  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided ACMA with information tailored to ACMA by including a map of submarine communication cables in relation to the activity.
- On 14 April 2026, ACMA shared its feedback regarding this activity, indicating the information provided was sufficient to enable ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed ACMA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to ACMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ACMA 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed ACMA a reasonable period for consultation in preparation of the EP, as evidenced by its response on 14 April 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ACMA is appropriate and adapted to the nature of interests of ACMA.

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside considers a reasonable opportunity was provided to ACMA as evidenced by its response on 14 April 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- ACMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from ACMA.
  - Made no changes or inclusions to the EP as a result of consultation with ACMA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.3 Australian Fisheries Management Authority (AFMA)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed AFMA advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 23 April 2026, AFMA thanked Woodside for its email (SI Report A, reference 2.1). AFMA raised **(1)** and **(2)**.
- On 29 April 2026, Woodside responded thanking AFMA for its email (SI Report A, reference 2.2). Woodside responded to **(1)** and **(2)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) AFMA advised it had no direct comments on the EP but would like to be included in future consultation on the matter.	**(1)** Woodside notes that AFMA has no direct comments. Woodside will include AFMA in applicable activity notifications that may be issued under the EP.	**(1)** Woodside thanked AFMA for confirming it had no comments and advised it would continue to include AFMA in consultation, including for applicable activity notifications under this EP.	**(1)** No additional controls or measures are required. Woodside will provide activity notifications to AFMA as referenced as PS 1.9 and set out in Table 7-11 of the EP.
(2)	**(2)**	**(2)**	**(2)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

AFMA noted Woodside was consulting directly with Commonwealth fishing operators in the area, confirmed it had consulted active fisheries, and recommended the Southern Bluefin Tuna Fishery be included due to the EMBA bounds. AFMA also provided a list of contact details for Commonwealth fisheries.	Along with consulting active fisheries in the EMBA, Woodside has, at its discretion, consulted ASBTIA and licence holders in the Southern Bluefin Tuna Fishery for this EP.	Woodside acknowledged AFMA's advice regarding the Southern Bluefin Tuna Fishery and confirmed it had contacted the fishery for this EP.	No additional controls or measures are required. Woodside's assessment of relevance for Commonwealth fisheries is set out in Appendix F, Table 1, and a summary of consultation is set out in Appendix F, Table 2.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.10.1 of the EP. No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AFMA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AFMA sufficient information to allow AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AFMA on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 23 April 2026, AFMA shared its feedback regarding this activity, indicating the information provided was sufficient to enable AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed AFMA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to AFMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AFMA 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed AFMA a reasonable period for consultation in preparation of the EP, as evidenced by its response on 23 April 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AFMA is appropriate and adapted to the nature of interests of AFMA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AFMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from AFMA.
  - Made no changes or inclusions to the EP as a result of consultation with AFMA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.4 Australian Hydrographic Office (AHO)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed AHO advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also provided a vessel density map (Record of Consultation, reference 6.1.4) and GIS shape files.
- On 15 April 2026, AHO emailed Woodside acknowledging consultation (SI Report A, reference 3.1). AHO also noted **(1)** and **(2)**.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• On 15 April 2026, Woodside responded thanking AHO for its feedback (SI Report A, reference 3.2). Woodside responded to **(1)** and **(2)**.			
Summary of Feedback, Objection or Claim	**Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity**	**Woodside's Statement of Response**	**Inclusion in Environment Plan**
(1) AHO acknowledged consultation and advised it had no concerns.	**(1)** Woodside notes AHO has no concerns regarding the proposed activity.	**(1)** Woodside thanked AHO for confirming it had no concerns.	**(1)** No additional controls or measures are required.
(2) AHO noted Woodside's intention to inform it closer to activities taking place.	**(2)** Woodside notes AHO's feedback reflects its understanding of the notification approach, in that Woodside will notify AHO at least four weeks prior to activities where vessels will be in the Operational Area for more than three weeks at a time.	**(2)** Woodside noted AHO's acknowledgement regarding notifications.	**(2)** No additional controls or measures are required. Woodside will notify AHO prior to the commencement of activities, as referenced as C 1.6 and set out in Table 7-11 of the EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AHO for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given AHO sufficient information to allow AHO to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AHO on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided AHO with information tailored to AHO by including a map of shipping density in relation to the activity, and GIS shape files.
- On 15 April 2026, AHO shared its feedback, objections or claims regarding this activity, indicating the information provided was sufficient to enable AHO to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed AHO a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to AHO advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AHO 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed AHO a reasonable period for consultation in preparation of the EP, as evidenced by its response on 15 April 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AHO is appropriate and adapted to the nature of interests of AHO:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- AHO provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from AHO.
  - Made no changes or inclusions to the EP as a result of consultation with AHO because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.5 Australian Maritime Safety Authority (AMSA) Marine Pollution

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed AMSA Marine Pollution advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required. Woodside has addressed oil pollution planning and response at Appendix I.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA Marine Pollution for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA sufficient information to allow AMSA Marine Pollution to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AMSA Marine Pollution on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed AMSA Marine Pollution a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to AMSA Marine Pollution advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA Marine Pollution 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed AMSA Marine Pollution a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA Marine Pollution is appropriate and adapted to the nature of interests of AMSA Marine Pollution:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding AMSA Marine Pollution of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AMSA Marine Pollution did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AMSA Marine Pollution's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.6 Australian Maritime Safety Authority (AMSA) Navigation Safety

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed AMSA Navigation Safety advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also provided a vessel density map for the EMBA (Record of Consultation, reference 6.1.4) and GIS shape files.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 14 May 2026, AMSA Navigation Safety responded thanking Woodside for its consultation (SI Report A, reference 4.1). AMSA Navigation Safety attached a chartlet of vessel traffic in the Operational Area and raised items **(1)** to **(6)**.
- Between 16 June and 27 July 2026, Woodside and AMSA Navigation Safety exchanged eight emails (SI Report A, references 4.2 to 4.9) to arrange a meeting regarding AMSA's notification framework including item **(4)**.
- On 31 July 2026, Woodside and AMSA Navigation Safety held an online meeting to discuss the notification framework (SI Report A, reference 4.10). AMSA provided further information on item **(4).**
- On 7 August 2026, Woodside thanked AMSA Navigation Safety for its feedback and for the additional information provided in the 31 July meeting (SI Report A, reference 4.11). Woodside responded to items **(1)** to **(6)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) AMSA advised the Operational Area overlapped a heavily used shipping fairway, and proposed wells and established infrastructure were close to frequent cargo vessel traffic, and recommended Woodside give particular focus to the areas of interaction between cargo vessels and offshore vessels.	**(1)** Woodside acknowledges that the Operational Area overlaps areas of heavy shipping traffic and has considered this in its impact and risk assessment and adopted controls.	**(1)** Woodside noted AMSA's advice regarding vessel traffic with and adjacent to the Operational Area and advised it had considered AMSA's feedback in relation to navigational safety risks associated with the proposed activities. Woodside noted that activities related to the drilling and installation of GWF infrastructure was covered by a separate EP which had separate notifications.	**(1)** No additional controls or measures are required. A description of commercial shipping in relation to the activity is set out in Section 4.10.4 and an impact assessment and controls related to interaction with other marine users are set out in Section 6.7.1 of the EP.
(2) AMSA recommended Woodside evaluate and implement anti-collision measures.	**(2)** As the EP relates to ongoing operations, Woodside will continue to assess and	**(2)** Woodside confirmed it continued to assess and implement collision risk	**(2)** No additional controls or measures are required. Woodside's impact assessment and controls related to

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	implement collision risk mitigation measures as appropriate.	mitigation measures for specific operational activities as appropriate.	interaction with other marine users are set out in Section 6.7.1 of the EP.
(3) AMSA recommended Woodside notify AHO no less than four weeks before operations commence.	**(3)** Woodside has committed to notify AHO no less than four weeks before activities commence where vessels will be in the Operational Area for >3 weeks at a time.	**(3)** Woodside advised it would notify AHO no less than four weeks before commencement of activities where vessels would be in the Operational Area (outside the PSZ), for more than 3 weeks, and would provide details relevant to Maritime Safety Information Notifications and Notices to Mariners	**(3)** No additional controls or measures are required. Woodside will notify AHO as referenced as PS 1.6 and set out in Table 7-11 of the EP.
(4) AMSA recommended Woodside notify its JRCC 72-96 hours before operations commenced. During a meeting on 31 July 2026, AMSA advised the longer lead times supported the promulgation of AUSCOAST warnings where vessel activities had a higher interaction risk or an extended duration.	**(4)** Woodside acknowledges AMSA's recommendations regarding notification lead times for the purposes of AUSCOAST warnings and will, where operationally practicable, provide notifications 72-96 hours prior to applicable activities.	**(4)** Woodside set out its assessment of vessel activities associated with the activity and advised it would notify AMSA prior to commencement of activities where the vessel would be in Operational Area for more than three weeks a time, and where activities were occurring in, or within 1km, of a shipping lane and the vessel would be connected to the seabed. Where operationally practicable, Woodside would provide the notification 72-96 hours prior to the commencement of the activities.	**(4)** Woodside will notify the JRCC as referenced as PS 1.7 and 1.8 and set out in Table 7-11 of the EP.
(5) AMSA confirmed vessels should exhibit appropriate lights and shapes to reflect the nature of operations and comply with the COLREGs.	**(5)** Compliance with COLREGs and Navigation Act 2012 is mandated on Woodside's chartered vessels.	**(5)** Woodside noted AMSA's advice and confirmed compliance with COLREGS and the Navigation Act 2012 was mandated aboard Woodside chartered vessels.	**(5)** No additional controls or measures are required. Woodside's impact assessment and controls related to interaction with other marine users are set out in Section 6.7.1 of the EP.
(6) AMSA noted additional information was available via its spatial gateway and	**(6)**	**(6)** Woodside noted AMSA's advice that further information was available.	**(6)** No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Offshore oil and gas exploration webpage.	Woodside acknowledges that additional information is available via the sources provided by AMSA.		
Woodside has addressed feedback, claims or objections as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA Navigation Safety for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA Navigation Safety sufficient information to allow AMSA Navigation Safety to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AMSA Navigation Safety on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided AMSA Navigation Safety with information tailored to AMSA Navigation Safety by including a map of shipping density in relation to the activity, and GIS shape files.
- On 14 May 2026, AMSA Navigation Safety shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AMSA Navigation Safety to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to AMSA Navigation Safety in response to AMSA Navigation Safety's feedback (Woodside's email of 7 August 2026).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed AMSA Navigation Safety a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to AMSA Navigation Safety advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA Navigation Safety 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed AMSA Navigation Safety a reasonable period for consultation in preparation of the EP, as evidenced by its response on 14 May 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA Navigation Safety is appropriate and adapted to the nature of interests of AMSA Navigation Safety:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AMSA Navigation Safety provided feedback or objections or claims about the adverse impacts of the proposed activity to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from AMSA Navigation Safety and assessed the merits of any objection or claim about the adverse impact of activities to which this EP relates.
  - Updated its JRCC notification framework for vessel activities as a result of consultation with AMSA Navigation Safety, as referenced as C 1.7 and 1.8 of the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.7 Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DAFF - Fisheries advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.10.1 of the EP. Woodside will provide activity notifications to DAFF- Fisheries as referenced as PS 1.9 and set out in Table 7-11 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF - Fisheries for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF - Fisheries sufficient information to allow DAFF - Fisheries to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DAFF - Fisheries on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DAFF - Fisheries a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to DAFF - Fisheries advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF - Fisheries 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DAFF - Fisheries a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF - Fisheries is appropriate and adapted to the nature of interests of DAFF - Fisheries:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DAFF – Fisheries of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF - Fisheries did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF - Fisheries' functions, interests or activities.

4.1.8 Department of Defence (DoD)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DoD advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also provided a map of defence zones in relation to the activity (Record of Consultation, reference 6.1.3).
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Defence areas overlapping the Operational Area and EMBA are set out in Section 4.10.7 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DoD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DoD sufficient information to allow DoD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DoD on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DoD with information tailored to DoD by including a map of defence zones in relation to the activity.

Reasonable Period

Woodside allowed DoD a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to DoD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DoD 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DoD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DoD is appropriate and adapted to the nature of interests of DoD:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DoD of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DoD did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DoD's functions, interests or activities.

4.1.9 Department of Planning, Lands and Heritage (DPLH)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DPLH advising of the proposed activity (Record of Consultation, reference 6.1.20), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also provided a list of State shipwrecks relevant to the EP (Record of Consultation, reference 6.1.5.2).
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	The EP demonstrates that there are no known historic underwater heritage sites or shipwrecks within the Operational Area and credible impacts to unexpected finds of historic underwater heritage or shipwrecks as a result of planned activities are managed in accordance with Unexpected Finds Procedure and relevant legislation (Sections 4.9.8 and 6.11 of the EP). Impacts to historic underwater heritage sites or shipwrecks are not considered credible possible in the event of an unplanned hydrocarbon spill, as hydrocarbons are not expected to contact the seabed as demonstrated in Section 6.8 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPLH for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPLH sufficient information to allow DPLH to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DPLH on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DPLH with information tailored to DPLH by including a list of State shipwrecks.

Reasonable Period

Woodside allowed DPLH a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DPLH advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPLH 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DPLH a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPLH is appropriate and adapted to the nature of interests of DPLH:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DPLH of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DPLH did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DPLH's functions, interests or activities.

4.1.10 Department of Primary Industries and Regional Development (DPIRD)

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 13 April 2026, Woodside emailed DPIRD advising of the proposed activity (Record of Consultation, reference 6.1.16), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with State managed fisheries issues in Section 4.10.1 of the EP. Woodside will provide activity notifications to DPIRD as referenced as PS 1.9 and set out in Table 7-11 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPIRD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPIRD sufficient information to allow DPIRD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DPIRD on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed DPIRD a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DPIRD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPIRD 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DPIRD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPIRD is appropriate and adapted to the nature of interests of DPIRD:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DPIRD of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DPIRD did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DPIRD's functions, interests or activities.

4.1.11 Department of Transport and Major Infrastructure (DTMI)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DTMI advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 14 July 2026, Woodside emailed DTMI a copy of the Oil Pollution First Strike Plan for this EP (Appendix I) for DTMI's review (SI Report A, reference 5.1). Woodside also provided another link to the Consultation Information Sheet.
- On 20 July 2026, Woodside emailed DTMI advising of an update to the Oil Pollution First Strike Plan (SI Report A, reference 5.2) and attached a revised copy of the FSP for DTMI's review (Appendix H).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside will consult DTMI if there is a spill impacting State waters from the proposed activity, as referenced in the Oil Pollution First Strike Plan (Appendix H). No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DTMI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DTMI sufficient information to allow DTMI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DTMI on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, on 14 July 2026, Woodside provided DTMI with the Oil Pollution First Strike Plan for its review and feedback.

Reasonable Period

Woodside allowed DTMI a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DTMI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's methodology allows a 30-day consultation period and Woodside allowed DTMI 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DTMI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DTMI is appropriate and adapted to the nature of interests of DTMI:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DTMI of the opportunity to provide feedback.
- In addition, on 14 July 2026 and 20 July 2026, Woodside provided DTMI with a copy of the Oil Pollution First Strike Plan, giving DTMI further opportunities to provide feedback on the activity.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DTMI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DTMI's functions, interests or activities.

4.1.12 Pilbara Ports

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Pilbara Ports advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 17 April 2026, Pilbara Ports emailed and advised it had conducted initial internal consultations with its Marine West operations team in relation to the activity (SI Report A, reference 6.1). Pilbara Ports also raised **(1)**.
- On 17 April 2026, Woodside responded thanking Pilbara Ports for its email (SI Report A, reference 6.2). Woodside responded to **(1)**. Woodside attached the EMBA shape files to the email.
- On 21 April 2026, Pilbara Ports thanked Woodside for its reply and shape files (SI Report A, reference 6.3). Pilbara Ports raised **(2)** and **(3)**.
- On 21 April 2026, Woodside and Pilbara Ports exchanged a further four emails (SI Report A, references 6.4 to 6.7) clarifying an administrative error which did not affect the content of Pilbara Ports' feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 15 June 2026, Woodside thanked Pilbara Ports for its feedback (SI Report A, reference 6.8). Woodside responded to **(2)** and **(3)** and attached a port boundaries map.
- On 15 June 2026, Pilbara Ports thanked Woodside for its email (SI Report A, reference 6.9). Pilbara Ports noted some outdated terminology in the map provided by Woodside and directed Woodside to its website for correct terminology.
- On 16 June 2026, Woodside thanked Pilbara Ports for flagging the terminology (SI Report A, reference 6.10). Woodside provided an updated map (Record of Consultation, reference 6.1.7).
- On 16 June 2026, Pilbara Ports responded to thank Woodside (SI Report A, reference 6.11).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Pilbara Ports requested further detail regarding the boundaries of the EMBA, particularly in respect to the Dampier port boundary, and other port locations including Ashburton, Cape Preston and Varanus Island.	**(1)** Woodside acknowledges that Pilbara Ports requires further information regarding EMBA boundaries to make an assessment of the potential consequences of the activity of its functions, interests or activities.	**(1)** Woodside confirmed the EMBA overlapped the Ashburton, Dampier, Balla Balla, Cape Preston West and Varanus Island port areas, and advised it was providing shape files for the EMBA.	**(1)** No additional controls or measures required.
(2) Pilbara Ports noted the EMBA overlapped multiple port boundaries and requested the boundaries be included on a figure in the EP to identify the jurisdiction of Pilbara Ports.	**(2)** Woodside acknowledges Pilbara Ports request for a figure representing the port boundaries in relation to the EMBA. Woodside has created and provided a map to Pilbara Ports and included it in Appendix F as part of Woodside's consultation materials. Woodside also recognises Pilbara Ports' request for acknowledgement of its jurisdiction and has updated the FSP to include notification to Pilbara Ports in the event of a spill that may interact with Pilbara Ports' boundaries.	**(2)** Woodside provided a map depicting the EMBA in relation to Pilbara Ports' boundaries and confirmed that while infrastructure overlapped by the EMBA was not routinely included in the EP, Woodside had updated its FSP to include notifications to Pilbara Ports of any spill that might interact with its port boundaries.	**(2)** The FSP (Appendix H) for this EP has been updated to include notifications to Pilbara Ports.
(3)	**(3)**	**(3)**	**(3)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Pilbara Ports advised the Port handbook for each operational port could be found via a supplied link.	Woodside acknowledges it has access to the Port handbook for each operational port.	Woodside thanked Pilbara Ports for providing the link to the handbook for each operational port.	No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Pilbara Ports for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara Ports sufficient information to allow Pilbara Ports to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Pilbara Ports on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 21 April 2026, Pilbara Ports shared its feedback regarding the activity, indicating the information provided was sufficient to enable Pilbara Ports to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided an additional map to Pilbara Ports in response to Pilbara Ports' feedback (Woodside's email of 16 June 2026).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed Pilbara Ports a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Pilbara Ports advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara Ports 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Pilbara Ports a reasonable period for consultation in preparation of the EP, as evidenced by its response on 17 April 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Ports is appropriate and adapted to the nature of interests of Pilbara Ports:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Pilbara Ports provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Pilbara Ports.
  - Included Pilbara Ports in the notifications table of the FSP (Appendix H) and included a map of port boundaries in Appendix F of the EP (Record of Consultation, reference 6.1.7).
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.13 Western Australian Museum (WAM)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed WAM advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also provided a list of State and Commonwealth shipwrecks relevant to the EP (Record of Consultation, reference 6.1.5).
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	The EP demonstrates that there are no known historic underwater heritage sites or shipwrecks within the Operational Area and credible impacts to unexpected finds of historic underwater heritage or shipwrecks as a result of planned activities are managed in accordance with Unexpected Finds Procedure and relevant legislation (Sections 4.9.8 and 6.11 of the EP). Impacts to historic underwater heritage sites or shipwrecks are not considered credible possible in the event of an unplanned hydrocarbon spill, as hydrocarbons are not expected to contact the seabed as demonstrated in Section 6.8 of the EP. As part of ongoing consultation engagements as set out in Table 7-11 of the EP, Woodside will notify WAM of any unexpected finds of potential Underwater Cultural Heritage under the Unexpected Finds Procedure (as described in Section 7.2.5 of the EP). No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WAM for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given WAM sufficient information to allow WAM to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WAM on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided WAM with information tailored to WAM by including a map of list of State and Commonwealth-registered shipwrecks.

Reasonable Period

Woodside allowed WAM a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to WAM advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAM 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed WAM a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAM is appropriate and adapted to the nature of interests of WAM:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding WAM of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WAM did not provide feedback for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WAM's functions, interests or activities.

4.2 Commonwealth and WA State Government departments or agencies – environment

4.2.1 Clean Energy Regulator (CER)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed CER advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 15 April 2026, CER responded thanking Woodside for its email (SI Report A, reference 7.1). CER raised **(1)** and **(2)**.
- On 15 April 2026, Woodside thanked CER for its email (SI Report A, reference 7.2). Woodside responded to **(1)** and **(2)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) CER advised it had no feedback to offer and did not require further consultation on the matter.	**(1)** Woodside acknowledges the CER has no feedback to offer and does not require further consultation on this matter. Based on prior engagements with CER, Woodside understands CER's regulatory interest is focused primarily on emissions reporting and compliance obligations under the Safeguard Mechanism and NGER framework during implementation of the activity.	**(1)** Woodside thanked CER for confirming CER had no feedback and did not require further consultation.	**(1)** No additional controls or measures are required.
(2) CER provided its standard advice regarding emissions, energy consumption and energy production reporting.	**(2)** Woodside notes CER's standard advice. Woodside complies with relevant legislative and reporting requirements.	**(2)** Woodside acknowledged CER's standard advice regarding NGER reporting obligations.	**(2)** No additional controls or measures are required. Controls related to NGERS reporting are set out in Section 6.7.7 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CER for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CER sufficient information to allow CER to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to CER on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 15 April 2026, CER shared its feedback regarding this activity, indicating the information provided was sufficient to enable CER to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed CER a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to CER advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CER 30 days for consultation.
- Consultation for this EP commenced 3 months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed CER a reasonable period for consultation in preparation of the EP, as evidenced by its response on 15 April 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CER is appropriate and adapted to the nature of interests of CER:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- CER provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from CER.
  - Made no changes or inclusions to the EP as a result of consultation with CER because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2.2 Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DAFF - Biosecurity advising of the proposed activity (Record of Consultation, reference 6.1.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of	Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Change and Revision process (see Section 7.10.1 of the EP).	Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.9.4 of the EP). No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF - Biosecurity for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF - Biosecurity sufficient information to allow DAFF - Biosecurity to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DAFF - Biosecurity on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DAFF - Biosecurity a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DAFF - Biosecurity advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF - Biosecurity 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DAFF - Biosecurity a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF - Biosecurity is appropriate and adapted to the nature of interests of DAFF - Biosecurity:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DAFF - Biosecurity of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF - Biosecurity did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF - Biosecurity's functions, interests or activities.

