feedback on the marine seismic survey proposed for the Otway Basin that TGS recently emailed the council including an information sheet. The Council representative asked for a name and number for call back. SLB provided their contact details for CHC to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Council	8-05-2023	Email TO relevant person	TGS emailed CHC to follow up on phone call with SLB 04/05/2023 and provide CH information about their proposed marine seismic survey within the Otway Basin (attaching the information sheet). TGS advised CHC they will call over the next few days to make sure they've received the information and if they had any queries.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Circular Head Council	10-05-2023	Phone call TO relevant person	TGS called CHC to follow up on email TGS sent 08/05/2023 regarding their marine seismic survey proposed for the Otway Basin. TGS spoke to reception who advised everyone was currently out of the office however they would return TGS' call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Council	17-05-2023	Phone call TO relevant person	SLB called CHC to follow up on previous phone call made 04/05/2023 regarding their proposed marine seismic survey within the Otway Basin. CHC asked if SLB could please resent the inforamtion sheet and call back later. SLB confirmed they would send an email following their call and call back later that day.	N	N/A	* (see note above table)	Continuing consultation.
Circular Head Council	17-05-2023	Email TO relevant person	SLB emailed CHC following their phone call earlier that day regarding their proposed marine seismic survey within the Otway Basin. SLB commented CHC would discuss with the relevant person and call SLB back (contact details provided). SLB closed the email advising they would be grateful if CHC could do this as soon as they receive this for SLB to receive feedback.	Y - Information sheet	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Council	17-05-2023	Phone call FROM relevant person	CHC returned SLB's call and message left earlier that day to discuss their prosposed marine seismic survey. CHC asked why they were being consulted and SLB explained the environment that may be affected (EMBA) triggered their engagement. CHC responded that likely no concerns but would send to final management for approval and then would send a formal response to SLB.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Circular Head Council	24-05-2023	Email FROM relevant person	CHC emailed TGS following a phone call with SLB earlier that day regarding their proposed marine seismic survey within the Otway Basin. CHC thanked TGS for providing them the opportunity to comment on the project, advising that council is not the responsible authority for foreshore and coastal areas. CHC continued they does manage several beachside parks, reserves, boat ramps, camping grounds and jetties within the municipality. CHC commented they do not have any particular concern with the detail provided in the information, however has a broad concern for the Circular Head ecology. CHC said they would support all [project] mitigation measures to ensure there is no detrimental effect to flora, fauna, fisheries, industrial seafood operations, coastal and river environments.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Circular Head Council	24-05-2023	Phone call FROM relevant person	CHC returned SLB's call made earlier that day regarding their proposed marine seismic survey within the Otway Basin. CHC advised they had reviewed the information SLB had emailed to them regarding the survey and did not require any further information relatied to the activity. CHC said they would confirm this in an email to SLB today.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Circular Head Council	24-05-2023	Phone call TO relevant person	SLB called CHC to follow up on previous phone calls and emails regarding the Otway Basin marine seismic survey however there was no answer. SLB left a message for CHC to return their call, providing contact details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Circular Head Council	25-05-2023	Email TO relevant person	TGS replied to CHC's email received 24/05/2023 thanking them for their formal reply advising they have noted CHC's comments and incorporated their concerns about the ecology of Circular Head and wider marine environment within the environmental plan. TGS also advied they will ensure CHC remains within their consultation program and is kept notified as the activity progresses. TGS closed the email advising CHC to contact them if they have any queries.	N	N/A	* (see note above table)	Continuing consultation.
Coastcare Victoria	27-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Coastcare Victoria	17-04-2023	Email TO relevant person	TGS emailed CV to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked CV to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Colac Otway Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Colac Otway Shire Council	16-02-2023	Email FROM relevant person	Automated reply email thanking TGS for their email and advising the email would be allocated to the relevant department for action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Colac Otway Shire Council	17-04-2023	Email TO relevant person	TGS emailed COSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked COSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Colac Otway Shire Council	17-04-2023	Email FROM relevant person	Automated reply email thanking TGS for their email and advising the email would be allocated to the relevant department for action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Colac Otway Shire Council	4-05-2023	Phone call TO relevant person	SLB called COSC and explained the call was to ask for feedback on the marine seismic survey proposed for the Otway Basin that TGS recently emailed the council including an information sheet. The Council representative could not find a record of the email and asked for the email to be resent with a contact name to contact TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Colac Otway Shire Council	8-05-2023	Email TO relevant person	TGS emailed COSC to provide a copy of the existing emails sent to COSC on 17/04/2023 and 16/02/2023 with the latest information sheet attached. TGS advised they would call over the next few days to check they had received and whether they had any queries or further information.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Colac Otway Shire Council	8-05-2023	Email FROM relevant person	Automated email COSC acknowledging email sent by TGS earlier that day advising the email will be allocated to the relevant department for action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Colac Otway Shire Council	10-05-2023	Phone call TO relevant person	SLB called COSC to follow up on their previous call made on 04/05/2023 and email sent 08/05/2023 regarding their marine seismic survey proposed for the Otway Basin. The COSC representative was unsure about the status of the review of the information and suggested it was best to speak to their Apollo Bay office. COSC transferred the call to the Apollo Bay office but there was no answer. SLB left a message and asked them to return their call, leaving their contact details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Colac Otway Shire Council	12-05-2023	Phone call TO relevant person	SLB called COSC to follow up on previous phone call made 10/05/2023 and email sent 08/05/2023. COSC confirmed the information had been received and advised the best person to speak to within the Environment and Sustainability team and transferred SLB to that contact but there was no answer. SLB left a message advising the reason for the call and asked them to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Colac Otway Shire Council	15-05-2023	Email FROM relevant person	COSC emailed TGS to provide options for an online meeting date and time and advised who from council would be attending.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Colac Otway Shire Council	16-05-2023	Email TO relevant person	TGS replied to COSC's email sent the day before confirming a meeting date for 29/02/2023 at 14:00 hrs and advised they will send an online meeting to COSC following this email. TGS explained they will provide an overview of the survey, the EP development and discuss any queries Council has and asked COSC to send through any specific aspects they like TGS to address and to let TGS know if they needed any further information.	N	N/A	* (see note above table)	Continuing consultation.
Colac Otway Shire Council	16-05-2023	Email TO relevant person	TGS emailed an online meeting invite to COSC including the latest information sheet.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Colac Otway Shire Council	16-05-2023	Email FROM relevant person	COSC replied to TGS' email sent earlier that day confirming a meeting date and time.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Colac Otway Shire Council	29-05-2023	Meeting with relevant person	TGS, SLB and SLR met with COSC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with COSC: - Increase consultation for activities within the general area; - Council formal position opposing any seismic testing in the Otway Basin in relation to environmental and fishing issues; - Marine protected areas; - Marine mammal control measures, e.g. whale migration routes; - Support vessels visiting local harbours; - Activity visibility from shore; - Clarification of 'multi-client'; and - Commercial fishing compensation. COSC suggested other parties TGS could consult as relevant persons of which all are being consulted. COSC concluded meeting advising they thought TGS provided a good presentation and askd if they could distribute to other Council staff and parties and TGS confirmed this would be ok. TGS advised they would provide COSC with minutes and copy of presentation. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific itesm raised in the meeting are discussed in detail in the EP as follows: Consultation: **Section 5** (consultation), all consultation with COSC will be ongoing to ensure COSC receives sufficient information and is provided with sufficient time to respond Marine protected areas: **Section 4.4** (existing environment), with potential imapcts of planned and unplanned activities discussed in detail across **Sections 7.1.2.4** (physical presence) , **Section 7.2.2.5.1** (acoustic disturbance), **Section 8.1.2** (IMS), **Section 8.3.3.4.2** (hydrocarbon spill), **Section 8.5.2** (hazardous and non-hazardous waste) Marine mammal control measures: **Table 84** Commercial fishing compensation: **Table 84** and agreed protocols. Ongoing consultation with COSC will be undertaken in accordance with the methods set out in Section 5 to ensure COSC have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects, in particular for items raised during the consultation meeting concerning commercial fishers and environmental protection measures.	Continuing consultation.
Colac Otway Shire Council	1-06-2023	Email TO relevant person	TGS emailed the minutes from meeting held 29/05/2023.	Y - Meeting minutes	N/A	* (see note above table)	Continuing consultation.
Colac Otway Shire Council	5-06-2023	Email FROM relevant person	COSC replied to TGS' email sent 01/06/2023 advising they have forwarded the email and minutes to the relevant people as requested.	N	N/A	* (see note above table)	Continuing consultation.
Colac Otway Shire Council	5-06-2023	Email FROM relevant person	COSC replied to TGS' email sent 05/06/2023 asking TGS to keep COSC on the consultation list to keep them updated with TGS' activities.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Colac Otway Shire Council	6-06-2023	Email TO relevant person	TGS replied to COSC's email received 05/06/2023 thanking them for forwarding the information on to the relevant persons.	N	N/A	* (see note above table)	Continuing consultation.
Colac Otway Shire Council	6-06-2023	Email TO relevant person	TGS replied to COSC's email received 05/06/2023 thanking them for their reply and confirming they will keep COSC on their consultation list and offered if anything arises in the meantime to get in touch with TGS.	N	N/A	* (see note above table)	Continuing consultation.
Commission for the Conservation of Southern Bluefin Tuna	8-06-2023	Email TO relevant person	TGS emailed CCSBT seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from CCSBT to ensure they know about their functions, interests or activities that may be impacted by the survey. TGS also provided information to help CCSBT provide feedback on the proposed survey, explaining their rights and TGS' obligations through the consultation process. TGS asked CCSBT to advise if they would like to discuss further or would like more information (providing contact details) or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Commission for the Conservation of Southern Bluefin Tuna	15-06-2023	Email TO relevant person	TGS emailed CCBST advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but it was not too late to provide a response and attached the information sheet. TGS also attached guidance from NOPSEMA to help with providing feedback about the survey and asked CCSBT to let them know if they have any queries about their consultation program so they can make sure they can effectively participate in the process. TGS advised they are about to submit their environmental plan (EP) to NOPSEMA for their completeness check and once accepted as complete will release their EP for public consultation where CCSBT has the opportunity to reveiw the draft EP and provide feedback before TGS resubmit to NOPSEMA for their overall assessment. TGS advised they'd welcome an online meeting if CCSBT would like TGS to provide an overview of their project and discuss any concerns CCSBT has. TGS closed the email asking CCSBT to call or email if they have any questions or would like additional information. Alternatively to advise if they wish to be removed from the consultation program and TGS will stop sending them communications.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Commission for the Conservation of Southern Bluefin Tuna	15-06-2023	Email FROM relevant person	CCBST replied to TGS' email sent earlier that day advising CCSBT will not be providing feedback on this survey.	N	N/A	* (see note above table)	Continuing consultation.
Commission for the Conservation of Southern Bluefin Tuna	16-06-2023	Email TO relevant person	TGS replied to CCSBT's email received the day before thanking them for their response and asked CCSBT if the want to be removed from TGS' consultation or would they still like to receive updates.	N	N/A	* (see note above table)	Continuing consultation.
Commissioner for Environmental Sustainability of Victoria (Department of Energy, Environment and Climate Action)	25-05-2023	Email TO relevant person	TGS emailed CES seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from CES to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked CES to reply before 02/06/2023 and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Commissioner for Environmental Sustainability of Victoria (Department of Energy, Environment and Climate Action)	25-05-2023	Email FROM relevant person	Automated reply to TGS' email sent earlier that day advising the email has been received.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Commonwealth Fisheries Association (CFA)	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Maps of the Commonwealth fisheries that operate in the region	N/A	* (see note above table)	Continuing consultation.
Commonwealth Fisheries Association (CFA)	13-05-2022	Email TO relevant person	TGS state they are contacting CFA to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, information sheet and maps and a summary of the Commonwealth fisheries	N/A	* (see note above table)	Continuing consultation
Commonwealth Fisheries Association (CFA)	17-05-2022	Email FROM relevant person	The stakeholder responded to request a short informal meeting with the CFA executive officer in-between sessions of the APPEA conference on the 18th May 2022.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Commonwealth Fisheries Association (CFA)	17-05-2022	Email TO relevant person	TGS/Schlumberger responded to CFA to accept the meeting and gave details of the location of the TGS booth at the APPEA conference.	N	N/A	* (see note above table)	Continuing consultation.
Commonwealth Fisheries Association (CFA)	17-05-2022	Email FROM relevant person	The stakeholder advised that they will find the TGS booth at the conference.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Commonwealth Fisheries Association (CFA)	23-05-2022	Email FROM relevant person	CFA advised that they had spoken to key fisheries stakeholders and that the general consensus was to organise an initial fisheries stakeholder online meeting with TGS/Schlumberger to introduce the project and discuss general information.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Commonwealth Fisheries Association (CFA)	25-05-2022	Email TO relevant person	TGS/Schlumberger agreed to set-up an online meeting with stakeholders and requested CFA provide some potential days/times for the meeting. TGS/Schlumberger also acknowledged that multiple meetings may be required for all stakeholders to attend.	N	N/A	* (see note above table)	Continuing consultation.
Commonwealth Fisheries Association (CFA)	26-05-2022	Email FROM relevant person	CFA agreed to this time, noting that others will need to be contacted to determine their availability.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Commonwealth Fisheries Association (CFA)	26-05-2022	Email TO relevant person	TGS/Schlumberger suggested Thursday 2nd June 1 pm Melbourne time for the meeting.	N	N/A	* (see note above table)	Continuing consultation.
Commonwealth Fisheries Association (CFA)	26-05-2022	Email FROM relevant person	CFA provided days that would suit a meeting with stakeholders.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Commonwealth Fisheries Association (CFA)	27-05-2022	Email FROM relevant person	CFA noted that other stakeholders should be contacted by TGS/Schlumberger (not CFA) to determine their availability.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Commonwealth Fisheries Association (CFA)	27-05-2022	Email TO relevant person	TGS/Schlumberger indicated that they will send out a teams invite once the time is confirmed by other stakeholders.	N	N/A	* (see note above table)	Continuing consultation.
Commonwealth Fisheries Association (CFA)	02-06-2022	Meeting with relevant person	TGS/Schlumberger/ERM presented an overview of the survey, and of the commercial fishing effort for relevant Commonwealth and State managed fisheries based on available data. The stakeholder confirmed Giant Crab habitat extends deeper than the 140-300m core fishing depths and lies within the 3D Active Source Area for the survey. They stated the some fisheries, such as the Squid Jig fishery, are variable. Given the length of the EP period, TGS/Schlumberger will need to keep the fisheries informed. The stakeholder queried if TGS/Schlumberger are considering alternative technologies to traditional seismic sources. TGS/Schlumberger confirmed the survey will apply traditional seismic and that alternative technologies are considered as part of the ALARP process. However, due to their limited commercial availability or effectiveness in some cases, the EP seeks approval for using a traditional seismic source; if alternative technologies or sources are available at the time of a survey that may reduce the range to effects, then this is of benefit, but it is difficult to commit to these methods when they may not be commercially available within Australia when surveys need to take place. The stakeholder explained that investment in research into the effects of seismic on relevant target species would also be welcomed by the industry. They flagged that some of the seafood industry organisations aren't as mature as others and don't have resources. Attention is needed to determine key contacts for all relevant stakeholders. TGS / Schlumberger sought the groups' suggestions on best approach for ongoing engagement, whether it be with each organisation separately or if they wanted to nominate a main representative. Attendees suggested ongoing consultation with each industry association. Refer to Appendix I for detailed meeting minutes.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised. Information regarding giant crab and Southern Squid Jig Fishery incorporated into the EP. Recommendation for research is noted. TGS/SLB support the notion of further research, however, currently TGS/SLB ability to fund research will depend upon survey funding / future joint industry funding opportunities and no specific studies are currently planned. EP will be assessed based on current available research and data.	* (see note above table)	No action required. Continuing consultation.
Commonwealth Fisheries Association (CFA)	7-06-2022	Email FROM relevant person	Meeting request declined for stakeholder meeting on 9 June 2023 12:30-1:30 PM (UTC+08:00) Perth.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Commonwealth Fisheries Association (CFA)	10-06-2022	Email TO relevant person	Reply to clarify that additonal meetings being held are repeats for those who can't attend other times.	N	N/A	* (see note above table)	Continuing consultation
Commonwealth Fisheries Association (CFA)	10-06-2022	Email TO relevant person	Email to notify 31 stakeholders that the scheduled online call has been logged off as no one is available to attend.	N	N/A	* (see note above table)	Continuing consultation
Commonwealth Fisheries Association (CFA)	10-06-2022	Email FROM relevant person	Clarification on the additional meetings being held and if they are a repeat of the initial meeting held the previous week.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Commonwealth Fisheries Association (CFA)	17-06-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholders for their attendance and participation in the meeting on June 2nd. TGS/Schlumberger highlighted that the attached 2019 report includes a summary of the proportion of historical catch in each fishery that was overlapped by that survey area, and that the current Otway Basin 3D MSS area is similar. TGS/Schlumberger also noted that the stakeholder from SETFIA pointed out there are areas where overlap is expected to be significantly reduced. TGS and Schlumberger informed the stakeholders that they have engaged SETFIA to compile similar information for the Otway Basin 3D MSS.	Y - Summary meeting notes - Copy of the 2019 Schlumberger Otway 2D Seismic Survey report prepared by SETFIA	N/A	* (see note above table)	Continuing consultation.
Commonwealth Fisheries Association (CFA)	28-06-2022	Email FROM relevant person	CFA declined an invitation to a stakeholder meeting scheduled for June 29th 9:00-10:00am AWST.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Commonwealth Fisheries Association (CFA)	15-02-2023	Email FROM relevant person	Reply email to advise the CFA is not resourced to provide EP feedback and to direct enquiries to the associations that directly represent each fishery. The email also advised the increasing volume of consultation requests is beyond the capacity of most associations and as a result expect to engage associations on a fee basis.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Ongoing consultation with CFA will be undertaken in accordance with the methods set out in **Section 5** to ensure CFA have had both sufficient information, and sufficient time to engage in the consultation programme.	Continuing consultation.
Commonwealth Fisheries Association (CFA)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Commonwealth Fisheries Association (CFA)	15-02-2023	Email TO relevant person	Reply email to CFA to thank them for their reply and information and advised them TGS would be engaging directly with fisheries and fishers.	N	N/A	* (see note above table)	Continuing consultation.
Commonwealth Fisheries Association (CFA)	15-02-2023	Email FROM relevant person	Reply email from CFA thanking TGS.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
ConocoPhillips	01-06-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
ConocoPhillips	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
ConocoPhillips	5-04-2023	Email TO relevant person	Confidential - Regarding commercial arrangements. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
ConocoPhillips	12-04-2023	Email TO relevant person	Confidential - Regarding commercial arrangements. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
ConocoPhillips	12-04-2023	Email FROM relevant person	Automated reply from CP advising the contact is on leave until 18/04/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
ConocoPhillips	18-04-2023	Email TO relevant person	TGS replied to CP's email received earlier that day advising the entity is to be TGS-NOPEC Geophysical Company Pty Ltd.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation

ConocoPhillips	26-04-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Letter of agreement to share data	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
ConocoPhillips	27-04-2023	Email TO relevant person	Confidential - Regarding commercial arrangements. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Letter of agreement to share data	N/A	* (see note above table)	Continuing consultation.
ConocoPhillips	2-05-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Aerial cetacean sighting data	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
ConocoPhillips	2-05-2023	Email TO relevant person	TGS replied to CP's emailed received earlier that day seeking clarification on confidential information.	N	N/A	* (see note above table)	Continuing consultation.
ConocoPhillips	2-05-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
ConocoPhillips	4-05-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Updated aerial cetacean sighting data	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Conservation Council of SA	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Conservation Council of SA	16-02-2023	Email FROM relevant person	Automated email notifying TGS the email sent to CCSA on 16/02/2023 was underliverable. TGS resent to alternative email address and did not receive an 'undeliverable' notification.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Conservation Council of SA	17-04-2023	Email TO relevant person	TGS emailed CCSA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked CCSA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Conservation Council of SA	17-04-2023	Email FROM relevant person	Automated email notifying TGS the email sent to CCSA on 17/04/2023 was undeliverable. TGS resent to alternative email address and did not receive an 'undeliverable' notification.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Conservation Council of SA	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Conservation Council of SA	22-05-2023	Email FROM relevant person	CCSA replied to TGS' email sent 22/05/2023 regarding their proposed marine seismic survey within the Otway Basin. CCSA asked if they could receive a briefing on what is proposed and if so, they can double check their understanding, invite member groups who have an interest in thet information and provide an opportunity to ask questions.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Conservation Council of SA	23-05-2023	Email TO relevant person	TGS replied to CCSA's email received the day before confirming they can provide a briefing with details about their proposed marine seismic survey within the Otway Basin and answer any questions they may have. TGS asked if they would be available 25/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Conservation Council of SA	26-05-2023	Email TO relevant person	TGS emailed CCSA to follow up on an email TGS sent to CCSA trying to arrange a meeting with them and asked CCSA to confirm if they would still like to meet and suggest some dates and times that would be convenient for them.	N	N/A	* (see note above table)	Continuing consultation.
Cooper Energy	01-06-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Cooper Energy	20-10-2022	Email TO relevant person	Email informing of planned start date, aiming for initial phase in September 2023.	N	N/A	* (see note above table)	Continuing consultation
Cooper Energy	20-10-2022	Email TO relevant person	Email thanking CE for informing of their planned offshore construction works during 2024 and 2025 and updating CE on changes i.e. that the 3D acquisition will be in over 500m of water with a 2D tie line in T/P30 to a water depth of approximately 115 m.	Y - PPTX information sheet and XLS of coordinates	N/A	* (see note above table)	Continuing consultation
Cooper Energy	20-10-2022	Email FROM relevant person	CE thanking TGS for information sent and asking what time of the year will they be offshore	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Cooper Energy	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Cooper Energy	16-02-2023	Email TO relevant person	TGS replied to CE's previous email providing coordinates as requested and advising the size of the area has been reduced by removing any active source area in SA waters. TGS offered to let them know if they need any other information.	Y - amended shapefiles (coordinates)	N/A	* (see note above table)	Continuing consultation.
Cooper Energy	16-02-2023	Email FROM relevant person	Reply to previous TGS email advising they will review and reply before deadline. CE asked if the coordinates sent last year are the same as the current information sheet.	Y - Updated information sheet and previous sent coordiates (Excel spreadsheet)	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Cooper Energy	23-02-2023	Email FROM relevant person	CE responded to TGS' previous email (16/02/2023) acknowledging TGS' update and coordinates.CE advised the EP area is approximately 13 km from the COE permits (provided an image within the email) and CE doesn't forsee any issues at this stage but would like to be kept informed, especially as the schedule is confirmed, as CE may have vessels in the region depending on when TGS mobilise.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Cooper Energy	23-02-2023	Email TO relevant person	TGS acknowledged CE's previous email (dated 23/02/2023) and confirmed they will keep CE informed and up to date as schedule progresses.	N	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	17-04-2023	Email TO relevant person	TGS emailed CSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked CSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	5-05-2023	Phone call TO relevant person	SLB called CSC and explained the call was to ask for feedback on the marine seismic survey proposed for the Otway Basin that TGS recently emailed the council including an information sheet. The Council representative could not find a record of the email and asked for the email to be resent with a contact name to contact TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Corangamite Shire Council	8-05-2023	Email TO relevant person	TGS emailed COSC to provide a copy of the existing emails sent to COSC on 17/04/2023 and 16/02/2023 with the latest information sheet attached. TGS advised they would call over the next few days to check they had received and whether they had any queries or further information.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	10-05-2023	Phone call TO relevant person	TGS called CSC to follow upon the email sent 08/05/2023 regarding their proposed marine seismic survey within the Otway Basin. The CSC CEO asked TGS to send them the information and advised they would be in contact if they needed additional information. TGS suggested an online meeting after they'd read the information and CSC agreed that would be good.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Corangamite Shire Council	10-05-2023	Email TO relevant person	TGS emailed COSC following their phone call earlier that day. TGS emailed a copy of the information sheet about their proposed marine seismic survey. TGS asked COSC to advise when it would be convenient to have a meeting to go through the project details.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	15-05-2023	Phone call TO relevant person	TGS called COSC to follow up on phone call and email TGS sent 10/05/2023 regarding their proposed marine seismic survey within the Otway Basin. TGS spoke to reception who advised the person they need to speak to was in a meeting. TGS left a message for them to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Corangamite Shire Council	17-05-2023	Phone call TO relevant person	SLB called CSC following up on previous phone calls regarding their proposed marine seismic survey. CSC confirmed they had received the information sheet sent 05/05/2023 although the relevant person was not available to discuss. The CSC reception said they would follow up with the appropriate person and ask them to response or call SLB to discuss further.	N	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	19-05-2023	Email TO relevant person	TGS emailed CSC advising they are visiting Victoria week commencing 29/05/2023 and would welcome the opportunity to meet with CSC and asked if they would be available for a meeting 30/05/2023 in Port Campbell.	N	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	19-05-2023	Email FROM relevant person	CSC replied to TGS' email sent earlier that day advising they may potentially be available for a meeting 30/05/2023 and asked what time.	N	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	19-05-2023	Email TO relevant person	TGS replied to CSC's email received earlier that day advising they can make it any time after 10 am and before 3 pm just let them know.	N	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	19-05-2023	Email FROM relevant person	CSC replied to TGS' email sent earlier that day advising meeting for 10 am at [location provided].	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Corangamite Shire Council	30-05-2023	Meeting with relevant person	TGS, SLB and SLR met with CSC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with CSC: - What concerns traditional owners are raising. - The behaviour of noise underwater and noise modelling. - Marine mammals and control measures, e.g. MFOs and PAM. - Communication with other mariners. CSC said the main concerns for the local community include impacts to: - crayfishing; - tourism (Great Ocean Rd, whale watching); and - environment in general and from cultural view. TGS advised they would provide CSC with minutes and copy of presentation. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific items raised in the meeting are discussed in detail in the EP as follows: Underwater noise: **Section 7.2.1** (noise modelling and description of imapcts), and **Section 7.2.2** (assesment of impacts and risks of underwater noise) Marine mammals and control measures: Table 84 Communication with other mariners: **Table 58** (communication to relevant persons including commercial fishers and AHO indicating publication of Notice to Mariners) Commercial fishers: **Section 7.1.3.1.1** (impacts of the physical presence of the seismic survey vessel and equipment), **Section 7.2.3.1** (acoustic imapacts) and **Section 8.3.4.1** (hydrocarbon spill) Recreation and tourism: **Section 7.1.3.3** (impacts of the physical presence of the seismic survey vessel and equipment), **Section 7.2.3.2** (acoustic imapcts on recreational dive operators), **Section 8.3.4.3** (hydrocarbon spill) Ongoing consultation with CSC will be undertaken in accordance with the methods set out in Section 5 to ensure CSC have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects, in particular for items raised during the consultation meeting concerning commercial fishers and environmental protection measures.	Continuing consultation.
Corangamite Shire Council	16-06-2023	Email TO relevant person	TGS emailed CSC to provide them with a copy of the minutes from their meeting held 30/05/2023 and a copy of the presentation and asked CSC to advise them of any amendments of text that needs removing. TGS advised they have incorporated CSC's comments and queries within their environment plan (EP) and will submit to NOPSEMA for their completeness check. TGS continued that once NOPSEMA advise the EP is complete it will be released for public consultation where TGS can incorporate more feedback from the community, then TGS will submit the EP to NOPSEMA again for their overall complete assessment. TGS asked CSC to advise them whether they would like to remain on their consultation list to keep updated with their progress or would they prefer to be removed from the consultation program.	Y - Meeting minutes and copy of presentation	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	16-06-2023	Email FROM relevant person	CSC replied to TGS' email sent earlier that day thanking them for their email and asked to continue to keep them informed about their proposed marine seismic survey.	N	N/A	* (see note above table)	Continuing consultation.
Corangamite Shire Council	16-06-2023	Email TO relevant person	TGS replied to CSC's email received earlier that day advising they have updated their consultation register and noted to keep CSC within their consultation program to keep updated with TGS' progress.	N	N/A	* (see note above table)	Continuing consultation.
CSIRO	7-05-2023	Online enquiry form submitted	TGS submitted an online enquiry form advising TGS is planning to undertake marine seismic survey in Otway Basin and seeking to engage with CSIRO as a potential relevant person in accordance with government consultation requirements. TGS advised that if CSIRO provide an appropriate contact, they will provide more information. TGS also advised they would like to knowwhether CSIRO has any interests or activities that may be affected by the survey so TGS can learn what these might be and discuss how any impacts may be avoided or mitigated. TGS also invited CSIRO to let them know if they would like to ask any questions or meet in person to go over the proposed survey.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
CSIRO	15-06-2023	Email FROM relevant person	CSIRO replied to the online equiry form submitted 07/06/2023 thanking TGS for contacting CSIRO. CSIRO advised they have contacted the EBU and don't believe TGS' query is relevant to them and have been informed they don't have anything to do with TGS' work and aren't among the stakeholders.	N	N/A	* (see note above table)	Continuing consultation.
CSIRO	15-06-2023	Email TO relevant persons	TGS replied to CSIRO's email received earlier that day thanking CSIRO for advising TGS' query is not relevant to them and they do not consider themselves a stakeholder. TGS advised they have noted this and will remove them from their consultation program. TGS closed their email advising CSIRO to get in contact with them if they have any queries regarding their project arise.	N	N/A	* (see note above table)	Continuing consultation.
Deakin University - School of Life and Environmental Sciences	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Deakin University - School of Life and Environmental Sciences	16-05-2022	Email FROM relevant person	Automated email acknowledging that Deakin University received the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS and will give an initial response within 2 business days.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Deakin University - School of Life and Environmental Sciences	16-05-2022	Email FROM relevant person	Automatic reply to acknowledge receipt of email and will be actioned within 2 days.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Deakin University - School of Life and Environmental Sciences	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Deakin University - School of Life and Environmental Sciences	17-04-2023	Email TO relevant person	TGS emailed DU to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked DU to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Deakin University - School of Life and Environmental Sciences	17-04-2023	Email FROM relevant person	Automated email acknowledging that Deakin University received the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS and will give an initial response within 2 business days.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Deakin University - School of Life and Environmental Sciences	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department for Energy and Mining (DEM)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Agriculture Water and the Environment (DAWE) - Australian Antarctic Division - Australian Marine Mammal Centre	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Agriculture Water and the Environment (DAWE) - Biosecurity (marine pests)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Agriculture Water and the Environment (DAWE) - Biosecurity (vessels, aircraft and personnel)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Agriculture Water and the Environment (DAWE) - Fisheries	13-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Maps of the Commonwealth fisheries that operate in the region	N/A	* (see note above table)	Continuing consultation.
Department of Agriculture Water and the Environment (DAWE) - Underwater Cultural Heritage	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Agriculture Water and the Environment (DAWE) - Underwater Cultural Heritage	19-05-2022	Email FROM relevant person	The email acknowledges that the DAWE received the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS and will review the survey details. They indicated that they will respond before 01/07/2022.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Department of Agriculture Water and the Environment (DAWE) - Underwater Cultural Heritage	29-06-2022	Email FROM relevant person	The stakeholder noted that since the proposed activities will not impact the seabed within the survey/project area, they do not consider it likely that protected or potentially significant UCH will be adversely impacted. This withstanding, the Department notes that TGS/Schlumberger will still have a legal obligation to notify the discovery of UCH if this occurs during the survey. A summary of notification requirements are detailed. DAWE consulted with partner agencies and the following was highlighted - Although the Otway Basin 3D MC MSS project will not disturb the seabed, is anticipated that the survey may lead to works that will impact the seabed. It is recommended that the data TGS and Schlumberger collect during the survey be made available to a qualified maritime archaeologist. The Department recommends TGS and Schlumberger engage a suitably qualified maritime archaeologist to ensure that the resolution level of the 3D MC MSS data capture will be sufficient for both current and future UCH management needs.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Department of Agriculture, Fisheries and Forestry	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Department of Agriculture, Fisheries and Forestry	16-02-2023	Email FROM relevant person	Automated reply acknowledging email and advising they will respond as soon as possible or within 10 working days.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Agriculture, Fisheries and Forestry	12-04-2023	Email TO relevant person	TGS emailed DAFF to follow up on email and information sent on 16/02/2023 about their proposed marine seismic survey within the Otway Basin. TGS advised they are consulting about the proposed survey, to ensure they can provide an informed response about whether the activity is likely to impact you're function, interests or activities. TGS attached the latest version of information sheet and offered for DAFF to let them know if they would like further information or have any queries.	Y - Updated information sheet and copy of previous email sent	N/A	* (see note above table)	Continuing consultation.
Department of Agriculture, Fisheries and Forestry (Seaports Program)	12-04-2023	Email FROM relevant person	DAFF replied to TGS' email sent earlier in the day advising they can support the vessel's visit into Australian territory. DAFF advised of the obligations under the Biosecurity Act 2015, including in summary: - pre-arrival process and reports; - Ship Sanitation Control Certificate or exemption; - Australian Ballast Water requirements; - biofouling management requirements; - MARS permission if entering Australia via a non-first point entry; - biosecurity requirements; and - Routine vessel Inspections. DAFF closed the email by providing a contact email address if any questions.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific claims raised by DAFF are detailed in **Section 8.1** (Introduction of invasive marine species), specific control measures are listed in **Table 107**.	Continuing consultation.
Department of Agriculture, Fisheries and Forestry (Seaports Program)	17-04-2023	Email TO relevant person	TGS replied to DAFF acknowledging their email received 12/04/2023, thanking them for taking the time to respond regarding their proposed marine seismic survey. TGS advised DAFF they have incorporated the information DAFF has provided within their survey planning and environmental plan, noting the key biosecurity obligations and requirements and pre-arrival and arrival processes. TGS closed their email by offering for DAFF to let them know if they need any further information or queries. TGS closed the email by thanking DAFF again.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	17-06-2022	Email TO relevant person	TGS/Schlumberger contacted the stakeholder to request a meeting to discuss any queries DNP may have in relation to the Nelson and Zeehan marine parks. Options for days to hold the meeting were provided.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	30-06-2022	Email FROM relevant person	The stakeholder apologised for their slow response and thanked TGS/Schlumberger for the follow-up. They explained that they are currently reviewing the information provided by TGS/Schlumberger and discussing the matter internally. They said they will be in touch the following week to discuss possible meeting times.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	07-07-2022	Email FROM relevant person	The stakeholder apologised for the delay in responding. The stakeholder explained that they would be available to meet during the week of the 25th July at a time that was convenient for TGS/Schlumberger.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	13-07-2022	Email TO relevant person	TGS thanked the stakeholder for their reply and proposed Monday the 25th July for a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	18-07-2022	Email FROM relevant person	The stakeholder agreed to this date and proposed anytime between 1-3pm AWST. Once the time is set the stakeholder will send a meeting invite.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	25-07-2022		The stakeholder advised that they are preparing a formal response. This will be comprehensive and is expected to be similar to the response prepared for ConocoPhillips for the Sequoia 3D MSS. The response will cover knowledge gaps, particularly in relation to impact pathways. The stakeholder also advised that the response will consider users of the AMPs, including fisheries. The stakeholder queried as to whether they could be sent a draft of the EP to allow for a more focussed response. TGS/Schlumberger/ERM advised that many sections of the EP are still being drafted and were not in a state of completeness suitable to provide to Marine Parks.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	02-08-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholder for their participation in the meeting and attached the various documents that were requested including shapefiles for the various polygons.	Y - Summary of call - Copy of slides - Information sheet - Survey area co-ordinates - Shapefiles for polygons	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	10-08-2022	Email TO relevant person	TGS/Schlumberger contacted the stakeholder to confirm they have all the information they require to develop a response, and queried as to when the response would be available.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	16-08-2022	Email TO relevant person	TGS/Schlumberger followed up their previous email and asked when the stakeholder expects they would be providing a formal response.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	23-08-2022	Email FROM relevant person	The stakeholder noted that given the commitment that the environment plan will identify and mitigate impact to the Nelson and Zeehan marine parks, they have no further claims or objections. In the event of any oil/gas pollution incident - the stakeholder explained that they should be notified of any incidences which occur within a marine park or are likely to impact on a marine park as soon as possible. They went on to explain that daily or weekly Situation Reports may be requested, depending on the scale and severity of the pollution incident.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	23-08-2022	Email FROM relevant person	The stakeholder corrected an error from the previous correspondence.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	23-08-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholder for their participation in the call, and confirmed that the survey will exclude seismic acquisition in waters shallower than 1,000 m adjacent to Tasmanian fishing areas, and this has been adopted as a control in the EP.	Y - Map of Giant Crab acoustic exclusion area	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	14-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	14-03-2023	Email TO relevant person	Resent email to an alternative email address obtained from the Marine Parks website as email sent 14/02/2023 was undeliverable. Requested feedback be provided before 26/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	14-03-2023	Email FROM relevant person	Automated reply acknowledging previous email (sent from TGS 14/03/2023).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	6-04-2023	Email FROM relevant person	The Director of National Parks (DNP) (representing the DCCEEW) emailed thanking TGS for the opportunity to comment on the Otway 3D seismic survey. In summary the key comments included: - overlaps Nelson and Zeehan marine parks (form part of the South-east Marine Parks Network) and if not managed could affect the parks' natural, social and economic values (information on marine park values was included). - intersects KEFs West Tasmanian Canyons and Bonney Coast Upwelling - high productivity and aggregations of marine life. - overlaps or adjacent to BIAs for numerous protected seabirds, Southern Right Whales, Pygmy Blue Whales, Southern Rock Lobster and Giant Crab. - overlaps or adjacent to recent seismic activities undertaken and is near another proposed seismic activity. The DNP makes the following objections and claims: - Activities that may prevent or displace Pygmy Blue Whales or Southern Right Whales' use of BIAs are avoided. - Activities are timed to avoid species' peak migration and foraging behaviours. - Potential cumulative impacts upon species are addressed, noting this activity overlaps a recent seismic survey and is near to another that is planned. This should include, but not limited to acoustic impacts to cetaceans (PTS and TTS) as well as impacts to availability of food (krill). Furthermore, impacts to Giant Crab and Southern Rock Lobster should be explored noting some populations could be exposed to repeated surveys. - Identify a comprehensive suite of whale detection measures including regular aerial surveillance flights to identify presence / absence / species and direction of movement and PAMs to support the efficacy and reliability of shut down protocols for marine mammals. - Seismic array to operate at low power during line turns to minimise the risk of SRW and BW entering the zone of potential TTS or behavioural disturbance during shut down. - Spatial avoidance of fishing grounds and, or, temporal avoidance of fishing seasons. - Excising Giant Crab and Southern Rock Lobster habitat within the canyon area in the southwest of the survey from the acquisition area, consistent with that applied to the ConocoPhillips Sequoia survey. - Reducing the overall area to be surveyed or splitting the area into smaller areas to be acquired to avoid peak utilisation rates and reduce cumulative impacts upon the environment. - Set a limit to the number of days for acquisition at full power and, or, the total distance of sail lines for acquisition at full power. Also explained, NOPSEMA has developed and published (in close work with Parks Australia) a guidance note outlining what titleholders need to consider and evaluate in their EPs. The DNP state that when preparing the EP, TGS should consider Australian marine parks and their representativeness and ensure the EP: - identifies and manages all impacts and risks on Australian marine park values (including ecosystem values) to an acceptable level and has considered all options to avoid or reduce them to as low as reasonably practicable. - clearly demonstrates that the activity will not be inconsistent with the management plan. The DNP also stated they should be made aware of oil/gas pollution incidences which occur within a marine park or are likely to impact on a marine park as soon as possible. Notification should be provided to the 24 hour Marine Compliance Duty Officer on 0419 293 465 and should include specific information (list provided). The DNP also stated they may request daily or weekly Situation Reports, depending on the scale and severity of the pollution incident. Refer to Appendix H for a copy of the full submission.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific claims raised by DNP are set out in the following sections of the EP: Pygmy and Blue whales: Effects are dsicussed in detail in **Sections 7.2.2.5.2** (BIA) and **7.2.2.3.6** (marine mammals), with Control Measures (cetacean specific) listed in **Table 84**. Whale detection methods: Refer to Control Measures in **Table 84.** Activities are timed to avoid species' peak migration and foraging behaviours: Behavioural; effects, inlcuding foraging, are discussed in detail in **Section 7.2.2.3** (including marine mammals, seabirds, and bony fish). Control Measures (cetacean specific and other sensitice receptor specific) listed in **Table 84**. Cummulative impacts: **Table 84** lists control measures to require a SIMOPS plan, which inlcudes the implementation of a 40 km spatial separation between Seismic Vessels. **Section 9** sets out the approach to manageing Cumulative Impacts. Outcomes of concurrent Cumulative Imapct Assessment workshops will be incorporated as frameworks become finalised and available for incorporation into this EP. Spatial avoidance of fishing grounds: **Table 84** lists control measures for communciation protocols with commercial fishers. **Table 84** lists the control measure for compensation to fishers for any claims received in accordance with the agreed compensation protocol. Seismic array control measures: Table 84 lists all relevant acoustic source control measures for ensuring adherence to the controls within the Aquisition Area, and ensure compliance outside the AA. Excising giant crab and rock lobster from Acquisition Area: Details of the Giant Crab Acoustic Exclusion Area are listed in Section 7.1.3.1.3.2 and Table 57. Reducing area or splitting , avoid peak utilisation rates and cumulative effects: Section 9 discussed Cumulative Effecst in detail. Effects on AMP: Effects to AMPs (and other sensitive areas) are discussed in detail in Section 7.2.2.5 (for planned activities), Section 8.1.2 (IMS), Section 8.2.2 (Streamer Loss), Section 8.3.3.4 (hydrocarbon spill), and Section 8.5.2 (accidental release of hazardous and non-hazardous materials). Control Measures for each respective impact are listed. Section 10 details the Implementation Plan which ensures effects are consistent with the EP (see Section 10.4) ,and there is a process to monitor and report to ensure this consistency, including all aspects of monitoring and reporting, (Section 10.4.1), Management of non-conformance (Section 10.4.4), EP Revision and Improvement (Section 10.4.5), Management of Change (Section 10.4.5) if required. DNP has been added to the notifications procedures ini the unlikely event of a hydrocarbon spill (Section 8.4 Hydrocarbon Spill Response),and Table 124 OPEP Notifications.	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	13-04-2023	Email TO relevant person	TGS replied to DNP's email received 06/04/2023 thanking them for their response regarding the Otway 3D marine seismic survey they are currently planning. In summary, TGS replied: - TGS currently reviewing EP and aware of sensitivities with control measures to prevent or avoid harm of the different receptors. - Site and acoustic source specific underwater modelling is being used in the assessment process and control measure and mitigation zone development. - Control measures will be in place to avoid impacts to southern right and pygmy blue whales, working with specialist. - Majority of survey area is in deep water with commitment remain deeper than 1000 m on eastern side of area to avoid potential impacts or conflicts with the giant crab fishery. - Working with other operators to consider cumulative impacts. - A commercial fisheries loss adjustment protocol is being developed. - The operational area has been significantly reduced, reducing the active source area and survey duration. - Survey will not run >400 days over EP duration with a maximum 200 days in any single year. - TGS welcomed the opportunity to provide feedback on the Parks Australia guidance note received in March. - DNP is on the notification list for any oil/gas pollution incident. - All other concerns are addressed in more detail in the EP. TGS closed the email by thanking DNP for their time and providing a response and advised that once the EP is accepted by NOPSEMA as complete, there is a 30 day public consultation period and offered to send a copy of the EP to DNP at that stage. Refer to Appendix H for detailed submission.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	14-04-2023	Email FROM relevant person	DCCEEW (DNP) replied to TGS' response emailed 13/04/2023 thanking them for their response and asked to be notified with the EP is out for public consultation.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	27-04-2023	Email TO relevant person	TGS replied to DCCEEW's email received 14/04/2023 advising they've added them to the action list to receive a copy of the EP once available for public consultation. TGS closed the email by advising DCCEEW to contact TGS if any further queries and thanking them for their help.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	10-05-2023	Email TO relevant person	TGS emailed DCCEEW as suggested by the Blue Whale Study Inc representative regarding control measures for southern right whales. TGS said they would really appreciate a meeting to discuss the measures and would provide an overview of the proposed survey. TGS provided an information sheet for more details.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	26-05-2023	Email TO relevant person	TGS emailed DCCEEW to follow up on their email sent 10/05/2023 regarding their proposed marine seismic survey within the Otway Basin. TGS said they would appreciate a meeting if they have time to discuss.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	29-05-2023	Email TO relevant person	TGS emailed DCCEEW to ask whether a meeting on 30/05/2023 would suit them otherwise would be later in the week.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	29-05-2023	Email TO relevant person	TGS replied to DCCEEW's email received earlier that day thanking them and asking them to advise when they are available the following week so TGS can set up a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	29-05-2023	Email FROM relevant person	DCCEEW replied to TGS' email sent earlier that day regarding a suitable meeting date. DCCEEW advised they will be unavailable for the rest of the week but will endeavour to get some information on the south-east austrlian southern right whale population to them as soon as possible.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	1-06-2023	Email TO relevant person	TGS emailed DCCEEW to confirm a meeitng next week and will contact again soon about a suitable time.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	1-06-2023	Email FROM relevant person	DCCEEW replied to TGS' email sent earlier that day regarding a suitable meeting date. The DCCEEW representative advised they are no longer within the Victorian department but can assist with some helpful information, providing a link to the southern right whale recovery plan which is currently being updated. DCCEEW advised a draft copy of the plan has been released for public comment and includes the mose up to date information on the east Australian population. DCCEEW added they are currently reviewing the BIAs, finalising the BIAS for the southern right whale and will let TGS know when they are published.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	1-06-2023	Email TO relevant person	SLR replied to DCCEEW's email received earlier that day thanking them.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	2-06-2023	Email FROM relevant person	DCCEEW emailed SLR to advise the Australian Government has developed the draft National Guidelines for the Survey of Cetaceans, Marine Turtles and the Dugong which may be useful as it contains a section on aerial surveys and photo-identification for the southern right whale.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	6-06-2023	Email TO relevant person	SLR emailed DCCEEW to thank them for the information they had provided recently and keeping them informed of the BIA revisions. SLR asked if they had an idea of when the revised BIAs would be published. SLR advised they are hoping to arrange a meeting to discuss their proposed marine mammal control measures for their proposed marine seismic survey and said DCCEEW would be most welcome to join, providing suggested meeting date and time.	N	N/A	* (see note above table)	Continuing consultation.
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	6-06-2023	Email FROM relevant person	DCCEEW replied to SLR's email sent earlier that day to coordinate a meeting to discuss proposed marine mammal control measures for their marine seismic survey. DCCEEW advised they are not in a position to advise regarding the control measures but hoped there was enough information in the draft recovery plan but happy to answer specific questions. DCCEEW provided a link to the validated southern right whale sightings in Victorian waters. DCCEEW also advised they can't provide a precise indication of when the southern right whale BIAs will be published but hoping soon and they will advise SLR. DCCEEW advised they have logged a request for interested parities (including TGS) to be provided the BIAs as soon as they are publicy available. DCCEEW advised to use the existing BIAs for sourthern right whale to inform decision making (link to BIAs included).	N		* (see note above table)	Continuing consultation
Department of Climate Change, Energy, the Environment and Water (incl Director of National Parks)	7-06-2023	Email TO relevant person	SLR emailed DCCEEW with a further question to clarify southern right whale reproductive BIAs from the draft recovery plan and whether they are indicative of what the final version might be.	N	N/A	* (see note above table)	Continuing consultation.
Department of Defence (DoD)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Defence (DoD)	01-07-2022	Email FROM relevant person	The stakeholder advised that part of the proposed operational area is located within the South Australian Exercise Area (SAXA) and restricted airspace, and that unexploded ordnance (UXO) may be present on and in the sea floor. Additionally, TGS and Schlumberger are advised that: a. all activities in the area are conducted at their own risk; and b. the Commonwealth of Australia, represented by the Department of Defence, takes no responsibility for: i. reporting the location and type of UXO that may be in the areas; ii. identifying or removing any UXO from these areas; and iii. any loss or damage suffered or incurred by TGS and Schlumberger or any third party arising out of, or directly related to, UXO in the area. The stakeholder advised that in order to ensure activities do not conflict with Defence operations, Defence requests ongoing notification of activities prior to and during the proposed activities. The stakeholder asked TGS/Schlumberger to ensure that any activities undertaken within Restricted Airspace comply with the relevant Notice to Airmen (NOTAM) restrictions and to liaise with the airspace controlling agency if restricted airspace is activated. The stakeholder asked for continued liaison with the Australian Hydrographic Service (AHS) for Notices to Mariners (NOTMAR), in particular ensure that the AHS is notified three weeks prior to the actual commencement of activities.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Department of Defence (DoD)	14-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Defence (DoD)	14-03-2023	Email TO relevant person	Resent email to an alternative email address obtained from another consultation database as email sent 14/02/2023 was undeliverable. Requested feedback be provided before 26/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Defence (DoD)	1-05-2023	Email TO relevant person	SLR emailed DoD requesting whether DoD can provide the WMS, shapefile or similar for the UXOs for those identified areas in the 'whereisuxo' interactive map. SLR advised this would be to check the proximity of any of the identified sites/locations to the proposed project area. SLR closed the email querying whether the email address used was the correct address for this query and to advise if there is another contact that should be used.	N	N/A	* (see note above table)	Continuing consultation.
Department of Energy and Mining (DEM)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Energy and Mining (DEM)	15-02-2023	Email FROM relevant person	Automated reply advising correspondence had been received and can expect response within 2-5 working days.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Energy, Environment and Climate Action	13-06-2023	Email TO relevant person	SLR emailed DEECA regarding a query about southern right whale (SRW) sightings and liaising with coordinate citizen science platforms to better understand SRW distribution off the Victorian southwest coast as the breeding season progresses. SLR enquired about the potential for data sharing with exploration companies (sightings during seismic surveys) to inform operational activity, e.g. to direct the survey away from areas in which whales are known to be present.	N	N/A	* (see note above table)	Continuing consultation.
Department of Energy, Environment and Climate Action	13-06-2023	Email FROM relevant person	DEECA replied to SLR's email sent earlier that day regarding sharing whale sighting data to inform survey activity. DEECA explained some of the platforms available for sourcing data and the process and delays associated with publicly available sightings data through necessary analysis and validation. DEECA offered the possibility of more real-time data however this would be limited [compared with validated data set]. DEECA offered to provide information from coastal flights they will be carrying out soon however may be limited value for an offshore activity.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Department of Energy, Environment and Climate Action	15-06-2023	Email TO relevant person	SLR replied to DEECA's email received 13/06/2023 expressing interest in their offer to assist with providing information about southern right whales. SLR asked DEECA whether they need to formalise arrangements for exchanging information and said they would provide more information about the proposed marine seismic survey.	N	N/A	* (see note above table)	Continuing consultation.
Department of Energy, Environment and Climate Action	15-06-2023	Email TO relevant person	SLR emailed DEECA a copy of the information sheet to provide them with background information about the marine seismic survey within the Otway Basin.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Energy, Environment and Climate Action	15-06-2023	Email FROM relevant person	DEECA replied to SLR's email sent earlier that day regarding sharing whale sighting data to inform survey activity. DEECA confirmed there is no need for a formal arrangement to share southern right whales sightings data advising they will send out a list of sightings as available and asked SLR to send a request to DEECA with the basic sighting update as needed and they can provide current sightings they have. DEECA asked SLR to also send any information to an additional DEECA email address (provided).	N	N/A	* (see note above table)	Continuing consultation.
Department of Energy, Environment and Climate Action	15-06-2023	Email TO relevant person	SLR replied to DEECA's email received earlier that day acknowledging their email and advising SLR will contact them as they progress through the approvals stage and once they have a start date for the marine seismic survey. SLR included the additional email address provided in DEECA's previous email as requested.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Infrastructure, Transport, Regional Development, Communication and the Arts	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Infrastructure, Transport, Regional Development, Communication and the Arts	16-02-2023	Email FROM relevant person	Automated email to TGS acknowledging email and advising will be directed to appropriate area in department.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Infrastructure, Transport, Regional Development, Communication and the Arts	17-04-2023	Email TO relevant person	TGS emailed DITRDCA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked DITRDCA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Infrastructure, Transport, Regional Development, Communication and the Arts	17-04-2023	Email FROM relevant person	Automated email to TGS acknowledging email and advising will be directed to appropriate area in department.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Infrastructure, Transport, Regional Development, Communication and the Arts	24-04-2023	Email FROM relevant person	DITRDCA replied to TGS' email sent 17/04/2023 advising this department is not relevant with regards to their enquiry and included a reference to the Department of Climate Change, Energy, the Environment and Water 'Contact Us' page.	N	N/A - not relevant, suggested alternative government department.	N/A	Consultation closed
Department of Jobs, Precincts and Regions (DJPR) - Earth Resources Regulation (ERR)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Jobs, Precincts and Regions (DJPR) - Victorian Gas Program	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Jobs, Precincts and Regions (DJPR) - Victorian Gas Program	16-05-2022	Email FROM relevant person	Email undeliverable to 1 stakeholder email account	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Mining, Exploration and Geoscience (NSW)	22-05-2023	Email TO relevant person	TGS emailed DMEG seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from DMEG to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked DMEG to reply prior to 26/05/2023 and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Mining, Exploration and Geoscience (NSW)	22-05-2023	Email FROM relevant person	Automated email advising email TGS sent 22/05/2023 was undelverable.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Mining, Exploration and Geoscience (NSW)	8-06-2023	Email TO relevant person	TGS emailed DMEG to forward original correspondence emailed 22/05/2023 as noticed an error in the email address. TGS asked wheterh DMEG would like to receive additional information on their proposed marine seismic survey and whether they wish to be included within their consultation program (attached information sheet).	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Natural Resources and Environment Tasmania (DNRET, formerly DPIPWE)	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Map of survey relative to Tasmanian fisheries reporting blocks	N/A	* (see note above table)	Continuing consultation.
Department of Natural Resources and Environment Tasmania (DNRET, formerly DPIPWE)	13-05-2022	Email TO relevant person	TGS state they are contacting DNRET to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, infoemation sheet and map presenting the survey relative to Tasmanian fisheries reporting blocks	N/A	* (see note above table)	Continuing consultation
Department of Natural Resources and Environment Tasmania (DNRET, formerly DPIPWE)	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	3-03-2023	Email TO relevant person	TGS replied to DNRET's email sent earlier in the day requesting an extension whether they could have until 05/04/2023 to provide feedback and TGS replied yes and thanked them for keeping them updated.	N	N/A	* (see note above table)	Continuing consultation.
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	3-03-2023	Email FROM relevant person	DNRET emailed TGS to apologise as urgent matters had arisen and the drafted comments to TGS regarding their proposed marine seismic survey are awaiting approval. DNRET asked if they could have until 05/04/2023 to provide TGS their department's comments and apologised again for any inconvenience.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	3-03-2023	Email FROM relevant person	DNRET replied to TGS' email sent earlier in the day thanking them for the extension.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	8-03-2023	Email FROM relevant person	DNRET replied to TGS' email dated 16/02/2023 providing information about the survey, advising they were in the process of reviewing the information provided and also seeking a deadline for when feedback is due. DNRET also provided preferred contact details within the Strategic Projects and Policy branch (email address provided) for further matters.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	13-03-2023	Email TO relevant person	TGS replied to DNRET's email dated 08/03/2023 requesting a deadline for feedback and acknowledging their response and correct contact details. TGS advised feedback is to be provided by COP 23/03/2023.	N	N/A	* (see note above table)	Continuing consultation.
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	14-03-2023	Email FROM relevant person	DNRET replied to TGS' email dated 13/03/2023 providing a deadline of 23/03/2023 for feedback about the proposed survey. DNRET advised they have shared this information with the Department and will be in contact if they need further information.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	22-03-2023	Email TO relevant person	TGS replied to email received from DNRET earlier in the day requesting an extension to feedback deadline advising yes extension to 03/02/2023 is ok.	N	N/A	* (see note above table)	Continuing consultation.
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	22-03-2023	Email FROM relevant person	DNRET replied to TGS' email dated 13/03/2023 regarding revised deadline for providing feedback on the survey. DNRET asked if they could please request an extension to feedback COB 03/04/2023 and commented they hope it does not cause any inconvenience to their team.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	4-04-2023	Email FROM relevant person	DNRET emailed TGS to provide a formal submission for the proposed Otway Basin 3D Marine Seismic Survey. DNRET recommended the following factors be considered and addressed during the EP development: - Seismic pulses are a known risk to marine mammals in vicinity of survey operations. - Difficult to identify a time period with minimum impact to cetacean species (in relation to various migration seasons). - Primary concern is impact to southern right whales (SRW) as showing limited signs of population increase - Portland area and aggregation area at Warrnambool in western Victoria and migration through western Bass Strait (including survey area) particularly important. - Any impact to SRW population likely to be significant due to their small population size. - Aware of consistent sightings of blue whales and other species in the Otway Basin from monthly aerial cetacean surveys by ConocoPhillips. CP indicated they could provide data set to TGS under MOU to inform TGS' EP (contact details provided). - King Island and NW Tasmania cetacean stranding record suggests survey area could be traversed by many other species at any time of the year. - DNRET supports TGS' commitment to implement control measures based on the EPBC Act Policy 2.1 Part B.4 at a minimum. - Indirect impacts of seismic activities should be considered for other top predators (e.g. shy albatross and Australian fur seal) - reference to important breeding period and prey species (cephalopds, pelagic fish) with particular mention of the shelf west of King Island and the Bonney Upwelling areas as important foraging areas. - Consideration of mitigating the impact of lighting on seabird species, given 24 hours operation and monitoring and reporting any impact. - Consideration of marine mammal detection during night time surveying or times with reduced visibility. - DNRET strongly recommends pro-active surveys or survey area to collect baseline information on species presence prior to and at the same time of the year the survey will be carried out to fulfill data gaps. Suggested PAM.	Y - Formal submission	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific claims raised by DNRET are set out in the following sections of the EP: Marine mammal detection and impacts: **Section 7.2.1.2.7** (animal movement and exposure modelling to acoustic disturbance), **Section 7.2.2.2.7** (imapcts of acoustic distrubance to marine mammals), **Table 84** (control measures for managing imapcts of acoustic disturbance) Shy albatross and Australian fur seal: adressed via various sections discussing sensitive ecological receptors and BIAs, and imapcts of planned and unplanned activities (**Section 4.4.4** BIA, **Section 4.5.6.3.2** Australian Fur Seal and **Section 4.5.7** seabirds and migratory shorebirds), and discussed in context of impacts of planned and unplanned activities (**Section 7.2.2.5.2** imapcts of underwater noise on BIA, **Section 8.3.3.2** impacts of hydrocarbon spills). BIA: **Section 4.4.4** (BIA), **Section 7.2.2.5.2** (imapcts of underwater noise on BIA), **Section 8.3.3.4** (impacts of hydrocarbon spills). Impact of lighting on seabird species: **Section 7.5.2.3** (impacts of artificial lighting on seabirds) Recommendation of pro-active surveys or survey area to collect baseline information: Section 9 sets of the approach and framework for assesment of cumualtive effects, which TGS are concurrently engaging with current operators and title holders to ensure the application of a meaningful proces to acknowledge and account for data gaps in cumualtive mapct assesment is adressed. Use of PAM: **Table 84** lists control measures for managing acoustic disturbance, and the use of PAM for night time operations. Ongoing consultation with DNRET will be undertaken in accordance with the methods set out in Section 5 to ensure DNRET have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	13-04-2023	Email TO relevant person	TGS replied to DNRET's email received 04/04/2023 thanking them for their detailed response that will inform their environment plan. TGS advised they are aware there is a wide range of sensitivities in the area and control measures which have been described and considered in the EP that is being developed. Other notes summarised below: - Underwater sound modelling has been performed to determine threshold noise sensitivity distances to prevent behavioural and acoustic impacts to a range of different species. - EP exceeds the normal control measures for marine seismic surveys to reflect sensitivities in the area and ensure compliance with the blue whale recovery plan and prevention of harm and disturbance to the BIA from acoustic noise. Includes restrictions on the seismic vessel operating during peak blue whale feeding season and the breeding season for southern right whales. - TGS has made a commitment to work with Blue Whale Study to undertake aerial surveys during the survey (led by BWS). - All requirements of the EPBC Act Policy 2.1 will be followed with additional measures to avoid impacts on marine mammals, e.g. marine mammal observers on both the survey and support vessel and increased mitigation zones (shutdown and observation). - Passive acoustic monitoring will be operating 24 hours per day for the duration of the survey. - Lighting measures will be in place, e.g. port holes will have closed curtains at night and only lighting necessary for safe navigation and working on deck will be used and directed inwards towards the vessel where possible. Any bird strikes will be recorded and notified if they occur. - All available information (including published literature, observations from previous surveys) has been collated to identify the likely marine mammal species in the area to incorporate in the EP. - TGS thanked DNRET for suggestion to contact ConocoPhillips regarding data sharing. TGS advised DNRET they have been discussing potential cumulative impacts with them and other proponents. TGS closed their email by asking DNRET to let TGS know if they have any further questions and advised that once the EP is submitted to NOPSEMA and accepted as complete, it will be publicly notified and available for submission for 30 days.	N	N/A	* (see note above table)	Continuing consultation.
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	21-04-2023	Email FROM relevant person	DNRET replied to TGS' emailed sent 13/04/2023 thanking them for their reply and advising DNRET has no further comment and they look forward to receiving a copy of the EP. DNRET closed the email asking TGS to let them know when the EP has been published.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	27-04-2023	Email TO relevant person	TGS replied to DNRET's email received 27/04/2023 thanking them for their response and advising they have noted the Department has no further comment on the matter and added an action to notify them and send a copy when the EP is finalised. TGS closed the email advising DNRET to contact TGS if they have any further queries.	N	N/A	* (see note above table)	Continuing consultation.
Department of Natural Resources and Environment Tasmania (Strategic Projects and Policy Branch)	28-04-2023	Email FROM relevant person	DNRET replied to TGS' email sent 27/04/2023 thanking TGS.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Planning and Environment (NSW)	9-05-2023	Email TO relevant person	TGS emailed DPE seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from DPE to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked DPE to reply and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Planning and Environment (NSW)	9-05-2023	Email FROM relevant person	Automated email from DPE acknowledging the email TGS sent earlier that day advising they aim to respond within three working days and some enquiries may take longer based on their complexity.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Planning and Environment (NSW)	11-05-2023	Phone call TO relevant person	TGS called DPE (Gulag and Biamanga Joint Authority) to follow up on email sent 09/05/2023 but DPE advised they had not received the email and provided an alternative email address to resend to. DPE asked for TGS to call back next week.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Planning and Environment (NSW)	11-05-2023	Email TO relevant person	TGS emailed DPE to advise them of proposal to undertake the Otway Basin 3D Multi-client MSS. TGS advised they had been provided this contact from Merrimans Local Aboriginal Land Council. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS advised they have undertaken modelling to identify where that may be to help direct who they need to consult and why DPE was triggered as a potential relevant person as the area that may be affected overlaps with the southern NSW coast. TGS asked DPE to adivise if they'd like to discuss further or would like further or more information, providing an offer to arrange an online meeting, or alternatively to let them know if the survey is not of interest or relevant to them and they will remove them from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Planning and Environment (NSW)	12-05-2023	Email TO relevant person	TGS emailed DPE to advise them of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS advised they have undertaken modelling to identify where that may be to help direct who they need to consult and why DPE was triggered as a potential relevant person as the area that may be affected overlaps with the southern NSW coast. TGS asked DPE to adivise if they'd like to discuss further or would like further or more information, providing an offer to arrange an online meeting, or alternatively to let them know if the survey is not of interest or relevant to them and they will remove them from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Planning and Environment (NSW)	12-05-2023	Email TO relevant person	TGS replied to DPE's email received earlier seeking clarification on which team or area of department to send their email to. TGS said they are wanting it to be delivered to Parks and Wildlife so might be best delivered to environment. TGS asked for them to confirm this.	N	N/A	* (see note above table)	Continuing consultation.
Department of Planning and Environment (NSW)	12-05-2023	Email TO relevant person	TGS replied to DPE's email received earlier that day advising they are in contact with the Department of Climate Change, Energy, the Environment and Water and have also been in contact with the Gulaga and Biamanga Joint Authority at the suggestion of Merrimans Local Aboriginal Land Council. TGS advised they wanted to make the NSW department aware of their project also. TGS closed their email asking for DPE to let them know if they would like to be kept up to date or if they would like to be removed from the TGS consultation list.	N	N/A	* (see note above table)	Continuing consultation.
Department of Planning and Environment (NSW)	12-05-2023	Email FROM relevant person	Automated reply thanking TGS for their email and advising their query will be processed within 5 working days.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Planning and Environment (NSW)	12-05-2023	Email FROM relevant person	DPE replied to TGS' email sent earlier that day asking for clarification on which team or area of the department they would like their email sent to - planning or environment.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Planning and Environment (NSW)	12-05-2023	Email FROM relevant person	DPE emailed TGS to advise their department is only responsible for NSW and recommended contacting the Department of Climate Change, Energy, the Environment and Water (link to website provided) at a federal level.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Primary Industries - Marine Environment (NSW)	22-05-2023	Email TO relevant person	TGS emailed DPI - ME seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from DPI - ME to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked DPI - ME to reply prior to 26/05/2023 and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Primary Industries and Regions South Australia (PIRSA) (includes South Australian Research and Development Institute (SARDI) Aquatic Sciences, aquaculture, commercial fishing, biosecurity, rec fishing and emergencies)	13-05-2022	Email TO relevant person	TGS state they are contacting PIRSA to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, information sheet and a map presenting the survey relative to South Australian fisheries reporting blocks	N/A	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Department of Primary Industries and Regions South Australia (PIRSA) (includes South Australian Research and Development Institute (SARDI) Aquatic Sciences, aquaculture, commercial fishing, biosecurity, rec fishing and emergencies)	28-06-2022	Email FROM relevant person	PDF attachment relating to correspondence on the the proposed survey area, which overlaps spatially and temporally with the South Australian Marine Scalefish, Giant Crab and Southern Zone Rock Lobster fisheries, which are important South Australian commercial fisheries. Any impacts may influence the sustainability of these fish stocks.	Y - formal response letter	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Primary Industries and Regions South Australia (PIRSA) (includes South Australian Research and Development Institute (SARDI) Aquatic Sciences, aquaculture, commercial fishing, biosecurity, rec fishing and emergencies)	14-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Primary Industries and Regions South Australia (PIRSA) (includes South Australian Research and Development Institute (SARDI) Aquatic Sciences, aquaculture, commercial fishing, biosecurity, rec fishing and emergencies)	14-02-2023	Email FROM relevant person	Automated email stating message was undeliverable for current contact email address.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Primary Industries and Regions South Australia (PIRSA) (includes South Australian Research and Development Institute (SARDI) Aquatic Sciences, aquaculture, commercial fishing, biosecurity, rec fishing and emergencies)	21-02-2023	Email FROM relevant person	PIRSA emailed TGS to provide formal correspondence for the proposed Otway Basin Seismic Survey. The letter acknowledged the distribution email delivered 14/02/2023.PIRSA advised the proposed survey area overlaps spatially and temporally with the SA Marine Scalefish, Giant Crab and Southern Zone Rock Lobster fisheries as well as the Commonwelath managed Southern Bluefin Tuna fishery of which are all important SA commercial fisheries and any impact may influence the sustainability of these fish stocks. PIRSA noted their previous correspondence (dated 28/06/2022) provided comment in relation to possible impacts from the survey and while the revised proposal (detailed in email delivered 14/02/2023) addresses these impacts, PIRSA recommend TGS continue to directly consult the South Eastern Professional Fisherman's Assn, the Marine Fishers Assn of SA and the Australian Southern Bluefin Tuna Industry Assn. PIRSA concluded letter with details for a direct contact within the PIRSA Fisheries and Aquaculture department.	Y - formal response letter	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Impacts of marine seismic survey on fishing activities: **Section 7.1.3.1** (impacts of the physical presence of the seismic survey vessels), **Section 7.2.3.1** (imacpts of acoustic disturbacne on fisheries), **Section 8.2.3** (imapct of streamer loss), **Section 8.3.4.1** (hydrocarbon spill), and **Table 84** includes control measures for adressing commercial fishers compensation in accordance with agreed protocols. Cumulative impacts and commercial fishers: **Section 9** sets of the approach and framework for assesment of cumulative effects, which TGS are concurrently engaging with current operators and title holders to ensure the application of a meaningful proces to acknowledge and account for data gaps in cumualtive imapct assesment is adressed. TGS will continue to consult with PIRSA and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Department of Primary Industries and Regions South Australia (PIRSA) (includes South Australian Research and Development Institute (SARDI) Aquatic Sciences, aquaculture, commercial fishing, biosecurity, rec fishing and emergencies)	23-02-2023	Email TO relevant person	TGS acknowledged PIRSA's previous email including formal response, noting their comments and suggestion to continue to consult several listed fisheries direct. TGS advised PIRSA to contact TGS should they have any comments or queries regarding the survey in the future.	N	N/A	* (see note above table)	Continuing consultation.
Department of Primary Industries and Regions South Australia (PIRSA) (includes South Australian Research and Development Institute (SARDI) Aquatic Sciences, aquaculture, commercial fishing, biosecurity, rec fishing and emergencies)	17-05-2023	Online enquiry form submitted	TGS submitted an online enquiry advising they have been trying to consult with someone from PIRSA about their upcoming marine seismic survey within the Otway Basin and requested someone contact them so TGS can provide further information to determine if PIRSA would like to continue consultation (contact details provided).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Primary Industries and Regions South Australia (PIRSA) (includes South Australian Research and Development Institute (SARDI) Aquatic Sciences, aquaculture, commercial fishing, biosecurity, rec fishing and emergencies)	17-05-2023	Email FROM relevant person	PIRSA replied to online query advising they would reply shortly (provided reference number).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Transport (Vic)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Department of Transport and Planning (Vic)	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Transport and Planning (Vic)	17-04-2023	Email TO relevant person	TGS emailed DTP to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked DTP to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Department of Transport and Planning (Vic)	17-04-2023	Email FROM relevant person	Automated reply thanking TGS for contacting the DTP advising their query had been forwarded to the appropriate team within Safe Transport Victoria and to allow 7 - 10 business days for a response.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Department of Transport and Planning (Vic)	18-04-2023	Email FROM relevant person	DTP replied to TGS' email sent 17/04/2023 thanking them for alerting them about their planned operations. DTP advised that as the survey is planned outside Victorian state waters they have no significant feedback or concerns. DTP offered to distribute a Victorian Notice to Mariners covering their activities if TGS would like. DTP continued this may be appropriate given significant offshore fishing occurs off Portland and they are happy to assist.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Department of Transport and Planning (Vic)	24-04-2023	Email TO relevant person	TGS replied to DTP's email received 18/04/2023 thanking them for their quick response confirming there was no significant feedback or concerns. TGS advised they would like to accept their offer to distribute Notice to Victorian Mariners and said they would note their offer and keep them updated with their progress and planning for notifications once confirmed. TGS closed their email thanking DTP for their support and assistance.	N	N/A	* (see note above table)	Continuing consultation.
Department of Transport and Planning (Vic)	24-04-2023	Email FROM relevant person	DTP replied to TGS' email sent 24/04/2023 advising they are happy to assist.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Devonport Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Devonport Council	16-02-2023	Email FROM relevant person	Acknowledgement of receipt of previous email advising the email has been forwarded to appropriate staff member for action/and or response.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Devonport Council	17-04-2023	Email TO relevant person	TGS emailed DC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked DC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Devonport Council	17-04-2023	Email FROM relevant person	Acknowledgement of receipt of previous email advising the email has been forwarded to appropriate staff member for action/and or response.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Discover Tasmania	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Discover Tasmania	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Discover Tasmania	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
District Council of Ceduna	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
District Council of Ceduna	16-02-2023	Email FROM relevant person	Automated reply thanking TGS for contacting the DCC and confirming the email had been received and will be forwarded to the appropriate department for consideration and a response may be provided.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
District Council of Ceduna	17-04-2023	Email TO relevant person	TGS emailed DCC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked DCC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
District Council of Ceduna	17-04-2023	Email FROM relevant person	DCC replied to TGS' email earlier in the day stating their council is located on the far west coast of South Australia and does not wish to be on the consultation list.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
District Council of Ceduna	18-04-2023	Email TO relevant person	TGS replied to DCC's email sent yesterday advising they do no wish to be on the consultation list. TGS advised they have removed them from the consultation list.	N	N/A - do not wish to be consulted.	N/A	Consultation closed
District Council of Grant	4-05-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS advised they have undertaken modelling to identify where that may be to help direct who they need to consult and why DCG was triggered as a potential relevant person as the area that may be affected overlaps with the southern SA coast. TGS asked DCG to advise if they'd like to discuss further or would like further or more information, providing an offer to arrange an online meeting, or alternatively to let them know if the survey is not of interest or relevant to them and they will remove them from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
District Council of Grant	4-05-2023	Email FROM relevant person	Automated reply email acknowledging TGS' email sent earlier that day advising the email has been forwarded to the appropriate staff to respond.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
District Council of Lower Eyre Peninsula	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
District Council of Lower Eyre Peninsula	17-04-2023	Email TO relevant person	TGS emailed DCLEP to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked DCLEP to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
District Council of Lower Eyre Peninsula	17-04-2023	Email FROM relevant person	DCLEP replied to TGS' email earlier in the day stating their council is located on the Eyre Peninsula in South Australia approximately 450 km west of Robe. DCLEP advised that given the distance from the proposal, they have no comments to make.	N	N/A - no comments to make given distance from proposal	N/A	Consultation closed
District Council of Lower Eyre Peninsula	18-04-2023	Email TO relevant person	TGS replied to DCLEP's email received yesterday advising they have no comments to make regarding the proposal. TGS thanked DCLEP.	N	N/A	N/A	Consultation closed
District Council of Wattle Range	4-05-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS advised they have undertaken modelling to identify where that may be to help direct who they need to consult and why DCWR was triggered as a potential relevant person as the area that may be affected overlaps with the southern SA coast. TGS asked DCWR to advise if they'd like to discuss further or would like further or more information, providing an offer to arrange an online meeting, or alternatively to let them know if the survey is not of interest or relevant to them and they will remove them from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
District Council of Wattle Range	4-05-2023	Email FROM relevant person	Automated reply email acknowledging TGS' email sent earlier that day advising the email will be forwarded to the relevant Council Officer for information and action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Diving Industry Of Victoria Association Inc	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Diving Industry Of Victoria Association Inc	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Diving Industry Of Victoria Association Inc	17-04-2023	Email TO relevant person	TGS emailed DIVA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked DIVA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Diving Industry Of Victoria Association Inc	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Dorset Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Dorset Council	16-02-2023	Email FROM relevant person	Automated reply acknowledging email and advising will respond as quickly as possible.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Dorset Council	17-04-2023	Email TO relevant person	TGS emailed DC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked DC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Dorset Council	17-04-2023	Email FROM relevant person	Automated reply acknowledging email and advising will respond as quickly as possible.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
East Gippsland Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
East Gippsland Shire Council	16-02-2023	Email FROM relevant person	Automated reply email thanking TGS for email and advising the enquiry would be assessed and where necessary scheduled for action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
East Gippsland Shire Council	17-04-2023	Email TO relevant person	TGS emailed EGSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked EGSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
East Gippsland Shire Council	17-04-2023	Email FROM relevant person	Automated reply email thanking TGS for contacting EGSC and advising their aim is to respond via call back or return email within 10 business days or 30 business days if the matter is of a complex nature.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
East Gippsland Shire Council	5-05-2023	Phone call TO relevant person	SLB called EGSC and explained the call was to ask for feedback on the marine seismic survey proposed for the Otway Basin that TGS recently emailed the council including an information sheet. The Council representative confirmed they had received the email and has been forwarded to the relevant department and they would respond in due course, typically within 10 days of receiving the notice.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
East Gippsland Shire Council	10-05-2023	Phone call TO relevant person	SLB called EGSC to follow up on previous phone call made 05/05/2023 regarding their marine seismic survey proposed for the Otway Basin. EGSC reception advised the best person to speak to within the Environmental Sustainability department, although that person was not available today. EGSC advised they would provide them a message to call SLB back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
East Gippsland Shire Council	17-05-2023	Email FROM relevant person	EGSC emailed TGS in response to TGS' email sent 16/02/2023 advising that given the proposed site location, that works are located within the Commonwealth water and will be undertaken in accordance with the Offshore Pertroleum and Greenhouse Gas Storage (Environment) Regulations 2009, EGSC do not wish to provide further comment.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
East Gippsland Shire Council	17-05-2023	Phone call TO relevant person	SLB called EGSC to follow up on previous phone call made 10/05/2023 regarding their marine seismic survey proposed for the Otway Basin. EGSC advised that given the survey so far offshore EGSC don't forsee any issues or have any further concerns. EGSC said they would confirm this with management and provide a written response to TGS email.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
East Gippsland Shire Council	14-06-2023	Email TO relevant person	TGS emailed EGSC acknowledging their response TGS received 17/05/2023. TGS apologised for the delay in acknowledgement and reassured EGSC planning and works will be carried out in accordance with the Offshore Pertroleum and Greenhouse Gas Storage (Environment) Regulations 2009. TGS advised EGSC their comments have been noted in their consultation register and TGS has updated their records. TGS closed the email asking EGSC to get in contact if they have any queries arise.	N	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	27-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	14-03-2023	Phone call TO relevant person	SLB called EMAC but there was no answer. SLB left a voice message offering to discuss the project further to call back at their earliest convenience.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eastern Maar Aboriginal Corporation	20-03-2023	Phone call TO relevant person	SLB called EMAC but there was no answer. SLB left a voice message offering to discuss the project further to call back at their earliest convenience.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eastern Maar Aboriginal Corporation	24-03-2023	Phone call TO relevant person	SLB called EMAC but there was no answer. SLB left a voice message offering to discuss the project further to call back at their earliest convenience.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eastern Maar Aboriginal Corporation	27-03-2023	Email TO relevant person	SLB emailed EMAC to introduce themselves and advise they are partnering with TGS who are leading plans to conduct a marine seismic survey in the Otway Basin to commence later this year. SLB advised EMAC they have been trying to contact EMAC and have left several voice messages on a phone number listed on the EMAC website. SLB attached the factsheet for the proposed project and advised they hoped this would prompt further discussions regarding any concerns EMAC may have regarding the proposed survey. SLB asked EMAC to advise if they had some time to discuss or a short online meeting to present the survey and closed the email by stating they look forward to hearing from them.	N	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	21-04-2023	Email TO relevant person	SLB emailed EMAC to follow up on previous emails sent 27/02/2023 and 27/03/2023 (copy included in email) regarding their proposed marine seismic survey in the Otway Basin. SLB advised they have developed a shorter, more concise factsheet which provides an explanation of why SLB is wanting to consult with EMAC. SLB also advised the factsheet also highlights aspects about the survey and potential effects on the environment, some of the measures in place to limit the potential effects and safeguards in place should an unexpected event occur. SLB said they would really like to meet with EMAC and anyone in their corporation that might be interested to hear about SLB's plans and hear any EMAC's concerns. SLB suggested they could arrange an online meeting at their convenience to discuss.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	26-04-2023	Email TO relevant person	SLB emailed an alternative contact for EMAC found online on the Office of Registrar of Indigenous Corporations. SLB advised they are partnering with TGS who are leading plans to conduct a marine seismic survey in the Otway Basin, commencing later this year. SLB advised they have been trying to contact with EMAC and have left several voice messages from a number on the EMAC website. SLB attached the latest information sheet to prompt further discussions with EMAC regarding any concerns they may have regarding the proposed survey. SLB closed the email by asking EMAC to let them know if they had time to discuss or for SLB to present the survey.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	1-05-2023	Email TO relevant person	SLB emailed another alternative contacts for EMAC obtained from the Office of Registrar of Indigenous Corporations advising they were trying to reach EMAC (included forwarded email sent to EMAC 26/04/2023) to consult further on their proposed marine seismic survey. SLB asked if they would be free for an online meeting where they could present the project which woud include the ongoing environmental planning activities. SLB attached the information sheet to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	5-05-2023	Email TO relevant person	SLB emailed the same contacts for EMAC they emailed on 01/05/2023 following up on that previously sent email, asking if they were available for an online meeting where they could present and discuss their project details with EMAC. SLB attached the information sheet to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	11-05-2023	Phone call TO relevant person	SLG called EMAC following discovery of an alternative contact on the Office of Registrar of Aboriginal Corporations website, however SLB were asked to leave a message. SLB left a message requesting someone call them back to discuss their proposed marine seismic survey and follow up on the various emails sent and phone calls made previously.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eastern Maar Aboriginal Corporation	18-05-2023	Phone call TO relevant person	SLG called EMAC to follow up on previous communications regarding their proposed marine seismic survey. However there was no answer so SLB left a voice mail message requesting someone call them back to discuss their proposed marine seismic survey and follow up on the various emails sent and phone calls made previously.	N	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	19-05-2023	Email TO relevant person	TGS emailed EMAC thanking them for contacting them through social media application. TGS advised they are planning a trip to Victoria week commencing 29/05/2023 and would really appreciate a meeint during that time, or alternatively an online meeting. TGS forwarded the previous emails sent to EMAC to provide the background information and left contact details if EMAC would prefer a phone call.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	19-05-2023	Letter TO relevant person	TGS posted a registered letter to EMAC advising of TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS enclosed an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided as soon as possible.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	23-05-2023	Email TO relevant person	TGS emailed EMAC asking whether they would be available for a meeting either 30/05/2023 or 31/05/2023 to discuss their proposed seismic survey. TGS advised their availability in either Warrnambool or Melbourne to go through the details with them, alternatively can arrange an online meeting.	N	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	26-05-2023	Email TO relevant person	TGS replied to EMAC's email received earlier that day confirming they will arrange a meeting for 02/06/2023 and will send out a meeting invite. TGS closed their email advising they look forward to meeting them.	N	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	26-05-2023	Email TO relevant person	TGS emailed an online meeting invite to EMAC for 02/06/2023.	N	N/A	* (see note above table)	Continuing consultation.
Eastern Maar Aboriginal Corporation	26-05-2023	Email FROM relevant person	EMAC replied to TGS's email regarding a meeting to discuss their proposed marine seismic survey. EMAC asked if they could set up an online meeting suggesting either 02/06/2023 or 05/06/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eastern Maar Aboriginal Corporation	2-06-2023	Meeting with relevant person	TGS, SLB and SLR met with EMAC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with EMAC: - EMAC queried the reason and purpose of the survey. - EMAC is uncomfortable with seimic surveying due to large international companies coming and going without any thought to longer term impacts. - Great risk to community compared with risks faced by companies. - Marine fauna observer integrity. - Wide mistrust in the community and activity doesnt employ local people. - Biocultural values most likely aren't being addressed in any studies that are part of the proposal. - Concerned about potential impact to important species, including eels. - Concerned with impacts of sharing information with companies. EMAC concluded the meeting by stating they would appreciate any additional information TGS could provide them. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific claims addressed in the EP are: Marine fauna observer integrity: **Section 10.3.5** MFOs and PAM Operators, detailing professional standards required. Biocultural values: Impacts to culture and heritage, as well as socio-economic imapcts are disscussed in detail in **Section 7.1.3** (Physical presence), **Section 7.2.3** (Acoustic imapcts), **Section 8.1.3** (Unplanned activities), **Section 8.3.4** (hydrocarbon spill) Impact to important species: **Section 7.2.2** (acoustic impacts), **Section 7.2.3** (routine permissible waste discharges), **Section 7.4.2** (atmospheric emissions), **Section 7.5.2** (artificial light emissions), **Section 8.1.2** (IMS), **Section 8.2.2** (streamer loss), **Section 8.3.3** (vessel collision and hydrocarbon spill), **Section 8.5.2** (accidental release of hazardous and non-hazardous materials). Remaining concerns will be subject to ongoing consultation. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Eastern Maar Aboriginal Corporation	14-06-2023	Email TO relevant person	TGS provided EMAC with a copy of the presentation and minutes from their meeting helf 02/06/2023 for their review and record. TGS also provided a list of the marine fauna considered within their environmental planning and environment plan. TGS also advised the marine fauna observer they discussed during the meeting would be willing to meet with them and asked EMAC to advise if they would like TGS to arrange a meeting. TGS closed the email thanking EMAC for their time and information and asked them to get in touch if they had any amendments, would like additional information or have and queries.	Y - Meeting minutes and copy of the presentation	N/A	* (see note above table)	Continuing consultation.
Eastern Zone Abalone Industry Association	09-06-2022	Meeting with relevant person	Stakeholder joined the meeting as a member of Seafood Industry Victoria (SIV). 'The stakeholder explained that they represents 1 of the 3 abalone zones in Victoria, being the Eastern Zone Abalone Industry Association, which covers the Victorian Coast from Lakes Entrance to Mallacoota. TGS / Schlumberger explained that they will manage the activity in accordance with Diving Medical Advisory Committee (DMAC) guidelines, whereby notifications will be provided to diving groups (such as abalone) with potential to dive within 45 km of the seismic survey, and groups can be involved in the risk assessment process where divers are within 30 km of the seismic survey. The stakeholder queried if seabed vibrations could affect the habitat of the abalone and how far the sound may travel and if it would impact on the abalone. TGS/Schlumberger/ERM clarified that due to the distance offshore and the deep water depths, sound propagation or seabed vibration inshore to areas where diving may occur (<30 m depth) is unlikely to have a significant effect on divers and Abalone are not expected to be impacted. The stakeholder raised that abalone around Portland are currently being impacted by the abalone viral ganglioneuritis (AVG) making them more susceptible to other external stressors. TGS/ Schlumberger/ERM confirmed that they are currently undertaking noise modelling to determine the extent of sound propagation. TGS/Schlumberger explained that they intend to consult with the Abalone Council of Australia and Abalone Council Victoria given the DMAC (2019) guidelines discussed previously. The stakeholder confirmed that they are on the board of Seafood Industry Victoria (SIV) and provided the name of the Independent Chair. TGS/Schlumberger/ERM confirmed that they are eager to speak with SIV regarding Victorian fisheries interests and will reach out again for a separate call.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Eastern Zone Abalone Industry Association	17-06-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholder for their attendance at the meeting.	Y - Summary meeting notes	N/A	* (see note above table)	Continuing consultation.
Eastern Zone Abalone Industry Association	23-06-2022	Email FROM relevant person	AIA declined an invitation to a stakeholder meeting scheduled for June 29th 9:00-10:00am AWST.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Eastern Zone Abalone Industry Association	26-04-2023	Email TO relevant person	TGS emailed EZAIA to reconnect and advise of changes to the survey (area size and contact details). TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked EZAIA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Eastern Zone Abalone Industry Association	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Eastern Zone Abalone Industry Association	22-05-2023		EZAIA replied to TGS' email sent 19/05/2023 with questions for TGS: - what is the purpose of the surveys; - who has commissioned the activity to take place: - what would prospective clients be looking for by having the seismic data. EZAIA commented they are concerned the EMBA spreads in to their fishing area near the NSW border and although they don't envisage any impact to the abalone fihsing area of their members, they would like to be kept informed.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Eastern Zone Abalone Industry Association	22-05-2023	Phone call TO relevant person	SLB called EZAIA to follow up on previous correspondence sent to them regarding their proposed marine seismic survey. EZAIA confirmed they had received the emails and information TGS had sent to them. EZAIA's main comments included: - noted large size of EMBA which SLB explained is to direct consultation based EMBA. - query around introduction and spread of fish disease, however SLB explained the strict biosecurity measures they have to comply with. EZAIA suggested contacting the western abalone zone sector (provided contact details). EZAIA advised they had no major concners, were happy with the project as presented for now, have no other qeustions and don't need any further information at this stage. They advised they are attending an industry meeting soon and this will be discussed and will contact SLB if any queries. Refer to Appendix I for full submission details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eastern Zone Abalone Industry Association	24-05-2023	Email TO relevant person	TGS replied to EZAIA's response received 22/05/2023 thanking them for their information and providing them with the following information: - Purpose of survey to image subsurface geology. - TGS and SLB are acquiring the data as multi-client data with TGS leading the acquisition. - The data will be used for evaluating the area for hydrocarbon prospectivity. TGS then elaborated on how the EMBA was determined - using highly conservative modelling. TGS also explained some of the additional controls being used to minimise the risk of a release occurring. TGS closed their email confirming they will keep EZAIA informed as a relevant person.	N	N/A	* (see note above table)	Continuing consultation.
Eden Local Aboriginal Land Council	29-03-2023	Email TO relevant person	TGS emailed ELALC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS asked if ELALC could advise the name of groups TGS may need to speak to in the lower NSW area to refine the list of who they contact, closing the email by advising any information would be very much appreciated.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Eden Local Aboriginal Land Council	4-04-2023	Phone call TO relevant person	TGS called ELALC to follow up on email sent 29/03/2023 with information about their proposed marine seismic survey within the Otway Basin, however there was no answer. TGS left a message advising they were calling to discuss the proposed Otway survey and email sent on 29/03/2023 and to return their call (contact details provided).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	11-04-2023	Phone call TO relevant person	TGS called ELALC to follow up on email sent 29/03/2023 with information about their proposed marine seismic survey within the Otway Basin, however there was no answer. TGS left a message advising they were calling to discuss the proposed Otway survey and email sent on 04/04/2023 and to return their call (contact details provided).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	11-04-2023	Email TO relevant person	TGS emailed ELALC to follow up on email sent 29/03/2023 explaining they would really appreciate their help with providing any information about traditional owner groups in the lower coastal NSW area. TGS provided their direct mobile contact details for a call or suggested they can set up an online meeting to discuss. TGS closed the email by thanking ELALC.	N	N/A	* (see note above table)	Continuing consultation.
Eden Local Aboriginal Land Council	17-04-2023	Phone call TO relevant person	TGS called ELALC to follow up on email and phone call from 11/04/2023 but there was no answer. TGS left a message to call them back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	1-05-2023	Phone call TO relevant person	TGS called ELALC to follow up on emails sent 29/03/2023 and 11/04/2023 and phone call made 17/04/2023 as had not received any response, however there was no answer. TGS left a message requesting they call TGS back and advised they'd follow up with an email.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	1-05-2023	Email TO relevant person	TGS emailed ELALC to follow up on emails sent 29/03/2023 and 11/04/2023. TGS advised they are consulting to see if ELALC requires further information about TGS' proposed marine seismic survey within the Otway Basin to ensure ELALC can provide an informed response about whether the activity is likely to impact their functrion, interests or activities. TGS attached the information sheet and asked ELALC to let them know if they would like further information of have any queries.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Eden Local Aboriginal Land Council	9-05-2023	Phone call TO relevant person	TGS called another ELALC representative after receiving alternative contact details from another relevant person to discuss their proposed marine seismic survey, however there was no answer. TGS left a message advising the purpose of the call and asked them to call them back, leaving contact details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	15-05-2023	Phone call TO relevant person	TGS called the new ELALC representative to follow up on their call and message left 09/05/2023 to discuss their proposed marine seismic survey, however there was no answer. TGS left a message advising the purpose of the call and asked them to call them back, leaving contact details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	22-05-2023	Phone call TO relevant person	TGS called the new ELALC representative to follow up on their call and message left 15/05/2023 to discuss their proposed marine seismic survey, however there was no answer. TGS left a message advising the purpose of the call and asked them to call them back, leaving contact details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	22-05-2023	Email TO relevant person	TGS emailed ELALC following their phone call and message left earlier that day. TGS advised they've been attempting gto correspond with them regarding their proposed marine seismic survey but have not received a response. TGS advised if ELALC has any input to let them know before 26/05/2023 so they can consider their information within the development of their environment plan before submitting to NOPSEMA soon. TGS asked ELALC to reply to the email if they have any questions or would like further detail.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Eden Local Aboriginal Land Council	22-05-2023	Phone call FROM relevant person	ELALC returned TGS' call made earlier that day regarding their proposed marine seismic survey. ELALC asked if the caller was a TGS employee or a consultant and TGS confirmed they were from TGS. TGS said they would really appreciate their time to meet and would help with resourcing. ELALC called back later to confirm the ELALC Chair would attend an online meeting the following day and advised they would send a meeting invite.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	22-05-2023	Email FROM relevant person	ELALC sent TGS a meeting invite to meet with their Chair for the following day 23/05/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	23-05-2023	Meeting with relevant person	TGS, SLB and SLR met with ELALC to discuss their proposed marine seismic survey. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with ELALC: - Ballast water and the introduction of pests. - Impacts to marine fauna and flora - noise and physical presence. - Low likelihood of spill reaching NSW. - Marine fauna observers. - Current South Coast People Native claim - whether this is relevant or not. - Significance of marine animals within native people's culture. - ELALC has no concerns with survey. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Eden Local Aboriginal Land Council	23-05-2023	Message FROM relevant person	ELALC forwarded contact details to TGS for distributing meeting minutes.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Eden Local Aboriginal Land Council	25-05-2023	Email TO relevant person	TGS emailed ELALC minutes from meeting held 23/05/2023 for their review and record. TGS asked ELALC to advise if any changes or text needs removing. TGS thanked ELALC for their information and time. TGS advised ELALC of their plans to submit to NOPSEMA soon and the process following submission. TGS also said they would contact the relevant person ELALC suggested. TGS closed the email asking ELALC if they woud like to remain on TGS' consultation list or prefer to be removed so they don't receive any more communications.	N	N/A	* (see note above table)	Continuing consultation.
Eden Local Aboriginal Land Council	25-05-2023	Email FROM relevant person	ELALC emailed TGS and other ELALC members contact details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Elders Council of Tasmania Aboriginal Corporation	4-05-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS asked ECTAC to advise if they'd like to discuss further or would like further or more information, providing an offer to arrange an online meeting, or alternatively to let them know if the survey is not of interest or relevant to them and they will remove them from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Elders Council of Tasmania Aboriginal Corporation	5-05-2023	Email TO relevant person	[PLEASE NOTE - double up in correspondence, as an email was sent previous day also]. TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS asked ECTAC to advise if they'd like to discuss further or would like further or more information, providing an offer to arrange an online meeting, or alternatively to let them know if the survey is not of interest or relevant to them and they will remove them from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Elders Council of Tasmania Aboriginal Corporation	11-05-2023	Phone call TO relevant person	TGS called ECTAC to follow up email sent 04/05/2023 regarding their proposed marine seismic survey within the Otway Basin and there was no answer. TGS left a message advising they were following up on their email sent 04/05/2023 and asked them to call TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Elders Council of Tasmania Aboriginal Corporation	22-05-2023	Phone call TO relevant person	TGS called ECTAC to follow up email sent 04/05/2023 and phone call and message left 11/05/2023 regarding their proposed marine seismic survey within the Otway Basin and there was no answer. TGS left a message advising they were following up on their phone call and message left 11/05/2023 and asked them to call TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Elders Council of Tasmania Aboriginal Corporation	22-05-2023	Email TO relevant person	TGS emailed ECTAC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous correspondence. TGS asked if ECTAC has any input about the survey to let them know prior to 26/05/2023 so they can consider the information within the development of their environment plan before submitting to NOPSEMA for their review. TGS closed the email asking them to reply to the email if they have any queries or would like further details.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Elders Council of Tasmania Aboriginal Corporation	1-06-2023	Email TO relevant person	TGS emailed ECTAC advising NOPSEMA has advised they should provide a copy of the attached brochure to help relevant persons provide feedback on the proposed survey, explaining their rights and TGS' obligations through the consultation process. TGS asked ECTAC to advise if they have any queries about their consultation program so they can make sure ECTAC can actively participate in the process. TGS advised they are about to submit their environmental plan (EP) to NOPSEMA for their completeness check and once accepted as complete will release their EP for public consultation where ECTAC has the opportunity to reveiw the draft EP and provide feedback before TGS resubmit to NOPSEMA for their overall assessment. TGS closed the email asking ECTAC to call or email if they have any questions or would like additional information. Alternatively to advise if they wish to be removed from the consultation program and TGS will stop sending them communications.	Y - NOPSEMA consultation guideline	N/A	* (see note above table)	Continuing consultation.
Environment Tasmania	20-03-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 27/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Environment Tasmania	17-04-2023	Email TO relevant person	TGS emailed ET to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked ET to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Environment Tasmania	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Environment Victoria	20-03-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 27/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Environment Victoria	20-03-2023	Email FROM relevant person	EV responded to email from TGS sent earlier that day asking to elaborate on what the actual purpose of the seismic survey is and what the data will be used for, to determine if EV is a relevant stakeholder.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Environment Victoria	22-03-2023	Email TO relevant person	TGS responded to EV's email dated 20/03/2023 advising that TGS is a data and information company and the seismic data that TGS will acquire will be licensed to petroleum exploration companies for them to assess the prospectivity in the area. TGS advised to let them know if they would like to meet and discuss in more detail.	N	N/A	* (see note above table)	Continuing consultation.
Environment Victoria	17-04-2023	Email TO relevant person	TGS emailed EV to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked EV to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Environment Victoria	19-04-2023	Email FROM relevant person	EV replied to TGS' email sent 17/04/2023 thanking TGS for following up. EV advised they will have to decline their offer at this time and asked to remove Environment Victoria from TGS' consultation list.	N	N/A - declined offer to engage - requested to be removed from consultation list.	N/A	Consultation closed
Environment Victoria	27-04-2023	Email TO relevant person	TGS replied to EV's email received 19/04/2023 thanking them for their reply to TGS' previous email. TGS advised they would remove EV from their consultation list as requested and advised EV they can always contact TGS if they need further information or have any queries about the proposed survey.	N	N/A	N/A	Consultation closed
Environmental Protection Authority (EPA) - NSW	8-06-2023	Email TO relevant person	TGS emailed EPA - NSW seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from EPA to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS also provided information to help EPA provide feedback on the proposed survey, explaining EPA's rights and TGS' obligations through the consultation process. TGS asked EPA to advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet, NOPSEMA guidelines for consultation	N/A	* (see note above table)	Continuing consultation.
Environmental Protection Authority (EPA) - NSW	8-06-2023	Email FROM relevant person	Automated email from EPA-NSW advising request will be processed within 5 working days.	N	N/A	* (see note above table)	Continuing consultation.
Environmental Protection Authority (EPA) - NSW	8-06-2023	Email FROM relevant person	EPA - NSW replied to TGS' email sent earlier that day regarding their marine seismic survey within the Otway Basin. EPA advised they deal with pollution issues onshore in NSW only and have no jurisdiction over this project. EPA asked TGS to note in their records so they don't need to contact them when their project is not onshore in NSW.	N	N/A - not relevant, no jurisdiction	N/A	Consultation closed
Environmental Protection Authority (EPA) - NSW	9-06-2023	Email TO relevant person	TGS replied to EPA-NSW's email received the day before advising they have no jurisdiction over their project. TGS thanked EPA and advised they will make a note and remove EPA from their consultation program.	N	N/A	N/A	Consultation closed
Environmental Protection Authority (EPA) - South Australia	28-04-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 05/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Environmental Protection Authority (EPA) - Tasmania	16-02-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Environmental Protection Authority (EPA) - Tasmania	19-04-2023	Email TO relevant person	TGS emailed EPA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked EPA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Environmental Protection Authority (EPA) - Tasmania	28-04-2023	Email TO relevant person	TGS replied to EPA email received earlier that day thanking them for persisting and to let TGS know if they needed more information to help determine who might be most relevant contact within the EPA.	N	N/A	* (see note above table)	Continuing consultation.
Environmental Protection Authority (EPA) - Tasmania	28-04-2023	Email FROM relevant person	EPA emailed TGS to apologise for delay in response advising they haven't been able to find an interested party within the EPA and would be searching further a field.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Environmental Protection Authority (EPA) - Victoria	28-04-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 05/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Environmental Protection Authority (EPA) - Victoria	28-04-2023	Email FROM relevant person	Automated reply from EPA confirming EPA received their email and the customer service team will review for the appropriate action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Environmental Protection Authority (EPA) - Victoria	28-04-2023	Email FROM relevant person	EPA emailed TGS advising they have passed on their email sent earlier that day to the South West Victoria Regional Team with reference [reference provided].	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Environmental Protection Authority (EPA) - Victoria	1-05-2023	Email TO relevant person	TGS replied to EPA's email received 28/04/2023 thanking them for their help and confirming they will wait to hear back from someone in their SW Victoria Regional team.	N	N/A	* (see note above table)	Continuing consultation.
Environmental Protection Authority (EPA) - Victoria	1-05-2023	Email FROM relevant person	Automated reply from EPA confirming EPA received their email and the customer service team will review for the appropriate action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
First Nations Legal and Research Services (Victoria)	06-10-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures . TGS/Schlumberger explained that from published online resources that Native Title Consent Determination Areas are registered for the following Traditional Owner Groups: • Gunditjmara and Eastern Maar (Victoria); and • Eastern Maar (Victoria). TGS/Schlumberger asked the stakeholder to give advice as to whether the relevant Sea Country Groups are the same as the Native Title groups.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
First Nations Legal and Research Services (Victoria)	10-10-2022	Email TO relevant person	TGS/SLB thanked the stakeholder for forwarding their query.	N	N/A	* (see note above table)	Continuing consultation.
First Nations Legal and Research Services (Victoria)	10-10-2022	Email FROM relevant person	The stakeholder explained that they have forwarded the email and information onto the relevant traditional owner group.	Y - Information Sheet - Area Co-ordinates	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
First Nations Legal and Research Services (Victoria)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
First Nations Legal and Research Services (Victoria)	15-02-2023	Email TO relevant person	TGS acknowledged previous email from FNLRS and forwarding to the Gunditj Mirring Traditional Owners Aboriginal Corporation.	N	N/A	* (see note above table)	Continuing consultation.
First Nations Legal and Research Services (Victoria)	15-02-2023	Email FROM relevant person	FNLRS advised the email previously sent by TGS was forwarded to the Gunditj Mirring Traditional Owners Aboriginal Corporation.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
First Nations Legal and Research Services (Victoria)	5-05-2023	Email TO relevant person	TGS emailed FNLRS to thank them for their help and advise they are liaising directly with Gunditj Mirring Traditional Owners Aboriginal Corporation. TGS asked FNLRS whether they would like to be removed from the TGS consultation program or whether there are other groups they should be contacting.	N	N/A	* (see note above table)	Continuing consultation.
First Nations Legal and Research Services (Victoria)	5-05-2023	Email TO relevant person	TGS emailed a copy of the updated information sheet to FNLRS for their records.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
First Nations Legal and Research Services (Victoria)	5-05-2023	Email FROM relevant person	TGS received an out of office reply to their email sent earlier in the day advising they work Monday to Thursday and will be on leave on 08/05/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
First Nations of the South-East (FNSE)	17-04-2023	Email TO relevant person	TGS received an email from the alternative contact within SANTS they emailed earlier in the day, thanking TGS for their email. SANTS advised this is most likely to be of interest only to the First Nations of the South-East (FNSE) within SA and included the FNSE contact within the email who represents FNSE and is best placed to assist with any engagement including identifying interests or concerns.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
First Nations of the South-East (FNSE)	18-04-2023	Email TO relevant person	TGS emailed FNSE directly stating it would be great to set up a meeting with them next week if possible and asked them to advise when is convenient during the week.	N	N/A	* (see note above table)	Continuing consultation.
First Nations of the South-East (FNSE)	20-04-2023	Phone call TO relevant person	TGS called to follow up on proposed marine seismic survey and email from TGS that included FNSE sent on 17/04/2023,/. However FNSE was not available so TGS left a message to return call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
First Nations of the South-East (FNSE)	21-04-2023	Email TO relevant person	TGS emailed FNSE to follow up on email sent 18/04/2023 and advised they had tried calling FNSE yesterday and left a message. TGS asked FNSE to call them or alternatively TSG can set up an online meeting.	N	N/A	* (see note above table)	Continuing consultation.
First Nations of the South-East (FNSE)	22-05-2023	Email TO relevant person	TGS emailed FNSE to follow up on emails and phone calls from 27/04/2023 regarding their proposed marine seismic survey. TGS said that if FNSE has any input about the proposed survey to advise them before 26/05/2023 so the information can be considered within the development of the environment plan before submitting to NOPSEMA soon. TGS closed their email advising FNSE to contact them if they have any questions or would like any futher detail or reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
First Nations of the South-East (FNSE)	22-05-2023	Email FROM relevant person	FNSE replied to TGS' email sent earlier that day advising the email was provided and instructions were sought and they will continue to seek instructions.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
First Nations of the South-East (FNSE)	22-05-2023	Email TO relevant person	TGS replied to FNSE's email received earlier that day, thanking them.	N	N/A	* (see note above table)	Continuing consultation.
First Nations of the South-East (FNSE)	29-05-2023	Email TO relevant person	TGS emailed FNSE to follow up on their email received 29/05/2023 and whether they had any feedback from FNSE.	N	N/A	* (see note above table)	Continuing consultation.
First Tasmanians Aboriginal Corporation	29-03-2023	Email TO relevant person	TGS emailed FTAC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided by 05/04/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
First Tasmanians Aboriginal Corporation	4-04-2023	Phone call TO relevant person	TGS called FTAC to follow up on their email sent 29/03/2023 regarding their proposed marine seismic survey within the Otway Basin, however there was no answer. TGS left a message to advise they were calling about the proposed marine seismic survey in the Otway Basin and they had sent an email on 29/03/2023 and to call them back (contact details provided).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
First Tasmanians Aboriginal Corporation	11-04-2023	Phone call TO relevant person	TGS called FTAC to follow up on the phone call on 04/04/2023 and their email sent 29/03/2023 regarding their proposed marine seismic survey within the Otway Basin. FTAC confirmed they would available for a meeting before the end of April and asked TGS to follow this call with an email as they were out of the office at the moment and they would get back with a suitable time.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
First Tasmanians Aboriginal Corporation	11-04-2023	Email TO relevant person	TGS called FTAC following phone call earlier that day providing a copy of the original email sent to FTAC 29/03/2023. TGS said to let them know when they are available for a meeting before the end of April and they can set up and online meeting.	N	N/A	* (see note above table)	Continuing consultation.
First Tasmanians Aboriginal Corporation	26-04-2023	Phone call TO relevant person	TGS called FTAC to follow up on previous phone call and email sent on 11/04/2023 and to advise TGS will be visiting Tasmania next week and would FTAC be available for a meeting. FTAC advised they wouldn't be available for a meeting next week but agreed to an online meeting on 27/04/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
First Tasmanians Aboriginal Corporation	27-04-2023	Meeting with relevant person	TGS, SLB and SLR met with FTAC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered a presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with FTAC: - Consultation with other First Nations groups. - Already great concerns with fish and wind farm applications. - There is awareness of issues and impacts to the ocean and wildlife. - Purpose of survey and seismic data. - Community benefits. - TGS' history of fuel spills > no spills and never occured within Australia. - Update on current status of project. TGS aked FTAC if there were any other groups they should be consulting and FTAC suggested several groups and TGS confirmed they are all being consulted with. Refer to Appendix I for detailed meeting minutes.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
First Tasmanians Aboriginal Corporation	16-05-2023	Email TO relevant person	TGS emailed FTAC to provide them with a copy of the minutes and presentation from their meeting held 27/04/2023. TGS also provided links to information as discussed during the meeting. TGS thanked FTAC for meeting with them and advised they will keep them posted as things progress and asked them to get in contact if they have any queries or amendments.	Y - Meeting minutes and copy of presentation	N/A	* (see note above table)	Continuing consultation.
Fisheries Research and Development Corporation (FRDC)	28-04-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 05/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Flinders Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Flinders Council	19-04-2023	Email TO relevant person	TGS emailed FC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked FC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Flinders Council	4-05-2023	Phone call TO relevant person	SLB called FC and explained the call was to ask for feedback on the marine seismic survey proposed for the Otway Basin that TGS recently emailed the council including an information sheet. The Council representative confirmed the email and factsheet had been received and reviewed and there were no comments from council.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Council	10-05-2023	Phone call TO relevant person	SLB called FC to follow up on phone call made 04/05/2023 regarding their marine seismic survey proposed for the Otway Basin. FC asked SLB to resend the information sheet originally sent (19/04/2023) and they would ensure it was forwarded to the relevant department for their feedback.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Council	11-05-2023	Email TO relevant person	SLB emailed FC following phone call with FC yesterday to resend the information sheet about their proposed marine seismic survey within the Otway Basin. SLB advised they would be grateful if they could forward to the relevant department within FC as discussed. SLB explained the reason for consultation is as part of the Environmental Plan also discussed during their previous phone call.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Flinders Council	17-05-2023	Phone call TO relevant person	SLB called FC reception who advised the best contact within FC regarding the proposed marine seismic survey and tried to transfer SLB to them, however there was no answer. FC confirmed they would follow up with that person and ask them to call SLB back.	N	N/A	* (see note above table)	Continuing consultation.
Flinders Council	17-05-2023	Phone call FROM relevant person	FC returned SLB's call from earlier that day regarding the proposed marine seismic survey within the Otway Basin. Both FC and SLB discussed the information sheet that had been sent through and FC commented they did not have any concerns or issues with the project plan however they would need management to approve before sending a formal response to TGS tomorrow.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Flinders Council	24-05-2023	Phone call TO relevant person	SLB called FC to follow up on previous communications regarding their proposed marine seismic survey within the Otway Basin and whether they had any feedback regarding the survey. FC reception advised they did not know the status of the information review or the persons that SLB had spoken to at FC. FC asked SLB to resend the information and they would action as soon as possible.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Council	24-05-2023	Email TO relevant person	SLB emailed FC following phone call with FC earlier that day. SLB advised the original email was sent 11/05/2023 and they called the council 17/05/2023 and spoke to two FC employees of which one person advised they would provide formal feedback via email at the end of the previous week. SLB asked FC if they could please ask their team again for a response. SLB included the previously send email from 11/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Flinders Council	26-05-2023	Phone call TO relevant person	SLB called FC to follow up on previous communications regarding their proposed marine seismic survey within the Otway Basin and whether they had any feedback regarding the survey. FC queried why they were being consulted (given the distance). SLB explained how they have modelled the potential environment that may be affected (EMBA) from the worst-cased scenario - fuel spill release, which triggered SLB to contact FC. FC said they would discuss again and provide a response via email. SLB said they would resend the information sheet.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Council	30-05-2023	Phone call TO relevant person	SLB called FC to follow up on previous communications regarding their marine seismic survey proposed for the Otway Basin. SLB was the advised the person they wish to speak to is unavailable but the matter was being followed up and a response would be coming in the next day or two.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Council	1-06-2023	Phone call TO relevant person	SLB called FC to follow up on phone call made 30/05/2023 regarding their marine seismic survey proposed for the Otway Basin. The receptionist advised SLB the person they wish to speak to is unavailable but they would check the status and feedback should come through following that.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Council	1-06-2023	Phone call FROM relevant person	FC returned SLB's call from earlier that day regarding the proposed marine seismic survey within the Otway Basin. SLB explained the reason for their earlier call. FC confirmed they had received the information and had some questions and in general Council is opposed to all offshore oil and gas related activities and council would respond to that effect. FC enquired why they were receiving so many requests [from various proponents] for feedback recently. SLB explained the change in consultation requirements for developing an environmental plan, including that all feedback would be logged and presented to the regulator. SLB also advised the environment plan would be released for public consultation where any interested party can provide feedback or request further information. FC thanked SLB for the information and advised a formal written response will be provided to SLB tomorrow (02/06/2023).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Island Aboriginal Association Inc	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Flinders Island Aboriginal Association Inc	14-03-2023	Phone call TO relevant person	SLB called FIAAI to follow up on factsheet emailed 16/02/2023.FIAAI advised they would review the factsheet and respond with any questions need. SLB thanked FIAAI for their help and confirmed they would call back in the future if no further feedback was received.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Island Aboriginal Association Inc	20-03-2023	Phone call TO relevant person	SLB called FIAAI to follow up on previous phone call on 14/03/2023. FIAAI asked SLB to resend the factsheet to generic email and they would review with the Department Lead (name provided) and get back to SLB. SLB advised the factsheet had been revised to better explain marine seismic surveying, the potential effects on the environment and measures SLB/TGS have in place to limit the potential effects and also the safeguards that will be in place should an unexpected event occur. FIAAI mentioned that due to the distance of the survey from their area of interest, there would not likely be any concerns and promised to get back to SLB following their review.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Island Aboriginal Association Inc	20-03-2023	Email TO relevant person	SLB emailed FIAAI following phone call earlier in the day. SLB provided the latest version of the factsheet for discussing with the FIAAI department lead. SLB advised they had developed the attached version for their planned marine seismic survey (MSS) which is more concise and provides an explanation of why SLB/TGS are wanting to consult with FIAAI in regards to the planned project. SLB also advised the factsheet highlights the aspects of the MSS and it's potential effects on the environment, the measures SLB/TGS will have in place to limit the potential effects and also the safeguards they will have in place should an unexpected event occur. SLB commented that from the previous phone call, they understand the survey plans may not be of concern to them due to the location of the survey and commented it would be great if they could provide that feedback once they have discussed so SLB can close out on the consultation register.	Y - Updated factsheet	N/A	* (see note above table)	Continuing consultation.
Flinders Island Aboriginal Association Inc	28-03-2023	Email TO relevant person	SLB emailed FIAAI following up on phone call and last email sent to FIAAI on 20/03/2023. SLB asked to please let them know if they require further information or a call or meeting to discuss further.	N	N/A	* (see note above table)	Continuing consultation.
Flinders Island Aboriginal Association Inc	3-04-2023	Email TO relevant person	SLB emailed FIAAI following previous unanswered emails and phone call, asking if they had any feedback regarding the proposed seismic survey and whether they had reviewed the information with the other FIAAI representative (name provided). SLB advised they would be happy to arrange an online meeting to update them if this is their preference. SLB included the previous two emails sent to FIAAI within the email and information sheet again.	Y - Updated factsheet	N/A	* (see note above table)	Continuing consultation.
Flinders Island Aboriginal Association Inc	5-04-2023	Phone call TO relevant person	SLB called FIAAI to follow up on phone call from 20/03/2023 and subsequent emails to FIAAI. FIAAI advised she has not yet received feedback from their CEO. FIAAI wanted to clarify the project because of other communications they had received from another group about another marine seismic survey. SLB confirmed there was a second marine seismic survey in planning stages by another company and confirmed this survey was the TGS survey. FIAAI promised to follow up with their CEO again and get back to SLB. SLB suggested an online meeting with the CEO might be a good next event and FIAAI confirmed they would pass this on to the CEO.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Island Aboriginal Association Inc	11-04-2023	Email TO relevant person	SLB replied to FIAAI's emailed received earlier in the day, thanking FIAAI for their email. SLB said they just want to confirm they understand FIAAI's message and asked if FIAAI mean they do not have any remaining concerns or questions regarding the planned marine seismic survey and that no further consultation from SLB is needed going forward. SLB closed the email with thanks.	N	N/A	* (see note above table)	Continuing consultation.
Flinders Island Aboriginal Association Inc	11-04-2023	Email FROM relevant person	FIAAI emailed SLB to advise their CEO has advised they do not wish to partake in the survey, closing the email with many thanks.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Flinders Island Aboriginal Association Inc	14-04-2023	Email TO relevant person	SLB emailed FIAAI to follow up on email sent 11/04/2023 asking for clarification on their email received 11/04/2023.	N	N/A	* (see note above table)	Continuing consultation.
Flinders Island Aboriginal Association Inc	20-04-2023	Phone call TO relevant person	SLB called FIAAI to follow up on email received 11/04/2023 to clarify the intent of that email. FIAAI confirmed the wording indicated that no further consultation was needed. SLB thanked FIAAI for their clarity and asked them to reach out if anything came to mind in the future or other concerns came to light.	N	N/A - no further consultation needed.	N/A	Consultation closed
Flinders Ports	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Flinders Ports	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Flinders Ports	19-04-2023	Email TO relevant person	TGS emailed FP to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked FP to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Flinders Ports	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Friends of the Bay of Islands Coastal Park	20-03-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 27/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Friends of the Bay of Islands Coastal Park	22-03-2023	Email FROM relevant person	FBICP replied to TGS' email sent 20/03/2023 advising that email has been forwarded on to the [individual] members FOBICP as the friends do not have a consensual statement on Seismic offshore survey. FBICP advised they have requested anyone who has an [opinion] to contact TGS with their feedback.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Friends of the Bay of Islands Coastal Park	26-03-2023	Email FROM relevant person	A FBICP member replied to TGS email sent to FBICP on 20/03/2023 thanking for the opportunity to engage with them. The FBICP member advised they are opposed to fossil gas exploration based on concerns relating to climate change and provided several references in support of their concerns.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Friends of the Bay of Islands Coastal Park	26-03-2023	Email FROM relevant person	A FBICP member replied to TGS email sent to FBICP on 20/03/2023 with two main concerns about the proposed activity: - lack of transparency and unproven effectiveness of TGS' environmental risk mitigation measures (on their website); and -TGS is a major participant in immoral and unethical supply-chain of fossil fuels. The member continued with the following questions: 1. Is the environmental impact assessment for this project publicly available. 2. If this is not publicly available, why not. 3. May the member be sent a copy. 4. TGS' website says 'the company employs protected species observers as a risk mitigation measure - what do these PSOs do. 5. Why are these observations not conducted by independent researchers. 6. Given the PSOs are employed by TGS, how can public be sure the data they collect is true, valid and not prejudiced because of their employment relationship to TGS. 7. Upon which scientific evidence are you basing risk mitigation measures and how do you know those measures are effective.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Friends of the Bay of Islands Coastal Park	27-03-2023	Email FROM relevant person	The FBICP President replied to TGS email sent to FBICP on 20/03/2023 advising they were replying as an individual as the group hadn't had time to meet. The FBICP member advised they are opposed to any future seismic activity occurring in the oceans to explore for opportunities for new or additional fossil fuel developments, citing the latest IPPC report on Climate Change (March 2023).	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Friends of the Bay of Islands Coastal Park	31-03-2023	Email TO relevant person	TGS replied to a FBICP member that emailed TGS on 26/03/2023 with concerns pertaining to climate change. TGS thanked the member for taking the time to correspond with TGS regarding the survey and acknowledged their issues and concerns raised. TGS clarified this proposed EP is to carry out a seismic survey to obtain geological data and does not include exploring for or producing oil or gas. TGS continued that would be a separate process and EP submitted by another proponent, requiring its own consultation and environmental assessments, independent of TGS. TGS added they are committed to protecting the environment, while operating in an environmentally sustainable and responsible manner and is why TGS wants to ensure their EP considers all environmental sensitivities and values within and around the survey area. TGS provided a link to their environmental policy and information about what TGS is doing to address climate risks and opportunities. TGS closed the email by thanking the FBICP member again for their time and feedback.	N	N/A	* (see note above table)	Continuing consultation.
Friends of the Bay of Islands Coastal Park	31-03-2023	Email TO relevant person	TGS replied to a FBICP member that emailed TGS on 27/03/2023 providing their comments to support their adamant opposition to any further seismic activity occurring in the oceans to explore opportunities for fossil fuel developments. TGS thanked the member for taking the time to correspond with TGS regarding the survey and acknowledged their issues and concerns raised. TGS clarified this proposed EP is to carry out a seismic survey to obtain geological data and does not include exploring for or producing oil or gas. TGS continued that would be a separate process and EP submitted by another proponent, requiring its own consultation and environmental assessments, independent of TGS. TGS added they are committed to protecting the environment, while operating in an environmentally sustainable and responsible manner and is why TGS wants to ensure their EP considers all environmental sensitivities and values within and around the survey area. TGS provided a link to their environmental policy and information about what TGS is doing to address climate risks and opportunities. TGS closed the email by thanking the FBICP member again for their time and feedback.	N	N/A	* (see note above table)	Continuing consultation.
Friends of the Bay of Islands Coastal Park	31-03-2023	Email FROM relevant person	The FBICP member that emailed on 26/03/2023 responded to TGS' response emailed 31/03/2023 thanking them for their response. The member commented that TGS does not mention what the purpose for the surveying is and they assumed it was for gas development but see it may be for offshore wind energy development and it makes a difference to them what industry the surveying is for. They do not wish to engage further if it would benefit a fossil fuel client and the fact further stages of development requiring consultation is semantics. The member asked whether TGS is able to disclose their client. The member's closing comments related to the staff of some consultancies being mindful of their own reputational risks and have decided not to work for fossil fuel companies as clients anymore, suggesting this is something for TGS to consider and advised everyone's corporate and personal decisions matter in this climate emergency.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Friends of the Bay of Islands Coastal Park	3-04-2023	Email TO relevant person	TGS replied to the FBICP member that emailed TGS on 26/03/2023 detailing specific concerns with the marine seismic survey. TGS answered their queries, including: - risk mitigation information is provided within the EP; - the EP is not yet available but will be publicly available once submitted to NOPSEMA); - what MFOs do; and - risk mitigation measures are based on scientific evidence (provided within the EP). TGS also acknowledged their issues and concerns and clarified this proposed EP is to carry out a seismic survey to obtain geological data and does not include exploring for or producing oil or gas. TGS continued that would be a separate process and EP submitted by another proponent, requiring its own consultation and environmental assessments, independent of TGS. TGS added they are committed to protecting the environment, while operating in an environmentally sustainable and responsible manner and is why TGS wants to ensure their EP considers all environmental sensitivities and values within and around the survey area. TGS thanked them for their time and feedback.	N	N/A	* (see note above table)	Continuing consultation.
George Town Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
George Town Council	19-04-2023	Email TO relevant person	TGS emailed GTC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked GTC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Glenelg Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Glenelg Shire Council	19-04-2023	Email TO relevant person	TGS emailed GSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked GSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Glenelg Shire Council	9-05-2023	Phone call TO relevant person	TGS called GSC to follow up on email TGS sent 19/04/2023 regarding their proposed marine seismic survey within the Otway Basin. The GSC receptionist advised TGS they had not received the email and asked TGS to resend (address provided - same address that original email was sent to).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Glenelg Shire Council	9-05-2023	Email TO relevant person	TGS emailed GSC following their phone call earlier that day. TGS provided the email TGS sent to GSC 19/04/2023 including the information sheet and asked GSC to advise if they would like to discuss further or would like further information. TGS said alternatively to advise if their survey is not of interest or not relevant to GSC and they will remove them from their consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Glenelg Shire Council	15-05-2023	Phone call TO relevant person	TGS called GSC to follow up on phone call and email TGS sent 09/05/2023 regarding their proposed marine seismic survey within the Otway Basin. The GSC receptionist advised the person they need to speak to was away and took TGS' contact details for them to call TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Glenelg Shire Council	17-05-2023	Email TO relevant person	TGS forwarded email to an alternative representative within GSC as suggested by another relevant person regarding their proposed marine seismic survey. TGS advised GSC they are visiting Portland 30/05/2023 and said it would be great to meet with them prior to that to provide details about their proposed survey. TGS closed the email by saying they understand thre representative is out of the office today but will try call them later in the week. TGS also provided their contact details.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Glenelg Shire Council	18-05-2023	Email TO relevant person	TGS replied to GSC's email received earlier that day thanking them for their time and offered for them to get in contact if they wan any additional information in the furture.	N	N/A	* (see note above table)	Continuing consultation.
Glenelg Shire Council	18-05-2023	Email FROM relevant person	GSC replied to TGS' email sent the day before regarding their marine seismic survey thanking TGS for their notification and request to provide feedback. GSC advised they have no interests or activities that may be affected by the proposed survey. GSC added they understand the requirements to undertake this type of survey and at this time do not have any concerns or comments about the propose MSS as long as it follows and abides by Commonwealth laws as they are the governing body in this instance. GSC closed their email by advising that to their knowledge they have not been notified or received any requests or concerns from general public on the proposed and if they do receive any concerns or comments will direct them to TGS or other appropriate channels for feedback.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Great Australian Bight Right Whale Study	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Great Australian Bight Right Whale Study	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Great Australian Bight Right Whale Study	16-02-2023	Email FROM relevant person	Reply to previous email acknowledging email and advised will prepare a response prior to 16/03/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Great Australian Bight Right Whale Study	20-02-2023	Email TO relevant person	Acknowledgement email for previous email sent from GABRWS (received 16/02/2023) and offer to contact TGS if any queries in the meantime.	N	N/A	* (see note above table)	Continuing consultation.
Great Australian Bight Right Whale Study	19-04-2023	Email TO relevant person	TGS emailed GABRWS to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked GABRWS to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Great Australian Bight Right Whale Study	10-05-2023	Email TO relevant person	TGS emailed GABRWS as suggested by the Blue Whale Study Inc representative regarding control measures for southern right whales. TGS said they would really appreciate a meeting to discuss the measures and would provide an overview of the proposed survey. TGS provided an information sheet for more details.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Great Australian Bight Right Whale Study	26-05-2023	Email TO relevant person	TGS emailed GABRWS to follow up on their email sent 10/05/2023 regarding their proposed marine seismic survey within the Otway Basin. TGS said they would appreciate a meeting if they have time to discuss.	N	N/A	* (see note above table)	Continuing consultation.
Great Australian Bight Right Whale Study	26-05-2023	Email FROM relevant person	GABRWS replied to TGS' emailed sent earlier that day thanking them for their email and apologising for the delayed response. GABRWS advised they are available for a meeting either 30/05/2023, 05/06/2023 or 06/06/2023 and they look forward to discussing further.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Great Australian Bight Right Whale Study	29-05-2023	Email TO relevant person	TGS replied to GABRWS' email received earlier that day asking if 8:30 am tomorrow morning would suit. TGS suggested they can send GABRWS an online meeting invite otherwise it will be later in the week.	N	N/A	* (see note above table)	Continuing consultation.
Great Australian Bight Right Whale Study	30-05-2023	Email FROM relevant person	GABRWS replied to TGS' email suggesting 05/06/2023 for a meeting to discuss the proposed marine seismic survey.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Great Australian Bight Right Whale Study	1-06-2023	Email TO relevant person	TGS emailed GABRWS to confirm a meeitng next week and will contact again soon about a suitable time.	N	N/A	* (see note above table)	Continuing consultation.
Great Australian Bight Right Whale Study	6-06-2023	Email TO relevant person	TGS emailed GABRWS and the DCCEEW to arrange a meeting to discuss their proposed marine mammal control measures for their proposed marine seismic survey providing suggested meeting date and time.	N	N/A	* (see note above table)	Continuing consultation.
Great Australian Bight Right Whale Study	6-06-2023	Email FROM relevant person	GABRWS replied to TGS' email sent earlier that day to coordinate a meeting to discuss propose marine mammal control measures for their marine seismic survey. GABRWS said they were unavailable for the suggested date and time but asked TGS to send through the proposed mitigation measures for review or engage the services of [consultant name] to advise on suitable mitigation measures to manage the potential impacts from their proposed activities. GABRWS advised while they are a relevant person for stakeholder engagement given their longterm research of southern right whales in southern Australia, they do not have the resources to prepare a detailed response. GABRWS advised their lack of response does not reflect the lack of concerns around TGS' activities and the potential impact to threatened and endangered marine fauna, their interests and activities for conducting long term research on southern right whales to inform national and international species assessments. GABRWS asked TGS to send through a scope of work for a proposal for [consultant name] to provide professional advice, if they'd like.	N	N/A	* (see note above table)	Continuing consultation.
Great Australian Bight Right Whale Study	8-06-2023	Email TO relevant person	TGS replied to GABRWS' email received 06/06/2023 asking TGS to send through proposed marine mammal control measures for review. TGS provided a summary of the proposed marine mammal control measures and attached an information sheet to provide an overview of the survey. TGS closed the email by asking GABRWS to contact TGS if they'd like to meet to discuss the control and welcome any feedback they have.	Y - Draft marrine mammal control measures and information sheet.	N/A	* (see note above table)	Continuing consultation.
Gulaga and Biamanga Joint Authority	9-05-2023	Email TO relevant person	TGS emailed GBJA providing information about their proposed marine seismic survey as promised. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from GBJA to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked GBJA to reply and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Gulaga and Biamanga Joint Authority	11-05-2023	Phone call TO relevant person	TGS called GBJA to discuss their proposed marine seismic survey within the Otway Basin. GBJA advised they had not received the email sent 09/05/2023 but provided an alternative email address to forward the information to. GBJA advised they are quite busy this week and asked TGS to call back next week.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gulaga and Biamanga Joint Authority	11-05-2023	Email TO relevant person	TGS emailed GBJA following their phone call earlier that day providing information about their proposed marine seismic survey as promised. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from GBJA to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked GBJA to reply and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Gulaga and Biamanga Joint Authority	15-05-2023	Phone call TO relevant person	TGS called GBJA to discuss their proposed marine seismic survey within the Otway Basin. GBJA advised they had read over the information and recommended she speak to the chairs of both the Gulaga and Biamanga groups to see if their boards would like to mee early June. GBJA said they would get an idea of the information they would request. TGS advised they can arrange an online meeting if preferred.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gulaga and Biamanga Joint Authority	19-05-2023	Email TO relevant person	TGS emailed GBJA following up their phone call 15/05/2023 regarding setting up a meeting with the Gulaga and Biamanga boards and would welcome a meeting early June. TGS asked for GBJA to advise if this would be convenient.	N	N/A	* (see note above table)	Continuing consultation.
Gulaga and Biamanga Joint Authority	24-05-2023	Phone call TO relevant person	TGS called GBJA to arrange a meeting date and time to discuss their proposed marine seismic survey with the Gulaga and Biamanga boards but there was no answer. TGS left a message for GBJA to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gulaga and Biamanga Joint Authority	26-05-2023	Phone call TO relevant person	TGS called GBJA to arrange a meeting date and time to discuss their proposed marine seismic survey with the Gulaga and Biamanga boards but there was no answer. TGS left a message for GBJA to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gulaga and Biamanga Joint Authority	6-06-2023	Email TO relevant person	TGS emailed GBJA advising NOPSEMA has advised they should provide a copy of the attached brochure to help relevant persons provide feedback on the proposed survey, explaining their rights and TGS' obligations through the consultation process. TGS asked GBJA to advise if they have any queries about their consultation program so they can make sure GBJA can actively participate in the process. TGS advised they are about to submit their environmental plan (EP) to NOPSEMA for their completeness check and once accepted as complete will release their EP for public consultation where GBJA has the opportunity to review the draft EP and provide feedback before TGS resubmit to NOPSEMA for their overall assessment. TGS closed the email asking GBJA to call or email if they have any questions or would like additional information. Alternatively to advise if they wish to be removed from the consultation program and TGS will stop sending them communications.	Y - NOPSEMA consultation guideline	N/A	* (see note above table)	Continuing consultation.
Gulaga and Biamanga Joint Authority	6-06-2023	Phone call FROM relevant person	GBJA called following email TGS sent earlier that day asking if it was too late to submit a response regarding TGS' proposed marine seismic survey within the Otway Basin. TGS advised they will submitting their environmental plan mid-June so not too late and TGS will continue consultation following initial EP submission so they can discuss any concerns or queries.	N	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	14-03-2023	Phone call TO relevant person	SLB called GLWAC to follow up on factsheet sent 16/02/2023. GLWAC advised they had reviewed the factsheet and had passed it internally for further comment. GLWAC confirmed they would review again and reply by email to SLB by COB 14/03/2023 if there were any concerns or need for further information regarding the survey. SLB thanked GLWAC for their help and noted they would wait for their email.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	20-03-2023	Phone call TO relevant person	SLB called GLWAC to follow up on their phone call on 14/03/2023. The person whom answered the phone advised the GLWAC representative they were after was not available and to call back tomorrow.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	23-03-2023	Phone call TO relevant person	SLB called GLWAC to follow up on phone call from 20/03/2023.GLWAC advised they had reviewed the information and concluded the project was of no concern to their organisation due to the distant location from Gunaikurnai Lands. GLWAC advised she would respond formally via email today. SLB thanked GLWAC and offered to arrange a meeting if there remained concerns or interest going forward to explain the project and outline sensitivities and adaptive management processes discussed in the EP. GLWAC replied this would not be necessary.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	23-03-2023	Email TO relevant person	SLB replied to GLWAC's email sent earlier in the day advising they look forward to hearing back from GLWAC on Monday.	N	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	23-03-2023	Email FROM relevant person	GLWAC emailed SLB to advise they need to get approval from their CEO for their draft response whom has been offsite and is now held up at a cultural session for all staff. GLWAC advised they would get to SLB on Monday (27/03/2023).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	5-04-2023	Phone call TO relevant person	SLB called GLWAC to follow up on previous emails and phone calls and spoke to reception who advised the previous person they had spoken to was not available today however, would be available tomorrow. SLB explained the previous correspondences and asked if the representative could be left a message to call their mobile tomorrow.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	14-04-2023	Phone call TO relevant person	SLB called GLWAC to follow up on previous emails and phone calls and spoke to reception who advised the previous person they had spoken to was not available but would ask them to call back later today.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	17-04-2023	Phone call TO relevant person	SLB called GLWAC to follow up on previous phone call made 14/04/2023. GLWAC advised they would like to receive a copy of the marine mammal sightings data that may be acquired during the marine seismic survey for their information. SLB confirmed this would be available and asked GLWAC to note this in their formal response via email.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	19-04-2023	Email FROM relevant person	GLWAC emailed SLB following their phone call on 17/04/2023 thanking SLB for respecting Aboriginal Culture and seeking feedback on their proposed seismic survey. GLWAC advised the area of the survey is not within the Gunaikurnai RAP or native title determination area which only extends 200 m offshore. GLWAC continued that no procedural/future act rights are activated under the Native Title Act. GLWAC closed their email advising that while they don't have any legal rights to the area, they would be interested in the data retrieved from the survey and trust SLB will be happy to share.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	19-04-2023	Email TO relevant person	SLB replied to GLWAC's email sent earlier in the day thanking them for confirming their earlier email and confirmed that as discussed, SLB will be compiling the sightings data following the conclusion of the survey as part of the environmental plan close out.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	21-04-2023	Email TO relevant person	SLB emailed GLWAC to advise they may have not been made aware of the potential risk associated with unplanned events (marine fuel discharge from the vessel) and the resulting environment that may be affected (EMBA). SLB attached an updated factsheet which includes this information and they apologised if they had not received earlier. SLB provided details about the modelling and advised it is extremely conservative and a collision with a seismic vessel has never occurred within Australia and possibly the world. SLB continued that the seismic operation is slow moving (7 km/hr) and includes at least two support vessels. SLB also noted notifications will be issued to mariners and they will be providing daily lookahead plans for the following 48 hr period to all those they are consulting as part of the EP. SLB closed the email advising they are happy to discuss the modelling to ease any concerns GLWAC may have. SLB closed the email apologising if this information has not reached them and to let them know if they would like to meet to discuss further.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	5-05-2023	Phone call TO relevant person	SLB called GLWAC to clarify information SLB had emailed earlier about the potential environment that may be affected (EMBA). SLB wanted to ensure GLWAC were aware of the EMBA and explain this is why SLB had consulted them. The GLWAC representative that SLB had spoken with earlier was not available so SLB left a message and requested them to call SLB back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	11-05-2023	Phone call TO relevant person	SLB called GLWAC regarding additional information SLB had sent GLWAC clarifying the EMBA and whether there was any additional feedback. GLWAC confirmed the inforrmation had been received and noted the likelihood of fuel spill occurring was extremely low and rarely occurred. SLB confirmed that was correct and commented on the other control measures employed to avoid a collision. GLWAC advised the factsheet had been sent to their legal department and would be discussed with their CEO and they would respond formally. SLB advised they would follow up with them if they hadn't heard back from them next week.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	18-05-2023	Phone call TO relevant person	SLB called GLWAC to follow up on previous phone call and message left on 11/05/2023 however they were unavailable. SLB left contact details and a message to return their call.	N	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	23-05-2023	Phone call TO relevant person	SLB called GLWAC regarding additional information SLB had sent GLWAC clarifying the EMBA and whether there was any additional feedback from the corporation managment. GLWAC advised they had sought legal advice and were in the process of formalising a response, expected later today or tomorrow. GLWAC asked SLB to call again if they haven't received anything tomorrow. SLB thanked GLWAC for their continued support.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	29-05-2023	Email TO relevant person	SLB emailed GLWAC to follow up on previous correspondence to see if there was anything they would like to share in terms of remaning concerns or information needs regarding their proposed marine seismic survey. SLB said should GLWAC require anything further to please let them know or to resepond to this email.	N	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	30-05-2023	Phone call TO relevant person	SLB called GLWAC to follow up pon previous email sent 29/05/2023 however they were unavailable. SLB left contact details and a message to return their call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	1-06-2023	Phone call TO relevant person	SLB called GLWAC to follow up on phone call made the day before and asked to speak to GLWAC representative however they were unavailable. SLB left contact details and a message to return their call.	N	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	7-06-2023	Phone call TO relevant person	SLB called GLWAC to follow up on previous phone call and message left on 01/06/2023 however they were unavailable. SLB left contact details and a message to return their call.	N	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	8-06-2023	Phone call TO relevant person	SLB called GLWAC to follow up on previous phone call and message left on 07/06/2023 however there was a message advising the office was closed until 12/06/2023. SLB left contact details and a message to return their call.	N	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	12-06-2023	Phone call TO relevant person	SLB called GLWAC to follow up on multiple phone calls made and emails sent earlier regarding their proposed marine seismic survey. GLWAC advised they were waiting for their CEO to responsed but will follow up tomorrow and send feedback to TGS.	N	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	14-06-2023	Phone call TO relevant person	SLB called GLWAC to follow up on call made yesterday to discuss their proposed marine seismic survey, however there was no answer. SLB left a message to call back.	N	N/A	* (see note above table)	Continuing consultation.
Gunaikurnai Land and Waters Aboriginal Corporation RNTBC	14-06-2023	Phone call FROM relevant person	GLWAC called SLB back following their call and message left earlier that day. GLWAC commented that any concerns [regarding survey] are not likely to be listened to and offshore projects seem to proceed regardless. SLB explained the consultation process is designed to uncover all relevant person concerns and trigger update of survey control measures within the environment plan (EP). SLB explained NOPSEMA's process to review the EP and determine if approved or not. GLWAC explained their overriding concern to cultural heritage is if a spill occurred and fuel reached the beaches. SLB outlined the controls proposed to mitigate the risk of a spill occurring and low likelihood of occurrence. GLWAC acknowledged controls however reiterated their concern still remains. GLWAC agreed they would provide this information in an email for SLB's records and thanked SLB for their patience through the process.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Ongoing consultation with GLWAC will be undertaken in accordance with the methods set out in Section 5 to ensure GLWAC have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	10-10-2022	Email FROM relevant person	Email from lawyer (FNLRS) acting for GMTOAC informing TGS that their email is being forwarded to GMTOAC.	Y - Attachment from TGS being forwarded	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	15-02-2023	Email TO relevant person	TGS replied to an email where FNLRS had included the GMTOAC in email as an RP. TGS invited GMTOAC for either an in-person or video meeting.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	15-02-2023	Email FROM relevant person	Automated reply to previous CC email advising reduced working hours until further notice. The email provided an alternative contact address.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	20-02-2023	Email TO relevant person	Forwarded original email forwarded to FNLRS on 15/02/2023 advising changes to survey and providing the updated information sheet.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	14-03-2023	Phone call TO relevant person	SLB called GMTOAC to follow up on email with factsheet sent to them on 20/02/2023 whom advised of the best GMTOAC representative. However that person was out of the office for the day. GMTOAC said they would leave the representative a message that SLB had called and to call SLB back 15/03/2023 to discuss survey further. SLB thanks GMTOAC for their help and noted they would wait for GMTOAC to call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	20-03-2023	Phone call TO relevant person	SLB called GMTOAC to follow up on email with information sent to them on 20/02/2023 and previous phone call on 14/03/2023. GMTOAC advised the person they need to speak to was in a meeting but took SLB's contact details to return call and advised SLB to call back tomorrow.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	21-03-2023	Phone call TO relevant person	SLB called GMTOAC to follow up on previous phone call on 14/03/2023 and subsequent attempts however the GMTOAC representative that SLB needed to speak to was unavailable. SLB left a message to return their call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	21-03-2023	Email TO relevant person	SLB emailed GMTOAC as discussed on the phone earlier that day to provide the latest version of the factsheet to discuss internally. SLB advised the factsheet was more concise and provides: - an explanation of why they were wanting to consult with GMTOAC in regards to the planned project; - aspects of the marine seismic survey; - the potential effects on the environment; - the measures SLB/TGS have in place to limit potential effects; and - safeguards in place should an unexpected event occur. SLB mentioned from the phone call earlier that day, that they understand GMTOAC may prefer an online meeting in the future to update them on the project (potentially April) and they plan to let SLB know their preference. SLB said if GMTOAC do not wish to have an online meeting and they have no concerns with the survey, it would be great if they could provide that feedback to SLB/TGS so SLB can close out in their consultation register.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	21-03-2023	Phone call FROM relevant person	GMTOAC returned SLB's call from earlier that day. After introductions and summary of reason for the call (to discuss the proposed seismic survey), GMTOAC asked SLB if there were other seismic plans in the area as they had received other emails. SLB confirmed there may be interest in the shallow water from other providers. GMTOAC commented they thought they had already commented on the TGS/SLB survey, however would like to discuss further with management. SLB offered to email the latest revised factsheet for use with Traditional Owner groups and GMTOAC ask.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	23-03-2023	Email TO relevant person	SLB thanked GMTOAC for getting back to them, stating they appreciate the volume of requests they must be getting for consultation following the revised consultation guidelines from NOPSEMA released Dec 2022. SLB commented they believe the CGG project may be in shallower water areas offshore Victoria, however uncertain of details as they are not involved in that project. SLB asked GMTOAC if they would prefer for SLB to arrange a quick online meeting to update them on the TGS/SLB Otway 3D project (deepwater), advising they could schedule for next week at their convenience.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	23-03-2023	Email FROM relevant person	GMTOAC replied to SLB's email sent 21/03/2023. GMTOAC apologised for not getting back in touch advising they have so many people engaging with them and they are a little confused about who they have spoken to - having spoken to someone else about seismic surveys. GMTOAC advised they had received correspondence from CGG and asked how this relates to what SLB is doing.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	27-03-2023	Email TO relevant person	SLB emailed GMTOAC to follow up on email sent 23/03/2023. SLB asked whether the GMTOAC representatives they had been speaking with previously would be available for a call some time this week. SLB said they remember GMTOAC advised they had a busy schedule and travel but couldn't remember the details. SLB advised TGS and SLB can make themselves available to suit their calendar. SLB closed the email by thanking GMTOAC.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	28-03-2023	Email TO relevant person	SLB replied to GMTOAC's email earlier that day advising they will wait to hear back from them regarding a suitable meeting time.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	28-03-2023	Email FROM relevant person	GMTOAC responded to SLB's email sent 27/03/2023 advising they were away at the moment and when they return will look to confirm a day for a quick catch up, thinking Thursday morning as next week won't work. GMTOAC closed the email to advise they will be in touch.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	29-03-2023	Email TO relevant person	SLB replied to GMTOAC's email earlier that day just clarifying that 10:00 am was Eastern Standard Time.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	29-03-2023	Phone call TO relevant person	SLB called GMTOAC to confirm meeting proposed in earlier emails. GMTOAC advised they were waiting on confirmation from another attendee and asked for more information on what would be discussed at the meeting. SLB outlined the project presentation material and intention to listen to any concerns GMTOAC may have. GMTOAC explained their corporation represents the traditional owners however to carry out full consultation would require meeting with the full traditional owner group which would be impossible to facilitate. SLB advised the meeting intention was to gather information regarding values and sensitivities if GMTOAC could discuss then SLB/TGS could incorporate in the EP. GMTOAC asked SLB if they had engaged Eastern Maar traditional owners and SLB confirmed they had no success with replies to their emails or phone calls. GMTOAC confirmed they can be very hard to reach. SLB said it would be good to discuss in tomorrow's meeting and GMTOAC said she would confirm the time with their colleague.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	29-03-2023	Text message TO relevant person	SLB texted GMTOAC to ask if the meeting proposed earlier was still on for tomorrow (30/03/2023). GMTOAC replied they were no longer available tomorrow to meet and GMTOAC would respond to SLB in due course.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	29-03-2023	Email FROM relevant person	GMTOAC emailed to ask SLB whether tomorrow (30/03/2023) at 10:00 am would suit for a meeting.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	28-04-2023	Email TO relevant person	SLB emailed GMTOAC thanking them for the call earlier that day to let SLB know the scheduled meeting was to be cancelled/postponed. SLB said they fully understand their work commitments as explained and they look forward to picking up their discussion again in early June when the GMTOAC representatives are available. SLB closed the email advising they will get back in contact in May regarding confirming a date for a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	28-04-2023	Phone call FROM relevant person	GMTOAC called SLB requesting the meeting arranged for today be cancelled or postponed due to excessive workload. GMTOAC explained the next few weeks GMTOAC will be preparing for a Native Titles meeting, in preparation for a court case in May. GMTOAC indicated the earliest availability is early June. SLB thanked GMTOAC for their call and informed them they will be meeting NOPSEMA next week with an update on their ongoing consultation with GMTOAC. SLB also committed to keeping in contact with GMTOAC in the coming weeks to confirm another day for their postponed meeting.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	5-05-2023	Email TO relevant person	SLB emailed GMTOAC asking whether GMTOAC has a date and time available to meet to discuss their proposed marine seismic survey.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	5-05-2023	Email TO relevant person	SLB replied to GMTOAC's email received earlier that day confirming a meeting date and time and advised they would send out a meeting invite to confirm.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	5-05-2023	Email TO relevant person	SLB emailed an online meeting invite to GMTOAC for 06/06/2023 at 10:00 am.	N	N/A	* (see note above table)	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	5-05-2023	Email FROM relevant person	GMTOAC replied to SLB's email sent earlier that day suggesting a meeting date and time 06/06/2023 at 10:00 am.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Gunditj Mirring Traditional Owners Aboriginal Corporation	6-06-2023	Meeting with relevant person	TGS, SLB and SLR met with GMTOAC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries and concerns with GMTOAC: - GMTOAC advised who they represent. - Need to consult with traditional owners and suggested with other proponents in combined session. - Concerns with impacts to whale and kooyang (eel) populations. - Deep rooted and historical connection with the sea country, only expressed by the GMTOAC people. - Purpose and reason for survey. - Impacts on the submerged tangible cultural heritage. - Potential for TGS to engage traditional owners in a training pathway. - Community meeting with other proponents and advice on presentation suitable for that meeting. - Understand reason for oil and gas exploration with global push to decarbonise. - Clarification on relationship with Eastern Maar people. - Unable to define extent of 'sea country'. GMTOAC advised they are in the process of developing guidance material for understanding cultural and historial context that will help explain connections with sea country. TGS discussed the potential for a visit later at the end of the month and will wait to hear from GMTOAC regarding a community meeting with their people. TGS advised they would provide GMTOAC with minutes and copy of presentation. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific claims addressed in the EP are: Purpose of the survey: **Section 1.2** (Purpose and objectives) Effects on marine mammals: **Section 4.5.6** (summary of existing knowledge of marine mammals), **Section 7.1.2.2** (effects of the physical presence of the Seismic Survey to marine mammals), **Section 7.2.2.2.7** (acoustic disturbance effects to marine mammals), **Section 8.3.3.2.5** (effects of a hydrocarbon spill to marine mammals) Cultural effects: **Section 4.6.1** (summary of existing knowledge of Aboriginal Heritage), **Section 8.3.3.3** (potential impacts and risks of hydrocarbon spill on cultural and heritage sites) Ongoing consultation with GMTOAC will be undertaken in accordance with the methods set out in **Section 5** to ensure GMTOAC have had both sufficient information, and sufficient time to engage in the consultation programme. Particular regard will be taken to ensure aspects realting to information provided by GMTOAC regarding cultural and historial context of sea country connections will be discussed. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Gunditj Mirring Traditional Owners Aboriginal Corporation	8-06-2023	Email TO relevant person	TGS emailed GMTOAC minutes and copy of the presentation from their meeting held 06/06/2023 and asked GMTOAC to advise of any amendments or text to be removed. TGS advised they have incorporated their comments and queries within their environmental and consultation planning and will update the environment plan to reflect the information GMTOAC provided. TGS added they look forward to meeting with the Gunditj Mirring people to share information and hear their stories. TGS closed their email thanking GMTOAC for their time and information and will be in contact regarding a vist later this month otherwise to contact TGS if they have any queries or need further information in the meantime.	Y - Meeting minutes and copy of presentation	N/A	* (see note above table)	Continuing consultation.
Huon Valley Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Huon Valley Council	16-02-2023	Email FROM relevant person	Automated repy acknowledging email and advising email will be forwarded to the relevant department for action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Huon Valley Council	19-04-2023	Email to relevant person	TGS emailed HVC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked HVC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Huon Valley Council	19-04-2023	Email FROM relevant person	Automated reply acknowledging email and advising email will be forwarded to the relevant department for action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Huon Valley Council	2-05-2023	Phone call TO relevant person	HVC called HVC to follow up on email TGS sent 19/02/2023 regarding their proposed marine seismic survey within the Otway Basin.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Huon Valley Council	2-05-2023	Email TO relevant person	TGS emailed HVC following phone call earlier that day. TGS said they will be in Hobart this week and would welcome the opportunity to meet with HVC to discuss their proposed offshore marine seismic survey to give a project update and hear if they have any concerns. TGS offered to alternatively set up an online meeting next week or call TGS direct (mobile phone number provided).	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Huon Valley Council	2-05-2023	Email FROM relevant person	Automated reply acknowledging email and advising email will be forwarded to the relevant department for action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Huon Valley Council	4-05-2023	Phone call TO relevant person	TGS called HVC to follow up on emails TGS sent 02/05/2023 regarding their proposed marine seismic survey within the Otway Basin. TGS advised they are contacting relevant councils to see if they had any concerns or needed any further information. HVC advised they need to speak to the Infrastructure and Environment team.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Huon Valley Council	10-05-2023	Phone call TO relevant person	TGS called HVC to follow up on emails and phone calls TGS had sent regarding their proposed marine seismic survey within the Otway Basin. TGS was transferred to the planning team who advised they discussed the proposal and were happy no further action was needed and would like to be removed from the consultation list. TGS asked if HVC could email their position through for their records and HVC confirmed they would send an email.	N	N/A - no further action needed - remove from consultation list	N/A	Consultation closed