4.2.3 Department of Biodiversity, Conservation and Attractions (DBCA)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DBCA advising of the proposed activity (Record of Consultation, reference 6.1.25), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 14 May 2026, DBCA emailed Woodside regarding the EP and advised it had reviewed the consultation information and other available information (SI Report A, reference 8.1). DBCA raised items **(1)** to **(12)**.
- On 10 June 2026, Woodside thanked DBCA for its feedback (SI Report A, reference 8.2). Woodside responded to **(1)** to **(12)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) DBCA noted there were a number of biologically important areas for conservation-significant species, marine	**(1)** Woodside acknowledges that there are biologically important areas which have the potential to be impacted by the	**(1)** Woodside acknowledged DBCA's feedback relating to biologically important areas, marine parks and	**(1)** No changes or additional measures required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

parks and island conservation reserves in the EMBA which had the potential to be affected, and provided examples of publicly available information sources that should be considered.	proposed activities. Woodside has considered multiple information sources to inform its description of the existing environment and impact and risk assessments.	management areas, island conservation reserves and other conservation-significant values relevant to the petroleum activity, and advised that, in identifying potential impacts, Woodside had considered multiple information sources.	
(2) DBCA noted that given the importance of areas potentially affected by a hydrocarbon release, it was considered essential that baseline environmental values were adequately understood and documented.	**(2)** Woodside considers DBCA's feedback appropriate given the importance of understanding baseline environmental values. Woodside maintains a Management of Knowledge process under which baseline information is reviewed and updated as appropriate.	**(2)** Woodside confirmed the EP included a description of baseline environmental data for the Operational Area and EMBA and that Woodside had established a Management of Knowledge process under which baseline information was reviewed and updated as appropriate.	**(2)** No changes or additional measures required
(3) DBCA suggested it would be appropriate to briefly highlight potential impacts to important areas in the Consultation Information Sheet.	**(3)** Woodside acknowledges DBCA's interest in BIAs and conservation values in relation to the EP and welcomes a meeting with DBCA to further discuss this topic.	**(3)** Woodside advised it was available to meet with DBCA to further the discuss the EP, including how BIAs and conservation values had been considered.	**(3)** No changes or additional measures required.
(4) DBCA indicated an expectation that Woodside's 10 Scientific Monitoring Programs had established suitable baseline survey data and any existing contamination, and that where baseline information was unavailable, Woodside should assess what information was required and identify suitable methods or data sources to obtain the information.	**(4)** Woodside recognises the importance of understanding the current condition of areas within the EMBA that support key ecological values, including baseline environmental conditions and any potential contamination, and ensuring baseline environmental information is commensurate with the environmental risk associated with the proposed activity.	**(4)** Woodside confirmed environmental information used to inform the EP and associated spill response planning was derived from a combination of regional datasets, targeted surveys, scientific literature, industry studies and monitoring programs. Where relevant data gaps were identified, Woodside assessed whether additional information collection or targeted studies were warranted on a risk-informed basis.	**(4)** No changes or additional measures required.
(5)	**(5)**	**(5)**	**(5)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

DBCA noted its expectation that Woodside engaged with Traditional Owners in a culturally sensitive manner.	Woodside has engaged with relevant Traditional Owners for this EP and feedback has been incorporated into the EP as appropriate.	Woodside advised it had undertaken consultation with relevant Traditional Owners and continued to seek engagement in a culturally appropriate manner.	No changes or additional measures required. Woodside's consultation approach with Indigenous Peoples is set out in Section 5 and its summary of consultation is set out in Appendix F, Tables 2 and 3.
(6) DBCA noted its monitoring in marine parks and reserves was to inform its values and objectives and may not be suitable for oil spill risk assessment and management planning.	**(6)** Woodside acknowledges the purpose of DBCA's monitoring program and that it may not be suitable for oil spill risk assessment.	**(6)** Woodside noted DBCA's advice regarding the scope and purpose of DBCA's marine park and reserve monitoring programs and noted that these were designed for marine park management objectives rather than oil spill risk assessment.	**(6)** No changes or additional measures required.
(7) DBCA encouraged Woodside to implement a before-after, control-impact (BACI) framework in planning and evaluating its management response.	**(7)** Woodside's Operational and Scientific Monitoring Bridging Implementation Plan (OSM-BIP) includes application of a BACI framework where appropriate.	**(7)** Woodside advised it had developed an OSM-BIP aligned with the Joint Industry Framework, which included processes for baseline information review, monitoring gap identification, spill response planning and application of a BACI framework where appropriate.	**(7)** No changes or additional measures required.
(8) DBCA recommended Woodside refer to DCCEEW's National Light Pollution Guidelines for Wildlife.	**(8)** Woodside has considered the National Light Pollution Guidelines for Wildlife, where relevant, in the preparation of this EP.	**(8)** Woodside acknowledged DCCEEW's guideline and noted it would consider the guideline, where relevant.	**(8)** No changes or additional measures required.
(9) DBCA requested that in the event of a hydrocarbon release, DBCA's Pilbara office was notified as soon as practicable.	**(9)** Woodside has committed to notifying DBCA's Pilbara office as soon as practicable in the event of a hydrocarbon release.	**(9)** Woodside advised its Oil Pollution First Strike Plan included a commitment to notify DBCA's Pilbara office as soon as practicable where oiled wildlife could occur or where a spill could contact DBCA-managed lands or waters.	**(9)** No changes or additional measures required. The FSP for this EP is at Appendix H.
(10)	**(10)**	**(10)**	**(10)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

DBCA noted it would not implement an oiled wildlife management response on behalf of an operator except as part of a mandated whole-of-government response.	Woodside recognises DBCA's position that it will not implement an oiled wildlife management response on behalf of an operator.	Woodside acknowledged DBCA's advice on oiled wildlife management responses and advised it would undertake response activities in consultation with relevant agencies and in accordance with applicable emergency response arrangements.	No changes or additional measures required.
(11) Advised Woodside to refer to the Department of Transport's web content regarding marine pollution.	**(11)** Woodside refers to DTMI guidance regarding marine pollution.	**(11)** Woodside advised it had reviewed and referenced DTMI's marine pollution guidance.	**(11)** No changes or additional measures required.
(12) Provided the email address it wished Woodside to continue using for notifications.	**(12)** Woodside has reviewed its contact details for DBCA.	**(12)** Woodside confirmed it would continue to provide future consultation and notifications via the nominated email address.	**(12)** No changes or additional measures required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DBCA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given DBCA sufficient information to allow DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DBCA on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 14 May 2026, DBCA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DBCA in response to DBCA's feedback (Woodside's email of 10 June 2026).

Reasonable Period

Woodside allowed DBCA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DBCA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DBCA 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DBCA a reasonable period for consultation in preparation of the EP, as evidenced by its response on 14 May 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DBCA is appropriate and adapted to the nature of interests of DBCA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DBCA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DBCA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Responded to feedback from DBCA.
- Made no changes or inclusions to the EP as a result of consultation with DBCA because appropriate measures are already included in the EP.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2.4 Department of Climate Change, Energy, the Environment and Water (DCCEEW)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DCCEEW advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also provided a list of State and Commonwealth shipwrecks relevant to the EP (Record of Consultation, reference 6.1.5).
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	The EP demonstrates that there are no known historic underwater heritage sites or shipwrecks within the Operational Area and credible impacts to unexpected finds of historic underwater heritage or shipwrecks as a result of planned activities are managed in accordance with Unexpected Finds Procedure and relevant legislation (Sections 4.9.8 and 6.11 of the EP). Impacts to historic underwater heritage sites or shipwrecks are not considered credible possible in the event of an unplanned hydrocarbon spill, as hydrocarbons are not expected to contact the seabed as demonstrated in Section 6.8 of the EP. No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DCCEEW for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given DCCEEW sufficient information to allow DCCEEW to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DCCEEW on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. – A timeframe for consultation and the provision of feedback. – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*. – Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). • In addition to the Consultation Information Sheet, Woodside provided DCCEEW with information tailored to DCCEEW by including a map of list of State and Commonwealth-registered shipwrecks. **Reasonable Period** Woodside allowed DCCEEW a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence to DCCEEW advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period and Woodside allowed DCCEEW 30 days for consultation. • Consultation for this EP commenced 3 months ago. • In this context, Woodside allowed DCCEEW a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DCCEEW is appropriate and adapted to the nature of interests of DCCEEW: • Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DCCEEW of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DCCEEW did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DCCEEW's functions, interests or activities.

4.2.5 Director of National Parks (DNP)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DNP advising of the proposed activity (Record of Consultation, reference 6.1.15), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also provided GIS shape files for the Operational Area and EMBA.
- On 30 April 2026, DNP responded thanking Woodside for the opportunity to comment (SI Report A, reference 9.1). DNP raised items **(1)** to **(6)**.
- On 8 June 2026, Woodside thanked DNP for its feedback (SI Report A, reference 9.2). Woodside responded to items **(1)** to **(6)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) DNP confirmed a small portion of the Operational Area overlapped the Montebello Marine Park Multiple Use Zone (MUZ) and outlined restricted mining operations in accordance with the North-west Marine Parks Network Management Plan 2018.	**(1)** Woodside acknowledges the Operational Area overlap with the Montebello Marine Park MUZ and has and has referred to the North-west Marine Parks Management Plan 2018 for this EP.	**(1)** Woodside noted DNP's advice regarding the overlap with the Montebello Marine Park MUZ and acknowledged the management plan.	**(1)** No additional controls or measures are required. A list of protected places in relation to the activity is set out in Section 4.8 of the EP.
(2) DNP advised that activities in the Multiple Use Zone could be authorised via class approval subject to an accepted EP and compliance with conditions, and noted that Woodside	**(2)** Woodside acknowledges the need for authorisations and understands its obligations under the class approval.	**(2)** Woodside confirmed it was aware of its obligations under the class approval.	**(2)** No additional controls or measures are required. A description of relevant requirements for Australian Marine Parks, including class approvals, is set out in Section 1.7.2.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

should be aware of its obligations under the class approval.			
(3) DNP acknowledged Woodside's consideration of NOPSEMA and Parks Australia guidance including the need to reduce impacts and risks to marine park values to as low as reasonably practicable and not inconsistent with the management plan.	**(3)** Woodside has considered guidance from NOPSEMA and Parks Australia and the EP demonstrates that impacts and risks to marine park values have been reduced to ALARP and not consistent with the management plan.	**(3)** Woodside confirmed the EP had been prepared with consideration of the NOPSEMA and Parks Australia guidance.	**(3)** No additional controls or measures are required. Consideration of potential impacts and risks and associated controls are set out in Section 6 of the EP.
(4) DNP stated that impacts and risks should be assessed against marine park values, including natural, cultural, heritage and socio-economic values, referenced examples specific to Montebello Marine Park, and provided links to additional information sources on marine park values	**(4)** Woodside has considered impacts and risks associated with the Montebello Marine Park, including values such as the ancient coastline ecosystem, internesting marine turtles, foraging sea birds, whale sharks and migrating humpback whales.	**(4)** Woodside confirmed it had considered the impacts and risks associated with the proposed activities in the context of the Montebello Marine Park, including relevant natural, cultural, heritage and socio-economic values.	**(4)** No additional controls or measures are required. A description of Montebello Marine Park values is set out in Section 4.8.1 of the EP.
(5) DNP requested that it be notified as soon as possible of any oil or gas pollution incidents affecting or likely to affect a marine park, outlined the information it required from the notification, and noted DNP might request regular situation reports depending on the severity of an incident.	**(5)** Woodside acknowledges DNP's expectations and in the highly unlikely event of a hydrocarbon release, Woodside will notify DNP as soon as practicable via the 24-hour Marine Compliance Officer if the incident occurs within a marine park or is likely to impact a marine park.	**(5)** Woodside advised that, in the event of a hydrocarbon release, it would notify DNP as soon as practicable where the incident occurred in, or was likely to impact on, a marine park.	**(5)** As set out in the Oil Pollution First Strike Plan (Appendix H), Woodside will notify DNP as soon as practicable where an incident occurs in, or is like to impact on, a marine park.
(6) DNP requested notification when the EP was approved, as well as at least 10 days prior to, and at the conclusion of, activities within a marine park.	**(6)** Woodside agrees to notify DNP upon acceptance of the EP, and prior to and on completion of activities occurring within a marine park.	**(6)** Woodside advised it would notify DNP upon acceptance of the EP by NOPSEMA, as well as at least 10 days before, and on completion of, activities occurring within a marine park.	**(6)** As referenced as C 1.10 and set out in Table 7-11 of the EP, Woodside will notify DNP upon acceptance of the EP and before and after activities occurring within a marine park.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	The EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values (including ecosystem values) to an ALARP and acceptable level and that the activity is not inconsistent with the management plan (see Section 6.8 of the EP). No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DNP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DNP sufficient information to allow DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DNP on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DNP with information tailored to DNP by including GIS shape files.
- On 30 April 2026, DNP shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DNP in response to DNP's feedback (Woodside's email of 8 June 2026).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed DNP a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DNP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DNP 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DNP a reasonable period for consultation in preparation of the EP, as evidenced by its response on 30 April 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DNP is appropriate and adapted to the nature of interests of DNP:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DNP provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from DNP.
  - Updated its standard schedule of notifications to DNP based on DNP's feedback, as set out in C 1.10 of the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2.6 Ningaloo Coast World Heritage Advisory Committee (NCWHAC)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NCWHAC advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with NCWHAC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given NCWHAC sufficient information to allow NCWHAC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to NCWHAC on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed NCWHAC a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to NCWHAC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed NCWHAC 30 days for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed NCWHAC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with NCWHAC is appropriate and adapted to the nature of interests of NCWHAC:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- (If applicable) From (dates), Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the (insert areas) to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding NCWHAC of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as NCWHAC did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on NCWHAC's functions, interests or activities.

4.3 Commonwealth and WA State Government departments or agencies – industry

4.3.1 Department of Mines, Petroleum and Exploration (DMPE)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DMPE advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DMPE for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DMPE sufficient information to allow DMPE to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DMPE on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DMPE a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DMPE advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DMPE 30 days for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DMPE a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DMPE is appropriate and adapted to the nature of interests of DMPE:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DMPE of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DMPE did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DMPE's functions, interests or activities.

4.3.2 Department of Industry, Science and Resources (DISR)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DISR advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DISR for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DISR sufficient information to allow DISR to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DISR on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DISR a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DISR advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DISR 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DISR a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DISR is appropriate and adapted to the nature of interests of DISR:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding DISR of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DISR did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DISR's functions, interests or activities.

4.4 Commonwealth commercial fisheries and peak representative bodies

4.4.1 Australian Southern Bluefin Tuna Industry Association (ASBTIA)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed ASBTIA advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ASBTIA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ASBTIA sufficient information to allow ASBTIA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to ASBTIA on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ASBTIA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to ASBTIA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ASBTIA 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed ASBTIA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ASBTIA is appropriate and adapted to the nature of interests of ASBTIA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding ASBTIA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- No additional measures were considered as a result of consultation as ASBTIA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

The measures and controls described in this EP address the potential impact from the proposed activity on ASBTIA's functions, interests or activities.

4.4.2 Commonwealth Fisheries Association (CFA)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed CFA advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.10.1 of the EP. Woodside will provide activity notifications to CFA as referenced as PS 1.9 and set out in Table 7-11 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CFA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CFA sufficient information to allow CFA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to CFA on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CFA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to CFA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CFA 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed CFA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CFA is appropriate and adapted to the nature of interests of CFA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding CFA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CFA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CFA's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.4.3 North West Slope Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed individual North West Slope Trawl Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.10.1 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with North West Slope Trawl Fishery licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given North West Slope Trawl Fishery licence holders sufficient information to allow North West Slope Trawl Fishery licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to North West Slope Trawl Fishery licence holders on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed North West Slope Trawl Fishery licence holders a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to North West Slope Trawl Fishery licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed North West Slope Trawl Fishery licence holders 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed North West Slope Trawl Fishery licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with North West Slope Trawl Fishery licence holders is appropriate and adapted to the nature of interests of North West Slope Trawl Fishery licence holders:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding North West Slope Trawl Fishery licence holders of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as North West Slope Trawl Fishery licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on North West Slope Trawl Fishery licence holders' functions, interests or activities.

4.4.4 Tuna Australia

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Tuna Australia advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• On 20 April 2026, Tuna Australia emailed thanking Woodside for the consultation (SI Report A, reference 10.1). Tuna Australia raised **(1)** and **(2)** and noted that its contractual services were available to Woodside. Tuna Australia also attached its position statement and consulting services agreement. • On 12 May 2026, Woodside thanked Tuna Australia for its email (SI Report A, reference 10.2). Woodside responded to **(1)** and **(2)** and acknowledged Tuna Australia's information on its position statement and consultation services.			
Summary of Feedback, Objection or Claim	**Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity**	**Woodside's Statement of Response**	**Inclusion in Environment Plan**
(1) Tuna Australia stated it had not been involved in the initial consultation for this project and would need to run a full consultation on the proposed activity.	**(1)** This consultation represents the initial consultation for the five-year revision of the EP and provides Tuna Australia the opportunity to consider the proposed activity. Woodside has provided Tuna Australia sufficient information to allow Tuna Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. The in-force GWA Facility Operations EP is also publicly available on the NOPSEMA website. Woodside has consulted Tuna Australia on the associated GWF-4 Drilling and Installation EP.	**(1)** Woodside advised this consultation represented consultation for the five-year revision of the EP, and that the in-force EP had been accepted in 2022. Woodside confirmed it had also consulted Tuna Australia for the GWF-4 Drilling and Installation EP.	**(1)** No additional controls or measures required.
(2) Tuna Australia advised it could reach out to relevant licence holders for this EP and would require a services agreement to complete this work due to resourcing and time constraints.	**(2)** Woodside has directly consulted relevant individual Commonwealth fishery licence holders for this EP.	**(2)** Woodside confirmed that as the Western Tuna and Billfish Fishery had been active in the EMBA within the past five years, Woodside had consulted individual WTBF licence holders for this EP.	**(2)** No additional controls or measures required. Woodside's assessment of relevance for Commonwealth fisheries is set out in Appendix F, Table 1, and the summary of consultation in Appendix F, Table 2.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback	Woodside has assessed the potential for interaction with Commonwealth

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the EP relates, as required under Regulation 24.	may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	managed commercial fisheries in Section 4.10.1 of the EP. No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Tuna Australia for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Tuna Australia sufficient information to allow Tuna Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Tuna Australia on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Tuna Australia a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Tuna Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Tuna Australia 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Tuna Australia a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Tuna Australia is appropriate and adapted to the nature of interests of Tuna Australia:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 12 May 2026 in response to items raised by Tuna Australia related to the consultation for this EP.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Tuna Australia provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Tuna Australia.
  - Made no changes or inclusions to the EP as a result of consultation with Tuna Australia because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.4.5 Western Deepwater Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Western Deepwater Trawl Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.10.1 of the EP. No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Western Deepwater Trawl Fishery licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given Western Deepwater Trawl Fishery licence holders sufficient information to allow Western Deepwater Trawl Fishery licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Western Deepwater Trawl Fishery licence holders on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. – A timeframe for consultation and the provision of feedback. – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*. – Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). **Reasonable Period** Woodside allowed Western Deepwater Trawl Fishery licence holders a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence to Western Deepwater Trawl Fishery licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period and Woodside allowed Western Deepwater Trawl Fishery licence holders 30 days for consultation. • Consultation for this EP commenced 3 months ago. • In this context, Woodside allowed Western Deepwater Trawl Fishery licence holders a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Deepwater Trawl Fishery licence holders is appropriate and adapted to the nature of interests of Western Deepwater Trawl Fishery licence holders: • Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Western Deepwater Trawl Fishery licence holders of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Deepwater Trawl Fishery licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Western Deepwater Trawl Fishery licence holders' functions, interests or activities.

4.4.6 Western Tuna and Billfish Fishery (WTBF)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed individual WTBF licence holders advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WTBF licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given WTBF licence holders sufficient information to allow WTBF licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WTBF licence holders on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WTBF licence holders a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to WTBF licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WTBF licence holders 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed WTBF licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WTBF licence holders is appropriate and adapted to the nature of interests of WTBF licence holders:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding WTBF licence holders of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WTBF licence holders did not provide feedback for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WTBF licence holders' functions, interests or activities.

4.5 State commercial fisheries and peak representative bodies

4.5.1 Aquaculture Council of Western Australia (ACWA)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed ACWA advising of the proposed activity (Record of Consultation, reference 6.1.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ACWA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ACWA sufficient information to allow ACWA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to ACWA on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ACWA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to ACWA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ACWA 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed ACWA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ACWA is appropriate and adapted to the nature of interests of ACWA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding ACWA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ACWA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ACWA's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.5.2 Western Australian Fishing Industry Council (WAFIC)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed WAFIC advising of the proposed activity (Record of Consultation, reference 6.1.23), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 20 April 2026, WAFIC emailed Woodside to confirm the consultation material had been distributed to relevant licence holders (SI Report A, reference 11.1).
- On 1 May 2026, Woodside emailed WAFIC to advise that, to ensure licence holders had adequate time to review the consultation materials following their distribution, the consultation close date for WAFIC and licence holders had been extended to 20 May 2026 (SI Report A, reference 11.2).
- On 3 June 2026, Woodside emailed WAFIC to follow up on whether WAFIC or licence holders had any feedback on a number of Woodside EPs, including this EP (SI Report A, reference 11.3).
- On 4 June 2026, WAFIC emailed Woodside regarding this EP (SI Report A, reference 11.4). WAFIC noted **(1)**.
- On 5 June 2026, Woodside thanked WAFIC for its email (SI Report A, reference 11.5). Woodside responded to **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) WAFIC advised no comments or industry feedback was received regarding the proposed activities.	**(1)** Woodside acknowledges that neither WAFIC nor individual licence holders had comments or feedback regarding the activities.	**(1)** Woodside thanked WAFIC for confirming there were no comments or industry feedback.	**(1)** No additional measures or controls required.
While feedback has been received, there were no objections or claims.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside will provide activity notifications to WAFIC as referenced as PS 1.9 and set out in Table 7-11 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation WAFIC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given WAFIC sufficient information to allow WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WAFIC on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WAFIC a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to WAFIC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAFIC 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed WAFIC a reasonable period for consultation in preparation of the EP, as evidenced by its response on 4 June 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAFIC is appropriate and adapted to the nature of interests of WAFIC:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In May 2026, Woodside held an information stall at a community event in the Pilbara region to raise awareness of the EP and provide another opportunity for feedback. This event was promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 1 May 2026, reminding WAFIC of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- WAFIC provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from WAFIC.
  - Made no inclusions to the EP as a result of consultation with WAFIC because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.5.3 Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Fish Trawl (Interim) Managed Fishery, Pilbara Trap Managed Fishery, Pilbara Line Fishery, Specimen Shell Managed Fishery (collectively State Fishery Licence Holders)

Summary of information provided and record of consultation for this EP:

- On 20 April 2026, Woodside, via WAFIC, emailed State Fishery Licence Holders advising of the proposed activity (Record of Consultation, reference 6.1.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- As per advice from WAFIC regarding its consultation guidelines, no follow-up email was required to State Fishery Licence Holders.
- On 4 June 2026, WAFIC confirmed State Fishery Licence Holders had not provided any feedback or comments in relation to this EP (SI Report A, reference 11.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with State Fishery Licence Holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given State Fishery Licence Holders sufficient information to allow State Fishery Licence Holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Via WAFIC, Woodside gave this information to State Fishery Licence Holders on 20 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed State Fishery Licence Holders a reasonable period for consultation in the preparation of the EP because:

- Woodside's methodology allows a 30-day consultation period and Woodside allowed State Fishery Licence Holders 30 days for consultation. This included an extension of the consultation period, communicated via WAFIC, to accommodate changes to the distribution date of the consultation material.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed State Fishery Licence Holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with State Fishery Licence Holders is appropriate and adapted to the nature of interests of State Fishery Licence Holders:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as State Fishery Licence Holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on State Fishery Licence Holders' functions, interests or activities.

4.5.4 West Coast Rock Lobster Fishery

Summary of information provided and record of consultation for this EP:

- On 15 April 2026, Woodside sent letters to individual West Coast Rock Lobster Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.27), provided a Consultation Information Sheet, and a QR code link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up letter (Record of Consultation, reference 6.2.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.10.1 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with West Coast Rock Lobster Fishery licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given West Coast Rock Lobster Fishery licence holders sufficient information to allow West Coast Rock Lobster Fishery licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to West Coast Rock Lobster Fishery licence holders on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed West Coast Rock Lobster Fishery licence holders a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to West Coast Rock Lobster Fishery licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed West Coast Rock Lobster Fishery licence holders 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed West Coast Rock Lobster Fishery licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with West Coast Rock Lobster Fishery licence holders is appropriate and adapted to the nature of interests of West Coast Rock Lobster Fishery licence holders:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation letter on 4 May 2026, reminding West Coast Rock Lobster Fishery licence holders of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as West Coast Rock Lobster Fishery licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on West Coast Rock Lobster Fishery licence holders' functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.5.5 Western Rock Lobster Council

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Western Rock Lobster Council advising of the proposed activity (Record of Consultation, reference 6.1.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with State managed commercial fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Western Rock Lobster Council for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Western Rock Lobster Council sufficient information to allow Western Rock Lobster Council to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Western Rock Lobster Council on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Western Rock Lobster Council a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Western Rock Lobster Council advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Western Rock Lobster Council 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Western Rock Lobster Council a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Rock Lobster Council is appropriate and adapted to the nature of interests of Western Rock Lobster Council:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Western Rock Lobster Council of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Rock Lobster Council did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Western Rock Lobster Council's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.6 Recreational marine users and peak representative bodies

4.6.1 Gascoyne Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Gascoyne Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 6.1.17), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 15 April 2026, Woodside mailed a letter with the same information to marine users without a designated email address (Record of Consultation, reference 6.1.17.1).
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1 and 6.2.2).
- On 6 May 2026, a licence holder emailed Woodside (SI Report A, reference 12.1) and raised **(1)**.
- On 7 May 2026, Woodside responded thanking the licence holder for their email (SI Report A, reference 12.2) and responded to **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) A licence holder requested to be removed from Woodside's mailing list.	**(1)** Woodside accepts that participation in the consultation process is voluntary and has removed the licence holder from its mailing list.	**(1)** Woodside confirmed the licence holder had been removed from Woodside's mailing list.	**(1)** No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Gascoyne Recreational Marine Users for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Gascoyne Recreational Marine Users sufficient information to allow Gascoyne Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Gascoyne Recreational Marine Users on 13 or 15 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link or QR code to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Gascoyne Recreational Marine Users a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Gascoyne Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Gascoyne Recreational Marine Users 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Gascoyne Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Gascoyne Recreational Marine Users is appropriate and adapted to the nature of interests of Gascoyne Recreational Marine Users:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email or letter on 4 May 2026, reminding Gascoyne Recreational Marine Users of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Gascoyne Recreational Marine Users provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from a Gascoyne Recreational Marine User.
  - Made no changes or inclusions to the EP as a result of consultation with Gascoyne Recreational Marine Users because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.6.2 Marine Tourism WA

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Marine Tourism WA advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Marine Tourism WA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Marine Tourism WA sufficient information to allow Marine Tourism WA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Marine Tourism WA on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Marine Tourism WA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Marine Tourism WA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Marine Tourism WA 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Marine Tourism WA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Marine Tourism WA is appropriate and adapted to the nature of interests of Marine Tourism WA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Marine Tourism WA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Marine Tourism WA did not provide feedback for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Marine Tourism WA's functions, interests or activities.

4.6.3 Pilbara/Kimberley Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Pilbara/Kimberley Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 6.1.17), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 15 April 2026, Woodside mailed a letter with the same information to marine users without a designated email address (Record of Consultation, reference 6.1.17.1).
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1 and 6.2.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Pilbara/Kimberley Recreational Marine Users for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara/Kimberley Recreational Marine Users sufficient information to allow Pilbara/Kimberley Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Pilbara/Kimberley Recreational Marine Users on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link or QR code to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Pilbara/Kimberley Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara/Kimberley Recreational Marine Users 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara/Kimberley Recreational Marine Users is appropriate and adapted to the nature of interests of Pilbara/Kimberley Recreational Marine Users:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email or letter on 4 May 2026, reminding Pilbara/Kimberley Recreational Marine Users of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara/Kimberley Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara/Kimberley Recreational Marine Users' functions, interests or activities.