Huon Valley Council	15-05-2023	Email TO relevant person	HVC emailed TGS to follow up after their call on 04/05/2023 asking HVC to confirm TGS can remove them from their consultation list.	N	N/A	N/A	Consultation closed
International Fund for Animal Welfare	20-03-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 27/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
International Fund for Animal Welfare	20-03-2023	Email FROM relevant person	Automated reply from IFAW acknowledging email sent to them earlier that day confirming they had received TGS's enquiry and will be in touch as soon as possible (within 2 working days). The email provided their office hours and advised if query was urgent to call their free phone line (details provided) and leave a voice mail message for them to return the call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
International Fund for Animal Welfare	20-03-2023	Email FROM relevant person	IFAW replied to email sent from TGS earlier that day advising that due to capacity they are not able to provide a detailed submission on the project. The email continued that the lack of formal comment should not be taken as an endorsement of the work and for the record, IFAW has significant concerns about the impact of oil and gas exploration on the marine environment, particularly in regards to seismic testing and its harmful impacts on whales. IFAW commented they would like to see the development of quieter alternatives to seismic airguns to reduce underwater noise pollution and a moratorium on any further seismic surveying in Biologically Important Areas at times when whales are present in these areas. IFAW advised TGS to refer to IFAW's submission to the Senate Environment and Communications References Committee Inquiry into the impact of seismic testing on fisheries and the marine environment 2019.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
International Fund for Animal Welfare	27-03-2023	Email TO relevant person	TGS responded to IFAW's response on 20/03/2023 acknowledging their email. TGS said they understand their concerns and advised them they will be implementing a suite of extensive control measures well above the standard regulatory requirements that is based on validated underwater noise modelling by world class experts in this field to avoid any impact or interference on marine mammals, existing marine environment and other users. TGS closed the email by advising IFAW to contact TGS if they have any further questions or if they have capacity.	N	N/A	* (see note above table)	Continuing consultation.
Kangaroo Island Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Kangaroo Island Council	16-02-2023	Email FROM relevant person	Automated reply acknowledging receipt of email and advising the email will be actioned in the normal course of business.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Karadi Aboriginal Corporation (KAC)	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Karadi Aboriginal Corporation (KAC)	14-03-2023	Phone call TO relevant person	TGS called KAC to follow up on the email and factsheet sent to them on 16/02/2023. KAC Reception advised whom the best person would be to speak to (contact details provided) but they were out of the office at that moment. TGS left a message to call them back or send an email when they were back in the office.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Karadi Aboriginal Corporation (KAC)	22-03-2023	Email TO relevant person	TGS emailed KAC to provide them with an updated version of the factsheet which is more concise and provides an explanation of why TGS is wanting to consult with KAC on their planned project. TGS continued the factsheet explains what a marine survey is, what are the potential effects on the environment, the measures TGS has in place to limit the potential effects and safeguards in place should an unexpected event occur. TGS said they would like to meet KAC online to share TGS's plans and whether KAC has any concerns and can arrange an online meeting at their convenience to discuss. TGS closed the email by thanking KAC and advising they look forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Karadi Aboriginal Corporation (KAC)	27-03-2023	Phone call TO relevant person	TGS called KAC to follow up on email sent on 22/03/2023 and the receptionist advised the KAC representative was out of the office. TGS left a message for the representative to call back or send an email when they are back in the office.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Karadi Aboriginal Corporation (KAC)	11-04-2023	Phone call TO relevant person	TGS called KAC to follow up on email sent on 22/03/2023 and there was no answer. TGS left a message for the representative to call back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Karadi Aboriginal Corporation (KAC)	11-04-2023	Email TO relevant person	TGS emailed KAC to follow up on email sent on 22/03/2023 (provided copy of email). TGS advised they would like to meet online with KAC to discuss the proposed marine seismic survey and hear any concerns they may have. TGS suggested they could arrange an online meeting at their convenience to discuss, or they can call them direct (mobile contact details provided). TGS closed the email by thanking KAC.	N	N/A	* (see note above table)	Continuing consultation.
Karadi Aboriginal Corporation (KAC)	11-04-2023	Email FROM relevant person	Automated reply to email TGS sent earlier that day advising out of the office until 26/04/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Karadi Aboriginal Corporation (KAC)	26-04-2023	Phone call TO relevant person	TGS called KAC to follow up on email and information sheet sent to KAC on 22/03/2023 and to set up a meeting next week while TGS will be visiting Tasmania. However the KAC receptionist advised the person TGS has been attempting to liaise with was out of the office. TGS asked if there was an alternative contact. The receptionist suggested emailing the information to the office manager (contact details provided).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Karadi Aboriginal Corporation (KAC)	26-04-2023	Email TO relevant person	TGS emailed the KAC office manager as suggested by the KAC receptionist following a phone call earlier that day. TGS advised they had been trying to liaise with the previous KAC contact regarding their proposed seismic project offshore in the Otway and the receptionist had advised contacting this person. TGS advised KAC they are planning a trip to Tasmania next week and would welcome the opportunity to meet and discuss the project and hear if KAC has any questions or concerns in regards to the project. TGS closed the email thanking KAC.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Karadi Aboriginal Corporation (KAC)	1-05-2023	Phone call TO relevant person	TGS called KAC to follow up on previous correspondence on 26/04/2023. The receptionist advised she had forwarded the information to the person TGS needs to speak to, however that person was not available but will be in the office the following day. TGS agreed to call back the following day.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Karadi Aboriginal Corporation (KAC)	2-05-2023	Email TO relevant person	TGS emailed KAC advising they had called and left a message but following up now with an email. TGS advised they will be in Hobart this week and would be great to get some time with them to give an overview of their project and more importantly understand if they have any concerns.	N	N/A	* (see note above table)	Continuing consultation.
Karadi Aboriginal Corporation (KAC)	3-05-2023	Email FROM relevant person	KAC replied to TGS' email sent 02/05/2023 and apologised they don't have time to meet as they have been away and will be away for the next two weeks.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Karadi Aboriginal Corporation (KAC)	22-05-2023	Phone call TO relevant person	TGS called KAC following up from their email received 03/05/2023 but the KAC representative was not available. TGS left a message for that person to return their call and advised they would send a follow up email.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Karadi Aboriginal Corporation (KAC)	23-05-2023	Email TO relevant person	TGS emailed KAC to follow up on phone call and message left the day before. TGS said that if KAC has any input about their proposed marine seismic survey to let TGS know before 26/05/2023 so they can consider the information within the development of their environmental plan before submitting to NOPSEMA for their review. TGS also advised there is an opportunity to provide feedback during the public consultation period where the EP will be released to the wider public for review. TGS closed the email asking them to reply to the email if they had any questions or would like further detail.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Karadi Aboriginal Corporation (KAC)	6-06-2023	Email TO relevant person	TGS emailed KAC advising NOPSEMA has advised they should provide a copy of the attached brochure to help relevant persons provide feedback on the proposed survey, explaining their rights and TGS' obligations through the consultation process. TGS asked KAC to advise if they have any queries about their consultation program so they can make sure KAC can actively participate in the process. TGS advised they are about to submit their environmental plan (EP) to NOPSEMA for their completeness check and once accepted as complete will release their EP for public consultation where KAC has the opportunity to reveiw the draft EP and provide feedback before TGS resubmit to NOPSEMA for their overall assessment. TGS closed the email asking KAC to call or email if they have any questions or would like additional information. Alternatively to advise if they wish to be removed from the consultation program and TGS will stop sending them communications.	Y - NOPSEMA consultation guideline	N/A	* (see note above table)	Continuing consultation.
King Island Boat Club	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
King Island Boat Club	17-05-2022	Email FROM relevant person	Email undeliverable to one stakeholder email account.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
King Island Boat Club	13-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
King Island Boat Club	15-02-2023	Email TO relevant person	Forwarded email TGS sent the day before to ensure they received the email as there were IT issues where KIBC may not have been able to reply. TGS closed their email asking for all comments and replies to be provided to TGS by 16/03/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
King Island Boat Club	16-02-2023	Email FROM relevant person	Automated email advising the email TGS sent 15/02/2023 was undeliverable.	N	N/A	* (see note above table)	Continuing consultation.
King Island Landcare (Tasmania)	15-05-2023	Email TO relevant person	TGS emailed KIL seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from KIL to ensure they know about their interests or activities that may be impacted by the survey. TGS asked for KIL to provide comments and replies by 16/05/2023 but to advise if they need more time.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
King Island Landcare (Tasmania)	26-05-2023	Email TO relevant person	TGS emailed KIL to see if they had any feedback regarding their proposed marine seismic survey within the Otway Basin, including the email sent 15/05/2023. TGS advised CBIAA the were finalising their environment plan (EP) before submitting to NOPSEMA for their completion check and once NOPSEMA advise the EP is complete it will be released for public consultation and hope to incorporate any feedback KIL may have from a meeting prior to their submission. TGS continued that if they are not available for a meeting and they have information they would like TGS to consider to let them know before 02/06/2023, alternatively they can provide feedback during the public consultation period.	N	N/A	* (see note above table)	Continuing consultation.
King Island Landcare (Tasmania)	26-05-2023	Email TO relevant person	TGS emailed KIL again with a correction to their email sent earlier that day. TGS' discussed a meeting this week but it is Friday already so no time to meet. TGS advised their previous email should have read that if KIL has any information they would like TGS to consider to let them know before 02/06/2023.	N	N/A	* (see note above table)	Continuing consultation.
King Island Shire Council	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
King Island Shire Council	13-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation
King Island Shire Council	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
King Island Shire Council	19-04-2023	Email TO relevant person	TGS emailed KISC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked KISC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
King Island Shire Council	19-04-2023	Email FROM relevant person	Automated reply to TGS' email sent earlier that day advising a reply within 72 hours.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
King Island Shire Council	4-05-2023	Phone call TO relevant person	SLB called KISC to fllow up on email sent 19/04/2023 regarding the proposed marine seismic survey within the Otway Basin. The council representative confirmed the factsheet had been reviewed and KISC would like to request a meeting for 09/05/2023 to discuss further. KISC asked SLB to please send a meeting invite.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
King Island Shire Council	8-05-2023	Email TO relevant person	TGS emailed meeting invite to KISC for 09/05/2023.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
King Island Shire Council	9-05-2023	Meeting with relevant person	TGS, SLB and SLR met with KISC to discuss their proposed marine seismic survey. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with KISC: - Other oil and gas proponents operating in the same area at the same time. - Challenging site conditions and concern any issues will impact the King Island west coast, e.g. drift waste, spill etc. - Two key industries that may be impacted include potted southern rock lobster and king crab and kelp harvesting (collected washed up on the shore). - Community consultation - propose a community meeting, KISC willing to assist with arranging. - King Island has a growing tourism industry and their pristine image is important. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
King Island Shire Council	24-05-2023	Email TO relevant person	TGS emailed KISC to provide the minutes from their meeting held on 09/05/2023 asking for KISC to advise of any amendments or redacting. TGS thanked KISC for their feedback and advised they have incorporated their comments and queries in to the environmental plan (EP). TGS continued they intend to submit to NOPSEMA soon for their completeness check of which is followed by a public consultaiton period. TGS advised they hope to hold a community information session during that period to provide the community with an overview of the project and discuss any concerns or queries the community may have. TGS advised they will incorporate any community feedback in to the EP before submitted to NOPSEMA for their environmental assessment. TGS closed the email they will be in contact regarding a community session.	Y - Meeting minutes	N/A	* (see note above table)	Continuing consultation.
King Island Shire Council	25-05-2023	Email FROM relevant person	KISC replied to TGS' email sent 24/05/2023 advising they are happy with the meeting minutes. KISC also mentioned [another proponent] had just visited King Island and held a community meeting and provided learnings from that meeting to assist TGS with their future meeting.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
King Island Shire Council	26-05-2023	Email TO relevant person	TGS replied to KISC's email received the day before, thanking KISC for their information and advising TGS will be in contact once they finalise a date for the community meeting.	N	N/A	* (see note above table)	Continuing consultation.
King Island Shire Council	31-05-2023	Email FROM relevant person	KISC replied to TGS' email sent earlier that day confirming 26/06/2023 for a community session would be best.	N	N/A	* (see note above table)	Continuing consultation.
King Island Shire Council	13-06-2023	Email TO relevant person	TGS replied to KISC's email received 31/05/2023 advising they are confirmed for 26/06/2023 for their community session at the King Island club. TGS closed email by thanking KISC for their help.	N	N/A	* (see note above table)	Continuing consultation.
King Island Tourism	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
King Island Tourism	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
King Island Tourism	19-04-2023	Email TO relevant person	TGS emailed KIT to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked KIT to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
King Island Tourism	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Kingborough Council	27-04-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 05/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Kingborough Council	27-04-2023	Email FROM relevant person	Automated response to TGS' email sent earlier that day advising TGS their email had been received and will be forwarded to the appropriate Council officer for actioning.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Kingborough Council	2-05-2023	Phone call TO relevant person	TGS called to follow up on email sent to KC on 27/04/2023 regarding their proposed marine seismic survey within the Otway Basin to see if they were available to meet. KC reception asked for the information to be resent to them [contact details provided] and they would get back to TGS.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Kingborough Council	2-05-2023	Email TO relevant person	TGS emailed KC following their phone call earlier that day providing the information sheet on their proposed marine seismic survey in the Otway Basin. TGS continued as discussed, they will be in Hobart later in the week and welcome the opportunity to meet to discuss the project and hear if they have any questions or concerns. TGS closed the email by saying alternatively they could arrange an online meeting or they can call TGS direct (contact phone number provided).	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Kingborough Council	3-05-2023	Email FROM relevant person	KC replied to TGS' email sent 02/05/2023 thanking them for their email and advising it has been referred to the appropriate council officer for consideration.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Kingborough Council	4-05-2023	Email FROM relevant person	KC replied to TGS' email sent 02/05/2023 advising they have read the information and don't see it is relevant to the work they do in Kingborough managing urban waterways. KC asked to be advised if TGS think the project will have a negative impact on any waterway in Kingborough, otherwise they do not want to be further engaged in the project as they do not have the resources to spread that far from their core work.	N	N/A	* (see note above table)	Continuing consultation.
Latrobe Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Latrobe Council	16-02-2023	Email FROM relevant person	Automated reply email confiming the email had been received and allocated to the appropriate department for action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Lia Pootah Aboriginal Corporation	29-03-2023	Email TO relevant person	TGS emailed LPAC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided by 05/04/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Lia Pootah Aboriginal Corporation	4-04-2023	Phone call TO relevant person	TGS called LPAC to follow up on their email sent 29/03/2023 regarding their proposed marine seismic survey within the Otway Basin, however there was no answer but a message provided an alternative contact number. TGS called the alternative number and spoke to a LPAC representative whom advised they hadn't received the email and provided another email address (details provided) for TGS to send to and they can print off the information and provide to them, as they had been having trouble with their server. LPAC advised they would be in contact in a couple of days.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Lia Pootah Aboriginal Corporation	4-04-2023	Email TO relevant person	TGS forwarded the original email sent to LPAC on 29/03/2023 with information sheet about their proposed marine seismic survey within the Otway Basin, to an alternative email addressed obtained from LPAC earlier in the day.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Lia Pootah Aboriginal Corporation	11-04-2023	Phone call TO relevant person	TGS called LPAC to follow up on their phone call and email from 04/04/2023 regarding their proposed marine seismic survey within the Otway Basin. LPAC confirmed they received the information emailed on 04/04/2023 and would like a meeting but will not be online as not everyone is online so will need to be in person. LPAC closed the call advising they would let TGS know the meeting date and time but proposing next week.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Lia Pootah Aboriginal Corporation	17-04-2023	Phone call TO relevant person	TGS called LPAC to follow up on their phone call on 11/04/2023. LPAC advised they have not been able to organise a meeting due to illness. LPAC advised to call back next week when they should have been able to organise a meeting time by then.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Lia Pootah Aboriginal Corporation	24-04-2023	Phone call TO relevant person	TGS called LPAC to follow up on previous phone call on 17/04/2023 as suggested by LPAC. TGS advised they would be visiting Tasmania next week and asked if they would be available to meet. LPAC suggested a meeting on 05/05/2023 at 7 pm would work for them at TGS' hotel as LPAC didn't have any internet access. TGS said they would confirm a location with LPAC before their meeting on 05/05/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Lia Pootah Aboriginal Corporation	27-04-2023	Message TO relevant person	TGS text messaged LPAC to confirm a meeting with them on 05/05/2023 at 7:00 pm at [location] in Hobart.	N	N/A	* (see note above table)	Continuing consultation.
Lia Pootah Aboriginal Corporation	27-04-2023	Message FROM relevant person	LPAC replied to TGS' text message sent earlier that day confirming meeting date, time and venue and advised they'd let everyone know.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Lia Pootah Aboriginal Corporation	2-05-2023	Message conversation with relevant person	LPAC text messaged TGS advising they have two peopl for the online meeting so far. TGS asked LPAC if they will come in person with others dialing in to meeting. LPAC answered yes and have three so far.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Lia Pootah Aboriginal Corporation	3-05-2023	Email TO relevant person	TGS emailed an online meeting invite to another LPAC representative to attend the evening of 05/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Lia Pootah Aboriginal Corporation	3-05-2023	Message conversation with relevant person	TGS text messaged an online meeting invitation to another LPAC representative to attend the evening of 05/05/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Lia Pootah Aboriginal Corporation	5-05-2023	Meeting with relevant person	TGS, SLR and SLB met with LPAC to provide information about the proposed survey, to identify any potential impacts to LPAC's functions, interests or activities and discuss any queries LPAC has with the proposed survey. The meeting's key comments and queries included: - Particular concern around impacts to fish, southern right whales (existing cultural link), plankton, krill, - Environmental plan development - process, purpose etc. - Control measures TGS proposes to protect marine species from harm. - Underwater sound modelling. - Fuel oil spill modelling to identify EMBA. - Various levels of other acoustic emissions, e.g. vocalising whales, commercial shipping etc. - Future use of data by oil and gas companies. - Fuel oil spill response. - Seismic survey use for archaeological information. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Impacts to sensitive ecological receptors (fish, southern right whales, plankton, krill): **Section 7.1.2** (physical presence of the seismic vessel and equipment), **Section 7.2.2** (acoustic disturbance), **Section 7.3.2** (permissible waste discharges), **Section 7.5.2** (artificial light emissions), **Section 8.1.2** (IMS), **Section 8.3.3 & 8.4.2** (hydrocarbon spill), **Section 8.5.2** (accidental release of hazardous/non-hazardous materials). Environmental plan development process: **Section 2** (environmental management framework), **Section 6** (impact assessment and risk assessment methodology) Control measures: **Section 7.1.5** (physical presence of the seismic vessel and equipment), **Section 7.2.5** (acoustic disturbance), **Section 7.3.4** (permissible waste discharge), **Section 7.4.4** (atmospheric emissions), **Section 7.5.4** (artificial light), **Section 8.1.5** (IMS), **Section 8.2.5** (streamer loss), **Section 8.3.4 & 8.4.4** (hydrocarbon spill), **Section 8.5.4** (accidental release of hazardous/non-hazardous materials). Underwater noise modelling / acoustic disturbance: **Section 7.2** and subsections therein Fuel oil spill modelling: **Section 8.3.2** (oil spill trajectory modelling) Fuel oil spill response: **Section 10.10** (Oil Pollution Emergency Plan) Remaining concerns will be subject to ongoing consultation. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects. Other aspects regarding use of data in relation to the Oil and Gas Industry are outside the scope of the NOPSEMA regulations for the purpose of this EP.	Continuing consultation.
Lia Pootah Aboriginal Corporation	16-05-2023	Email TO relevant person	TGS emailed LPAC to provide minutes and a copy of the presentation from meeting held 05/05/2023. TGS also provided a copy of the underwater acoustic modelling report and literature references as discussed during the meeting. TGS also included a link to a research project for the impacts of seismic surveying on the coral reef environment. TGS thanked LPAC for meeting with them and advised they will keep them updated as things progress, otherwise asked them to get in contact if they have any amendments or queries.	Y - Meeting minutes, copy of presentation and literature reference, underwater acoustic modelling report, publication references	N/A	* (see note above table)	Continuing consultation.
Lia Pootah Aboriginal Corporation	16-05-2023	Email FROM relevant person	Automated email advising TGS email sent earlier that day to one of the recipients was underliverable.	N	N/A	* (see note above table)	Continuing consultation.
Lia Pootah Aboriginal Corporation	25-05-2023	Letter TO relevant person	TGS posted a registered letter to LPAC providing information emailed to them on 16/05/2023 including minutes, copy of presentation and information discussed during a meeting held with LPAC on 05/05/2023.	Y - Meeting minutes, copy of presentation and literature reference, underwater acoustic modelling report, publication references	N/A	* (see note above table)	Continuing consultation.
Marine and Safety Tasmania (MAST)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Marine and Safety Tasmania (MAST)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Marine and Safety Tasmania (MAST)	19-04-2023	Email TO relevant person	TGS emailed MAST to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked MAST to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Marine and Safety Tasmania (MAST)	1-05-2023	Email FROM relevant person	MAST replied to TGS' email sent 19/04/2023 thanking TGS for contaciting MAST in relation to their seismic survey within the Otway Basin and apologised for the slow response. MAST advised that as the drilling occurs within the Commonwealth waters, then MAST has no direct involvement in activities occurring within this area. MAST continued that TGS' correspondence indicates the Hydrographic Office will release Notice to Mariners, however MAST would like to also be kept in form of the more general nature of when activities will be taking place then they can issue a local Tasmanian Notice to Mariners relating to the activity, which may assist inform recreational and fishing vessels in the area of activities taking place.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Marine and Safety Tasmania (MAST)	8-05-2023	Email TO relevant person	TGS' replied to MAST's email received 08/05/2023 thanking them for their response. TGS clarified they are proposing to carry out a marine seismic survey not drilling (as referred to in their previous email). TGS advised they have noted their comment and appreciate their assistance with issuing a local Tasmanian Notice to Mariners to inform recreational and fishing vessels in the area of the activity. TGS also confirmed they would keep MAST on their consultation list to keep them updated.	N	N/A	* (see note above table)	Continuing consultation.
Marine Conservation Program	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Marine Mammal Foundation	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Marine Mammal Foundation	19-04-2023	Email TO relevant person	TGS emailed MMF to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked MMF to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Marine Mammal Foundation	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
MD Australian Oceanographic Services Pty Ltd	12-08-2022	Email FROM relevant person	The stakeholder expressed an interest in providing Fisheries Liaison Services for the planned Otway Basin Survey, and went on to detail relevant credentials.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
MD Australian Oceanographic Services Pty Ltd	18-08-2022	Email TO relevant person	TGS/Schlumberger explained that they are engaging with the fishing industry via various fishing industry associations, and the process is not yet advanced enough as to be planning specific surveys. TGS/Schlumberger requested the stakeholder send though further information on projects where they have provided fisheries liaison and MFO services.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
MD Australian Oceanographic Services Pty Ltd	23-08-2022	Email FROM relevant person	The stakeholder attached their CV to provide further information on past experience as requested by TGS/Schlumberger.	Y - Stakeholder CV	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
melythina tiakana warrana Aboriginal Corporation	4-05-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS explained they are identifying potential relevant persons by those that may be impacted by their worst case scenario for their unplanned activities (release of fuel from a collision). TGS asked MTWAC to advise if they'd like to discuss further or would like further or more information, providing an offer to arrange an online meeting, or alternatively to let them know if the survey is not of interest or relevant to them and they will remove them from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
melythina tiakana warrana Aboriginal Corporation	11-05-2023	Phone call TO relevant person	TGS called MTWAC to follow up email sent 04/05/2023 regarding their proposed marine seismic survey within the Otway Basin and there was no answer. TGS left a message advising they were following up on their email sent 04/05/2023 and asked them to call TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
melythina tiakana warrana Aboriginal Corporation	15-05-2023	Phone call TO relevant person	TGS called MTWAC to follow up emails sent 04/05/2023 and phone call and message left 11/05/2023 regarding their proposed marine seismic survey within the Otway Basin and there was no answer. TGS left a message advising purpose of their call and asked them to call TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
melythina tiakana warrana Aboriginal Corporation	22-05-2023	Phone call TO relevant person	TGS called MTWAC to follow up email sent 04/05/2023 regarding their proposed marine seismic survey within the Otway Basin and there was no answer. TGS left a message advising they were following up on their email sent 04/05/2023 and asked them to call TGS back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
melythina tiakana warrana Aboriginal Corporation	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
melythina tiakana warrana Aboriginal Corporation	25-05-2023	Email TO relevant person	TGS replied to MTWAC's email received earlier that day thanking them for their email. TGS closed their email asking MTWAC to let TGS know if they want to set up a call or meeting online and they can arrange that.	N	N/A	* (see note above table)	Continuing consultation.
melythina tiakana warrana Aboriginal Corporation	25-05-2023	Email FROM relevant person	MTWAC replied to TGS' email sent 22/05/2023 advising they'd forwarded the information to the relevant people but had not received any comments. MTWAC advised their organisation is focused on the NE of Tasmania as their priority, however they would ask the others once more if any comments. MTWAC asked if the timeline for comments could be extended as they are fully voluntary and their board members are either working or have significant commitments. MTWAC apologised for nor returning TGS' calls.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
melythina tiakana warrana Aboriginal Corporation	6-06-2023	Email TO relevant person	TGS emailed MTWAC advising NOPSEMA has advised they should provide a copy of the attached brochure to help relevant persons provide feedback on the proposed survey, explaining their rights and TGS' obligations through the consultation process. TGS asked MTWAC to advise if they have any queries about their consultation program so they can make sure MTWAC can actively participate in the process. TGS advised they are about to submit their environmental plan (EP) to NOPSEMA for their completeness check and once accepted as complete will release their EP for public consultation where MTWAC has the opportunity to reveiw the draft EP and provide feedback before TGS resubmit to NOPSEMA for their overall assessment. TGS closed the email asking MTWAC to call or email if they have any questions or would like additional information. Alternatively to advise if they wish to be removed from the consultation program and TGS will stop sending them communications.	Y - NOPSEMA consultation guideline	N/A	* (see note above table)	Continuing consultation.
Merrimans Local Aboriginal Land Council	12-04-2023	Email TO relevant person	TGS emailed MLALC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback by 19/04/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Merrimans Local Aboriginal Land Council	20-04-2023	Phone call TO relevant person	TGS called MLALC to follow up email sent to MLALC on 12/04/2023. TGS spoke to the receptionist who advised everyone was at a meeting but to call back after 2 pm and speak to the acting CEO (name provided). TGS called back at 2:30 pm but the receptionist advised the acting CEO would call back and took contact details.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Merrimans Local Aboriginal Land Council	21-04-2023	Email TO relevant person	TGS emailed MLALC to follow up on the email sent 12/04/2023 and message left with MLALC receptionist on 20/04/2023. TGS said they would really like to get some time online with MLALC to discuss their proposed marine seismic survey and hear if MLALC has any concerns. TGS advised they could arrange an online meeting at MLALC's convenience to discuss or TGS offered their mobile contact details for a phone call. TGS closed the email thanking MLALC.	N	N/A	* (see note above table)	Continuing consultation.
Merrimans Local Aboriginal Land Council	3-05-2023	Email TO relevant person	TGS emailed online meeting invite to MLALC for 09/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Merrimans Local Aboriginal Land Council	3-05-2023	Email TO relevant person	TGS emailed MLALC to ask if possible to change previously scheduled meeting to either 10 or 11/05/2023 as one of their team is not available.	N	N/A	* (see note above table)	Continuing consultation.
Merrimans Local Aboriginal Land Council	8-05-2023	Email TO relevant person	TGS emailed MLALC advising they look forward to meeting with them tomorrow.	N	N/A	* (see note above table)	Continuing consultation.
Merrimans Local Aboriginal Land Council	8-05-2023	Email TO relevant person	TGS replied to MLALC's email received earlier that day confirming their meeting tomorrow was at 11:00 am.	N	N/A	* (see note above table)	Continuing consultation.
Merrimans Local Aboriginal Land Council	8-05-2023	Email FROM relevant person	MLALC replied to TGS' email sent earlier that day asking what time the meeting was tomorrow.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Merrimans Local Aboriginal Land Council	8-05-2023	Email FROM relevant person	MLALC replied to TGS' email sent earlier that day thanking TGS for confirming the meeting time.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Merrimans Local Aboriginal Land Council	9-05-2023	Meeting with relevant person	TGS, SLB and SLR met with MLALC to discuss their proposed marine seismic survey. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with MLALC: - Discussed the EMBA triggering consultation with MLALC but low likelihood of fuel release occurring, guides consultation. - Best way to consult would be to go out to the people. - Need to speak to the people that know the water. - Important to discuss with MLALC board - TGS to arrange a meeting with the Board 17/05/2023. MLALC provided contact details for several other groups that may be interested in project. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Merrimans Local Aboriginal Land Council	9-05-2023	Email TO relevant person	TGS emailed MLALC a meeting invite for 17/05/2023 to meet with the MLALC Board.	N	N/A	* (see note above table)	Continuing consultation.
Merrimans Local Aboriginal Land Council	17-05-2023	Email TO relevant person	TGS emailed MLALC to remind them of the meeting scheduled for today to discuss their proposed marine seismic survey with the MLALC Board.	N	N/A	* (see note above table)	Continuing consultation.
Merrimans Local Aboriginal Land Council	17-05-2023	Meeting with relevant person	TGS, SLB and SLR arranged a meeting with MLALC Board but no one from MLALC arrived so the meeting was cancelled.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Merrimans Local Aboriginal Land Council	24-05-2023	Email TO relevant person	TGS emailed MLALC to provide minutes and copy of presentation from meeting held 09/05/2023. TGS asked MLALC to advise if any amendments of text needs removing. TGS said they appreciate their time and information they shared with TGS asked if there was another opportunity to meet with their Board over the next week. TGS advised they are finalising their EP before submitting to NOPSEMA mid-June, following that their EP will be released for public consultaiton. TGS commented would be good to incorporate any feedback from the wider MLALC group may have from a meeting prior to submitting their EP, however if they are not available but still have information they would like TGS to consider to please let TGS know before 31/05/2023. Alternatively MLALC can provide feedback during the public consultation period.	Y - Meeting minutes and copy of presentation	N/A	* (see note above table)	Continuing consultation.
Mineral Resources Tasmania (MRT), Department of State Growth	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Mineral Resources Tasmania (MRT), Department of State Growth	14-02-2023	Email FROM relevant person	MRT advised they do not presently have any functions or activities in the area that may be affected but would like to receive 48 hour look ahead plans. MRT also advised appears to be an error with the TGS email account.	N	Stakeholder has provided information and/or requested additional information. Would like 48 hour lookahead plans sent to them. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Mineral Resources Tasmania (MRT), Department of State Growth	14-02-2023	Email TO relevant person	Reply to MRT thanking them for their response and advising a note has been made to ensure they receive 48 hours look ahead plans once survey underway and acknowledging them for informing TGS of email account error.	N	N/A	* (see note above table)	Continuing consultation.
Mineral Resources Tasmania (MRT), Department of State Growth	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Mornington Peninsula Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Mornington Peninsula Shire Council	16-02-2023	Email FROM relevant person	Automated reply email acknowledging email and advising email will be forwarded to relevant department for response.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Mornington Peninsula Shire Council	3-05-2023	Email TO relevant person	TGS emailed MPSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked MPSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Mornington Peninsula Shire Council	3-05-2023	Email FROM relevant person	Automated reply email acknowledging email and advising email will be forwarded to relevant department for response.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Mornington Peninsula Shire Council	8-05-2023	Email TO relevant person	TGS replied to MPSC's email received earlier that day thanking them for their reply. TGS advised they have noted their comments and confirmed MPSC will remain on the project's consultation list.	N	N/A	* (see note above table)	Continuing consultation.
Mornington Peninsula Shire Council	8-05-2023	Email FROM relevant person	MPSC replied to TGS' email sent 03/05/2023 following up on their proposed marine seismic survey. MPSC thanked TGS for reaching out and the updated information sheet which has been added to their records. MPSC said they have reviewed the information sheet and don't consider a formal submission necessary given the proposed location of the survey within the Otway Basin and considerable distance from their municipality. MPSC closed their email advising they still appreciate being kept in the loop on the project and to not remove them from the consultation list.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	24-04-2023	Email TO relevant person	TGS emailed MSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked MSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	24-04-2023	Email TO relevant person	TGS replied to MSC's email received earlier that day with meeting date and time suggestions confirming Friday 28/04/2023 at 2 pm would suit and advised they would send a meeting invite.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	24-04-2023	Email TO relevant person	TGS emailed an online meeting invite to MSC for 28/04/2023 at 2:00 pm.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	24-04-2023	Email FROM relevant person	Automated reply from MSC thanking TGS for contacting MSC and advising the email sent earlier that day has been referred to the appropriate officer for action.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Moyne Shire Council	24-04-2023	Email FROM relevant person	MSC replied to TGS' email sent earlier that day apologising for not getting back sooner. MSC asked to set up an online meeting either 27/04/2023 at 10:00 or 28/04/2023 at 10:00 am or 2:00 pm.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	28-04-2023	Meeting with relevant person	TGS, SLB and SLR met with MSC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered a presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries and concerns with MSC: - Other activities occurring within their area planned for the same time. - Whale feeding and migration. - Impacts of acoustic disturbance on fish. - NOPSEMA expertise for assessing the environment plan (EP). - Monitoring carried out during the surveying. - Current status of EP and release for public review. - Community engagement > expect community meetings. TGS asked if they could suggest other groups they should be consulting with and MSC advised they can assist with this. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Effects to marine mammals: Sections 7.2.2.3.6 and 7.2.2.4.2 (Acoustic imapcts to marine mammals with control measures specific for marine mammals listed in Table 84),and Section 8.3.3.2.5 (effects of a hydrocarbon spill to marine mammals). Effects of acoustic disturbance on fish: Section 7.2 and subsections therein (**Section 7.2.2.1** (Noise effect criteria, and **Section 7.2.2.3.2** effects of acoustic deisturbance to bony fish). Monitoring carried out during the surveying: **Section 10.6** (reporting requirements, including **Section 10.6.3** Reportable and Recordable Incident Reporting). Other activities occurring within the same area: **Section 9** (Cumualtive Effects). NOPSEMA processes: **Section 2** (Legislative Framework, including **Section 2.3** Relevant NOPSEMA Guidance Documents). Consultation and community engagement: Section 5 (Relevant Persons Consultation). Ongoing consultation with MSC will be undertaken in accordance with the methods set out in Section 5 to ensure MSC have had both sufficient information, and sufficient time to engage in the consultation programme.	Continuing consultation.
Moyne Shire Council	9-05-2023	Email FROM relevant person	MSC emailed TGS following up on meeting 28/04/2023 where there was a suggestion for TGS to provide MSC with a list of relevant persons they were intending on consulting with in the Moyne to allow MSC to identify any others for TGS. MSC also commented that TGS would consider holding online or in-person information sessions. MSC offered to chat by phone.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	10-05-2023	Email TO relevant person	TGS replied to MSC's emailed received 09/05/2023 confirming would be good to chat and to let TGS know when they are available.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	12-05-2023	Email TO relevant person	TGS replied to MSC's email received earlier that day thanking them for their phone conversation earlier and will update MSC with their plans for meetings next week.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	12-05-2023	Email FROM relevant person	MSC emailed TGS providing an article for TGS records printed in the Warrnambool Standard regarding marine seismic surveys.	Y - Newspaper article	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	16-05-2023	Email TO relevant person	TGS emailed MSC the minutes to their meeting held on 28/04/2023 for their review and record.	Y - Meeting minutes	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	17-05-2023	Email FROM relevant person	MSC replied to TGS' email sent the day before thanking TGS and advised of another company holding community information sessions. MSC asked TGS whether TGS was planning to carry out community information sharing.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	17-05-2023	Email FROM relevant person	MSC emailed TGS advising their councillors have requested briefings from companies involved in the seismic programs currently being proposed for the Otway Basin and therefore invited TGS to attend a session (in-person or online) on 20/06/2023 to provide information to councillors, the Executive Management Team and Energy Projects Team regarding their Otway Basin marine seismic survey. MSC advised they will let TGS know of the time once it has been confirmed and will email a placeholder invite. MSC closed the email advising they will call Friday to discuss.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	17-05-2023	Email FROM relevant person	MSC emailed a placeholder invite to TGS for councillor meeting on 20/06/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	17-05-2023	Email FROM relevant person	MSC emailed TGS providing information to assist with arranging a community session planned for Port Fairy.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	18-05-2023	Email TO relevant person	TGS replied to MSC's email from the day before in regards to planning a community session at Port Fairy.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	18-05-2023	Email TO relevant person	TGS replied to MSC's email received earlier that day confirming the details of the Port Fairy community session for 6-7 pm on 29/05/2023 at (location provided). TGS provided a copy of the advertisement scheduled for the local newspaper confirming all of the session details.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	18-05-2023	Email FROM relevant person	MSC replied to TGS' email sent earlier that day regarding arrangements for community session at Port Fairy.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	22-05-2023	Email TO relevant person	TGS emailed MSC asking if MSC would be available to discuss the session with the councillors scheduled for later in the month with them and asked if MSC was available 30/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	24-05-2023	Email TO relevant person	TGS replied to MSC's email received earlier that day regarding a meeting on 29/05/2023 suggesting a venue.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	24-05-2023	Email FROM relevant person	MSC replied to TGS' email sent 22/05/2023 about a possible meeting on 30/05/2023 and advised they were not available but could meet before the community session in Port Fairy on 29/05/2023.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	24-05-2023	Email FROM relevant person	MSC emailed TGS to confirm they can meet on 29/05/2023 (location and time provided) and advised they will send TGS a meeting invite.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	24-05-2023	Email FROM relevant person	MSC emailed an online meeting invitation for 29/05/2023 (general catch-up).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	30-05-2023	Email FROM relevant person	MSC emailed an online meeting invitation for 20/06/2023 (councillor briefing).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Moyne Shire Council	30-05-2023	Email FROM relevant person	MSC emailed TGS following meeting on 29/05/2023 to provide TGS with a link to MSC's energy project web pages.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	2-06-2023	Email FROM relevant person	MSC emailed TGS to advise that all presenters at the 20/06/2023 Council briefing provide a copy of their presentation by 13/06/2023 and to confirm presenters by middle of next week.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	2-06-2023	Email TO relevant person	TGS acknowledged MSC's email received earlier that day.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	6-06-2023	Email TO relevant person	TGS acknowledged MSC's email received on 30/05/2023 providing information following their meeting on 29/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	8-06-2023	Email FROM relevant person	MSC emailed TGS to confirm who from TGS will be presenting at the Council briefing on 20/06/2023.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	8-06-2023	Email TO relevant person	TGS replied to MSC's email received earlier that day confirming who from TGS will be presenting at the Councillor's briefing and advised they will provide their presentation to them 13/06/2023.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	8-06-2023	Email TO relevant person	TGS emailed MSC providing minutes from their meeting on 29/05/2023 at Port Fairy for their record and review. TGS asked MSC to advise of any changes.	Y - Meeting minutes from 29/05/2023 meeting.	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	8-06-2023	Email FROM relevant person	MSC replied to TGS' email sent earlier that day advising of changes to the 29/05/2023 meeting minutes and requested a copy of the updated version for their records.	Y - Amended meeting minutes	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	8-06-2023	Email TO relevant person	TGS provided MSC with the amended meeting minutes from meeting in Port Fairy on 29/05/2023.	Y - Amended meeting minutes	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	13-06-2023	Email TO relevant person	TGS provided MSC with a copy of the presentation prepared for their meeting with MSC councillors 20/06/2023. TGS asked MSC to advise if they need to include or remove any information.	Y - Prepared presentation (project overview)	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	14-06-2023	Email FROM relevant person	MSC replied to TGS' email sent the day before advising TGS to leave the slides regarding seismic surveying in the presentation. MSC advised another proponent is presenting on the same day but they will be discussing exploration drilling.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	14-06-2023	Email TO relevant person	MSC emailed TGS a meeting invited for 20/06/2023.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	16-06-2023	Email FROM relevant person	MSC emailed TGS to advise MSC has discussed the updated meeting notes from their meeting 29/05/2023 and requested the detailed minutes be kept confidential.	N	N/A	* (see note above table)	Continuing consultation.
Moyne Shire Council	16-06-2023	Email TO relevant person	TGS replied to MSC's email receive earlier that day advising they have noted and actioned their request from that email.	N	N/A	* (see note above table)	Continuing consultation.
National Native Title Tribunal	14-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
National Native Title Tribunal	06-10-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures TGS/Schlumberger explained that from published online resources that Native Title Consent Determination Areas are registered for the following Traditional Owner Groups: • Ngarrindjeri and Others (South Australia); • First Nations of the South East (South Australia); • Gunditjmara and Eastern Maar (Victoria); and • Eastern Maar (Victoria). TGS/Schlumberger asked the stakeholder to confirm if any Determinations or groups exist for Tasmania or King Island. They also asked the stakeholder to give advice as to whether the relevant Sea Country Groups are the same as the Native Title groups.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
National Native Title Tribunal	6-10-2022	Email TO relevant person	TGS thanks NNTT for their email input dated 6 Oct 2023.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
National Native Title Tribunal	06-10-2022	Email FROM relevant person	The stakeholder explained that the existence or otherwise of native title is quite separate to matters relating to Aboriginal cultural heritage or the identifying of traditional owner groups for areas not under a current native title determination or application. The stakeholder also gave contact details for relevant Native Title Representative Bodies.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
National Native Title Tribunal	6-10-2022	Email FROM relevant person	Automatic email informing that correspondence will be forwarded to the appropriate team.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
National Native Title Tribunal	6-10-2022	Email FROM relevant person	Reply to TGS email dated 6-Oct-2022. Advice regarding contacting relevant Native Title Representative Bodies.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
National Offshore Petroleum Titles Administrator	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
National Offshore Petroleum Titles Administrator	16-02-2023	Email FROM relevant person	Automated reply acknowledging email has been received.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
National Parks and Wildlife Services South Australia (Marine Parks)	30-05-2023	Online enquiry form submitted	TGS submitted an online enquiry regarding their proposed marine seismic survey within the Otway Basin advising they are seeking to engage with NPWSSA as a potentially relevant person. TGS advised they would like to know whether they have any interests or activities that may be affected by the proposed survey. TGS advised they are finalising their EP before submitting to NOPSEMA for their completion check and would be great to include any feedback NPWSSA has. TGS also advised they have a factsheet with more informtion and if they provide contact details they will send to them, alternatively they can call TGS to discuss any queries or arrange an online meeting to discuss further.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
New South Wales Aboriginal Land Council	29-03-2023	Email TO relevant person	TGS emailed NSWALC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS asked if NSWALC could advise the name of groups TGS may need to speak to in the lower NSW area to refine the list of who they contact, closing the email by advising any information would be very much appreciated.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
New South Wales Aboriginal Land Council	4-04-2023	Phone call TO relevant person	TGS called NSWALC to follow up on email sent 29/03/2023 with information about their proposed marine seismic survey within the Otway Basin and spoke to a NSWALC representative whom advised they would look at the email and forward to the appropriate person and get back to TGS.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
New South Wales Aboriginal Land Council	11-04-2023	Email FROM relevant person	NSWALC emailed TGS providing the names, contact details and location of the various land councils within NSW.	Y - Location map and link to contact details	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
New South Wales Aboriginal Land Council	11-04-2023	Phone call TO relevant person	TGS called NSWALC to follow up on phone call from 04/04/2023. NSWALC found the email and said they would send a map and link to the different land councils and TGS had any trouble contacting them, they can help out with contacts.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
New South Wales Aboriginal Land Council	11-04-2023	Email TO relevant person	TGS replied to NSWALC's email received earlier that day thanking them for their email and information.	N	N/A	* (see note above table)	Continuing consultation.
New South Wales Aboriginal Land Council	12-04-2023	Email TO relevant person	TGS emailed NSWALC again thanking them for their past assistance with identifying land councils within lower coastal NSW. TGS advised they identified the key relevant land councils and most of the contact details except: - Bodalla Local Aboriginal Land Council; and - Wagonga Local Aboriginal Land Council. TGS asked NSWALC if they had contact details either of these land councils.	N	N/A	* (see note above table)	Continuing consultation.
New South Wales Aboriginal Land Council	20-04-2023	Email TO relevant person	TGS emailed NSWALC to follow up on email sent 12/04/2023 regarding contact details for two traditional owner groups within NSW. TGS also asked for contact details for a third traditional owner group, as phone number was not in service.	N	N/A	* (see note above table)	Continuing consultation.
New South Wales Aboriginal Land Council	27-04-2023	Phone call TO relevant person	TGS called NSWALC to follow up on email sent 20/04/2023 requesting contact details for Wagonga and Bodalla aboriginal land councils however there was no answer. TGS left a message for NSWALC to return their call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
New South Wales Aboriginal Land Council	1-05-2023	Phone call TO relevant person	TGS called NSWALC to follow up on previous emails and phone calls regarding their proposed marine seismic survey within the Otway Basin and obtaining contact details for Wagonga and Bodalla Aboriginal Land Councils. TGS left a message to return their call.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
New South Wales National Parks	9-05-2023	Email TO relevant person	TGS emailed NSWNP seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from NSWNP to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked NSWNP to reply and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
New South Wales National Parks	29-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 02/06/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	14-03-2023	Phone call TO relevant person	TGS called NREC to follow up email sent to NREC on 16/02/2023 regarding the proposed Otway 3D Seismic Survey and was provided this NREC representative's name and email address as the best person to contact regarding the survey.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	14-03-2023	Email TO relevant person	TGS emailed the NREC representative contact details provided by the NREC receptionist obtained from a phone call earlier in the day. TGS attached the factsheet and advised this had been emailed last month to the admin email address and they plan to send out a shorter version in the coming days. TGS explained they hoped the factsheet would prompt discussions with them regarding any concerns they may have regarding the proposed survey. TGS asked if NREC could let them know if they have time to discuss (phone call or online meeting) to present the survey to them and concluded the email by stating they look forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	22-03-2023	Email TO relevant person	TGS emailed NREC to provide them with an updated version of the factsheet which is more concise and provides an explanation of why TGS is wanting to consult with NREC on their planned project. TGS continued the factsheet explains what a marine survey is, what are the potential effects on the environment, the measures TGS has in place to limit the potential effects and safeguards in place should an unexpected event occur. TGS said they would like to meet NREC online to share TGS's plans and whether NREC has any concerns and can arrange an online meeting at their convenience to discuss. TGS closed the email by thanking NREC and advising they look forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	27-03-2023	Phone call TO relevant person	TGS called to follow up on email sent to NREC on 22/03/2023. The NREC representative advised the original contact that was provided to TGS was not the correct person and provided an alternative contact.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	27-03-2023	Email TO relevant person	TGS emailed NREC to provide information (including factsheet) about their marine seismic survey proposed for Otway Basin. TGS advised the NREC contact they had been provided their contact details from a phone call earlier that day to the NREC office. TGS advised they would really like to get some time online with them to hear about their plans and more importantly they would like to hear if they have any concerns. TGS advised they could arrange an online meeting at their convenience to discuss. TGS closed the email by thanking NREC and advising they look forward to hearing back from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	11-04-2023	Email TO relevant person	TGS emailed NREC to follow up email sent 27/03/2023 regarding their proposed marine seismic survey within the Otway Basin. TGS advised they would like to meet NREC online to discuss the proposed survey and hear any concerns they may have. TGS suggested they could arrange an online meeting at their convenience to discuss, or they can call them direct (mobile contact details provided). TGS closed the email by thanking NREC.	N	N/A	* (see note above table)	Continuing consultation.
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	17-04-2023	Phone call TO relevant person	TGS called NREC to follow up on previous correspondence but there was no answer.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	26-04-2023	Phone call TO relevant person	TGS called NREC to follow up on previous correspondence and the receptionist advised the person TGS had been trying to contact was not available. The receptionist confirmed this person was the best person to speak to and they would try find a phone number to contact them direct as they didn't have one. The receptionist also suggested they contact another person within NREC (contact details provided).	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Ngarrindjeri Aboriginal Corporation RNTBC Ngarrindjeri Ruwe Empowered Communities (NREC)	26-04-2023	Email TO relevant person	TGS emailed an alternative contact within NREC which the NREC receptionist suggested during a phone call TGS made to NREC earlier that day. TGS advised they were following up on an email TGS sent a couple of weeks ago regarding their proposed Otway 3D seismic survey. TGS advised they had spoken to the NREC receptionist who provided the alternative contact and had attached the information sheet detailing information about the survey. TGS said they would really like to meet NREC online to discuss the proposed survey and hear any concerns they may have. TGS suggested they could arrange an online meeting at their convenience to discuss.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
NTS Corp	25-05-2023	Email TO relevant person	TGS emailed NTSCORP seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from NTSCORP to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked NTSCORP to reply before 02/06/2023 and advise if they would like to discuss further or would like more information.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
NTS Corp	6-06-2023	Phone call TO relevant person	TGS called NTSC to follow up on email TGS sent 25/05/2023 regarding their proposed marine seismic survey and the person they needed to speak to was not available and they were having trouble with the email. TGS said they would resend the email.	N	N/A	* (see note above table)	Continuing consultation.
NTS Corp	6-06-2023	Email TO relevant person	TGS emailed NTSC following phone call made earlier that day forwarding original email TGS sent on 25/05/2023 regarding their proposed marine seismic survey within the Otway Basin. TGS explained they contacted NTSC based on a recommendation from another relevant person. TGS closed their email thanking NTSC for their help.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
NTS Corp	13-06-2023	Phone call TO relevant person	TGS called NTSC to follow up on email TGS sent 06/06/2023 regarding their proposed marine seismic survey. NTSC asked TGS to forward email again to a different address and they would pass on to the appropriate person. TGS confirmed they would forward the email to the new NTSC address.	N	N/A	* (see note above table)	Continuing consultation.
NTS Corp	13-06-2023	Email TO relevant person	TGS emailed NTSC following phone call made earlier that day regarding their proposed marine seismic survey. TGS included previous correspondence TGS sent to NTSC within email and provided information sheet. TGS closed the email asking NTSC to let TGS know if they would like additional information or a meeting to discuss further (contact details provided).	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
NTS Corp	14-06-2023	Email FROM relevant person	NTSC replied to TGS' email sent the day before thanking TGS for following up on the information. NTSC advised they have referred the information to their South Coast native title applicant to consider. NTSC asked TGS to allow traditional owners 14 days to consider the potential impacts to their country and decide whether comment is necessary (comment provided by 28/06/2023).	N	N/A	* (see note above table)	Continuing consultation.
NTS Corp	15-06-2023	Email TO relevant person	TGS replied to NTSC's email received the day before. TGS confirmed they can allow 14 days for traditional owners to consider the potential impactrs of their proposed survey on their country and decide whether a comment is necessary. TGS attached a copy of a brochure to help relevant persons provide feedback on the proposed survey, explaining their rights and TGS' obligations through the consultation process. TGS asked NTSC to advise if they have any queries about their consultation program so they can make sure NTSC can actively participate in the process. TGS advised they are about to submit their environmental plan (EP) to NOPSEMA for their completeness check and once accepted as complete will release their EP for public consultation where NTSC has the opportunity to reveiw the draft EP and provide feedback before TGS resubmit to NOPSEMA for their overall assessment. TGS closed the email asking NTSC to call or email if they have any questions or would like additional information. Alternatively to advise if they wish to be removed from the consultation program and TGS will stop sending them communications.	Y - NOPSEMA consultation guideline	N/A	* (see note above table)	Continuing consultation.
Ocean Racing Club of Victoria (ORCV)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Ocean Racing Club of Victoria (ORCV)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Ocean Racing Club of Victoria (ORCV)	24-04-2023	Email TO relevant person	TGS emailed ORCV to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked ORCV to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Ocean Racing Club of Victoria (ORCV)	27-04-2023	Email FROM relevant person	ORCV replied to TGS' email sent 24/04/2023 seeking feedback. ORCV advised they run yacht races which may include areas withn the EP zones namely between the Christmas and New Year period (Melbourne to Hobart race) and the Melbourne to Port Fairy race during the Easter period of 2024. ORCV advised they will ensure the EP area is designated as an exclusion zone for any yachts and request TGS provide the location of all th EP boundary corners to allow us to establish this exclusion zone.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Ocean Racing Club of Victoria (ORCV)	3-05-2023	Email TO relevant person	TGS replied to ORCV's email received 27/04/2023 thank them for their email and attached the EP location co-ordinates and shapefiles. TGS asked ORCV to let them know fi the area will affect their races and they can meet and discuss if there is potentially another option other than exclusion zone for their race.	Y - EP location shapefiles and coordinates	N/A	* (see note above table)	Continuing consultation.
Ocean Racing Club of Victoria (ORCV)	3-05-2023	Email FROM relevant person	ORCV replied to TGS' email sent earlier that day thanking TGS and advising ORCV will contact them if they have any further queries.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	17-08-2022	Email FROM relevant person	The stakeholder reached out to request a meeting with TGS/Schlumberger to provide feedback on the proposal at the earliest convenience.	Y - Consultation request	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	24-08-2022	Email FROM relevant person	Relevant person provides letter requesting more information regarding the application.	Y - Consultation letter	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	04-09-2022	Email FROM relevant person	The stakeholder reached out to follow up on their request for a meeting with TGS/Schlumberger to provide feedback on the proposal at the earliest convenience.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	15-02-2023	Email TO relevant person	TGS reconnected to advise of changes to survey (area size and contact details) and provide updated information sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	16-02-2023	Email FROM relevant person	OCEAN advised they requested consultation with SLB/TGS regarding initial proposed for larger survey and didn't receive a response. OCEAN referred to the amended NOPSEMA consultation guidelines and requested consultation with TGS if the reduced survey is to be undertaken solely by TGS and not SLB. OCEAN also advised they recently undertook consultation with [another proponent] which is also proposing a survey in the Otway Basin and asked for advice on a date when the meeting might occur.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	20-02-2023	Email TO relevant person	Acknowledged email provided for email to TGS 16/02/2023 advising TGS would like to meet with OCEAN to discuss survey. TGS asked if OCEAN could provide a list of the main items of concern they would like to discuss during the meeting. TGS also asked if there was a good understanding in OCEAN of 3D seismic surveys, modelling requirements and control measures and offered to provide a brief overview. TGS asked if there was a suitable time to meet over the next 2-4 weeks and asked if they would be inviting other groups to the meeting or just OCEAN members.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	27-02-2023	Email TO relevant person	TGS emailed OCEAN following up on email sent to OCEAN on 20/02/2023 and offered to let TGS know when convenient to visit over the next 1-3 weeks to allow travel to be arranged.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	27-02-2023	Email TO relevant person	TGS emailed OCEAN to ask if they can provide later dates for a meeting so they can consider travel plans. TGS also asked if OCEAN can provide a list of their main concerns they would like to discuss at the meeting so TGS can come fully prepared. TGS also asked: - if there would be Powerpoint facilities as may be beneficial to present some slides to help with discussions; - will OCEAN invite other groups to the meeting or just OCEAN members; and - is there a good understanding of what is involved with undertaking a seismic survey, modelling requirements as part of the EP development and control measures implemented etc within their group. TGS offered to provide an overview of all of this to help with their understanding and knowledge, as well as regulatory requirements.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	27-02-2023	Email FROM relevant person	OCEAN replied to TGS' email from 27/02/2023 acknowledging their request to meet. OCEAN suggested either Mon 6 or Tues 7 March and would be an early evening meeting (~5:30 pm).	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	28-02-2023	Email FROM relevant person	OCEAN acknowledged TGS' previous email sent 27/02/2023. OCEAN noted that TGS stated any time over the next three weeks and any weekday except a Friday would suite them. OCEAN confirmed they do have Powerpoint presentation facilities but asked this be no longer than 10 minutes. OCEAN advised their group is well informed on seismic surveys and how they are done, so there's no need to cover that. They are keen for detail on the current proposal only, e.g. who will be undertaking it now and whether SLB is still involved, why the area has been downsized, whether there will be an overlap with the seismic surveys proposed by other companies in Otway Basin and what assurances can be given that any limitations placed on the proposal by NOPSEMA will be met (if approved). OCEAN said they would then like 10 minutes to present their concerns and why they care about the propose before questions from the members. OCEAN concluded they will invite Apollo Bay Fisherman's Cooperative to attend but their presence will depend on the meeting date and their availability.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	3-03-2023	Email TO relevant person	TGS replied to OCEAN's email 03/03/2023 enquiring if there was an update regarding meeting. TGS advised they would like to host an online meeting with OCEAN where TGS can share details about the proposed either later next week or the following week. TGS said if OCEAN choose a date and time that is most convenient and which online platform (Zoom or Teams), TGS will set up the meeting.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	3-03-2023	Email FROM relevant person	OCEAN emailed TGS asking if there was an update on previous email regarding arranging a meeting.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	9-03-2023	Email TO relevant person	TGS advised OCEAN they had sent an email to OCEAN on 03/03/2023 responding to their previous email. TGS advised they would like to host an online meeting with OCEAN to share information about the project either later in the week or the following week and asked OCEAN to choose a convenient day and time and advise which meeting platform they would like to use.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	9-03-2023	Email TO relevant person	TGS replied to OCEAN's email from earlier in the day, advising they did not receive the email on 06/03/2023. TGS also replied the 20/03/2023 is not suitable, however can do any other day that week and to let them know.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	9-03-2023	Email FROM relevant person	OCEAN requested a reply to their last email.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	9-03-2023	Email FROM relevant person	OCEAN replied to TGS' email from earlier in the day, suggesting TGS missed their email sent 06/03/2023, nominating 20/03/2023 at 5:30 pm.	N	Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Otway Climate Emergency Action Network (OCEAN)	9-03-2023	Email FROM relevant person	OCEAN emailed TGS advising they were confused with who is proposing the seismic survey in the Otway Basin, hoping TGS can clarify this and the following queries: - Who is the proponent for this Special Prospector Authority? - What company owns/runs the ship that will be carrying out the survey? - Will TGS be carrying out the survey and if not what exploration company will be completing the survey? OCEAN also noted the original application dated 16/8/2022 on the NOPTA applicant tracking site has not changed, where the company is listed as TGS NOPEC Geophysical Company P/L. OCEAN also commented TGS is currently working with one of their members to organise a consultation meeting and they need to know the above information prior to that meeting and appreciate an early response. OCEAN concluded their email by offering for TGS to contact them if they have any queries or need clarification.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	10-03-2023	Email TO relevant person	TGS provided the following answers to OCEAN's queries emailed to TGS on 09/03/2023: - Survey is a joint venture between SLB and TGS however TGS is taking the lead. - TGS is the lead with both TGS and SLBs name on the Special Prospecting Authority as this is a joint venture. - Currently TGS has not contracted a vessel for the survey as they are still in the process of seeking approval from the regulator to carry out the proposed survey. - TGS will be acquiring the survey. - TGS' Australian entity is TGS-NOPEC Geophysical Company Pty Ltd. TGS closed their email advising they look forward to hearing from OCEAN about a preferred day/time for an online meeting to discuss the proposed survey in more detail.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	10-03-2023	Email TO relevant person	TGS replied to OCEAN's email from earlier in the day, advising they had responded to their previous email on 09/03/2023 stating the 20/03/2023 would not be suitable. TGS provided a copy of this email to confirm they had responded.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	10-03-2023	Email TO relevant person	TGS confirmed 21/03/2023 at 5:30 pm would work and asked if OCEAN had a preference for either Teams or Zoom.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	10-03-2023	Email FROM relevant person	OCEAN replied to TGS' query about a suitable day and time for an online meeting suggesting 20/03/2023 at 5:30 pm and asked if TGS is receiving their emails.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	10-03-2023	Email FROM relevant person	OCEAN apologised for not receiving TGS' response to a suggested meeting day and time and suggested 21/03/2023 at 5:30 pm.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	10-03-2023	Email FROM relevant person	OCEAN replied to TGS' email requesting confirmation of which platform they would prefer for a proposed online meeting with their members on 21/03/2023 at 5:30 pm., advising they would prefer Zoom.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	15-03-2023	Email TO relevant person	TGS emailed out a Zoom meeting invite to OCEAN to share with their members for Tuesday 21/03/2023 at 17:30 hrs AEDT.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	18-03-2023	Email FROM relevant person	OCEAN replied to the Zoom meeting invite that TGS distributed on 15/03/2023. OCEAN advised they have distributed the invite to their members and community and noted the following stipulations for the consultation: Their group wishes to know about the TGS' seismic 3D proposal for the Otway Basin only with time for questions and true consultation rather than receiving information regarding TGS' history, achievements or objectives. They would like a copy of the transcript (or recording) of meeting and an opportunity to vet information that will be fed into the EP resulting from the meeting. They would like to convene the meeting to ensure everyone has a fair opportunity to speak and ask questions. OCEAN advised this will be done with the respect and fairness to TGS representatives and OCEAN members. OCEAN concluded the email thanking TGS for the opportunity.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	21-03-2023	Email TO relevant person	TGS responded to OCEAN's email sent on 18/03/2023 advising the following: As the meeting is for consultation there will be time for questions and will be providing an overview of the meeting; and TGS will not be recording the meeting but will be taking notes and these will be distributed to OCEAN as well as included in the consultation material for the EP.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	21-03-2023	Email TO relevant person	TGS responded to OCEAN's email sent earlier in the day asking who will be presenting at the online meeting later that day. TGS provided details of presenters from TGS and SLR.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	21-03-2023	Phone call FROM relevant person	OCEAN called TGS to discuss how the up-and-coming online meeting later that day would best be managed, given there were going to be so many people. OCEAN suggested all attendees be muted and advised if they wish to ask a question to raise their hand. TGS would then unmute them to ask their question. Both TGS and OCEAN agreed to this approach.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	21-03-2023	Email FROM relevant person	OCEAN emailed TGS to ask for the names of presenters and their roles for the online meeting scheduled that day.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	21-03-2023	Meeting with relevant person	TGS and SLR met with OCEAN members (54 members registered) to provide a presentation detailing the proposed survey, listen to feedback and discuss any questions they had. OCEAN's key queries included: - the large survey area; - trust issues around partnership with SLB; - confirmation of what is an 'acceptable risk level'; - reason and timing for exploring offshore resources with government's target to be 90% renewable by 2035; - impacts to species other than whales; and - compensation for indirect impacts to marine ecology. SLR provided a closing summary advising only some of the measures were discussed due to time restrictions [as an example] and all control measures are extensively detailed in the EP. TGS thanked OCEAN and advised the meeting minutes. The meeting was extended 45 minutes to ensure all questions were asked and addressed. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	24-03-2023	Email FROM relevant person	OCEAN emailed TGS thanking them for the meeting on 21/03/2023, appreciating the team's attempt to answer their questions. OCEAN asked for the following advising they will follow up with more questions from OCEAN members that came about during the meeting: 1.A list of all members who registered for the meeting (priority). 2.A list of all members who attended the meeting (priority). 3.A copy of the slides provided by TGS at the meeting (priority). 4. A (draft) record or transcript of the meeting, for comment. 5.A map of the proposed project overlap with previous and proposed surveys, including other company survey boundaries. 6.Did TGS play any role in the SLB 2019 2D survey of the Otway Basin? If so, what component of that operation. 7.We would like to also double check a question that was asked regarding a GSA. Is TGS or SLB acting in regards to a GSA. 8.Details of the independent observer group that TGS will employ. 9.If this proposal is successful, [they] would like to have a promise from TGS that they will provide all data and reportable incidents relevant to the EP during the project to OCEAN. OCEAN closed the email thanking TGS again.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	29-03-2023	Email TO relevant person	TGS replied to the OCEAN member that emailed TGS earlier in the day. TGS advised that in the meeting held on 21/03/2023, TGS stated the survey would commence from Oct 2023, pending regulatory approval and the EP will be submitted to NOPSEMA for review well before then. If NOPSEMA accept the EP as complete, the EP will be released for public comment for 30 days. TGS advised they cannot provide the sound modelling (JASCO) report now as stated in the meeting as it is being updated to reflect the reduction in survey area but can provide once the report is updated. TGS advised the member there were a lot of comments and subsequent questions at the meeting and they are drafting a response and summarising the meeting and collating the references. TGS advised the member it had only been six working days since the meeting and they will get the information to OCEAN as soon as it is completed, although please do not hesitate to ask if they have any further questions.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	29-03-2023	Email FROM relevant person	An OCEAN member replied to their email sent earlier in the day, thanking TGS for the full and swift reply and asked when they thought the JASCO report would be available.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	29-03-2023	Email FROM relevant person	An OCEAN member emailed TGS directly stating that at the OCEAN meeting on 21/03/2023, TGS said they would be starting seismic testing on 23/10/2023 and commented that is not long for them to submit their viewpoint to NOPSEMA. They also mentioned that it is now almost two working weeks and TGS hasn't responded to the questions and asked for a copy of the JASCO report as soon as possible.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	30-03-2023	Email TO relevant person	TGS replied to the OCEAN member that emailed TGS yesterday enquiring when the JASCO report would be available. TGS advised they should be able to get the JASCO report to them next week.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	30-03-2023	Email FROM relevant person	An OCEAN member replied to the TGS acknowledging their response regarding when the JASCO report would be available.	N	Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Otway Climate Emergency Action Network (OCEAN)	3-04-2023	Email FROM relevant person	OCEAN emailed TGS to follow up on the meeting held on 21/03/2023 with the following questions that weren't answered during the session: - Why has Schlumberger's name been removed from the revised information sheet for the reduced area when it is still part of the operation seeking approval for an SPA. - Who made the decision to remove Schlumberger's name, Schlumberger or TGS. These two questions are particularly relevant because [OCEAN] has no confidence in Schlumberger as a reputable company, given its history of criminal fines in the US and the current investigation into its 2019 survey by NOPSEMA. - What is the reason for the reduced size of the proposed survey area in the new information sheet. - TGS stated that the survey was due to commence in October 2023 – but how long will the survey run for. - What is TGS's policy in regard to indirect compensation for fishers as a result of seismic blasting. - Would you please provide those answers to [name removed] questions, and to any questions posted by other people in the chat. - Can OCEAN have clarification on this statement made during the meeting by [name removed]: 'Every single receptor in the marine environment has been assessed and incorporated into the model.' OCEAN understood 'receptor' to mean marine organisms receptive to seismic waves, and 'incorporated into the model' to mean the model for the accessible level of risk. Is this correct. If so, the statement is surely too broad. Every single organism can't have been assessed. - In 2019 Schlumberger seismic blasted over a dumpsite for WWI and WWII chemical and artillery weapons in the Otway Basin. This site was overlooked in the EP prepared by SLR. What assurances can be given that SLR will not overlook similarly dangerous sites in the EP it prepares for the current SPA. - Is TGS concerned about the fact that Schlumberger is under investigation for its 2019 2D seismic blasting project in the Otway Basin, and about Schlumberger's bad global corporate reputation. For example, the fact that in 2015 Schlumberger was handed the biggest corporate criminal fine in US history, and given three years' corporate probation, for sanctions violations in Iran and Sudan. What reassurances can you give that this company is fit to undertake seismic blasting in highly sensitive waters.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	4-04-2023	Email TO relevant person	TGS emailed OCEAN a copy of the minutes from meeting held 21/03/2023 which included a copy of the presentation delivered at the meeting and references verifying the JASCO Acoustic Modelling Report. The email also addressed questions from OCEAN in email received 24/03/2023.	Y - meeting minutes, presentation and acoustic modelling report references.	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	5-04-2023	Email FROM relevant person	An OCEAN member replied to TGS's response to their email on 30/03/2023 asking if they could have the JASCO acoustic modelling report.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	6-04-2023	Email TO relevant person	TGS replied to emailed received on 05/04/2023 from an OCEAN member requesting the acoustic modelling report, advising they are waiting on the final report and will send once they receive it.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	6-04-2023	Email TO relevant person	TGS replied to an email from an OCEAN member received 31/03/2023 thanking them for their time to respond with additional comments, acknowledging and noting their concerns. TGS confirmed in their email the purpose of the proposed seismic survey is to obtain data to inform the oil and gas industry.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	6-04-2023	Email FROM relevant person	An OCEAN member replied to TGS's response to their email sent earlier in the day, thanking TGS.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	14-04-2023	Email TO relevant person	TGS forwarded a list of references regarding plankton that is currently being used in the draft EP, as promised in their email sent to OCEAN on 04/04/2023. TGS noted the EP is still being developed and will be carrying out an in-depth literature review to identify if there is any other information that needs to be incorporated in the EP.	Y - list of references regarding plankton	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	14-04-2023	Email TO relevant person	TGS replied to email received from OCEAN on 03/04/2023 with various questions. The following information was provided in summary: - Survey is being lead by TGS under their policies and procedures etc with joint venture partners, SLB. - The reduced survey area is from relevant person feedback and no acreage release in SA. - First phase (between 6-7,000 km2) between 4-6 months pending weather and mitigation measures. - TGS is developing a commercial fishing loss adjustment protocol that will be consistent with the NERA protocol. - Answers to James Dunbar's questions were provided on 04/04/2023. - Receptors assessed in the modelling were extensive (list provided). - The extensive review process and ability for any party to comment and review the EP provides assurance there is little opportunity for anything to be overlooked. Additionally, the dumpsite has been excluded from the survey. - TGS obtains all necessary permits including any related assessments and analyses and they conduct survey acquisition in accordance with applicable law and such permits. TGS and SLB collaborate on various projects globally. Regarding the Otway 2D proposal, SLB obtained all necessary approvals, operating in accordance with applicable and such permits and is cooperating with NOPSEMA regarding all compliance matters. TGS then clarified and explained a term misused by OCEAN - seismic surveys do not 'blast' nor does the technology produce blasts. Refer to Appendix H for detailed response.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	17-04-2023	Email TO relevant person	TGS replied to OCEAN's email sent earlier in the day and provided a record of recent correspondence TGS had sent to OCEAN including answering questions they had asked in previous correspondence. TGS explained their consultation process was currently occurring to inform their environmental plan, processing a high level of information. TGS continued that in some cases they required specialist input which can cause delays in their response to relevant persons and is the reason OCEAN had not yet received a report they were waiting for. TGS noted OCEAN's concerns with ensuring they have adequate time to review the report but reassured OCEAN they would receive the report once TGS had received it and had it reviewed by SLR. TGS also advised the OCEAN member that once the EP was finalised, submitted to NOPSEMA and NOPSEMA accept it as complete, it will be publicly available for submission for 30 days. TGS closed their email thanking them for their patience.	N	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	17-04-2023	Email FROM relevant person	An OCEAN member emailed TGS commenting it has almost been a month since the online meeting and they understood, answers have not been sent to OCEAN and the member has not yet received the underwater acoustic modelling report. The member also stated they had been advised by NOPSEMA they had not yet received an EP for assessment (for the proposed Otway 3D MSS) as it is still being prepared by the titleholder. NOPSEMA advised the member the consultation session and any response provided by RPs will be an important aspect of the EP and will be considered by NOPSEMA during the assessment process. NOPSEMA also recommended the member provide a submission to TGS (or SLR) outlining any additional information they need to make an informed assessment of potential consequences of the activity, and any claims or objections they may have that relate to the environmental management of the activity and the potential impacts and risks.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	17-04-2023	Email FROM relevant person	OCEAN replied to the email response TGS had sent earlier that day, thanking them for their detailed and rapid response and apologised for the lack of coordination on their side and they had now received all of TGS' replies. OCEAN advised the source about JASCO provided to them was insufficient for them to know what evidence TGS is using. OCEAN also advised they wish to see the report on which TGS will be basing their submission to NOPSEMA. OCEAN closed their email noting they are aware of the 30 days in which they can respond but would rather do their [review] now and let TGS know their results.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	19-04-2023	Email TO relevant person	TGS emailed OCEAN a copy of the underwater acoustic modelling report to the OCEAN member whom requested it 06/04/2023, as latest version was now available.	Y - Underwater acoustic modelling report	N/A	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	19-04-2023	Email FROM relevant person	OCEAN member replied to TGS' email sent earlier that day providing them the underwater acoustic modelling report thanking TGS.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	22-04-2023	Email FROM relevant person	An OCEAN member emailed TGS having reviewed the minutes from the meeting held with OCEAN on 21/03/2023. The member advised they are not listed as attending and asked for the minutes to be updated to include those who attended or asked questions.	N	Continuing consultation	* (see note above table)	Continuing consultation
Otway Climate Emergency Action Network (OCEAN)	24-04-2023	Email TO relevant person	TGS replied to the email from the OCEAN member received 22/04/2023 providing amended meeting minutes to include their name.	Y - Meeting minutes	N/A	* (see note above table)	Continuing consultation.
Otway Climate Emergency Action Network (OCEAN)	24-04-2023	Email FROM relevant person	An OCEAN member acknowledged TGS' email sent to them earlier that day providing amended meeting minutes as requested.	N	Continuing consultation	* (see note above table)	Continuing consultation
Parks and Wildlife Tasmania	5-05-2023	Online enquiry form submitted	TGS submitted an online enquiry form advising TGS is seeking feedback about their 3D marine seismic survey proposed for the Otway Basin. TGS continued they have identified PWS as a potential relevant person and would like to meet with PWS to explain the survey and discuss any queries they have. TGS explained PWS would assist with identifying the local environmental values and sensitivities that TGS needs to consider within and around the survey area.Additionally they would like to know how the survey could potentially impact PWS' functions, interests or activities and explain some control measuers TGS is implementing to minimise impacts. TGS closed the enquiry by asking PWS to contact them to arrange a suitable date and time to meet (contact details provided).	N	Continuing consultation	* (see note above table)	Continuing consultation
Parks and Wildlife Tasmania	5-05-2023	Email FROM relevant person	Automated reply to TGS' online enquiry form submitted earlier that day advising request had been received and PWS' customer service team will be reviewing the request and forwarded to the appropriate management team.	N	Continuing consultation	* (see note above table)	Continuing consultation
Parks and Wildlife Tasmania	9-05-2023	Phone call TO relevant person	TGS called PWT regarding their proposed marine seismic survey to follow up on an online querye TGS submitted last week. PWT suggested an alternative to contact (provided contact details).	N	Continuing consultation	* (see note above table)	Continuing consultation
Parks and Wildlife Tasmania	9-05-2023	Email TO relevant person	TGS emailed PWT seeking feedback on their proposed marine seismic survey within the Otway Basin. TGS enclosed an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Parks and Wildlife Tasmania	9-05-2023	Phone call TO relevant person	TGS called PWT - King Island Field office regarding their proposed marine seismic survey but there was no answer so left a message for them to return their call, leaving contact details.	N	Continuing consultation	* (see note above table)	Continuing consultation
Parks and Wildlife Tasmania	9-05-2023	Email TO relevant person	TGS replied to PWT's email received earlier that day thanking them for their help.	N	N/A	* (see note above table)	Continuing consultation.
Parks and Wildlife Tasmania	9-05-2023	Email FROM relevant person	PWT replied to TGS' email sent earlier that day thanking them for their call and email. PWT advised the email has been delivered to the Park Entry/Passes team email address who do their best to forward to the most appropriate staff member/area. PWT advised they had forwarded TGS' email to the Parks and Wildlife field centre on King Island for response as they are geographically the closest to the area outlined for the project. PWT provided their contact details to follow up.	N	Continuing consultation	* (see note above table)	Continuing consultation
Parks and Wildlife Tasmania	12-05-2023	Email TO relevant person	TGS emailed PWT King Island field office to provide them information about the proposed marine seismic survey within the Otway Basin. TGS advised they met with Aboriginal Heritage Tasmania and suggested contacting PWT and PWT main office referred TGS to the King Island field office. TGS said it would be great to meet with them to discuss the project further and provided contact details and to advise when is convenient. TGS provided background information within the email and attached the information sheet.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Parks and Wildlife Tasmania	15-05-2023	Phone call TO relevant person	TGS called PWT King Island field office to follow up on their email sent 12/05/2023 regarding their proposed marine seismic survey. PWT KI advised they didn't believe the survey was relevant as it is based offshore and their jurisdiction is on land. PWT suggested they are best to consult King Island Landcare (contact details provided).	N	N/A - not relevant	N/A	Consultation closed
Parks Victoria	5-05-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS advised they will be visiting Tasmania later that week if they'd like a for a meeting.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Parks Victoria	5-05-2023	Email FROM relevant person	PV replied to TGS' email sent earlier that day advising they have forwarded TGS' enquiry to the appropriate management team.	N	Continuing consultation	* (see note above table)	Continuing consultation
Parks Victoria	29-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 02/06/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Parks Victoria	29-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 02/06/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Parks Victoria	29-05-2023	Email FROM relevant person	Automated reply to TGS' email sent earlier that day advising they have forwarded TGS' enquiry to the appropriate management team.	N	Continuing consultation	* (see note above table)	Continuing consultation
Parks Victoria	29-05-2023	Email FROM relevant person	PV replied to TGS' email sent earlier that day advising they have forwarded TGS' enquiry again and will let them know TGS has been in contact with them.	N	Continuing consultation	* (see note above table)	Continuing consultation
Parradarrama Pungenna Aboriginal Corporation	27-04-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 05/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Parradarrama Pungenna Aboriginal Corporation	28-04-2023	Phone call TO relevant person	TGS followed up email sent to PPAC regarding their proposed marine seismic survey within the Otway Basin. TGS advised they are visiting Hobart next week and would welcome a meeting. PPAC said they hadn't seen the email yet but would locate it and call TGS back.	N	Continuing consultation	* (see note above table)	Continuing consultation
PIRSA Fisheries & Aquaculture South Australian Research and Development Institute (SARDI) Aquatic Sciences	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Map of survey relative to South Australian fisheries reporting blocks	N/A	* (see note above table)	Continuing consultation.
PIRSA Fisheries & Aquaculture South Australian Research and Development Institute (SARDI) Aquatic Sciences	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Port Fairy Community	29-05-2023	Community information session	TGS, SLB and SLR arranged a community information session to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries: - liaising with traditional owner groups; - decrease in rock lobster catch following past survey; - confusion with multiple activities occuring similar time; - impacts and controls for marine mammals; - how noise behaves in the ocean; and - need for survey. The main community concerns would be impact to local tourism and fishing. Refer to Appendix I for detailed meeting minutes.		The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Consultation with traditional owner groups: **Section 5.5.7** Effects to rock lobster (and past surveys): **Section 7.1.3.1.2** Victoria Fisheries- Rock Lobster), **Section 7.1.3.1.5** (Summary of Potential Impacts to Commercial Fisheries), **Section 7.2.2.2.1** (acoustic effects to plankton, includingn rock lobster larvae), **Section 7.2.2.2.1.4** (acoustic effects on Rock Lobster Larvae). It is noted the Giant Crab Acoustic Exclusion Area also provides for protection to rock lobster (see **Table 81**). Effects of multiple activities: Aspects regarding recovery periods and previus surveys are adressed in **Section 9** Cumulative Effects. Further to this, outcomes of concurrent Cumulative Imapct Assessment workshops will be incorporated as frameworks become finalised and available for incorporation into this EP. Effects to marine mammals: **Section 4.5.6** (summary of existing knowledge of marine mammals), **Section 7.1.2.2** (effects of the physical presence of the Seismic Survey to marine mammals), **Section 7.2.2.2.7** (acoustic disturbance effects to marine mammals), Section **8.3.3.2.5** (effects of a hydrocarbon spill to marine mammals) Underwater noise behaviour: **Section 7.2.1.2** (underwater acoustic modelling) Survey purpose/requirement: **Section 1.2** (purpose and objectives) Effects to local tourism and fishing: **Section 7.1.3.1.1** (impacts of the physical presence of the seismic survey vessel and equipment), **Section 7.2.3.1** (acoustic imapacts) and **Section 8.3.4.1** (hydrocarbon spill) Recreation and tourism: **Section 7.1.3.3** (impacts of the physical presence of the seismic survey vessel and equipment), **Section 7.2.3.2** (acoustic imapcts on recreational dive operators), **Section 8.3.4.3** (hydrocarbon spill). Ongoing consultation with the Port Fairy Community will be undertaken in accordance with the methods set out in Section 5 to ensure the Community have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Port Phillip EcoCentre	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Port Phillip EcoCentre	24-04-2023	Email TO relevant person	TGS emailed PPEC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked PPEC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Port Phillip EcoCentre	18-05-2023	Email FROM relevant person	PPEC emailed TGS responding to email TGS sent 24/04/2023. PPEC advised their response was high level given the broad area that may be affected and time, however would be pleased to meet with TGS to elaborate on their response. PPEC provided background information about the EcoCentre and a summary of key concerns and considerations (based on their desktop research and a review of the information sheet), including: - Not enough available information on potential survey impacts to ensure negative impacts to the marine environment are avoided. - Impact to marine fauna (including endangered and listed species) given proximity to Bonney Upwelling. - Impacts on wildlife - pelagic fish species. - Research into the effects of surveying on fish catch rates has found near-total depletion of whiting in affected areas. Noted the information sheet TGS provided does not reference fish species, lobsters or penguins and does not mention impacts of acoustic energy deployed by the seismic survey vessel. PPEC then posed the following two questions: 1. what existing studies on impacts of seismic surveys on pelagic schooling fish are available; and 2. what methods are proposed to acheive the "detailed impact assessment being undertaken to understand the potential impacts to marine fauna and identify appropriate management measures". Refer to Appendix H for detailed submission.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Current status of comemrcial fisheries: Section 4.7.3 (including catch rates/efforts) Effects to commercial fishing industry: Section 7.1.3.1 (impacts of the physical presence of the seismic survey vessels), Section 7.2.3.1 (imapcts of acoustic disturbacne on fisheries), Section 8.2.3 (imapct of streamer loss), Section 8.3.4.1 (hydrocarbon spill), and Table 84 includes control measures for adressing commercial fishers compensation in accordance with agreed protocols. Table 84 lists the control measure for compensation to fishers for any claims received in accordance with the agreed compensation protocol. Cumulative impacts: Table 84 lists control measures to require a SIMOPS plan, which inlcudes the implementation of a 40 km spatial separation between Seismic Vessels. Section 9 sets out the approach to manageing Cumulative Impacts. Impacts on wildlife (pelagic fish species): Section 7.2 and subsections therein (Section 7.2.2.1 (Noise effect criteria, and Section 7.2.2.3.2 effects of acoustic deisturbance to bony fish), Section 8.3.3.2.3 (effects of a hydrocarbon spill on bony fish and elasmobranchs). Methods to acheive the "detailed impact assessment being undertaken to understand the potential impacts to marine fauna and identify appropriate management measures": Section 6 Environmental Impact and Risk Assessment Methodology described the risk assessment process, to ensure all effects are at Acceptable Levels, and are reduced to ALARP. Ongoing consultation with PPEC will be undertaken in accordance with the methods set out in Section 5 to ensure PPEC have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Port Phillip EcoCentre	20-05-2023	Email TO relevant person	TGS replied to PPEC's email received the day before thanking them for their detailed response regarding their proposed Otway Basin seismic survey and confirmed TGS would be keen to meet so PPEC can further elaborate on their response. TGS clarified the information sheet was high level summary of the survey as the environment plan (EP) is being developed, however the EP covers a lot of questions they raised. TGS asked if they are available to meet 01/06/2023 and whether any other members would be attending the meeting.		N/A	* (see note above table)	Continuing consultation.
Port Phillip EcoCentre	23-05-2023	Email FROM relevant person	PPEC emailed TGS responding to email TGS sent earlier that day advising that MS Teams will work for their meeting to discuss the proposed marine seismic survey and asked if they could shift the meeting to a slightly earlier to accommodate another meeting following their meeting with TGS.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Port Phillip EcoCentre	23-05-2023	Email TO relevant person	TGS replied to PPEC's email received earlier that day regarding meeting date and time and confirmed 07/06/2023 for an online meeting. TGS asked whether Microsoft Teams was ok for an online meeting platform and offered to send a meeting invite out.	N	N/A	* (see note above table)	Continuing consultation.
Port Phillip EcoCentre	23-05-2023	Email FROM relevant person	PPEC replied to TGS' email sent earlier that day confirming Microsoft Teams works for them and said they have another meeting following the TGS meeting so would appreciate finishing slightly earlier and could adjust the start time if necessary.	N	N/A	* (see note above table)	Continuing consultation.
Port Phillip EcoCentre	23-05-2023	Email TO relevant person	TGS emailed an online meeting invite to PPEC for 07/06/2023.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Port Phillip EcoCentre	7-06-2023	Meeting with relevant person	TGS, SLB and SLR met with PPEC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered a presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with PPEC: - Agency providing environmental approval; - Aerial surveys (marine fauna monitoring); - Impacts on fish; - Environment plan development and approval process; - Survey timing; - Consultation with other groups; - Marine fauna observers; and - Impacts on endangered species and other non-whale species. Refer to Appendix H for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Purpose of the EP: **Section 1.2** Sound propagation and underwater acoustic modelling: **Section 7.2.1.2** (Underwater Acoustic Modelling) Impacts to commercially relevant species: **Section 7.1.3.1** (Seismic Survey physical presence: Potential Impacts and Risks to Commercial Fishing Operations), **Section 7.2.3.1** (Acoustic disturbance - Evaluation of Known and Potential Impacts and Risks on Commercial Fisheries), **Section 8.2.3** (Streamer loss - Evaluation of Known and Potential Impacts and Risks to Other Marine Users), **Section 8.3.4.1** (Hydrocarbon spill - Potential Impacts and Risks to Commercial Fishing). EP Impact and risk assessment process: **Section 6** (Environmental Impact and Risk Assessment Methodology). Impacts to plankton (outside of survey area): effects to plankton outide the survey area primarly related to the risk of unplanned activities (**Section 8**), in particular **Section 8.3** (hydrocarbon release) , with **Section 8.3.3.2.2** (hydrocarbon spill effects to Zooplankton, Fish Eggs and Larvae) assessed. Commercial fishers compenstation protocol: **Section 7.2.3.1** (Acoustic disturbance: Evaluation of Known and Potential Impacts and Risks on Commercial Fisheries) describes the Commercial fisheries compensation protocol, with Control Measures listed in **Table 84**. Direct inshore impacts: Primarily related to effects of Unplanned Activities (**Section 8**), in partivular effects to nearshore environments of a hydrocarbon spill (**Section 8.3.3.4** - Potential Impacts and Risks to Coastal Marine Environment of an accidental hydrocarbon spill, including effects to nearshore waters) Fauna monitoring during survey: **Section 10.6** (reporting) sets out all reporting and monitoring requiremetns, including **Section 10.6.2** (Marine Fauna Reporting) and **Section 10.6.3** (Reportable and Recordable Incident Reporting) Effects to marine mammals: Sections 7.2.2.3.6 and 7.2.2.4.2 (Acoustic imapcts to marine mammals with control measures specific for marine mammals listed in Table 84), and Section 8.3.3.2.5 (effects of a hydrocarbon spill to marine mammals). Ongoing consultation with PPEC will be undertaken in accordance with the methods set out in **Section 5** to ensure PPEC had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Ports of Melbourne Authority	16-02-2023	Email TO relevant person	TGS advised PoM of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Ports of Melbourne Authority	24-04-2023	Email TO relevant person	TGS emailed PoM to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked PoM to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Ports of Melbourne Authority	4-05-2023	Email TO relevant person	TGS replied to PoM's email acknowledging PoM's comment they have no meaningul input to give and queried whether PoM would like to remain on the consultation list to receive updates or would they prefer to be removed.	N	N/A	* (see note above table)	Continuing consultation.
Ports of Melbourne Authority	4-05-2023	Email FROM relevant person	PoM replied to TGS' email sent 24/04/2023 advising they had discussed with their team and as the survey is quite away from the PoM area, they don't have any meaningful input to give and thanked TGS for checking with them.	N	Continuing consultation	* (see note above table)	Continuing consultation
Ports of Melbourne Authority	4-05-2023	Email FROM relevant person	PoM replied to TGS' email sent earlier that day advising they'd like to remain on the consultation list.	N	Continuing consultation	* (see note above table)	Continuing consultation
Ports of Melbourne Authority	5-05-2023	Email TO relevant person	TGS replied to PoM's email sent earlier that day confirming TGS will keep them in their consultation program so they can keep updated with their progress. TGS closed the email advising PoM to let them know if any queries arise.	N	N/A	* (see note above table)	Continuing consultation.
Ports Victoria	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Ports Victoria	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Ports Victoria	17-02-2023	Email FROM relevant person	Response to previous email from TGS requesting additional email address be included within the distribution list for communications around the survey they can forward safety information to vessels (via agents) calling at the Port of Portland.	Y - Updated information sheet	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Ports Victoria	20-02-2023	Email TO relevant person	Acknowledgement of previous email and offer to forward safety information to vessels calling at Port of Portland.	N	N/A	* (see note above table)	Continuing consultation.
Primary Industries and Regions SA	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Map of survey relative to South Australian fisheries reporting blocks	N/A	* (see note above table)	Continuing consultation.
Primary Industries and Regions SA	12-05-2022	Email FROM relevant person	Email undeliverable to one stakeholder email account. Note, other PIRSA contacts were successfully emailed.	N	Continuing consultation	* (see note above table)	Continuing consultation
Primary Industries and Regions SA	28-06-2022	Email FROM relevant person	The stakeholder attached a response to the survey and recommended that TGS/Schlumberger consult directly with the South Eastern Professional Fishermen's Association, the Marine Fishers Association of South Australia and the Australian Southern Bluefin Tuna Industry Association.	Y - Response to the survey	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised. The relevant associations/contacts are confirmed contacted.	* (see note above table)	No action required. Continuing consultation.
Primary Industries and Regions SA (PIRSA)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Primary Industries and Regions SA (PIRSA) - South Australian Rock Lobster Fishery	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
RecFish SA	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
RecFish SA	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
RecFish SA	24-04-2023	Email TO relevant person	TGS emailed RSA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked RSA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
RecFish SA	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
RecFish SA	22-05-2023	Phone call TO relevant person	SLB called RFSA to follow up on unanswered emails TGS has sent regarding their proposed seismic survey. Key comments from the call included: - Seismic testing not perceived well in SA. - Past concerns related to impacts of survey on southern blue fin tuna and lobster larvae in the water column due to the local fisheries relying on the currents from Victoria to receive their eggs and larvae. - Seismic testing cause panic amongst industry due to potential effects on the embryos within the eggs and suspended larve. - Surveying is to acquire subsurface data for oil and gas exploration, carbon capture and storage but doesn't necessarily mean they will be any development. RFSA confirmed they've had sufficient information about the project but would like additional details about impacts on lobster larvae and embryos. RFSA also confirmed they've had enough time and will follow up the phone call with an email confirming their position. Refer to Appendix I for detailed call record.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Imapcts of the seismic survey activity for commercial fishers, specifically in relation to underwater noise are discussed in detail in **Section 7.2.3.1.** Other specific impacts are discussed in detail in **Section 7.2.2.3.2** (bony fish / tuna behavioural impacts), and **Section 7.2.2.2.1.2** (duration and extent of zooplankton exposure), **Section 7.2.2.2.1.4** (rock lobster larvae) and **Section 7.2.2.2.3.2** (bony fish larvae). Other aspects regarding use of data in relation to the Oil and Gas Industry are outside the scope of the NOPSEMA regulations for the purpose of this EP.	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
RecFish SA	30-05-2023	Email FROM relevant person	RSA emailed TGS following phone call conversation with SLB on 22/05/2023 and email TGS sent 19/05/2023. RSA advised they are responding in the absence of the information they have requested regarding the effect of seismic testing on lobster larvae and eggs due to timeframe requested. RSA advised they are a nationally recognised peak body for 360,000 fishers within South Australia and the response provided is representative of the community's views and expectations. RSA continued that due to the heightened concern of environmental issues regarding wind energy in SA/Vic and seismic testing, RSA strongly discourage seismic testing due to the potential effect on: - Whale and marine mammal interaction or damage; - Suspended Lobster egg and larvae disruption/destruction; - Migratory fish dispersal (Southern Blue Fin Tuna); and - Sardine impact and/or pelagic egg destruction. RSA added that with little data understood, particularly regarding Southern Rock Lobster prevalent within this region, the environmental risk is too great to encourage or endorse.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Effects to marine mammals: **Sections 7.2.2.3.6** and **7.2.2.4.2** (Acoustic imapcts to marine mammals with control measures specific for marine mammals listed in **Table 84**), and **Section 8.3.3.2.5** (effects of a hydrocarbon spill to marine mammals). Effects to migratory fish (Southern Blue Fin Tuna): **Section 7.1.3.1.1.6** (Southern Bluefin Tuna Fishery) regarding an assessment of the effects of the physical presence of the Seismic Survey; Effects to fisheries and effects to (pelagic) larval/egg stages: **Section 7.2.2.3.2** (bony fish / tuna behavioural impacts), and **Section 7.2.2.2.1.2** (duration and extent of zooplankton exposure), and **Section 7.2.2.2.3.2** (bony fish larvae). Effects to Southern Rock Lobster and effects to egg/larvae: **Section 7.2.2.2.1.4** (rock lobster larvae). Ongoing consultation with RecFish SA will be undertaken in accordance with the methods set out in **Section 5** to ensure RecFish SA have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
RecFish SA	15-06-2023	Email TO relevant person	TGS replied to RSA's email received 30/05/2023 thanking them for their information. TGS advised they acknowledge and have noted their comments and concerns regarding their proposed activity and provided the following summarised comments: - Explanation of and update on EP submission process and status. - Public consultation period opportunity to provide feedback, alternatively can arrange a meeting to explain marine seismic surveying, provide a project overview and discuss their concerns. - EP contains extensive assessment of potential impacts to marine fauna (including those RSA listed). - EP also includes information about impacts to commercial fishing and the species RSA mentioned in their submission. TGS also advised they are preparing an information sheet discussing the impacts to marine fauna to provide to RSA, otherwise to advise whether they would like to meet or any other specific information that will help them.	N	N/A	* (see note above table)	Continuing consultation.
Roads and Maritime Services (NSW)	22-05-2023	Email TO relevant person	TGS emailed RMS seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from RMS to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked RMS to reply prior to 26/05/2023 and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Scallop Fishermen's Association of Tasmania Incorporated also Bass Strait Central Zone Scallop Fishery	19-05-2023	Email FROM relevant person	SFATI replied to TGS' email sent earlier that day advising the survey is not over known scallop grouds so is of no great concern to them, however asked if they could be kept informed of their activities.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Scallop Fishermen's Association of Tasmania Incorporated also Bass Strait Central Zone Scallop Fishery	19-05-2023	Email TO relevant person	TGS replied to SFATI's reply email received earlier that day thanking them and confirming they will keep them up to date with their activities. TGS also asked whether they represent the Bass Strait Scallop Industry Association as well as the SFATI.	N	N/A	* (see note above table)	Continuing consultation.
Scallop Fishermen's Association of Tasmania Incorporated also Bass Strait Central Zone Scallop Fishery	19-05-2023	Email FROM relevant person	SFATI replied to TGS' email sent earlier that day advising they are the executive officer for the SFATI which represents all scallop fishermen and processors in both Tasmania and Bass Strait Central Zone fisheries.	N	N/A	* (see note above table)	Continuing consultation.
Scallop Fishermen's Association of Tasmania Incorporated also Bass Strait Central Zone Scallop Fishery	19-05-2023	Email TO relevant person	TGS replied to SFATI's reply email received earlier that day thanking them for their reply.	N	N/A	* (see note above table)	Continuing consultation.
Scuba Divers Federation of South Australia, Inc	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Scuba Divers Federation of South Australia, Inc	14-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Scuba Divers Federation of South Australia, Inc	24-04-2023	Email TO relevant person	TGS emailed SDFSA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SDFSA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Scuba Divers Federation of South Australia, Inc	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	N	N/A	* (see note above table)	Continuing consultation.
SCUBA Divers Federation of Victoria	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
SCUBA Divers Federation of Victoria	14-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
SCUBA Divers Federation of Victoria	24-04-2023	Email TO relevant person	TGS emailed SDFV to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SDFV to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
SCUBA Divers Federation of Victoria	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Australia (SIA)	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Maps of the Commonwealth fisheries that operate in the region	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Australia (SIA)	31-05-2022	Email TO relevant person	TGS/Schlumberger invited AFMA to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Australia (SIA)	2-06-2022	Email FROM relevant person	Meeting request response stating 'tentaive' for a meeting scheduled for the 2 June 2022 11:00 AM to 12:00PM (UTC+08:00) Perth.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Australia (SIA)	03-06-2022	Email FROM relevant person	SIA declined an invitation to a stakeholder meeting to be held June 9th 12:30-1:30pm AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Australia (SIA)	03-06-2022	Email FROM relevant person	SIA declined an invitation to a stakeholder meeting to be held June 10th 9:00-10:00am AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Australia (SIA)	23-06-2022	Email FROM relevant person	SIA declined an invitation to a stakeholder meeting to be held June 29th 9:00-10:00am AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Australia (SIA)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Australia (SIA)	24-04-2023	Email TO relevant person	TGS emailed SIA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SIA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Australia (SIA)	24-04-2023	Email FROM relevant person	SIA responded to email TGS sent earlier that day advising they had passed TGS' email on to the appropriate stakeholders and thanking TGS for their contact.	N	Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Seafood Industry Australia (SIA)	26-04-2023	Email TO relevant person	TGS replied to email from SIA received 24/04/2023 thanking them for their response and passing on to relevant stakeholders. TGS asked if SIA could advise who the relevant stakeholders that SIA represent and sent information to, to avoid doubling up communications. TGS also said it would be good to meet with SIA to introduce themselves and discuss what is currently being proposed. TGS advised they are preparing their environmental plan for submission to NOPSEMA and want to ensure their consultation with all relevant parties within the seafood industry is appropriate.	N	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Australia (SIA)	22-05-2023	Email TO relevant person	TGS emailed SIA seeking clarification on which associations or organisations they represent as they are in the final stages of preparing their environmental plan to submit to NOPSEMA for completeness check and need to explcitly state who they have consulted with.	N	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Maps of Victorian fisheries having the potential to be affected - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	13-05-2022	Email TO relevant person	TGS state they are contacting SIV to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, information sheet and maps and a summary of the three Victorian fisheries	N/A	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	31-05-2022	Email FROM relevant person	The stakeholder advised that TGS/Schlumberger should reach out to their board to see who can attend a stakeholder meeting on June 2 2022.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Seafood Industry Victoria (SIV)	31-05-2022	Email TO relevant person	TGS/Schlumberger invited SIV to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	01-06-2022	Email TO relevant person	TGS/Schlumberger explained that they forwarded a meeting invitation to the Board Directors listed on the SIV website, but noted that there were currently no representatives for Ocean Access or Rock Lobster. TGS/Schlumberger expressed a desire to engage further with SIV to determine level of interest and best approach for engaging with fishers.	N	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	2-06-2022	Email TO relevant person	TGS forwarded a meeting invitation to the Board Directors listed on their website, at SIVs suggestion.	N	N/A	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	02-06-2022	Email FROM relevant person	SIV declined an invitation to a stakeholder meeting to be held June 2nd 11:00am-12:00pm AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	06-06-2022	Email FROM relevant person	SIV declined an invitation to a stakeholder meeting to be held June 10th 9:00-10:00am AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	06-06-2022	Email FROM relevant person	SIV declined an invitation to a stakeholder meeting to be held June 9th 12:30-1:30pm AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	09-06-2022	Meeting with relevant person	Stakeholder attended a meeting where they represented SIV and the Abalone Industry Association (Eastern Zone) (see meeting discussion under this stakeholder title).	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	22-06-2022	Email TO relevant person	TGS/Schlumberger expressed their desire to engage further with this stakeholder so that all potentially affected fishers have had a reasonable opportunity to respond to the proposal. TGS/Schlumberger expressed a desire to organise a meeting with SIV prior to the submission of a formal response and requested SIV provide available dates/times.	N	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	24-06-2022	Email FROM relevant person	SIV declined an invitation to a stakeholder meeting to be held June 29th 9:00-10:00am AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	05-07-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for making the time to call and talk through the proposed survey earlier that day. The stakeholder explained that they do not feel the need to provide comment via the consultation process. The stakeholder did request additional information regarding the location of the proposed survey. The stakeholder explained that based on the location of the survey, they would be able to provide the contact details for potentially impacted fishers.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Seafood Industry Victoria (SIV)	05-07-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholder for the clarification, and accepted the offer of providing contact details for potentially affected fishers.	Y - Information Sheet - Maps of Victorian and Commonwealth fisheries having the potential to be affected - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	13-07-2022	Email TO relevant person	TGS followed up with the stakeholder regarding the stakeholder providing contact details for potentially affected Victorian fishers.	N	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	29-07-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for the information attached in the previous email. They explained that they have passed the details onto SIV members along with the contact details for TGS/Schlumberger.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Seafood Industry Victoria (SIV)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	11-04-2023	Email TO relevant person	TGS emailed SIV to arrange an online meeting to discuss recent changes to their proposed marine seismic survey, acknowledging their current high level of information requests. TGS advised they have had a change of environmental consultant and would like to update them on their progress with their EP and ensure they are addressing any concerns or queries they may have before submitting their EP to NOPSEMA for consideration. TGS closed the email asking them to advise a suitable date and time for an online meeting and they will arrange. TGS attached the updated information sheet.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	11-04-2023	Email TO relevant person	TGS replied to SIV's email reply received earlier that day thanking them for their reply. TGS confirmed a meeting on 26/04/2023 at 11:00 am would suit best and they can send out a meeting invite once SIV confirm suitable.	N	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	11-04-2023	Email FROM relevant person	SIV replied to TGS' email sent earlier that day acknowledging that email. SIV advised there has been a change in CEO and provided updated contact details. SIV said an online meeting would be a good idea and thanked TGS for providing the latest information sheet. The CEO suggested a meeting time for 26/04/2023 either between 11 - 2 pm or 3:30 - 5 pm or any time 28/04/2023 and asked TGS to advise if they don't suit and they will provide some other options.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	12-04-2023	Email TO relevant person	TGS emailed meeting invite to SIV for 26/04/2023 at 1:00 pm.	N	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	12-04-2023	Email FROM relevant person	SIV replied to TGS' email confirming a meeting date and time. SIV confirmed 26/04/2023 at 11:00 am suits them and will look out for meeting invite.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	26-04-2023	Meeting with relevant person	TGS, SLB and SLR met with SIV to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered a presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries and concerns with SIV: - Recently appointed CEO and therefore learning all. - Discussed queries from their Board: reason for reduction in survey area, length of the streamers, and size of first phase (6,500 - 7,000 km^2), exclusion zone around equipment and communicating with AMSA. - Purpose and current status of the environment plan (EP). - Sound propagation and underwater acoustic modelling. - Impacts to commercially relevant species. - EP impact and risk assessment process. - Concerns relate to impacts to plankton > effects on fishing outside of survey area. - Commercial fishers compenstation protocol. - Clarification of SIV's representation. - Direct inshore impacts. - Fauna monitoring during survey. TGS closed the meeting offering SIV to contact them with any further queries. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Purpose of the EP: **Section 1.2** Sound propagation and underwater acoustic modelling: **Section 7.2.1.2** (Underwater Acoustic Modelling) Impacts to commercially relevant species: **Section 7.1.3.1** (Seismic Survey physical presence: Potential Impacts and Risks to Commercial Fishing Operations), **Section 7.2.3.1** (Acoustic disturbance - Evaluation of Known and Potential Impacts and Risks on Commercial Fisheries), **Section 8.2.3** (Streamer loss - Evaluation of Known and Potential Impacts and Risks to Other Marine Users), **Section 8.3.4.1** (Hydrocarbon spill - Potential Impacts and Risks to Commercial Fishing). EP Impact and risk assessment process: **Section 6** (Environmental Impact and Risk Assessment Methodology). Impacts to plankton (outside of survey area): effects to plankton outide the survey area primarly related to the risk of unplanned activities (**Section 8**), in particular **Section 8.3** (hydrocarbon release) , with **Section 8.3.3.2.2** (hydrocarbon spill effects to Zooplankton, Fish Eggs and Larvae) assessed. Commercial fishers compenstation protocol: **Section 7.2.3.1** (Acoustic disturbance: Evaluation of Known and Potential Impacts and Risks on Commercial Fisheries) describes the Commercial fisheries compensation protocol, with Control Measures listed in **Table 84**. Direct inshore impacts: Primarily related to effects of Unplanned Activities (**Section 8**), in partivular effects to nearshore environments of a hydrocarbon spill (**Section 8.3.3.4** - Potential Impacts and Risks to Coastal Marine Environment of an accidental hydrocarbon spill, including effects to nearshore waters) Fauna monitoring during survey: **Section 10.6** (reporting) sets out all reporting and monitoring requiremetns, including **Section 10.6.2** (Marine Fauna Reporting) and **Section 10.6.3** (Reportable and Recordable Incident Reporting) Ongoing consultation with SIV will be undertaken in accordance with the methods set out in **Section 5** to ensure SIV has had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Seafood Industry Victoria (SIV)	15-05-2023	Email TO relevant person	TGS emailed SIV the minutes from their meeting on 26/05/2023. TGS also provided some of the information discussed during the meeting and advised the remaining information would be provided in due course. TGS closed the email thanking SIV for meeting with them and offered for SIV to contact them if they had any amendments to the minutes or queries.	Y - Meeting minutes and underwater acoustic modelling report	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	16-05-2023	Email TO relevant person	TGS replied to SIV's email received earlier that day with an amendment to the meeting minutes, advising the amendment had been made. TGS also commented they look forward to receiving information about their service model.	Y - Amended meeting minutes	N/A	* (see note above table)	Continuing consultation.
Seafood Industry Victoria (SIV)	16-05-2023	Email FROM relevant person	SIV replied to TGS' email sent the day before providing meeting minutes. SIV requested a minor amendment to text in the minutes and commented they look forward to receiving the summaries as soon as they are available. SIV advised they are looking at a revised service model to ensure the organisation is properly resourced to undertake consultation with the wider industry on behalf of third parties, and commented they look forward to presenting the information to TGS in due course.	N	Continuing consultation	* (see note above table)	Continuing consultation
Seafood Industry Victoria (SIV)	16-05-2023	Email FROM relevant person	SIV replied to TGS' email sent earlier that day thanking TGS for their email [and amended minutes].	N	Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Six Rivers Aboriginal Corporation	29-03-2023	Email TO relevant person	TGS emailed SRAC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided by 05/04/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Six Rivers Aboriginal Corporation	11-04-2023	Phone call TO relevant person	TGS called SRAC regarding their proposed marine seismic survey within the Otway Basin, however the number was not connected.	N	Continuing consultation	* (see note above table)	Continuing consultation
Six Rivers Aboriginal Corporation	11-04-2023	Email TO relevant person	TGS emailed SRAC to follow up on email sent 29/03/2023 regarding their proposed marine seismic survey within the Otway Basin. TGS advised they have tried to contact via phone but the number is not connected and asked if there was a phone number they can be contacted on. TGS advised they would like to meet SRAC online to discuss the proposed survey and hear any concerns they may have. TGS suggested they could arrange an online meeting at their convenience to discuss. TGS closed the email by thanking SRAC.	N	N/A	* (see note above table)	Continuing consultation.
Six Rivers Aboriginal Corporation	17-04-2023	Phone call TO relevant person	TGS called SRAC regarding their proposed marine seismic survey within the Otway Basin, however the number was not connected.	N	Continuing consultation	* (see note above table)	Continuing consultation
Six Rivers Aboriginal Corporation	17-04-2023	Email TO relevant person	TGS emailed SRAC following a phone call made earlier in the day that did not appear to be connected. TGS advised they were emailing in regards to their marine seismic survey within the Otway Basin and had tried to contact via phone but the number was not connected. TGS asked if there was a number SRAC could be reached on as would really like to meet them and those in the organisation that would be interested to hear about their plans and discuss any concerns they have. TGS advised they could arrange an online meeting at their convenience to discuss. TGS closed the email thanking SRAC, advising they look forward to hearing back from them.	N	N/A	* (see note above table)	Continuing consultation.
Six Rivers Aboriginal Corporation	26-04-2023	Phone call TO relevant person	TGS called SRAC but the number was still not connected.	N	Continuing consultation	* (see note above table)	Continuing consultation
Six Rivers Aboriginal Corporation	26-04-2023	Email TO relevant person	TGS messaged the General Manager of SRAC via LinkedIn explaining they had been trying to make contact with SRAC regarding their proposed offshore seismic project in the Otway. TGS advised they had attached information and asked if there was a better email address they could use to contact SRAC. TGS closed their message by saying they would really like some time with them and those within their organisation that would be interested to hear about TGS' plans and to hear if they have any concerns. TGS said they can arrange an online meeting at their convenience to discuss.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Six Rivers Aboriginal Corporation	19-05-2023	Letter TO relevant person	TGS posted a registered letter to SRAC advising of TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS enclosed an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided as soon as possible.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Six Rivers Aboriginal Corporation	23-05-2023	Phone call TO relevant person	TGS called SRAC to follow up on previous correspondence after receiving a suggestion from another relevant person to contac them. However the number was disconnected.	N	Continuing consultation	* (see note above table)	Continuing consultation
Six Rivers Aboriginal Corporation	23-05-2023	Email TO relevant person	TGS forwarded previous emails sent to SRAC attempting to correspond with them regarding their proposed marine seismic survey attaching an updated information sheet. TGS asked if SRAC has any input about the survey to let them know prior to 26/05/2023 so they can consider the information within the development of their environment plan before submitting to NOPSEMA for their review. TGS also advised there is a public consultation period when the EP will be released to the wider public for review.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Six Rivers Aboriginal Corporation	1-06-2023	Email TO relevant person	TGS emailed SRAC advising NOPSEMA has advised they should provide a copy of the attached brochure to help relevant persons provide feedback on the proposed survey, explaining their rights and TGS' obligations through the consultation process. TGS asked SRAC to advise if they have any queries about their consultation program so they can make sure SRAC can actively participate in the process. TGS advised they are about to submit their environmental plan (EP) to NOPSEMA for their completeness check and once accepted as complete will release their EP for public consultation where SRAC has the opportunity to reveiw the draft EP and provide feedback before TGS resubmit to NOPSEMA for their overall assessment. TGS closed the email asking SRAC to call or email if they have any questions or would like additional information. Alternatively to advise if they wish to be removed from the consultation program and TGS will stop sending them communications.	Y - NOPSEMA consultation guideline	N/A	* (see note above table)	Continuing consultation.
South Australian Marine Fisheries Association	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Map presenting survey relative to SA fisheries reporting blocks - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
South Australian Marine Fisheries Association	13-05-2022	Email FROM relevant person	The email acknowledges that the MFASA received the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS and will review the survey details. The MFSA also clarified the current Executive Officers contact details and the future contact for administrative services.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Marine Fisheries Association	18-05-2022	Email TO relevant person	TGS/Schlumberger thanked the MFASA for their reply and clarification of contact details. They asked for clarification from the MFASA regarding whether they would represent the views of respective fishers, or if the MFASA would act as a disseminator of the information to the relevant licence holders within the survey area.	N	N/A	* (see note above table)	Continuing consultation.
South Australian Marine Fisheries Association	31-05-2022	Email TO relevant person	TGS/Schlumberger invited the stakeholder to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
South Australian Marine Fisheries Association	22-06-2022	Email TO relevant person	TGS/Schlumberger expressed a desire to engage with the stakeholder in a meeting to discuss any questions they may have regarding the potential for the project to interact with fisheries. TGS/Schlumberger asked if the stakeholder could provide some days/times they would be available for a meeting.	N	N/A	* (see note above table)	Continuing consultation.
South Australian Marine Fisheries Association	30-06-2022	Email FROM relevant person	The stakeholder identified that the scope of work for the survey does not affect any of their members due to the fact that only three license holders operate in the area, and that the survey is not intrusive. As such the stakeholder has not raised any objections to the proposal.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
South Australian Marine Fisheries Association	13-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South Australian Marine Fisheries Association	19-02-2023	Email FROM relevant person	MFAI responded to previous TGS email providing a response to the TGS survey proposal. The response advised that after considering the amended proposal, the MFA does not believe the area that TGS has proposed for Otway Basin will have impact on the Marine Scale Commercial Fishing access. MFA thanks TGS for consulting them and wished them the best with their venture.	Y - formal response letter	N/A - no impact on marine scale commercial fishing access.	N/A	Consultation closed
South Australian Marine Fisheries Association	20-02-2023	Email TO relevant person	Acknowledged MFA's response email 19/02/2023.	N	N/A	N/A	Consultation closed
South Australian Native Title Services (SANTS)	06-10-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS/Schlumberger explained that from published online resources that Native Title Consent Determination Areas are registered for the following Traditional Owner Groups: • Ngarrindjeri and Others (South Australia); • First Nations of the South East (South Australia); TGS/Schlumberger asked the stakeholder to give advice as to whether the relevant Sea Country Groups are the same as the Native Title groups.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
South Australian Native Title Services (SANTS)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South Australian Native Title Services (SANTS)	14-03-2023	Phone call TO relevant person	TGS called SANTS to follow up on email and factsheet sent 15/02/2023 and spoke to a temporary receptionist whom advised everyone was out of the office. The receptionist took TGS's contact details and said someone would ring back later in the day.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Native Title Services (SANTS)	22-03-2023	Email TO relevant person	TGS emailed SANTS to provide them with an updated version of the factsheet which is more concise and provides an explanation of why TGS is wanting to consult with SANTS on their planned project. TGS continued the factsheet explains what a marine survey is, what are the potential effects on the environment, the measures TGS has in place to limit the potential effects and safeguards in place should an unexpected event occur. TGS said they would like to meet SANTS online to share TGS's plans and whether SANTS has any concerns and can arrange an online meeting at their convenience to discuss. TGS closed the email by thanking SANTS and advising they look forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South Australian Native Title Services (SANTS)	27-03-2023	Phone call TO relevant person	TGS called SANTS to follow up on email and factsheet sent on 22/03/2023. SANTS told TGS they had not personally received the factsheet and suggested to send it to them and she would forward to the right person (whom they were unsure of at that stage).	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Native Title Services (SANTS)	27-03-2023	Email TO relevant person	TGS emailed SANTS following a phone call earlier with them where SANTS requested they resend the factsheet providing information about the proposed survey. TGS said they would really like to get some time online with those within SANTS that would be interested to hear about TGS' plans and more importantly for TGS to hear if they have any concerns. TGS advised they would arrange an online meeting at their convenience to discuss. TGS closed the email by thanking SANTS and saying they look forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South Australian Native Title Services (SANTS)	11-04-2023	Email TO relevant person	TGS emailed SANTS to follow up on phone call and email sent 27/03/2023 asking if they would like any additional information. TGS advised they would like to meet SANTS online to discuss the proposed survey and hear any concerns they may have. TGS suggested they could arrange an online meeting at their convenience to discuss. TGS closed the email by thanking SANTS.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
South Australian Native Title Services (SANTS)	11-04-2023	Email TO relevant person	TGS emailed an alternative contact at SANTS from the contact used in previous correspondence following advice from another Traditional Owner group in regards to the proposed marine seismic survey within Otway Basin. TGS advised they had contacted SANTS with the same information (included email TGS sent on 29/03/2023). TGS explained they would really like to meet online with them to discuss their proposed survey and would like to hear if SANTS have any concerns. TGS advised they can arrange an online meeting at SANTS convenience to discuss, or SANTS can call them direct (details provided). TGS closed the email thanking SANTS.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South Australian Native Title Services (SANTS)	17-04-2023	Phone call TO relevant person	TGS called SANTS and spoke to the receptionist who advised they had received the factsheet and tried to transfer to another SANTS representative but they did not answer. The receptionist suggested TGS email the representative direct, providing TGS with the email address.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Native Title Services (SANTS)	17-04-2023	Email TO relevant person	TGS emailed an alternative contact at SANTS as advised by another SANTS representative, providing the updated information sheet. TGS said they would really like to meet online with them and those in their organisation that would be interested in hearing about the proposed marine seismic survey and they would like to hear if they have any concerns. TGS said they could arrange an online meeting at their convenience to discuss. TGS closed the email thanking SANTS.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South Australian Native Title Services (SANTS)	17-04-2023	Email FROM relevant person	TGS received an email from the alternative contact within SANTS they emailed earlier in the day, thanking TGS for their email. SANTS advised this is most likely to be of interest only to the First Nations of the South-East (FNSE) within SA and included the FNSE contact within the email who represents FNSE and is best placed to assist with any engagement including identifying interests or concerns.	Y - Updated information sheet	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Native Title Services (SANTS)	20-04-2023	Phone call TO relevant person	TGS called SANTS to follow up on First Nations of the South-East and Burrandies Aboriginal Corporation, but the person TGS needed to speak to and had emailed on 17/04/2023 was not available so TGS left a message for them to call TGS back.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Native Title Services (SANTS)	21-04-2023	Email TO relevant person	TGS emailed SANTS to follow up on email TGS sent 18/04/2023 and phone call and voice mail message left on 20/04/2023. TGS asked SANTS to call or alternatively suggested an online meeting. TGS closed the email thanking SANTS.	N	N/A	* (see note above table)	Continuing consultation.
South Australian Native Title Services (SANTS)	27-04-2023	Phone call TO relevant person	TGS called SANTS to follow up on previous unanswered correspondence and spoke to the SANTS person suggested they speak with and they asked why TGS were consulting them. TGS explained they had been provided their contact details for consultation with First Nations of the South-East (FNSE) and Burrandies Aboriginal Corporation (BAC) regarding their proposed marine seismic survey. TGS provided SANTS an overview of the proposed project and offered a meeting to discuss any concerns they may have with the project. SANTS said they would ask FNSE and BAC if they want to meet or have any concerns.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Native Title Services (SANTS)	22-05-2023	Email TO relevant person	TGS emailed SANTS to follow up on emails and phone calls from 27/04/2023 regarding their proposed marine seismic survey. TGS said that if SANTS has any input about the proposed survey to advise them before 26/05/2023 so the information can be considered within the development of the environment plan before submitting to NOPSEMA soon. TGS closed their email advising SANTS to contact them if they have any questions or would like any futher detail or reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
South Australian Native Title Services (SANTS)	22-05-2023	Email FROM relevant person	SANTS replied to TGS' email sent earlier that day advising the email was provided and instructions were sought and they will continue to seek instructions.	N	N/A	* (see note above table)	Continuing consultation.
South Australian Native Title Services (SANTS)	22-05-2023	Email TO relevant person	TGS replied to SANT'S email received earlier that day, thanking them.	N	N/A	* (see note above table)	Continuing consultation.
South Australian Recreational Fishing Advisory Council	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
South Australian Recreational Fishing Advisory Council	17-05-2022	Email FROM relevant person	Email undeliverable to one stakeholder email account.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Rock Lobster Advisory Council Inc.	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Maps of the Victorian fisheries that operate in or adjacent to the EP Area - A map of the survey relative to Tasmanian fisheries reporting blocks - A map of the survey relative to SA fisheries reporting blocks - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
South Australian Rock Lobster Advisory Council Inc.	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Map of survey relative to South Australian fisheries reporting blocks	N/A	* (see note above table)	Continuing consultation.
South Australian Rock Lobster Advisory Council Inc.	31-05-2022	Email TO relevant person	TGS/Schlumberger invited the stakeholder to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
South Australian Rock Lobster Advisory Council Inc.	02-06-2022	Meeting with relevant person	TGS/Schlumberger/ERM presented an overview of the survey, and of the commercial fishing effort for relevant Commonwealth and State managed fisheries based on available data. The stakeholder suggested TGS/Schlumberger go back to SARDI for better South Australia data, and agreed to follow up, given the data has been provided to them previously. The stakeholder made a general comment that lobster fisheries occur in the periphery of the 3D Active Source Area, but substantial fishing is less likely to occurring depths greater than 100m. TGS / Schlumberger sought the groups' suggestions on best approach for ongoing engagement, whether it be with each organisation separately or if they wanted to nominate a main representative. The stakeholder recommended consultation with the various rock lobster industry organisations and fishers be filtered through the stakeholder at Southern Rock Lobster Ltd.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
South Australian Rock Lobster Advisory Council Inc.	03-06-2022	Email FROM relevant person	SARLAC declined an invitation to a stakeholder meeting to be held June 9th 12:30-1:30pm AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Rock Lobster Advisory Council Inc.	03-06-2022	Email FROM relevant person	SARLAC declined an invitation to a stakeholder meeting to be held June 10th 9:00-10:00am AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Rock Lobster Advisory Council Inc.	17-06-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholders for their attendance and participation in the meeting on June 2nd. TGS/Schlumberger highlighted that the attached 2019 report includes a summary of the proportion of historical catch in each fishery that was overlapped by that survey area, and that the current Otway Basin 3D MSS area is similar. TGS/Schlumberger also noted that stakeholder from SETFIA pointed out there are areas where overlap is expected to be significantly reduced. TGS and Schlumberger informed the stakeholders that they have engaged SETFIA to compile similar information for the Otway Basin 3D MSS.	Y - Summary meeting notes - Copy of the 2019 Schlumberger Otway 2D Seismic Survey report prepared by SETFIA	N/A	* (see note above table)	Continuing consultation.
South Australian Rock Lobster Advisory Council Inc.	23-06-2022	Email TO relevant person	TGS noted that at the first stakeholder briefing session on the 6th June, it was indicated that the Southern Rock lobster Ltd would be the central point of contact for consultation with all of the State rock lobster fisheries. TGS acknowledged that the survey area does not overlap areas of significant rock lobster fishing, but welcomed an additional meeting to answer any questions regarding impacts to lobster of giant crab fishing from the project. TGS asked if SARLAC could communicate a time when the meeting could be held.	N	N/A	* (see note above table)	Continuing consultation.
South Australian Rock Lobster Advisory Council Inc.	23-06-2022	Email FROM relevant person	South Australian Rock Lobster Advisory Council declined an invitation to a stakeholder meeting scheduled for June 29th 9:00-10:00am AWST.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
South Australian Rock Lobster Advisory Council Inc.	30-06-2022	Email FROM relevant person	South Australian Rock Lobster Advisory Council declined an invitation to a stakeholder meeting scheduled for July 5th 8:30-9:30am AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Australian Rock Lobster Advisory Council Inc.	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South Australian Rock Lobster Advisory Council Inc.	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
South Australian Rock Lobster Advisory Council Inc.	19-05-2023	Phone call TO relevant person	SLR called SARLAC to discuss TGS' marine seismic survey within the Otway Basin but there was no answer. SLR left a message for SARLAC advising they are working with TGS on their proposed survey and assisting them with the consultation process. SLR also advised there has been a reduction in the Operation Area, removing the survey from South Australian waters. SLR asked for SARLAC to call them back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
South Australian Rock Lobster Advisory Council Inc.	19-05-2023	Email FROM relevant person	The Southern Rock Lobster Ltd replied to TGS' email sent earlier that day and confirmed the SA Rock Lobster fishery has two peak bodies.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
South Australian Rock Lobster Advisory Council Inc.	19-05-2023	Email TO relevant person	TGS emailed the Southern Rock Lobster Ltd representative to ask if they also represent SARLF as they hadn't heard anything back from them regarding their proposed marine seismic survey within the Otway Basin.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
South Australian Rock Lobster Advisory Council Inc.	22-05-2023	Phone call TO relevant person	SLR called SARLAC to follow up on phone call, message and email from 19/05/2023 regarding TGS' marine seismic survey within the Otway Basin but there was no answer. SLR left a message asking if SARLAC was available to meet to discuss the survey or SARLAC could reply to the email sent 19/05/2023 or call SLR or TGS to discuss further.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
South East Professional Fisherman's Association	19-05-2023	Phone call TO relevant person	SLR called SEPFA to discuss TGS' marine seismic survey within the Otway Basin but there was no answer. SLR left a message for SEPFA advising they are working with TGS on their proposed survey and assisting them with the consultation process. SLR also advised there has been a reduction in the Operation Area, removing the survey from South Australian waters. SLR asked for SEPFA to call them back.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
South East Professional Fisherman's Association	22-05-2023	Phone call TO relevant person	SLR called SEPFA to follow up on phone call, message and email from 19/05/2023 regarding TGS' marine seismic survey within the Otway Basin but there was no answer. SLR left a message asking if SEPFA was available to meet to discuss the survey or SEPFA could reply to the email sent 19/05/2023 or call SLR or TGS to discuss further.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
South East Tasmanian Aboriginal Corpora	29-03-2023	Email TO relevant person	TGS emailed SETAC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided by 05/04/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
South East Tasmanian Aboriginal Corporation	4-04-2023	Phone call TO relevant person	TGS called SETAC to follow up on their email sent 29/03/2023 regarding their proposed marine seismic survey within the Otway Basin and spoke to reception advising they had called the [alternative location]. The reception asked what email address the information had been sent to and TGS provided information. They said they would find out who to forward the information to.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Tasmanian Aboriginal Corporation	11-04-2023	Phone call TO relevant person	TGS called an alternative contact phone number for SETAC to follow up on their phone call from 04/04/2023 and email sent 29/03/2023 regarding their proposed marine seismic survey within the Otway Basin, however there was no answer. TGS left a message to call back.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Tasmanian Aboriginal Corporation	11-04-2023	Email TO relevant person	TGS emailed SETAC to follow up on email sent 29/03/2023 (copy of email included) regarding their proposed marine seismic survey within the Otway Basin. TGS advised they would like to meet SETAC online to discuss the proposed survey and hear any concerns they may have. TGS suggested they could arrange an online meeting at their convenience to discuss, or they can call them direct (mobile contact details provided). TGS closed the email by thanking SETAC.	N	N/A	* (see note above table)	Continuing consultation.
South East Tasmanian Aboriginal Corporation	20-04-2023	Phone call TO relevant person	TGS called SETAC to follow up on their phone call and email sent 11/04/2023. The receptionist advised they had received the email and forwarded to another SETAC representative. The receptionist confirmed SETAC is a health care provider but the SETAC representative (Health Care Manager) was also from the Weetapoona Aboriginal Corporation who looks after the environment. The receptionist took TGS' phone number to call back.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Tasmanian Aboriginal Corporation	28-04-2023	Email TO relevant person	TGS emailed SETAC following phone call earlier that day. TGS mentioned they will be in Hobart next week and would welcome the opportunity to give a project overview and to hear if SETAC or anyone else in their organisation has any concerns or questions about the proposed Otway offshore seismic survey. TGS suggested any time Friday or Thursday afternoon would work. TGS closed the email stating they look forward to meeting with them next week.	N	N/A	* (see note above table)	Continuing consultation.
South East Tasmanian Aboriginal Corporation	1-05-2023	Email TO relevant person	TGS replied to SETAC's email received earlier that day thanking them for their reply. TGS said they are engaging other groups as well but would like to engage with all groups to ensure TGS understands any concerns the different groups.	N	N/A	* (see note above table)	Continuing consultation.
South East Tasmanian Aboriginal Corporation	1-05-2023	Email FROM relevant person	SETAC replied to TGS' email sent 28/04/2023 advising TGS that looking at the map, SETAC think it would be best to engage with Australia mainland Aboriginal organisations as it is much closer to them than SETAC and asked TGS what their thoughts were.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Tasmanian Aboriginal Corporation	3-05-2023	Email TO relevant person	TGS replied to SETAC's email received earlier that day thanking them and advised they can arrange a meeting online next week.	N	N/A	* (see note above table)	Continuing consultation.
South East Tasmanian Aboriginal Corporation	3-05-2023	Email FROM relevant person	SETAC replied to TGS' email sent 01/05/2023 advising they had sent an email to see if anyone is available on Friday as they are all busy on Thursday and would advise TGS soon.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Tasmanian Aboriginal Corporation	9-05-2023	Email TO relevant person	TGS emailed SETAC asking if they would be available for an online meeting the current week.	N	N/A	* (see note above table)	Continuing consultation.
South East Tasmanian Aboriginal Corporation	9-05-2023	Email TO relevant person	TGS replied to SETAC's email received ealier that day and suggested an online meeting date and time of 11/05/2023 at 11:00 am.	N	N/A	* (see note above table)	Continuing consultation.
South East Tasmanian Aboriginal Corporation	9-05-2023	Email TO relevant person	TGS emailed SETAC seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from SETAC to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked SETAC to reply and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
South East Tasmanian Aboriginal Corporation	9-05-2023	Email FROM relevant person	SETAC replied to TGS' email sent earlier that day enquiring about an online meeting. SETAC replied yes they would be available for an online meeting that week and asked TGS to advise when and they will send an invite to their cultural committee.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Tasmanian Aboriginal Corporation	11-05-2023	Meeting with relevant person	TGS, SLB and SLR met with WAC/SETAC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered a presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with WAC/SETAC: - Fuel release and response process; - Reason for survey - to provide data to oil and gas companies, not a government initiative. - Impacts to marine life, cultural sites (petroglyph sites), heritage sites (Tasmanian Wilderness Heritage area) and fishing trap areas. - TGS part of the Energeo Alliance Ghost Net and Marine Debris Removal Iniative. - Socio-economic benefits of the project - employment opportunities etc. - Oil and gas exploration and drilling is not in the scope of this project, just data acquisition. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Purpose of the EP: **Section 1.2** Fuel release and response process: **Section 8.3.6** specififes the Control Measures to ensure the risks of accidential hydrocarbon release is ALARP, **Section 8.4** described the Hydrocarbon Spill Response, **Section 10.10** (Oil Pollution Emergency Plan) describes the response procedures for any accidental hydrocarbon release. The Operational and Scientific Monitoring PLan (OSMP) specifies monitoring response protocols, if triggered. Impacts to marine life: various sensitive receptors are discussed in **Section 7.2** (for acoustic impacts), **Section 7.3** (routine permissible waste discharge), **Section 7.4** (atmospheric emissions), **Section 7.5** (artificial light emissions), **Section 8.1** (IMS), **Section 8.2** (streamer loss), **Section 8.3** (vessel collision and hydrocarbon spill), and **Section 8.5** (accidental release of hazardous and non-hazardous material). Impacts to cultural and heritage sites: Impacts to culture and heritage, as well as socio-economic imapcts are disscussed in detail in **Section 7.1.3** (Physical presence), **Section 7.2.3** (Acoustic imapcts), **Section 8.1.3** (Unplanned activities), **Section 8.3.4** (hydrocarbon spill) Impact to important species: **Section 7.2.2** (acoustic impacts), **Section 7.2.3** (routine permissible waste discharges), **Section 7.4.2** (atmospheric emissions), **Section 7.5.2** (artificial light emissions), **Section 8.1.2** (IMS), **Section 8.2.2** (streamer loss), **Section 8.3.3** (vessel collision and hydrocarbon spill), **Section 8.5.2** (accidental release of hazardous and non-hazardous materials). Ongoing consultation with WAC/SETAC will be undertaken in accordance with the methods set out in Section 5 to ensure WAC/SETAC have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
South East Tasmanian Aboriginal Corporation	9-06-2023	Email TO relevant person	TGS emailed SETAC to provide them with a copy of the meeting minutes and presentation for their review and record. TGS asked SETAC to advise of any changes and provided the following information as discussed during the meeting: - contact for Aboriginal Heritage Tasmania; - information about the Energeo Alliance - Ghost net and marine debris removal initiative, including information about handling entangled animals (attached); and - employment opportunities (marine fauna observer possibility), asking SETAC to advise if there would be interest so they can discuss further. - TGS thanked SETAC for their time and information and advised they have noted their concerns and queries which will be incorporated within their enviornmental and survey planning and environmental plan. TGS closed by advising they will keep them updated as things progress and get the impact summaries as soon as they can but asked them to get in touch if they have any amendments or queries.	Y - Meeting minutes, copy of presentation and IAGC guidance for handling entangled animals.	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Maps of the Commonwealth fisheries that operate in the region	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	12-05-2022	Email FROM relevant person	Email undeliverable to one stakeholder email account. Note there was a correction of this address to and the email was re-sent.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	13-05-2022	Email TO relevant person	TGS state they are contacting SETFIA to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, information sheet and maps and a summary of the Commonwealth fisheries	N/A	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	16-05-2022	Email FROM relevant person	The email acknowledges that the SETFIA received the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS. The stakeholder noted the similarity of the project to a previous MSS proposal (Otway Regional 2D Survey), and that the current proposal used ABARES charts of fishing catch without actual catch and revenue being quantified. They noted that the use of ABARES only does not assist them in understanding actual impact on the GHaT and CTS. There were 2 questions raised: 1. How do the polygons from the 2019/20 Otway Regional 2D survey and the current survey relate. 2. What is the GHaT and CTS catch and revenue taken from the 2022 (current) surveys polygon.	Y - 2 images were included in the email	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
South East Trawl Fishing Industry Association (SETFIA)	19-05-2022	Email FROM relevant person	SETFIA suggest a separate report is not necessary rather an update to Table 1, this can be further discussed with SETFIA.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	19-05-2022	Email TO relevant person	TGS/Schlumberger thanked SETFIA for their quick reply. It was communicated that there are differences between the current survey and the Otway Regional 2D area, particularly along the northern margin, and that currently TGS has no catch and revenue data for the current survey. It was noted that depending on the resolution of SETFIAs data, there may be some differences from the last EP, particularly if the current survey area doesn't encroach as far into the fisheries. TGS/Schlumberger enquired as to whether SETFIA could prepare a similar report regarding commercial fishing data, and if so, could a call be set up involving the relevant parties (TGS, Schlumberger and ERM).	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	19-05-2022	Email TO relevant person	TGS/Schlumberger requested the stakeholder advise them of their availability for a call via teams on Monday 23/05/2022.	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	19-05-2022	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	19-05-2022	Email FROM relevant person	SETFIA agreed to a teams call on the morning of 23 May 2022 (Melbourne time).	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	23-05-2022	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Active Source Area - EP Area (Total 15 attachments)	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	30-05-2022	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Proposal for services	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	31-05-2022	Email TO relevant person	TGS/Schlumberger invited SETFIA to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	02-06-2022	Meeting with relevant person	TGS/Schlumberger/ERM presented an overview of the survey, and of the commercial fishing effort for relevant Commonwealth and State managed fisheries based on available data. The stakeholder clarified in regards to the Commonwealth trawl sector that there is a deep water closure line which follows the 700 m contour in some areas, but the 1,000m contour in others, particularly off west coast of Tasmania. The stakeholder noted that the fishing data presented during the meeting is based on course resolution data (e.g. 60 NM blocks in the case of Commonwealth fisheries) so generally over-represented the area of fishing effort in some cases. They also noted that the polygon significantly reduced overlap with many fisheries compared with Schlumberger's 2D seismic polygon which SETFIA consulted on back in 2019 (potentially as much as 80% in some cases). The stakeholder encouraged TGS and Schlumberger to share the report that SETFIA had prepared for Schlumberger in 2019 with all attendees so that they can see the reduction in overlap. SETFIA was pleased to see impacts to shark and trawl sectors have been significantly reduced, and noted that some Scale fish Hook Sector effort may also be relevant, as well as the various State giant crab and rock lobster fisheries. SETFIA asked TGS/Schlumberger if compensation would be available if any fishers suffer a loss due to displacement and reduced catch. TGS confirmed that their priority is to first work with the fishing industry to reduce the potential for impacts. The stakeholder stated the industry will be looking for a clear commitment to compensate for reduced catch. TGS confirmed that a compensation policy will be in place but they are currently looking at the specifics of the policy and how it will be implemented. TGS / Schlumberger sought the groups' suggestions on best approach for ongoing engagement, whether it be with each organisation separately or if they wanted to nominate a main representative. SETFIA referred TGS/Schlumberger to the SETFIA 2019 Report for appropriate contacts for industry organisations, as well as individuals where a fishery did not have its own industry organisation.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	3-06-2022	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Proposal for services with comments from TGS	N/A	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	03-06-2022	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Updated map showing new boundaries.	N/A	* (see note above table)	Continuing consultation.