4.6.4 Recfishwest

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Recfishwest advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 18 May 2026, Recfishwest emailed thanking Woodside for the consultation information (SI Report A, reference 13.1). Recfishwest raised **(1)** and **(2)**.
- On 29 May 2026, Woodside thanked Recfishwest for its email (SI Report A, reference 13.2). Woodside responded to **(1)** and **(2)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Recfishwest noted the location of the activities and advised the general area may still accessed by the charter industry and large recreational vessels.	**(1)** Woodside acknowledges Recfishwest's advice that the general area may be used for charter activity and recreational vessels, and has consulted recreational marine users in the Gascoyne and Pilbara/Kimberley regions for this EP.	**(1)** Woodside noted Recfishwest's advice regarding charter and recreational vessel activity in the area.	**(1)** Woodside's summary of consultation with recreational marine users is set out in Appendix F, Table 2. No additional controls or measures are required.
(2) Recfishwest requested Woodside keep it informed as activities progressed.	**(2)** Woodside acknowledges Recfishwest's request to be kept informed and will include Recfishwest in start of activity notifications associated with this EP.	**(2)** Woodside confirmed it would keep Recfishwest informed of significant changes to the proposed activity, and would notify Recfishwest prior to activities where vessels would be in the Operational Area for more than three weeks.	**(2)** Woodside will provide notifications to Recfishwest as standard practice, as referenced as C 1.9 and set out in Table 7-11 of the EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its	No additional controls or measures are required.

		Management of Change and Revision process (see Section 7.10.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Recfishwest for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Recfishwest sufficient information to allow Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Recfishwest on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Recfishwest a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Recfishwest advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Recfishwest 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Recfishwest a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Recfishwest is appropriate and adapted to the nature of interests of Recfishwest:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Recfishwest of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Recfishwest provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Recfishwest.
  - Made no changes or inclusions to the EP as a result of consultation with Recfishwest because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.6.5 WA Game Fishing Association

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed WA Game Fishing Association advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WA Game Fishing Association for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WA Game Fishing Association sufficient information to allow WA Game Fishing Association to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WA Game Fishing Association on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WA Game Fishing Association a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to WA Game Fishing Association advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WA Game Fishing Association 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed WA Game Fishing Association a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WA Game Fishing Association is appropriate and adapted to the nature of interests of WA Game Fishing Association:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding WA Game Fishing Association of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WA Game Fishing Association did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WA Game Fishing Association's functions, interests or activities.

4.7 Titleholders and operators

4.7.1 Bounty Oil and Gas, Carnarvon Energy; Coastal Oil and Gas; ExxonMobil Australia; Finder Energy; INPEX Alpha; Jadestone; JX Nippon O&G Exploration; KATO Energy/ KATO Corowa/KATO NWS/KATO Amulet; Kyushu Electric Wheatstone; PE Wheatstone; Shell Australia; Western Gas (collectively: Titleholders)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Titleholders advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Titleholders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Titleholders sufficient information to allow Titleholders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Titleholders on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Titleholders a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Titleholders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Titleholders 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Titleholders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Titleholders is appropriate and adapted to the nature of interests of Titleholders:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Titleholders did not provide feedback for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Titleholders' functions, interests or activities.

4.7.2 BP Australia

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed BP Australia advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 29 April 2026, BP responded thanking Woodside for the information (SI Report A, reference 14.1). BP raised **(1).**
- On 30 April 2026, Woodside responded thanking BP Australia for its responses on a number of Woodside EPs including this one (SI Report A, reference 14.2). Woodside responded to **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) BP acknowledged that, as a JV partner and with titles overlapping the EMBA, the proposed activity had the potential to impact BP Australia's functions, interests or activities, however it considered the impacts and risks identified would be appropriately managed, and had no objections or other feedback.	**(1)** Woodside notes BP has considered the impacts and risks associated with the activity and has no objections or feedback.	**(1)** Woodside thanked BP Australia for confirming it had no objections or feedback.	**(1)** No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with BP Australia for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given BP Australia sufficient information to allow BP Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Titleholders on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. – A timeframe for consultation and the provision of feedback. – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.* – Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). • On 29 April 2026, BP Australia shared its feedback regarding this activity, indicating the information provided was sufficient to enable BP Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. **Reasonable Period** Woodside allowed BP Australia a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence to BP Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period and Woodside allowed BP Australia 30 days for consultation. • Consultation for this EP commenced 3 months ago. • In this context, Woodside allowed BP Australia a reasonable period for consultation in preparation of the EP, as evidenced by its response on 29 April 2026. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with BP Australia is appropriate and adapted to the nature of interests of BP Australia: • Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- BP Australia provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from BP Australia.
  - Made no changes or inclusions to the EP as a result of consultation with BP Australia because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.3 Chevron Australia

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Titleholders advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'* and GIS shape files.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 13 May 2026, Chevron emailed to thank Woodside for its consideration of Chevron in relation to the planned activities (SI Report A, reference 15.1). Chevron raised **(1)**.
- On 14 May 2026, Woodside thanked Chevron for its response (SI Report A, reference 15.2). Woodside responded to **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Chevron advised it had no concerns or feedback regarding the proposed activities.	**(1)** Woodside acknowledges that Chevron has no concerns or feedback.	**(1)** Woodside thanked Chevron for confirming it had no objections or feedback.	**(1)** No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Chevron for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Chevron sufficient information to allow Titleholders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Chevron on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 13 May 2026, Chevron shared its feedback regarding this activity, indicating the information provided was sufficient to enable Chevron to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Chevron a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Chevron advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Chevron 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Chevron a reasonable period for consultation in preparation of the EP, as evidenced by its response on 13 May 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Chevron is appropriate and adapted to the nature of interests of Chevron:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Chevron provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Chevron.
  - Made no changes or inclusions to the EP as a result of consultation with Chevron because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.4 InCapture

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed InCapture advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 15 April 2026, InCapture emailed thanking Woodside for providing details of the EP (SI Report A, reference 16.1). InCapture also raised **(1)**.
- On 15 April 2026, Woodside thanked InCapture for its response (SI Report A, reference 16.2). Woodside responded to **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) InCapture advised it had no objections regarding the proposed activity.	**(1)** Woodside acknowledges that InCapture has no objections to the proposed activity.	**(1)** Woodside thanked InCapture for confirming it had no objections.	**(1)** No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the EP relates, as required under Regulation 24.	consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with InCapture for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given InCapture sufficient information to allow InCapture to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to InCapture on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 15 April 2026, InCapture shared its feedback regarding this activity, indicating the information provided was sufficient to enable InCapture to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed InCapture a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to InCapture advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed InCapture 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed InCapture a reasonable period for consultation in preparation of the EP, as evidenced by its response on 15 April 2026.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with InCapture is appropriate and adapted to the nature of interests of InCapture:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- InCapture provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from InCapture.
  - Made no changes or inclusions to the EP as a result of consultation with InCapture because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.5 KUFPEC

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Titleholders advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 5 May 2026, KUFPEC thanked Woodside for its communication regarding this EP (SI Report A, reference 17.1). KUFPEC raised **(1)**.
- On 6 May 2026, Woodside thanked KUFPEC for its email (SI Report A, reference 17.2). Woodside responded to **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) KUFPEC advised it had no objections regarding the proposed activity.	**(1)** Woodside acknowledges that KUFPEC has no objections to the proposed activity.	**(1)** Woodside thanked KUFPEC for confirming it had no objections.	**(1)** No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with KUFPEC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given KUFPEC sufficient information to allow KUFPEC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to KUFPEC on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 5 May 2026, KUFPEC shared its feedback regarding this activity, indicating the information provided was sufficient to enable KUFPEC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed KUFPEC a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to KUFPEC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed KUFPEC 30 days for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed KUFPEC a reasonable period for consultation in preparation of the EP, as evidenced by its response on 5 May 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with KUFPEC is appropriate and adapted to the nature of interests of KUFPEC:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- KUFPEC provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from KUFPEC.
  - Made no changes or inclusions to the EP as a result of consultation with KUFPEC because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.6 OMV Australia / Sapura OMV Upstream

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed OMV advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 April 2026, after receiving email bounce-backs from OMV on consultation emails for two Woodside EPs including this one, Woodside sent a follow-up email to a different email address (SI Report A, reference 18.1). Woodside provided a copy of the Consultation Information Sheet for this EP and advised OMV it had extended the consultation period for OMV until 30 May 2026.
- On 19 May 2026, OMV responded thanking Woodside for getting in contact (SI Report A, reference 18.2). OMV noted **(1)**.
- On 19 May 2026, Woodside thanked OMV for its response (SI Report A, reference 18.3) and responded to **(1)**.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) OMV advised it would not make a consultation submission for this EP, and recommended contacting Santos as the operator of a title referenced in relation to another Woodside EP.	**(1)** Woodside acknowledges that OMV is not making a submission on this EP. While the title referenced by OMV is not relevant to this EP, Woodside has consulted Santos for this EP.	**(1)** Woodside thanked OMV for confirming it had no objections and advised that Santos had been consulted for this EP.	**(1)** No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with OMV for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given OMV sufficient information to allow OMV to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to OMV on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 19 May 2026, OMV shared its feedback regarding this activity, indicating the information provided was sufficient to enable OMV to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed OMV a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to OMV advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed OMV 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed OMV a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with OMV is appropriate and adapted to the nature of interests of OMV:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as OMV did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on OMV' functions, interests or activities.

4.7.7 Pathfinder Energy

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Pathfinder Energy advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 14 April 2026, Pathfinder Energy thanked Woodside for its email (SI Report A, reference 19.1). Pathfinder Energy raised **(1)**.
- On 15 April 2026, Woodside thanked Pathfinder Energy for its response (SI Report A, reference 19.2). Woodside responded to **(1)**.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Pathfinder Energy advised it had no comment and did not require consultation.	**(1)** Woodside acknowledges that Pathfinder Energy does not have any comment on the EP and does not require any further consultation on the proposed activity.	**(1)** Woodside thanked Pathfinder Energy for confirming it had no comments.	**(1)** No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Pathfinder Energy for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pathfinder Energy sufficient information to allow Pathfinder Energy to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Pathfinder Energy on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 14 April 2026, Pathfinder Energy shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Pathfinder Energy to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Pathfinder Energy a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Pathfinder Energy advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pathfinder Energy 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Pathfinder Energy a reasonable period for consultation in preparation of the EP, as evidenced by its response on 14 April 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pathfinder Energy is appropriate and adapted to the nature of interests of Pathfinder Energy:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Pathfinder Energy provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Pathfinder Energy.
  - Made no changes or inclusions to the EP as a result of consultation with Pathfinder Energy because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.8 Santos NA Energy Holdings / Santos Ltd / Santos WA Northwest / Santos Offshore / Santos WA Southwest / Santos (BOL) / Santos WA PVG

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 13 April 2026, Woodside emailed Santos advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 1 May 2026, Santos thanked Woodside for the email (SI Report A, reference 20.1) and raised **(1)**.
- On 6 May 2026, Woodside thanked Santos for its response (SI Report A, reference 20.2) and responded to **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Santos advised it had no objections to claims in relation to the activity.	**(1)** Woodside acknowledges that Santos has no objections or claims.	**(1)** Woodside thanked Santos for confirming it had no objections or claims.	**(1)** No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Santos for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Santos sufficient information to allow Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Santos on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Santos a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Santos advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Santos 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Santos a reasonable period for consultation in preparation of the EP, as evidenced by its response on 1 May 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Santos is appropriate and adapted to the nature of interests of Santos:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Santos provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Santos.
  - Made no changes or inclusions to the EP as a result of consultation with Santos because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.9 Vermilion Energy

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 13 April 2026, Woodside emailed Vermilion Energy advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 4 May 2026, Vermilion thanked Woodside for the email (SI Report A, reference 21.1) and raised **(1)**.
- On 6 May 2026, Woodside thanked Vermilion for its email (SI Report A, reference 21.2) and responded to **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Vermilion advised it had no comments on the proposed activity.	**(1)** Woodside acknowledges that Vermilion has no comments.	**(1)** Woodside thanked Vermilion for confirming it had no comments.	**(1)** No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Vermilion Energy for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Vermilion Energy sufficient information to allow Vermilion Energy to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Vermilion Energy on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Vermilion Energy a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Vermilion Energy advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Vermilion Energy 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Vermilion Energy a reasonable period for consultation in preparation of the EP, as evidenced by its response on 4 May 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Vermilion Energy is appropriate and adapted to the nature of interests of Vermilion Energy:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Vermilion Energy provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Vermilion Energy.
  - Made no changes or inclusions to the EP as a result of consultation with Vermilion Energy because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.8 Peak industry representative bodies

4.8.1 Australian Energy Producers (AEP)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed AEP advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AEP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AEP sufficient information to allow AEP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AEP on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed AEP a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to AEP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AEP 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed AEP a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AEP is appropriate and adapted to the nature of interests of AEP:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding AEP of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AEP did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AEP's functions, interests or activities.

4.9 Local government and elected parliamentary representatives, community groups or organisations

4.9.1 Carnarvon Chamber of Commerce and Industry; Exmouth Chamber of Commerce and Industry; Karratha & Districts Chamber of Commerce and Industry; Onslow Chamber of Commerce and Industry (collectively: Chambers of Commerce and Industry)

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 13 April 2026, Woodside emailed the Chambers of Commerce and Industry advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with the Chambers of Commerce and Industry for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Chambers of Commerce and Industry sufficient information to allow Chambers of Commerce and Industry to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Chambers of Commerce and Industry on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Chambers of Commerce and Industry a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to Chambers of Commerce and Industry advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Chambers of Commerce and Industry 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Chambers of Commerce and Industry a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Chambers of Commerce and Industry is appropriate and adapted to the nature of interests of Chambers of Commerce and Industry:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Chambers of Commerce and Industry of the opportunity to provide feedback.
- Woodside hosted CLG meetings in Exmouth and Karratha which were attended by representatives of Exmouth CCI and Karratha & Districts CCI, offering another opportunity for those chambers to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Chambers of Commerce and Industry did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Chambers of Commerce and Industry's functions, interests or activities.

4.9.2 Exmouth Community Liaison Group (Exmouth CLG)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Exmouth CLG advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 7 May 2026, Woodside presented to the Exmouth CLG on a number of Woodside activities including EP consultation (SI Report A, reference 22.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside presented slides on how it consults relevant persons in the course of preparing EPs and provided an overview of this EP. The slides included a QR code and a URL for the Consultation Activities page of the Woodside website.
- 8 CLG members attended the meeting representing:
  - Shire of Exmouth (3)
  - Gascoyne Development Commission (1)
  - Exmouth Chamber of Commerce and Industry (1)
  - Exmouth Volunteer Marine and Rescue (1)
  - Exmouth Freight and Logistics (1)
  - Terrafirma Offshore (1)
- No feedback was provided for this EP.

- On 3 June 2026, slides from the 7 May 2026 meeting were distributed to all members of the CLG.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Exmouth CLG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exmouth CLG sufficient information to allow Exmouth CLG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Exmouth CLG on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Exmouth CLG a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Exmouth CLG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Exmouth CLG 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Exmouth CLG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exmouth CLG is appropriate and adapted to the nature of interests of Exmouth CLG:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Exmouth CLG of the opportunity to provide feedback.
- On 7 May 2026, Woodside hosted an Exmouth CLG meeting during which this EP was discussed, offering another opportunity for members to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Exmouth CLG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exmouth CLG's functions, interests or activities.

4.9.3 Karratha Community Liaison Group (Karratha CLG)

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 1 April 2026, Woodside presented to the Karratha CLG on EP consultation requirements and Woodside activities, including activities for this EP (SI Report A, reference 23.1).
  - Woodside presented slides on how it consults relevant persons in the course of preparing EPs and advised consultation was coming up for this EP. The slides included a QR code and a URL for the Consultation Activities page of the Woodside website.
  - 5 CLG members attended the meeting representing:
    - Department of Education
    - Dampier Community Association
    - Karratha Central Healthcare
    - Karratha and Districts Chamber of Commerce and Industry
    - Bechtel
  - No feedback was provided for this EP.
- On 13 April 2026, Woodside emailed Karratha CLG advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Karratha CLG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Karratha CLG sufficient information to allow Karratha CLG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Karratha CLG on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Karratha CLG a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Karratha CLG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Karratha CLG 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Karratha CLG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Karratha CLG is appropriate and adapted to the nature of interests of Karratha CLG:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- On 1 April 2026, Woodside hosted a Karratha CLG meeting during which this EP was discussed, offering another opportunity for members to provide feedback.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Karratha CLG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Karratha CLG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Karratha CLG's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.9.4 City of Karratha

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed City of Karratha advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with City of Karratha for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given City of Karratha sufficient information to allow City of Karratha to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to City of Karratha on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed City of Karratha a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to City of Karratha advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed City of Karratha 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed City of Karratha a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with City of Karratha is appropriate and adapted to the nature of interests of City of Karratha:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding City of Karratha of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as City of Karratha did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on City of Karratha's functions, interests or activities.

4.9.5 Shire of Ashburton

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Shire of Ashburton advising of the proposed activity (Record of Consultation, reference 6.1.21), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Ashburton for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shire of Ashburton sufficient information to allow Shire of Ashburton to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Shire of Ashburton on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Ashburton a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Shire of Ashburton advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Ashburton 30 days for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Shire of Ashburton a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Ashburton is appropriate and adapted to the nature of interests of Shire of Ashburton:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Shire of Ashburton of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Ashburton did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Ashburton's functions, interests or activities.

4.9.6 Shire of Carnarvon

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Shire of Carnarvon advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Carnarvon for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shire of Carnarvon sufficient information to allow Shire of Carnarvon to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Shire of Carnarvon on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Carnarvon a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Shire of Carnarvon advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Carnarvon 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Shire of Carnarvon a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Carnarvon is appropriate and adapted to the nature of interests of Shire of Carnarvon:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Shire of Carnarvon of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Carnarvon did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Carnarvon's functions, interests or activities.

4.9.7 Shire of Exmouth

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Shire of Exmouth advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Exmouth for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Shire of Exmouth sufficient information to allow Shire of Exmouth to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Shire of Exmouth on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Exmouth a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Shire of Exmouth advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Exmouth 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Shire of Exmouth a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Exmouth is appropriate and adapted to the nature of interests of Shire of Exmouth:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Shire of Exmouth of the opportunity to provide feedback.
- On 7 May 2026, Woodside hosted an Exmouth CLG meeting which was attended by representatives of the Shire of Exmouth, offering another opportunity for Shire of Exmouth to provide feedback on this EP.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Exmouth did not provide feedback for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Exmouth's functions, interests or activities.

4.10 Other non-government groups or organisations (NGOs) or individuals

4.10.1 The Wilderness Society

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed TWS advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 8 May 2026, TWS emailed to thank Woodside for contacting it (SI Report A, reference 24.1). TWS raised **(1)** and **(2)**.
- On 19 May 2026, Woodside thanked TWS for the email (SI Report A, reference 24.2). Woodside responded to **(1)** and **(2)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) TWS set out reasons why it considered itself a relevant person but advised it would not provide feedback on the activity at this time.	**(1)** Woodside notes that TWS will not provide feedback at this time.	**(1)** Woodside acknowledged TWS's advice that it would not provide feedback at this time.	**(1)** No changes or additional measures required. Woodside's assessment of relevancy is set out in Appendix F, Table 1.
(2) TWS asked to be kept updated as the activity progressed as it may provide feedback in the future, and provided its preferred email address.	**(2)** Woodside will notify TWS of significant changes to the proposed activity, and will continue to review, assess and respond to relevant claims and objections about the adverse impact of the activity throughout the life of the EP.	**(2)** Woodside advised it would keep TWS informed of significant changes to the proposed activity, and that it continued to assess relevant feedback throughout the life of the EP, applying its Management of Change and Revision Process as appropriate.	**(2)** No changes or additional measures required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with TWS for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given TWS sufficient information to allow TWS to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to TWS on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed TWS a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to TWS advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed TWS 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed TWS a reasonable period for consultation in preparation of the EP, as evidenced by TWS's response on 8 May 2026.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with TWS is appropriate and adapted to the nature of interests of TWS:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding TWS of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as TWS did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on TWS's functions, interests or activities.

4.10.2 Telstra

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Telstra advising of the proposed activity (Record of Consultation, reference 6.1.10), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*. Woodside also provided a map of communication cables in relation to the activity (Record of Consultation, reference 6.1.6).
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 7 May 2026, Telstra responded to the consultation email for this EP (SI Report A, reference 25.1) asking for an additional Telstra contact to be added to Woodside's mailing list, and if there was a direct Woodside contact.
- On 12 May 2026, Woodside telephoned Telstra to provide general information on Woodside's consultation process (SI Report A, reference 25.2).
- On 13 May 2026, Woodside responded to Telstra in relation to this EP (SI Report A, reference 25.3). Woodside acknowledged that Telstra was already liaising with Woodside on general consultation processes and other EPs, and advised the best contact if Telstra had specific feedback on this EP. No response to this email was received.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Submarine communications infrastructure in proximity to the Operational Area is set out in Section 4.10.6 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Telstra for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Telstra sufficient information to allow Telstra to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Telstra on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Telstra a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Telstra advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Telstra 30 days for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Telstra a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Telstra is appropriate and adapted to the nature of interests of Telstra:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Telstra of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Telstra did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Telstra's functions, interests or activities.

4.11 Research institutes and local conservation groups or organisations

4.11.1 Cape Conservation Group (CCG)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed CCG advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CCG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CCG sufficient information to allow CCG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to CCG on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CCG a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to CCG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CCG 30 days for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed CCG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CCG is appropriate and adapted to the nature of interests of CCG:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding CCG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CCG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CCG's functions, interests or activities.

4.11.2 Protect Ningaloo

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Protect Ningaloo advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Protect Ningaloo for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Protect Ningaloo sufficient information to allow Protect Ningaloo to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Protect Ningaloo on 13 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Protect Ningaloo a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Protect Ningaloo advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Protect Ningaloo 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed Protect Ningaloo a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Protect Ningaloo is appropriate and adapted to the nature of interests of Protect Ningaloo:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside also consulted Protect Ningaloo's parent organisation, AMCS, for this EP, providing Protect Ningaloo with an additional avenue for providing feedback.
- In the absence of feedback, Woodside sent a follow-up consultation email on 4 May 2026, reminding Protect Ningaloo of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Protect Ningaloo did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Protect Ningaloo's functions, interests or activities.