South East Trawl Fishing Industry Association (SETFIA)	06-06-2022	Email FROM relevant person	SETFIA declined an invitation to a stakeholder meeting to be held June 10th 9:00-10:00am AWST under the assumption that it was a repeat of the June 2nd meeting.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	17-06-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholders for their attendance and participation in the meeting on June 2nd. TGS/Schlumberger highlighted that the attached 2019 report includes a summary of the proportion of historical catch in each fishery that was overlapped by that survey area, and that the current Otway Basin 3D MSS area is similar. TGS/Schlumberger also noted that the stakeholder from SETFIA pointed out there are areas where overlap is expected to be significantly reduced. TGS and Schlumberger informed the stakeholders that they have engaged SETFIA to compile similar information for the Otway Basin 3D MSS.	Y - Summary meeting notes - Copy of the 2019 Schlumberger Otway 2D Seismic Survey report prepared by SETFIA	N/A	* (see note above table)	Continuing consultation.

Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - PDF and Word document fisheries data report finalised post comments	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	10-09-2022	Email TO relevant person	Commentary on the EP boundaries used in SETFIAs report.	Y - XLS boundary coordinates. JPG EP area	N/A	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	10-09-2022	Email TO relevant person	Email thanking SETFIA for final version of report.	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	12-09-2022	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	12-09-2022	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Version 3.2 FINAL-FINAL of fisheries data report	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	17-02-2023	Phone call TO relevant person	Discussed the revision to the Environment Plan and the potential to get the Otway fishing report updated. SETFIA advised they have been busy with all the wind farm consultation with over a dozen requests and requested TGS send through a request and they will look at it next week.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	17-02-2023	Email TO relevant person	TGS emailed following previous phone call with SETFIA earlier that day to request a cost and timing for revising the commercial fishing report similar to what SETFIA provided last year with the updated EP area, noting the updated EP area excluded SA. TGS provided the updated map and shapefiles.	Y - Updated map and shapefiles	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	27-02-2023	Phone call TO relevant person	TGS called SETFIA but there was no answer. TGS left voice message to return call.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	27-02-2023	Text message FROM relevant person	SETFIA texted TGS responded to voice message left earlier in the day advising they were very busy and to call back later in the week. SETFIA apologised for putting TGS off.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	13-03-2023	Phone call TO relevant person	TGS called SETFIA but there was no answer. TGS left voice message to return call.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	23-03-2023	Phone call TO relevant person	TGS called SETFIA but there was no answer. TGS left voice message to return call regarding the Otway Seismic Survey.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	30-03-2023	Email FROM relevant person	SETFIA emailed TGS apologising for being hard to find explaining their heavy workload including a variety of MSS companies chasing them. SETFIA attached a policy document aimed at MSS proponents that SSIA (Shark Fishery) and SETFIA (trawl) have drafted in order to assist with the number of approaches being made. SETFIA closed the email by suggesting they have an online meeting. The SETFIA submission proposed the following six steps to effective consultation and planning of MSSs: 1. Proponents to complete a data project to guide their consultation. 2. Proponents should focus engagement on fisheries working in and around the area of interest. 3. SSIA and SETFIA can only assist if proponents agree to cover reasonable costs. 4. Proponents acknowledge there is a real potential for impacts on fishing and try to adjust the MSS footprint or timing to reduce impacts. 5. Compensation must be paid where mitigation is not possible and fishing industry must move elsewhere and catches decline. 6. SETFIA offers a SMS/text system to contact fishers in different regions for notifications and updates. Refer to Appendix H for a copy of the detailed submission.	Y - Formal submission policy statement	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Consultaion with commercial fisheries industry bodies is an ongoing process for the duration of the development of the EP, and during the lifetime of the Seismic Survey. This is recognised via a suite of control measures, notification procedures, and development of an agreed commercial fisheries compensation protocol, addressed in teh following sections of the EP: Effects to commercial fishing industry: Section 7.1.3.1 (impacts of the physical presence of the seismic survey vessels), Section 7.2.3.1 (imapcts of acoustic disturbacne on fisheries), Section 8.2.3 (imapct of streamer loss), Section 8.3.4.1 (hydrocarbon spill), and Table 84 includes control measures for adressing commercial fishers compensation in accordance with agreed protocols. Spatial avoidance of fishing grounds: Table 84 lists the control measure for compensation to fishers for any claims received in accordance with the agreed compensation protocol. Cumulative impacts on stock: Table 84 lists control measures to require a SIMOPS plan, which inlcudes the implementation of a 40 km spatial separation between Seismic Vessels. Section 9 sets out the approach to manageing Cumulative Impacts. Outcomes of concurrent Cumulative Imapct Assessment workshops will be incorporated as frameworks become finalised and available for incorporation into this EP. Ongoing consultation with SETFIA will be undertaken in accordance with the methods set out in **Section 5** to ensure SETFIA have had both sufficient information, and sufficient time to engage in the consultation programme.	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	30-03-2023	Email TO relevant person	TGS responded to SETFIA's email dated 30/03/2023 thanking them for their submission and agreeing to have an online meeting. TGS asked SETFIA to let them know when is convenient next week and they will organise. Two other emails followed confirming a date and time.	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	30-03-2023	Email FROM relevant person	SETFIA emailed TGS and SLR a meeting invite for 05/04/2023.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	5-04-2023	Meeting with relevant person	TGS, SLB and SLR met with SETFIA to discuss their policy statement received 30/03/2023 and ongoing consultation with Commonwealth commercial fishers. SETFIA explained their overwhelming workload and apologised for the delay with their response. SETFIA confirmed they represent the Commonwealth Trawl Fishery and the Southern Shark Industry Alliance (gillnet, hook and trap fisheries). The meeting concluded with a plan for SETFIA to submit a proposal to TGS/SLB for works to provide data on relevant fisheries. Once TGS approve the proposal, SETFIA will request the data and prepare information for TGS. However SETFIA explained this data is not likely to be available until June 2023. The proposal included the ability to liaise with relevant fishers via a text message. Refer to Appendix I for a copy of the full meeting minutes.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	6-04-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Proposal for services	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	13-04-2023	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Proposal for services	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	13-04-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	14-04-2023	Email TO relevant person	TGS provided SETFIA with minutes from their meeting held 05/04/2023.	Y - Meeting minutes	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	16-04-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Updated proposal for services	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	16-04-2023	Email FROM relevant person	SETFIA replied to meeting minutes sent to them for review on 14/04/2023 with suggested changes.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	17-04-2023	Email TO relevant person	TGS replied to SETFIA's email received 16/04/2023 providing amended meeting minutes incorporating changes suggested in their email.	Y - Updated meeting minutes	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
South East Trawl Fishing Industry Association (SETFIA)	17-04-2023	Email TO relevant person	TGS replied to SETFIA's emailed received 16/04/2023 providing amended proposal, thanking them and advising they will revert soon.	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	17-04-2023	Email FROM relevant person	SETFIA replied to TGS' email sent earlier that day, thanking TGS and advising they appreciate it.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	18-04-2023	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Proposal for services contract	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	19-04-2023	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Executed proposal for services contract	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	19-04-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	Continuing consultation	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	21-04-2023	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	21-04-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	5-05-2023	Email FROM relevant person	SETFIA emailed TGS to advise their commercial fishing data request had been submitted to relevant agencies.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	9-05-2023	Email TO relevant person	TGS replied to SETFIA's email received 05/05/2023 thanking them.	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	11-05-2023	Phone call TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	11-05-2023	Email TO relevant person	TGS replied to SETFIA's email received and phone call made earlier that day. TGS provided SETFIA with TGS' latest information sheet for commercial fishers.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	11-05-2023	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service) and commissioning of report. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	11-05-2023	Email TO relevant person	TGS replied to SETFIA's email received earlier that day and confirmed they had been in contact with the SA Marine Fishers Assn and the South Eastern Professional Fishermans Assn.	N	N/A	* (see note above table)	Continuing consultation.
South East Trawl Fishing Industry Association (SETFIA)	11-05-2023	Email FROM relevant person	SETFIA emailed TGS to advise that Victoria, AFMA and SA (slower) were making progress on their data request. SETFIA suggested that once TGS has expected dates, they implement the SMS program.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	11-05-2023	Email FROM relevant person	SETFIA replied to TGS' email sent earlier that day regarding a draft text message to notify commercial fishers of TGS proposed marine seismic survey. SETFIA provided draft text for TGS to review. SETFIA also asked TGS if they have spoken to SIV, TSIC and SA associations.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	11-05-2023	Email FROM relevant person	SETFIA replied to TGS's email sent earlier that day suggesting contact details for the SA Marine Fishers Assn and South Eastern Professional Fishermans Assn.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	16-05-2023	Phone call TO relevant person	TGS called SETFIA to advise they were about to contact the commercial fishers individually as part of their consultation requirements. SETFIA asked TGS to not send any information to fishers and questioned where the fishers' contact information had been obtained. TGS advised that AFMA had provided the contact details.	N	Continuing consultation	* (see note above table)	Continuing consultation
South East Trawl Fishing Industry Association (SETFIA)	16-05-2023	Phone call FROM relevant person	SETFIA called TGS back regarding their earlier phone call about contacting commercial fishers direct following a phone call with AFMA. SETFIA advised that AFMA stated they would not have provided the contact details. TGS confirmed they would pause on contacting the commercial fishers direct until the matter was resolved.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Gippsland Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South Gippsland Shire Council	16-02-2023	Email FROM relevant person	Automated email reply advising a member of council's staff would get back to TGS as soon as possible.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Gippsland Shire Council	24-04-2023	Email TO relevant person	TGS emailed SGSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SGSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
South Gippsland Shire Council	24-04-2023	Email FROM relevant person	Automated response to TGS' email sent earlier that day acknowledging email and advising SGSC will response within 10 business days.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Gippsland Shire Council	10-05-2023	Phone call TO relevant person	TGS called SGSC to follow up on email TGS sent on 24/04/2023 regarding their proposed marine seismic survey within the Otway Basin, to clarify the environment that may be affected (EMBA). SGCS asked to be removed from the consultation list.	N	Continuing consultation	* (see note above table)	Continuing consultation
South Gippsland Shire Council	11-05-2023	Email FROM relevant person	SGSC replied to TGS' email sent 24/04/2023 advising that considering the location of the activity and the information provided, SGSC do no have any feedback to share with TGS at this point in time. SGSC said they appreciate the opportunity to provide comment and for now welcome ongoing updates and information on the project.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
South Gippsland Shire Council	19-05-2023	Email FROM relevant person	Automated response to TGS' email sent earlier that day acknowledging email and advising SGSC will response within 10 business days.	N	Continuing consultation	* (see note above table)	Continuing consultation
Southern Coast Charters (King Island Dive Adventure)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Southern Coast Charters (King Island Dive Adventure)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Southern Coast Charters (King Island Dive Adventure)	24-04-2023	Email TO relevant person	TGS emailed SCC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SCC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Southern Coast Charters (King Island Dive Adventure)	26-04-2023	Email FROM relevant person	SCC emailed TGS and advised all is ok their end with the survey.	N	Continuing consultation	* (see note above table)	Continuing consultation
Southern Coast Charters (King Island Dive Adventure)	27-04-2023	Email FROM relevant person	SCC replied to TGS' email sent earlier that day advising they are ok to remain on the survey consultation list.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Southern Coast Charters (King Island Dive Adventure)	27-04-2023	Email TO relevant person	TGS replied to SCC's email received yesterday thanking them for their reply and letting them know they are ok with the proposed survey. TGS asked SCC if they wanted to be kept on the consultation list so they can keep updated with the survey progress or would they prefer to be removed [from the consultation list]. TGS closed the email advising SCC can always contact TGS if any queries arise.	N	N/A	* (see note above table)	Continuing consultation.
Southern Coast Charters (King Island Dive Adventure)	28-04-2023	Email TO relevant person	TGS replied to SCC's email received yesterday advising SCC would like to remain on the survey consultation list.	N	N/A	* (see note above table)	Continuing consultation.
Southern Ocean Protection Embassy Collective Hissing Swan Arts	19-08-2022	Email FROM relevant person	SOPEC emailed TGS to provide a letter of request to be consulted by Traditional Custodians of Sea Country along the SW coast of Victoria encompassing Sea Country for Gunditjmara, Keerray Woorroong, Gadubanud and Wathaurong. SOPEC concluded their email stating they anticipate a response at TGS' earliest convenience.	Y - Letter of Request to be Consulted	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Southern Ocean Protection Embassy Collective Hissing Swan Arts	19-08-2022	Email FROM relevant person	The stakeholder attached a letter with the request to have full project information shared, and protections to be negotiated across Gunditjmara Country for the Southern Right Whale.	Y - Letter of Request to be Consulted	Stakeholder has raised an objection, claim or concern. The stakeholder opposes the proposed seismic survey and requested a meeting between TGS/SLB and SOPEC members.	* (see note above table)	Continuing consultation
Southern Ocean Protection Embassy Collective Hissing Swan Arts	24-08-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholder for the correspondence and information provided. TGS/Schlumberger provided some dates and times for a meeting to be held.	N	N/A	* (see note above table)	Continuing consultation.
Southern Ocean Protection Embassy Collective Hissing Swan Arts	08-10-2022	Email FROM relevant person	The stakeholder thanked TGS/Schlumberger for their reply, and explained that the slow response was a result of consulting with Elders and the relevant communities. The stakeholder detailed that they will reach out in the coming weeks with clearer dates and times for a meeting.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Southern Ocean Protection Embassy Collective Hissing Swan Arts	10-10-2022	Email TO relevant person	TGS/SLB thanked the stakeholder for their response.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Southern Ocean Protection Embassy Collective Hissing Swan Arts	4-01-2023	Email TO relevant person	TGS reconnected with FNLRS given it had been a while since last communicated to see if they were available for a meeting on the EP.	N	N/A	* (see note above table)	Continuing consultation.
Southern Ocean Protection Embassy Collective Hissing Swan Arts	13-02-2023	Email TO relevant person	TGS Reconnected to advise of changes to survey (area size and contact details) and provide updated information sheet.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Southern Ocean Protection Embassy Collective Hissing Swan Arts	15-02-2023	Email TO relevant person	TGS emailed SOPEC to ensure they had received the previous email from TGS sent 13/02/2023 as technical error may have prevented them from replying. TGS asked for all comments to be provided by Thursday 16/03/2023.	N	N/A	* (see note above table)	Continuing consultation.
Southern Ocean Protection Embassy Collective Hissing Swan Arts	27-02-2023	Phone call TO relevant person	TGS called SOPEC to follow up on previous correspondence to discuss the survey and their previous submission (dated 19/08/2022) however there was no answer. TGS sent a text message to request a meeting at their convenience.	N	Continuing consultation	* (see note above table)	Continuing consultation
Southern Ocean Protection Embassy Collective Hissing Swan Arts	27-02-2023	Text message TO relevant person	TGS messaged SOPEC to advise they would welcome the opportunity to meet with them and asked them to please let them know when convenient.	N	N/A	* (see note above table)	Continuing consultation.
Southern Ocean Protection Embassy Collective Hissing Swan Arts	24-04-2023	Email TO relevant person	TGS emailed SOPEC to provide an update on their proposed marine seismic survey within the Otway Basin. TGS thanked SOPEC for their patience with TGS' response to their submission [received 19/08/2022]. TGS advised SOPEC they are still planning their survey incorporating feedback from their stakeholders and have enough information to discuss SOPEC's comments and explain some of the measures TGS will be implementing to avoid and mitigate impacts to the marine environment, including protection for the southern right whales. TGS commented they need to ensure they fully understand SOPEC's concerns and a meeting would provide them the opportunity to discuss them. TGS attached the updated information sheet to provide some of the changes they have been working on. TGS asked if SOPEC would be available to meet online or for a phone call (contact details provided to SOPEC).	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Southern Ocean Protection Embassy Collective Hissing Swan Arts	9-06-2023	Email TO relevant person	TGS emailed SOPEC thanking them for their submission (Aug 2022) regarding their proposed seismic survey and to provide an update on the progress with their survey. TGS advised they are about to submit their environment plan (EP) to NOPSEMA and once accepted as completd will be released for public consultation. SOPEC will have an opportunity to review the draft EP and provide feedback before TGS update the EP and resubmit to NOPSEMA for their overall assessment. However TGS expressed their desire to meet with SOPEC to discuss the information they have shared particularly their deeply troubling cultural and legal concerns. TGS added they would like SOPEC to know they acknowledge their birthrights to sea country and their opposition to industrialisation and TGS respects that. TGS suggested they could meet to introduce themselves and the proposed survey and discuss their concerns and strong cultural alliance with the sea country. TGS would like to better understand the values and sensitivities of their traditional owner groups to TGS can ensure they are considered, respected and protected during survey planning and operations. TGS added they can also explain the EP process and the work TGS has been doing to understand the environmental sensitivities in the area and control measures TGS has develoed to avoid harming marine fauna, particularly the sacred species SOPEC has mentioned. TGS also provided information to help SOPEC provide feedback on the proposed survey, explaining SOPEC's rights and TGS' obligations through the consultation process. TGS asked SOPEC to advise if they would like to meet or would like more information or alternatively if they would no longer like to engage on the survey and would prefer to be removed from their consultation program and they will update their records.	Y - Updated information sheet and NOPSEMA guidance for provided feedback	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Maps of the Victorian fisheries that operate in or adjacent to the EP Area - A map of the survey relative to Tasmanian fisheries reporting blocks - A map of the survey relative to SA fisheries reporting blocks - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	31-05-2022	Email TO relevant person	TGS/Schlumberger invited the stakeholder to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	23-06-2022	Email TO relevant person	TGS/Schlumberger noted that at the first stakeholder briefing session on the 6th June, it was indicated that the Southern Rock lobster Ltd would be the central point of contact for consultation with all of the State rock lobster fisheries. TGS/Schlumberger acknowledged that the survey area does not overlap areas of significant rock lobster fishing, but welcomed an additional meeting to answer any questions regarding impacts to lobster of giant crab fishing from the project. TGS/Schlumberger asked if SRL could communicate a time when the meeting could be held.	N	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	27-06-2022	Email FROM relevant person	The stakeholder advised TGS/Schlumberger that they are available for a meeting during the week of 4th July (besides Friday 8th July). They proposed 10:30am Tuesday Eastern time for the meeting.	N	Continuing consultation	* (see note above table)	Continuing consultation
Southern Rock Lobster Limited	29-06-2022	Email FROM relevant person	The stakeholder accepted a meeting on Tuesday 5th July 8:30-9:30 AWST with TGS/Schlumberger.	N	Continuing consultation	* (see note above table)	Continuing consultation
Southern Rock Lobster Limited	05-07-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholder for their attendance at the meeting on July 5th and explained that the meeting notes would be sent through once finalised.	Y - Meeting presentation	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	05-07-2022	Meeting with relevant person	Stakeholder requested that information discussed not be publically disclosed except the following key points to represent concerns and the position of some of SRL's members: - Concerns regarding impacts to lobsters based on recent research; - Concerns regarding impacts to lobster larvae/puerulus based on recent research; - Request that all areas of historical rock lobster fishing effort be excluded from the survey.	N	Stakeholder has raised an objection, claim or concern. The objection, claim or concern is addressed in the EP. Impacts to rock lobster have been assessed in the EP. No discernible impacts to stock given that the 3D Active Source Area avoids the continental shelf (core rock lobster distribution) and acquisition on the shelf is limited to a few hours/single 2D tie line. Limited or no effects to deep water white lobster on the continental slope given water depths and vertical sound propagation losses. Impacts to larvae and recruitment of rock lobster are assessed in the EP. The magnitude and extent of effects from a seismic survey (transient point source) are expected to be negligible in the context of natural mortality and variability at a regional scale. Request to exclude all areas of historical fishing effort has been considered, but not adopted given that the Active Source Area already has very limited overlap with rock lobster habitat and fishing effort. Overlap is mainly with infrequent fishing effort for deep water white lobster. Given low frequency of fishing in deep water, the potential for interaction is unlikely. Note that fishing effort data is available in coarse resolution 10 nm or 30 nm blocks depending upon State data and it is not possible to accurately determine the location of fishing effort. However, the 3D Active Source Area is in water depths greater than 510 m (shallowest point) and generally deeper than 600 or even 700 m, therefore, even deep water lobster is expected to be avoided. While exclusion of all fished blocks by rock lobster fishery has not been adopted, the following controls have been adopted in the EP and should prevent/limit impacts to the fisheries: - Exclusion of acquisition in water depths <1,000m south of the 2D Tie Line Extension Area. This was implemented primarily for giant crab but indirectly benefits Tasmanian Rock Lobster and part of the Victorian Rock Lobster Fishery. - When acquiring 3D data at eh northern and eastern margins of the 3D Active Source Area, the seismic vessel will make line turn towards deep water (i.e. away from areas of fishing effort). Therefore, potential interaction with rock lobster fishers on the continental shelf is limited only to the single 2D tie line in the 2D Tie Line Extension Area, or in the unlikely event that the seismic vessel (at the decision of the Vessel Master) has to make an unforeseen movement outside of the Active Source Area into the surrounding EP Area.	* (see note above table)	Continuing consultation
Southern Rock Lobster Limited	07-10-2022	Email TO relevant person	TGS/Schlumberger updates the stakeholder on the progress of the EP, and listed aspects of the potential survey that would assist in avoiding disturbance to rock lobster fishers and habitat.	Y - Meeting notes	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	07-10-2022	Email FROM relevant person	The stakeholder explained that they are out of the office until October 10, and gave alternative contact details.	N	Continuing consultation	* (see note above table)	Continuing consultation
Southern Rock Lobster Limited	7-10-2022	Email FROM relevant person	Automatic reply for out of office, returning on the 10/10/2022.	N	Continuing consultation	* (see note above table)	Continuing consultation
Southern Rock Lobster Limited	13-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	11-04-2023	Email TO relevant person	TGS emailed SRLL to arrange an online meeting to discuss their proposed marine seismic survey, acknowledging their current high level of information requests. TGS said they consider SRLL's input valuable and want to ensure they are addressing any concerns they may have. TGS closed the email asking them to advise a suitable date and time for an online meeting and they will arrange. TGS attached the updated information sheet.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	11-04-2023	Email TO relevant person	TGS replied to SRLL's email sent earlier that day and suggested 26/04/2023 at 13:00 hrs for a meeting and if suitable would send a meeting request.	N	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	11-04-2023	Email FROM relevant person	SRLL replied to TGS' email sent earlier that day thanking them for getting in touch and advising they have availability from the week beginning 24/04/2023.	N	Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Southern Rock Lobster Limited	12-04-2023	Email TO relevant person	TGS emailed meeting invite to SRLL for 26/04/2023 at 3:00 pm and attached the minutes from the last meeting held 07/05/2022.	Y - Last meeting minutes dated 07/05/2022	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	12-04-2023	Email FROM relevant person	SRLL replied to TGS' email sent yesterday confirming their suggested meeting date and time (26/04/2023 at 1 pm) sounds good.	N	Continuing consultation	* (see note above table)	Continuing consultation
Southern Rock Lobster Limited	13-04-2023	Email FROM relevant person	SRLL accepted the meeting invite that TGS emailed 12/04/2023.	N	Continuing consultation	* (see note above table)	Continuing consultation
Southern Rock Lobster Limited	26-04-2023	Meeting with relevant person	TGS, SLB and SLR met with SRLL to provide information about the proposed survey, to identify any potential impacts to SRLL's functions, interests or activities and discuss any concerns SRLL has with the proposed survey. The meeting's key comments included: - SRLL represents five rock lobster organisations (SA, northern, southern, Victorian and Tasmanian) with mixed views on seismic surveying from not interested to strongly opposed. - SRLL believes the research suggests seismic only likely to be having mild impacts on fisheries. - Strong opposition around Apollo Bay and keen to understand if something occurring within fishery or an individual's view. - Queried impacts assessment and SLR explained is based on assessing impacts to existing environment and sensitivities using basic risk assessment processm a consequence x likelihood assessment. - Likelihood of noise from air guns reaching shore line (60 km away). - Underwater acoustic modelling. - SRLL would like to see the commercial fisheries compensation protocol. - Peak lobaster fishing periods. - Can SLR provide any information to explain concern around Apollo Bay. - Catch rates have increased in nearly every state. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are addressed in the following sections: Environmental plan development process and impact assessment: **Section 2** (environmental management framework), **Section 6** (impact assessment and risk assessment methodology) Control measures for managing adverse effects to commercial fisheries: Consultaion with commercial fisheries industry bodies is an ongoing process for the duration of the development of the EP, and during the lifetime of the Seismic Survey. This is recognised via a suite of control measures (**Table 84**), notification procedures (**Table 84, Table 148**), and development of an agreed commercial fisheries compensation protocol (as per **Table 84** control measures). Underwater noise modelling / acoustic disturbance: **Section 7.2.1.2** (underwater noise modelling), **Section 7.2.3.1** (imapcts of underwater noise on commercial fishers). Remaining concerns, including concerns regarding Apollo Bay (and relevant persons) will be subject to ongoing consultation. TGS will continue to consult with SRLL and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Southern Rock Lobster Limited	15-05-2023	Email TO relevant person	TGS emailed SRLL a copy of the minutes from the meeting held on 26/04/2023 for their review and record. TGS advised they haven't been able to identify any site-specific scientific reasons for the elevated interest in Apollo Bay. TGS also advised there is information within the attached acoustic modelling report to support the very low likelihood of being able to hear the survey 60 km away from the coast. TGS closed the email by thanking SRLL for meeting with TGS and sharing information and asked SRLL to get in touch if they need more information or have any queries. TGS added they will keep SRLL updated with their progress.	Y - Meeting minutes, Draft Commercial Fisheries Compensation Protocol and underwater acoustic modelling report prepared by JASCO.	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	19-05-2023	Email TO relevant person	TGS emailed SRLL stating they had not heard anything back from the South Australian Rock Lobster Fishery in regards to their Otway Basin seismic survey and asked if that was an organisation that SRLL covers also.	N	N/A	* (see note above table)	Continuing consultation.
Southern Rock Lobster Limited	19-05-2023	Email FROM relevant person	SRLL replied to TGS' email sent earlier that day advising the SA rock lobster fishery has two other peak bodies (SA Northern Zone Rock Lobster Fishers Assn and the SA Rock Lobster Advisory Council) and provided contact names. SRLL advised if they are happy to delegate responsibility to SRLL then SRLL can confirm they cover those areas.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Southern Rock Lobster Limited	22-05-2023	Email TO relevant person	TGS replied to SRLL's email sent 19/05/2023 thanking SRLL for their help with this.	N	N/A	* (see note above table)	Continuing consultation.
Southern Shark Industry Alliance Inc.	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Maps of the Commonwealth fisheries that operate in the region	N/A	* (see note above table)	Continuing consultation.
Southern Shark Industry Alliance Inc.	31-05-2022	Email TO relevant person	TGS/Schlumberger invited AFMA to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Southern Shark Industry Alliance Inc.	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Southern Shark Industry Alliance Inc.	24-04-2023	Email TO relevant person	TGS emailed SSIAI to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SSIAI to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Southern Shark Industry Alliance Inc.	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	8-06-2023	Email FROM relevant person	SPL emailed SLB thanking them for their email and clarified the Indigo Central system is owned by a consortium and the information SLB provided about their proposed marine seismic survey will be passed on to their operations group. SPL advised they are an Indigo consortium member and would like to understand the activity in relation to both Indigo cables and look forward to SLB's reply.	N	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	8-06-2023	Email TO relevant person	SLB replied to SPL's email received earlier that day thanking them for their reply. SLB attached an information sheet about their proposed marine seismic survey, noting this is for environmental permitting only and the project has not been confirmed and the following additional points: - Operational Area is limited to Otway basin, VIC and TAS waters; - Type – Conventional 3D seismic survey; - Timing – there is an option for up to a maximum of 200 days per year (400 days total activity) within a 5 year period; and - Ideal start is December 2023, subject to permitting and regulatory approval. SLB also provided an image of the survey area and the Indigo Central cable. SLB closed the email asking SPL to let them know if they have any additional queries.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	8-06-2023	Email FROM relevant person	SPL replied to SLB's email sent earlier that day and advised there is some additional information on their potential project that will need to be aware which will require SLB/TGS to sign a non-disclosure agreement before discussing further.	N	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	8-06-2023	Email TO relevant person	SLB replied to SPL's email received earlier that day regarding a non-disclosure agreement (NDA) and advised SPL the proposed marine seismic survey will be undertaken as a joint venture between SLB and TGS leading the acquisition. SLB advised TGS is better placed to proceed with discussion and NDA and will respond with an appropriate contact.	N	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	8-06-2023	Email TO relevant person	SLB emailed SPL regarding the proposed marine seismic survey including TGS within the email to continue discussions and progress a non-disclosure agreement with.	N	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	8-06-2023	Email TO relevant person	TGS replied to SLB's email including SPL and suggested they call SPL and provided contact details.	N	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	8-06-2023	Email FROM relevant person	SPL emailed TGS providing them with a non-disclosure agreement for TGS to review and asked them to sign if theya re happy and return a copy for SPL to counter-sign.	Y - Non-disclosure agreement	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	9-06-2023	Phone call TO relevant person	TGS called SPL to discuss the non-disclosure agreement relating to information about submarine cable system that overlaps the operational area but there was no answer. TGS left a message to return their call.	N	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	14-06-2023	Email TO relevant person	TGS emailed SPL providing them a reviewed copy of the non-disclosure agreement with amendments and asked them to call TGS if they have any questions.	Y - Non-disclosure agreement	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	14-06-2023	Email FROM relevant person	SPL replied to TGS' email sent earlier that day with changes to the non-disclosure agreement advising they have accepted the amendments and attached an execution copy asking TGS and SLB to sign and return to SPL for countersigning.	Y - Non-disclosure agreement	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	15-06-2023	Email TO relevant person	TGS replied to SPL's email received the day before and provided signed non-disclosure agreement for them to countersign.	Y - Non-disclosure agreement	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	15-06-2023	Email FROM relevant person	SPL replied to TGS' email sent earlier that day providing TGS a copy of the signed non-disclosure agreement.	Y - Non-disclosure agreement	N/A	* (see note above table)	Continuing consultation.
SUBCO Pty Ltd	16-06-2023	Email TO relevant person	TGS replied to SPL's email received the day before thanking them and asking for a suitable time to meet regarding their proposed marine seismic survey.	N	N/A	* (see note above table)	Continuing consultation.
Superfresh Scallops	9-06-2023	Email TO relevant person	TGS emailed SS seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from SS to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS also provided information to help SS provide feedback on the proposed survey, explaining EPA's rights and TGS' obligations through the consultation process. TGS asked SS to advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet and NOPSEMA consultation guidance	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Superloop Ltd	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Superloop Ltd	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Superloop Ltd	27-03-2023	Online enquiry form submitted	TGS submitted an online enquiry form advising TGS is planning to undertake marine seismic survey in Otway Basin including background information about minimum depth and methodology for generating soundwaves. TGS offered if Superloop have any concerns to let them know as can provide further information. TGS also commented it would be good to hear from Superloop as to whether there is any other information they required about the proposed survey or if they are satisfied with the information they have been provided.	N	Continuing consultation	* (see note above table)	Continuing consultation
Superloop Ltd	24-04-2023	Email TO relevant person	TGS emailed SL to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SL to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Superloop Ltd	6-05-2023	Email TO relevant person	TGS emailed Superloop providing an update on proposed marine seismic survey planning to commence October 2023 pending NOPSEMA approval. TGS said they'd like to hear from Superloop to confirm information pertaining to their survey is being received as they have not received any responses. TGS asked Superloop to advise if there is any planned maintenance or works scheduled on the Indigo Central submarine cable system located within their survey area (image provided) over the next four year period.	N	N/A	* (see note above table)	Continuing consultation.
Superloop Ltd	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	16-02-2023	Email FROM relevant person	Automated reply acknowledging receipt of email and advising TGS will hear from them within 10 working days.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surf Coast Shire Council	28-02-2023	Email TO relevant person	TGS responded to SCSC's email sent 28/02/2023 thanking them for their email. TGS confirmed they had the correct person for the letter to be addressed to.	N	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	28-02-2023	Email FROM relevant person	SCSC advised the Mayor of their Council will be responding to TGS. SCSH asked for confirmation on the correct person the Mayor's letter should be addressed to.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surf Coast Shire Council	24-04-2023	Email TO relevant person	TGS emailed SCSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information, even though SCSC advised the mayor would respond. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SCSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	24-04-2023	Email FROM relevant person	Automated email responding to email TGS sent earlier in the day acknowledging email and advising TGS will hear from SCSC within 10 working days.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surf Coast Shire Council	26-04-2023	Email FROM relevant person	SCSC replied to TGS' email sent 24/04/2023 thanking TGS for following up on initial emails from February. SCSC commented they are not sure what happened to their response but this email provided a formal submission summarised below: - seismic testing and its impact on the marine environment and fossil fuel exploration and development in the Otway Basin is a matter of significant concern to their community and Council. - Concerns include potential negative impacts of seismic testing, gas exploration and development on country, the marine and coastal environment, the local economy, traditional owners and their local communities. - The region's economic profile relies on a healthy natural environment and tourism it attracts, particularly along the Great Ocean Rd. - They are concerned about continued fossil fuel exploration and development in face of climate change. - Council passed a motion to oppose oil and gas exploration in the Otway Basin in July 2021 which included a resolution , which remains Council's position and they continue to deliver on their advocacy commitments in that resolution. - Council will make a submission to NOPSEMA during the public consultation period reiterating their opposition. - Council remains committed to addressing climate change recognising the dire threat it poses to the environment, health and wellbeing, their local businesses and industry, quoting their Climate Emergency Response Plan 2021-2031. SCSC closed their email by offering to discuss further if TGS would like (details provided). Refer to Appendix H for the detailed submission.	Y - Formal submission	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Surf Coast Shire Council	1-05-2023	Email TO relevant person	TGS replied to SCSC's email received 26/04/2023 providing formal submission from their mayor. TGS acknowledge their council's and community's concerns and the Council's stance taken on oil and gas activities and climate change. TGS advised they are proposing a number of control measures to ensure the impacts of their seismic survey do not have any harm on the environment or receptors living within the marine environment. TGS offered further information to SCSC if they wanted more details on the control measures and advised this information will also be included within the environment plan once complete and goes out for public comment. TGS reiterated SCSC's comment in their submission regarding the environment plan being publicly notified once NOPSEMA accepts it as complete, which provides the opportunity for anyone to make a submission on the application. TGS closed their email thanking SCSC for their time in responding and offered for them to contact TGS if they have any further queries.	N	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	25-05-2023	Email TO relevant person	TGS emailed SCSC to advise they will be visiting their area and to see if they would be interested in meeting to discuss their proposed marine seismic survey within the Otway Basin. TGS advised would be an opportunity for TGS to provide an overview of the project and discuss some of the concerns raised in their submission received 26/04/2023 so TGS can better understand the region's values and they can address them going forward. TGS asked if a meeting on 30/05/2023 would suit them, alternatively they could arrange an online meeting at a later date. TGS closed their email by advising they are planning on submitting their environment plan to NOPSEMA for a completeness check soon and would be great to include any feedback that SCSC may have. TGS also mentioned there is a public consultation period following that as another opportunity to provide additional information.	N	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	2-06-2023	Email FROM relevant person	The SCSC Environmental Coordinator emailed TGS to arrange a meeting with TGS to learn more about their proposed seismic survey activities. SCSC confirmed an online meeting would be fine. SCSC advised their position provided in letter from SCSC dated 14/03/2023 opposing all new oil and gas remains Council's position and they have communicated this to other operators within the Otway Basin, the local registered Aboriginal parties, Federal government, state government and other councils across Australia and will continue to advocate this position on behalf of their community. SCSC asked TGS to note this position within TGS' consultation record and added they are interested current and proposed gas exploration and development in the Otway Basin and believe they are a relevant person and appreciate being consulted. SCSC continued to explain their concern with fossil fuel exploration and potential negative impacts on Country, the marine and coastal environment and local economy, traditional owners and local communities. SCSS added their region relies on a healthy natural environment and the tourisms it attracts. SCSC is concerned about the continued fossil exploration and development in relation to climate change.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Surf Coast Shire Council	7-06-2023	Email TO relevant person	TGS replied to SCSC's email received 02/06/2023 thanking them for their response and wanting to arrange a meeting. TGS advised SCSC they have noted Council's position opposing oil and gas development within the Otway Basin and this has been logged within the environment plan consultation records. TGS also agreed they are a relevant person and will include them within their ongoing consultation program. TGS noted their concerns relating to fossil fuel exploration and preference to be consulted via email. TGS also advised SCSC they will provide them with meeting minutes and a copy of the presentation for their records. TGS closed the email suggesting a date and time for an online meeting.	N	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	8-06-2023	Email FROM relevant person	SCSC replied to TGS' email sent 07/06/2023 thanking TGS for following up regarding their request to meet. SCSC advised their availability for a meeting. SCSC thanked TGS for responding to their requests regarding the environment plan consultation record and council's position and confirming council's status as a relevant person.	N	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	8-06-2023	Email TO relevant person	TGS replied the SCSC's email received earlier that day confirming a meeting date and time and asked SCSC to advise if that doesn't work and they can deliver a shorter presentation and answer any questions via email.	N	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	8-06-2023	Email TO relevant person	TGS emailed SCSC a meeting invite to discuss Council's concerns with their proposed marine seismic survey.	N	N/A	* (see note above table)	Continuing consultation.
Surf Coast Shire Council	8-06-2023	Email FROM relevant person	SCSC replied to TGS' email sent earlier that day confirming the meeting date and time and thanking TGS for setting up a meeting invite.	N	N/A	* (see note above table)	Continuing consultation.
Surfers for Climate	17-08-2022	Email FROM relevant person	The stakeholder reached out to request a meeting with TGS/Schlumberger to provide feedback on the proposal at the earliest convenience.	Y - Consultation request	Stakeholder has raised an objection, claim or concern. TGS/SLB distinguishes between persons or organisations who have a specific and established function, interest or activity relevant to the EP Area, and persons or organisations who have a general interest in the activity or region, or those who generally oppose seismic surveys or oil and gas exploration. While all persons are entitled to provide views on the activity, engagement with persons generally opposed to seismic surveys or oil and gas activities may not provide for constructive discussions about the effective management of survey activities to reduce the potential impacts and risks to the environment and genuine stakeholders. Given this, TGS/SLB has not engaged with the stakeholder during the preparation of the EP, but it is noted that there is the opportunity for their feedback to be received during the 30-day public comment period that will apply upon submission of this EP.	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Surfers for Climate	04-09-2022	Email FROM relevant person	The stakeholder reached out to follow up on their request for a meeting with TGS/Schlumberger to provide feedback on the proposal at the earliest convenience.	N	Stakeholder has raised an objection, claim or concern. TGS/SLB distinguishes between persons or organisations who have a specific and established function, interest or activity relevant to the EP Area, and persons or organisations who have a general interest in the activity or region, or those who generally oppose seismic surveys or oil and gas exploration. While all persons are entitled to provide views on the activity, engagement with persons generally opposed to seismic surveys or oil and gas activities may not provide for constructive discussions about the effective management of survey activities to reduce the potential impacts and risks to the environment and genuine stakeholders. Given this, TGS/SLB has not engaged with the stakeholder during the preparation of the EP, but it is noted that there is the opportunity for their feedback to be received during the 30-day public comment period that will apply upon submission of this EP.	* (see note above table)	Continuing consultation
Surfers for Climate	15-02-2023	Email TO relevant person	Reconnected with relevant person to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Surfers for Climate	15-02-2023	Email TO relevant person	Reply email to SFC thanking SFC and asking to please let TGS know if they require further information.	N	N/A	* (see note above table)	Continuing consultation.
Surfers for Climate	15-02-2023	Email FROM relevant person	Reply email from SFC thanking TGS for message and advising they will respond before the date listed.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surfers for Climate	24-04-2023	Email TO relevant person	TGS emailed SFC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SFC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	1-03-2023	Email FROM relevant person	SFA emailed TGS advised they are a non-profit organisation that represents communities around the protection of Australian oceans and coastlines, representing 18 local branches around Australia. SFA advised there are two branches representing communities in both Tasmania and Victoria (details provided) that will need updated and consulted on any plans regarding the Otways Exploration Drilling. SFA closed the email advising they look forward to hearing from TGS and thanked them for their time.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Surfrider Foundation Australia	3-03-2023	Email TO relevant person	TGS responded to SFA's email dated 01/03/2023 acknowledging their effort to reach out as TGS work through identifying who they need to liaise with. TGS advised they have logged their details for future correspondence for the Tasmania and Victoria branches and asked if they had a contact name for the Tasmania branch (noting they had included them in this response). TGS provided information about their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 16/03/2022.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	24-04-2023	Email TO relevant person	TGS emailed SFA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked SFA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	29-04-2023	Email FROM relevant person	SFA replied to TGS' email sent 24/04/2023 advising the survey is a big issue for a large population of surfers and ocean lovers on the Surf Coast. SFA continued they feel there is not much awareness in the community about seismic blasting so they are starting to plan a community information forum to raise awareness in the community. SFA said they hope to have experts present in the areas of marine science, gas economy and perhaps the political side. SFA advised the date isn't set yet but considering the last week of May in Torquay (venue to be confirmed) with approximately 100 - 200 people. SFA closed their email asking if TGS would like to attend and make a presentation about their project.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	3-05-2023	Email TO relevant person	TGS replied to SFA's email received 29/04/2023 thanking them for their email. TGS said they acknowledge their issues and concerns and commend them on arranging a community information session to help educate all groups on what is involved with marine seismic surveying, adding there appers to be a lot of misinformation circulating in the area and this would be a great opportunity to discuss people's concerns and provide answers and reassurance. TGS advised they are interested in attending but woud like to know the following before committing: - what information would they like TGS to present and the community like to hear; - what would be the forum format; - will there be a facilitator to ensure proper and meaningful engagement. TGS closed the email confirming that TGS is committed to protecting the environment, while conducting operations in an environmental sustainable and responsible manner and why TGS is wanting to ensure their EP considers all environmental sensitivities and values within and around the area and why hearing from SFA is so important.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	9-05-2023	Email FROM relevant person	SFA Tasmania emailed TGS to introduce themselves and advise they are currently organising two community information sessions within Tasmania at Stanley and King Island. SFA extended an invitation TGS to attend these events to raise community awareness, discuss concerns and help educate all groups on what is involved with marine seismic surveying. Some of the community concerns and areas they would like more information include: - how are marine mammals protected during surveys; - what level of access do commercial and recreational fishermen have to the area being sureyed; - how many Australians do you employ and how many new jobs will be created from the survey; - will TGS be surveying in the marine parks. SFA advised they are planning the event to be a Q and A format for approximatly 1 hour and dates are yet to be confirmed but around mid-June for Stanely and King Island is last week of June of first week of July. SFA will be facilitating and helping organise the event.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	17-05-2023	Email TO relevant person	TGS emailed SFA Tasmania in response to their email dated 09/05/2023 thanking them for their information. TGS asked if SFA Tasmania would like TGS to reply to their queries raised in their email as they could run through a quick presentation online to provide an overview of the project and address the aspects. TGS commented they are committed to engaging with community and agree a community session is a great opportunity to hear the community's queries and concerns and help educate everyone as there appears to be a lot of mis-information circulating. TGS asked SFA to let them know when they have confirmed dates and they can advise if they can attend or not. TGS advised they are developing their environment plan before submitting to NOPSEMA for a completeness check and once the EP is complete, it will be released for public consultation where they can incorporate feedback from the SFA sessions. TGS asked if SFA had any input they'd like TGS to consider for NOPSEMA's completion check to let them know before 26/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	17-05-2023	Email TO relevant person	TGS emailed SFA Victoria to make sure they had received their email send 03/05/2023 regarding the community session they were planning for Torquay about marine seismic surveying and if they had more information about the session. TGS advised they are planning visit to the area and would like to attend the session if it would work with their timing.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	18-05-2023	Email FROM relevant person	SFA Tasmania replied to TGS' email sent the day before thanking them for their information and suggestions. SFA advised an online presentation was not necessary and the questions provided in their email were provided to assist TGS' preparation based on common questions from their experience with local communities. SFA advised they would return to their team and advise TGS if they have any input for consideration for NOPSEMA's completion check prior to 26/05/2023. SFA closed their email advising they would provide confirmed dates of the community information sessions as soon as possible.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	19-05-2023	Email TO relevant person	TGS emailed SFA Victoria following up from their email sent 17/05/2023 regarding their information session planned for Torquay and advised they are visiting the area week commencing 29/05/2023. TGS asked if they would be available to meet on 31/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	19-05-2023	Email FROM relevant person	SFA Victoria replied to TGS' email sent earlier that day regarding a meeting advising they had to delay their community information session but planning for 14/06/2023 in Torquay. SFA said it would be fantastic to have a presentation from TGS and asked if they would be available that day.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	25-05-2023	Email TO relevant person	TGS replied to SFA Victoria's email received 19/05/2023 advising they are potentially not available 14/06/2023 for a community information session but if SFA could confirm the date, TGS could rearrange other commitments to ensure they were available. TGS closed their email advising they could alternatively make the following week and to please let them know.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	29-05-2023	Email TO relevant person	TGS replied to SFA Victoria's email received earlier that day checking whether the community information session date was 14/07/2023 or 14/06/2023.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	29-05-2023	Email FROM relevant person	SFA Victoria replied to TGS' email sent 25/05/2023 seeking whether the community information session could be moved to another date but SFA advised it can't be due to other commitments. SFA said they would greatly appreciate if the environmental advisor could change their commitments as their session is definitely confirmed for 14/07/2023. SFA advised they would be advising the community soon and provided the location and time details. SFA closed their email asking TGS to confirm whether their environmental advisor could attend or not and they will keep TGS informed of their format and presenters once organised.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	29-05-2023	Email FROM relevant person	SFA Victoria replied to TGS' email sent earlier that day confirming the community information session will be held on 14/06/2023.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	30-05-2023	Email TO relevant person	TGS replied to SFA Victoria's email received the day before advising they will be able to attend their community information session and will make arrangements to be there.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	30-05-2023	Email FROM relevant person	SFA Victoria replied to TGS' email sent earlier that day thanking TGS for letting them know and they will keep TGS updated.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	31-05-2023	Email TO relevant person	TGS emailed SFA Victoria to request a phone call with them in relation to the community meeting and to let them know if 1 pm tomorrow 01/06/2023 they will be available.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	31-05-2023	Email FROM relevant person	SFA Tasmania emailed TGS to confirm their Stanley community consultation event (date, time and venue). SFA said they are yet to confirm the event at King Island but will confirm as soon as possible. SFA asked if TGS would like to present, advising they will prepare a run sheet for TGS to review. SFA explained they would appreciate TGS' attendance given the community's proximity to the proposed seismic activity and density of relevant stakeholders in the townships.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	1-06-2023	Email FROM relevant person	SFA Victoria replied to TGS' email sent 31/05/2023 requesting a phone call to discuss the upcoming SFA community session. SFA said they would prefer to communicate via email and they are happy to answer any queries they have.	N	Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Surfrider Foundation Australia	2-06-2023	Email TO relevant person	TGS emailed SFA Victoria to advise they are cancelling their attendance at their community session planned for 14/06/2023. TGS explained they had been made aware of information recently posted on SFA social media about TGS and seismic surveying that is untrue, inaccurate and misleading and a session would potentially expose their employees and supporting experts and advisors to a hostile environment. TGS added they don't feel they would have a fair opportunity to present their project and receive constructive and reasonable feedback relevant to the scope of the activity. TGS provided some factual information within the email about seismic surveying and TGS. TGS mentioned the mis-information generated and distributed potentially endangers relationships with other groups willling to work with TGS towards better environmental outcomes. TGS offered an online meeting to proved an overview of their project and receive feedback relevant to their project scope. TGS closed the email asking SFA to advise if they would like to arrange an online meeting and if so, to provide a suitable date and time.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	5-06-2023	Email FROM relevant person	SFA Victoria replied to TGS' email sent 02/06/2023 apologising for the mis-information shared on social media and confirmed they understand TGS is not extracting. SFA advised they removed some of the information from social media 02/05/2023 and they would like TGS to know they are committed to continue learnining about seismic activity and this highlights the lack of awareness in the community and need for a information sessions. SFA believe it would be beneficial for TGS to attend the session to clarify what their activity entails and TGS' involvement in the overall exploration/extraction process. SFA continued they are committed to ensuring the opposite of a hostile environment. SFA provided a draft run sheet for the session, providing TGS 15 minutes but offering longer if needed. SFA closed their email asking TGS to reconsider attending the session in person and asked TGS to confirm if their representatives can attend on 14/06/2023.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	7-06-2023	Email TO relevant person	TGS replied to SFA Victoria's email received 05/06/2023 to confirm that TGS will not be attending the SFA information session in-person, offering an online meeting as an alternative.TGS added this would allow other SFA members from outside Torquay (e.g. Tasmania) to attend. TGS asked SFA Tasmania if they'd like to proceed with an online meeting and they will arrange a meeting invite.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	7-06-2023	Email TO relevant person	TGS replied to SFA Tasmania's email received earlier in the day to advise TGS will not be attending the SFA information sessions in-person, offering an online meeting as an alternative. TGS asked SFA Tasmania if they'd like to proceed with an online meeting and they will arrange a meeting invite.	N	N/A	* (see note above table)	Continuing consultation.
Surfrider Foundation Australia	7-06-2023	Email FROM relevant person	SFA Tasmania emailed TGS to confirm their King Island community consultation event and asked if TGS would like to present, advising they will prepare a run sheet for TGS to review. SFA explained they would appreciate TGS' attendance and commit to a respectful and professional environment to present and engage local communities.	N	Continuing consultation	* (see note above table)	Continuing consultation
Surfrider Foundation Australia	9-06-2023	Email FROM relevant person	SFA Tasmania replied to TGS' email sent 07/06/2023 regarding TGS declining SFA's invitation to attend their community information sessions and asked TGS for their reasoning. SFA commented declining attendance and offering an online meeting severaly restricts community participation and see this as an attempt by TGS and SLB to minimise community engagement. SFA is disappointed given they are primarily at risk fo seismic impacts and have a right to be informed and express concerns. SFA asked whether TGS plan any in-person meetings for the Tasmanian community.	N	N/A	* (see note above table)	Continuing consultation.
Tasman Council	2-05-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS advised they will be visiting Tasmania later that week if they'd like a for a meeting. Requested any feedback be provided prior to 10/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Tasman Council	2-05-2023	Email FROM relevant person	Automated email received in response to TGS' email sent earlier that day thanking TGS for contacting TC. TC advised the email had been forwarded to the relevant officer for further response.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasman Council	10-05-2023	Phone call TO relevant person	TGS called TC to follow up on their email sent 02/05/2023 regarding their proposed marine seismic survey within the Otway Basin. The TC reception advised the General Manager would call TGS back the following day.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasman Council	15-05-2023	Phone call TO relevant person	TGS returned phone call and voice mail message from TC General Manager received earlier that day regarding their proposed marine seismic survey but there was no answer. TGS left a message to call them back.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasman Council	15-05-2023	Phone call FROM relevant person	The TC General Manager called TGS back responding to email TGS sent on 02/05/2023 regarding their proposed marine seismic survey within the Otway Basin. TGS did not answer the call so TC left a message advising that based on the information provided, it doesn't appear there will be any impact on the Tasman Peninsula but if there is likely to be any impact, could they please call back.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasman Council	16-05-2023	Email FROM relevant person	TC emailed TGS thanking them for their call earlier that day and apologised for it taking so long to connect. TC advised they have no further comment on this matter (TGS' proposed marine seismic survey within the Otway Basin). TC closed their email by stating that when the information has been collected, they may have an interest in knowing the results of the surveying.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Tasman Council	16-05-2023	Phone call TO relevant person	TGS called TC to follow up on emails and messages from the day before. TC confirmed their position regarding the proposed marine seismic survey that TC has no further comment and they may have an interest once the information has been collected. TGS asked if TC could provide this information in an email for their records and TC confirmed they would send an email.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Tasman Council	16-05-2023	Email TO relevant person	TGS replied to TC's email received earlier that day thanking them for their time regarding their proposed marine seismic survey.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Aboriginal Centre Inc (TACI)	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Aboriginal Centre Inc (TACI)	14-03-2023	Phone call TO relevant person	TGS called TACI to follow up on email and factsheet sent 16/02/2023 and spoke to receptionist whom confirmed the original email had been forwarded to the CEO. The receptionist asked when a response is needed by and TGS advised by the end of March 2023. TGS advised they would like the opportunity to talk so TACI could voice any concerns. The Receptionist advised they had sent another email to the CEO to advise them that TGS had offered to meet to discuss and to call TGS on mobile or contact by email.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Aboriginal Centre Inc (TACI)	22-03-2023	Email TO relevant person	TGS emailed TACI to provide them with an updated version of the factsheet which is more concise and provides an explanation of why TGS is wanting to consult with TACI on their planned project. TGS continued the factsheet explains what a marine survey is, what are the potential effects on the environment, the measures TGS has in place to limit the potential effects and safeguards in place should an unexpected event occur. TGS said they would like to meet TACI online to share TGS's plans and whether TACI has any concerns and can arrange an online meeting at their convenience to discuss. TGS closed the email by thanking TACI and advising they look forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Aboriginal Centre Inc (TACI)	27-03-2023	Phone call TO relevant person	TGS called TACI to follow up on email sent to TACI on 22/03/2023. The TACI receptionist confirmed they had received the factsheet and it had been forwarded to the CEO. TACI could not provide contact details for the CEO but advised they would let them know that TGS had requested a meeting and they would contact TGS directly if they wanted to meet.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Aboriginal Centre Inc (TACI)	11-04-2023	Email TO relevant person	TGS emailed TACI to follow up on phone call from 27/03/2023 and email sent 22/03/2023 in regards to a potential meeting. TGS said that TACI had mentioned the information had been forwarded to the CEO and they would contact TGS if they want to meet. TGS said they were emailing to check if the CEO would like to meet TGS to discuss the proposed survey or any concerns they may have.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Aboriginal Centre Inc (TACI)	20-04-2023	Phone call TO relevant person	TGS called TACI to follow up on email sent to TACI on 11/04/2023 and spoke to the receptionist. The TACI receptionist confirmed the previous email had been sent to their CEO but advised the CEO may not respond. The receptionist said they would send a friendly reminder and try to get a response and sent this response back to TGS.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Aboriginal Centre Inc (TACI)	26-04-2023	Phone call TO relevant person	TGS called TACI to follow up on email sent to TACI on 11/04/2023 and phone call from 20/04/2023 but there was no answer. TGS left a message advising that TGS would be visiting Tasmania next week and would welcome a meeting and to please call back to discuss.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Aboriginal Centre Inc (TACI)	26-04-2023	Email TO relevant person	TGS emailed TACI following a phone call earlier that day. TGS advised they are planning a visit to Tasmania next week and planning on visiting Hobart and would welcome the opportunity to meet. TGS closed the email asking TACI to advise when is convenient for TACI.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Aboriginal Centre Inc (TACI)	28-04-2023	Phone call TO relevant person	TGS called TACI to follow up on previous correspondence regarding a possible meeting while TGS is visiting Hobart. TACI confirmed they had received TGS' email and forward again to the relevant people and try and arrange something and get back to TGS.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Aboriginal Centre Inc (TACI)	1-05-2023	Phone call TO relevant person	TGS called TACI to follow up on previous phone call made 28/04/2023 and the TACI receptionist advised the CEO was going on leave and suggested contacting the Sea Country Coordinator within TACI (name and contact details provided) as the proposed survey is located offshore and potentially state government cultural heritage.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Aboriginal Centre Inc (TACI)	1-05-2023	Email TO relevant person	TGS emailed TACI following a phone call earlier that day. TGS advised they are planning a visit to Tasmania next week and would welcome the opportunity to meet to discuss their proposed marine seismic survey in the Otway Basin offshore Tasmania. TGS said ths would be an opportunity for TACI to hear about TGS' plans and more importantly hear if they have any concerns. TGS attached an information sheet on the planned survey and advised this provides an explanation of why they are wanting to consult with TACI. TGS continued the sheet highlights aspects of what a marine seismic survey is and what are the potential affects on the environment, the measures TGS have in place to limit those potential affects and also what safeguards they will have in place should an unexpected event occur.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Tasmanian Aboriginal Centre Inc (TACI)	2-05-2023	Email FROM relevant person	TACI replied to TGS' email sent 01/05/2023 providing a submission on the proposed TGS seismic survey in the Otway Basin. TACI advised they are not available to meet this week but would welcome TGS' consideration and response to their concerns and issues they have about the project. TACI explained they are an Aboriginal community organisation established in the 1970s representing the political and community development aspirations of the Tasmanian Aboriginal community. TACI provided an explanation of the work they have carried out including establishing Tasmania's first indigenous protected area. TACI provided the following summarised comments in regards to the proposed survey: - TACI opposes oil and gas exploration and development due to the risk the activities pose to the marine environment, marine species and their community's connect to and enjoyment of sea country. - An incident such as a leak or spill are too great and could pose long-term, if not permanent catastrophic impacts. - TACI thinks the evidence that seismic survey does not have significant impacts on phytoplankton and other marine species is lacking and a precautionary approach should be taken whereby exploration is only undertaken once these impacts are properly understood and can be mitigated. - TACI oppose the expansion of the fossil fuel industry. - TACI is dismayed that such development proposes no benefits for Aboriginal people, nor any genuine recognition for the custodianship Aboriginal people have for sea country or their efforts in carbon-abatement. - TACI do not consider TGS' communication with TACI about this project is genuine as it doesn't recognise their community's needs, advising consultation with Aboriginal people must respect cultural mores, spiritual beliefs, cultural knowledge and custodianship of Country borne by Aboriginal people. - TACI advised as an Aboriginal community-controlled organisation, they must focus their work on where they can make a difference for their people and country and cannot undertake or support consultation where there is no discernable benefit for their people. TACI closed their email stating that for TACI to engage in genuine consultation on this project, TGS must: - commit to addressing their concerns about the environmental risks of the project; - identify how their people would benefit from the project; and - supply resources to enable them to genuinely engage their community on the project.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the claims are addessed in the following sections: Impacts to phytoplankton/marine species: **Section 7.2** discusses in detail the outcomes of underwater noise modelling, evaluation of known and potential impacts to sensitive environmental receptors, and sets out the control measures for ensuring risks are As Low As Reasonably Practicable (ALARP) and to Acceptable Levels. In addition, **Section 9** sets of the approach and framework for assesment of cumualtive effects, which TGS are concurrently engaging with current operators and title holders to ensure the application of a meaningful proces to acknowledge and account for data gaps in cumualtive imapct assesment is addressed. Impacts of leaks/spills: Section 8.3 discusses in detail the outcome of potentail worst case oil spill scenario modelliings, and impacts for sensitive receptors. Control measures are listed in Table 126, these ensure risks are As Low As Reasonably Practicable (ALARP) and to Acceptable Levels. Ongoing consultation with TACI will be undertaken in accordance with the methods set out in **Section 5** to ensure TACI have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult with TACI and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Tasmanian Aboriginal Centre Inc (TACI)	10-05-2023	Email TO relevant person	TGS replied to TACI's email received 02/05/2023 providing a formal submission regarding the proposed marine seismic survey within the Otway Basin. TGS acknowledged the information TACI had provided regarding the connection between the people of the land and the sea. TGS advised they note TACI's comments and concerns and further explained the reasons why they would like to meet with TACI, including ensuring TACI has sufficient information to make an informed decision on how the proposed survey may impact them. TGS provided an overview of what the meeting would involve including an opportunity to discuss specific concerns. TGS closed the email asking whether TACI would be willing to discuss how TGS can best engage with their communities to ensure they are heard and considered and confirmed they would be willing to consider resources that would be required to do this. TGS asked TACI to suggest a suitable date and time to meet.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Aboriginal Centre Inc (TACI)	22-05-2023	Phone call TO relevant person	TGS called TACI to follow up on their email sent 10/05/2023 but there was no answer so TGS left a message for TACI to call them back.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Aboriginal Centre Inc (TACI)	22-05-2023	Email TO relevant person	TGS emailed TACI to follow up on their email sent 10/05/2023. TGS advised TACI's comments have been noted and addressed within their environment plan however would still like the opportunity to discuss their concerns and explain the measures to minimise impacts from their proposed survey. TGS asked if they have a suitable date and time to meet the current week. TGS also advised they are developing their environment plan before submitting to NOPSEMA for a completeness check and once the EP is complete, it will be released for public consultatio. TGS advised they hope to incorporate additional feedback from a meeting with TACI prior to their submission to NOPSEMA, however if TACI can't meet they asked TACI to let them know if they had any input they'd like TGS to consider for NOPSEMA's completion check before 26/05/2023.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Association for Recreational fishing (TARFish)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Tasmanian Association for Recreational fishing (TARFish)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Association for Recreational fishing (TARFish)	24-04-2023	Email TO relevant person	TGS emailed TARFish to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked TARFish to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Association for Recreational fishing (TARFish)	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Association for Recreational fishing (TARFish)	22-05-2023	Phone call TO relevant person	SLB called TARFish to follow up on unanswered emails regarding their proposed marine seismic survey however there was no answer. SLB left TARFish a message to return their call at a convenient time.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Association for Recreational fishing (TARFish)	25-05-2023	Email TO relevant person	TGS emailed an alternative contact at TARFish advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 31/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Conservation Trust	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Conservation Trust	24-04-2023	Email TO relevant person	TGS emailed TCT to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked TCT to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Conservation Trust	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Regional Aboriginal Communities Alliance (TRACA)	27-02-2023	Online enquiry form submitted	TGS submitted an online enquiry form advising TGS is planning to undertake marine seismic survey in Otway Basin and seeking to engage with TRACA as a potential relevant person in accordance with government consultation requirements. TGS advised that if TRACA provide an appropriate contact, they will provide more information. TGS also advised they would like to knowwhether TRACA has any interests or activities that may be affected by the survey so TGS can learn what these might be and discuss how any impacts may be avoided or mitigated. TGS also invited TRACA to let them know if they would like to ask any questions or meet in person to go over the proposed survey.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Regional Aboriginal Communities Alliance (TRACA)	14-03-2023	Email TO relevant person	TGS emailed TRACA following an online query submission on 27/02/2023 including information about the proposed survey. This email provided the factsheet again and background information about the location, depth, equipment, timing, experience and request for TRACA to provide feedback. TGS advised a shorter factsheet would be provided to them over the next coming days to hopefully prompted discussions with them about any concerns they may have regarding the proposed survey. TGS asked if they could let them know if they have time to discuss (phone call or online meeting) to present the survey and concluded the email stating they look forward to hearing from them.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Regional Aboriginal Communities Alliance (TRACA)	22-03-2023	Email TO relevant person	TGS emailed TRACA to follow up on email TGS sent 14/03/2023 and to provide an updated version of the factsheet for Traditional Owner groups. TGS advised they would like to get some time online with TRACA to discuss their plans and more importantly hear if they have any concerns and could arrange a meeting at their convenience to discuss. TGS closed the email by thanking TRACA and stating they look forward to hearing from them.	Y - updated factsheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Rock Lobster Fisherman's Association	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Maps of the Victorian fisheries that operate in or adjacent to the EP Area - A map of the survey relative to Tasmanian fisheries reporting blocks - A map of the survey relative to SA fisheries reporting blocks - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Tasmanian Rock Lobster Fisherman's Association	13-05-2022	Email TO relevant person	TGS state they are contacting TRLFA to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, Maps of SA&Tas fisheries reporting blocks, information sheet, maps and summary of Victorian fisheries	N/A	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Tasmanian Rock Lobster Fisherman's Association	31-05-2022	Email TO relevant person	TGS/Schlumberger invited the stakeholder to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Tasmanian Rock Lobster Fisherman's Association	31-05-2022	Email FROM relevant person	The stakeholder gave the name of the representative that will represent TRLFA for the stakeholder meeting on 2 June 2022.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Rock Lobster Fisherman's Association	2-06-2022	Email TO relevant person	Thanking TRLFA for providing a contact (Tom Consentino) and looking forward to speaking with him	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Rock Lobster Fisherman's Association	23-06-2022	Email TO relevant person	TGS/Schlumberger noted that at the first stakeholder briefing session on the 6th June, it was indicated that the Southern Rock lobster Ltd would be the central point of contact for consultation with all of the State rock lobster fisheries. TGS/Schlumberger acknowledged that the survey area does not overlap areas of significant rock lobster fishing, but welcomed an additional meeting to answer any questions regarding impacts to lobster of giant crab fishing from the project. TGS/Schlumberger asked if TRLFA could communicate a time when the meeting could be held.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Rock Lobster Fisherman's Association	31-08-2022	Meeting with relevant person	The stakeholder asked about the difference between the Otway Basin 3D MSS and the previous 2D MSS. TGS/Schlumberger explained that the 2D MSS conducted by SLB in 2020 was a sparse survey, while the 3D MSS would be more densely focused over smaller areas with lines 600 m apart using a smaller source volume and shorter SP intervals. The stakeholder expressed appreciation that the seismic source would not be operated in the Giant Crab Exclusion Zone (GCEZ) but were concerned about larvae being affected outside of this area. The stakeholder asked how feasible it is for resources to be developed in deeper waters. TGS/Schlumberger explained that TGS/SLB acquire data to inform about seabed characteristics and clients would then decide the feasibility of developing any resources. Refer to Appendix I for detailed meeting minutes.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Tasmanian Rock Lobster Fisherman's Association	07-09-2022	Meeting with relevant person	The stakeholder raised concern around crab and lobster spring / spawning time, and juvenile stock. TGS/Schlumberger/ERM emphasised the main focus of the survey controls is to avoid impacts to spawn biomass i.e. adult stock. Studies have indicated no mortality impacts to larvae but may affect development. Stakeholder queried if there will be compensation available, and TGS/Schlumberger/ERM confirmed compensation will be available around displacement and loss of catch related to displacement. The stakeholder raised concern that assumptions are being made regarding Giant Crabs with reference to other species. TGS/Schlumberger/ERM added that the aim of the controls associated with the survey is to avoid impacts to adults, the scale of impact to giant crab and rock lobster is usually very small. Several other queries were discussed. Refer to Appendix I for detailed meeting minutes.	N	Stakeholder has raised an objection, claim or concern. The objection, claim or concern is addressed in the EP. Impacts to larvae and recruitment of giant crab and rock lobster are assessed in the EP. The magnitude and extent of effects from a seismic survey (transient point source) are expected to be negligible in the context of natural mortality and variability at a regional scale. This was a point of contention and concern for stakeholders. TGS/SLB agreed to provide a link to the EP and relevant impact assessment sections when it is available.	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Map presenting the survey relative to Tasmanian fisheries reporting blocks - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	13-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Map presenting the survey relative to Tasmanian fisheries reporting blocks - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	31-05-2022	Email TO relevant person	TGS/Schlumberger invited TSIC to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	31-05-2022	Email FROM relevant person	TSIC advised that they would not be able to attend a meeting with stakeholders on June 2 2022, but would be free for a meeting on Thursday 9th or Friday 10th June 2022.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	2-06-2022	Email TO relevant person	TGS aiming to set up additional introduction sessions the week of the 6 June 2022 with invites being sent out invites following a call the next day.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	09-06-2022	Email FROM relevant person	TSIC declined an invitation to a stakeholder meeting to be held June 9th 12:30-1:30pm AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	09-06-2022	Email FROM relevant person	TSIC declined an invitation to a stakeholder meeting to be held June 10th 9:00-10:00am AWST.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	22-06-2022	Email TO relevant person	TGS/Schlumberger reached out to TSIC to express their desire to organise a meeting to discuss the survey and address any questions TSIC and the related fisheries may have regarding the survey. TGS/Schlumberger noted that consultation with rock lobster fisheries should go through Southern Rock lobster Ltd, but recognised that fisheries such as the SA Marine Scale fish Fishery and Giant Crab Fishery may have questions in relation to the project. TGS requested that TSIC communicate times that they would be available for a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	24-06-2022	Email TO relevant person	Reply to initial email saying TSIC can't make the meeting, requesting them to suggest an alternative day for the introduction meeting.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	24-06-2022	Email FROM relevant person	TSIC declined an invitation to a stakeholder meeting to be held June 29th 9:00-10:00am AWST and expressed their desire for another meeting to be organised when they were available.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	24-06-2022	Email FROM relevant person	A stakeholder meeting was organised for 09:00-10:00 am AWST for Wednesday the 29th of June by TGS and declined by TSIC.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	25-06-2022	Email FROM relevant person	Suggesting a meeting time 1200 midday Tasmanian time 04/07/2022.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	25-06-2022	Email FROM relevant person	TSIC requested a meeting to be held with TGS/Schlumberger at 12:00pm Tasmanian time Monday 4th July.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	26-06-2022	Email TO relevant person	Email to check suggested meeting date is available.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	26-06-2022	Email TO relevant person	TGS/Schlumberger advised the stakeholder that they will check the time and date and respond in regards to organising a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	29-06-2022	Email FROM relevant person	A stakeholder meeting was organised for 10:00-11:00 am AWST for Monday the 4th of July by TGS and accepted by TSIC.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	04-07-2022	Meeting with relevant person	The stakeholder expressed concern around the location of the survey, particularly in the King Island area, as there is the potential to cumulative effects from several recent surveys. The stakeholder detailed that the biggest concern from fishers are the interactions of the survey with giant crab fishers on the west side of King Island, and overlap will occur with the survey area. The stakeholder emphasised that giant crabs could live up to a depth of 1,000 m, and the crab fishers are requesting this as a depth restriction for the current survey. However, the turning circle of the survey vessel could still impact giant crab fishing even if survey is pushed to deeper waters. The stakeholder explained that there is a recruitment corridor for rock lobster from SA to NW Tasmania (directly through the survey area) and there is little known about where the larvae will be and where they will settle. The stakeholder described how Giant crab fisheries are operating at historic low levels after poor recruitment and negative interaction with the Commonwealth Trawl Fishery. This has negatively impacted giant crab stocks. Recent years has seen the first good signs of recruitment in a long time and crab fishers are eager to preserve this. Refer to Appendix I for detailed meeting minutes.	N	Stakeholder has raised an objection, claim or concern. The objection or claim is addressed in the EP. Extended depths of giant crab habitat and fishing effort in water depths greater than the core depth range have been described and mapped in the EP. Impacts of received sound levels on the seabed in the 3D Active Source Area are predicted to have limited sub-lethal effects or no effects on crustaceans on the seabed due to the water depths and vertical propagation losses. However, request for exclusion of acquisition from water depths <1,000m for the Tasmanian fishery has been considered and adopted as a precautionary measure based on: - The Tasmanian giant crab stock is currently assessed as Depleted; - Tasmanian giant crab and the fishery are a described feature of the Zeehan AMP; - Stakeholder concern and potential scientific uncertainty regarding the sensitivity of giant crab; - Area can be excluded with limited loss of survey area and is therefore deemed practicable.	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	05-07-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholder for their attendance at the meeting and indicated that they will send through the meeting notes in the coming days. TGS/Schlumberger explained that they would appreciate engaging TSIC on a fee-for-service basis to facilitate engagement with potentially affected commercial fishers on King Island and in Tasmania. TGS and Schlumberger are to represent themselves but would appreciate support with communications and arranging in-person meetings that may be necessary. TGS/Schlumberger requested a quote for undertaking this support and potential timeframes for scheduling in-person meetings. TGS/Schlumberger expressed interest in engaging TSIC in providing survey notifications and daily updates should surveys go ahead (pending acceptance of the EP by NOPSEMA), and highlighted that currently the focus is on consultation for the EP.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Tasmanian Seafood Industry Council (TSIC)	03-08-2022	Email TO relevant person	TGS/Schlumberger attached the meeting notes from the meeting on July 4th and explained that they are eager to receive feedback on the previous email regarding engaging TSIC to engage with potentially affected fishers in King Island and Tasmania. TGS/Schlumberger explained that the EP is on track to be submitted to NOPSEMA in August, but stakeholder engagement will be ongoing and meetings may still be organised.	Y - Meeting notes	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	08-08-2022	Email FROM relevant person	The stakeholder agreed to connect TGS/Schlumberger with relevant fishers on King Island and Tasmania. The stakeholder requested TGS/Schlumberger send through appropriate correspondence and maps, requests for meetings and potential times to meet for distribution to these third party stakeholders.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	8-08-2022	Email FROM relevant person	Email stating TSIC happy to connect TGS with relevant people on King Island and in the NW for discussions, and if TGS could provide appropriate correspondence and maps, request for meetings, times you could meet etc.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	18-08-2022	Email TO relevant person	TGS/Schlumberger asked for clarification regarding whether meetings with stakeholders would be in person or over Teams/Zoom. Potential days and times were proposed so as to include a consultant from ERM in the discussions. TGS/Schlumberger noted that they are proposing to exclude seismic acquisition in waters shallower than 1,000 m adjacent to Tasmanian fishing areas and have adopted this as a control in the EP. This control is a direct result of consultation with the stakeholder and discussion around concerns for fisheries such as the Giant Crab and Rock Lobster. TGS/Schlumberger agreed to provide additional maps with specific detail on Tasmanian fisheries ahead of a meeting.	Y -Map of Giant Crab acoustic exclusion area	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	22-08-2022	Email FROM relevant person	The stakeholder explained that crab fishers will welcome the exclusion of portions of their fishing grounds from the survey, and expressed that TSIC would promote online meeting with fishing stakeholders. The stakeholder requested some potential dates and times so this information can be passed on.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	24-08-2022	Email FROM relevant person	The stakeholder advised TGS/Schlumberger that the Tasmanian Rock Lobster Fishermen's Association is sending out a newsletter during the week of the 29th August, and this could be an opportunity to include information on the proposed survey.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	24-08-2022	Email FROM relevant person	The stakeholder confirmed that Wednesday 31 August at 11:00am AEST is most appropriate, and questioned as to who would be setting up a meeting and sending out invites.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	24-08-2022	Email TO relevant person	TGS thank TSIC for proposing a new meeting time (Wed 31-Aug-2022 1:00 PM) and ask that the meeting invite be forwarded to others at TSIC who may want to attend.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	24-08-2022	Email TO relevant person	TGS thank TSIC for proposing a new meeting time (Wed 31-Aug-2022 9:00 PM) and ask that the meeting invite be forwarded to others at TSIC who may want to attend.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	24-08-2022	Email TO relevant person	TGS/Schlumberger proposed Monday, Tuesday or Wednesday of the week of the 29th August after 11am AEST.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	24-08-2022	Email FROM relevant person	The stakeholder accepted a meeting on Wednesday 31 August 9:00-10:00am AWST with TGS/Schlumberger.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	30-08-2022	Email TO relevant person	Change in meeting invite date, with a comment from TGS stating that due to unforeseen circumstances the meeting date needs to change.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	30-08-2022	Email FROM relevant person	The stakeholder agreed to communicate the new time but advised that they would not be able to attend or notify attendees of the cancellation on such short notice. The stakeholder suggested a representative from TGS/Schlumberger attend the online meeting at the original time to let attendees know the meeting has been rescheduled.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	30-08-2022	Email TO relevant person	TGS/Schlumberger communicated that the meeting would need to be rescheduled, and requested the stakeholder provide available times the following week.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	30-08-2022	Email TO relevant person	TGS/Schlumberger apologised for the late change in meeting time and any inconvenience caused, and explained they will be able to let any attendees know the meeting has moved once these stakeholders have dialled in.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	31-08-2022	Meeting with relevant person	The stakeholder asked about the difference between the Otway Basin 3D MSS and the previous 2D MSS. TGS/Schlumberger explained that the 2D MSS conducted by SLB in 2020 was a sparse survey, while the 3D MSS would be more densely focused over smaller areas with lines 600 m apart using a smaller source volume and shorter SP intervals. The stakeholder expressed appreciation that the seismic source would not be operated in the Giant Crab Exclusion Zone (GCEZ) but were concerned about larvae being affected outside of this area. The stakeholder asked how many more surveys would be conducted and if data from previous surveys is kept and used to avoid duplication of effort. TGS/Schlumberger explained that the multi-client approach means that TGS/SLB are able to licence data to any interested company, thus reducing the need for surveys to be conducted by multiple companies, and yes, historical data is kept and utilised. The stakeholder asked how long the survey has been in the planning phase and when TSIC had been notified. TGS/Schlumberger explained that TSIC were contacted in May 2022 as part of the stakeholder consultation process.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	31-08-2022	Email TO relevant person	Email thanking TSIC for their response and confirming there will be a revised map for attendees at the meeting that day.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	31-08-2022	Email TO relevant person	TGS requested the surnames of some of the meeting attendees and stated they would be included in future communications.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	31-08-2022	Email TO relevant person	TGS/Schlumberger assured the stakeholder that a representative would be present for the original online meeting time to present a revised map.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	01-09-2022	Email FROM relevant person	The stakeholder offered 2:00pm AEST on Wednesday the 7th as a potential meeting time.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	1-09-2022	Email TO relevant person	TGS thanks TSIC for providing full names of contact persons.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	1-09-2022	Email FROM relevant person	TSIC confirming meeting time and date.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	1-09-2022	Email TO relevant person	Notifying TSIC that they should have received a teams invite from the stakeholder email address.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	1-09-2022	Email TO relevant person	TGS suggesting a meeting time any time after 11AM AEST next Mon-Wed.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	1-09-2022	Email TO relevant person	TGS thanks TSIC for providing meeting times and state they will await to hear from Julian Harrington before finalising a date.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	1-09-2022	Email FROM relevant person	TSIC suggesting a prefered meeting time but are flexible.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	1-09-2022	Email FROM relevant person	TSIC suggesting an afternoon time for next meeting as it will allow Fishers to attend.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	1-09-2022	Email FROM relevant person	TSIC confirming full names of contact persons.	N	No concerns raised Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	01-09-2022	Email TO relevant person	TGS/Schlumberger offered Monday the 5th, Tuesday the 6th or Wednesday the 7th after 11am AEST as potential dates for a rescheduled meeting.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	01-09-2022	Email TO relevant person	TGS/Schlumberger confirmed 2:00pm AEST and explained an invite will be sent out shortly to all attendees.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	06-09-2022	Email FROM relevant person	The stakeholder accepted a meeting on Wednesday 7 September 12:00-1:00pm AWST with TGS/Schlumberger.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	7-09-2022	Email TO relevant person (meeting request	Meeting request Wednesday, 7 September 2022 4:00 PM-5:00 PM.	N	N/A	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	07-09-2022	Meeting with relevant person	The stakeholder raised concern around crab and lobster spring / spawning time, and juvenile stock. TGS/Schlumberger/ERM emphasised the main focus of the survey controls is to avoid impacts to spawn biomass i.e. adult stock. Studies have indicated no mortality impacts to larvae but may affect development. Stakeholder queried if there will be compensation available, and TGS/Schlumberger/ERM confirmed compensation will be available around displacement and loss of catch related to displacement. The stakeholder raised concern that assumptions are being made regarding Giant Crabs with reference to other species. TGS/Schlumberger/ERM added that the aim of the controls associated with the survey is to avoid impacts to adults, the scale of impact to giant crab and rock lobster is usually very small.	N	Stakeholder has raised an objection, claim or concern. The objection, claim or concern is addressed in the EP. Impacts to larvae and recruitment of giant crab and rock lobster are assessed in the EP. The magnitude and extent of effects from a seismic survey (transient point source) are expected to be negligible in the context of natural mortality and variability at a regional scale. This was a point of contention and concern for stakeholders. TGS/SLB agreed to provide a link to the EP and relevant impact assessment sections when it is available.	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	16-02-2023	Email TO relevant person	TGS responded to TSIC's previous email and concern regarding exclusion of previously agreed Giant Crab Exclusion zone and apologised for not including the information in the fact sheet. TGS confirmed the 3D seismic data acquisition will not be undertaken in water depths less than 1,000 m in waters south and east of the 2D Tie Line Extension Area. TGS offered to let them know if they required additional information.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Tasmanian Seafood Industry Council (TSIC)	16-02-2023	Email FROM relevant person	TSIC made a preliminary comment in response to previous email from TGS (dated 15/02/2023). TSIC expressed frustration that the map and information within the information sheet did not include or reference the previously agreed Giant Crab Exclusion Zone west of King Island and asked if this is still included within the EP and why this information was not included in the information and map.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	17-02-2023	Email TO relevant person	TGS forwarded a map provided the Giant Crab Exclusion Zone for the revised EP area and offered to let them know if they would like to set up a meeting to discuss.	Y - Upated EP area map including Giant Crab Exclusion Zone.	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	11-04-2023	Email TO relevant person	TGS emailed TSIC to arrange an online meeting to discuss recent changes to their proposed marine seismic survey, acknowledging their current high level of information requests. TGS advised they have had a change of environmental consultant and in a position to discuss progress with their EP, particularly in response to their concerns raised last September. TGS said they would are addressing any queries they may have before submitting their EP to NOPSEMA for consideration. TGS closed the email asking them to advise a suitable date and time for an online meeting and they will arrange. TGS attached the updated information sheet.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	26-04-2023	Email TO relevant person	TGS emailed TSIC advising TGS will be visiting Tasmania and hoping to meeting with TSIC to discuss the recent changes with marine seismic survey. TGS asked if TSIC could advise when they might be available for a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	26-04-2023	Phone call TO relevant person	TGS called TSIC to arrange a meeting in Tasmania next week to discuss their proposed marine seismic survey but there was no answer. TGS left a message for TSIC to return there call.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	27-04-2023	Email TO relevant person	TGS emailed TSIC a meeting invite for 9:30 am on 04/05/2023 at TSIC office.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	27-04-2023	Phone call FROM relevant person	TSIC returned TGS' call from yesterday regarding arranging a meeting next week. Both parties confirmed a meeting for 04/05/2023 at 9:30 am at the TSIC office.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	4-05-2023	Meeting with relevant person	TGS, SLB and SLR met with TSIC to discuss the proposed marine seismic survey within the Otway Basin. Key queries and concerns discussed included the following: - Reduction in survey area. - Exclusion area west of King Island (no acquisition <1000 m). - Avoiding the munitions dump with buffers. - Southern lobster recruitment, potential stresses on larval cycle. - Stress on fishing industry from competing activities [for space] and volume of consultation. - Unknown nature of cumulative impacts on stock and recent activity west of King Island. - Level of fatigue within fishing community due to increase in consultation from various sources and industries. - TSIC would not support a marine seismic survey because of concerns (listed above). - Consultation process with revised guidance from NOPSEMA. - Modelling used to determine environment that may be affected. - TSIC represents most of fishing industry within Tasmania but could not speak directly for fishers but can assist with consultation. - Latest project design is less concerning but need more information on the reason for the survey in areas that appear to have been surveyed. TGS asked what other information could be included within consultation to help fishers and TSIC replied a two level approach with high level information about the activity followed by more in-depth descriptive document. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the claims are addessed in the following sections: Reduction in survey area: the survey area is described in **Section 3.2** (Survey Location) Exclusion area west of King Island (no acquisition <1000 m): to be discussed during ongoing consultation with TSIC Avoiding the munitions dump with buffers: **Section 7.2.3.3** (effects of acoustic disturbance to UXOs and Defence Activities), including the Acoustic Exclusion Area of 3 NM around the centre point of UXO site SDS006 (see **Table 84** for Control Measures). Southern lobster recruitment, potential stresses on larval cycle: Section 7.1.3.1.2 Victoria Fisheries- Rock Lobster), Section 7.1.3.1.5 (Summary of Potential Impacts to Commercial Fisheries), Section 7.2.2.2.1 (acoustic effects to plankton, includingn rock lobster larvae), Section 7.2.2.2.1.4 (acoustic effects on Rock Lobster Larvae). It is noted the Giant Crab Acoustic Exclusion Area also provides for protection to rock lobster (see Table 81). Effects to commercial fishing industry: Section 7.1.3.1 (impacts of the physical presence of the seismic survey vessels), Section 7.2.3.1 (imapcts of acoustic disturbacne on fisheries), Section 8.2.3 (imapct of streamer loss), Section 8.3.4.1 (hydrocarbon spill), and Table 84 includes control measures for adressing commercial fishers compensation in accordance with agreed protocols. Spatial avoidance of fishing grounds: Table 84 lists the control measure for compensation to fishers for any claims received in accordance with the agreed compensation protocol. Cumulative impacts on stock and recent activity west of King Island: Table 84 lists control measures to require a SIMOPS plan, which inlcudes the implementation of a 40 km spatial separation between Seismic Vessels. Section 9 sets out the approach to manageing Cumulative Impacts. Outcomes of concurrent Cumulative Imapct Assessment workshops will be incorporated as frameworks become finalised and available for incorporation into this EP.	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)						Consultation fatigue: Section 5 described the consultation programme methodology in detail. Particular emphasis is given to the bespoke nature of Relevant Persons requirements, and the approach TGS follows to enable consultation is meaningful and genuine, and sufficient information and time is given to all Relevant Persons. The bespoke / case-by-case nature of the programme ensures all efforts are in place to reduce consultation fatigue, and to ensure it is targeted to specific requirements of Relevant Persons Consultation process with revised guidance from NOPSEMA: Section 5.1 (Relevant Persons Consultation - Regulatory Requirements and Guidelines) described the regualtory framework in detail, including the revised guidance from NOPSEMA for undertaking consultation with Relevant Persons. Modelling used to determine environment that may be affected: Section 4.1 (Environment that May Be Affected) describes the method to define the EMBA. Ongoing consultation with TSIC will be undertaken in accordance with the methods set out in Section 5 to ensure TSIC have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult with TSIC and endeavour to provide assurances of its environmental protection measures for its projects.	
Tasmanian Seafood Industry Council (TSIC)	8-05-2023	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service). Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	10-05-2023	Email TO relevant person	TGS emailed TSIC to provide them with minutes from their meeting on 04/05/2023. TGS closed the email advising it would be great to get their fee for service agreement document for review.	Y - Meeting minutes	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	10-05-2023	Email FROM relevant person	Automated reply to TGS' email sent earlier that day advising TSIC is out of the office.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	15-05-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service). Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Consultation proposal	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	16-05-2023	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service). Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	17-05-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service). Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Updated consultation proposal	Continuing consultation	* (see note above table)	Continuing consultation
Tasmanian Seafood Industry Council (TSIC)	17-05-2023	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service). Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	18-05-2023	Email TO relevant person	Confidential - Regarding commercial arrangements (fee-for-service). Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Draft subcontractor agreement.	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	19-05-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service). Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	30-05-2023	Email To relevant person	Confidential - Regarding commercial arrangements (fee-for-service). Information is available in the Sensitive Matters Report for NOPSEMA reference. SLR also advised TSIC that TGS is planning a community session on King Island as part of their consultation program and asked if TSIC would be available to meet with them and any fishers that were available at King Island around the time of their visit.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	31-05-2023	Email FROM relevant person	Confidential - Regarding commercial arrangements (fee-for-service). Information is available in the Sensitive Matters Report for NOPSEMA reference. TSIC asked SLR to clarify what dates they are visiting King Island.	Y - Signed subcontractor agreement.	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	8-06-2023	Email FROM relevant person	TSIC emailed TGS to provide them with draft correspondence and questionnaire TSIC propose to send to relevant fishers in the NW/King Island/Victorian region for their review. TSIC advised once the information is finalised, they will either email or post to relevant stakeholders followed by phone calls next week.	Y - Draft correspondence for fishers	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	8-06-2023	Email TO relevant person	TGS responded to TSIC's email received earlier that day thanking them for providing their information advising the information looks good and have provided a few suggestions for them to consider. TGS also provided the latest information sheet.	Y - Reviewed correspondence to fishers and information sheet	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	15-06-2023	Phone call TO relevant person	SLR called TSIC regarding their proposed marine seismic survey and assistance with meeting fishers on King Island Tasmania, however TSIC was not available. SLR left a message to advise of their call and they would email.	N	N/A	* (see note above table)	Continuing consultation.
Tasmanian Seafood Industry Council (TSIC)	15-06-2023	Email TO relevant person	SLR emailed TSIC regarding their proposed marine seismic survey and assistance with meeting fishers on King Island Tasmania, however TSIC was not available. SLR left a message to advise of their call and they would email.	N	N/A	* (see note above table)	Continuing consultation
TasPorts	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
TasPorts	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
TasPorts	24-04-2023	Email TO relevant person	TGS emailed TasPorts to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked TasPorts to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
TasPorts	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
The Wilderness Society	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
The Wilderness Society	24-04-2023	Email TO relevant person	TGS emailed TWS to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked TWS to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
The Wilderness Society	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Tourism Industry Council of Tasmania	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Tourism Industry Council of Tasmania	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tourism Industry Council of Tasmania	24-04-2023	Email TO relevant person	TGS emailed TICT to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked TICT to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tourism Industry Council of Tasmania	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. Tourism SA	16-05-2022	Email FROM relevant person	The email acknowledges that the South Australian Tourism Commission received the previous email advising them of the proposal to undertake the Otway Basin 3D Multi-client MSS and will give an initial response within 3-5 business days.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tourism SA	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tourism SA	15-02-2023	Email FROM relevant person	Automatic reply advising a response will be received within 3-5 business days.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tourism SA	24-04-2023	Email TO relevant person	TGS emailed TSA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked TSA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Tourism SA	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Tourism Tasmania	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates - Maps of the Commonwealth fisheries that operate in the region	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	13-05-2022	Email TO relevant person	TGS state they are contacting ASBTIA to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, information sheet and maps and a summary of the Commonwealth fisheries	N/A	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	31-05-2022	Email TO relevant person	TGS/Schlumberger invited Tuna Australia to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	29-06-2022	Meeting with relevant person	The stakeholder asked for clarification regarding whether the Otway Basin 3D MSS would be followed by additional seismic surveys over the same area over the next 5 years. TGS/Schlumberger/ERM explained that although these surveys are an alternative to companies undertaking their own proprietary 3D seismic surveys, the possibility of an oil and gas company undertaking a proprietary survey in the region can't be ruled out. TGS further clarified that the 3D survey would provide adequate data for clients to inform drilling campaigns. The stakeholder explained that Long-line fishing effort has historically taken place on the east coast of Australia, however, the long-line fisheries are likely to grow over time as the global and domestic SBT quotas increase; more effort is likely off the east coast of Tasmania and fishers will likely be looking for new grounds, which may include fishing further west off the Bass Strait off Victoria and southern SA. The stakeholder made note that Portland, Port Fairy and Warrnambool are significant staging areas for SBT recreational fishermen – up to 350-400 boats. TGS/Schlumberger confirmed they have sent stakeholder materials to the various State recreational fishing associations but have had no feedback to date. The stakeholder asked about the sensitivity of SBT to seismic emissions and potential for behavioural disturbance. ERM explained that the leading experts in the field of acoustics and fish suggest that the range to behavioural effects is likely to be in the order of hundreds of metres form the seismic source. The stakeholder asked about potential behavioural effects in bait fish, SBT prey. TGS/Schlumberger/ERM acknowledged that in some cases, the potential effects on baitfish could be greater than on SBT themselves. However, the impacts are typically short term and localised. The stakeholder asked if the seismic emissions could interfere with fish finders and echo-sounding devices. TGS/Schlumberger/ERM explained that they are not aware of any cases where the sound has interfered with higher frequency echo-sounders. TGS/Schlumberger highlighted that the intent is to keep engaging throughout the EP development process, after submission, and during the life of the EP (if accepted by NOPSEMA) as well.	N	Stakeholder has provided information and/or requested additional information. No objections or concerns were raised. Responses provided to stakeholder during call. Information regarding potential future changes in the long line fishery have been reflected in the EP.	* (see note above table)	No action required. Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Tuna Australia (ETBF Industry Association)	01-07-2022	Email FROM relevant person	The stakeholder attached a consultation submission identifying the following impacts to fishing activity. 1. Possible food web impacts of large scale seismic testing regimes. Tuna Australia would like to ensure the impacts on bottom web species is included in any environmental before, after, control, impact, (BACI) assessment. 2. Potential impacts on the migratory routes of SBT should be considered in the context of not only the seismic testing area, but how it effects further movement east and north to the main catching areas off NSW over the following months. Tuna Australia would be grateful to understand if SBT migration will be considered in the broader environmental (BACI) assessment. 3. Seismic testing has proven detrimental to the fishing productivity of other fisheries sectors targeting demersal fish (Flathead and Whiting in the South East Trawl fishery for example) as well as invertebrates and shellfish. What assurances can TSG Schlumberger provide regarding these potential impacts and what compensation regimes are in place should this be proven to be a cause of decreased productivity, altered migratory routes or measured disruption to food web chain dynamics? 4. The proposal is silent on potential impacts on the electrical and acoustic interferences that may be generated through the proposed activities. Is there any evidence to suggest impacts may not be limited to fauna i.e. marine traffic? In addition, Tuna Australia remains concerned that many activities impact on our members statutory rights to access key fishing areas. For the activities identified in these proposals, the stakeholder would like to be assured that there will be no impact to target fish, or the broader ecology of the marine environment.	Y - Consultation submission from Tuna Australia - Professional fees invoice.	Stakeholder has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP. 1. Impacts to zooplankton, benthic invertebrates and baitfish are addressed in the underwater noise impact assessment in the EP. Impacts to zooplankton and benthic invertebrates are predicted to be minor in the context of natural mortality and variability. Zooplankton/invertebrates that are killed/injured continue to be scavenged within the water column or on the seabed. No significant food web impacts are expected. 2. Potential for activity to affect the migration of SBT is assessed in the EP. Given the limited sensitivity of tuna to sound pressure, behavioural effects will be localised. Evidence from previous studies, plus steady historical SBT catch rates in the GAB and Tasman Sea, indicate that SBT migration continues regardless of past seismic surveys. 3. Preliminary research reports regarding impacts of seismic in Bass Strait to whiting and flathead catches has been summarised in the EP. Note that exposure to shallow continental shelf species is not representative of deep water Otway Basin 3D MC MSS. Results of study are noteworthy and suggest longer term impact that broader body of research. Note, however, that historical catch of both species indicates that both impact and control sites were lowest on record and in decline prior to the survey. Past catches of deep water demersal slope species (including deep water flathead) in the GAB have returned to normal the month following a seismic survey in 2015 (Haddon 2017). 4. No known effects of low frequency seismic on high frequency sonar / fish finder devices, as stated during previous call. No effects on navigational equipment, noting proximity of seismic and support vessels to the seismic source. Statutory rights to access key fishing areas are acknowledged. Situation is complex for potential future long lining for SBT off Victoria given there have ben limited effort previously and difficult to predict exactly when/where effort will increase. Phases of survey are not expected to cover whole area and alternative fishing grounds will be available. TGS/SLB have developed a compensation protocol that covers damage to equipment, displacement, and associated reduced catch. No long term impacts to target tuna or broader ecosystem are expected. Regular reference made by client regarding before, after, control, impact, (BACI) assessment - Recommendation for research is noted. TGS/SLB support the notion of further research, however, currently TGS/SLB ability to fund research will depend upon survey funding / future joint industry funding opportunities and no specific studies are currently planned. EP will be assessed based on current available research and data.	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	05-07-2022	Email TO relevant person	TGS/Schlumberger thanked the stakeholder for providing a response and explained that they will now review this and reply in regards to any matters raised.	Y - Summary meeting notes from 29 June 2022	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	13-07-2022	Email TO relevant person	TGS noted that some information was missing from the stakeholders response letter and asked for clarification from the stakeholder on the months they request for the survey to take place to avoid impacts to fishers.	N	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	14-07-2022	Email FROM relevant person	The stakeholder clarified that the months in which interaction with fishers would be minimised are April to December.	N	Stakeholder has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP. Requested period of avoidance has been assessed in the EP, but is not practicable, given other seasonal sensitivities that the survey must manage and that alternative fishing grounds will be available where long lining can continue.	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	09-08-2022	Email FROM relevant person	Confidential - Regarding commercial arrangements for consultation. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Invoice for professional fees	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	10-08-2022	Email TO relevant person	Confidential - Regarding commercial arrangements for consultation. Information is available in the Sensitive Matters Report for NOPSEMA reference. TGS/Schlumberger explained that they are in the process of replying to the stakeholders submission from July 1st.	N	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	16-08-2022	Email FROM relevant person	Confidential - Regarding commercial arrangements for consultation. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	18-08-2022	Email TO relevant person	Confidential - Regarding commercial arrangements for consultation. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	21-08-2022	Email FROM relevant person	Confidential - Regarding commercial arrangements for consultation. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	23-08-2022	Email TO relevant person	Confidential - Regarding commercial arrangements for consultation. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	24-08-2022	Email FROM relevant person	Confidential - Regarding commercial arrangements for consultation. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	25-08-2022	Email TO relevant person	Confidential - Regarding commercial arrangements for consultation. Information is available in the Sensitive Matters Report for NOPSEMA reference.	N	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	13-09-2022	Email FROM relevant person	Confidential - Regarding commercial arrangements for consultation. Information is available in the Sensitive Matters Report for NOPSEMA reference.	Y - Tuna Australia Consulting Services Agreement	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	10-10-2022	Email TO relevant person	TGS/SLB provided a response to matters raised by the stakeholder previously. TGS/SLB provided a summary of potential impacts to southern bluefin tuna (SBT) and other fishes in the EP. Key points are provided below. 1. Food web impacts (plankton and baitfish) 2. Disturbance to SBT migration 3. Impacts to fishing productivity 4. Electrical and acoustic interferences TGS/SLB provided reference to key controls that will lbe implemented in the EP. TGS/SLB also confirmed that Before, After, Control, Impact, (BACI) assessments will not be applied in the EP assessment but may be considered further. TGS/SL informed the stakeholder they will let them know the Otway Basin 3D MC MSS EP is available for the public comment period and direct them to the relevant impact assessment sections.	Y - Consultation submission from Tuna Australia	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	2-11-2022	Email TO relevant person	TGS acknowledged TA's reply to previous email and advised their legal team is currently reviewing the service agreement. TGS said they would be in touch soon.	N	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	2-11-2022	Email FROM relevant person	TA acknowledged previous email from TGS and thanked them for the EP. TA said they would need further clarification and justification of the information but expressed their willingness TGS with meeting EP requirements, however must be done under service agreement.	Y - Service Agreement	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	4-11-2022	Email TO relevant person	TGS emailed TA to advise that in order for them to progress their service agreement, they require TA to complete a Due Diligence Questionnaire.	Y - Due Diligence Questionnaire	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	16-11-2022	Email FROM relevant person	TA provided completed Due Diligence Questionnaire.	Y - Due Diligence Questionnaire	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	22-11-2022	Email TO relevant person	TGS provided TA with reviewed service agreement for their review.	Y - Reviewed service agreement	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	13-02-2023	Email TO relevant person	TGS provided TA with updated information sheet and asked for any feedback. TGS also asked about whether they'd reviewed the service agreement comments that TGS provided last Nov.	Y - Updated informtion sheet	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	15-02-2023	Email TO relevant person	TGS replied to previous email from TA advising them to execute agreement and feedback is due back by 16/03/2023.	N	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	15-02-2023	Email FROM relevant person	TA reply emailed previous email from TGS asking whether they reviewed the service agreement comments. TA apologised for not having returned the agreement and included in this email. TA stated they have no concerns with what is proposed in the agreement and accepted all changes. TA asked if there was nothing further to let them know so they can execute the agreement. TA also advised they would respond regarding the new EP area and asked for a response due date.	Y - service agreement	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	28-02-2023	Email FROM relevant person	TA apologised for the delay as they were out at sea last week. TA provided the latest version of the services agreement executed their end and advised them to call if TGS require anything further.	Y - Tuna Australia Consulting Services Agreement	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	2-03-2023	Email TO relevant person	TGS provided TA with a copy of the fully executed agreement and advised TA they are looking forward to receiving their feedback on the revised Otway 3D area.	Y - Tuna Australia Consulting Services Agreement	N/A	* (see note above table)	Continuing consultation.
Tuna Australia (ETBF Industry Association)	14-03-2023	Email FROM relevant person	TA emailed TGS to ask for an extension in time for providing feedback as they are still waiting for feedback from members and a few issues have been raised that require more research and thought. TA asked if they could submit their report on 24/03/2023 and asked for TGS to confirm this would be ok.	N	Continuing consultation	* (see note above table)	Continuing consultation
Tuna Australia (ETBF Industry Association)	15-03-2023	Email TO relevant person	TGS replied to TA's previous email requested extension of time for submitting feedback and advised the 24 March will be fine and advised them TA to let TGS know if they need more information. TGS concluded email by stating they look forward to hearing from them.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Tuna Australia (ETBF Industry Association)	30-03-2023	Email FROM relevant person	TA emailed TGS to provide them with a formal submission for the Otway Basin 3D Marine Seismic Survey EP and appreciated their patience while they consulted with industry. TA closed the email offering to call them if TGS requires further information. The TA submission included the following summarised information: - background information about the existing tuna fisheries in Australia (distribution, management and commercial catch); - current activity; - impacts of marine seismic survey on fishing activity (food web impacts and SBT migratory pattern interruption); - concession holders in multiple fisheries (lobsters and king crab and nursery stage of some SESSF species claimed to aggregate in the Zeehan marine park area); and - competing marine seismic surveys (CGG survey appears to occur at the same time - duplication of activity and cumulative impacts). Refer to Appendix H for detailed submission.	Y - formal submission	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are adressed in the following sections: Impacts of marine seismic survey on fishing activities: **Section 7.1.3.1 (**impacts of the physical presence of the seismic survey vessels), **Section 7.2.3.1** (imapcts of acoustic disturbacne on fisheries), **Section 8.2.3** (imapct of streamer loss), **Section 8.3.4.1 (**hydrocarbon spill), and Table 84 includes control measures for adressing commercial fishers compensation in accordance with agreed protocols. Cumulative impacts: **Section 9** sets of the approach and framework for assesment of cumualtive effects, which TGS are concurrently engaging with current operators and title holders to ensure the application of a meaningful proces to acknowledge and account for data gaps in cumualtive mapct assesment is adressed. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Tuna Australia (ETBF Industry Association)	14-04-2023	Email TO relevant person	TGS replied to TA's email received 30/03/2023 thanking them for their submission stating it is great to get feedback from the industry on three tuna fisheries. TGS advised their feedback will be taken in to consideration as the EP and control measures are being developed. TGS also noted the following summary: - TGS is working with SETFIA to understand the fishing activity in and around the survey area and assist with notifying fishers during the survey. - TGS is committed to working with commercial fishers and trying to minimise any potential impacts or concerns. - A commercial fisheries adjustment protocol will be in place (this can be provided once finalised). - The operational area is in deep water where most of the survey will be acquired in water depths > 500 m to 5,000 m. - There will be restrictions around blue whale biological important areas, limiting where the vessel can operate during Jan - April to avoid impacts on feeding pygmy blue whales, which also coincides with the information TA provided on SBT from all western Victorian ports and the Bass Strait between Feb - March. - There should be on nearshore fisheries or migrations due to the physical distance separation with the SBT areas and area where the seismic vessel will be operating with an active source. - There will be marine fauna observers onboard the survey vessel and support vessel(s) that will record any sightings of SBT and this information will be shared with TA. - In agreeance with TSIC, the survey will exclude any activity in waters less < 1,000 m depth on the eastern side of the operational area to avoid any impacts with giant crab fishery, which also removes the survey from areas where tuna fishing has been undertaken in the past. - TGS is aware of the Regia survey proposed by CGG and is in discussions with them about potential cumulative impacts in the area. It is unlikely the surveys will take place concurrently. TGS closed the email by inviting TA to let them know if they have any further questions or concerns. Refer to Appendix H for detailed submission.	N	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	15-02-2023	Email FROM relevant person	Automated reply advising correspondence had been received with Case ID [reference included] and UTAS will be in contact in due course, advising TGS may provide updates by responding to this email.	N	Continuing consultation	* (see note above table)	Continuing consultation
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	16-03-2023	Email FROM relevant person	IMAS emailed TGS to provide comment on the upcoming survey. Key comments summarised below: - given survey predominantly in deep water (excluding tie-in component), potential impacts to animals are likely not going to be directed to animals on benthos. - given high productivity in region to be surveyed, there is potential for impacts to zooplankton. - their research team presented evidence in 2017 that seismic surveys can cause significant mortality to zooplankton populations, decreasing zooplankton abundance when compared with controls and caused a two- to threefold increase in dead adult and larval zooplankton. - impacts were observed to a maximum range of 1.2 km. - no adult krill were present, however all larval krill were killed after airgun passage. - this study highlighted the significant and unacknowledged potential for ocean ecosystem function and productivity to be negatively impacted by present seismic technology. Further comments were made about previous research. IMAS concluded their message by stating that given the potential for the planned survey to impact the planktonic community in the survey region and consequential impacts on the ecosystem, IMAS has an expectation that TGS will address the potential risk in their EP. IMAS also stated that given the general lack of understanding of seismic survey impact on plankton and the large-scale of the planned activity in a highly productive system, they encourage TGS to fund a scientific study to run parallel with the proposed survey. IMAS requested TGS contact them to discuss the above matters further.	N	The relevant person has raised an objection, claim or concern. The objection or claim raised is considered to have no merit.	* (see note above table)	Continuing consultation
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	17-03-2023	Email TO relevant person	TGS acknowledged IMAS' email sent 16/03/2023 and their feedback and advised they would appreciate a meeting to discuss comments further. TGS asked IMAS for a suitable meeting date and time and preferred meeting platform. TGS also thanked IMAS for their time and look forward to hearing from them soon.	N	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	21-03-2023	Email FROM relevant person	IMAS replied to email TGS sent on 17/03/2023 apologising for late reply and asked if either Monday or Wednesday next week would suit for a meeting and said either Zoom or Teams would be fine.	N	Continuing consultation	* (see note above table)	Continuing consultation
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	22-03-2023	Email TO relevant person	TGS emailed IMAS to ask them to let them know when is convenient to meet and TGS can arrange an online meeting to discuss.	N	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	22-03-2023	Email TO relevant person	TGS replied to IMAS' email from earlier in the day suggesting a date and time for a meeting. TGS apologised for the delay in replying and confirmed Wednesday would work and advised they would set up an online meeting with Teams for 11 am Perth time/2 pm Tasmania time.	N	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	22-03-2023	Email TO relevant person	TGS sent meeting invite to IMAS for meeting on 29/03/2023 at 4:00 pm (NZT) via Microsoft Teams.	N	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	22-03-2023	Email FROM relevant person	IMAS replied email to advise they were resending as did not appear as though TGS received last email with suggested meeting time and date. IMAS asked if either Monday or Wednesday next week would suit for a meeting.	N	Continuing consultation	* (see note above table)	Continuing consultation
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	23-03-2023	Email FROM relevant person	IMAS replied to email TGS sent on 22/02/2023 confirming the meeting time of 11 am Perth time/2 pm Tasmania time for next Wednesday.	N	Continuing consultation	* (see note above table)	Continuing consultation
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	29-03-2023	Meeting with relevant person	TGS, SLB and SLR met with UTAS to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered a presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with UTAS: - Blue whale season. - Range [distance] and propagation of acoustic sound. - Fuel oil and spill modelling. - Impacts to plankton, e.g. krill, threshold distances. - Influence of prey on whale presence, impacts on whales and control measures. - Giant crab exclusion zone near King Island. - Potential for research program associated with the survey > currently limited information impacts on plankton. - Limitations on their 2017 study. Meeting closed with TGS inviting UTAS to provide a proposal for research. Refer to Appendix I for a copy of the full meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	29-03-2023	Email FROM relevant person	IMAS emailed TGS to provide them with the scientific references as discussed at the meeting held earlier that day with specific reference to the Pygmy Blue whale season.	Y - Scientific references	Continuing consultation	* (see note above table)	Continuing consultation
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	30-03-2023	Email TO relevant person	TGS replied to IMAS' email from the previous day thanking them for sending the references as discussed at the meeting held the previous day. TGS advised they are working on the minutes and hope to get them to IMAS early next week for their review.	N	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	30-03-2023	Email TO relevant person	SLR replied to IMAS thanking them for sending the scientific references through to them the previous day. SLR advised they have discussed the 2018 McCauley et al. within the EP already, however had not used Garilov 2018. SLR advised they will review the scientific references IMAS provided and mentioned they had primarily relied on work by another scientist [SLR has been liaising with] and other literature detailed in the EP for defining the foraging season. SLR closed the email by thanking IMAS again.	N	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	13-04-2023	Email TO relevant person	TGS emailed IMAS providing the minutes from meeting held on 29/03/2023 for their record and review. The minutes also included a copy of the slides presented at the meeting. TGS also attached the latest copy of the underwater acoustic modelling report prepared by JASCO. TGS closed the email by advising recipients to get in touch if there area any amendments or queries.	Y - meeting minutes, presentation and acoustic modelling report references.	N/A	* (see note above table)	Continuing consultation.
University of Tasmania (UTAS) - Institute for Marine and Antarctic Studies (IMAS)	16-06-2023	Email FROM relevant person	UTAS emailed TGS to provide them a proposal for potential plankton research project consisting of two components (details provided in correspondence). UTAS closed the email asking whether TGS and UTAS should meet to discuss further and said they would like an update from TGS on their EP process also.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Victorian Fisheries Authority (VFA) - Fisheries Management and Science Branch	12-05-2022	Email TO relevant person	TGS state they are contacting VFA to provide information on the Otway Basin 3D Multi-client (MC) Marine Seismic Survey (MSS), which TGS and Schlumberger propose to undertake in Commonwealth waters offshore from Victoria, Tasmania and South Australia.	Y - Area coordinates, information sheet and maps and a summary of three Victorian fisheries	N/A	* (see note above table)	Continuing consultation
Victorian Fisheries Authority (VFA) - Fisheries Management and Science Branch	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Victorian Fisheries Authority (VFA) - Ocean General Fishery Manager	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Victorian Fisheries Authority (VFA) - Ocean General Fishery Manager	15-02-2023	Email FROM relevant person	Replied to TGS previous email advising they will respond when working.	N	Continuing consultation	* (see note above table)	Continuing consultation
Victorian Fisheries Authority (VFA) - Ocean General Fishery Manager	24-04-2023	Email TO relevant person	TGS emailed VFA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked VFA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Victorian Fisheries Authority (VFA) - Ocean General Fishery Manager	24-04-2023	Email FROM relevant person	VFA included TGS within a forwarded email to another two contacts within their department asking if they had any comments.	N	Continuing consultation	* (see note above table)	Continuing consultation
Victorian Fisheries Authority (VFA) - Ocean General Fishery Manager	26-04-2023	Email FROM relevant person	VFA replied to TGS' email sent 24/04/2023 apologising for delayed response and advised they are liaising with other VFA staff and will let TGS know as soon as possible.	N	Continuing consultation	* (see note above table)	Continuing consultation
Victorian Fisheries Authority (VFA) - Ocean General Fishery Manager	28-04-2023	Email TO relevant person	TGS replied to VFA's email received 26/04/2023 acknowledging their response. TGS asked VFA if it would be easier to discuss as can provide an online presentation with an opportunity to discuss any queries they have at the end. TGS added they really want to make sure they area liaising with the relevant Victorian fisheries rather than overload other fisheries unnecessarily and after some advice on the best way to do that. TGS closed their email saying they would appreciate any help.	N	N/A	* (see note above table)	Continuing consultation.
Victorian Fisheries Authority (VFA) - Rock Lobster and Giant Crab Fishery Manager	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Victorian Fisheries Authority (VFA) - Rock Lobster and Giant Crab Fishery Manager - Ocean General Fishery Manager - Fisheries Management and Science Branch	11-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Potential for Interaction with Victorian Fisheries Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Victorian Fisheries Authority (VFA) - Rock Lobster and Giant Crab Fishery Manager - Ocean General Fishery Manager - Fisheries Management and Science Branch	11-05-2022	Email FROM relevant person	Emails undeliverable to two stakeholder email accounts. Note, other VFA contacts (fishery managers) were successfully emailed.	N	Continuing consultation	* (see note above table)	Continuing consultation
Visit Victoria	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Visit Victoria	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Visit Victoria	24-04-2023	Email TO relevant person	TGS emailed VV to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked VV to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Visit Victoria	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Visit Victoria	22-05-2023	Email FROM relevant person	VV replied to TGS' email sent earlier that day advising they have forwarded to the relevant internal stakeholders and suggested contacting the Commissioner for Environmental Sustainability Victoria (link to website provided).	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
VR Fish (Victorian Rec Fishing Peak Body)	16-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
VR Fish (Victorian Rec Fishing Peak Body)	14-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
VR Fish (Victorian Rec Fishing Peak Body)	15-02-2023	Email TO relevant person	Forwarded email TGS sent the day before to ensure they received the email as there were IT issues where VR Fish may not have been able to reply. TGS closed their email asking for all comments and replies to be provided to TGS by 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	14-03-2023	Phone call TO relevant person	TGS called WTOAC to follow up on email and factsheet sent 16/02/2023. WTOAC advised that no one from Heritage was currently in the office and took TGS' contact details. The WTOAC representative advised they were new and wasn't sure whom the right contact was but they would find out and someone would get back in touch.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	22-03-2023	Email TO relevant person	TGS emailed WTOAC to provide them with an updated version of the factsheet which is more concise and provides an explanation of why TGS is wanting to consult with WTOAC on their planned project. TGS continued the factsheet explains what a marine survey is, what are the potential effects on the environment, the measures TGS has in place to limit the potential effects and safeguards in place should an unexpected event occur. TGS said they would like to meet WTOAC online to share TGS's plans and whether WTOAC has any concerns and can arrange an online meeting at their convenience to discuss. TGS closed the email by thanking WTOAC and advising they look forward to hearing from them.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	27-03-2023	Phone call TO relevant person	TGS called WTOAC to follow up on email and factsheet sent 22/03/2023. WTOAC reception provided TGS with contact details of a suitable WTOAC member to speak to and TGS called that member. WTOAC advised they didn't think there would be any concerns as it is so far offshore, however would be worth meeting. WTOAC advised they would send a meeting request form for TGS to fill in.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	27-03-2023	Email FROM relevant person	WTOAC emailed TGS to provide them with contact details for the WTOAC person whom can send a meeting booking form to schedule a time with the Heritage Unit to discuss the project.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	27-03-2023	Email TO relevant person	TGS emailed WTOAC to provide them with a completed meeting booking request form.	Y - Completed meeting booking request form	N/A	* (see note above table)	Continuing consultation.
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	27-03-2023	Email FROM relevant person	WTOAC emailed TGS to provide them with a meeting booking request form for TGS to complete and submit to book a meeting to discuss the proposed marine seismic survey.	Y - Meeting booking request form	Continuing consultation	* (see note above table)	Continuing consultation
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	27-03-2023	Email FROM relevant person	WTOAC acknowledged TGS' email sent earlier in the day providing the completed meeting booking request form and advised the next available meeting would be 27/06/2023 at 1300 hrs.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	3-04-2023	Phone call TO relevant person	TGS called WTOAC to ask if possible to have an earlier meeting (currently proposed for 27/06/2023) given they thought there would be no concerns. WTOAC advised they wouldn't be able to meet earlier because they are busy but it still stands they think there will be no concerns but they can't provide this in writing as they are required to meet with their members and they didn't have time now. TGS thanked them for their time.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	3-04-2023	Email TO relevant person	TGS emailed WTOAC to confirm meeting booking scheduled for 27/06/2023 at 13:00 hrs and asked if they would send an invitation or would they like TGS to send one.	N	N/A	* (see note above table)	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	3-04-2023	Email FROM relevant person	WTOAC replied to TGS' email earlier in the day confirming meeting booking in June and advised they have sent a meeting invite.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wadawurrung Traditional Owners Aboriginal Corporation (WTOAC)	3-04-2023	Email FROM relevant person	WTOAC sent TGS a meeting invite for 26/07/2023 at 1300 hrs, using Microsoft Teams.	Y - Meeting booking request form	Continuing consultation	* (see note above table)	Continuing consultation
Wagonga Local Aboriginal Land Council	12-04-2023	Email TO relevant person	TGS emailed WLALC to advise of their proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback by 19/04/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Wagonga Local Aboriginal Land Council	12-04-2023	Email FROM relevant person	Automated email from WLALC advising a problem with the recipient's mailbox, and to try resending.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wagonga Local Aboriginal Land Council	12-04-2023	Email FROM relevant person	TGS resent the email sent to WLALC that was undelivered earlier that day, however received notification this email was also undelivered.	Y - Copy of previously undelivered email	Continuing consultation	* (see note above table)	Continuing consultation
Wagonga Local Aboriginal Land Council	1-05-2023	Letter to relevant person	TGS posted a registered letter to WLALC advising of TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS enclosed an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 12/05/2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Wagonga Local Aboriginal Land Council	9-05-2023	Email TO relevant person	TGS emailed WLALC seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from WLALC to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked WLALC to reply and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Wagonga Local Aboriginal Land Council	22-05-2023	Email TO relevant person	TGS emailed WLALC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous correspondence. TGS asked if WLALC has any input about the survey to let them know prior to 26/05/2023 so they can consider the information within the development of their environment plan before submitting to NOPSEMA for their review. TGS closed the email asking them to reply to the email if they have any queries or would like further details.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Wagonga Local Aboriginal Land Council	1-06-2023	Email TO relevant person	TGS emailed WLALC advising NOPSEMA has advised they should provide a copy of the attached brochure to help relevant persons provide feedback on the proposed survey, explaining their rights and TGS' obligations through the consultation process. TGS asked WLALC to advise if they have any queries about their consultation program so they can make sure WLALC can actively participate in the process. TGS advised they are about to submit their environmental plan (EP) to NOPSEMA for their completeness check and once accepted as complete will release their EP for public consultation where WLALC has the opportunity to reveiw the draft EP and provide feedback before TGS resubmit to NOPSEMA for their overall assessment. TGS closed the email asking WLALC to call or email if they have any questions or would like additional information. Alternatively to advise if they wish to be removed from the consultation program and TGS will stop sending them communications.	Y - NOPSEMA consultation guideline	N/A	* (see note above table)	Continuing consultation.
Waratah-Wynyard Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Waratah-Wynyard Council	24-04-2023	Email TO relevant person	TGS emailed WWC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked WWC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	16-02-2023	Email FROM relevant person	Automated email acknowledging TGS email has been received and registered within their records system and will be forwarded to the appropriate department for action.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	4-03-2023	Email TO relevant person	TGS replied to WCC's email regarding setting up a meeting with executives and councillors to breif them on the proposed marine seismic survey within the Otway Basin. TGS suggested 17/04/2023.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	3-04-2023	Email FROM relevant person	WCC responded to the email TGS sent out 16/02/2023 regarding their proposed marine seismic survey in the Otway Basin. WCC thanked TGS for the offer to engage and would like to invite TGS to a briefing with their executives and councillors with a focus on what is being proposed, approval process and timelines along with any impact assessment/environmental assessment that TGS is able to share. WCC advised their briefing sessions are held on Monday afternoons and asked TGS to let them know a suitable date when they can attend and they can schedule it in.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	6-04-2023	Email TO relevant person	TGS emailed WCC to ask if they could let them know if 17/04/2023 will be suitable for a meeting and whether they can attend via an online meeting.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	12-04-2023	Email TO relevant person	TGS emailed WCC following up email sent 03/04/2023 about confirming meeting for 17/04/2023.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	13-04-2023	Email TO relevant person	TGS thanked WCC for their email received 13/04/2023.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	13-04-2023	Email FROM relevant person	WCC replied to email TGS sent 12/04/2023 about confirming a meeting date and time, apologising. WCC needs to discuss with management how consultation will work and is meeting with them morning of 14/04/2023 to discuss and hopefully have an answer tomorrow afternoon.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	14-04-2023	Email FROM relevant person	WGG emailed TGS to advise WCC had discussed consultation on the Otway Basin 3D Marine Seismic Survey and aren't ready to conduct anything with the councillors and executive management team at this time. WCC advised if possible they would like to do something in the next few months and will be in contact again shortly.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	17-04-2023	Email TO relevant person	TGS emailed WCC thanking them for their reply of 14/04/2023. TGS asked if there was anything they can provide WCC to ensure they've got sufficient information to know if the survey impacts Council's functions, interests or activities. TGS advised they have been liaising with local groups and are aware of some of the local issues and may be able to provide an insight in to what measures they will have in place to address them. TGS continued a meeting might help streamline information for the Councillors and Executive Management when time comes to meet with them and would help TGS with identifying other issues they may need to address during their survey planning and within their environmental plan. TGS closed the email by advising they had attached the updated information sheet and were happy to arrange an online meeting that suits them over the next week or two.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	17-04-2023	Email FROM relevant person	Automated reply advising the WCC contact was on leave returning to the office on 24/04/2023 and will respond to this email on their return.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	26-04-2023	Email TO relevant person	TGS emailed WCC to follow up on email sent to WCC on 17/04/2023 and if there was anything TGS could help WCC with.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	26-04-2023	Email FROM relevant person	WCC replied to email TGS sent earlier that day asking if TGS would be available on 22/05/2023 to present to their councillors and if so, WCC can provide information on available times.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	27-04-2023	Email TO relevant person	TGS replied to WCC's email received yesterday suggesting a meeting date. TGS confirmed they would like to meet with WCC's Councillors on 22/05/2023 and to please send through available times. TGS closed the email asking if there were any specific questions or information the Councillors or council staff had so that TGS could include in their presentation.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	3-05-2023	Email FROM relevant person	WCC replied to TGS' email sent 27/04/2023 confirming TGS' presentation would be part of their councillor briefing session on Monday afternoon. WCC continued this would be a 10 min allocated time confirmed closer to the date and advised the presentation could be in person or online and presentation facilities are available. WCC said they can add the information sheet provided to them earlier, to their breifing paper. WCC advised it would be good for TGS to provide a summary of what works are intented, expected outcomes and issues to deal with.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	12-05-2023	Email TO relevant person	TGS emailed WCC to thank them for setting up the meeting on 22/05/2023 and asked if they had a time slot that TGS will be presenting.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	15-05-2023	Email FROM relevant person	WCC emailed TGS advising they don't have a time slot for their meeting on 22/05/2023 yet but will advise as soon as they find out.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	18-05-2023	Email FROM relevant person	WCC emailed TGS to apologise and advise they have to reschedule their meeting from 22/05/2023 to either 19 or 26/06/2023 (following month) and asked which date TGS would prefer, reminding TGS they can do online if not available in person.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	19-05-2023	Email TO relevant person	TGS emailed WCC thanking them for their reply of 18/05/2023. TGS confirmed a meeting for 19/06/2023 and explained they will be submitting their environmental plan to NOPSEMA for completeness check before they can meet with council however they are visiting the area soon if they'd like to meet. TGS continued this would provide an opportunity to share feedback for survey planning and their environmental plan. TGS closed the email asking if they would like to catch up and TGS can confirm a time.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	23-05-2023	Phone call TO relevant person	TGS called WCC to follow up on email sent 19/05/2023 regarding a meeting while TGS visits Victoria, however there was no answer. TGS left a message to return their call.	N	Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Warrnambool City Council	24-05-2023	Email FROM relevant person	WCC replied to TGS' email sent 19/05/2023 advising they are happy to leave the meeting until 19/06/2023.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	25-05-2023	Email TO relevant person	TGS replied to WCC's email received the day before. TGS asked if WCC had any information they woud like TGS to consider or address within their survey planning for their initial environmental plan submission to NOPSEMA. TGS said they are asking for all information to be provided before 31/05/2023 but advised WCC to let them know if they need more time and to contact them if any queries arise in the meantime.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	7-06-2023	Email TO relevant person	TGS replied to WCC's email from earlier that day and confirmed the people attending the Council briefing and that the meeting will be online.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	7-06-2023	Email FROM relevant person	WCC emailed TGS to confirm who will be attending the council briefing scheduled for 19/06/2023 and whether their attendance will be in-person or online.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	7-06-2023	Email FROM relevant person	WCC replied to TGS' email reply sent earlier that day thanking TGS.	N	Continuing consultation	* (see note above table)	Continuing consultation
Warrnambool City Council	13-06-2023	Email FROM relevant person	WCC emailed TGS confirming the presentation to council 19/06/2023 will still work for TGS.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	13-06-2023	Email TO relevant person	TGS replied to WCC's email received earlier that day confirming the meeting time and date will work for TGS and asked if WCC would be sending out a meeting invite.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	14-06-2023	Email FROM relevant person	WCC replied to TGS' email sent the day before advising the WCC admin team will be in contact with a meeting link.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	14-06-2023	Email TO relevant person	TGS' replied to WCC's email received earlier that day thanking them.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	15-06-2023	Email FROM relevant person	WCC emailed TGS asking for meeting attendees email address for meeting scheduled 19/06/2023 to send a meeting invite.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	15-06-2023	Email TO relevant person	TGS replied to WCC's email providing them email addresses for meeting attendess for 19/06/2023.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	15-06-2023	Email FROM relevant person	WCC emailed a meeting invite for 19/06/2023.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool City Council	15-06-2023	Email TO relevant person	TGS replied to WCC's email thanking them for sending meeting invite.	N	N/A	* (see note above table)	Continuing consultation.
Warrnambool Coastcare Landcare Network Inc	20-03-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 27/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Warrnambool Coastcare Landcare Network Inc	24-04-2023	Email TO relevant person	TGS emailed WCLN to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked WCLN to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Warrnambool Coastcare Landcare Network Inc	22-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Warrnambool Coastcare Landcare Network Inc	10-06-2023	Email FROM relevant person	WCLNI replied to TGS' email sent 22/05/2023 and provided a formal response regarding their proposed marine seismic survey. WCLNI discussed TGS' information and advised that WCLNI has decided that seismic [surveying] should not proceed in the Otway Basin or any areas where the marine environment will be impacted, adding if a different and less hazardous technique for marine exploration is proposed they will be pleased to consider it. WCLNI provided the following summarised reasons in their submission: - direct impact on little penguin feeding and breeding; - general impact on marine animals (negative effects of seismic sound, particularly impacts to commercial fishing catches); - general impact on cetaceans (reduced sightings), particularly seismic survey noise; - impact on the foundations of marine food web (impacts to plankton, larval stages of many commercial fisheries); and - any processes that drive marine life away from Bonney Upwelling as a critical food source should be prevented. Refer to Appendix H for detailed meeting minutes.	Y - Formal submission	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are adressed in the following sections: Effects to little penguin feeding and breeding: Section 7.2.2.3.7 (effects of acoustic disturbance on Seabirds, including penguins), Section 8.3.3.2.6 (effects of hydrocarbon spill / oiling to Seabirds and Migratory Shorebirds including penguins). General impact on marine animals (effects of acoustic disturbance, including commercial fisheries): Section 7.1.3.1 (Seismic Survey physical presence: Potential Impacts and Risks to Commercial Fishing Operations), Section 7.2.3.1 (Acoustic disturbance - Evaluation of Known and Potential Impacts and Risks on Commercial Fisheries), Section 8.2.3 (Streamer loss - Evaluation of Known and Potential Impacts and Risks to Other Marine Users), Section 8.3.4.1 (Hydrocarbon spill - Potential Impacts and Risks to Commercial Fishing). General impact on cetaceans: Sections 7.2.2.3.6 and 7.2.2.4.2 (Acoustic imapcts to marine mammals with control measures specific for marine mammals listed in Table 84), and Section 8.3.3.2.5 (effects of a hydrocarbon spill to marine mammals). Impact plankton, larval stages of many commercial fisheries): Section 7.2.2.3.2 (bony fish / tuna behavioural impacts), and Section 7.2.2.2.1.2 (duration and extent of zooplankton exposure), and Section 7.2.2.2.3.2 (bony fish larvae). Interactions and cumulative effects: Table 84 lists control measures to require a SIMOPS plan, which includes the implementation of a 40 km spatial separation between Seismic Vessels. Section 9 sets out the approach to managing Cumulative Impacts. Outcomes of concurrent Cumulative Imapct Assessment workshops will be incorporated as frameworks become finalised and available for incorporation into this EP. Ongoing consultation with WCLNI will be undertaken in accordance with the methods set out in **Section 5** to ensure WCLNI have had both sufficient information, and sufficient time to engage in the consultation programme. TGS will continue to consult with WCLNI and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.
Weetapoona Aboriginal Corporation	20-04-2023	Phone call FROM relevant person	WAC called TGS following TGS' email sent earlier that day. WAC confirmed consultation was more relevant to them than SETAC (health care provider) and would be better to send to the Weetapoona Board (email provided). WAC advised they would respond if relevant. TGS noted they have been working on kelp rehabilitation.	N	The relevant person has provided information and/or requested additional information. No objections or concerns were raised.	* (see note above table)	No action required. Continuing consultation.
Weetapoona Aboriginal Corporation	20-04-2023	Email TO relevant person	TGS emailed WAC to advise of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 4 May 2023.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	26-04-2023	Phone call TO relevant person	TGS called WAC but there was no answer. TGS left a message advising they will be in Tasmania next week and would welcome a meeting and to please call TGS back to discuss.	N	Continuing consultation	* (see note above table)	Continuing consultation
Weetapoona Aboriginal Corporation	28-04-2023	Email TO relevant person	TGS emailed WAC following phone call earlier that day. TGS mentioned they will be in Hobart next week and would welcome the opportunity to give a project overview and to hear if WAC or anyone else in their organisation has any concerns or questions about the proposed Otway offshore seismic survey. TGS suggested any time Friday or Thursday afternoon would work. TGS closed the email stating they look forward to meeting with them next week.	N	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	1-05-2023	Email FROM relevant person	WAC replied to TGS' email sent 28/04/2023 regarding a possible meeting with WAC.advising TGS may be better to engage with Australia mainland Aboriginal organisations as much closer to them than WAC and asked what TGS' thoughts were.	N	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	1-05-2023	Email TO relevant person	TGS replied to WAC's email received earlier that day advising they are engaging with other groups about their proposed marine seismic surey and would like to engage with all groups to ensure they understand any concerns the different groups may have.	N	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	3-05-2023	Email FROM relevant person	WAC emailed TGS to advise they have sent an email to see if anyone is available for a meeting and will advise as soon as they know.	N	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	3-05-2023	Email TO relevant person	TGS replied to WAC's email received earlier that day advising they can meet online next week if a meeting this week is not suitable.	N	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	9-05-2023	Email TO relevant person	TGS emailed WAC to arrange a meeting to discuss their proposed marine seismic survey suggesting 11/05/2023. TGS advised they can send a Teams invite to forward on [to others that may wish to attend].	N	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	9-05-2023	Email FROM relevant person	WAC replied to TGS' email sent earlier that day requesting a meeting to discuss their proposed marine seismic survey and asked TGS to let them know whent and WAC will send an invite to the cultural committee.	N	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	9-05-2023	Email TO relevant person	TGS replied to WAC's email received earlier that day suggesting 11/05/2023 for an online meeting to discuss their proposed marine seismic survey.	N	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	9-05-2023	Email TO relevant person	TGS emailed WAC a meeting invite for 11/05/2023 to discuss their proposed marine seismic survey.	N	N/A	* (see note above table)	Continuing consultation.
Weetapoona Aboriginal Corporation	11-05-2023	Meeting with relevant person	TGS, SLB and SLR met with WAC/SETAC to discuss their proposed marine seismic survey within the Otway Basin. TGS and SLR delivered a presentation providing an overview of the project and environmental planning to develop the environmental plan before discussing the following summarised queries with WAC/SETAC: - Fuel release and response process; - Reason for survey - to provide data to oil and gas companies, not a government initiative. - Impacts to marine life, cultural sites (petroglyph sites), heritage sites (Tasmanian Wilderness Heritage area) and fishing trap areas. - TGS part of the Energeo Alliance Ghost Net and Marine Debris Removal Iniative. - Socio-economic benefits of the project - employment opportunities etc. - Oil and gas exploration and drilling is not in the scope of this project, just data acquisition. Refer to Appendix I for detailed meeting minutes.	N	The relevant person has raised an objection, claim or concern. The objection or claim has merit and is addressed in the EP.	Specific aspects of the discussion points are adressed in the following sections: Fuel release and response process: **Section 10.9 (OPEP)** Impacts to culture and heritage, as well as socio-economic imapcts are disscussed in detail in **Section 7.1.3** (Physical presence), **Section 7.2.3** (Acoustic imapcts), **Section 8.1.3** (Unplanned activities), **Section 8.3.4** (hydrocarbon spill) Impacts to marine life: **Section 7.2.2** (acoustic impacts), **Section 7.2.3** (routine permissible waste discharges), **Section 7.4.2** (atmospheric emissions), **Section 7.5.2** (artificial light emissions), **Section 8.1.2** (IMS), **Section 8.2.2** (streamer loss), **Section 8.3.3** (vessel collision and hydrocarbon spill), **Section 8.5.2** (accidental release of hazardous and non-hazardous materials). Other aspects regarding use of data in relation to the Oil and Gas Industry are outside the scope of the NOPSEMA regulations for the purpose of this EP. Remaining concerns will be subject to ongoing consultation. TGS will continue to consult and endeavour to provide assurances of its environmental protection measures for its projects.	Continuing consultation.

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Weetapoona Aboriginal Corporation	9-06-2023	Email TO relevant person	TGS emailed WAC to provide them with a copy of the meeting minutes and presentation for their review and record. TGS asked WAC to advise of any changes and provided the following information as discussed during the meeting: - contact for Aboriginal Heritage Tasmania; - information about the Energeo Alliance - Ghost net and marine debris removal initiative, including information about handling entangled animals (attached); and - employment opportunities (marine fauna observer possibility), asking WAC to advise if there would be interest so they can discuss further. - TGS thanked WAC for their time and information and advised they have noted their concerns and queries which will be incorporated within their enviornmental and survey planning and environmental plan. TGS closed by advising they will keep them updated as things progress and get the impact summaries as soon as they can but asked them to get in touch if they have any amendments or queries.	Y - Meeting minutes, copy of presentation and IAGC guidance for handling entangled animals.	N/A	* (see note above table)	Continuing consultation.
Wellington Shire Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Wellington Shire Council	16-02-2023	Email FROM relevant person	Automated email advising email has been received and will be handled and responded to in accordance with Customer Service Commitment.		Continuing consultation	* (see note above table)	Continuing consultation
Wellington Shire Council	24-04-2023	Email TO relevant person	TGS emailed WSC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked WSC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Wellington Shire Council	24-04-2023	Email FROM relevant person	Automated email responding to email TGS sent earlier in the day acknowledging email.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wellington Shire Council	4-05-2023	Phone call TO relevant person	SLB called WSC and explained the call was to ask for feedback on the marine seismic survey proposed for the Otway Basin that TGS recently emailed the council including an information sheet. The Council representative confirmed the email and factsheet had been received and reviewed but their records showed receipt was still within 10 days for them to respond. WSC advised someone would reply to TGS by 08/05/2023 and if to please call again.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wellington Shire Council	10-05-2023	Phone call TO relevant person	TGS called WSC following email TGS sent 24/04/2023 regarding their marine seismic survey proposed for the Otway Basin. WSC confirmed they had received the information and advised the person looking after this query and they will ask that person to call TGS back as they were not available at the moment.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wellington Shire Council	10-05-2023	Email FROM relevant person	WSC emailed following TGS' phone call made earlier that day. WSC advised they tried calling the phone number provided by their message taker but must have been recorded incorrectly, hence their email. WSC apologised for their late response but given the proposed location of the seismic survey work, which they understand is within the Otway Basin and remote proximity to Wellington Shire, they don't believe it will impact the activities of the council. WSC closed their email by thanking TGS for their communication and opportunity to comment and wish TGS well with their surveying.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wellington Shire Council	10-05-2023	Email TO relevant person	TGS replied to WSC's email received earlier that day thanking them for their reply and time. TGS advised they have noted WSC's comments and offered to please get in contact if they have any queries.	N	N/A	* (see note above table)	Continuing consultation.
West Coast Council	16-02-2023	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
West Coast Council	16-02-2023	Email FROM relevant person	Automated email acknowledging TGS email and advising the email has been forwarded to the appropriate department for a response or action within 10 working days of receipt.	N	Continuing consultation	* (see note above table)	Continuing consultation
West Coast Council	24-04-2023	Email TO relevant person	TGS emailed WCC to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked WCC to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
West Coast Council	24-04-2023	Email FROM relevant person	Automated email responding to email TGS sent earlier in the day acknowledging email and advising email will be forwarded to appropriate department who will formally acknowledge receipt of request within two working days.	N	Continuing consultation	* (see note above table)	Continuing consultation
West Coast Council	26-04-2023	Email FROM relevant person	WCC replied to TGS' email sent 24/04/2023 advising they have no concerns regarding the survey.	N	N/A - no concerns	N/A	Consultation closed
West Coast Council	28-04-2023	Email TO relevant person	TGS replied to WCC's email received 26/04/2023 thanking them for their reply and noting they have no concerns regarding their survey. TGS closed the email asking if WCC still wanting to be kept on TGS' consultation list to keep updated with survey progress or would they prefer to be removed. TGS added WCC can always contact them if they have a query or need further information.	N	N/A	N/A	Consultation closed
West Coast Council	28-04-2023	Email FROM relevant person	WCC replied to TGS' email sent earlier that day advising TGS can remove WCC from their consultation list. TGS replied thanking them for their prompt reply.	N	N/A	N/A	Consultation closed
West Tamar Council	16-02-2023	Email TO relevant person	TGS advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
West Tamar Council	16-02-2023	Email FROM relevant person	Automated email acknowledging email had been received and will be allocated to the appropriate team or officer.	N	Continuing consultation	* (see note above table)	Continuing consultation
West Tamar Council	27-04-2023	Email TO relevant person	TGS replied to WTC's email received 16/02/2023 querying TGS' email. TGS thanked WTC for their patience with their response and advised that recent changes in the survey planning show WTC is out of the survey scope. TGS closed the email by advising they would remove WTC from the consultation list.	N	N/A - out of survey or EMBA range.	N/A	Consultation closed
Western Abalone Divers Assn (Abalone Western Zone)	15-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Western Abalone Divers Assn (Abalone Western Zone)	24-04-2023	Email TO relevant person	TGS emailed WADA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked WADA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Western Abalone Divers Assn (Abalone Western Zone)	19-05-2023	Email TO relevant person	TGS emailed relevant person advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 26/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Western Abalone Divers Assn (Abalone Western Zone)	25-05-2023	Email TO relevant person	TGS emailed an alternative contact at WADA advising they had been attempting to correspond with them about their proposed marine seismic survey within the Otway Basin to include them in their consultation program. TGS commented they had not received a response from them but advised its not too late and to provide any input back to TGS prior to 31/05/2023 so they can consider their information within the development of the environmental plan before submitting to NOPSEMA mid-June for their review. TGS closed the email by stating if they had any questions or would like more information to reply to the email.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.
Wildcatch Fisheries South Australia	12-05-2022	Email TO relevant person	Advised of proposal to undertake the Otway Basin 3D Multi-client MSS. Attached Information Sheet provided information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures Requested any feedback be provided prior to 01/07/2022.	Y - Information Sheet - Map presenting survey relative to SA fisheries reporting blocks - Area Co-ordinates	N/A	* (see note above table)	Continuing consultation.
Wildcatch Fisheries South Australia	31-05-2022	Email TO relevant person	TGS/Schlumberger invited WFSA to a call with other relevant fisheries stakeholders on June 2nd 2022 11:00am AEST. Three additional dates were given for alternative meeting days/times and the stakeholder was asked to indicated their availability during these times if they are unable to attend the June 2nd meeting. The times given were. •Wednesday 8th June – Between 11 am and 4 pm Victoria/Tasmania time (between 10:30 am and 3.30 pm SA time) •Thursday 9th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) •Friday 10th June – Between 11 am and 5 pm Victoria/Tasmania time (between 10:30 am and 4.30 pm SA time) TGS/Schlumberger noted that the 2D tie line extension area near King Island had been removed.	Y - Updated information sheet - Boundary coordinates	N/A	* (see note above table)	Continuing consultation.
Wildcatch Fisheries South Australia	22-06-2022	Email TO relevant person	TGS/Schlumberger expressed a desire to engage with the stakeholder in a meeting to discuss any questions they may have regarding the potential for the project to interact with fisheries. TGS/Schlumberger asked if the stakeholder could provide some days/times they would be available for a meeting.	N	N/A	* (see note above table)	Continuing consultation.
Wildcatch Fisheries South Australia	14-02-2023	Email TO relevant person	Reconnected to advise of changes to survey (area size and contact details) and provide updated Information Sheet. Requested any feedback be provided prior to 16/03/2023.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Wildcatch Fisheries South Australia	15-02-2023	Email FROM relevant person	Automated reply advising TGS' emailed sent 14/02/2023 was undeliverable.	N	Continuing consultation	* (see note above table)	Continuing consultation