4.12 Traditional custodians and nominated representative corporations

4.12.1 Buurabalayji Thalanyji Aboriginal Corporation (BTAC)

BTAC is established under the *Native Title Act 1993* (Cth) by the Thalanyji people to represent the Thalanyji people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Through conversations with BTAC outside of EP consultation, Woodside was advised of additional contacts within BTAC to forward EP information. Woodside forwarded this information to these contacts. This context and process demonstrates that Woodside's consultation approach with BTAC is appropriate and adapted to the nature and interests of BTAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed BTAC advising of the proposed activity (Record of Consultation, reference 6.1.28). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - **(1)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

- On 14 April 2026, Woodside forwarded BTAC the record of consultation email to further contacts within BTAC. Woodside also shared an overview of the upcoming EPs (SI Report B, reference 1.1.1).
- On 30 April 2026, Woodside emailed BTAC a reminder about the proposed activity (SI Report B, reference 1.1.2). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value Sea Country – connection to, access to and transfer of knowledge: • Enduring deep connection north of Onslow, extending out to Islands off the Pilbara coast including the Montebello, Barrow and Mackerel Islands. • Cultural obligation to care for environment and values of Sea Country.	**(1)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.28). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Resources including fish, shellfish, crabs, crustaceans, sea urchins, eggs, turtles, dugongs, flora and fauna associated with mangrove communities. • Artefacts and burials in coastal sand dunes. • Archaeological sites on Barrow and Montebello Islands. • Archaeological evidence of use of resources including fish, turtles, marine mammals, crocodiles, crabs and sea urchins. • Ceremonial sites (Thalu) for the increase of turtle, shark, ray, fish, squid, octopus, hill kangaroo and emu.			
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and publicly available literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because: • On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website. • Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than 3 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, but the group has done so in consultation for other activities or via desktop analysis of publicly available literature. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.2 Kariyarra Aboriginal Corporation (KAC)

Kariyarra is established under the *Native Title Act 1993* (Cth) by Kariyarra people to represent the Kariyarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

At the start of consultation, Woodside provided KAC a table of cultural values previously identified through consultation and reviews of publicly available literature. Woodside invited KAC to make changes or provide additional information about these cultural values. During a consultation meeting for this EP, KAC clarified the wording of a cultural value. Woodside has updated its records to reflect this. This context and engagement in this process demonstrates that Woodside's consultation approach with KAC is appropriate and adapted to the nature and interests of KAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed KAC advising of the proposed activity (Record of Consultation, reference 6.1.29). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - **(1,2,3,4,5,6,7,8,9)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1,2,3,4,5,6,7,8,9)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 13 April 2026, KAC emailed Woodside to ask whether Woodside would like to consult on this EP (SI Report B, reference 1.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 14 April 2026, Woodside replied to KAC noting the consultation dates for this and another EP. Woodside also welcomed the opportunity to meet to consult (SI Report B, reference 1.2.2).
- Between the 13 April 2026 and 7 May 2026, KAC and Woodside emailed to discuss meeting details, the consultation meeting quote and KAC's Meeting policy for the upcoming consultation meeting for this and another EP (SI Report B, Reference 1.2.3 - 1.2.16).
- On 8 May 2026, Woodside met with KAC to discuss this and another EP (SI Report B, reference 1.2.17). Relevant matters include:
  - Overview of the EP consultation process was discussed.
  - Woodside provided an activity overview of this and another EP including details of planned and unplanned activities.
  - **(10,11,12,13)** The group raised the following feedback for consideration within the EP.
  - **(10,11,12,13)** Woodside responded to and addressed feedback from the group.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value Marine Animals: • Management of sea turtle nesting. • Impacts to whale migration (whales are connected to Songlines). • Shellfish. • Cockles. • Oysters. • Clam shells. • Concha Shells (Nanku). • Mullets (fish). • Sea cow (dugong).	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). During consultation for this EP, KAC clarified the wording for Concha Shells (Nanku) during the consultation meeting. Woodside updated its records to reflect this.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(2) Cultural Value Sea Country:	**(2)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

• Cultural obligations to care for Country. • Secret habitat totems. • Access required for fishing, trapping, crabbing, catching turtle, hunting dugong, using stingray barbs for spears, collecting shellfish and visiting offshore islands at low tide.		invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(3) Cultural Value Yinta: • Significant cultural/spiritual sites often a water source but possibly other features such as hills. • Cultural rights to land to determine who can use or speak for an area.	**(3)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(4) Cultural Value Marine species as resources: • Marine mammals. • Fish. • Molluscs including bivalves, gastropods and cephalopods. • Shellfish, cockles, oysters, clam shells, concha shells (Nanku).	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(5) Cultural Value • Potential impacts on coastal landforms and vegetation.	**(5)** This value has been identified through Woodside's data collection processes (consultation).	**(5)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Consultation, 6.1.29). No changes were requested.	
(6) Cultural Value Heritage sites associated with the coast and ocean including the presence of mythical snakes: • Traditional knowledge recalls that a saltwater serpent lives in the sea and brings fish to shore.	**(6)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(6)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(6)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(7) Cultural Value Transfer of knowledge to future generations: • Impacts of species reduction. • Temporary exclusion to areas in the case of an oil spill etc.	**(7)** This value has been identified through Woodside's data collection processes (consultation).	**(7)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(7)** Knowledge of cultural values and heritage is presented in Section 4.9 of the EP. Impacts and risks to Indigenous cultural features and heritage values are assessed in Section 6.11 of the EP. Procedures related to an unplanned hydrocarbon release are identified in Appendix G - Oil Spill Preparedness and Response Mitigation Assessment and Appendix H – Oil Pollution First Strike Plan.
(8) Cultural value • Islands off the coast of Port Hedland are extremely important to KAC (Little Turtle, North Turtle and Bedout).	**(8)** This value has been identified through Woodside's data collection processes (consultation).	**(8)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(8)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(9) Cultural Value	**(9)**	**(9)** At the beginning of consultation for this EP, Woodside provided a list of the	**(9)** Woodside has updated Section 4.9 to record these interests and cultural

No changes were requested.	values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(10) KAC noted that engagement on EPs should not be limited to meeting with the CEO; Directors should also be engaged.	**(10)** Woodside acknowledges KAC's preference for consultation to involve Directors.	**(10)** Woodside considers that its consultation approach provides an opportunity for consultation information to be shared with KAC Directors, the Board, Elders, office holders and other interested parties as outlined in the Record of Consultation.	**(10)** No action required.
(11) KAC asked how common small, unplanned spills are and what is the threshold for action.	**(11)** Woodside takes a robust and systematic approach to environmental management of petroleum activities.	**(11)** Woodside explained that small, unplanned spills are more likely to occur compared with larger well blowouts or vessel collisions. These spills of chemicals and hydrocarbons are typically small volumes and are required to be submitted to NOPSEMA through monthly incident reporting regardless of volume.	**(11)** Risks arising from unplanned spills are assessed in Section 6.8 and 6.9 of the EP. As well as in Appendix H – Oil Pollution First Strike Plan.
(12) KAC asked what a planned discharge look like (e.g., sewage) and what are the actual levels?	**(12)** Woodside has controls in place to manage planned discharges in accordance with its regulatory obligations.	**(12)** Woodside explained that discharge levels vary due to personnel numbers onboard and operational activity and are managed to be as low as reasonably practicable (ALARP).	**(12)** Planned discharges are described and assessed in Section 6.7 of the EP.
(13) KAC asked if vessels/platforms have weather tracking systems.	**(13)** Weather conditions can influence offshore operations and emergency response activities. Woodside considers that the use of weather forecasting and monitoring information forms part of	**(13)** Woodside noted that vessels/platforms typically have oil spill tracker buoys onboard that can be activated/deployed	**(13)** No action required.

	standard operational and risk management processes for offshore activities.	to move with waves and provide raw swell movement data.	
While feedback has been received, there were no objections or claims.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and publicly available literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	Based on the engagement to date, no additional measures or controls required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than 3 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions and met to discuss the proposed activity.
- Throughout the consultation period, Woodside has had direct contact lines during the consultation period. This included multiple emails, phone calls and meetings.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Feedback was provided during consultation for this EP relating to cultural values, in addition to cultural values obtained throughout consultation for other activities or via desktop analysis of publicly available literature. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, the group provided feedback but no objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.3 Malgana Aboriginal Corporation (Malgana)

Malgana is established under the *Native Title Act 1993* (Cth) by the Malgana people to represent the Malgana people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Malgana advising of the proposed activity (Record of Consultation, reference 6.1.30). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the proposed activity.
- Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
- **(1,2,3,4,5)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
- **(1,2,3,4,5)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.

- On 30 April 2026, Woodside emailed Malgana a reminder about the proposed activity (SI Report B, reference 1.3.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value Interest in Shark Bay: • Unique environment. • Stromatolites and microbial mats. • Seagrass.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(2) Cultural value Access to Country for resources: • Bird and turtle eggs. • Dugongs. • Turtle. • Fish including sharks. • Shellfish. • Crabs.	**(2)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(3) Cultural value • Traditional knowledge of freshwater seeps in the submerged landscape.	**(3)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(4) Cultural value Cultural significant species: • Green sea turtles. • Dugongs. • Shags. • Bottlenose dolphins.	**(4)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(5) Cultural value Knowledge: • Sharing and controlling of knowledge – knowledge owners must maintain control.	**(5)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(5)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Transfer of knowledge to younger generations – older people pass on knowledge about Country to younger people.		Consultation, 6.1.30). No changes were requested.	included controls in Sections 6.7, 6.8, 6.9 and 6.11.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and publicly available literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, however information relating to the group's cultural values has been obtained during consultation for other activities or via desktop analysis of publicly available literature. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.4 Murujuga Aboriginal Corporation (MAC)

MAC is established under the Burrup and Maitland Industrial Estates Agreement and is the representative body for the Traditional Custodians for Murujuga being the Ngarluma, the Mardudhunera, the Yaburara, the Yindjibarndi, and the Wong-Goo-Tt-Oo peoples (collectively Ngarda-Ngarli). MAC is the cultural authority for Murujuga and is responsible for the management and protection of its cultural values.

At the start of consultation, Woodside provided MAC a table of cultural values previously identified for MAC through consultation and reviews of publicly available literature. Woodside invited MAC to make changes or provide additional information about these cultural values. During consultation for this EP, MAC wrote to Woodside to provide feedback on this EP and provide additional context on the cultural values shared by Woodside. Woodside has updated the

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

EP to reflect this, and if relevant, potential impacts assessed and controls applied. This context and process demonstrates that Woodside's consultation approach with MAC is appropriate and adapted to the nature and interests of MAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed MAC advising of the proposed activity (Record of Consultation, reference 6.1.31). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - **(1,2,3,4,5,6,7,8)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1,2,3,4,5,6,7,8)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed MAC a reminder about the proposed activity (SI Report B, reference 1.4.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 12 May 2026, MAC emailed Woodside a letter relating to this and another EP (SI Report B, reference 1.4.2). Relevant items include:
  - **(9,10,11,12,13)** The group raised the following feedback for consideration within the EP.
- On 15 June 2026, Woodside emailed MAC to address feedback from the letter dated 12 May 2026 (SI Report B, reference 1.4.3). Relevant items include:
  - **(9,10,11,12,13)** Woodside responded to and addressed feedback from the group.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value • The ecosystem and health of Mermaid Sound.	**(1)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.31). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(2) Cultural value Marine species: • Whales – totemic importance. • Dolphins – cultural ceremonies. • Dugongs – food source. • Fish – cultural ceremonies. • Sea snakes – culturally important. • Turtles – Songlines. • Coral – attract fish and other species. • Seagrass – provide protection for animals. Locations include Conzinc Island and between Angel and Gidley Islands. • Stingrays. • Sharks. • Crustaceans. • Octopus.	**(2)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.31). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Sea stars. • Sea urchins. • Sponges. • Molluscs			
(3) Cultural value Marine eco-systems: • Mangroves: would have provided shelter, crabbing, digging for shellfish and could be turtle nurseries. Locations include Conzinc Bay north end, Flying Foam Passage, Searipple Passage, North-East Bay of West Lewis Island. • Macroalgal (seaweed) communities: important habitats and food sources. • Subtidal soft bottom communities (ocean bottom): support invertebrate diversity. • Intertidal sand and mudflat communities: support invertebrate diversity and provide food for shorebirds. • Rocky shores: habitats for plants/animals and provide food for shorebirds.	**(3)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.31). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(4) Cultural value • Fish traps in Conzinc Bay and Angel and Gidley Islands.	**(4)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

		additional information (See Record of Consultation, 6.1.31) No changes were requested.	included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(5) Cultural value • Harvesting squid around Conzinc Bay.	**(5)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(5)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.31). No changes were requested.	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(6) MAC is the appropriate cultural authority for Murujuga.	**(6)** This value has been identified through Woodside's data collection processes (consultation).	**(6)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.31). No changes were requested.	**(6)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(7) Cultural value Submerged landscape: • Potential impact on Jinna (Songlines). • Potential impact to Aboriginal heritage due to the submerged coastline at initial occupation of the region, landscape features that would have defined the first travel routes used to move through Country.	**(7)** This value has been identified through Woodside's data collection processes (consultation).	**(7)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.31). No changes were requested.	**(7)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(8) Cultural value Murujuga seasonal calendar: • Any change to the feeding, breeding or migratory behaviour of culturally significant species would impact significantly on subsistence, cultural and ceremonial activities.	**(8)** This value has been identified through Woodside's data collection processes (consultation).	**(8)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.31). No changes were requested.	**(8)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(9) MAC advised that the cultural values attachment does not appear to be a comprehensive assessment of values and the attachment remains limited. MAC requested that Woodside clearly identify within the EPs what efforts have gone into identify cultural values that may be impacted by their proposed works and how these have been incorporated into specific management actions.	**(9)** Woodside notes that the cultural values attachment is not intended to be a comprehensive assessment of cultural values and welcomes groups to provide additional information. Cultural information provided through consultation, together with desktop studies, is considered in the assessment of impacts and development of management measures, where relevant to the activity. The potential risks and impacts associated with the proposed activities are described in the Consultation Information Sheet. A link to this document was provided to MAC via Woodside's initial consultation email for the EPs dated 13 April 2026.	**(9)** Woodside responded to MAC and noted that Attachment A reflects information previously shared by MAC, as well as information stated as explicitly relevant to MAC sourced through reviews of publicly available literature. The attachment is not intended to represent a comprehensive or final assessment of cultural values. Woodside advised the purpose of EP consultation is to understand how the proposed activities in the EPs could potentially impact cultural values, functions, interests, and activities. This allows Woodside, in the course of developing the EPs, to assess feedback, and where relevant to the activity, consider appropriate control measures to include in the EPs.	**(9)** Cultural values identified through consultation and desktop studies, and the assessment of potential impacts and controls, are described in Sections 4.9 of the EP.
(10) MAC advised that any development that could potentially affect the natural movement, migration and/or other behaviour of marine species may have an impact on the cultural interpretation of the seasonal landscape and seascape and associated cultural behaviours. MAC also advised	**(10)** This value has already been identified through Woodside's data collection processes (consultation). However, the added contextual information provided by MAC will be considered alongside the current assessment of information where relevant.	**(10)** Woodside advised that this information is already recorded Attachment A. Woodside noted that updated contextual information will be included so it is considered alongside the current assessment of information where relevant. Woodside invite MAC to continue to identify the potential impacts	**(10)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

that any impact to the ocean floor should be considered in terms of its potential impact to submerged landscapes and the preservation of earliest human occupation of the region.		to cultural heritage and cultural values by the proposed activities under consideration in EPs through ongoing consultation and engagement with Woodside. Woodside will continue to provide the cultural values document in future EP consultation with MAC to support ongoing review and accuracy.	
(11) MAC advised that whilst the protection of environmental values is a significant aspect of protecting cultural values, the nature and threshold of impact must be assessed separately.	**(11)** Woodside undertakes assessments for both environmental and cultural values. These are considered individually and collaboratively.	**(11)** Woodside advised potential impacts to cultural heritage and cultural values are considered through Woodside's established cultural heritage management and consultation processes, which recognise that cultural values are not always fully captured through environmental or scientific assessment alone. Consultation seeks to understand the cultural, social and spiritual significance of places, species and seasonal indicators, and how changes to environmental conditions may have associated potential cultural impacts. Information provided through consultation informs the identification of potential cultural heritage impacts and if relevant, supports the consideration and where appropriate the adoption of management and mitigation measures, in addition to broader environmental controls. Where group-specific cultural information is shared, this is considered alongside environmental risk assessment to support culturally informed decision-making and ongoing management.	**(11)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(12)	**(12)**	**(12)**	**(12)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

MAC requested that Woodside notify MAC in advance of any extended or non-routine offshore operations in the vicinity of the Dampier Archipelago, including unplanned extensions to activities in this area.	Woodside acknowledges MAC's request regarding notification of extended or non-routine offshore operational activities in the vicinity of the Dampier Archipelago relevant to MAC's air quality monitoring programs. Woodside is supportive of the Murujuga Rock Art Monitoring Program (MRAMP) where the main focus is on sources in and around the Murujuga airshed, which in terms of Woodside activities include the Karratha Gas Plant (KGP) and Pluto LNG Plant. Activities covered by this EP are not anticipated to influence MAC's monitoring programs and relevant notification arrangements are managed through separate approval processes where applicable.	Woodside advised MAC that offshore operational activities undertaken in Commonwealth Waters are relevant to direct emissions which occur from the facility or associated vessels. Direct emissions from the proposed activities identified in the EP, even in the event of extended or non-routine activities, are not anticipated to influence monitoring results, data interpretation, and reporting for MRAMP. The associated onshore emissions which are relevant to the scope of MRAMP occur at KGP, as a result of processing gas produced and transported onshore from Goodwyn Alpha Facility (and other offshore facilities). Woodside confirmed notifications to MAC in the context of onshore activities and associated emissions are more appropriately managed by the primary and secondary approvals for KGP, including but not limited to various onshore management plans (such as the Air Quality of Cultural Heritage Management Plan) required under Ministerial Statement 1233 for ongoing operations at KGP.	No action required.
(13) MAC advised that in the event of an environmental incident whereby Murujuga falls within the possible impact zone, MAC must be contacted for comment and a review of management actions.	**(13)** Woodside has incident response and notification procedures in place, consistent with regulatory requirements, that include notification of relevant cultural authorities in the event of an environmental incident. Should an incident occur over Murujuga Sea Country, MAC would be contacted as part of this process.	**(13)** Woodside advised that should an incident occur over Murujuga Sea Country, MAC would be contacted.	**(13)** Refer to Section 6.11 of the EP (Indigenous Cultural Features and Heritage Values), including MC 10.5.1 relating to consultation and notification following relevant environmental incidents in line with Appendix H – Oil Pollution First Strike Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	Based on the engagement to date, no additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Additional contextual information was provided during consultation for this EP relating to cultural values, in addition to cultural values obtained throughout consultation for other activities and publicly available literature. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, the group provided feedback but no objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.5 Nanda Aboriginal Corporation (Nanda)

Nanda is established under the *Native Title Act 1993* (Cth) by the Nanda people to represent the Nanda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

At the start of consultation, Woodside provided Nanda a table of cultural values previously identified through consultation and reviews of publicly available literature. Woodside invited Nanda to make changes or provide additional information about these cultural values. During consultation for this EP, Nanda emailed Woodside to provide additional cultural values. Woodside has updated the EP to reflect this, with potential impacts assessed and relevant controls applied. This context and process demonstrates that Woodside's consultation approach with Nanda is appropriate and adapted to the nature and interests of Nanda.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Nanda advising of the proposed activity (Record of Consultation, reference 6.1.32). The email included:
  - A Summary Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to the Consultation Information Sheet.
- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
- **(1,2,3,4,5)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
- **(1,2,3,4,5)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.

- On 30 April 2026, Woodside emailed Nanda a reminder about the proposed activity (SI Report B, reference 1.5.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 14 May 2026, Nanda emailed Woodside a letter relating to this and another EP (SI Report B, reference 1.5.2). Relevant items include:
  - **(6,7,8,9,10)** The group raised the following feedback for consideration within the EP.
- On 18 May 2026, Nanda resent the same email dated 14 May 2026 (SI Report B, reference 1.5.3).
- On 15 June 2026, Woodside emailed Nanda to address feedback from the email dated 14 May 2026 (SI Report B, reference 1.5.4). Relevant items include:
  - **(6,7,8,9,10)** Woodside responded to and addressed feedback from the group.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(1) Cultural value Connection to Country: • Kalbarri Coastal Cliffs: Dreamtime, mythological/creation stories. • Archaeological sites. • Red sandstone outcrops. • Fresh water springs. • Artefacts abundant on islands adjacent to the state marine park.	**(1)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.32). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(2) Cultural value • Shorelines are culturally significant.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.32). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(3) Cultural value • Whales – migration patterns.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.32). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(4) Cultural value Abrolhos Islands and North Island: • Artefacts. • Historical significance.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		additional information (See Record of Consultation, 6.1.32) No changes were requested.	included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(5) Cultural value White snow crabs: • Food sources.	**(5)** This value has been identified through Woodside's data collection processes (consultation).	**(5)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.32). No changes were requested.	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(6) Cultural value • Coastlines - Nanda has a rich cultural heritage landscape that spans the entire coastline as can be seen by all the registered sites that are currently recorded on the Aboriginal Cultural Heritage Inquiry System (ACHIS).	**(6)** Woodside acknowledges the cultural significance of coastlines and the broader cultural heritage landscape extending across the Nanda coastline. The information provided is relevant to understanding Nanda's cultural values and has been incorporated into Woodside's assessment of potential impacts on cultural values, where relevant to the Petroleum Activity.	**(6)** Woodside replied to Nanda's email and thanked Nanda for providing this information and updated its record of Nanda cultural values. Woodside assessed whether the proposed activity presents an impact pathway to these values and noted that no shoreline accumulation is predicted from the activity. Woodside invited Nanda to continue providing information regarding cultural heritage values through ongoing consultation.	**(6)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(7) Cultural value • Heritage Sites (known and unknown) including artefact scatters, burials as well as ethnographic sites related to the Nanda dreaming story (most notably Bula Guda and Nungingay Spring).	**(7)** Woodside acknowledges the significance of known and potential Aboriginal heritage places and ethnographic values to the Nanda People. The information provided by Nanda supplements existing information available to Woodside and has been incorporated into Woodside's assessment of potential impacts on	**(7)** Woodside advised that it conducts ACHIS searches to identify known registered and lodged heritage sites that may overlap with an EP area and recognises that ACHIS records are not exhaustive. Woodside updated its record of Nanda cultural values and invited Nanda to continue identifying cultural heritage values and potential impacts through ongoing consultation.	**(7)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	cultural values, where relevant to the Petroleum Activity.		
(8) Cultural value • Presence of submerged cultural landscapes - The sea shelf along this shoreline is very shallow, from 10m up to 125m, so there is a strong possibility that submerged cultural heritage may be present, as has been exemplified by the Murujuga site complex further north.	**(8)** Woodside acknowledges the cultural significance of the potential presence of submerged cultural heritage and submerged cultural landscapes within the region. The information is relevant to Woodside's consideration of underwater cultural heritage and has been considered in the assessment of potential impacts associated with planned seabed disturbance activities, where relevant.	**(8)** Woodside advised that during the preparation of an EP, it considers available information relating to potential underwater cultural heritage using a risk-based approach. Where seabed disturbance is proposed, Woodside engages qualified maritime archaeologists to undertake underwater cultural heritage assessments, including consideration of submerged cultural landscapes. Assessment outcomes are used to inform management measures to avoid or minimise potential impacts.	**(8)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(9) Nanda requested that Woodside to assist Nanda to carry out comprehensive research on land and sea country to help provide Nanda with assurance that their heritage is properly surveyed and recorded in detail.	**(9)** Woodside notes Nanda's request for further research relating to land and sea country.	**(9)** Woodside advised that it is open to exploring research on land and sea country as part of broader discussions where Woodside activities are relevant to Nanda's footprint.	**(9)** No action required.
(10) Nanda requested these conversations to include discussion around the rehab of sites if they are damaged by Woodside's activities.	**(10)** Woodside notes Nanda's request for discussions regarding rehabilitation of sites if damaged. In the highly unlikely event of a spill, Woodside would notify relevant cultural authorities. There is no expected impact pathway to Nanda's coastline.	**(10)** Woodside also advised that incident response and notification procedures are in place, consistent with regulatory requirements, including notification of relevant cultural authorities where required. Remediation or rehabilitation measures would be determined based on the nature of any incident, regulatory requirements and consultation with relevant persons.	**(10)** No action required. Existing incident response, notification and consultation arrangements are considered adequate.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation. The consultation period extended beyond the 30-day period.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Feedback was provided during consultation for this EP relating to cultural values, in addition to cultural values obtained throughout consultation for other activities or via desktop analysis of publicly available literature. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, the group provided feedback but no objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.6 Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)

NTGAC is established under the *Native Title Act 1993* (Cth) by the Baiyungu people to represent the Baiyungu people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NTGAC advising of the proposed activity (Record of Consultation, reference 6.1.33). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
- (1) A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.

- On 30 April 2026, Woodside emailed NTGAC a reminder about the proposed activity (SI Report B, reference 1.6.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value Marine ecosystems and species: • Interest in invasive marine species. • Interest in chemicals released into water – ballast water discharge. • Marine parks – risks. • Whales. • Whale sharks.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.33). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, but the group has done so in for other activities consultation or via desktop analysis of publicly available literature. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.7 Ngarluma Aboriginal Corporation (NAC)

NAC is established under the *Native Title Act 1993* (Cth) by the Ngarluma people to represent the Ngarluma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NAC advising of the proposed activity (Record of Consultation, reference 6.1.34). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1,2,3)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
- **(1,2,3)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

- On 30 April 2026, Woodside emailed NAC a reminder about the proposed activity (SI Report B, reference 1.7.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 3 June 2026, NAC, WAC and Wong-Goo-Tt-Oo attended a Quarterly Heritage Meeting in Karratha (SI Report B, reference 5.1). Matters discussed included:
  - Woodside showed a video explaining environmental impact assessments.
  - Woodside noted upcoming EP dates.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value • Onshore Heritage – interest in management of heritage sites.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Consultation, 6.1.34). No changes were requested.	included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(2) Cultural value • Potential submerged heritage.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.34). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(3) Cultural value • Manggan (Creative beings) used supernatural force to shape the hills, rivers, seas and landform.	**(3)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.34). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and publicly available literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically: **Sufficient Information**			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.
- Woodside hosts Heritage Meetings.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, but the group has done so in consultation for other activities or via desktop analysis of publicly available literature. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.8 Nhuwala Claim Group (Nhuwala)

The Nhuwala Claim Group Native Title claim is in Western Australia's Pilbara region within the Shire of Ashburton. The application area covers around 3,475 square kilometres near the town of Onslow. Nhuwala is represented by YMAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Nhuwala (via YMAC) advising of the proposed activity (Record of Consultation, reference 6.1.34). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed Nhuwala (via YMAC) a reminder about the proposed activity (SI Report B, reference 1.8.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a “reasonable period” of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside’s approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside’s initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside’s Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.9 Nhuwala / Thalanyji People (Nhuwala / Thalanyji)

The Thalanyji / Nhuwala People Native Title claim is in Western Australia’s Pilbara region within the Shire of Ashburton. The application area consists of multiple parts with a total combined area of around 2,058 square kilometres in an area surrounding Onslow. The Thalanyji / Nhuwala People have legal representation and are associated with BTAC. Woodside has consulted with the Thalanyji / Nhuwala People via BTAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Nhuwala / Thalanyji (via BTAC) advising of the proposed activity (Record of Consultation, reference 6.1.36). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.

• On 30 April 2026, Woodside emailed Nhuwala / Thalanyji (via BTAC) a reminder about the proposed activity (SI Report B, reference 1.9.1). The email included:

- A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
- A reminder that consultation for the preparation of the EP closes on 12 May 2026.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.10 Nyangumarta Warrarn Aboriginal Corporation (NWAC)

NWAC is established under the *Native Title Act 1993* (Cth) by the Nyangumarta people to represent the Nyangumarta people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NWAC advising of the proposed activity (Record of Consultation, reference 6.1.37). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - **(1,2)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1,2)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed NWAC a reminder about the proposed activity (SI Report B, reference 1.10.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.			
Summary of Feedback, Objection or Claim	**Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity**	**Woodside's Response**	**Inclusion in Environment Plan**
(1) Cultural value • Eighty Mile Beach has cultural and ecological value to the Nyangumarta Custodians.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.37). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11. .
(2) Cultural value Resource Collection: • Impacts to migrating birds, whales, turtles and vegetation.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.37). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, but the group has done so in consultation for other activities. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.11 Robe River Kuruma Aboriginal Corporation (RRKAC)

RRKAC is established under the *Native Title Act 1993* (Cth) by the Robe River Kuruma people to represent the Robe River Kuruma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed RRKAC advising of the proposed activity (Record of Consultation, reference 6.1.38). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - **(1, 2)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1, 2)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 30 April 2026, Woodside emailed RRKAC a reminder about the proposed activity (SI Report B, reference 1.11.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value • Concerns about underwater heritage – impacts at shoreline.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.38). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(2) Cultural value • Coastline.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.38). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered	Woodside engages in ongoing consultation throughout the life of an EP. 	relevant have been identified and included based on consultation.	assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, but the group has done so in consultation for other activities. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.12 Wanparta Aboriginal Corporation (Wanparta)

Wanparta is established under the *Native Title Act 1993* (Cth) by the Ngarla people to represent the Ngarla people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. Wanparta are represented by a law firm, therefore Woodside consult Wanparta through a legal representative.

At the start of consultation, Woodside provided Wanparta a table of cultural values previously identified through consultation and reviews of publicly available literature. Woodside invited the group to make changes or provide additional information about these cultural values. During consultation for this EP, Wanparta requested a consultation meeting. During this meeting Wanparta shared additional information with Woodside. We understand this new information to also be relevant to the activities described within this EP and have updated the EP to reflect this, with potential impacts assessed and relevant controls applied. This context and process demonstrates that Woodside's consultation approach with Wanparta is appropriate and adapted to the nature and interests of Wanparta.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Wanparta advising of the proposed activity (Record of Consultation, reference 6.1.39). The email included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - **(1,2,3,4)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1,2,3,4)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed Wanparta a reminder about the proposed activity (SI Report B, reference 1.12.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 8 May 2026, Wanparta (via legal representative) emailed Woodside noting a date to meet and consult on this EP (SI Report B, reference 1.12.2).
- On 11 May 2026, Woodside emailed Wanparta (via legal representative) agreeing to meet on the proposed day to consult on this EP (SI Report B, reference 1.12.3).
- Between 11 May 2026 and 8 June 2026, Woodside and Wanparta (via legal representative) emailed to discuss meeting details, the agenda and the consultation cost (SI Report B, reference 1.12.4 – 1.12.9).
- On 9 June 2026, Wanparta emailed Woodside advising that several directors would not be able to attend in person (SI Report B, reference 1.12.10)
- On 9 June 2026, Woodside met with Wanparta to discuss this and another EP (SI Report B, reference 1.12.11). Relevant matters include:
  - Overview of the EP consultation process was discussed.
  - Woodside provided an activity overview of this and another EP including details of planned and unplanned activities.
  - **(1,5,6,7,8,9,10,11,12,13)** The group raised the following feedback for consideration within the EP
  - **(1,5,6,7,8,9,10,11,12,13)** Woodside responded to and addressed feedback from the group.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(11)** On 10 June 2026 Woodside emailed Wanparta (via legal representative) thanking them for the consultation meeting and provided information pertaining to the National Energy Training Scheme (NETTS) (SI Report B, reference 1.12.12)
- On 15 June 2026, Wanparta (via legal representative) emailed Woodside to thank them for the NETTS information (SI Report B, reference 1.12.13).
- On 1 July 2026, Woodside emailed Wanparta (via legal representative) to confirm if final invoice had been sent through (SI Report B, reference 1.12.14).
- On 2 July 2026, Wanparta emailed Woodside a letter relating to this EP (SI Report B, reference 1.12.15). Relevant items include:
  - **(1,7,9,14)** The group raised the following feedback for consideration within the EP.
- On 3 July 2026, Wanparta emailed Woodside advising final invoice has not been submitted (SI Report B, reference 1.12.16, 1.12.17)
  - Woodside responded acknowledging the email.
- On 6 July 2026, Wanparta (via legal representative) emailed Woodside to confirm if the letter had been received (SI Report B, reference 1.12.18).
- On 7 July 2026, Woodside emailed Wanparta (via legal representative) to confirm the letter had been received (SI Report B, reference 1.12.19).
- On 28 July 2026, Woodside emailed Wanparta (via legal representative) a letter relating to this EP (SI Report B, reference 1.12.20).
  - **(1,7,9,14)** Woodside responded to and addressed feedback from the group.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value Sea Country: • Spiritual connection. • Cultural obligation to look after Sea Country. • A healthy Sea Country leads to healthy marine life and healthy Ngarla People. • Importance of fish stocks. During consultation for this EP, Wanparta raised further cultural values relating to Sea Country:	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.39). On 9 June 2026 and within a follow up letter dated 2 July 2026, Wanparta raised further cultural records relating to Sea Country. Woodside has updated its records.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Best way to protect Sea Country is through engagement with Ngarla rangers. • Coastline – spiritually and as a way of living. • Ngarla are responsible for caring for now and into the future. • By caring for Ngarla Country, the spirits look after Ngarla people.			
(2) Cultural value Dreamtime stories connected to nearshore islands particularly Solitary Island / Jarrkunpungu: • Dreaming stories through the interconnecting islands. • Dreamtime stories through the nearshore islands. • There is ethnohistorical evidence of Ngarla occupation on these islands.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.39). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(3) Cultural Value: Sea (fresh and salt water): • Dreaming stories. • A responsibility to look after the ocean (law and culture).	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.39). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(4) Cultural value Totemic species: • Kestrel.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

	regulator, NOPSEMA and any relevant cultural authorities that may be affected.	activities and that opportunities for involvement continue to be explored. Woodside also advised that rangers have previously participated in cross-industry oil spill response exercises.	
(13) Wanparta asked if there is potentially an oil spill on Wanparta Country, is Woodside open to completing Cultural Awareness Training before coming on Country.	**(13)** Cultural awareness is incorporated into onboarding and workforce training.	**(13)** During the consultation meeting on 9 June 2026, Woodside explained that cultural awareness is incorporated into onboarding and workforce training. This includes information relevant to working respectfully on Country and recognising Aboriginal cultural values.	**(13)** No action required.
(14) Wanparta requested that Woodside attends at least one Board meeting per calendar year.	**(14)** Woodside appreciates Wanparta's invitation to attend at least one annual Board meeting.	**(14)** Woodside advised that it appreciates Wanparta's invitation to attend at least one annual Board meeting per calendar year and remains open to additional engagement opportunities in the future.	**(14)** No action required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	Based on the engagement to date, no additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because: • On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website. • Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation. The consultation period extended beyond the 30-day period.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions and met on 9 June 2026 to discuss the proposed activity.
- Throughout the consultation period, Woodside has had direct contact lines during the consultation period. This included multiple emails, meetings and letters.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Feedback was provided during consultation for this EP relating to cultural values, in addition to cultural values obtained throughout consultation for other activities. Woodside has incorporated the groups interests and cultural values in Section 4.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- During the past 3 months, the group provided feedback but no objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.13 Wirrawandi Aboriginal Corporation (WAC)

WAC is established under the *Native Title Act 1993* (Cth) by the Mardudhunera and Yaburara people to represent the Mardudhunera and Yaburara people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed WAC advising of the proposed activity (Record of Consultation, reference 6.1.41). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - **(1,2,3,4)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1,2,3,4)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed WAC a reminder about the proposed activity (SI Report B, reference 1.13.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Woodside's commitment to managing gender-restricted or other culturally sensitive information.
– Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after.

- On 3 June 2026, NAC, WAC and Wong-Goo-Tt-Oo attended a Quarterly Heritage Meeting in Karratha (SI Report B, reference 5.1). Matters discussed included:
  – Woodside showed a video explaining environmental impact assessments.
  – Woodside noted upcoming EP dates.an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value Marine species: • Whales – migration and potential impact of noise on whale communication. • Turtles – general interest around management and monitoring.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.41). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(2) Cultural value Rock art: • Potential impact of emissions from activities.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.41). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11. .
(3) Cultural value Underwater heritage: • Impacts particularly given recent finding of artefacts.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

		additional information (See Record of Consultation, 6.1.41). No changes were requested.	included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(4) Cultural value Onshore heritage: • Management of sites.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.41). No changes were requested.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.
- Woodside hosts Heritage Meetings.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, but the group has done so in consultation for other activities. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.12.14 Wong-Goo-Tt-Oo

MAC has members from five traditional custodial groups from the Pilbara region of Western Australia. These groups are the Ngarluma, Yaburara, Mardudhunera, Yindjibarndi, and Wong-Goo-Tt-Oo peoples. Wong-Goo-Tt-Oo is part of the Ngarda Ngarli which is the collective term for the five Traditional Owner groups of Murujuga. Wong-Goo-Tt-Oo has requested to be consulted separately from MAC. Wong-Goo-Tt-Oo has been assessed as not relevant to the proposed activity. Woodside chose to contact Wong-Goo-Tt-Oo at its discretion.

Summary of information provided and record of consultation for this EP:

- On 24 April 2026, Woodside emailed Wong-Goo-Tt-Oo advising of the proposed activity (Record of Consultation, reference 6.1.40). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 25 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed Wong-Goo-Tt-Oo a reminder about the proposed activity (SI Report B, reference 1.14.1). The email included:
  - A reference to the original consultation email for this EP sent on 24 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 25 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 24 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 24 April 2026 and requested feedback by 25 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 24 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.12.15 Yindjibarndi Aboriginal Corporation (Yindjibarndi)

Yindjibarndi is established under the *Native Title Act 1993* (Cth) by the Yindjibarndi people to represent the Yindjibarndi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. Yindjibarndi has formally notified Woodside that all oil and gas matters relating to Yindjibarndi are to be directed to NYFL, which is Yindjibarndi's Native Title Representative Body.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Yindjibarndi advising of the proposed activity (Record of Consultation, reference 6.1.42). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 30 April 2026, Woodside emailed Yindjibarndi a reminder about the proposed activity (SI Report B, reference 1.15.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

	about the adverse impact of the activity		
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.12.16 Yinggarda Aboriginal Corporation (YAC)

YAC is established under the *Native Title Act 1993* (Cth) by the Yinggarda people to represent the Yinggarda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed YAC advising of the proposed activity (Record of Consultation, reference 6.1.43). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - **(1,2,3,4)** Information on the cultural values related to the group that Woodside considers relevant to the activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1,2,3,4)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.

- On 30 April 2026, Woodside emailed YAC a reminder about the proposed activity (SI Report B, reference 1.16.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value • Right and responsibility to speak and care for Country.	**(1)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.43). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(2) Cultural value	**(2)** This value has been identified through Woodside's data collection processes	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential

Contemporary use of Country for cultural activities: • Fishing including for Shark Bay mullet. • Camping. • Hunting and gathering.	(consultation and publicly available literature).	believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.43). No changes were requested.	impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(3) Cultural value Ecosystem health: • Plants and animals and the environment are inexorably linked to culture. • Seagrass is an important food. source for dugongs.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.43). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(4) Cultural value Marine mammals: • Dugongs. • Whales (potential impact to migration patterns and potential collisions with vessels).	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.38). No changes were requested.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and publicly available literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, but the group has done so in for other activities consultation or via desktop analysis of publicly available literature. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.13 Native Title representative bodies

4.13.1 Kimberley Land Council (KLC)

Kimberley Land Council is the Native Title Representative Body for the Kimberley region of Western Australia. As such, it is not a Prescribed Body Corporate or Registered Native Title Body Corporate but exists to assist Native Title claimants and holders. During consultation for this EP, KLC advised that there has been staffing changes. Woodside updated its records to reflect this.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed KLC advising of the proposed activity (Record of Consultation, reference 6.1.44). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed KLC a reminder about the proposed activity (SI Report B, reference 2.1.1). The email included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
- A reminder that consultation for the preparation of the EP closes on 12 May 2026.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 5 May 2025, KLC emailed Woodside to note staffing changes (SI Report B, reference 2.1.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.13.2 Yamatji Marlpa Aboriginal Corporation (YMAC)

YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community but exist to assist native title claimants and holders.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed YMAC advising of the proposed activity (Record of Consultation, reference 6.1.45). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed YMAC a reminder about the proposed activity (SI Report B, reference 2.2.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.14 Self-identified Indigenous Groups

4.14.1 Ngarluma Yindjibarndi Foundation Ltd (NYFL)

NYFL was created to act as Trustee for the Trust under the *Northwest Shelf Agreement 1998* struck between the Ngarluma and Yindjibarndi registered native title claimants, the NWS JVs and Woodside, prior to the resolution of the Ngarluma and Yindjibarndi native title claim. Its purpose is to carry on the business of enterprise development, investment and social welfare.

In 1999 the Ngarluma and Yindjibarndi native title claim was settled with the Federal Court appointing, at the request of the common law native title holders, the Ngarluma Aboriginal Corporation (NAC) as PBC to represent the communal interests of the Ngarluma people and the Yindjibarndi Aboriginal Corporation as PBC to represent the communal interests of the Yindjibarndi people. Woodside consulted both NAC and Yindjibarndi as relevant persons in the course of preparing this EP. NYFL self-identified and has advised it is relevant for this EP.

Since March 2024, Woodside and NYFL have been in communication about a draft consultation agreement. Woodside and NYFL have exchanged the draft consultation agreement a number of times during this period. Woodside has also travelled to Roebourne to meet with NYFL to progress negotiations and provided funding to NYFL for legal advice to finalise the agreement. During consultation for other EPs, NYFL has claimed that formal consultation had not taken place due to the absence of a finalised consultation agreement. Woodside has reiterated to NYFL on a number of occasions, including during consultation for this EP, that a consultation agreement is not a pre-requisite for consultation and that negotiations relating to a consultation agreement have and continue to occur in parallel to EP consultation. Discussions between Woodside and NYFL in relation to finalising this agreement remain ongoing.

Woodside has continually informed NYFL that it is open to receiving or being notified of feedback, claims or objections on EPs.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NYFL advising of the proposed activity (Record of Consultation, reference 6.1.46). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 30 April 2026, Woodside emailed NYFL a reminder about the proposed activity (SI Report B, reference 3.1.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Between 1 to 18 May 2026, NYFL and Woodside exchanged emails relating a Consultation Agreement as well as a meeting (SI Report B, reference 3.1.2 – 3.1.5).
  - **(1)** The group raised the following feedback for consideration within the EP.
  - **(1)** Woodside responded to and addressed feedback from the group.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) NYFL requested to continue discussions on the Consultation Agreement and provided an opportunity to meet and discuss.	**(1)** A consultation framework agreement is not a prerequisite for EP consultation. Consultation for this EP and others has occurred in parallel to any discussion about a framework agreement.	**(1)** Woodside has reminded NYFL that a consultation framework agreement is not a prerequisite for EP consultation.	**(1)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 3 months, while feedback was received, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

4.15 Other Indigenous Groups

4.15.1 Save Our Songlines

SOS and/or [Individual 1] do not squarely fall within the consultation categories in the current Woodside methodology and are therefore considered in their own category. SOS is an organisation formed by [Individual 1], who we currently understand is the group's primary spokesperson. [Individual 1] and/or SOS are together represented by lawyers from Johnson Legal. During consultation for this EP, Johnson Legal advised that there has been staffing changes. Woodside updated its records to reflect this.

Woodside understands that the views expressed by SOS align with the views of [Individual 1]. Woodside therefore approaches communication with SOS and/or [Individual 1] as communication with SOS and has consulted them concurrently. The stated interests of [Individual 1] and/or SOS include the conservation of Murujuga rock art, and opposition to expansion of projects on the Burrup Peninsula. On the information available to us, we understand that SOS and/or [Individual 1] have also been members of Aboriginal corporations who have been separately consulted as relevant persons by Woodside. This is relevant because it confirms that cultural values or interests of those groups have been consulted on and assessed in preparing this EP. This context and process demonstrates that Woodside's consultation approach with SOS is appropriate and adapted to the nature and interests of SOS.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Historical Information

During previous consultation for other activities, SOS and/or [Individual 1] has provided information relating to its cultural values which Woodside deem relevant to this EP:

- **(1,2,3,4)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
- **(1,2,3,4)** Woodside has noted the cultural values and if relevant assessed risks in the EP.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed SOS advising of the proposed activity (Record of Consultation, reference 6.1.47). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed SOS a reminder about the proposed activity (SI Report B, reference 4.1.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 30 April 2026, SOS (via legal representative) emailed Woodside requesting to update the contact details of the legal representation (SI Report B, reference 4.1.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(1) Cultural value Marine Species: • Whales: migratory patterns, behavioural impacts, sonar communication. • Turtles: migratory patterns. • Dugongs. • Plankton. • Seagrass. • Pygmy blue whales. • Pelagic fish. • Sharks. • Seabirds.	**(1)** This value has been identified through Woodside's data collection processes (consultation and Affidavit).	**(1)** Woodside acknowledges these interests and cultural values and assessed the potential impacts on there and where appropriate included controls.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(2) Cultural value Totemic Species: • Bungarra. • Eagle. • Kangaroo.	**(2)** This value has been identified through Woodside's data collection processes (Affidavit).	**(2)** Woodside acknowledges these interests and cultural values and assessed the potential impacts on there and where appropriate included controls.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(3) Cultural value Caring for Country: • Sea Country. • Rock Art. • Water Quality. • Murujuga.	**(3)** This value has been identified through Woodside's data collection processes (Affidavit).	**(3)** Woodside acknowledges these interests and cultural values and assessed the potential impacts on there and where appropriate included controls.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
(4) Cultural value	**(4)**	**(4)**	**(4)**

• Songlines, dreaming and energy lines, including where saltwater and freshwater meet.	This value has been identified through Woodside's data collection processes (Affidavit).	Woodside acknowledges these interests and cultural values and assessed the potential impacts on there and where appropriate included controls.	Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7, 6.8, 6.9 and 6.11.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a “reasonable period” of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside’s approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside’s initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside’s Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, but the group has done so in consultation for other activities as well as from an Affidavit. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 3 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5. TABLE 3: ENGAGEMENT REPORT WITH PERSONS OR ORGANISATIONS ASSESSED AS NOT RELEVANT

The black numbering **(N)** in the 'Summary of information provided and record of consultation for this EP' in Table 3 denotes an item raised by a person or organisation Woodside chose to contact. The green numbering **(N)** in this section denotes Woodside's response to that issue.

5.1 Commonwealth and WA State Government departments or agencies - environment

5.1.1 Department of Water and Environment Regulation (DWER)

Summary of information provided and record of consultation for this EP:

- On 14 April 2026, Woodside emailed DWER advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 15 April 2026, Woodside received an autogenerated response confirming a ticket number had been allocated, followed by advice the ticket had been marked as resolved (SI Report A, references 26.1 and 26.2).
- On 4 May 2026, as no feedback had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
While DWER is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for DWER to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.2 Commonwealth commercial fisheries and peak representative bodies

5.2.1 Southern Bluefin Tuna Fishery (SBTF)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed individual SBTF licence holders advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

While SBTF is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for SBTF to provide feedback during the consultation process.

5.2.2 Western Skipjack Fishery

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed individual Western Skipjack Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.
Summary Report – Consultation Complete			
While Western Skipjack Fishery is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Western Skipjack Fishery to provide feedback during the consultation process.			

5.3 Other non-government groups or organisations

5.3.1 350 Australia (350A)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed 350A advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	
Summary Report – Consultation Complete			
While 350A is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for 350A to provide feedback during the consultation process.			

5.3.2 Australian Conservation Foundation (ACF)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed ACF advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
While ACF is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACF to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.3.3 Australian Marine Conservation Society (AMCS)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed AMCS advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 14 April 2026, as Woodside had received an email bounce-back, Woodside forwarded the email to a different AMCS address and reattached the Consultation Information Sheet (SI Report A, reference 27.1).
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While AMCS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AMCS to provide feedback during the consultation process.

5.3.4 Conservation Council of Western Australia (CCWA)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed CCWA advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
While CCWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CCWA to provide feedback during the consultation process.			

5.3.5 Doctors for the Environment Australia (DEA)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed DEA advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Change and Revision process (see Section 7.10.1 of the EP).	
Summary Report – Consultation Complete			
While DEA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for DEA to provide feedback during the consultation process.			

5.3.6 Friends of Australian Rock Art (FARA)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed FARA advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
While FARA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for FARA to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.3.7 Greenpeace Australia Pacific (GPAP)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed GPAP advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 14 April 2026, as Woodside had received an email bounce-back, Woodside forwarded the email to a different GPAP address and reattached the Consultation Information Sheet (SI Report A, reference 28.1).
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While GPAP is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for GPAP to provide feedback during the consultation process.

5.3.8 Vocus

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Vocus advising of the proposed activity (Record of Consultation, reference 6.1.10), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also provided a map of communication cables in relation to the activity (Record of Consultation, reference 6.1.6).
- On 16 April 2026, Vocus emailed to acknowledge the consultation information (SI Report A, reference 29.1). Vocus raised **(1)**.
- On 16 April 2026, Woodside thanked Vocus for its response (SI Report A, reference 29.2). Woodside responded to **(1)**.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Vocus advised that as the nearest point of the Highclere cable was more than 20km from the proposed activity, it had no feedback regarding the EP or associated conditions.	**(1)** Woodside acknowledges that due to the distance of Vocus's infrastructure from the activity, it has no feedback.	**(1)** Woodside thanked Vocus for confirming that based on activity location, it had no feedback.	**(1)** No additional measures or controls are required.
While feedback has been received, there were no objections or claims.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	Submarine communications infrastructure in proximity to the Operational Area is set out in Section 4.10.6 of the EP. No additional measures or controls are required.
Summary Report – Consultation Complete			
While Vocus is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Vocus to provide feedback during the consultation process.			

5.4 Research institutes and local conservation groups

5.4.1 Australian Institute of Marine Science (AIMS)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed AIMS advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also sought advice from AIMS on any research activities it was undertaking that may overlap with the proposed activities.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
While AIMS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AIMS to provide feedback during the consultation process.			

5.4.2 Commonwealth Scientific and Industrial Research Organisation (CSIRO)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed CSIRO advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also sought advice from CSIRO on any research activities it was undertaking that may overlap with the proposed activities.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	
Summary Report – Consultation Complete			
While CSIRO is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CSIRO to provide feedback during the consultation process.			

5.4.3 Western Australian Marine Science Institution (WAMSI)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed WAMSI advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also sought advice from WAMSI on any research activities it was undertaking that may overlap with the proposed activities.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
While WAMSI is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for WAMSI to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.4.4 University of Western Australia (UWA)

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed UWA advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also sought advice from UWA on any research activities it was undertaking that may overlap with the proposed activities.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While UWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for UWA to provide feedback during the consultation process.

5.4.5 Curtin University

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Curtin University advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also sought advice from Curtin University on any research activities it was undertaking that may overlap with the proposed activities.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
While Curtin University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Curtin University to provide feedback during the consultation process.			

5.4.6 Edith Cowan University

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Edith Cowan University advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also sought advice from Edith Cowan University on any research activities it was undertaking that may overlap with the proposed activities.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	
Summary Report – Consultation Complete			
While Edith Cowan University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Edith Cowan University to provide feedback during the consultation process.			

5.4.7 Murdoch University

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Murdoch University advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. Woodside also sought advice from Murdoch University on any research activities it was undertaking that may overlap with the proposed activities.
- On 4 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.10.1 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
While Murdoch University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Murdoch University to provide feedback during the consultation process.

Woodside Energy

Consultation Information Sheet
April 2026

Goodwyn Alpha Facility Operations Environment Plan

Carnarvon Basin, North-West Australia

Activity overview

The Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP) is a five-year revision of the in-force EP, which covers:

- Continued operation of the GWA facility, which receives, extracts and processes dry gas and condensate from the Goodwyn, Echo/Yodel, Perseus/Searipple, Wilcox and Greater Western Flank fields.
- Export of dry gas and condensate via the Interfield Line, which ties into the second trunkline near the Woodside-operated North Rankin Complex (NRC) for transport to the Karratha Gas Plant onshore.
- Commissioning of up to seven (7) new production wells associated with Greater Western Flank developments.
- Vessel-based routine inspection, monitoring, maintenance and repair (IMMR) activities to support the GWA platform and associated subsea infrastructure.

Context

- The GWA facility forms part of the North West Shelf Project. Gas processed at the GWA platform is transported (via the existing Interfield Line and export trunkline) onshore to the Karratha Gas Plant) for final processing.

Location

- The GWA facility is located in Commonwealth waters approximately 138 km north-west of the town of Dampier and 23 km south-west of the NRC (Figure 2).

Water depth

- Approximately 74 m - 200 m deep.

Timing

- Production from the GWA facility commenced in 1995.
- End of field life is currently anticipated between 2036 and 2040.
- Decommissioning is not planned during the next 5 years. Any future decommissioning activities will be subject to separate approvals.

Duration

- Routine operations 24 hours a day, 365 days a year.
- IMMR activities take place as required.

Joint Venture

- Operator – Woodside Energy Ltd.
- Joint Venture – Woodside Energy Ltd., BP Developments Australia Pty. Ltd., Woodside Energy (North West Shelf) Pty Ltd, Chevron Australia Pty Ltd, Japan Australia LNG (MIMI) Pty. Ltd., CNOOC NWS Private Limited and Shell Australia Pty Ltd.

We would like to hear from you

We would like relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to provide feedback on our proposed activity, in accordance with the intended outcome of consultation.

Woodside must consult relevant persons when developing an EP to confirm current measures or identify additional measures, which could lessen or avoid potential adverse effects of the proposed activity on the environment.

Woodside aims to ensure the proposed activity is consistent with the principles of ecologically sustainable development, by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level.