Relevant Person	Date of Correspondence	Type of Correspondence	Summary of Correspondence	Attachments	Assessment of Merit (Objection or Claim)	Reference to Location within the EP	Status of Consultation
Wildcatch Fisheries South Australia	24-04-2023	Email TO relevant person	TGS emailed WFSA to see if they had any queries about their proposed marine seismic survey within Otway Basin as TGS had not received any response to their previous email and information. TGS advised they want to make sure they have sent sufficient information to know if the survey impacts their functions, interests or activities and then TGS can discuss any queries or concerns they may have to ensure they are addressing them in their survey planning and environmental plan. TGS attached an updated information sheet and asked WFSA to reply and advise if they would like to discuss further or would like more information. Alternatively, they can let TGS know if the survey is not of interest or relevant to them and they will be removed from the consultation list.	Y - Updated information sheet	N/A	* (see note above table)	Continuing consultation.
Wildcatch Fisheries South Australia	25-04-2023	Email FROM relevant person	Automated reply advising TGS' emailed sent 24/04/2023 was undeliverable.	N	Continuing consultation	* (see note above table)	Continuing consultation
Wildcatch Fisheries South Australia	19-05-2023	Email TO relevant person	TGS emailed WFSAI seeking feedback on TGS' proposal to undertake a marine seismic survey within the Otway Basin. TGS attached an information sheet providing information on: · the location, schedule and description of activities to be undertaken; · types of vessels to be used and logistical arrangements, as known; · potential impacts and control measures. TGS also explained they would like to hear from WFSA to ensure they know about their functions, interests or activities that may be impacted by the survey and explained why they were contacted as a potential relevant person that may be impacted by an unplanned release of the vessels fuel from a collision. TGS asked WFSA to reply before 26/05/2023 and advise if they would like to discuss further or would like more information or alternatively if the survey is not of interest or not relevant and TGS will remove then from their consultation list.	Y - Information sheet	N/A	* (see note above table)	Continuing consultation.