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the activities under this EP, we would like your feedback by **14 May 2026.**

feedback@woodside.com
Toll free: 1800 442 977

A summary of the activity and location is found in **Table 1** and **2**.

Figure 1. Goodwyn Alpha (GWA) offshore facility.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to Indigenous Peoples and communities around the world.

Activity location

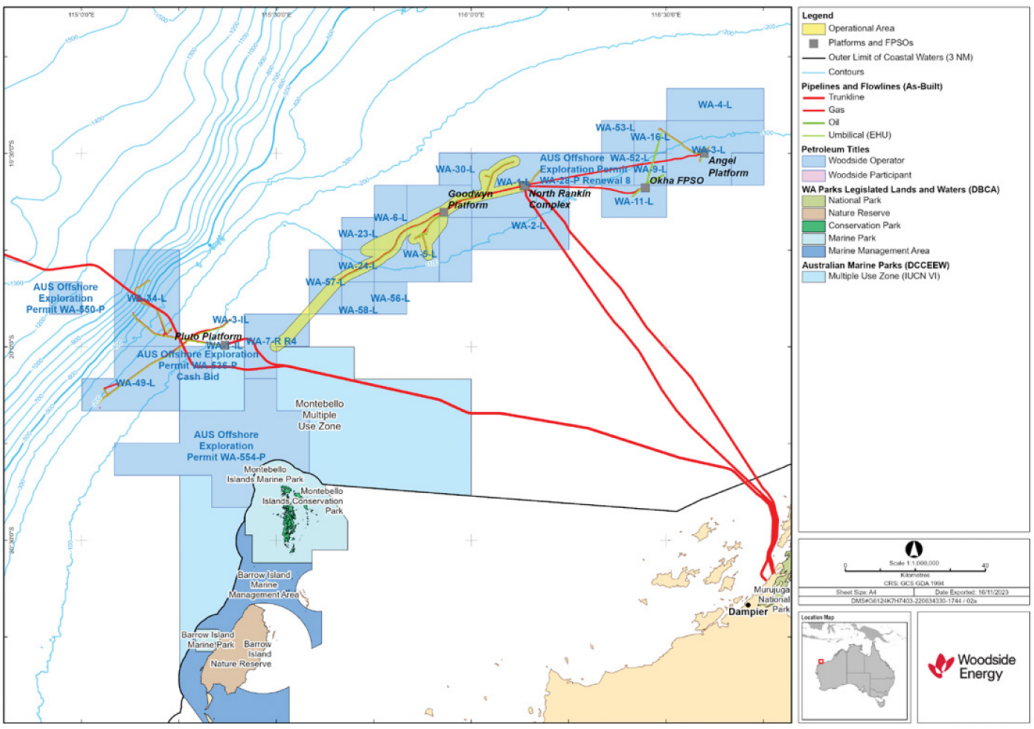

Figure 2. Location of the GWA Operational Area and associated infrastructure.

Table 1 – Activity and location summary

Goodwyn Alpha Facility Operations EP	
Activity details	• Processing and production of dry gas and condensate. • Routine and non-routine IMMR activities to support the GWA platform and associated subsea infrastructure. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (lifting, bunkering, support vessel and helicopter operations).
Titles	• Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. • Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, Xmas trees, manifolds, flowlines/pipelines, spools, jumpers and umbilicals associated with the Goodwyn, Perseus/Searipple and Greater Western Flank developments.
Vessels	• Platform support vessels undertake routine logistics and operational support. • IMMR vessels such as subsea support vessels and uncrewed surface vessels as well as accommodation and heavy lift vessels may be used as required. • Helicopters transport personnel and/or freight to and from the GWA facility and support vessels.
Operational Area and exclusion zones	• The location of the infrastructure and the exclusion zones are marked on nautical charts. The Operational Area includes: - The GWA platform and an area within 500 m Petroleum Safety Zone (PSZ) of the platform. - The Interfield Line between GWA and NRC and an area within 1500 m of the infrastructure. - The Echo/Yodel, Perseus over Goodwyn and Greater Western Flank subsea infrastructure, including wells, manifolds, flowlines, pipelines, umbilicals, jumpers and spools, and an area within 1500 m of the infrastructure. - New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure (see Table 2).
Communication with mariners	• Marine notices will be issued where vessels will be undertaking activities in the Operational Area (outside the 500 m PSZ around the GWA platform) for more than three weeks. • Commercial fishers and other marine users are permitted to use the Operational Area. Unauthorised vessels are prohibited from entering the PSZ.
Distance to nearest marine park/nature reserve	• The Operational Area overlaps the Montebello Marine Park - Multiple Use Zone (Cth).

[1] *The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.*
[2] *A new pipeline licence is required for the operation of the proposed GWF-4 flowline.*

[3]*A new pipeline licence is required for operation of the proposed GWF-4 flowline.*
[4]*The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.*

NOTES:
a – Echo Yodel (EY) Pipeline is suspended and isolated. Activities associated with decommissioning are provided for under the approval of the EY Decommissioning EP (NOPSEMA Doc ID A728912). Maintenance continues under this EP until decommissioning activity commences.
b – These are approximate locations based on current engineering designs.
c – PER 02 and 04 wells are production wells no longer in use (i.e. shut in and designated redundant). PER 02 and PER 04 will continue to be subject to subsea inspection until final abandonment. Plug and abandonment will be undertaken as part of the NWS Phase 1 P&A and TPA03 Well Intervention EP, currently scheduled for 2026. Remaining infrastructure will be managed under this EP until completion of all decommissioning activities in the field.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA was developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations. The EMBA is depicted in **Figure 3.**

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release. To learn more about an EMBA, please see the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) video on oil spill modelling at **www.nopsema.gov.au.**

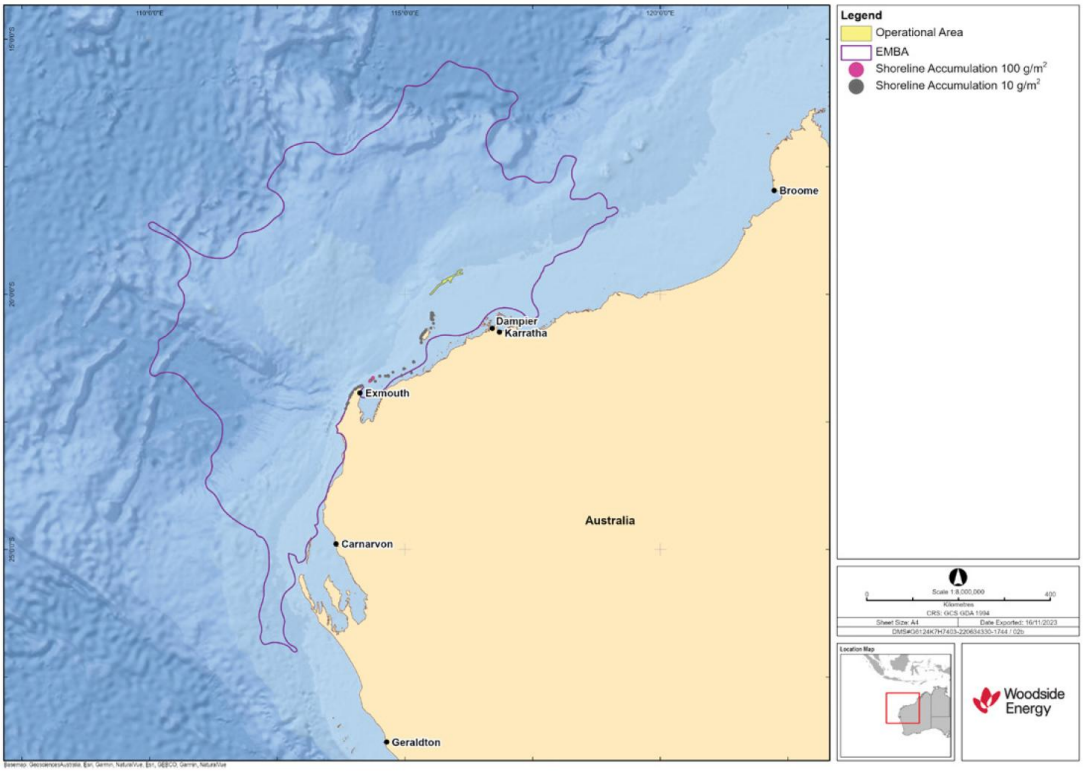

Figure 3. Environment that May Be Affected (EMBA) by activities under the GWA Facility Operations EP.

Impacts/Risks, and Mitigation and/or Management Measures

Woodside assessed the impacts and risks to the environment arising from the planned activities and unplanned events. This assessment considers the timing, duration and location of the activities. Proposed mitigation and management measures are summarised in **Table 3.** Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental, social and cultural impacts and risks associated with the proposed activities, and Woodside seeks your feedback to help inform our decision-making.

Table 3 – Summary of impacts and risks and key proposed management measures*

Aspect	Description of Source of Impact	Description of Impact	Proposed Mitigation and/or Management Measure
Planned activities (routine and non-routine)			
Physical Presence: ***Interaction with other Marine Users***	• Physical presence of the GWA facility and subsea Infrastructure as well as support vessels.	• Localised impacts with no lasting effect may occur as a result of: - Localised displacement or exclusion of commercial fishing operations from the PSZ and during intermittent IMMR activities. - Localised exclusion of shipping traffic from the PSZ and during intermittent IMMR activities.	• Vessels are compliant with Marine Orders for safe vessel operation. • 500 m PSZ around the GWA platform. • Subsea infrastructure locations marked on marine charts. • Notify Australian Hydrographic Office (AHO) of locations of new permanent infrastructures to enable update of maritime charts. • Notices will be issued where vessels will be undertaking activities in the Operational Area (outside the 500 m PSZ around the GWA platform) for more than three (3) weeks.
Physical Presence: ***Disturbance to Seabed***	• Seabed disturbance may result from the following activities: - Presence of the GWA facility, subsea infrastructure, wet parked equipment and IMMR activities on seafloor. - Physical presence of redundant infrastructure remaining infield until end of field life. - Anchoring as required in emergency conditions.	• Slight and low-level impact on seabed habitat may occur as a result of: - Footprint of subsea infrastructure including suspended infrastructure until EOFL. - Disturbance from direct interaction with the seabed during IMMR activities. - Indirect disturbance from suspended sediment and sediment deposition.	• Monitoring and maintenance of all suspended and subsea infrastructure completed as per IMMR process. • ROV surveys undertaken after maintenance or repair activities to confirm temporary equipment has been removed and to record location of any new or suspended subsea infrastructure. • Vessels used for IMMR activities will be dynamic positioning capable. • Comply with regulatory requirements for Underwater Cultural Heritage. • Implement Woodside's Unexpected Finds Procedure.
Routine Acoustic Emissions: ***Generation of Noise***	• Noise generated within the Operational Area from: - GWA facility and associated subsea infrastructure; - Support vessels and helicopters; and - Vessel-based IMMR activities.	• Localised impacts with no lasting effect may occur as a result of: - Temporary behavioural disturbance to marine fauna around infrastructure and vessels.	• Comply with regulatory requirements for interactions with marine fauna. • Environmental induction of all relevant marine crew.
Routine and Non-Routine Discharges: ***Utility Systems and Drains***	• Discharges within the Operational Area from the GWA platform and support vessels.	• Slight and low-level impact on marine water quality may occur as a result of: - Discharge of brine, cooling water, drain, deck drainage, bilge water, grey water, sewage and putrescible waste.	• Marine discharges managed in accordance with regulatory requirements. • Putrescible waste from GWA facility macerated prior to overboard discharge.

Aspect	Description of Source of Impact	Description of Impact	Proposed Mitigation and/or Management Measure
Routine and Non-Routine Discharges: ***Produced Water***	• Discharges within the Operational Area from the GWA platform.	• Slight and low-level impacts on marine sediments and water quality as well as ecosystems may occur as a result of: - Discharge of produced water.	• Monitoring oil in water concentrations in accordance with PARCOM 1997/16 Annex 3 methodology.
Routine and Non-Routine Discharges: ***Hydrocarbon and Chemicals***	• Discharges within the Operational Area from subsea infrastructure and submersible equipment.	• Slight and low-level impacts on marine sediments and water quality as well as ecosystems may occur as a result of: - Discharge of small volumes of hydrocarbons and chemicals during subsea operations.	• Chemicals selected with the lowest practicable environmental impacts subject to technical constraints and approved through the Woodside chemical assessment process. • Subsea infrastructure flushed where practicable to reduce volume/concentration of hydrocarbons released to the environment.
Routine and Non-Routine Air Emissions: ***Atmospheric and Greenhouse Gas (GHG)***	• Atmospheric and GHG emissions generated through fuel combustion associated with the GWA facility, support vessels and helicopters as well as fugitive emissions. • Onshore processing of gas, third-party transportation, regassification and combustion by end users.	• Localised impacts with no lasting effect may occur as a result of: - Temporary and localised reductions in air quality. The activity will also contribute to global GHG emissions.	• Comply with regulatory requirements relating to GHG emissions and reporting. • Monitoring, review and optimisation of facility fuel use and emissions, where possible.
Routine Atmospheric Emissions: ***Indirect emissions associated with gas processing onshore***	• Consideration of potential indirect impact associated with atmospheric emissions from onshore processing of GWA gas.	• Potential indirect impacts may include: - Reduction in ambient air quality. - Contribution to processes that may impact the rock art on the Burrup Peninsula and within the Dampier Archipelago (Murujuga).	• Karratha Gas Plant is subject to assessment and compliance under the Environmental Protection Act 1986 (WA). • The Murujuga Rock Art Strategy and Monitoring Program (MRAS/MRAMP), administered by DWER and MAC, provides a long-term framework for monitoring, analysis and management of potential impacts to rock art.
Routine Light Emissions	• Light generated within the Operational Area from: - External lighting and operational flaring at the GWA facility. - External lighting on support vessels. - External lighting on submersible equipment.	• Localised impacts with no lasting effect may occur as a result of: - Temporary behavioural disturbance to fish, marine reptiles and seabirds.	• Lighting limited to the minimum required for navigational and safety requirements, except for emergency events. • Implementation of Woodside's Seabird Management Plan. • Environmental induction of all relevant marine crew.
Aspect	**Description of Source of Risk**	**Description of Risk**	**Proposed Mitigation and/or Management Measure**
Unplanned events (accidents / incidents)			
Unplanned Release: ***Hydrocarbons and Chemicals***	• Accidental loss of hydrocarbons during bunkering/refuelling and chemicals during transfer, storage and use.	• Potential minor impacts on marine water quality and species including: - Temporary decrease in water quality; and - Temporary disruption to marine fauna.	• Comply with Marine Orders to prevent pollution events. • Implement Woodside's bunkering procedures. • Chemicals selected with the lowest practicable environmental impacts subject to technical constraints and approved through the Woodside chemical assessment process. • Safe storage of diesel and chemicals.
Unplanned Discharges: ***Hazardous and Non-hazardous Waste Management***	• Accidental loss of solid wastes generated by the facility or vessels including packaging, domestic wastes and hazardous wastes such as oil rags, batteries and waste oil.	• Potential localised impacts with no lasting effect may occur as a result of: - Pollution and contamination of the marine environment. - Injury or death of marine fauna (single animal), including protected species.	• Comply with Marine Orders to prevent pollution events. • Implement Woodside's Offshore Facilities Waste Management Plan. • Solid waste will be recovered, if safe and practicable to do so.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Aspect	Description of Source of Risk	Description of Risk	Proposed Mitigation and/or Management Measure
Physical Presence: ***Interactions with Marine Fauna***	• Accidental interaction between support vessels and marine fauna.	• Potential localised impacts with no lasting effect may occur as a result of: - Injury or death to marine fauna (single individual) including protected species.	• Comply with regulatory requirements for interactions with marine fauna. • Environmental induction of all relevant marine crew.
Physical Presence: ***Introduction of Invasive Marine Species (IMS)***	• IMS in vessel ballast or on vessels and/or submersible equipment.	• Potential slight and low-level impacts on species, ecosystems or socio-economic receptors may occur as a result of: - Introduction of IMS which may alter the localised environment through predation, competition or interspecies breeding.	• Comply with Australian Ballast Water Management Requirements and the Australian Biofouling Management Requirements, as applicable. • Implement Woodside's IMS risk assessment process to support vessels and immersible equipment entering the Operational Area.
Unplanned Hydrocarbon Release: ***Loss of Well Containment***	• Loss of well containment resulting in release of hydrocarbons.	• Potential major impacts to the marine environment, including: - Marine sediment and water quality - Air quality - Nearshore areas of offshore islands and coastal shorelines. - Marine fauna including protected species. - Interference with or displacement of other marine users.	**Preventing loss of well containment** • The activity is operated in compliance with the accepted Safety Case. • Maintain Fire and Gas Detection and Alarm Systems on GWA facility to facilitate prevention and response to fire or gas hazards. **Spill response arrangements** • Maintain availability of external and internal communication systems and Safety Instrumented System to facilitate prevention and response to accidents and emergencies. • Maintain environmental incident response equipment to enact the GWA Oil Pollution First Strike Plan. • In the event of a spill emergency response activities implemented in accordance with the OPEP. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented.
Unplanned Hydrocarbon Release: ***Subsea Equipment Loss of Containment***	• Loss of subsea equipment containment resulting in release of hydrocarbons.	• Potential major impacts to the marine environment, including: - Marine sediment and water quality - Air quality - Nearshore areas of offshore islands and coastal shorelines. - Marine fauna including protected species. - Interference with or displacement of other marine users.	**Preventing subsea equipment loss of containment** • The activity is operated in compliance with the accepted Safety Case. • Maintain Fire and Gas Detection and Alarm Systems on GWA facility to facilitate prevention and response to fire or gas hazards. **Spill response arrangements** • Maintain availability of external and internal communication systems and Safety Instrumented System to facilitate prevention and response to accidents and emergencies. • Maintain environmental incident response equipment to enact the GWA Oil Pollution First Strike Plan. • In the event of a spill emergency response activities implemented in accordance with the OPEP. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented.
Unplanned Hydrocarbon Release: ***Topsides Loss of Containment***	• Loss of topsides containment resulting in release of hydrocarbons.	• Potential moderate impacts to the marine environment, including: - Marine water quality - Air quality - Nearshore areas of offshore islands and coastal shorelines. - Marine fauna including protected species. - Interference with or displacement of other marine users.	**Preventing topsides loss of containment** • The activity is operated in compliance with the accepted Safety Case. • Maintain Fire and Gas Detection and Alarm Systems on GWA facility to facilitate prevention and response to fire or gas hazards. **Spill response arrangements** • Maintain availability of external and internal communication systems and Safety Instrumented System to facilitate prevention and response to accidents and emergencies. • Maintain environmental incident response equipment to enact the GWA Oil Pollution First Strike Plan. • In the event of a spill emergency response activities implemented in accordance with the OPEP. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented.

Aspect	Description of Source of Risk	Description of Risk	Proposed Mitigation and/or Management Measure
Unplanned Hydrocarbon Release: ***Loss of Structural Integrity***	• Loss of subsea infrastructure containment resulting in release of hydrocarbons.	• Potential major impacts to the marine environment, including: - Marine sediment and water quality - Air quality - Nearshore areas of offshore islands and coastal shorelines. - Marine fauna including protected species. - Interference with or displacement of other marine users.	**Preventing loss of structural integrity** • The activity is operated in compliance with the accepted Safety Case. • Maintain Fire and Gas Detection and Alarm Systems on GWA facility to facilitate prevention and response to fire or gas hazards. • Woodside management system is implemented during operations to maintain infrastructure integrity, communication systems and safety instrumented systems to an acceptable standard. **Spill response arrangements** • Maintain availability of external and internal communication systems and Safety Instrumented System to facilitate prevention and response to accidents and emergencies. • Maintain environmental incident response equipment to enact the GWA Oil Pollution First Strike Plan. • In the event of a spill emergency response activities implemented in accordance with the OPEP. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented as planned.
Unplanned Hydrocarbon Release: ***Loss of Marine Vessel Separation***	• Loss of marine vessel separation resulting in release of hydrocarbons.	• Potential major impacts to the marine environment, including: - Marine sediment and water quality - Air quality - Nearshore areas of offshore islands and coastal shorelines. - Marine fauna including protected species. - Interference with or displacement of other marine users.	**Preventing loss of marine vessel separation** • The activity is operated in compliance with the accepted Safety Case. • Maintain collision warning systems and navigational aids and critical communications systems. • Woodside management system is implemented during operations to maintain infrastructure integrity, communication systems and safety instrumented systems to an acceptable standard. **Spill response arrangements** • Maintain availability of external and internal communication systems and Safety Instrumented System to facilitate prevention and response to accidents and emergencies. • Maintain environmental incident response equipment to enact the GWA Oil Pollution First Strike Plan. • In the event of a spill emergency response activities implemented in accordance with the OPEP. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented as planned.
Unplanned Hydrocarbon Release: ***Loss of Control of Suspended Load from Platform***	• Loss of topsides or subsea infrastructure containment resulting from a loss of control of a suspended load from the platform.	• Potential moderate impacts to the marine environment, including: - Marine water quality - Air quality - Nearshore areas of offshore islands and coastal shorelines. - Marine fauna including protected species. - Interference with or displacement of other marine users.	**Preventing loss of control of suspended load** • The activity is operated in compliance with the accepted Safety Case. • Woodside management system is implemented during operations to maintain infrastructure integrity, communication systems and safety instrumented systems to an acceptable standard. **Spill response arrangements** • Maintain availability of external and internal communication systems and Safety Instrumented System to facilitate prevention and response to accidents and emergencies. • Maintain environmental incident response equipment to enact the GWA Oil Pollution First Strike Plan. • In the event of a spill emergency response activities implemented in accordance with the OPEP. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented.

** These mitigation and management measures are subject to change through the consultation and subsequent assessment process and may not represent content in the publicly available EP or in the final plan once accepted.*

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the proposed activities and to obtain relevant feedback to inform its planning.

If you would like to comment on the proposed activities outlined in this information sheet, please provide feedback to Woodside by **14 May 2026** via:

feedback@woodside.com
Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:
woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to NOPSEMA as required under legislation. Woodside will communicate any material changes to the proposed activity to affected relevant persons as relevant and appropriate.

Your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit:
woodside.com/what-we-do/consultation-activities

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6.1.2 Summary Information Sheet

Woodside Energy

Consultation Summary Information Sheet
April 2026

Goodwyn Alpha Facility Operations Environment Plan

Carnarvon Basin, North-West Australia (Commonwealth Waters)

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to First Nations peoples and communities around the world.

Have Your Say

We want to talk, share ideas, and yarn with local community who have a deep connection to the land and sea. Your knowledge helps us do our work better!

We want to understand the environments we want to work in. We want to work in a way which manages the environmental impacts and risks of the activities appropriately. By working together, we want to help protect cultural heritage and keep the Land and Sea Country healthy.

We welcome feedback from Indigenous communities and stakeholders whose functions, interests and activities may be affected by our activities under this Environment Plan (EP). If you'd like to share your views, please contact us before **12 May 2026.**

Email: **IndigenousAffairs@woodside.com**
Call: **1800 442 977 (toll-free)**
Visit: **woodside.com/what-we-do/consultation-activities**

Your feedback will be included in our EP submissions to NOPSEMA (National Offshore Petroleum Safety and Environmental Management Authority) and will help guide responsible environmental decision-making.

Figure 1. Goodwyn Alpha (GWA) offshore facility.

Activity overview

The Goodwyn Alpha (GWA) facility forms part of the North West Shelf Project. The GWA Facility Operations Environment Plan (EP) is a five-year revision of the in-force EP, which covers:

- Continued operation of the GWA facility, which receives, extracts and processes dry gas and condensate from the Goodwyn, Echo/Yodel, Perseus/Searipple, Wilcox and Greater Western Flank fields.
- Export of dry gas and condensate via the Interfield Line, which ties into the second trunkline near the Woodside-operated North Rankin Complex (NRC) for transport to the Karratha Gas Plant onshore.
- Commissioning of up to seven (7) new production wells associated with Greater Western Flank developments.
- Vessel-based routine inspection, monitoring, maintenance and repair (IMMR) activities to support the GWA platform and associated subsea infrastructure.

Location

- The GWA facility is located in Commonwealth waters approximately 138 km north-west of the town of Dampier and 23 km south-west of the NRC.

Water depth

- Approximately 74 m - 200 m deep.

Timing & Duration

- Production from the GWA facility commenced in 1995.
- End of field life is currently anticipated between 2036 and 2040.
- Decommissioning is not planned during the next 5 years. Any future decommissioning activities will be subject to separate approvals
- Routine operations 24 hours a day, 365 days a year.
- IMMR activities take place as required.

Joint Venture

- Operator – Woodside Energy Ltd.
- Joint Venture – Woodside Energy Ltd., BP Developments Australia Pty. Ltd., Woodside Energy (North West Shelf) Pty Ltd, Chevron Australia Pty Ltd, Japan Australia LNG (MIMI) Pty. Ltd., CNOOC NWS Private Limited and Shell Australia Pty Ltd.

Activity Location

The EP explains how Woodside will manage environmental risks and impacts while carrying out our activities. These plans help us conduct operations safely and responsibly, with respect for the environment and cultural heritage. The location where the work will be done is known as the Operational Area (**Figure 2**).

Woodside must consult with relevant persons, including Traditional Custodian groups whose functions, interests or activities may be affected by the activities to be carried out under the EP or that are considered relevant, to listen to concerns and, where required, incorporate feedback into the EP.

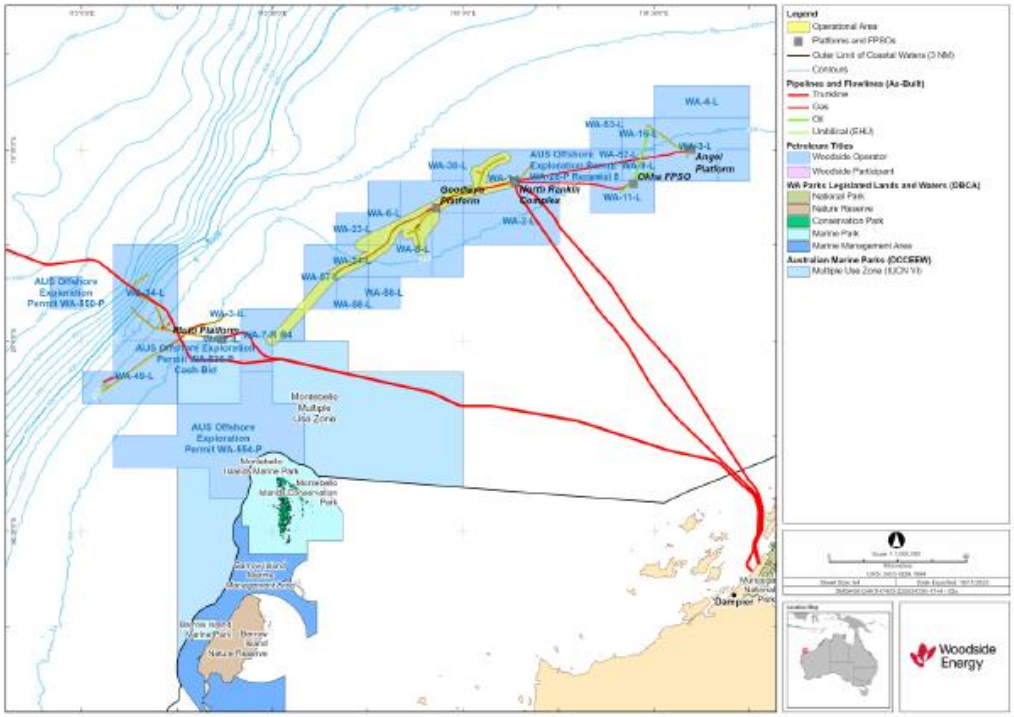

Figure 2: Location of the activity, including Operational Area and associated infrastructure

Planned Activities and Unplanned Events

We assess both planned activities and unplanned events which may result in environmental risks and impacts.

Planned activities are activities that Woodside knows will happen as part of the work under the EP. This could include generating underwater noise, light emissions, associated atmospheric emissions or routine discharges (such as sewage, waste, and deck drainage). We take steps so that planned activities comply with legislative and regulatory requirements.

Unplanned events are very unlikely. They may be the result of an accident, incident or emergency, such as a spill of fuel or oil from a ship (vessel) collision, a spill on the deck of a vessel (like during refuelling), unplanned seabed and/or marine life disturbance, or accidental introduction of invasive species from outside the region.

Planned and unplanned activities, potential impacts, and management measures are included in the Consultation Information Sheet for this activity, available at www.woodside.com/what-we-do/consultation-activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

The EMBA map (**Figure 3**) is a model of the largest spatial area where the activity could have a potential environmental impact. It combines multiple modelling outputs for both planned and unplanned activities in the highly unlikely event of an oil and natural gas (hydrocarbon) release to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not show the predicted impact of a single event - it is the merged area of many possible scenarios that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time. This means that if a hydrocarbon release was to occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of a release.

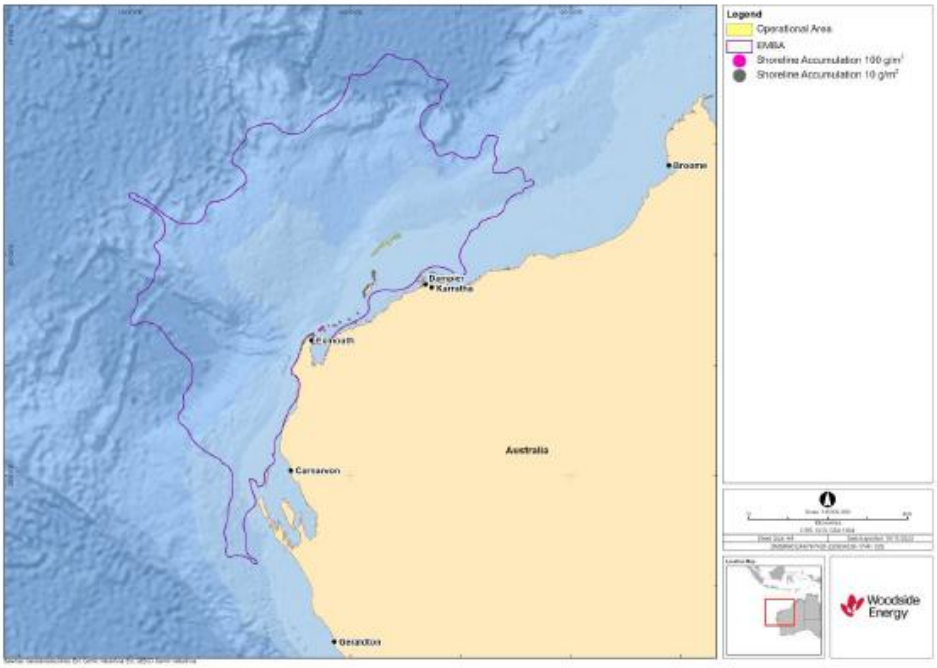

Figure 3: Environment that May Be Affected (EMBA) map

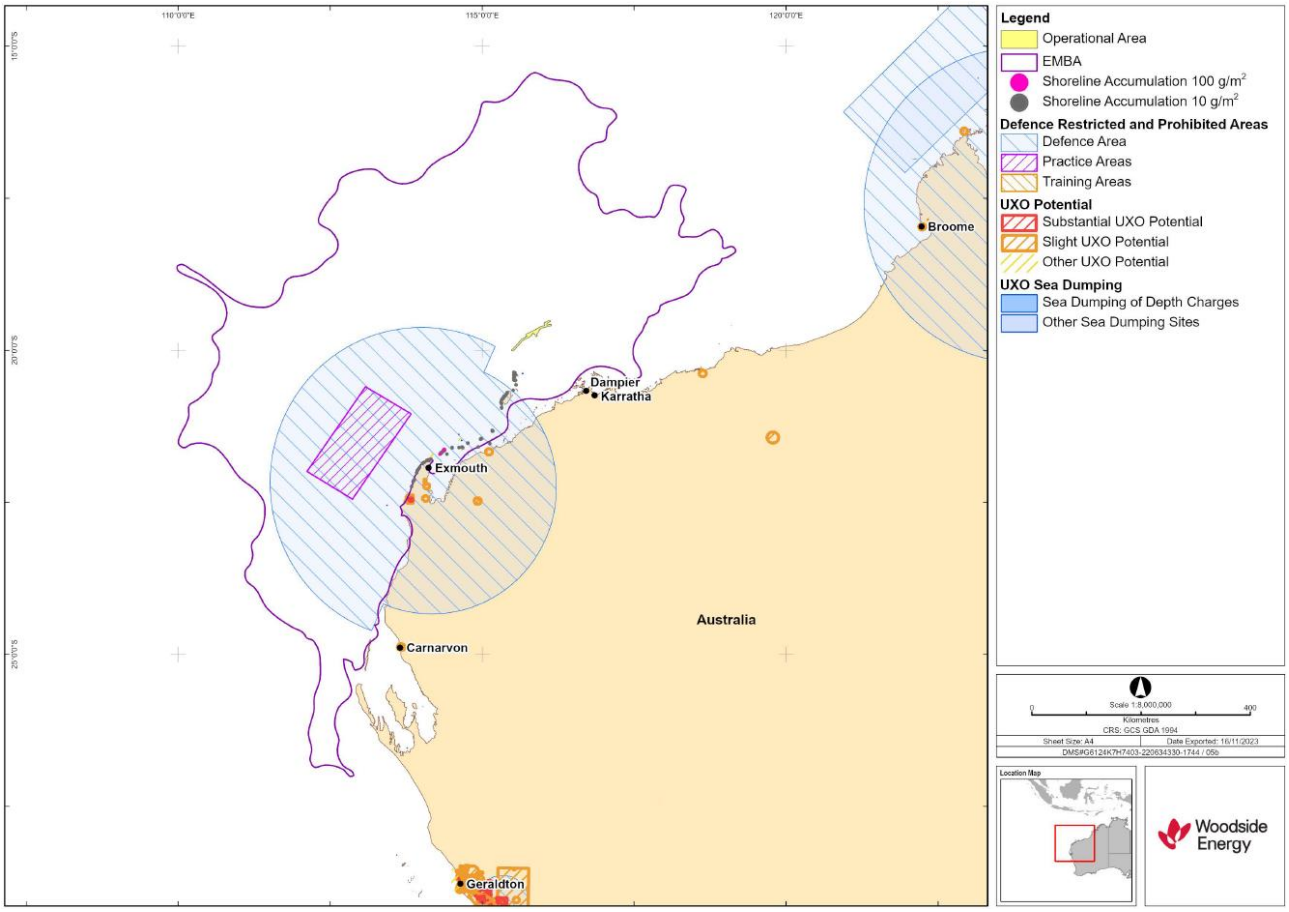
Your Feedback is Important

Woodside consults with relevant persons during the preparation of EPs to notify them about the activity and hear their feedback. By working together, we aim to protect biodiversity and maintain the health of ecosystems while carrying out our projects.

Your feedback helps shape the EP by:



- Identifying additional possible measures to reduce environmental impacts.
- Helping us consider cultural heritage and environmental values.
- Providing information that may help improve Woodside's environmental practices.

If there is particular information that you provide during consultation that you'd prefer not to be published, please let us know. We'll make your request known to NOPSEMA.

We'll manage any personal information collected during our consultation with you in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand more, please visit www.woodside.com/what-we-do/consultation-activities.

Ningaloo – 13 April 2026
Email sent to Department of Water and Environment Regulation (DWER) – 14 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and Woodside's response will be included in Woodside's EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

Woodside Energy Feedback

6.1.9 Email sent to Department of Defence (DoD) – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please also find attached a defence area map in the areas surrounding the Operational Area and EMBA.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and Woodside's response will be included in Woodside's EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.10 Email sent to Australian Communications and Media Authority (ACMA); Telstra; Vocus – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Please also find attached a map of the submarine communication cables in the vicinity of the Operational Area. Based on the map, Woodside is consulting Telstra and Vocus for this EP.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and Woodside's response will be included in Woodside's EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

Woodside Energy Feedback

6.1.11 Email sent to Australian Maritime Safety Authority (AMSA) – Navigation Safety; Australian Hydrographic Office (AHO) – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Please also find attached a vessel density map and GIS shape files.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.

Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line (IFL) and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Please note that Woodside will:

- Notify AHO no less than 4 weeks before operations commence where vessel activities are to be undertaken for more than three weeks at a time in the Operational Area.
- Notify AMSA's Response Centre (ARC) at least 24-48 hours before operations commence
    - For activities in the Operational Area <3 weeks; or
    - If activities occur in a shipping lane; or
    - Activities are undertaken in close proximity (within 1km) to a shipping lane.
- Provide updates to both the AHO and AMSA on any material changes to planned activities
- Ensure vessels exhibit appropriate lights and shapes to reflect the nature of operations and the obligation to comply with the International Rules for Preventing Collisions at Sea (COLREGS)
- Evaluate and implement adequate anti-collision measures including but not limited to additional warnings and/or lights to attract attention, and installation of Automatic Identification System (AIS) units.

	• Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Biosecurity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

With respect to the biosecurity matters, please note the following information below:

Environment description
The GWA Operational Area (which includes the GWA topsides, subsea components, interfiled line, and wells and reservoirs) is located in water depths of approximately 74 m - 200 m on the outer continental shelf. The bathymetry within the Operational Area is generally flat, which is consistent with the broader NWS Province shelf region. The seabed has a gentle (0.05°) seaward gradient extending to a steep distal slope occurring between 200 to 300 km offshore in water depths of around 200 m. The continental slope then descends more rapidly from the shelf edge to depths greater than 1,000 m to the north-west. Sediments in the Operational Area are broadly consistent with those in the NWS Province. Sediments in the outer NWS Province are relatively homogenous and are typically dominated by sands and a small portion of gravel. Fine sediment size classes (e.g. muds) increase with proximity to the shoreline and the shelf break but are less prominent in the intervening continental shelf. Carbonate sediments typically account for the bulk of sediment composition, with both biogenic and precipitated sediments present on the outer shelf (Dix et al. 2005). Beyond the shelf break, the proportion of fine sediments increases along the continental slope towards the Exmouth Plateau and the abyssal plain. While hard substrates are not known to occur within the Operational Area, they occur in the region more broadly and can host more diverse benthic communities. Hard substrate may be associated with the Ancient coastline at 125 m depth contour Key Ecological Feature (KEF). which overlaps the Operational Area. Rankin Bank is on the continental shelf, approximately 3 km from the Operational Area at the closest point and approximately 33 km away from the GWA platform. While not a KEF, Rankin Bank, along with Glomar Shoal, is the only large, complex bathymetrical feature on the outer western shelf of the West Pilbara and represents habitats that are likely to play an important role in the productivity of the Pilbara region. Rankin Bank consists of three submerged shoals delineated by the 50 m depth contour with water depths of approximately 18–30.5 m. Rankin Bank represents a diverse marine environment, predominantly composed of consolidated reef and algae habitat (~55% cover), followed by hard corals (~25% cover), unconsolidated sand/silt habitat (~16% cover), and benthic communities composed of macroalgae, soft corals, sponges and other invertebrates (~3% cover). Hard corals are a significant component of the benthic community of some parts of the bank, with abundance in the upper end of the range observed elsewhere on the submerged shoals and banks of NW Australia. Rankin Bank has been shown to support a diverse fish assemblage. This is consistent with studies showing a strong correlation between habitat diversity and fish assemblage species richness.

Potential IMS risk	IMS mitigation management
Unplanned introduction of invasive marine species (IMS)	• All vessels will manage their ballast water using one of the approved ballast water management options, as specified in the Australian Ballast Water Management Requirements. • Internationally sourced support vessels will manage their biosecurity risk associated with biofouling as specified in the Australian Biofouling Management Requirements. • Woodside's IMS risk assessment process will be applied to the accommodation support vessel, vessels and relevant immersible equipment undertaking the Petroleum Activity. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as treating internal systems) will be implemented to minimise the likelihood of IMS being introduced.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

6.1.15 Email sent to Director of National Parks (DNP) – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by 14 May 2026 using the details below. Woodside would also welcome the opportunity to meet with DNP to discuss the EP, should this be of interest.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Please also find attached GIS shape files.

Activity and location summary

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Australian Marine Parks (AMPs)

We note Australian Government Guidance on consultation activities and confirm that:

- Through review of hydrocarbon spill modelling, and with consideration of a 10 ppb dissolved threshold, the following AMPs may be contacted in the event of a spill:
    - The south-western end of the GWA Operational Area overlaps 3.22 km (0.9%) of the Montebello Australian Marine Park (Multiple Use Zone, IUCN: VI).
    - Dampier Marine Park (Habitat Protection Zone, IUCN: IV) is 113 km south east of the Operational Area.
    - Gascoyne Marine Park (Multiple Use Zone, IUCN VI) is 196.7 km south west of the Operational Area.
    - Argo-Rowley Terrace Marine Park (Multiple Use Zone, IUCN VI) is 196 km north of the Operational Area.
    - Ningaloo Marine Park (Recreational Use Zone, IUCN: IV) is 225.6 km south west of the Operational Area.
    - Shark Bay Marine Park (Multiple use Zone, IUCN: VI) is 535 km south west of the Operational Area.
    - Carnarvon Canyon Marine Park (Habitat Protection Zone, IUCN IV) is 560 km south west of the Operational Area.
- A Commonwealth Government-approved oil spill response plan will be in place for the duration of the activities, which will include notification to relevant agencies and organisations as to the nature and scale of the event, as soon as practicable following an occurrence. The Director of National Parks will be advised if an environmental incident occurs that may impact the values of any AMP.

Woodside is aware of and will consider the *'Petroleum Activities and Australian Marine Parks'* guidance note developed and published jointly by DNP and NOPSEMA, while preparing this EP to ensure that the EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Identifies and manages all impacts and risks on AMP values (including ecosystem values) to an acceptable level and has considered all options to avoid or reduce them to as low as reasonably practicable (ALARP).
- Clearly demonstrates that the activities will not be inconsistent with the North-west Marine Parks Network Management Plan 2018.

If there is a change in activities which results in an overlap or new impact to a marine park Woodside will notify DNP.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.16 Email sent to Department of Primary Industries and Regional Development (DPIRD) – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

State fisheries

State fisheries active in the Operational Area:

- Mackerel Managed Fishery (Area 2)
- Marine Aquarium Fish Managed Fishery
- Onslow Prawn Managed Fishery
- Pilbara Fish Trawl (Interim) Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery (Condition)
- Specimen Shell Managed Fishery

State fisheries active in the EMBA:

- Exmouth Gulf Prawn Managed Fishery
- Gascoyne Demersal Scalefish Managed Fishery
- Mackerel Managed Fishery (Area 2)
- Marine Aquarium Fish Managed Fishery

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Nickol Bay Prawn Managed Fishery
- Onslow Prawn Managed Fishery
- Pilbara Crab Managed Fishery
- Pilbara Fish Trawl (Interim) Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery (Condition)
- Western Australian Sea Cucumber Fishery
- Shark Bay Crab Managed Fishery
- Shark Bay Prawn Managed Fishery
- Shark Bay Scallop Managed Fishery
- Specimen Shell Managed Fishery
- West Coast Deep Sea Crustacean Managed Fishery
- West Coast Demersal Scalefish (Interim) Managed Fishery
- West Coast Rock Lobster Managed Fishery
- Exmouth Gulf Beach Seine and Mesh Net Managed Fishery
- Open Access in the North Coast, Gascoyne Coast and West Coast Bioregions
- Pearling leases in the Montebello Islands and Dailey Shoal
- Aquaculture sites in the Mackerel Islands and Exmouth

Please note that Woodside has provided consultation information to the Western Australian Fishing Industry Council (WAFIC), Aquaculture Council of Western Australia (ACWA) and Recfishwest. Information provided to these bodies includes the planned timing and duration of the activities, and the spatial extent of the proposed activities (including any exclusion zones).

Woodside consults individual fishing licence holders based on WAFIC's guidance and advice, whereby WAFIC:

- directly consults fishery licence holders that are assessed as having a potential for interaction in the Operational Area
- consults fisheries that are assessed as having a potential for interaction in the EMBA only in the event of an unplanned emergency scenario.

Woodside also consults with relevant Traditional Owners in the preparation of this EP.

Spill Contingency Plans

Within Woodside's Oil Pollution First Strike Plan (FSP), Woodside commits to notifying Department of Transport and Major Infrastructure (DTMI) within 2 hours of becoming aware of a marine pollution incident that occurs in or may impact State waters. Woodside also consults DTMI in the development of the FSP.

Woodside commits to notify DPIRD within 24 hours of our reporting the incident to the appropriate authority. We have noted this contact as environment@dpird.wa.gov.au and placed this in the Notification section of the FSP.

In addition, within the FSP, Woodside commits to identify and notify additional relevant persons and organisations such as, but not limited to, commercial fishers or tourism operators that may be affected during a spill event. Woodside would, at the relevant time, engage with these parties as appropriate and will re-assess relevant persons and organisations throughout the response period.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside mitigates the risk of spill events through the adoption of a range of preventative controls (including engineering design) that all contribute to reducing the likelihood of a spill event to an unlikely level. The potential for hydrocarbons to reach coastal regions would be further minimised in the event of a spill by offshore response actions. Such responses would be aimed at reducing hydrocarbon contact with sensitive coastal areas, including commercially important fish species' spawning and aggregation areas.

Woodside's oil spill Operational and Scientific Monitoring (OSM) Program is executed under the Joint Industry OSM Framework (AEP, 2021). In the event of a spill, the OSM Framework will guide the situational awareness and response as well as undertake a suite of comprehensive science-based monitoring programs to evaluate environmental impacts. One such program is dedicated to the impacts on fisheries. The fisheries impact assessment has two objectives – to assess any physiological impacts to important fish and shellfish species and to assess targeted fish and shellfish species for hydrocarbon contamination.

Biosecurity

Woodside contracts vessels, which are used in a support capacity for transferring materials, equipment, and personnel in emergency scenarios from the facility. Vessels are also used for project field work such as subsea intervention (e.g. IMMR of subsea infrastructure), as described in the EP. Woodside works closely with contractors to ensure compliance with all requirements previously requested by DPIRD including DPIRD's policy that marine pests or disease are reported within 24 hours. A 24-hour notification will be formally captured as a notification within the EP and communicated to vessel operators.

All vessels are required to comply with the *Australian Biosecurity Act 2015*, specifically the Australian Ballast Water Management Requirements (as defined under the *Biosecurity Act 2015*) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing invasive marine species (IMS). Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan. Woodside's Invasive Marine Species Management Plan includes a risk assessment process that is applied to vessels undertaking activities. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced.

Notifications

Please let us know if you do not wish to receive start and end-of-activity notifications that may be issued under this EP.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.17 Email sent to Gascoyne Recreational Marine Users and Pilbara/Kimberley recreational marine users – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and Woodside's response will be included in Woodside's EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Dear Stakeholder

GOODWYN ALPHA FACILITY OPERATIONS ENVIRONMENT PLAN

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by 15 May 2026 using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is enclosed, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website at www.woodside.com/what-we-do/consultation-activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m petroleum safety zone (PSZ). • The Interfield Line (IFL) and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form at www.woodside.com/what-we-do/consultation-activities by **15 May 2026.** Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. You can access the brochure online through the QR code below.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit www.woodside.com/what-we-do/consultation-activities.

6.1.19 Email sent to Western Australian Museum; Department of Climate Change, Energy, the Environment and Water (DCCEEW) – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by 14 May 2026 using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Please also find attached the details of Commonwealth and WA shipwrecks that are relevant for this EP.

Woodside refers to the *Underwater Cultural Heritage Act 2018 (Cwth)* and the Commonwealth Government's (2024) Assessing and Managing Impacts to Underwater Cultural Heritage in Australian Waters: Guidelines on the application of the *Underwater Cultural Heritage Act* 2018.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line (IFL) and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

6.1.20 Email sent to Department of Planning, Lands and Heritage (DPLH) – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Please also find attached the details of WA shipwrecks that are relevant for this EP.

Given the proximity of the proposed activities to Marine Parks, Woodside is consulting with the Department of Biodiversity, Conservation and Attractions (DBCA) for this EP. Woodside is also consulting with the Western Australian Museum and provided it with relevant shipwreck information for this EP.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan

6.1.21 Email sent to Shire of Ashburton – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Woodside is required to manage environmental impacts and risks to the EMBA by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations), through the implementation of the EP. Woodside will submit the proposed EP to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Preparedness and Response

In the course of developing the EP, Woodside will develop the oil spill preparedness and response position tailored to this activity including the drafting of the Oil Pollution First Strike Plan which details the potential impacts, notifications and response mitigations that may be executed to manage an emergency event. Woodside consults with the relevant jurisdictional authorities and controlling agencies, including the Western Australian Department of Transport and Major Infrastructure (DTMI), the Australian Maritime Safety Agency (AMSA) and, in some circumstances, relevant port authorities, during the plan drafting process to inform mitigation management measures in place for the proposed activities. Woodside may also consult with other relevant external emergency management agencies, including LEMC, to ensure emergency management plans are aligned with effective outcomes.

In addition to the jurisdictional authorities and controlling agencies, the plan includes standard emergency notifications to agencies including NOPSEMA, the Department of Climate Change, Energy, the Environment and Water (DCCEEW), the Director of National Parks (DNP), and the WA Department of Biodiversity, Conservation and Attractions (DBCA). Where applicable, notification information for relevant Shires is also included in the Oil Pollution First Strike Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Cultural heritage

Woodside routinely utilises the Department of Planning, Land and Heritage Aboriginal Cultural Heritage Inquiry System as part of the EP development process and includes the results of these inquiry system searches as an appendix to each EP.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.22 Email sent to Chevron – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Please also find attached GIS shape file/s.

We would be grateful if you could please forward this consultation information to your Joint Venture participants Osaka Gas Gorgon, MidOcean Gorgon and JERA Gorgon for feedback.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.23 Email sent to Western Australian Fishing Industry Council (WAFIC) – 13 April 2026

Please see below consultation information for the Goodwyn Alpha (GWA) Facility Operations Environment Plan. The consultation period is due to close on **14 May 2026**.

A Consultation Information Sheet is also attached.

Under the fee-for-service agreement Option A, can WAFIC please provide the consultation information to the following fisheries based on active fishing (Fishcube data) in the Operational Area:

- Mackerel Managed Fishery (Area 2)
- Marine Aquarium Fish Managed Fishery
- Onslow Prawn Managed Fishery
- Pilbara Fish Trawl (Interim) Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery (Condition)
- Specimen Shell Managed Fishery

Draft email for WAFIC to send to Individual Licence Holders

Dear Licence Holders

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to WAFIC by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The table below provides a summary of the proposed activities under this EP. The attached Consultation Information Sheet provides further information including a map of impacted areas, summaries of potential impacts and risks relating to the proposed activities, and associated management measures, as well as our approach to consultation. This is also available on Woodside's website.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line (IFL) and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Feedback

Please provide feedback specific to the proposed activities described to admin@wafic.org.au by **14 May 2026**.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.24 Email sent to Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Fish Trawl (Interim) Managed Fishery, Pilbara Trap Managed Fishery, Pilbara Line Fishery, Specimen Shell Managed Fishery individual licence holders (via WAFIC) – 20 April 2026

Dear Licence Holders

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to WAFIC by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

6.1.25 Email sent to Department of Biodiversity, Conservation and Attractions (DBCA) – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by 14 May 2026 using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Areas of ecological importance

The GWA Operational Area overlaps the Montebello Islands Marine Park (IUCN: II, IA, IV, VI).