APPENDIX L

PAM Specifications

PAM Specifications

Cetacean Detection Capability

The vocalisations made by the full range of marine mammal species can be detected by our PAM systems. Typical system configuration has the capability of detecting sounds within a frequency range of 200 Hz to 200 kHz. This frequency band covers most marine mammal vocalisations. The system sensitivity may be extended to 10 Hz to 200 kHz for surveys in which it is necessary to monitor for baleen whales that vocalise at very low frequencies. However, in some circumstances, vessel noise at low frequencies can mask marine mammal vocalisations and limit the performance of PAM. The frequency response of some hydrophone channels is set to counter this (e.g. lower frequency response of 2 kHz for channels designed to detect the majority of species vocalisations). Seiche can readily tailor the frequency sensitivity of the hardware to suit the project application and the range of marine mammal species likely to be encountered. Additionally, PAMGuard software can be configured to focus on the detection of the vocalisations of particular species of interest or concern.

PAMGuard Software

PAMGuard software is integrated into all our PAM systems. PAMGuard is industry-standard software for the acoustic detection, localization and classification of vocalizing marine mammals. It is a sophisticated and extendible software package that assists trained operators in robust decision-making during real-time mitigation operations. As an open source development, PAMGuard is publicly owned and freely available. PAMGuard development is led by a team of specialists at the University of St Andrews, U.K. This has to date been funded by industry via the IOGP Sound and Marine Life Joint Industry Program. Funding is now transitioning to a self-funding mechanism operated through voluntary user contributions.

Table 1. Hydrophone elements frequency range

Hydrophone Elements	
H1	10 Hz to 200 kHz (-3 dB points)
H2	10 Hz to 200 kHz (-3 dB points)
H3	2 Hz to 200 kHz (-3 dB points)
H4	2 Hz to 200 kHz (-3 dB points)

Table 2. Hydrophone sensitivity

Hydrophone sensitivity	
Broadband channel sensitivity	-166 dB re 1V/µPa (nominal)
Standard channel sensitivity	-157 dB re 1V/µPa (nominal)

APPENDIX M

Marine Mammal Control Measures

SUMMARY OF PROPOSED MARINE MAMMAL CONTROL MEASURES

Based on the distribution and likelihood of marine mammals in the Operational Area (**OA**) (as described in **Section 4.5.6** of the EP) and as per the definitions outlined in the EPBC Act Policy Statement 2.1:

- There is a high likelihood of encountering whales in the OA;
- The OA overlaps with the defined biologically important habitat (BIA) for blue whales (i.e. an annual high use foraging area and the flanking known foraging areas/likely foraging areas) and has been nominated as an extension of the existing BIA; and
- The OA overlaps biologically important habitat for southern right whales (i.e. known core range) and approaches the boundary of a biologically important aggregation area (which occurs 14 km inshore of the OA).

On this basis, the application of both standard management procedures and additional management procedures is necessary to ensure that potential impacts from the proposed Seismic Survey to marine mammals are managed to an acceptable level.

Modelling of underwater noise from the 3,480 in^3 acoustic source has been conducted (see **Section 7.2.1.2** of the EP), and while the modelled results indicate that the standard management procedures outlined in EPBC Act Policy Statement 2.1[1] will be sufficient to protect high-frequency odontocete whales, additional control measures are required to protect low-frequency baleen whales.

The control measures below are proposed to ensure full compliance with the EPBC Act Policy Statement 2.1 and the relevant Conservation Management Plans (blue whales, and southern right whales). Where species identification is uncertain, a precautionary approach will be adopted.

In accordance with the EPBC Act Policy Statement 2.1, no control measures are required for dolphins and the modelling results support this approach.

TERMINOLOGY

In accordance with the EPBC Act Policy Statement 2.1, the term 'whale' refers to baleen whales and other large, toothed whales such as, sperm whales, killer whales, false killer whales, pilot whales and beaked whales.

For clarity, all whale species other than blue whales/pygmy blue whales **(BW/PBW)** and southern right whales (**SRW**) are herein referred to as 'other whales', meaning:

- All baleen whales excepting BW/PBW and SRW; e.g. humpback, fin, sei, Bryde's, pygmy right, and minke whales; and
- All large, toothed whales; e.g. sperm whales, killer whales, false killer whales, pilot whales, pygmy sperm whale, dwarf sperm whale, and beaked whales; and
- Spectacled porpoise[2].

[1] Namely the 500 m shutdown zone, the 2 km low power zone and the 3+ km observation zone.
[2] Note that spectacled porpoises may occur in and around the OA, and model results indicate that (as a very high frequency cetacean) it should be afforded protection from acoustic injury associated with underwater noise (see **Section 7.2.2.2.7** of the EP).

The measures that are specific to 'other whales' have been developed on the basis that free-ranging pelagic animals are not expected to remain in the vicinity of the Seismic Vessel for extended periods and the movement of the Seismic Vessel means that any potential exposure will be transitory in nature.

MANAGEMENT PROCEDURES – ALL WHALES

Unless otherwise stated, the following management procedures (**MP**s) apply to the following species and will be implemented throughout the entire OA[3] for the duration of the survey:

1) 'other whales'; and
2) BW/PBW; and
3) SRW.

Where management procedures for all whales are superseded by species specific controls, this has been identified as a footnote. In these cases, the applicable BW/PBW or SRW management procedures are described in the subsequent sections of this appendix.

In addition, while standard management procedures outlined in the EPBC Act Policy Statement 2.1 will be adopted for the Seismic Survey, TGS has adapted some of these measures to provide increased protection to marine mammals. These are marked with an 'AC' superscript to denote an 'additional control'.

- MP 1: During daylight hours at least one marine fauna observer (**MFO**) will be on duty at all times from the Seismic Vessel and one MFO will be on duty at all times from the Attending Support Vessel[4] to undertake continuous visual observations for marine mammals[AC].
- MP 2: MFOs will implement a 5+ km Observation Zone[AC] from the acoustic source[5]. In practise this means that MFOs will be required to scan as far as possible towards the horizon given the prevailing sightings conditions. In those circumstances when monitoring of the Observation Zone is a pre-requisite to certain operations (see **AMP 1**), the minimum radius permissible will be 5 km. Note that the implementation of this Observation Zone does not prohibit Low Visibility or Night-time Operations (see **MP 9**) but whenever conditions allow, this zone will be monitored.
- MP 3: During daylight hours, Pre Start-up Visual Observations for the presence of whales within the 5+ km Observation Zone will be undertaken for at least 30 minutes before the commencement of the Soft Start Procedure.
- MP 4: If no whales have been sighted within the relevant Shut-down Zones, Soft Start Procedures will commence over a 30-minute period.
- MP 5: A 2 km Shut-down Zone[AC] for all whales will be implemented throughout the entire OA at all times[6]. On this basis a Low Power Zone is unnecessary.

[3] Including those BIAs and buffers that apply to BW/PBW and SRW.
[4] Where 'Attending Support Vessel' means the vessel that is accompanying the Seismic Vessel at close range at any one time. Noting that it could be the support, chase, or supply vessel; but at least one of these vessels is required to be in attendance at any one time.
[5] This distance has been selected on the basis that blue whale detection can be reasonably expected to 5 km over a range of sighting conditions.
[6] This measure is superseded by Additional Management Procedures applicable to BW/PBW and SRW.

- MP 6: A Start-up Delay will occur if a whale enters or is detected in any relevant Shut-down Zone during the soft start. Whale presence within the Shut-down Zone will trigger an immediate and complete shut-down. Soft Start Procedures may only resume after the whale has been observed to move outside the Shut-down Zone, or when 30 minutes have lapsed since the last whale sighting.
- MP 7: If a whale is detected within any nominated Observation Zone during the Seismic Survey, an additional MFO will be stationed on the bridge of the vessel from which the detection was made to assist with observations. The only permissible exception to this is when the off-duty MFO is on a meal or toilet break or is standing-down having reached maximum shift duration for that particular working day. In these instances a trained crew member will assist with marine mammal observations.
- MP 8: Stop Work Procedures will be implemented for the entire duration in which operations are underway as follows: the acoustic source will shut-down immediately whenever a whale is detected in, or about to enter, any relevant Shut-down Zone. Soft Start Procedures may only resume after the whale has been observed to move outside the Shut-down Zone, or when 30 minutes have lapsed since the last whale sighting.
- MP 9: Low Visibility[7] or Night-time[8] Operations may occur provided that there have not been three or more whale instigated shut-down situations during the preceding 24-hour period[9].
- MP 10: When species identification is uncertain, a precautionary approach will be taken, and the most conservative option in accordance with the additional management procedures for BW/PBW or SRWs will be followed until identification is otherwise confirmed.

The Extended Precaution Zones for 'other whales' are depicted in **Figure 1**.

ADAPTIVE MANAGEMENT PROCEDURES – OTHER WHALES

Unless otherwise stated, the following adaptive management procedures (**ADMP**s) will be followed throughout the entire OA[10] for the duration of the survey, noting that the maximum onset distance predicted by underwater acoustic modelling for behavioural effects was c. 12 km for all species.

- ADMP 1: If three or more 'other whale' instigated shut-downs occur within a 24-hour period, the Seismic Vessel will relocate at least 12 km in the direction away from the sightings before commencing Pre Start-up Visual Observations and Soft Start Procedures[11].
- ADMP 2: If an 'other whale' mother and calf pair is observed within 12 km[12] of the active acoustic source during the Seismic Survey, the acoustic source will be immediately shut down and the Seismic Vessel will relocate to another area at least 12 km away from the last recorded position of the mother/calf pair before commencing Pre Start-up Visual Observations and Soft Start Procedures[13].

[7] When observations cannot extend to 5 km from the acoustic source, e.g. during fog or periods of high winds.
[8] The hours between sunset and sunrise at any given location.
[9] This measure is superseded by Additional Management Procedures applicable to BW/PBW and SRW.
[10] Including those BIAs and buffers that apply to BW/PBW and southern right whales.
[11] This measure is superseded by Additional Management Procedures applicable to BW/PBW and SRW.
[12] Note that the intention here is not to provide full MFO coverage of this zone, but to opportunistically respond to any mother/calf sightings that are detected within a 12 km radius. If the sighting occurs outside 12 km (i.e., during aerial surveys or support vessels en-route to resupply) no action will be required.
[13] This measure is superseded by Additional Management Procedures applicable to BW/PBW and SRW.

ADDITIONAL MANAGEMENT PROCEDURES – GENERAL

The following additional management procedures (**AMP**s) apply to all operations:

- AMP 1: Soft start procedures throughout the OA can only proceed under the following circumstances:
    a. If no acquisition has occurred in the preceding 24 hours, soft starts may only commence in daylight hours and when conditions allow visual inspection of the 5+ km Observation Zone[AC];
    b. If acquisition has occurred within the preceding 24 hours and no whale initiated shut downs have been made during this period, then soft starts may commence at night or during periods of low visibility providing they occur outside of the BW BIAs/buffer and the SRW Ag BIA/buffer.
- AMP 2: 2D tie line acquisition inside any BIA/buffer will only be permitted to occur in daylight hours, and two MFOs must be on duty on the Seismic Vessel and two MFOs must be on-duty on the Attending Support Vessel. 2D tie line acquisition inside any BIA/buffer can occur at any time providing the following criteria are met:
    a. An aerial survey has been conducted within 4 days of such operations commencing and no baleen whales have been detected. This aerial survey must focus on the area of planned acquisition that overlaps the BIA/buffer and must extend to at least 42 km on either side of the planned 2D sail line;
    b. 2D tie line acquisition inside any BIA/buffer must not occur for more than 12 hours total within any 24 hour period;
    c. The Extended Observation Zone as described in BMP 4 is implemented; and
    d. The acoustic source must not be active for more than a combined total of 20 hours (maximum) in the BIAs/buffers.
- AMP 3: Marine mammal observations made during the Seismic Survey will be undertaken by dedicated, trained and experienced MFOs. All MFOs must have proven 'at sea' experience in whale identification and behaviour, and distance estimation, and must be confident in the identification of those species that the EP predicts will be present in the OA. All MFOs will hold a JNCC Marine Mammal Observation certification (or equivalent). In addition, the lead MFO on the Seismic Vessel must have logged a minimum of 20 weeks' relevant sea-time engaged in marine seismic survey operations in Australian waters as an MFO.
- AMP 4: A minimum of two MFOs will be onboard the Seismic Vessel for the duration of the Seismic Survey and two additional MFOs will be stationed on the Attending Support Vessel.
- AMP 5: A passive acoustic monitoring (**PAM**) system will run 24 hours per day on the Seismic Vessel during the Seismic Survey, with dedicated, trained and experienced PAM Operators conducting acoustic monitoring for the presence of cetaceans[14] while the acoustic source is active and during the 30 minutes before the commencement of any Soft Start Procedure.
- AMP 6: At least two dedicated, trained and experienced PAM Operators will be on the Seismic Vessel for the duration of the survey, with at least one PAM Operator maintaining 'acoustic watch' at all times while the acoustic source is active and during the 30 minutes before the commencement of any Soft Start Procedure.

[14] PAM is not considered to be a particularly reliable method for detecting low-frequency cetaceans. On this basis, management measures for baleen whales have been developed to remove the reliance on PAM while still maintaining a high level of protection.

- AMP 7: The lead PAM Operator must have logged a minimum of 20 weeks' relevant sea-time engaged in seismic survey operations in Australian waters as a PAM Operator. All PAM Operators will need to be able to demonstrate competency in the acoustic identification of the species that are likely to be present during the Seismic Survey, and in interpreting acoustic software and estimating distance to any detected whale calls.
- AMP 8: A full replacement PAM system will be kept onboard the Seismic Vessel and will be used as a back-up if the PAM system malfunctions and is unable to be repaired.
- AMP 9: In the event that the PAM system malfunctions or becomes damaged, seismic operations may continue for 20 minutes without PAM while the PAM Operator diagnoses the issue. If it is found that the PAM system needs to be repaired or replaced, seismic operations may continue for an additional two hours without operational PAM as long as: a) it is daylight hours and the sea state is less than or equal to Beaufort 4, b) no whales were detected solely by PAM in the relevant mitigation zones in the previous two hours; c) two MFOs maintain watch at all times during seismic operations when PAM is not operational, d) seismic operations with an active source, but without an active PAM system, do not exceed a cumulative total of four hours in any 24-hour period.
- AMP 10: The PAM system will be programmed to receive/recognise vocalisations of whales within the frequencies 10 Hz to 200 Hz. The frequency range will theoretically be tuned to detect both low frequency vocalisations of baleen whales and the high frequency echolocations of sperm whales.
- AMP 11: PAMGuard software will be incorporated into the PAM system to assist with locating and classifying the vocalisations of marine mammals, and the PAM Operators will be suitably trained in using the PAMGuard software.

ADDITIONAL AND ADAPTIVE MANAGEMENT PROCEDURES – BLUE WHALES/PYGMY BLUE WHALES

Animat modelling has been used to inform the development of the following control measures for blue whales. As the two subspecies of blue whales are difficult to distinguish at sea, these controls will be applied to both subspecies (denoted as **BW/PBW**). This modelling predicts the maximum onset distances for 24 hour cumulative PTS and TTS as 130 m and 32 km respectively. Cumulative TTS effects from acquisition on the continental slope are however only expected to occur to 15.4 km inshore of the active acoustic source on account of reduced sound propagation in the upslope direction. Therefore, acquisition within c. 16 km of the pygmy blue whale foraging BIAs or within the BIAs themselves has the potential to result in injury or displacement of a BW/PBW from a foraging area[15].

The maximum predicted onset distance for behavioural effects for BW/PBW is 7 km. This distance underpins the Shut-down Zone for BW/PBW. In addition, the 32 km maximum predicted onset distance for TTS has also been utilised in defining several control measures for BW/PBW.

It is noteworthy that the modelling undertaken was conservative, where 1) the worst-case scenarios for noise propagation were modelled to produce maximum estimates of onset distances for TTS and PTS, and 2) the modelled source locations and seasons were those expected to exhibit noise propagation over the greatest distances.

[15] Defined in the 'Guidance on key terms within the Blue Whale Conservation Management Plan' (published by DAWE in September 2021) as a designated foraging BIA.

The c. 16 km onset distance for cumulative TTS in the onshore direction has been used to define a buffer zone around the blue whale foraging BIAs (referred to as **BW BIAs** herein). No acquisition will occur within the BW BIAs or the 16 km buffer during the 'peak feeding season' from January to June (inclusive) based on the expected consistent and widespread presence of whales in the foraging areas during these months (Gill *et al*., 2011; 2015; McCauley *et al*., 2018). The only exception allowed is the acquisition of the 2D tie line which will be subject to additional operational restrictions (see **AMP 2**) and will only take approximately 12 hours to acquire.

This spatio-temporal measure has been designed to eliminate any physical or behavioural effects on foraging BW/PBW in the designated BW BIAs during the foraging season; hence, to comply with the requirement of the Blue Whale Conservation Management Plan that blue whales can continue to use biologically important areas without injury and no blue whale will be displaced from a foraging area. On this basis, the protection afforded to BW/PBW in the BW BIAs is very strong during the peak months of foraging area use.

Operations inside the BW BIAs and the 16 km buffer (referred collectively as **BW BIAs/buffer** herein) will be permitted outside these months including during the 'foraging shoulder season' months of September to December and July when whales may be present, but densities are expected to be substantially lower and presence is less consistent. All operations inside the BW BIAs/buffer during the foraging shoulder season will be subject to the use of aerial surveys to assist with BW/PBW detection.

Throughout the survey an Extended Observation Zone (as described in **BMP 4** below) will be implemented and will serve the dual purpose of detecting BW/PBWs at extended distances in order to implement the 7 km Extended Shut-down Zone and to assist with survey planning in order to facilitate operational avoidance of areas where BW/PBWs are present. Several adaptive management measures are also proposed.

In light of the conservative approach taken by the modelling, the proposed controls (as summarised above and detailed below) demonstrate consistency with the objective of the Blue Whale Conservation Management Plan (that "*anthropogenic threats are demonstrably minimised*") and the purpose of the Australian Whale Sanctuary (that cetaceans are not killed, injured, or interfered). On this basis, acoustic injury to BW/PBW can be managed to an acceptable level throughout the OA; hence, anthropogenic threats (as they relate to physiological impacts from underwater noise) are avoided through robust and adaptive management measures.

The following additional and adaptive management procedures for BW/PBW (denoted with **BMP**) will be implemented during the Seismic Survey:

- <u>BMP 1:</u> A 16 km buffer will be established around all BW BIAs where they overlap or approach the OA.
- <u>BMP 2:</u> The Seismic Vessel will not activate the acoustic source(s) within any BW BIAs/buffer from January to June (inclusive) which represents the peak foraging season during which BW/PBW are expected to consistently be present at foraging areas in and around the OA at elevated densities. The only exception allowed relates to the acquisition of the 2D tie line in accordance with the criteria outlined in **AMP 2**.
- <u>BMP 3:</u> A 7 km Extended Shut-down Zone will be implemented for BW/PBW throughout the OA (including the BW BIAs/buffer). On this basis a Low Power Zone is deemed unnecessary.

- BMP 4: An 'Extended Observation Zone' will be adopted such that vessel based MFOs observe for BW/PBWs as far as practicable, and to a minimum of 7 km during daylight hours. During periods when visibility is < 7 km, the Extended Observation Zone will be monitored by the combined efforts of the MFOs on both the Seismic Vessel and at least one Support Vessel travelling approximately 5-7 km ahead of the Seismic Vessel. This Support Vessel will focus monitoring efforts on the 90° quadrant that lies directly ahead of the Seismic Vessel, and in reference to these specific duties, is herein referred to as the EOZ Support Vessel. When visibility is > 7 km, this Extended Observation Zone may be monitored solely by MFOs on the seismic vessel. At these times the EOZ Support Vessel will be available to assist with vessel operations and port calls; however, whenever possible the intention is that the EOZ Support Vessel shall maintain its position 5-7 km ahead of the seismic vessel to assist with BW/PBW detections. The only permissible exceptions to the specified EOZ Support Vessel duties will be issues of safety that require relocation of the EOZ Support Vessel or in the event of incidents involving significant risk to in-sea equipment when the EOZ Support Vessel will be permitted to temporarily assist providing the following criteria are met:
    a. The MFO onboard the EOZ Support Vessel continues observations for BW/PBWs;
    b. There have been no BW/PBW instigated shut downs in the preceding 6 hours; and
    c. No more than 4 hours elapse before the EOZ Support Vessel resumes its position ahead of the Seismic Vessel.
- BMP 5: Low Visibility or Night-time Operations may occur provided that no BW/PBW shut downs have been instigated during the preceding 24 hours within 32 km of the planned acquisition (i.e. the survey lines that will occur during the hours of darkness or the period of low visibility).
- BMP 6: During the 'foraging shoulder season' months of September to December and July the seismic vessel is permitted to operate in the BW BIAs/buffer in accordance with the following protocols:
    a. All reasonable efforts[16] will be made to ensure that aerial surveys will be conducted to assist with the detection of BW/PBW in the BW BIAs/buffer during the 'foraging shoulder season'. Within the seven days prior to commencement of any acquisition in the BW BIAs/buffer aerial surveys will be flown, if possible, to identify any BW/PBWs that may be present. Any such detections will result in acquisition within the BW BIAs/buffers being redirected away from areas in which such detections have been made. The intent of this control is to allow TGS to respond adaptively to detections of BW/PBWs in the BW BIAs/buffer by relocating to parts of the BW BIAs/buffer where potential impacts on BW/PBWs are less likely.
    b. If the requirement for aerial surveys as outlined in (a) above cannot be achieved, no low visibility or night time operations may occur inside the BW BIAs/buffer until such time as the aerial survey requirement is met.
    c. Aerial survey efforts will concentrate on the area of the BW BIAs/buffer nearest to the proposed start up location and/or those waters that will be subject to acquisition in the first 24 hours of planned seismic operations. Throughout the period in which acquisition is underway, aerial surveys will be flown periodically as weather permits to support the detection of BW/PBW and to redirect seismic survey efforts in order to avoid BW/PBW that are present.

[16] Noting that in some circumstances aerial surveys may not be possible due to weather or aircraft availability constraints.

d. Aerial surveys must be undertaken by two experienced observers from a suitable aircraft. At least one of these observers must demonstrate previous experience in the detection and identification of BW/PBW from the air.

e. Start-up (via soft start) can only commence in the BW BIAs/buffer during the 'foraging shoulder season' if the following criteria are met:

   i. A minimum of two hours of daylight remain before nightfall;

   ii. Good sightings conditions prevail that allow visual observations of the Extended Observation Zone;

   iii. MFOs on board the Seismic Vessel and the EOZ Support Vessel have completed at least 30 minutes of pre-start observation procedures and confirmed no BW/PBW have been sighted; and

   iv. The start-up location does not occur within 32 km of an area where a BW/PBW detection has been made in the last four days.

- BMP 7: If a BW/PBW is detected in the 7 km Extended Shut-down Zone during the survey the acoustic source will be immediately shut down and the seismic vessel will relocate to another area at least 32 km away from the last PBW sighting before commencing Pre Start-up Visual Observations and Soft Start Procedures. If relocation of the seismic vessel is not possible[17], then acquisition will cease and will not recommence until 24 hours have elapsed and no BW/PBW has been detected in the 7 km Extended Shut-down Zone.
- BMP 8: A Start-up Delay will occur if a BW/PBW enters or is detected in the 7 km Extended Shut-down Zone during the soft start, and soft start procedures may only resume once the BW/PBW is observed to move outside this Shut-down Zone or when 30 minutes have lapsed since the last BW/PBW sighting.
- BMP 9: If higher than anticipated numbers of BW/PBW are observed (three or more BW/PBW instigated shut downs are made during the preceding 48 hour period[18]) at any time or location during the survey, the following adaptive management controls will apply:

   a. Acquisition in the BW BIAs/buffer must cease;

   b. Low Visibility or Night-time Operations must cease; and

   c. Normal operations may only resume after 24 hours of no BW/PBW instigated shut downs.

The Precaution Zones for BW/PBW are depicted in **Figure 2**.

[17] For instance, towards the end of the survey when few survey lines remain to be acquired.
[18] Note that any unidentified whale/s will contribute to this count.

ADDITIONAL AND ADAPTIVE MANAGEMENT PROCEDURES – SOUTHERN RIGHT WHALES

Animat modelling has been used to inform the development of the following control measures for SRW. This modelling predicts the maximum onset distances for 24 hour cumulative PTS and TTS as 40 m and 11 km respectively. Based on these results, TTS effects are not predicted to extend from the OA into the Aggregation BIA (which occurs 14 km north of the OA) or any of the connecting habitat, migration and resting on migration BIAs that occur further afield in coastal waters. The predicted onset distance for behavioural effects for SRWs were assessed separately for 'mother/calf pairs' and 'other individuals' as 31.5 km and 6.1 km respectively. In keeping with the Shut-down Zone with BW/PBW, 7 km has been selected as the Shut-down Zone for SRW, to conservatively address the maximum predicted onset distance of 6.1 km for behavioural effects on individual (i.e., unaccompanied) SRWs. In addition to the Animat modelling and using a very conservative interpretation of the maximum-over-depth acoustic modelling results, behavioural effects to mother/calf pairs may indeed occur up to 42 km inshore of acquisition when it occurs closest to the Aggregation BIA.

The operative SRW Conservation Management Plan (CoA, 2012) states that "Noise interference is of particular concern within or close to southern right whale aggregation areas where young calves are present and whales are resident for long periods of time"; hence the measures described below are targeted to address these specific noise impacts. While there is another designated 'known core range' BIA in the area, the OA only marginally overlaps with this and the expectation is that animals traverse this area on their way to and from the more coastal aggregation areas and connecting habitat. Strong adaptive management measures have been developed to address potential noise effects in the wider area.

The 42 km onset distance for behavioural impacts to mother-calf pairs has been used to define a buffer zone around the SRW Aggregation BIA (referred to as the **SRW Ag BIA** herein). No acquisition will occur within the SRW Ag BIA or the 42 km buffer during the core aggregation months of May to September (SWIFFT 2023). The only exception allowed is the acquisition of the 2D tie line which will be subject to additional operational restrictions (see **AMP 2**) and will only take approximately 12 hours to acquire.

This spatio-temporal measure has been designed to eliminate any physiological or behavioural effects on SRWs in the SRW Ag BIA during the months over which SRWs are expected to be present. On this basis, compliance with Interim Recovery Objective 5 of the operative Southern Right Whale Conservation Management Plan that anthropogenic threats are demonstrably minimised, is achieved. This control also aligns with the recommendation in Policy 2.1 that seismic surveys should be undertaken outside of biologically important areas at biologically important times.

While the Draft National Recovery Plan for the Southern Right Whale (CoA, 2022) is not yet operative, once finalised it will supersede the operative plan. The conservation actions included in the draft plan that are of relevance to seismic survey noise are listed in **Table 1** along with how they are addressed by the proposed controls. TGS is aware that the designated BIAs are also being reviewed as part of the process underpinning the review of the recovery plan. There is a strong possibility that the BIA boundaries for SRWs will change prior to the commencement of the proposed survey. TGS can confirm that the 42 km buffer as described above will be applied to the updated aggregation/reproductive BIA should it be published before the survey commences.

Table 1 Assessment of proposed controls against the draft conservation actions outlined in the Draft National Recovery Plan for Southern Right Whales (CoA, 2022)

Draft Actions of Relevance to Anthropogenic Underwater Noise (Action Area A5)	How Addressed by the Proposed Controls
Improve baseline understanding of SRW acoustic communication to better assess potential impacts from anthropogenic underwater noise	The EP relies on the best available data as included in the Animat modelling undertaken by JASCO regarding SRW behaviour and acoustic communication.
Actions within and adjacent to SRW BIAs and 'Habitat Critical to Survival' should demonstrate that it does not prevent any SRW from utilising the area or cause injury (TTS and PTS) and/or disturbance.	The proposed 7 km Shut-down Zone prevents all PTS and single pulse TTS. Noting that cumulative TTS is predicted only if a SRW remained within 11 km of the active source for 24 hours. However, the vessel movement (average 8 km/hr) means that in practice TTS is unlikely as the vessel would be well beyond the TTS onset distances within 2 hours (i.e. much shorter than the 24 hrs of exposure needed to induce TTS). The 7 km Shut-down Zone protects all unaccompanied SRWs against behavioural effects (which are predicted to only occur to 6.1 km) and the 42 km buffer around the SRW Ag BIA protect mother calf pairs from behavioural disturbance. In addition, if a mother calf pair is detected outside the SRW Ag BIA/buffer (which could occur as they move south at the end of the breeding season), a shutdown will be triggered at any distance to prevent disturbance. In addition, no acquisition will occur within the SRW Ag BIA or the 42 km buffer during the core aggregation months of May to September.
Ensure environmental assessments associated with underwater noise generating activities include consideration of national policy (e.g., EPBC Act Policy Statement 2.1) and guidelines related to managing anthropogenic underwater noise and implement appropriate mitigation measures to reduce risks to SRWs to the lowest possible level	The EP contains a comprehensive assessment of the potential effects of underwater noise on SRWs. The survey adopts the EPBC Act Policy Statement 2.1 and oftentimes exceeds the requirements of this policy statement to ensure that the risks to SRWs are reduced to the lowest possible level.
Quantify risks of anthropogenic underwater noise to SRWs, including behavioural disturbance, changes to vocalisations, and physiological effects to whales	The EP contains a comprehensive assessment of the potential effects of underwater noise on SRWs, and Animat modelling has been conducted to specifically quantify the risks of underwater noise.
Prioritise government/industry funding opportunities to support research to identify short and long-term responses of SRWs to underwater noise	TGS is in dialogue with Blue Whale Study regarding the implementation of aerial surveys during the proposed seismic survey.
Improve understanding and characterisation of marine soundscapes, including the application of new technologies for data processing, within Southern Right Whale BIAs to facilitate quantification of anthropogenic noise in the marine soundscape	Animat modelling has been conducted to specifically quantify the risks of underwater noise. In particular two scenarios were modelled, one of which was specifically tailored to assess the effects of underwater noise in the SRW Ag BIA. The model was run for both mother/calf pairs and all other cohorts of unaccompanied SRWs.

The modelling took a conservative approach, whereby 1) the worst-case scenarios for noise propagation were modelled to produce maximum estimates of onset distances for TTS, PTS and behavioural effects, and 2) the modelled source locations and inputs were those expected to exhibit noise propagation over the greatest distances.

Operations inside the SRW Ag BIA and the 42 km buffer (referred collectively as **SRW Ag BIA/buffer** herein) will be permitted outside these months including during the aggregation shoulder months of April and October. All operations inside the SRW Ag BIA/buffer during the shoulder months will be subject to the use of aerial surveys to assist with SRW detection.

Throughout the survey an Extended Observation Zone (as described in **SRMP 4** below) will be implemented and will serve the dual purpose of detecting SRWs at extended distances in order to implement the 7 km Extended Shut-down Zone and to assist with survey planning in order to facilitate operational avoidance of areas where SRWs are present. Several adaptive management measures are also proposed.

In light of the conservative approach taken by the modelling, the proposed controls (as summarised above and detailed below) demonstrate consistency with the objective of the SRW Conservation Management Plan (that anthropogenic threats are demonstrably minimised) and the purpose of the Australian Whale Sanctuary (that cetaceans are not killed, injured, or interfered).

The adoption of the controls summarised above and detailed in the specific control measures below ensures that the protection afforded to SRWs, both inside the SRW Ag BIA and outside, is very strong and that the risks to SRWs are reduced to the lowest possible level.

The following additional and adaptive management procedures for SRW (denoted with **SRMP**) will be implemented during the Seismic Survey:

- SRMP 1: A 42 km buffer will be established around the SRW Ag BIA where it approaches the OA.
- SRMP 2: The Seismic Vessel will not activate the acoustic source(s) within the SRW Ag BIA/buffer from May to September (inclusive) which represents the core aggregation months during which SRWs are expected to be present here. The only exception allowed relates to the acquisition of the 2D tie line in accordance with the criteria outlined in **AMP 2**.
- SRMP 3: A 7 km Extended Shut-down Zone will be implemented for SRWs throughout the OA (including the SRW Ag BIA/buffer). On this basis a Low Power Zone is deemed unnecessary.
- SRMP 4: An 'Extended Observation Zone' will be adopted such that vessel based MFOs observe for SRWs as far as practicable, and to a minimum of 7 km during daylight hours. During periods when visibility is < 7 km, the Extended Observation Zone will be monitored by the combined efforts of the MFOs on both the Seismic Vessel and at least one Support Vessel travelling approximately 5-7 km ahead of the Seismic Vessel. This Support Vessel will focus monitoring efforts on the 90° quadrant that lies directly ahead of the Seismic Vessel, and in reference to these specific duties, is herein referred to as the EOZ Support Vessel. When visibility is > 7 km, this Extended Observation Zone may be monitored solely by MFOs on the seismic vessel. At these times the EOZ Support Vessel will be available to assist with vessel operations and port calls; however, whenever possible the intention is that the EOZ Support Vessel shall maintain its position 5-7 km ahead of the seismic vessel to assist with SRW detections. The only permissible exceptions to the specified EOZ Support Vessel duties will be issues of safety that require relocation of the EOZ Support Vessel or in the event of incidents involving significant risk to in-sea equipment when the EOZ Support Vessel will be permitted to temporarily assist providing the following criteria are met:

    a. The MFO onboard the EOZ Support Vessel continues observations for SRWs;

b. There have been no SRW instigated shut downs in the preceding 6 hours; and

c. No more than 4 hours elapse before the EOZ Support Vessel resumes its position ahead of the Seismic Vessel.

- SRMP 5: Low Visibility or Night-time Operations may occur provided that no SRW shut downs have been instigated during the preceding 24 hours within 42 km of the planned acquisition (i.e. the survey lines that will occur during the hours of darkness or the period of low visibility).
- SRMP 6: During April and October (shoulder aggregation months) the Seismic Vessel is permitted to operate in the SRW Ag BIA/buffer in accordance with the following protocols:

a. All reasonable efforts will be made to ensure aerial surveys will be conducted to assist with the detection of SRWs in the SRW Ag BIA/buffer during April and October. Within the seven days prior to commencement of any acquisition in the SRW Ag BIA/buffer, aerial surveys will be flown, if possible, to identify any SRW that may be present. Any such detections will result in acquisition within the SRW Ag BIA/buffer being redirected away from areas in which such detections have been made. The intent of this control is to allow TGS to respond adaptively to detections of SRWs in the SRW Ag BIA/buffer by relocating to parts of the OA where potential impacts on SRWs are less likely.

b. If the requirement for aerial surveys as outlined in (a) above cannot be achieved, no low visibility or night time operations may occur inside the BW BIAs/buffer until such time as the aerial survey requirement is met.

c. Aerial survey efforts will concentrate on the area of the SRW Ag BIA/buffer nearest to those waters that will be subject to acquisition in the first 24 hours of planned seismic operations. Aerial surveys should also monitor any nearby waters of the known core range BIA that acquisition will soon occur in. Throughout the period in which acquisition in the SRW Ag BIA/buffer is underway, aerial surveys will be flown periodically as weather permits to support the detection of SRWs and to redirect seismic survey efforts in order to avoid areas where SRWs are present.

d. Aerial surveys must be undertaken by two experienced observers from a suitable aircraft. At least one of these observers must demonstrate previous experience in the detection and identification of SRW from the air.

e. Start-up (via soft start) can only commence in the SRW Ag BIA/buffer during April and October if the following criteria are met:

i. A minimum of two hours of daylight remain before nightfall;

ii. Good sightings conditions prevail that allow visual observations of the Extended Observation Zone;

iii. A Support Vessel is available to undertake the requisite marine mammal monitoring;

iv. MFOs on board the Seismic Vessel and the EOZ Support Vessel have completed at least 30 minutes of pre-start observation procedures and confirmed no SRWs have been sighted; and

v. The start-up location does not occur within 42 km of an area where a SRW detection has been made in the last four days.

- SRMP 7: If a SRW is detected in the 7 km Extended Shut-down Zone during the survey the acoustic source will be immediately shut down and the seismic vessel will relocate to another area at least 11 km away from the last SRW (unaccompanied) sighting before commencing Pre Start-up Visual Observations and Soft Start Procedures. Note that this distance increases if a calf is present in accordance with **SRMP 10**. If relocation of the seismic vessel is not possible, then acquisition will cease and will not recommence until 24 hours have elapsed and no SRW has been detected in the 7 km Extended Shut-down Zone.

- SRMP 8: A Start-up Delay will occur if a SRW enters or is detected in the 7 km Extended Shut-down Zone during soft start, and soft start procedures may only resume once the SRW is observed to move outside this Shut-down Zone or 30 minutes have lapsed since the last SRW sighting.

- SRMP 9: If higher than anticipated numbers of SRW are observed (three or more SRW instigated shut downs are made during the preceding 48 hour period[19]) at any time or location during the survey, the following adaptive management controls will apply:

    a. Acquisition in the SRW Ag BIA/buffer must cease

    b. Low Visibility or Night-time Operations must cease;

    c. The acoustic source will be shut down and the Seismic Vessel will relocate to another area at least 42 km away from the last SRW sighting, and outside of the SRW Ag BIA/buffer, before commencing Pre Start-up Visual Observations and Soft Start Procedures. If relocation of the seismic vessel is not possible, then acquisition will cease and will not recommence until 24 hours have elapsed and no SRW has been detected in the 7 km Extended Shut-down Zone; and

    d. Normal operations may only resume after 24 hours of no SRW instigated shut downs.

- SRMP 10: If a SRW mother and calf pair is observed from the Seismic Vessel or the Attending Support Vessel at any distance during the Seismic Survey, the acoustic source will be immediately shut down and the Seismic Vessel will relocate to another area at least 42 km away, and outside of the SRW Ag BIA/buffer, before commencing Pre Start-up Visual Observations and Soft Start Procedures. If relocation of the seismic vessel is not possible, then acquisition will cease and will not recommence until 24 hours have elapsed and no SRW has been detected in the 7 km Extended Shut-down Zone.

The Precaution Zones for SRW are depicted in **Figures 3**.

[19] Note that any unidentified whale/s will contribute to this count.

Figure 1 Extended Precaution Zones: Other Whales

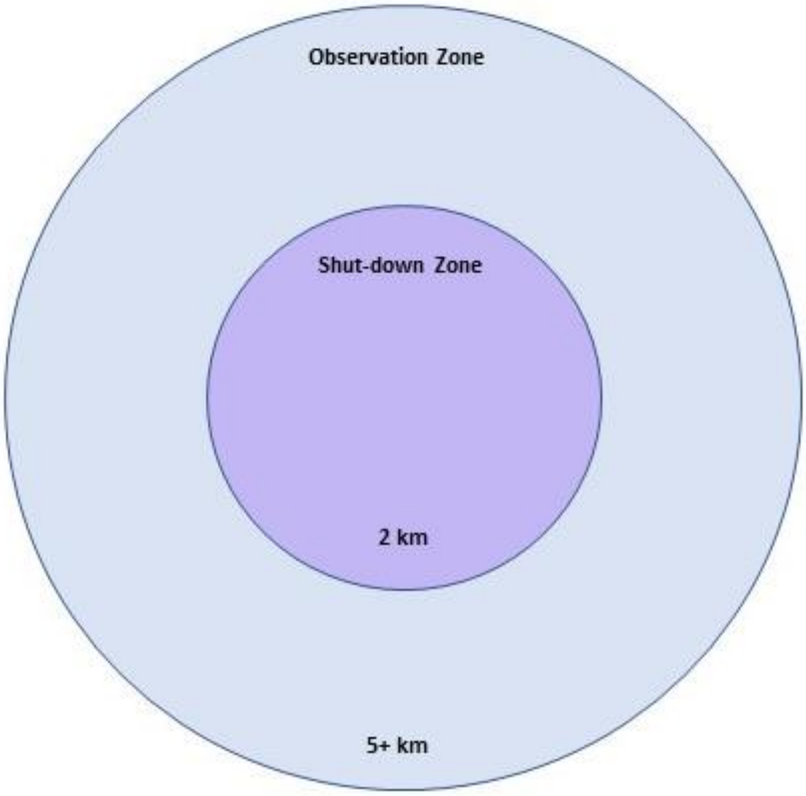

Figure 2 Extended Precaution Zones: Blue Whales/Pygmy Blue Whales

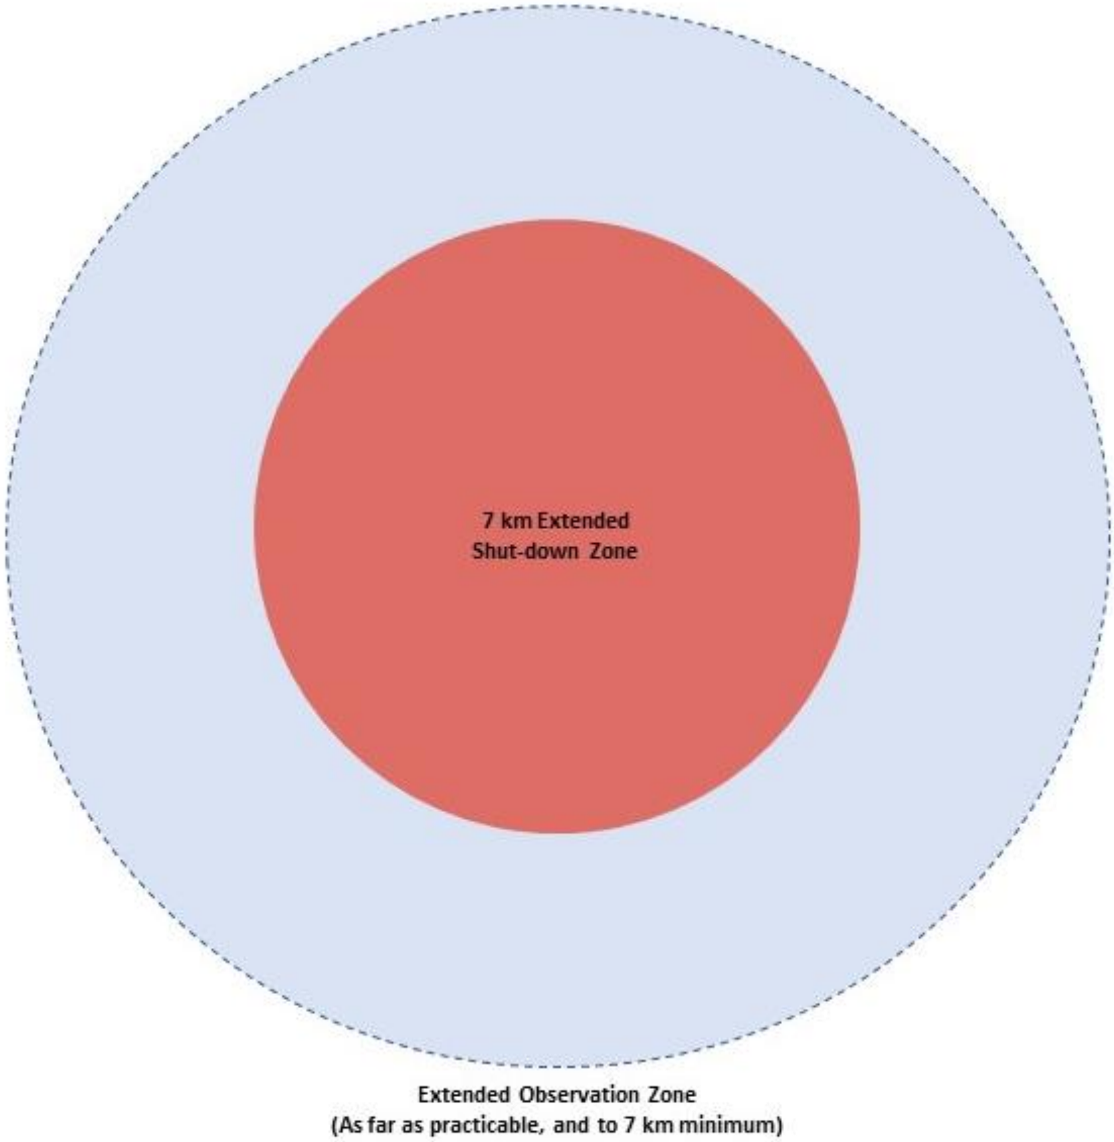

Figure 3 Extended Precaution Zones: Southern Right Whales

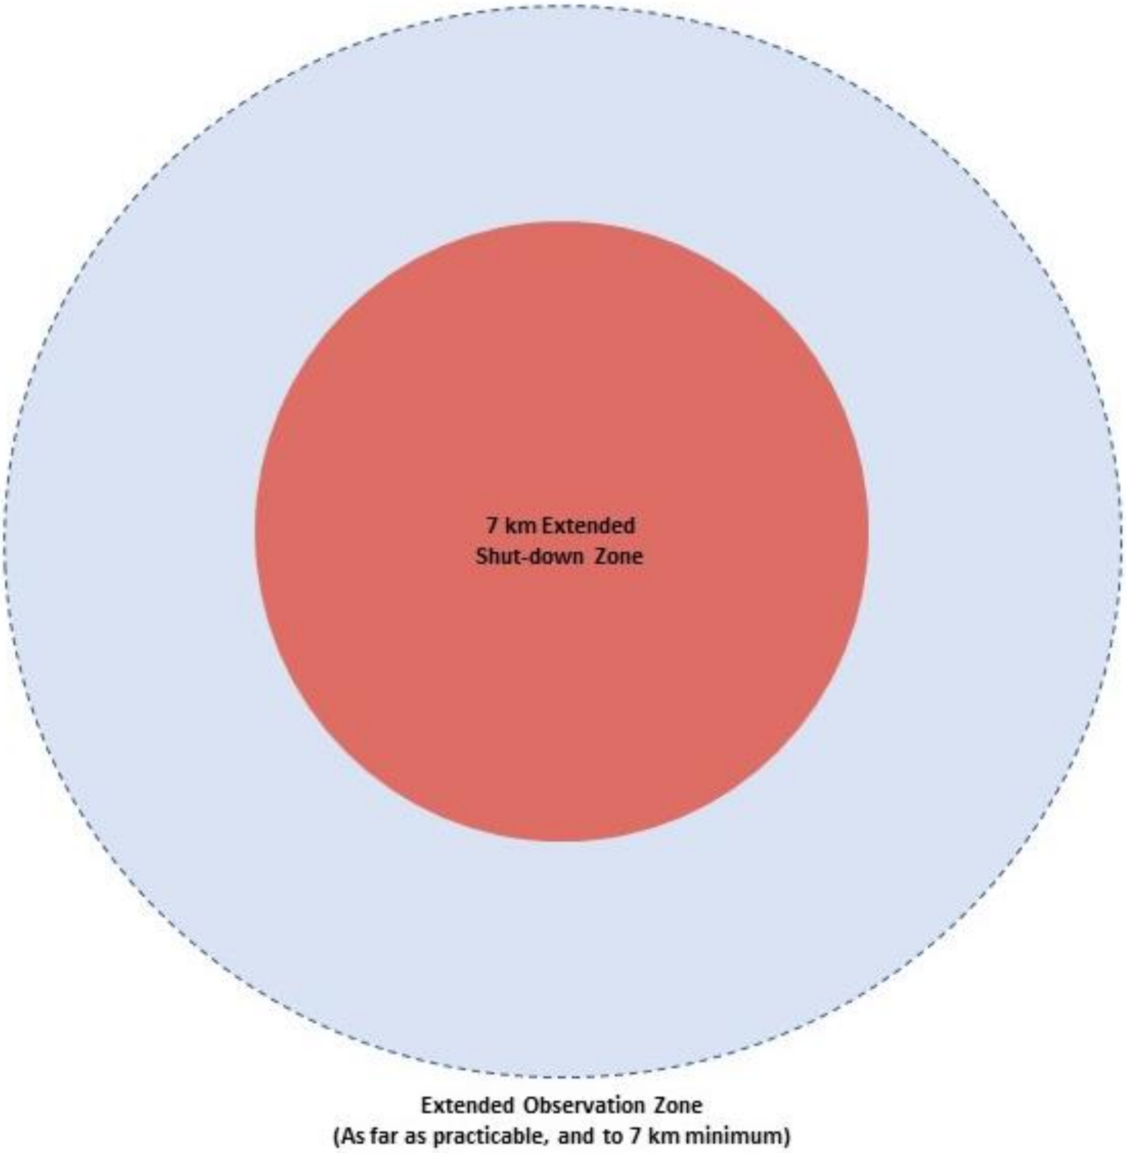

MOTHER/CALF PAIR SIGHTINGS:

If a mother/calf pair is observed from the Seismic Vessel or the Attending Support Vessel at any distance during the Seismic Survey, the acoustic source will be immediately shut down.

1 Introduction

1.1 Purpose

The Operational and Scientific Monitoring Plan (**OSMP**) is an operational document and provides further detail on how the OSMP will be implemented in the event of a Level 2 spill. Specifically, this OSMP Logistics and Monitoring Plan demonstrates how the Type I Operational and Type II Scientific monitoring tasks assigned to the approved Service Provider would be implemented on behalf of TGS in the event that monitoring is initiated.

Section 10.10 of the EP Implementation Strategy contains an Oil Pollution Emergency Plan (**OPEP**) which introduces the framework of the OSMP. The OSMP framework broadly outlines the details of Type I Operational Monitoring and Type II Scientific Monitoring studies which would be undertaken in the event of a Level 2 hydrocarbon spill. These plans are an integrated package of environmental management documents designed to manage environmental issues and protect the environment during the Otway Basin 3D MC MSS.

This OSMP document provides further detail on how the OSMP will be implemented in the event of a Level 2 spill. Specifically, this OSMP Logistics and Monitoring Plan demonstrates how the Type I Operational and Type II Scientific monitoring tasks assigned to SLR would be implemented on behalf of TGS in the event that monitoring is initiated.

This OSMP has been developed in accordance with the requirements of the Offshore Petroleum and Greenhouse Gas Storage Act 2006 (**OPGGS Act**) and associated the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (**OPGGS(E)R**). It has also been prepared with reference to the following documents published by the National Offshore Petroleum Safety and Environmental Management Authority (**NOPSEMA**):

- GN1488 Oil Pollution Risk Management guidance note (Rev 2, Feb 2018); and
- N-04700-IP1349 Operational and scientific monitoring programs information paper (Mar 2016).

1.2 Scope

Any spill resulting in a release of hydrocarbons into the marine environment is an oil pollution incident for the purposes of this OSMP.

This document has been prepared to cover Otway Basin 3D MC MSS activities within the operational area (**OA**), located within the South-East Marine Region in Commonwealth waters, offshore from south-eastern Australia. The acquisition area comprises approximately 45,000 square kilometres (km^2) and is surrounded by a larger OA covering 55,000 km^2. The OA is located approximately 31 km from the mainland at the closest point (**Figure 1**).

Other key coastal locations of relevance to the OA include:

- Portland, VIC: 45 km north of the OA;
- Warrnambool, VIC: 61 km north-northeast of the OA;
- Arthur River, TAS: 85 km east of the OA;
- King Island, TAS: 39 km east of the OA; and
- Port MacDonnell, SA: 39 km north of the OA.

Potential spills scenarios considered in the development of this OPEP are:

- Level 1: Spill of hydrocarbons (lubrication oil or hydraulic fluid);
- Level 1: Spill during vessel refuelling resulting in release of up to 10 m^3 of Marine Diesel Oil (MDO); and
- Level 2: Release of marine diesel to the environment following a vessel collision and resulting in rupture of one or more fuel storage tanks. Based on the maximum volume of the proposed survey vessel(s), the maximum credible release volume would be 1066 m^3 over a period of six hours.

The document provides guidance for response personnel for the initial hours following a hydrocarbon release. Upon notification the CA Incident Management Team (**IMT**) will have taken over responsibility for the response and will develop their own incident action plan (**IAP**). The IAP will form the basis of transitioning to an ongoing response following the first strike response period.

OSMP implementation will continue beyond the initial response by the vessel and will remain the responsibility of TGS.

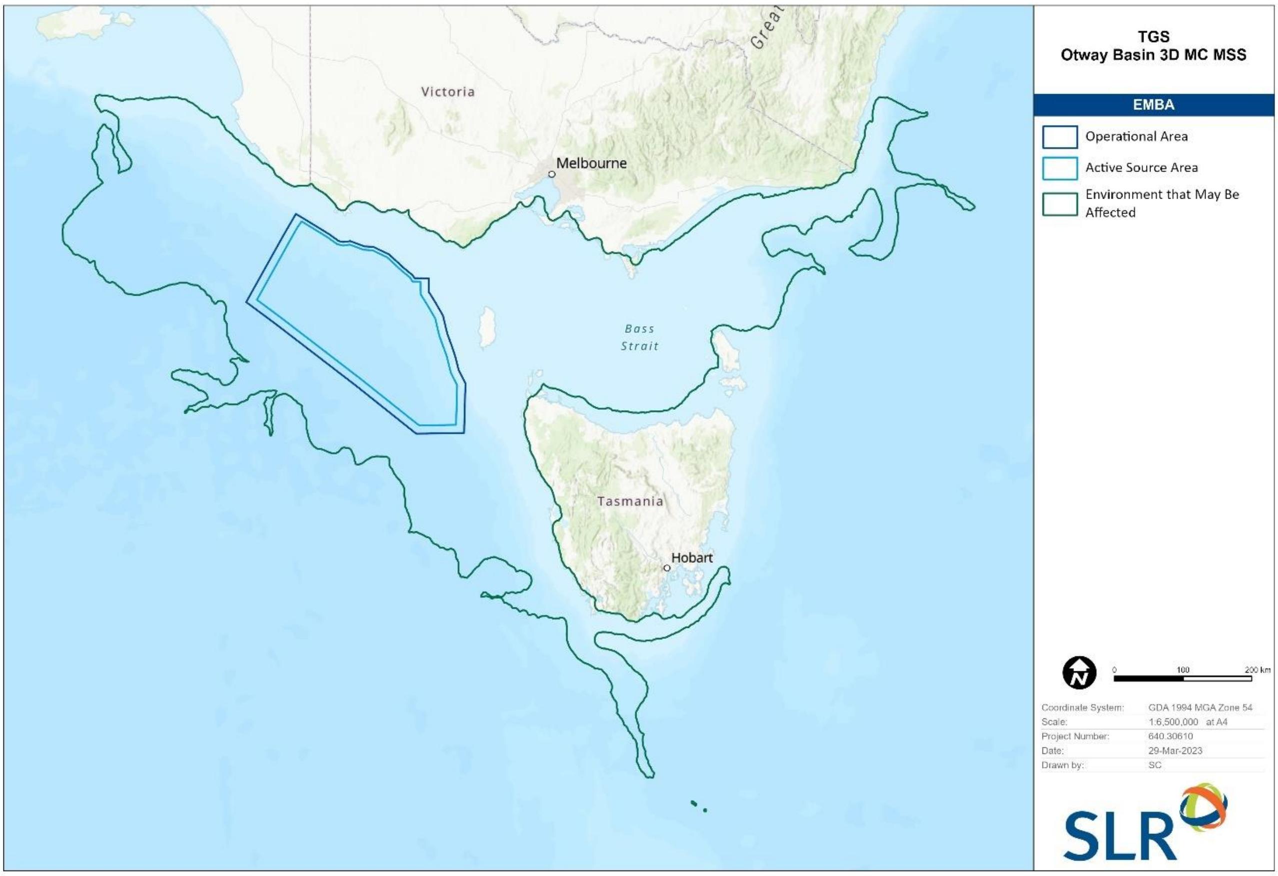

Figure 1 Location of Otway Basin 3D MSS and EMBA

1.3 Interface with other plans

This OSMP forms part of a wider emergency response framework, linking to the following emergency response documents:

- Survey or support vessel(s) >400 GRT SOPEP - deals with hydrocarbon spills which are either contained on the vessel or which can be dealt with from/by the vessel;
- Survey or support vessel(s) <400 GRT spill management plan - deals with spills which are either contained on the vessel or which can be dealt with from/responded by the vessel;
- The National Plan for Maritime Environmental Emergencies (National Plan) (AMSA, 2019);
- The VIC state plan: Transport Safety Victoria (**TSV**) (transport safety regulator for Victoria) Victorian State Emergency Management Plan (**SEMP**);
- The TAS state plan: Tasmanian Marine Oil and Chemical Spill Contingency Plan- TasPlan;
- The NSW state plan: NSW State Waters Marine Oil and Chemical Spill Contingency Plan, a sub-plan to the NSW State Emergency Management Plan; and
- The South Australian state plan: the South Australian Marine Spill Contingency Action Plan (**SAMSCAP**).

2 First response actions

2.1 Immediate Actions

Immediate actions for hydrocarbon releases from the Otway Basin MC MSS activity are defined in **Table 1.**

Table 1 Immediate Actions, Timeframes and Responsibilities for the Otway Basin 3D MC MSS in Response to a Hydrocarbon Release

Action	Timeframe	Responsibility
Identify the source of the hydrocarbon release and raise the alarm	Immediate; as soon as a release has been identified.	All offshore personnel
Activate the vessel shipboard oil pollution emergency plan (**SOPEP**)/spill management plan to stop the spill: • isolate the source of the spill • minimise the release volume (consider transfer of fuel from leaking tank) • clean up spill to deck	Following alarm being raised and rapid considerations of health and safety risks.	Vessel master (on-scene incident commander)
Classify the Level of the spill (see **Table 3**)	Immediately following activation of the SOPEP/OPEP	Vessel master
Verbally notify Australian Maritime Safety Authority (AMSA) via the AMSA Rescue Coordination Centre (**JRCC**) Australia on +61 (02) 6230 6811 (1800 641 792)	Immediately (as soon as possible) following alarm being raised	Vessel master
Notify TGS Seismic: Primary contact: [redacted] Secondary contacts: [redacted]	Immediately (as soon as possible) following alarm being raised	Vessel master

Action	Timeframe	Responsibility
[redacted]		
Activate TGS Incident Management Team (IMT)	Immediately, following verbal notification of release from vessel master	TGS IMT IC
Activate monitor and surveillance response strategy (see **Section 3.3**): • maintain visual observations • oil spill trajectory calculations	Within one hour of first report of spill	Vessel master, supported by TGS IMT
Undertake other relevant regulator notifications and reporting (see **Table 2**)	In a timely manner	Vessel master, supported by TGS IMT
Conduct a Net Environmental Benefit Assessment (NEBA) of spills response strategies and tactics	Within two hours of first report of spill	TGS IMT / AMSA
If wildlife is likely to be oiled, notify relevant jurisdictional control agency	Within two hours of identifying risk to oiled wildlife	TGS IMT / AMSA
For a Level 2 spill, activate Operational and Scientific Monitoring Plan (OSMP) and review activation triggers for individual monitoring plans	Within two hours of first report of the spill to the TGS on-call incident commander	TGS IMT / Control Agency(ies)

2.2 Notification requirements

Notification requirements for hydrocarbon releases from the Otway Basin 3D MC MSS activity are defined in **Table** 2. Oil spill incident levels are described in **Table 3**. In addition to the regulatory notification requirements listed below, identified Relevant Persons (as required) will be included in immediate and ongoing notification procedures (as outlined in Section 10.10.6.3 of the EP).

Table 2 Regulator Notification and Reporting Requirements

Organisation for notification	Responsible person	Contact details of organisation	Notification requirement and timeframe
Australian Maritime Safety Authority (AMSA)	Vessel Master	Verbal report: JRCC: +61 02 6230 6811; 1800 641 792	Verbal, ASAP
	Vessel Master	Email written report to rccaus@amsa.gov.au	Harmful substances report (**POLREP**) within two hours POLREP form is available in Appendix A and at https://www.amsa.gov.au/forms/harmful-substances-report-polrep-oil
National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA)	TGS IMT	Verbal report (+61 08 6461 7090) followed up with written notification	*Any spill with the potential to cause moderate to significant harm.* Verbal report within two hours of the first report of the incident Written report within three days of the initial verbal report (which must also be cc'd to NOPTA[1] and DMIRS[2])
		Email written report to: submissions@nopsema.gov.au	Within three days Part 1 of Report of an Accident, Dangerous Occurrence or Environmental Incident (NOPSEMA form FM0831) https://www.nopsema.gov.au/assets/Freedom-of-information/F095/A543965.pdf
			Within 30 days

Organisation for notification	Responsible person	Contact details of organisation	Notification requirement and timeframe
			Part 2 of Report of an Accident, Dangerous Occurrence or Environmental Incident (NOPSEMA form FM0831) https://www.nopsema.gov.au/assets/Freedom-of-information/F095/A543965.pdf
Department of Agriculture, Water and the Environment (DAWE)	TGS IMT	Verbal: Compliance Hotline: 1800 110 395 (business hours only) Fauna: Phone: (02) 6274 1111	*Any spill with the potential to cause a significant impact to a matter of National Environmental Significance (NES) including impacts to protected species.* Verbal report within 48 hours of becoming aware of the incident or non-conformance.
		Email written report to: protected.species@environment.gov.au	Written report (no template). Follow incident-specific requirements.
Director of National Parks (DNP)	TGS IMT Incident Commander (**IC**)	Verbal report (+61 419 293 465)	As soon as practicable before hydrocarbon release exposure to areas managed by Director of National Parks (**DNP**) (including Mermaid Reef Marine Park, Argo-Rowley Terrace Marine Park)
Spill heading towards VIC Waters			
Transport Safety Victoria – Maritime Safety Victoria unit	TGS IMT IC	Verbal report: TSV-MSV unit 1800 223 022	Verbal notification as soon as it is identified that hydrocarbon may enter VIC State waters.
		Email written report to information@transportsafety.vic.gov.au	Marine Pollution Report (POLREP) within two hours. AMSA POLREP Form Template https://www.amsa.gov.au/forms/harmful-substances-report-polrep-oil
			Marine Pollution Report (POLREP) within 24 hours. SITREP (AMSA template requirements)
VIC Department of Energy, Environment and Climate Action (DEECA)	TGS IMT IC	Verbally notify DEECA Duty Officer: 0419 597 010 if a spill is likely to contact areas managed by DEECA or if wildlife is oiled, followed by a written Marine Pollution Report (**POLREP**)	Verbal notification as soon as practicable before hydrocarbon release exposure to areas managed by DEECA. Witten notification as soon as practicably following the initial report
Spill heading towards TAS Waters			
TAS Environment Protection Authority	TGS IMT IC	Verbally notify TAS EPA Duty Officer: 1800 005 171 (03) 6165 4599 if a spill is likely to contact areas managed by EPA or if wildlife is oiled, followed by a written Marine Pollution Report (**POLREP**)	Verbal notification as soon as it is identified that hydrocarbon may enter TAS State waters.
		Email written report to incidentresponse@epa.tas.gov.au	Marine Pollution Report (POLREP) within two hours. AMSA POLREP Form Template https://www.amsa.gov.au/forms/harmful-substances-report-polrep-oil
			Marine Pollution Report (POLREP) within 24 hours. SITREP (AMSA template requirements)
Spill heading towards SA Waters			
SA Department of	TGS IMT IC	Verbally notify SA DPTI Duty Officer: (08) 8248 3505	Verbal notification as soon as it is identified that hydrocarbon may enter SA State waters.

Organisation for notification	Responsible person	Contact details of organisation	Notification requirement and timeframe
Planning, Transport and Infrastructure		if a spill is likely to contact areas managed by DPTI or if wildlife is oiled, followed by a written Marine Pollution Report (**POLREP**)	
		Email written report to SA DPTI (via DIT) dit.marinesafety@sa.gov.au	Marine Pollution Report (POLREP) within two hours. AMSA POLREP Form Template https://www.amsa.gov.au/forms/harmful-substances-report-polrep-oil
			Marine Pollution Report (POLREP) within 24 hours. SITREP (AMSA template requirements)
Spill heading towards NSW Waters			
NSW Department of Transport	TGS IMT IC	Verbally notify NSW DoT Duty Officer: (02) 8202 2200 if a spill is likely to contact areas managed by DoT or if wildlife is oiled, followed by a written Marine Pollution Report (POLREP)	Verbal notification as soon as it is identified that hydrocarbon may enter NSW State waters.
		Email written report to NSW DoTR (via NSW EPA) info@epa.nsw.gov.au	Marine Pollution Report (POLREP) within two hours. AMSA POLREP Form Template https://www.amsa.gov.au/forms/harmful-substances-report-polrep-oil
			Marine Pollution Report (POLREP) within 24 hours. SITREP (AMSA template requirements)

[1] National Offshore Petroleum Titles Administrator (resources@nopta.gov.au)

2.3 Oil spill incident levels

As defined in the National Plan for Maritime Environmental Emergencies (AMSA, 2019) marine hydrocarbon spills are divided into three categories (termed 'Levels') (**Table 3**) depending on the volume released, the resources and capabilities required for an effective response, and to some extent the scale of environmental risk.

Table 3 Oil Spill Incident Levels

Aspect	Level 1	Level 2	Level 3*
Spill volume (m^3)	0-10	10-1,000	>1,000
Response period	Likely to be <48 hrs	48 hrs to weeks	Weeks to months
Description	Generally can be resolved through the application of local or initial response resources (first strike response).	Typically more complex in size, duration, resource management and risk than Level 1 incidents. May require escalated deployment of resources beyond the first strike response.	Characterised by a high degree of complexity, potentially with multiple hazards. Requiring strategic leadership and response coordination. May require national and international response resources.
Potential environmental impacts	Potential impacts are likely to be short-term, with recovery in days to weeks. A Level 1 release may be upgraded to a Level 2 release if there is a risk of significant environmental impacts.	Potential impacts are likely to be significant and with a more prolonged recovery period (weeks to months). A Level 2 release may be upgraded to a Level 3 release if there is a risk of significant environmental impacts.	Potential impacts are likely to be significant over large spatial scales with a prolonged recovery period (months to years). Remediation may be required.

*(Not considered credible for the Otway Basin 3D MSS).

3 Operational and Scientific Monitoring Plan

This section sets out the framework and requirements for developing an incident specific Operational and Scientific Monitoring Plan (**OSMP**). Development of the OSMP following an oil spill is based on the parameters of the spill, including the location, environmental conditions, fuel type, nature and scale of the spill, and any potentially impacted values including sensitive resources.

As part of the initial response, TGS and the Seismic Vessel operator will provide a first-strike response (i.e. local or initial resources to stop or contain spill) at the direction of the Control Agency and provide ongoing response and monitoring arrangements where requested.

Type I (Operational) and Type II (Scientific) monitoring plans may be implemented in the case of a Level 2 spill.

3.1 Type I – Operational Monitoring

As an integral part of the response to a spill 'Type 1', 'response phase' or 'operational monitoring', is used to collect information about the oil spill and associated response operations for the purposes of aiding decision-making during the response.

Type I 'Operational Monitoring' will be implemented where it is safe to do so and when there is a net benefit in doing so (as agreed with the Control Agency). This monitoring will be implemented to:

- Determine the extent and character of a spill;
- Visual tracking of the movement/ trajectory of surface slicks;
- Identify areas/ resources potentially affected by surface slicks; and
- Determine sea conditions/ other constraints.

Table 4 provides a description of operational and scientific monitoring plans (**OMP/SMP**) likely required in the event of a Level 2 spill (consistent with the worst-case scenario), the key receptors and the aims of the plan. These include:

- OMP1 (Oil Spill Modelling) - real-time spill trajectory modelling to provide assurances that response options can be tailored to the specific spill situation. The modelling will be based on continuous weather monitoring which will be utilised in conjunction with hindcast data to predict any potential beaching locations of the hydrocarbon, if any exist. This real-time spill trajectory modelling will be utilised to focus any potential scientific monitoring if it were to be required (and directed by the Control Agency) in order to monitor the impacts from a spill occurrence;
- OMP2 (Surveillance and Tracking) - field-based monitoring, including vessel and/or aerial surveillance, will be undertaken immediately following a spill event. This monitoring will enable the Vessel Master to provide up-to-date information to the relevant Control Agency via the POLREP form to appropriate plan any response options; and
- OMP3 (Monitoring of Hydrocarbons: Weathering and Behaviour in Marine Waters). This field-based monitoring will be led by an approved Service Provider.

Table 4 Monitoring Plans for the Otway Basin 3D MC MSS – Key Receptors, Aims and Responsibilities

Plan Reference	Title	Key Receptor(s)	Aim	Implementation
OMP1	Oil Spill Modelling	Multiple receptors at local- to regional-level scales	Provide information that can be used to define the spatial extent of the spill, for comparison with the pre-defined EMBA	TGS
OMP2	Surveillance and Tracking	Multiple receptors at local- to regional-level scales	Provide situational awareness to the Incident Management Team (**IMT**), to allow effective ongoing planning and management of spill response activities and identify any significant changes in risk Provide information to allow the assessment of the efficacy and potential impacts (positive and negative) of spill response strategies and tactics	TGS
OMP3	Monitoring of hydrocarbons in seawater - Weathering and Behaviour in Marine Waters	Offshore pelagic habitats (i.e., water column) exposed or at risk of exposure from spill hydrocarbons	Provide information that can be used to define the spatial extent of the spill, for comparison with the pre-defined EMBA, and inform SMP requirements	Service Provider
SMP1	Marine water quality	Background water quality	To monitor the hydrocarbons in marine waters to inform assessment of impacts and recovery of sensitive receptors, and to verify assumptions about any hindcast modelling to inform ongoing SMP requirements	Service Provider
SMP2	Intertidal and shoreline sediment quality	Background sediment quality, particularly focused on sensitive locations	Characterise the state, persistence and fate of spilled hydrocarbons within sediments	Service Provider
SMP3	Intertidal and shoreline habitats and benthos	Invertebrates, filter feeders, benthic primary producers, demersal fish, shorelines and intertidal habitats	Determine the impacts of spilled hydrocarbons on intertidal benthos and habitats	Service Provider
SMP4	Seabirds and shorebirds population and recovery	Foraging seabirds and coastal shorebird populations	Assess impacts on seabird and shorebird populations.	Service Provider
SMP5	Marine fauna (excluding avifauna)	Marine mammals, marine reptiles, bony fish, elasmobranchs	Assess impacts on non-avian marine fauna potentially impacted by a hydrocarbon spill.	Service Provider

Plan Reference	Title	Key Receptor(s)	Aim	Implementation
SMP6	Socio economic impact monitoring (fisheries, aquaculture and tourism)	Target species or areas of importance for fishing/tourism	Assess impacts on fisheries (including aquaculture) and tourism activities	Service Provider

This monitoring will enable the Vessel Master to provide the necessary information to the relevant Control Agency, via a POLREP form, to determine and plan appropriate response actions under the National Plan and the relevant State plan. Operational monitoring and observation in the event of a spill will inform an adaptive spill response and scientific monitoring of relevant key sensitive receptors.

Ongoing situational awareness information is provided to the Control Agency through the use of a Marine Pollution Situation Report.

TGS will assist with further operational monitoring (including funding if required) as directed by the Control Agency.

3.1.1 Operational monitoring: vessel surveillance

Vessel surveillance actions required following a spill are defined in **Table 5.**

Table 5 Vessel-Based Surveillance Requirements

Task	Responsible party
Request any available vessel in close proximity to monitor spill, including Otway Basin 3D MSS support vessels	Vessel Master/AMSA
Provide TGS IMT IC/AMSA information on spill, including spill trajectory, appearance and area of coverage.	Vessel Master/AMSA
Activate additional vessel surveillance support through AMSA.	AMSA
Termination criteria: Continue to monitor spill through vessel surveillance until: Slick is no longer visible Aerial surveillance has commenced.	AMSA

3.1.2 Operational monitoring: aerial surveillance

Aerial surveillance actions which may be activated by the CA are defined in **Table 6.**

Table 6 Aerial surveillance requirements

Task	Responsible party
Activate aerial surveillance support (aircraft and trained aerial observers) from AMSA	AMSA
Supply a copy of the Aerial Observer Log if required.	TGS IMT IC
Prepare and provide to the aviation contractor a pre-flight information pack containing: Safety considerations: • Identify and obtain the appropriate personal protective equipment (**PPE**), aviation lifejackets should be worn in aircraft • identify risks and necessary controls • Communicate the risks and controls in place through a pre-operation safety brief. Operational Communications Plan that documents: • Specific contacts and names of assets deployed • Methods of communication with personnel (including the crew of aircraft/vessels) • Call signs and radio communication frequencies.	AMSA
Conduct pre-flight briefing, which shall include: • Location of the area of operation • Radio frequencies used in the area and on the response • Call signs of other aircraft operating in the vicinity • Locations of any temporary or permanent exclusion zones.	AMSA
Use a global positioning system (GPS) to track aerial surveillance operations.	AMSA
Conduct localised search: • Use the predicted spill location as a starting point and conduct a localised search to determine the exact position of the spill • The aerial observer should sit directly behind the pilot, so the same perspective is shared, making it easier to direct the aircraft to the spill • Observers will have different perspectives. Ensure a comprehensive hand over brief is given to maintain consistency of approach	AMSA

Task	Responsible party
• Fly the length and width of the spill (noting time taken and speed) • Record and report observations of wildlife that are present in the area.	
Record aerial surveillance using: • Annotated maps or charts • Photographs (preferably geo-referenced) • Aerial surveillance logs.	AMSA
Undertake calculations (on the return journey or when the aircraft has landed): • Calculate distance of spill length or width: Distance of slick length or width (nm) = $\frac{\text{time taken to fly (seconds)} \times \text{speed (knots)}}{\text{3600 (or 60 if time taken to fly is in minutes)}}$ • Divide answer by 1.85 to convert to km • Calculate spill area: Spill area (km^2) = length (km) × width (km).	AMSA
Calculate spill volume: Use the Bonn Agreement Oil Appearance Code (**BAOAC**) to estimate the percentage spill coverage: • Divide the spill into percentage areas based on its appearance (e.g. 10% sheen, 40% rainbow and 50% metallic) • Use the following equation to calculate the minimum and maximum spill volume for each oil type: Maximum / minimum estimated spill volume (m^3) for each appearance type = area covered with specific appearance (%) × total area of spill (km^2) x thickness of slick (in µm) • Add together all the calculated volumes to calculate a total volume. • The Air Operations Branch Director may decide that International Tanker Owners Pollution Federation (**ITOPF**) oil observation guidance could be used by aerial observers instead of the BAOAC. ITOPF methods are in the Aerial Observation of Marine Oil Spills Technical Information Paper (ITOPF, 2011).	AMSA
Upon completion, provide the following: • Aerial surveillance logs • Location of oil identified (e.g. shown on a map or chart, waypoints on GPS or geo-referenced photo) • Quantity of oil observed and calculations • Other relevant information on the aerial surveillance operations (e.g. pilot operational hours, fuel logs, maintenance issues, logistical requirements, aerial simultaneous operations (SIMOPS) issues).	AMSA
Termination criteria: Continue routine aerial observations daily during daylight hours until no slick can be observed.	AMSA as the CA

3.1.3 Operational monitoring: spill trajectory assessment

3.1.3.1 Computer-based modelling (Level 2 only)

Oil spill trajectory modelling (OSTM) requirements are defined in **Table 7.**

Table 7 Computer-based oil spill trajectory modelling requirements

Task	Responsible party
Request oil spill trajectory modelling	AMSA
Termination criteria: Repeat modelling as required until the response is terminated by the control agency.	AMSA

If computer-based modelling is not yet available for a specific tractor assessment, then a manual trajectory calculation may be used (**Table 9**).

Table 8 Manual oil spill trajectory modelling requirements

Task	Responsible party
Request manual oil spill trajectory assessment	AMSA
Using vectors, draw the resulting distance of 3% of wind speed and 100% of current from the initial spill location for a 1-hour duration.	TGS IMT IC/AMSA
Repeat this process for each hour using the new location and predicted wind/current.	TGS IMT IC/AMSA (until OSTM data available)
Termination criteria: Level 1 – predictions completed for ≥12 hours Level 2 – Repeat manual calculations as required until computer modelling methods are available to provide the information required, or until the spill response phase has been terminated.	AMSA

3.2 Type II – Scientific Monitoring

'Type II', 'recovery phase' or 'scientific monitoring', comprises a series of Scientific Monitoring Plans (**SMPs**) designed to be implemented at the termination of the response phase to quantify impacts from the spill. In consultation with the Control Agency, TGS will commit to scientific monitoring dependent on the circumstances of the spill, and the sensitivities at risk.

3.2.1.1 Type II – Scientific Monitoring Services Agreement

Prior to the commencement of the Otway Basin 3D MC MSS, TGS will have in place an overarching service agreement with a service provider who have demonstrated capability to undertake Type II Monitoring. This agreement will ensure TGS has a capability to undertake Type II monitoring if required and also enable the service provider to act (in a capacity as agreed with all parties), to either assist the Control Agency or to undertake key Type II monitoring activities on TGS's behalf (if initiation criteria are triggered).

The service provider must demonstrate they have the following capabilities:

- Emergency manned mobile telephone number;
- Capacity to prioritise and deploy qualified personnel to execute each scientific monitoring plan (**Section 3.3**);

- Qualifications and capacity to prepare detailed supporting sampling analytical plans/ monitoring plans for each of the scientific monitoring plans described in **Section 3.3**;
- The ability to prioritise and mobilise resources to the region (i.e. logistics are in place); or resources are located within the region; and
- Capacity to mobilise personnel and resources to the region as soon as practicable.

A notification will be provided to the service provider within two hours of a known spill event, so the service provider can be ‘at the ready’, even in the event initiation criteria are not yet triggered.

3.2.1.2 Situational Awareness

In the event of a hydrocarbon spill, details that will be exchanged between TGS and the service provider describing situational awareness will include:

- Hydrocarbon type and size of spill;
- Is the spill under control;
- Potential environmental or external influences that may impact a monitoring response;
- Predicted behaviour and predicted trajectory of the spill;
- Potential sensitivities at risk;
- Any ongoing safety concerns; and
- Protection priorities.

3.3 Scientific Monitoring Plans

Following the initial notification of a spill, a NEBA will be undertaken in consultation with the Control Agency to identify applicable operational and scientific monitoring requirements. Where a net environmental benefit is identified and the Control Agency recommends field monitoring, the Service Provider will develop detailed OSMP plans. **Table 9** provides rationale for the various monitoring plans that would be developed.

Draft detailed monitoring plans will be provided to TGS as soon as practicable, but within 24 hours after receiving the initial notification that monitoring is required.

Detailed monitoring plans will be developed in consultation with the Control Agency and **TGS**. Each plan will include as a minimum:

- <u>Objectives and rationale of the monitoring plan:</u> Each plan developed will outline the key objectives, rationale and focus of the plan;
- <u>Baseline information</u>: It is important for each monitoring plan to specify the details of the baseline to be applied, or a method for selection of suitable reference/control sites. If possible, previous monitoring from published studies and findings is to be utilised;
- <u>Spatial awareness</u>: It is important for any scientific monitoring plan to provide information and outcomes obtained from the operational monitoring (such as real-time spill trajectory modelling) to support the proposed design;

- Methodology: The proposed survey methodology should consider the statistical methods and sampling effort required to achieve the objectives of the scientific monitoring plan. If sampling is proposed as part of the monitoring plan, industry recognised methods for collection and analysis of the samples must be used. This includes utilising accredited laboratories and following best practice guidelines and applicable legislation where applicable. The methodology should include, as a minimum:
  - Details of any permits or approvals required to undertake the work, including whether there are any exemptions;
  - Collection and analysis requirements (i.e. permits);
  - Personnel proposed to undertake the monitoring, including appropriate qualifications and skills;
  - Equipment required to complete the proposed monitoring;
  - HSSE requirements to complete the survey; and
  - QA/QC requirements if appropriate.
- Initiation criteria: The criteria used to initiate the proposed scientific monitoring plan;
- Termination criteria: Each monitoring plan will include a termination date at which time the monitoring can stop which is consistent with the objectives of the monitoring plan. These criteria must be adaptive and be able to change based on the actual circumstances of the impacts and/or risks of assessment;
- Management of change: The monitoring plans must be adaptive to ensure the impacts and risks are managed appropriately. As such, if a monitoring plan is required to change to adapt to these circumstances, then a process for change needs to be detailed so that any revision is provided to TGS and the relevant Control Agency for acceptance as soon as practicable. Any revisions undertaken must be tracked to clearly communicate the current status of the monitoring requirements; and
- Reporting: Each monitoring plan is required to detail the reporting of results during and post monitoring. This reporting will include ongoing situation reports during the implementation of monitoring; the timing of these situation reports will be based on the nature and scale of the impacts/risks. Post monitoring, a draft report and third-party peer reviewed report will be provided to TGS, the Control Agency and NOPSEMA which will include any recommendations resulting from the monitoring plan.

A number of monitoring plans may be required to monitor the potential impacts of a hydrocarbon spill.

Any monitoring plans that are implemented are required to be adaptive to allow key sensitivities at risk to be identified. Such as, if a Control Agency makes a reasonable request for monitoring to be undertaken on a receptor which isn't specified here, any service agreement will provide TGS with the capacity to react to these requests.

Table 9 Scientific Monitoring Plan Aims, Objectives and Rationale

Scientific Monitoring Plan	Key Receptor(s)	Aim	Objective	Rationale
SMP1: Marine water quality	Background water quality	To monitor the hydrocarbons in marine waters to support assessment of impacts and recovery of sensitivities and to verify hindcast modelling	Assess and document the extent and severity of hydrocarbon contamination utilising observations and/or in-water measurements made during operational monitoring. Provide data to inform further scientific monitoring plans.	Reductions in water quality are likely to result due to aromatic hydrocarbons being entrained within the water column. Subsequent partitioning, including to the water column, is expected. Impacts on the water quality from a hydrocarbon spill are important to understand and evaluate as this will potentially impact a range of other receptors, and data will be used to inform other monitoring plans described below.
SMP2: Intertidal and shoreline sediment quality	Background sediment quality, particularly focused on sensitive locations	Gain an understanding of the characteristics, persistence, and fate of spilled hydrocarbons within sediments exposed to beached oil	Estimate spilled hydrocarbon concentrations within sediment exposed to beached oil. Monitor changes over time in hydrocarbon concentrations. Provide data to assist assessment of impacts on benthic communities. Establish necessary response options.	Should a spill of hydrocarbons reach the shoreline it has the potential to impact on the sediment quality, and as such impact on intertidal biota (described below) which may be exposed to chronic toxicity levels of hydrocarbons.
SMP3: Intertidal and shoreline habitats and benthos	Invertebrates, filter feeders, benthic primary producers, demersal fish, shorelines and intertidal habitats	Determine the impacts of spilled hydrocarbons on intertidal benthos and habitats	Monitor impacts on intertidal and shoreline habitats from beached hydrocarbon contamination. Define recovery parameters for benthos. Monitor benthos recovery to hydrocarbon contamination. Establish necessary response options.	Shoreline habitats can be impacted from a spill through stranded floating hydrocarbons, or droplets entrained within the water column, with hydrocarbons becoming increasingly entrained within the nearshore waters. Aquatic organisms utilising these habitats can be exposed to elevated levels of hydrocarbons over their thresholds which will ultimately impact the organism.

Scientific Monitoring Plan	Key Receptor(s)	Aim	Objective	Rationale
SMP4: Seabirds and shorebirds population and recovery	Foraging seabirds and coastal shorebird populations	Assess impacts on seabird and shorebird populations.	Quantify foraging, nesting or breeding seabird and shorebird populations potentially impacted by spilled hydrocarbons. Quantify oiled avifauna, including mortalities. Establish necessary response options.	Seabirds and shorebirds can be impacted by hydrocarbons spills through the presence of hydrocarbons on the surface of the water and from hydrocarbons entrained within the water column. This can lead to potential behavioural, physiological and physical impacts such as deviation from migratory routes, disruption to their indigestion and/or coating their feathers resulting in the inability to fly.
SMP5: Marine fauna (excluding avifauna)	Marine mammals, marine reptiles, bony fish, elasmobranchs	Assess impacts on non-avian marine fauna potentially impacted by a hydrocarbon spill.	Quantify oiled marine fauna, including mortalities.	Hydrocarbon spills resulting in a surface slick or entrained within the water column has the potential for long-term impacts to marine fauna. Contact between marine fauna and a surface slick or in-water concentrations of hydrocarbon has the potential to elicit lethal and sub-lethal impacts, including behavioural (avoidance of foraging habitats or migratory routes), physiological (inability to digest) and/or physical effects.
SMP6: Socio economic impact monitoring (fisheries and tourism)	Target species or areas of importance for fishing/tourism	Assess impacts on fisheries (including aquaculture) and tourism activities	Monitor hydrocarbon concentration within tissue of species targeted by commercial fisheries. Identify potential impacts on human health as a result of hydrocarbon contamination. Assess recovery of tourism operations in area affected.	Commercial fishing operations for pelagic fish, prawn fisheries, shellfish can be impact from a hydrocarbon spill which can include lethal and sub-lethal physiological and physical effects. Any exposure to commercial and recreational target species can result in the tainting of flesh and increase in toxicity above human consumption thresholds. In terms of tourism, a hydrocarbon spill can result in a negative perception on the environment impacted by the spill.

3.3.1 Implementation of Scientific Monitoring Plans

The service provider will undertake all planning actions required to mobilise to the site. This will include providing a brief proposal to TGS which will outline the resources and personnel required, transport arrangements and timeframes for implementation. The service provider will undertake all reasonable measures to mobilise to the site as soon as practicable. The ability for the service provider to mobilise within 24 hours will be required under the service agreement.

Due to the low likelihood of a spill occurring, it is not considered reasonable to have these resources on standby during the Otway Basin 3D MC MSS. It would require considerable financial investments over and above the significant control measures implemented to reduce the risks of a vessel collision to **ALARP** and **Acceptable Levels**. Therefore, TGS consider the approach outlined above to be reasonably practicable based on the nature and scale of the risks associated with the Otway Basin 3D MC MSS.

3.4 Preparedness

This section includes information relating to contractual arrangements, communication protocols, roles and responsibilities and resources to activate the OSMP, initial mobilisation and ongoing maintenance of the response.

3.4.1 Contractual Arrangements

3.4.1.1 Approved Service Provider and TGS

TGS will have in place have a service agreement with an appropriately qualified and experienced scientific Service Provider. This overarching agreement will enable the approved Services Provider to initiate the planning and commence preparation in anticipation that a field response may be required.

3.4.1.2 Logistics

Logistical requirements (including but not limited to arrangement of transport, accommodation, victualling, shipping, vessels, etc.) will be contracted directly by TGS via existing overarching service agreements.

3.4.2 Roles and Responsibilities

Section 10.2 of the EP provides a description of the roles and responsibilities of all personnel involved in the Otway Basin 3D MC MSS. Those relevant to the OSMP implementation are described below.

3.4.2.1 OSMP Management

The roles responsible for the overall management of the OSMPs, and integration, data transfer and communications between TGS and the Service Provider are defined in **Table 10**.

Table 10 OSMP Management Roles and Responsibilities

Tile	Role	Responsibilities
TGS Project Manager (**PM**)	- The TGS PM is the direct line of communication and Management between and the OSMP Service Provider - The role facilitates information transfer between TGS internal management and stakeholders and Service Provider, manages the day-today needs of the project (including addressing operational needs/requests), and makes sure that the OSMP meets the needs of TGS (including regulatory requirements) and external independent review/stakeholder groups	- Has overall responsibility for the implementation of the OSMP. - Ensures all required reporting (including to regulators and AMSA) has occurred in accordance with the relevant requirements. - Notifies Service Provider in the event of a Level 2 spill within two hours and provide the relevant information discussed in Section 10.9.5.3 in the EP. - Coordinates communication/liaison between the Service Provider, AMSA, TGS and any other relevant parties. - Provides and/or facilitates support to the OSMP service provider (e.g. in the application of permits).
Service Provider Project Manager	- Direct engagement with the TGS PM. - Responsible for the implementation and day-to-day management of the OSMPs, and information transfer between TGS and the OSMP response teams. - Management of communications between the OSMP Service Provider and TGS.	- First point of contact in the event that an OSMP response is required. - Response initiation. - Management of the Service Provider personnel and subcontractors. - Day-to-day responsibility for facilitating/coordinating OSMP monitoring activities. - Direct engagement with the TGS PM. - Maintenance of the Service Provider's preparedness - Overall responsibility for HSE of the Service Provider's personnel and subcontractors.
TGS Onboard Representative	- Direct engagement with the Service Provider Monitoring Coordinator.	- Day-to-day responsibility for the provision of the spill characteristics and operational monitoring required to implement the OSMP. - Day-to-day responsibility for facilitating/coordinating OSMP monitoring activities on behalf of TGS.
Service Provider Monitoring Coordinator	- Direct engagement with the Service Provider Monitoring Coordinator. - Oversight of the Field Operations Coordinator (see **Table 11**).	- Responsible for the development of detailed OSMP plans and their implementation. - Responsibility for overseeing an OSMP is initiated and performed.

3.4.2.2 Operational Management Personnel

The roles responsible for the day-to-day management of survey operations and operational activities (including data management, QA/QC and reporting) are outlined in **Table 11**.

Table 11 Operational Personnel Roles and Responsibilities

Tile	Role	Responsibilities
Service Provider Field Operations Coordinator	- Supporting the mobilisation and the day-to-day field management of OSMPs. They are required to engage with the internal management team and TGS logistics (in line with the communications protocol) to resource, equip and maintain all survey operations	- Day-to-day management of field teams - Engagement with subcontractors and analytical laboratories - Sourcing personnel, equipment and consumables for OSMPs, including managing shifts and periodic shift rotations - Coordinating logistics with TGS (equipment, sample containers, travel and accommodation, supporting infrastructure, etc.) - Managing relevant survey permit applications and notifications - Coordinating sample pick-up and shipping to labs in line with sample holding times - Arranging sample labels (e.g. barcodes) with laboratory - First point of contact for field teams - Management of personnel qualification, medical and accreditation database - Communicating survey platform requirements (e.g. winches, a-frames, deck cranes, deck space, etc.) - Identification of additional survey requirements
HSE Coordinator	- Health, safety and environment (**HSE**) aspects of the OSMP scope	- Management of all HSE related plans - Point of contact for Health, Safety and Environment issues - Provision of guidance in all HSE matters - Management of HSE reviews, incident investigation and reporting - Management of post-survey debriefs and lessons learned as part of an ongoing improvement process - Review of load testing information for equipment and additional components

Tile	Role	Responsibilities
Data Manager/ Quality Lead	- Managing the collection, transmittal, QA/QC and delivery of all OSMP and laboratory data. Responsible for ensuring all QA/QC procedures are in place and that processes have been adhered to	- Management of the preparation and implementation of Standard Operating Procedures in line with appropriate guidance and standards - Management of QA/QC reviews - Development and implementation of the data and metadata management plan - Provision of data management and QA/QC guidance throughout the OSMP response - Responsible for managing data quality (QA/QC), issues and lessons learned
Field Technical Leads	- Technical quality of survey operations, data and sample collection in the field - Responsible for all non-vessel-based survey management (e.g. HSE, field communications, field operational management decisions)	- Supporting mobilisation and demobilisation of equipment - Participating in HSE processes (e.g. HSE briefings, toolbox talks) - Coordinating day-to-day survey planning with the Vessel Party Chief and/or other Field technical leads (where appropriate) - Pre-survey vessel contamination risk assessment (to plan deck operations to minimise vessel-related sample contamination risks) - Field management of technical survey protocols, equipment, personnel and subcontractors - Deployment and retrieval of survey equipment - In situ collection of samples in line with approved SAP/PEP procedures - QA/QC of samples and sampling procedures - In situ identification of biota (where required) - Collection of relevant environmental meta data (e.g. time, sampling coordinates, depth, conditions etc.) - Management of sampling data records (e.g. field sheets, data records) and imagery - Sample processing and proper handling and storage - Sample transfer and Chain of Custody (**CoC**) forms - All field personnel have stop work authority – safety is everyone's responsibility

Tile	Role	Responsibilities
Field Survey Personnel (Field Teams)	- Collection of data and samples under the direction of the field technical lead	- Supporting mobilisation and demobilisation of equipment - Participating in HSE processes (e.g. HSE briefings, toolbox talks) - Deployment and retrieval of survey equipment - Labelling of sample containers - In situ collection of samples in line with approved SAP/PEP procedures - Sample processing and proper storage - Data entry - Sample transfer and CoC forms - All field personnel have stop work authority – safety is everyone's responsibility

3.4.3 Communication

All OSMP response communications will be managed by the TGS Project Manager (**PM**) in accordance with the OPEP.

3.4.4 Resources and Quality Control

Resource suppliers / service providers will be required to demonstrate capabilities/competencies across TGS's Contractor Management SOPs and as relevant across their selected areas of expertise as follows:

- Demonstrable personnel competencies and capabilities for area of expertise to implement each OMP and SMP:
  - Appropriate accreditation, qualifications and experience, reliability
- Field personnel safety and security training and accreditation and HSE management, including Senior First Aid certification, Hazard Identification, Job Hazard Analysis, HSE planning and risk management
- Relevant offshore health and safety training accreditation, including:
  - Medical (e.g. United Kingdom Oil and Gas (**UKOG**) offshore medical, or equivalent);
  - Maritime Security Identification Card (**MSIC**); and
  - Basic Offshore Safety Induction and Emergency Training (**BOSIET**) or Tropical Basic Offshore Safety Induction and Emergency Training (**TBOSIET**).

In addition, assessment of capability and competencies will be inclusive of Service Provider ability to demonstrate Standard Operating Procedures (**SOPs**) for QA/QC (such as ISO 9000 across all aspects for implementing OMP and SMPs, including field record data management and field data QA/QC, any report related data management QA/QC procedures.

3.4.5 Health, Safety and Environment

3.4.5.1 HSE management

HSE performance will be managed through TGS's QHSE SOPs. This process requires contractors to meet TGS's QHSE SOPs requirements via compliance checks and requires all contracted companies to have an HSE management system in place that demonstrate the process by which health and safety is managed within the organisation.

3.4.5.2 HSE Plan and provisions

The Service Provider will identify senior HSE personnel who are available to provide rapid response capability during an oil spill emergency. These contact details will be provided to TGS.

Comprehensive QHSE Plan(s) for OSMP activities will be developed prior to mobilisation addressing any risks associated with working in a hydrocarbon spill area. Such risks include the potential exposure of operational personnel to hazardous hydrocarbon compounds (e.g. volatile organic compounds, and management actions such as safe work limits will be defined based on recommendations in the TGS HSE plan.

The QHSE plans are inclusive of appended standard Job Hazard Analyses plans, and identification of and components in the SMPs that may require specific MSDS to be appended (in the case where SMPs may require the use of chemicals for cleaning and/or storage/preservation of samples taken during the implementation of a SMP). HSE plans will also include all relevant personal protective equipment (**PPE**) requirements and will include any specialised PPE relevant for offshore HSE operations.

3.4.6 Permit Requirements

OSMP field survey operations may be undertaken in both Commonwealth and state waters (the latter extend from the mean low water mark to the three-nautical mile limit) and a hydrocarbon release could conceivably reach the mainland and nearshore island waters (which are determined based on modelling outcomes and to be verified through surveillance during the event of a spill). The permits generally required by the Commonwealth are listed in **Table 12**. State based permits may be required, and are location specific.

In general, permit applications require details on the samples to be collected (including timing, species, numbers, methods to be used, etc.) and specific details of the survey platforms (e.g. vessel names and registration details) and personnel. Permits can take 4–6 weeks (or longer) to be approved, though in the event of an oil spill, the Responsible Agencies can expedite the process and/or possibly offer exemptions (depending on the legal ramifications to the relevant agency).

Notification SHALL be given to relevant government agencies in the region to be sampled, prior to mobilisation. Post-survey reports must also be filed in accordance with the requirements of the specific permit(s) in place.

Confirmation of any reporting requirements shall be sought should an exemption be granted.

Table 12 Commonwealth permit requirements for the collection of survey samples

Permit	Relevance	Legislation	Responsible Agency
Commonwealth			
General Permit Application for: threatened species and ecological communities migratory species whales and dolphins listed marine species.	Required for scientific sampling of matters listed under the Environment Protection and Biodiversity Conservation Act 1999 (**EPBC Act, 1999**)	EPBC Act 1999	Department of the Environment and Energy (**DEE**)
Access to Biological Resources in a Commonwealth Area for Non-Commercial Purposes	An applicant must obtain written permission from each Access Provider. The Access Provider must state permission for the applicant to: enter the Commonwealth area take samples from the biological resources of the area remove samples from the area.		

3.5 Initiation and termination of the OSMP

Initiation and termination criteria for the OSMP are defined below.

3.5.1 Initiation Criteria

Initiation criteria for the Type 1 Operational and Type II Scientific monitoring tasks are shown in **Table 13**. In the case of a Level 2 spill, AMSA would likely request trajectory modelling indicates that sensitive receptors may be impacted in consultation with AMSA, a Net Environmental Benefits Assessment will be performed to help identify the most appropriate studies to initiate.

Once the extent of the spill and required response effort is understood, the Service Provider and the TGS Project Manager will agree any additional costs, time and resources required to implement the appropriate elements of the OSMP. As soon as possible after notification (but within 12 hours), a teleconference will be held between the Service Provider and TGS project managers, the responsible program and response managers, the vessel operator and vessel master (or representative if unavailable) to determine requirements for scientific monitoring. The Monitoring Coordinator(s) will then begin coordinating the development of the detailed monitoring plans.

An overview of the response process, through the mobilisation of personnel and equipment is provided in **Figure 2**. Termination criteria and provided in **Section 4** (**Table 15**).

Table 13 Initiation Criteria - Operational and Scientific Monitoring Plan

Plan	Criteria
OM1 - Oil spill modelling	Notification of a Level 2 or greater hydrocarbon spill

Plan	Criteria
OM2 – Surveillance and tracking	Notification of a Level 2 or greater hydrocarbon spill
OM3 - Monitoring of hydrocarbons in seawater	Notification of a Level 2 or greater hydrocarbon spill
SMP1 - Marine water quality	Notification of a Level 2 or greater hydrocarbon spill
SMP2 - Intertidal and shoreline sediment quality	Notification of a Level 2 or greater hydrocarbon spill and Where modelling and/or Operational Monitoring indicates likely exposure to intertidal and/or shoreline sediments or Reports are received of shoreline and/or shoreline contact from hydrocarbon spill
SMP3 - Intertidal and shoreline habitats and benthos	Notification of a Level 2 or greater hydrocarbon spill and Where modelling and/or Operational Monitoring indicates likely exposure to intertidal and/or shoreline habitats or benthos, or Reports are received of shoreline and/or shoreline contact from hydrocarbon spill
SMP4 - Seabirds and shorebirds population and recovery	Notification of a Level 2 or greater hydrocarbon spill and Where modelling and/or Operational Monitoring indicates likely exposure to seabird and/or shorebird populations and/or Reports are received of contact with avifauna from hydrocarbon spill And/or Reports of oiled or dead avifauna are received
SMP5 - Marine fauna (excluding avifauna)	Notification of a Level 2 or greater hydrocarbon spill and Where modelling and/or Operational Monitoring indicates likely exposure to non-avian marine fauna and/or Reports are received of contact with non-avian marine fauna from hydrocarbon spill and/or Reports of oiled or dead non-avian marine fauna are received
SMP6 - Socio economic impact monitoring (fisheries, aquaculture and tourism)	Notification of a Level 2 or greater hydrocarbon spill and Where modelling and/or Operational Monitoring indicates likely exposure to aquaculture operations and/or Reports are received of commercial fisheries closures due to hydrocarbon contamination and/or Reports are received of tourism operation closures due to hydrocarbon contamination.

The initiation criteria (**Table 13**) for each monitoring plan is broadly applied to enact the response described within the EP. However, it is important to note that the final decision to commence each monitoring plan will be based on the net environmental benefit in which the environmental sensitivities should be avoided if the monitoring proposed may reasonably result in further impacts and offer no net benefit.

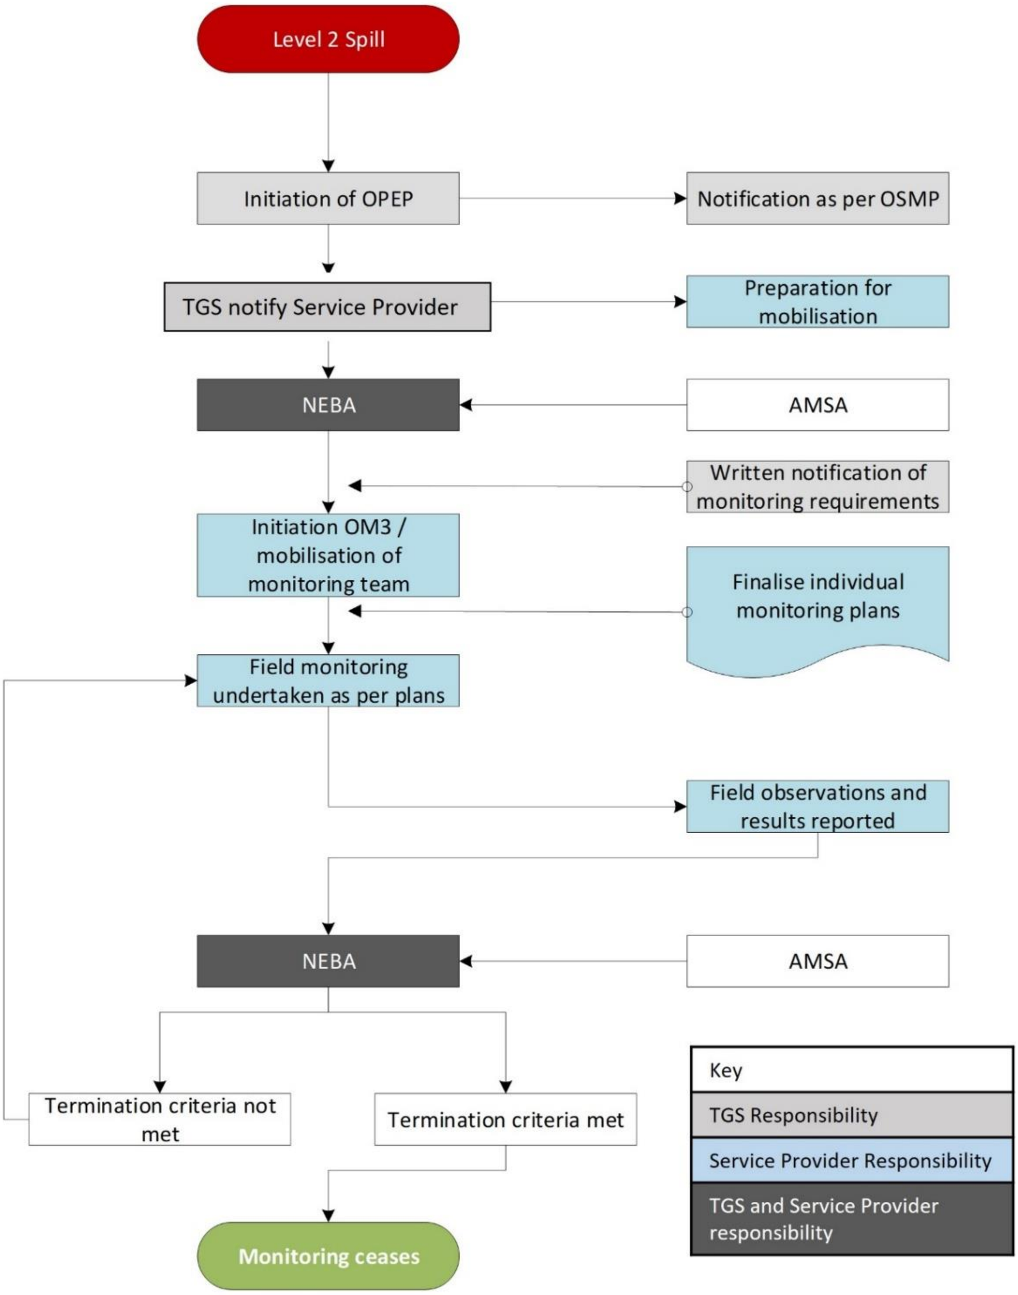

Figure 2 OSMP Implementation Process

3.5.1.1 Oiled wildlife response (OWR)

Wildlife protection and response operations will be directed by AMSA in Commonwealth waters.

The Western Australian Oiled Wildlife Response Plan for a Maritime Environmental Emergency is administered by the DBCA. During a Maritime Environmental Emergency, DBCA will lead the oiled wildlife response under the control of the appointed CA. Alternatively the CA may engage AMOSC to support/direct oiled wildlife response.

TGS will provide support to the CA and DBCA/AMOSC for the duration of the response. TGS will not undertake any oiled life response unless directed by the CA. **Table 14** provides the process which would be undertaken in the event of wildlife response.

Table 14 Oiled Wildlife Response Requirements

Task	Responsible party
Notify the relevant agency when injured/oiled wildlife is confirmed or could potentially occur. Notifications of oiled wildlife will be undertaken by relevant control agency(ies)	CA supported by TGS IMT IC
Obtain any licences required from the relevant state wildlife licensing authority, at the time of any incident and prior to undertaking any exclusion, hazing or fauna handling activities such as pre-emptive capture.	Relevant CA IMT(s)
Provide additional support to control agency/ies as directed by AMSA	TGS IMT IC
Activate the relevant scientific monitoring program depending on species impacted, in consultation with AMSA.	TGS IMT IC
Termination criteria: Continue supporting the control agency in oiled wildlife response until: injured/oiled wildlife have all been treated or euthanised dead wildlife and waste have been disposed of control agency(ies) have terminated the response phase in line with their relevant plans.	Relevant CA IMT(s)

3.5.2 Termination Criteria

Each monitoring plan that is initiated will continue until certain termination criteria have been met (**Table 15**), in consultation with the relevant Control Agency (**AMSA**).

TGS will appoint an investigation team following the termination of a spill response. The investigation team will be responsible for:

- Undertaking an investigation into the cause of the spill. Feedback will be sought from stakeholders as part of the investigation and evaluation of response success;
- Organising an after-action review of both the emergency and spill response actions;
- Close-out of all TGS IMT and emergency response actions;
- Implementation of a lessons learned assessment process, which will form the basis of a post-incident action plan; and
- Liaison with all involved external agencies to support their post-incident investigations and close-out activities.

Table 15 Termination criteria

Plan	Criteria
OMP1 - Oil Spill Modelling	It can be demonstrated that no further environmental improvement outcomes can be achieved through continued implementation of OMP1 and/or Notification of termination of spill response phase.
OMP2 - Surveillance and Tracking	It can be demonstrated that no further environmental improvement outcomes can be achieved through continued implementation of OMP2 and/or Notification of termination of spill response phase.
OMP3 - Monitoring of hydrocarbons in seawater	It can be demonstrated that no further environmental improvement outcomes can be achieved through continued implementation of OM3 and/or Notification of termination of spill response phase.
SMP1 - Marine water quality	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens are predicted by the modelling. Monitoring data of in-water concentrations of hydrocarbons have been compiled and analysed. Reporting on sampling has been completed detailing extent and severity of spilled hydrocarbons which can enable further analysis of impacts on other receptors in any further scientific monitoring plans.
SMP2 - Intertidal and shoreline sediment quality	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens are predicted by the modelling. Any monitoring done shows concentrations of hydrocarbons present within sediments fall below relevant guidelines (e.g. ANZG). Reporting on the sampling has been completed detailing the extent and severity of spilled hydrocarbons which can enable further analysis of impacts on benthic communities.
SMP3 - Intertidal and shoreline habitats and benthos	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens are predicted by the modelling. Impacts from hydrocarbon spill on benthos quantified and recovery evaluated. Reporting on the monitoring has been completed detailing the extent and severity of spilled hydrocarbon impacts on benthos.
SMP4 - Seabirds and shorebirds population and recovery	Hydrocarbon spill has ceased, are no visible sheens present and no further sheens are predicted by the modelling. Objectives and values associated with any relevant species recovery plans and/or conservation advice have been met. Impacts from hydrocarbon spill on avifauna quantified and recovery evaluated. Reporting on the monitoring has been completed detailing the extent and severity of spilled hydrocarbon impacts on avifauna.
SMP5 - Marine fauna (excluding avifauna)	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens are predicted by the modelling. Objectives and values associated with any relevant species recovery plans and/or conservation advice have been met. Impacts from hydrocarbon spill on marine fauna (excluding avifauna) quantified and recovery evaluated. Reporting on the monitoring has been completed detailing the extent and severity of spilled hydrocarbon impacts on marine fauna (excluding avifauna)
SMP6 - Socio economic impact monitoring (fisheries, aquaculture and tourism)	Hydrocarbon spill has ceased, there are no visible sheens present and no further sheens are predicted by the modelling. Impacts to important commercial fisheries quantified and recovery evaluated. Impacts to seafood quality and secondary impacts on human health evaluated. Impacts on tourism ventures quantified and evaluated. Reporting on the monitoring has been completed detailing the extent and severity of spilled hydrocarbon impacts on commercial fisheries, aquaculture and tourism operations.

3.6 Development of Detailed Monitoring Plans

Following the initial notification of a spill, a NEBA will be undertaken in consultation with the Control Agency to identify applicable operational and scientific monitoring requirements. Where a net environmental benefit is identified and the Control Agency recommends field monitoring, the Service Provider will develop detailed OSMP plans in accordance with the EP.

Draft detailed monitoring plans will be provided to TGS as soon as practicable, but within 24 hours after receiving the initial notification that monitoring is required.

Detailed monitoring plans will be developed in consultation with the Control Agency and TGS. Each plan will include as a minimum:

- Objectives and rationale of the monitoring plan: Each plan developed will outline the key objectives, rationale and focus of the plan.
- Baseline information: It is important for each monitoring plan to specify the details of the baseline to be applied, or a method for selection of suitable reference/control sites. If possible, previous monitoring from published studies and findings is to be utilised.
- Spatial awareness: It is important for any scientific monitoring plan to provide information and outcomes obtained from the operational monitoring (such as real-time spill trajectory modelling) to support the proposed design.
- Methodology: The proposed survey methodology should consider the statistical methods and sampling effort required to achieve the objectives of the scientific monitoring plan. If sampling is proposed as part of the monitoring plan, industry recognised methods for collection and analysis of the samples must be used. This includes utilising accredited laboratories and following best practice guidelines and applicable legislation where applicable. The methodology should include, as a minimum:
  - Details of any permits or approvals required to undertake the work, including whether there are any exemptions;
  - Collection and analysis requirements (i.e. permits);
  - Personnel proposed to undertake the monitoring, including appropriate qualifications and skills;
  - Equipment required to complete the proposed monitoring;
  - HSSE requirements to complete the survey; and
  - QA/QC requirements if appropriate.
- Initiation criteria: The criteria used to initiate the proposed scientific monitoring plan.
- Termination criteria: Each monitoring plan will include a termination date at which time the monitoring can stop which is consistent with the objectives of the monitoring plan. These criteria must be adaptive and be able to change based on the actual circumstances of the impacts and/or risks of assessment.
- Management of change: The monitoring plans must be adaptive to ensure the impacts and risks are managed appropriately. As such, if a monitoring plan is required to change to adapt to these circumstances, then a process for change needs to be detailed so that any revision is provided to TGS and the relevant Control Agency for acceptance as soon as practicable. Any revisions undertaken must be tracked to clearly communicate the current status of the monitoring requirements.

- Reporting: Each monitoring plan is required to detail the reporting of results during and post monitoring. This reporting will include ongoing situation reports during the implementation of monitoring; the timing of these situation reports will be based on the nature and scale of the impacts/risks. Post monitoring, a draft report and third-party peer reviewed report will be provided to TGS, the Control Agency and NOPSEMA which will include any recommendations resulting from the monitoring plan.

3.7 Activation and Initial Mobilisation

3.7.1 Immediate Response

1. Following notification of a Level 2 spill by the TGS Project Manager, the Service Provider Program Manager will confirm availability of scientific personnel and instruct each team member to stand-by.
2. Incident control will be established at the Port Hedland Supply Base, Western Australia.
3. Equipment will be prepared for shipping and laboratories and freight contractors placed 'on-call'. Flights and accommodation will be booked. Vessel operators will be contacted and advised to prepare for mobilisation. The analytical laboratory will prepare and dispatch all sample containers. Security arrangements for sample handling and transport will be confirmed with both laboratory personnel and the courier company.
4. Inductions under the Service Provider HSE Management System will be conducted prior to any site / field work. Any additional HSE inductions required by TGS will also be completed at this time.

3.7.2 Mobilisation

3.7.2.1 Freight

TGS will be responsible for logistical management of freight during the response phase.

Shipping of equipment will be managed by the Service Provider during the scientific monitoring phase and will have in place an overarching service agreement with a current national freight carrier. This will include the ability to transport any samples (e.g. in a chilled / refrigerated state) to arrive within laboratory specifications. under

Sample transfer is described separately in **Section 3.7.4.**

3.7.2.2 Personnel

Personnel mobilised for scientific studies may require accommodation. This will be managed by TGS. Where TGS direct the Service Provider to arrange accommodation (e.g. to support scientific monitoring), the Service Provider administration team will source and book accommodation as per instructions from the Service Provider Program Manager.

It is anticipated that all personnel will arrive at Port Melbourne (VIC), Warbambol (VIC) or Port of Devonport (TAS) within 24 hours.

3.7.3 Daily Field Reporting

All field teams will prepare daily progress reports for transmittal to the Service Provider Field Operations Coordinator. The daily progress reports will address project and scope details of the relevant component of the OSMP, including but not limited to:

- OSMP specifications (OMP / SMP implementation, permits required, anticipated resource requirements);
- Daily field/sea/ weather conditions;
- QHSE updates;
- Equipment and vessel updates;
- Key activities during the day and relevant details/outcomes; and
- Outlook for planned activities (next day and beyond).

3.7.4 Sample Transfer and management

Samples collected for laboratory analysis as part of OSMP field operations will be stored and transferred as per the specific instructions provided by the analytical laboratory for each analytical method. Samples will be collated based on holding times, storage requirements and sample type, to maximise sample management and facilitate transfer of samples within holding times.

All samples submitted for analysis will be accompanied by a detailed and completed Chain of Custody form, which details the laboratory the samples will be sent to, and all analytical requirements.

Where holding times are shorter than the survey rotation period (e.g. seven days for water samples, with up to three weeks between survey personnel rotations), then alternative arrangements will be made to collect samples for transfer to the laboratory. Samples will either be freighted from site/ports to laboratories or accompany survey personnel on return flights for hand-delivery to laboratories. Refrigerated transport or samples packed in ice-packed eskies will be required for the majority of samples.

3.7.5 Data Transfer and Management

All data management protocols (including related equipment checks, data security, data QA/QC, data storage and management), as well as field-based QA/QC protocols will be in place by the Service Provider prior to the commencement of the Otway Basin 3D MC MSS.

Laboratory data will be received by the Service Provider approximately two weeks following receipt of the samples by the analytical laboratory. The Service Provider will undertake a QA/QC review of laboratory reports and collate relevant data (including metadata) into files for subsequent analysis.

3.8 Reporting and Closeout

Upon termination and demobilisation of the final active OSMP, the operational and scientific monitoring program finalisation and close-out phase will commence. This phase incorporates:

- Data collation and delivery;
- Analysis and interpretation;

- Final reporting; and
- Archiving.

3.8.1 Data Collation and Delivery

QA/QC'd data will be compiled in OSMP databases throughout the OSMP response. Data collation includes digital (scanned) copies of all field survey reports, field survey logbooks, CoCs and other records completed by hand.

The Data Manager/Quality Lead will ensure the compiled datasets have been checked against data records to confirm that all data (and metadata) for each scope are accounted for and will confirm details of the QA/QC assessments undertaken on the data. Any remaining data gaps will be identified and addressed, with records generated detailing the outcomes.

Once all digital data (or sets of data) have been compiled and final checks have been completed, databases will either be transferred to TGS via appropriate password-protected storage media, or (where applicable and in line with corporate data management requirements) transferred via online resources (e.g. secure websites/data portals, cloud services and/or Corporate internet-based file transfer systems).

3.8.2 Analysis and Interpretation

Final datasets for individual scopes (SMPs) will be analysed to provide interpretation of:

- Impacts of the spill on the values or sensitivities for each plan;
- Potential impacts of spill response activities;
- Recovery over time; and
- Consideration of the potential effects of other natural and anthropogenic impacts.

Statistical analyses of quantitative data will be undertaken using appropriate, commonly used and scientifically-robust univariate and multivariate statistical analysis techniques. Depending on the size of datasets for each scope, data analyses may be undertaken solely by the Service Provider or in conjunction with a third-party service provider.

3.8.3 Final Reporting

Reporting will comprise:

- OSMP program status reports;
- Field daily progress reports;
- Health, safety and environment (HSE) reports;
- Technical reports;
- A summary report, collating the outcomes of each OSMP report; and
- A 'lessons learned' report, detailing OSMP challenges, solutions and future recommendations.

3.8.4 Archiving and Close-out

All digital and paper records, data and reports will be archived in accordance with the Service Provider's internal archiving procedures and standards. Completion of the archiving process will be the final requirement of the operational and scientific monitoring program close-out phase. TGS will then be informed that the OSMP response has been completed.

3.9 OPEP Review and Revision

In accordance with subregulation 14(8) of the Environment Regulations, the OPEP will be reviewed, updated and resubmitted to NOPSEMA should a change to the existing OPEP be required. It is considered, such changes to the OPEP could arise due to:

- A change to the EP that may impact spill response capabilities or coordination, such as an increase to the potential risk of a spill or release of hydrocarbons;
- When a significant change to the activities currently included within this EP has occurred, which could have implications on spill response or coordination;
- During routine testing of the OPEP, where improvements or corrections of the current OPEP are identified; and
- Any learnings from the result of a Level 1 or Level 2 spill or incident.

Any changes made to the OPEP, and any subsequent resubmission will be informed by the Environment Regulations or any other relevant Commonwealth regulations. If a change to the OPEP is required, TGS will undertake this in accordance with the Management of Change (**MoC**) procedures.

The TGS Project Manager will be responsible for the OPEP and ensuing that any relevant updates are made to the OPEP, and should any amendments be required, that the revised plan is submitted to NOPSEMA.