Woodside maintains knowledge and an understanding of areas of ecological importance within and adjacent to the Operational Area. An information system to track current existing environment knowledge is regularly updated and covers the following topics:

- EPBC Act Matters of National Ecological Significance (MNES) including threatened and migratory listed species
- WA Biodiversity Conservation Act 2016 – threatened and priority fauna list, the Part 13 Instruments, i.e., threatened species recovery plans and Biodiversity Regulations 2018
- EPBC Act threatened Species, Recovery Plans and Conservation advice
- State protected areas information and management plans on the habitats and associated fish and benthic communities.

The sources of information include credible published scientific research, industry and research agencies (government and university) study reports including baseline and monitoring programs. Woodside is also committed to sharing knowledge and contributes to the Index of Marine Surveys for Assessment (IMSA) hosted by the Department of Water and Environmental Regulation (WA) and supported by WAMSI.

National Light Pollution Guidelines

The lighting associated with the Goodwyn Alpha Facility and activity vessels is required as a priority for safe operation. Woodside has considered the Commonwealth Department of Climate Change, Energy, the Environment and Water's National Light Pollution Guidelines for Wildlife (NLPG) (Commonwealth of Australia 2023) with respect to the facility and vessel activities. The assessment of potential impacts to seabird, marine turtles, and fish behaviour, is based on recommendations in the NLPG. Operational light emissions from the GWA facility and vessels represent a negligible disturbance to fauna within the Operational Area. This impact assessment determined that the impacts of lighting are as low as reasonably practicable (ALARP).

Operational and Scientific Monitoring Program

Woodside's oil spill Operational and Scientific Monitoring (OSM) Program, executed under the Joint Industry OSM Framework (AEP, 2021), provides for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors including but not limited to the Ningaloo Marine Park (M 2), Montebello Islands Marine Park (M 9) and the Barrow Island Nature Reserve (R 11648). The OSM comprises ten scientific monitoring programs (SMPs) and six operational monitoring programs (OMPs). The SMPs are targeted environmental monitoring programs to assess and quantify the environmental impact of a hydrocarbon spill range of physical-chemical (water and sediment) and biological (species and habitats) receptors, including EPBC Act listed species, environmental values associated with protected areas and socio-economic values, such as fisheries. The ten SMPs address a range of receptors most vulnerable to the impacts of a hydrocarbon release. The actual design and execution of the OSM program will be dependent on the nature and scale of the spill and the receptors predicted to be impacted. One of the priority focus areas in the early phase of an incident would be to identify and execute OSM at First Strike Monitoring Priorities.

Incidents and emergency response

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside's Oil Pollution First Strike Plan for this activity includes a commitment that the DBCA will be notified via phone call as soon as practicable if there is potential for oiled wildlife or the spill is expected to contact land or waters managed by WA DBCA. Woodside has incorporated the DBCA Pilbara regional office phone number as part of the notifications as listed in the Oil Pollution First Strike Plan.

This plan describes the incident management structure, notification and reporting requirements, the Operational Area, activity specific credible spill scenarios, and the hydrocarbon spill response strategies available for the protection of priority receptors. Links are included in the plan to a suite of existing Operational Plans and Tactical Response Plans (TRPs) to commence the mobilisation of response resources immediately, including 'monitor and evaluate' services, operational and scientific monitoring, and shoreline clean-up where required. Woodside understands that DBCA will not implement an oiled wildlife management response on behalf of a petroleum operator.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.26 Email sent to Aquaculture Council of Western Australia (ACWA), Western Rock Lobster Council – 13 April 2026

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **14 May 2026** using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line to the Karratha Gas Plant onshore.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m Petroleum Safety Zone (PSZ) of the platform. • The Interfield Line and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

State fisheries

State fisheries active in the Operational Area:

- Mackerel Managed Fishery (Area 2)
- Marine Aquarium Fish Managed Fishery
- Onslow Prawn Managed Fishery
- Pilbara Fish Trawl (Interim) Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery (Condition)
- Specimen Shell Managed Fishery

State fisheries active in the EMBA:

- Exmouth Gulf Prawn Managed Fishery
- Gascoyne Demersal Scalefish Managed Fishery
- Mackerel Managed Fishery (Area 2)
- Marine Aquarium Fish Managed Fishery

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Nickol Bay Prawn Managed Fishery
- Onslow Prawn Managed Fishery
- Pilbara Crab Managed Fishery
- Pilbara Fish Trawl (Interim) Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery (Condition)
- Western Australian Sea Cucumber Fishery
- Shark Bay Crab Managed Fishery
- Shark Bay Prawn Managed Fishery
- Shark Bay Scallop Managed Fishery
- Specimen Shell Managed Fishery
- West Coast Deep Sea Crustacean Managed Fishery
- West Coast Demersal Scalefish (Interim) Managed Fishery
- West Coast Rock Lobster Managed Fishery
- Exmouth Gulf Beach Seine and Mesh Net Managed Fishery
- Open Access in the North Coast, Gascoyne Coast and West Coast Bioregions
- Pearling leases in the Montebello Islands and Dailey Shoal
- Aquaculture sites in the Mackerel Islands and Exmouth

1. **Notifications**
2. Please let us know if you wish to receive start and end-of-activity notifications that may be issued under this EP.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Dear Stakeholder

GOODWYN ALPHA FACILITY OPERATIONS ENVIRONMENT PLAN

Woodside is preparing to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP). The GWA facility is located in Commonwealth waters approximately 138 km north-west of Dampier and 23 km south-west of the Woodside-operated North Rankin Complex.

The current GWA Facility Operations EP was accepted in January 2022. This revision incorporates updates including Greater Western Flank (GWF) infrastructure and associated activities.

If you would like to comment on the proposed activity, please provide feedback to Woodside by 15 May 2026 using the details below.

Overview

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Consultation information

A Consultation Information Sheet is enclosed, which provides further information on the proposed activities, including potential impacts and risks and associated management measures. The Consultation Information Sheet is also available on our website at www.woodside.com/what-we-do/consultation-activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Activity and location summary

Goodwyn Alpha Facility Operations Environment Plan	
Activity details	Activities include: • Processing and production of dry gas and condensate. • Routine and non-routine inspection, monitoring, maintenance and repair (IMMR) activities. • Well clean-up and commissioning. • Platform well intervention, unloading, workovers and well kill activities. • Associated facility operations (e.g. lifting, bunkering, support vessel and helicopter operations).
Titles	Production licences: WA-1-L, WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-57-L[1]. Pipeline licences: WA-2-PL, WA-9-PL, WA-13-PL, WA-24-PL, WA-27-PL[2].
Location	The GWA platform is located in approximately 131 m of water, approximately 138 km north-west of Dampier and 23 km south-west of North Rankin Complex (NRC).
Water depth	Approximately 74 m to 200 m deep.
Timing	• Production commenced in 1995. • End of field life is anticipated between 2036 and 2040. • Decommissioning is not planned within the next five years.
Duration	• Operations occur 24 hours a day, 365 days a year. • IMMR activities occur as required.
Infrastructure	• GWA fixed platform, processing equipment, platform wells and utilities. • Subsea wells, manifolds, flowlines/pipelines, umbilicals and associated infrastructure.
Vessels	• Platform support vessels for logistics and operational support. • IMMR vessels (including subsea, accommodation and heavy lift vessels) as required. • Helicopters for personnel and freight transfer.
Operational Area and exclusion zones	The Operational Area includes: • The GWA platform and an area within a 500 m petroleum safety zone (PSZ). • The Interfield Line (IFL) and an area within 1500 m of the infrastructure. • Subsea infrastructure associated with offshore fields, and an area within 1500 m of that infrastructure. • New proposed subsea infrastructure and production wells, and an area within 1500 m of the infrastructure.
Communication with mariners	• Marine notices will be issued where vessel activities occur for more than three weeks outside the PSZ. • Other marine users may operate within the Operational Area but must not enter the PSZ.

[1] The Operational Area currently includes WA-7-R which is expected to be converted to a production licence.

[2] A new pipeline licence is required for the operation of the proposed GWF-4 flowline.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are well loss of containment, subsea loss of containment, topsides loss of containment, loss of structural integrity, vessel loss of separation, and loss of control of suspended load from facility lifting operations.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form at www.woodside.com/what-we-do/consultation-activities by **15 May 2026.** Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. You can access the brochure online through the QR code below.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit www.woodside.com/what-we-do/consultation-activities.

6.1.28 Email sent to Buurabalayji Thalanyji Aboriginal Corporation (BTAC) (via legal representative) – 13 April 2026

We are contacting you as the delegated representative for Buurabalayji Thalanyji Aboriginal Corporation (BTAC), as well as the primary contact for the Thalanyji / Nhuwala People.

Woodside would like to consult with BTAC and the Thalanyji / Nhuwala People as a relevant stakeholder that may be affected by the:

- Goodwyn Alpha Facility Operations Environment Plan (EP).
- CK4 (Cossack-4H) and LH3 (Lambert-3) Well Intervention EP

Consultation for these activities closes on Tuesday 12 May 2026. Your feedback, opinions and comments provided by this date will be reflected in the EPs and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

- inform you about our plans for the activities,
- invite you to submit feedback for the activities,
- provide an opportunity to discuss the activities,
- discuss further ways to consult and engage for the activities.

Overview of the activities

The attached Summary Information Sheets have been developed for an Indigenous audience and provide a high-level overview of the activities, including the Environment that May Be Affected (EMBA) map. We have also linked Consultation Information Sheets here with further details including assessments of the potential impacts and risks relevant to these activities, as well as mitigation and management measures.

Consultation with Woodside
We'd like to gather your feedback about:

1. How the activities could impact your cultural values, interests, and activities.
2. Protection of the environment and its relationship to your cultural values.
3. Your concerns about the proposed activities.
4. Other elements we should consider in the EPs.
5. Any other individuals, groups, or organisations we should talk to about these activities.

We have considered the information you have already provided Woodside during previous consultation and also conducted reviews of available literature in relation to BTAC's cultural values that we consider relevant to these activities, which is outlined in Attachment A. Please get in touch with us if you would like more information or references regarding the values outlined in the document. If there are any changes or additional information you would like Woodside to consider in the preparation of these EPs, please let us know by Tuesday 12 May 2026.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about these activities. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Further information about NOPSEMA
The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- Policy: Draft policy for managing gender-restricted information (nopsema.gov.au)

Ongoing Feedback
Feedback can continue to be provided during the life of the EPs, including after consultation for the EPs has closed, during EP assessment, and after the EPs has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EPs. Should a claim or objection be received following the acceptance of the EPs that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members, Traditional Owners and other people and organisations who may be interested.

We also acknowledge our discussions relating to a consultation framework agreement have been ongoing and appreciate that these discussions will progress in parallel with consultation for these EPs.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards

6.1.31 Email sent to Murujuga Aboriginal Corporation (MAC) – 13 April 2026

Woodside would like to consult with MAC as a relevant stakeholder that may be affected by the:

- Goodwyn Alpha Facility Operations Environment Plan (EP).
- CK4 (Cossack-4H) and LH3 (Lambert-3) Well Intervention EP

Consultation for these activities closes on Tuesday 12 May 2026. Your feedback, opinions and comments provided by this date will be reflected in the EPs and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

- inform you about our plans for the activities,
- invite you to submit feedback for the activities,
- provide an opportunity to discuss the activities,
- discuss further ways to consult and engage for the activities.

Overview of the activities
The attached Summary Information Sheets have been developed for an Indigenous audience and provide a high-level overview of the activities, including the Environment that May Be Affected (EMBA) map. We have also linked Consultation Information Sheets here with further details including assessments of the potential

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

impacts and risks relevant to these activities, as well as mitigation and management measures.

Consultation with Woodside
We'd like to gather your feedback about:

1. How the activities could impact your cultural values, interests, and activities.
2. Protection of the environment and its relationship to your cultural values.
3. Your concerns about the proposed activities.
4. Other elements we should consider in the EPs.
5. Any other individuals, groups, or organisations we should talk to about these activities.

We have considered the information you have already provided Woodside during previous consultation and also conducted reviews of available literature in relation to MAC's cultural values that we consider relevant to these activities, which is outlined in Attachment A. Please get in touch with us if you would like more information or references regarding the values outlined in the document. If there are any changes or additional information you would like Woodside to consider in the preparation of these EPs, please let us know by Tuesday 12 May 2026.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about these activities. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Further information about NOPSEMA
The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- Policy: Draft policy for managing gender-restricted information (nopsema.gov.au).

Ongoing Feedback
Feedback can continue to be provided during the life of the EPs, including after consultation for the EPs has closed, during EP assessment, and after the EPs has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EPs. Should a claim or objection be received following the acceptance of the EPs that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards

Cultural Values – Murujuga Aboriginal Corporation (MAC)

Cultural Value	Source	
	Consultation – identified during EP consultation	Literature review (publicly available)
The ecosystem and health of Mermaid Sound.		x
Marine species • Whales: totemic importance • Dolphins: cultural ceremonies • Dugongs: food source • Fish: cultural ceremonies • Sea Snakes: culturally important • Turtles: Songlines • Coral: attract fish and other species • Seagrass: provide protection for animals. Locations include Conzinc Island and between Angel and Gidley Islands. • Stingrays • Sharks • Crustaceans • Octopus • Sea stars • Sea urchins • Sponges • Molluscs	x	x
Marine eco-systems • Mangroves: would have provided shelter, crabbing, digging for shellfish and could be turtle nurseries. Locations include Conzinc Bay north end, Flying Foam Passage, Searipple Passage, North-East Bay of West Lewis Island. • Macroalgal (seaweed) communities: important habitats and food sources. • Subtidal soft bottom communities (ocean bottom): support invertebrate diversity. • Intertidal sand and mudflat communities: support invertebrate diversity and provide food for shorebirds. • Rocky shores: habitats for plants/animals and provide food for shorebirds.	x	x
Fish traps in Conzinc Bay and Angel and Gidley Islands.	x	x
Harvesting squid around Conzinc Bay		x

MAC is the appropriate cultural authority for Murujuga	x	
Submerged landscape: • Potential impact on Jinna (Songlines) • Potential impact to Aboriginal heritage, due to the submerged coastline at initial occupation of the region, landscape features that would have defined the first travel routes used to move through Country.	x	
Murujuga seasonal calendar: • Any change to the feeding, breeding or migratory behaviour of culturally significant species would impact significantly on subsistence, cultural and ceremonial activities.	x

6.1.32 Email sent to Nanda Aboriginal Corporation (Nanda) – 13 April 2026

Woodside would like to consult with Nanda Aboriginal Corporation (Nanda) as a relevant stakeholder that may be affected by the Goodwyn Alpha Facility Operations (the activity) Environment Plan (EP).

Consultation for this activity closes on Tuesday 12 May 2026. Your feedback, opinions and comments provided by this date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity
The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have linked a Consultation Information Sheet here with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside
We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the EP
5. Any other individuals, groups, or organisations we should talk to about this activity

We have considered the information you have already provided Woodside during previous consultation and also conducted reviews of available literature in relation to Nanda's cultural values that we consider relevant to this activity, which is outlined in Attachment A. Please get in touch with us if you would like more information or references regarding the values outlined in the document. If there are any changes or additional information you would like Woodside to consider in the preparation of this EP, please let us know by Tuesday 12 May 2026.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Further information about NOPSEMA
The following NOPSEMA publications may be of assistance to support understanding of the requirements to

We welcome the opportunity to speak with Elders, office holders and other interested parties about these activities. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Further information about NOPSEMA
The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- Policy: Draft policy for managing gender-restricted information (nopsema.gov.au).

Ongoing Feedback
Feedback can continue to be provided during the life of the EPs, including after consultation for the EPs has closed, during EP assessment, and after the EPs has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EPs. Should a claim or objection be received following the acceptance of the EPs that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards

6.1.38 Email sent to Robe River Kuruma Aboriginal Corporation (RRKAC) – 13 April 2026

Woodside would like to consult with RRKAC as a relevant stakeholder that may be affected by the:

- Goodwyn Alpha Facility Operations Environment Plan (EP).
- CK4 (Cossack-4H) and LH3 (Lambert-3) Well Intervention EP

Consultation for these activities closes on Tuesday 12 May 2026. Your feedback, opinions and comments provided by this date will be reflected in the EPs and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

- inform you about our plans for the activities,
- invite you to submit feedback for the activities,
- provide an opportunity to discuss the activities,
- discuss further ways to consult and engage for the activities.

Overview of the activities
The attached Summary Information Sheets have been developed for an Indigenous audience and provide a high-level overview of the activities, including the Environment that May Be Affected (EMBA) map. We have also linked Consultation Information Sheets here with further details including assessments of the potential impacts and risks relevant to these activities, as well as mitigation and management measures.

Consultation with Woodside
We'd like to gather your feedback about:

1. How the activities could impact your cultural values, interests, and activities.
2. Protection of the environment and its relationship to your cultural values.
3. Your concerns about the proposed activities.
4. Other elements we should consider in the EPs.
5. Any other individuals, groups, or organisations we should talk to about these activities.

We have considered the information you have already provided Woodside during previous consultation and also conducted reviews of available literature in relation to RRKAC's cultural values that we consider relevant to these activities, which is outlined in Attachment A. Please get in touch with us if you would like more information or references regarding the values outlined in the document. If there are any changes or additional information you would like Woodside to consider in the preparation of these EPs, please let us know by Tuesday 12 May 2026.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about these activities. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Further information about NOPSEMA
The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- Policy: Draft policy for managing gender-restricted information (nopsema.gov.au).

Ongoing Feedback
Feedback can continue to be provided during the life of the EPs, including after consultation for the EPs has closed, during EP assessment, and after the EPs has been accepted by NOPSEMA. Consultation with Woodside
We'd like to gather your feedback about:

1. How the activities could impact your cultural values, interests, and activities.
2. Protection of the environment and its relationship to your cultural values.
3. Your concerns about the proposed activities.
4. Other elements we should consider in the EPs.
5. Any other individuals, groups, or organisations we should talk to about these activities.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about these activities. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Further information about NOPSEMA

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- Policy: Draft policy for managing gender-restricted information (nopsema.gov.au).

Ongoing Feedback
Feedback can continue to be provided during the life of the EPs, including after consultation for the EPs has closed, during EP assessment, and after the EPs has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EPs. Should a claim or objection be received following the acceptance of the EPs that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please feel free to forward this email and the attached document to members, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards

6.1.45 Email sent to Yamatji Marlpa Aboriginal Corporation (YMAC) – 13 April 2026

We are contacting you as the delegated representative for Yamatji Marlpa Aboriginal Corporation (YMAC), as well as the primary contact for the Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC) and Nhuwala Claim Group.

Woodside would like to consult with YMAC, NTGAC and the Nhuwala Claim Group as a relevant stakeholder that may be affected by the:

- Goodwyn Alpha Facility Operations Environment Plan (EP).
- CK4 (Cossack-4H) and LH3 (Lambert-3) Well Intervention EP

Consultation for these activities closes on Tuesday 12 May 2026. Your feedback, opinions and comments provided by this date will be reflected in the EPs and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

- inform you about our plans for the activities,
- invite you to submit feedback for the activities,
- provide an opportunity to discuss the activities,
- discuss further ways to consult and engage for the activities.

Overview of the activities
The attached Summary Information Sheets have been developed for an Indigenous audience and provide a high-level overview of the activities, including the Environment that May Be Affected (EMBA) map. We have also linked Consultation Information Sheets here with further details including assessments of the potential impacts and risks relevant to these activities, as well as mitigation and management measures.

Consultation with Woodside
We'd like to gather your feedback about:

1. How the activities could impact your cultural values, interests, and activities.
2. Protection of the environment and its relationship to your cultural values.
3. Your concerns about the proposed activities.
4. Other elements we should consider in the EPs.
5. Any other individuals, groups, or organisations we should talk to about these activities.

We have considered the information you have already provided Woodside during previous consultation and also conducted reviews of available literature in relation to NTGAC's cultural values that we consider relevant to these activities, which is outlined in Attachment A. Please get in touch with us if you would like more information or references regarding the values outlined in the document. If there are any changes or additional information you would like Woodside to consider in the preparation of these EPs, please let us know by Tuesday 12 May 2026.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

these activities. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Further information about NOPSEMA

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- Policy: Draft policy for managing gender-restricted information (nopsema.gov.au).

Ongoing Feedback
Feedback can continue to be provided during the life of the EPs, including after consultation for the EPs has closed, during EP assessment, and after the EPs has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EPs. Should a claim or objection be received following the acceptance of the EPs that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards

6.1.46 Email sent to Ngarluma Yindjibarndi Foundation Ltd (NYFL) – 13 April 2026

We are contacting you as the delegated representative for Yindjibarndi Aboriginal Corporation and Ngarluma Yindjibarndi Foundation Ltd (NYFL).

Woodside would like to consult with NYFL and Yindjibarndi as a relevant stakeholder that may be affected by the:

- Goodwyn Alpha Facility Operations Environment Plan (EP).
- CK4 (Cossack-4H) and LH3 (Lambert-3) Well Intervention EP

Consultation for these activities closes on Tuesday 12 May 2026. Your feedback, opinions and comments provided by this date will be reflected in the EPs and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

- inform you about our plans for the activities,
- invite you to submit feedback for the activities,
- provide an opportunity to discuss the activities,

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- discuss further ways to consult and engage for the activities.

Overview of the activities

The attached Summary Information Sheets have been developed for an Indigenous audience and provide a high-level overview of the activities, including the Environment that May Be Affected (EMBA) map. We have also linked Consultation Information Sheets here with further details including assessments of the potential impacts and risks relevant to these activities, as well as mitigation and management measures.

Consultation with Woodside
We'd like to gather your feedback about:

1. How the activities could impact your cultural values, interests, and activities.
2. Protection of the environment and its relationship to your cultural values.
3. Your concerns about the proposed activities.

Woodside previously consulted you on its plans to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations EP.

The GWA Facility Operations EP will cover:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Additional information on the EP is provided in the email below and in the Consultation Information Sheet, which is available on Woodside's website.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **14 May 2026**.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

4 May 2026

Dear Stakeholder,

Woodside previously consulted you on its plans to submit a five-year revision of the Goodwyn Alpha (GWA) Facility Operations EP.

The GWA Facility Operations EP covers:

- Continued operation of the GWA facility to receive, extract and process dry gas and condensate from offshore fields.
- Export of gas and condensate via the Interfield Line (IFL) to the Karratha Gas Plant onshore.
- Commissioning of up to seven new production wells associated with GWF developments.
- Vessel-based inspection, monitoring, maintenance and repair (IMMR) activities to support the facility and subsea infrastructure.

Further information on the proposed activities is provided in the Consultation Information Sheet which is available on Woodside's website **https://www.woodside.com/what-we-do/consultation-activities** or via the QR code below:

If you have feedback specific to the activities and the proposed EP, Woodside welcomes your feedback at **feedback@woodside.com** or via phone call at 1800 442 977 by **14 May 2026**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit **www.woodside.com/what-we-do/consultation-activities**.

Regards

6.3 Newspaper advertisements

6.3.1 The Australian – 13 April 2026

THE AUSTRALIAN MONDAY, APRIL 13, 2026

6 THE NATION

AUSE01Z50MA - V3

No Skye, an oddly shy NGA chief and controversy all over the walls

APY artists at the opening of the Ngura Pulka exhibition at the National Gallery, left and above; artist Yaritji Young, right; NGA director Nick Mitzevich with the Arts Minister's special envoy for the arts Susan Templeman, below

ROSEMARY NEILL

It was postponed for three years and is one of the most controversial exhibitions in the National Gallery of Australia's history.

Yet the launch on Saturday of Ngura Pulka (Epic Country) – an Indigenous landscape exhibition dogged by disputed allegations of white interference in black art – was a low-key "community" affair.

It featured a smoking ceremony and traditional songs performed by more than a dozen APY artists who flew to Canberra from remote South Australia – as well as a string of high-profile no-shows.

NGA director Nick Mitzevich declared "the National Gallery stands by all the (Indigenous) artists in the room ... by putting your work on display for the first time for the nation", but refused to speak to media or to have his photograph taken by The Australian's photographer.

The Governor-General, Sam Mostyn, sent her apologies, as did the member for Canberra, Alicia Payne.

APY Art Centre Collective CEO Skye O'Meara – the woman at the centre of the interference allegations – and high-profile APY artist and National Gallery council member Sally Scales – whose painting was withdrawn from the show – did not attend.

Tight-lipped publicists could not explain Scales' absence, while O'Meara's no-show was put down to a "scheduling clash".

Arts Minister Tony Burke sent his special envoy for the arts, Susan Templeman, who saluted the "incredible beauty" of the 30 landscapes in the exhibition and became emotional as she read from a statement by APY artist and art centre chair Sandra Pumani, who said: "We always knew we would get here ... we stand by these artworks as one."

The landscapes (not including the new works) in the exhibition were cleared by an NGA investigation that followed The Australian's months-long probe into South Australia's APY Art Centre Collective, the influential art centre behind the Ngura Pulka show.

The independent NGA investigation concluded all 28 paintings then bound for the Ngura Pulka

exhibition met the gallery's provenance standards. However, that inquiry excluded a video that was central to The Australian's investigation and appeared to show a white gallery assistant painting on a work by APY painter Yaritji Young, who has a different painting in the Ngura Pulka exhibition. Young was at the NGA on Saturday, but she and the other APY artists did not speak to the media.

The NGA investigators, Melbourne silk and copyright expert Colin Golvan and Sydney copyright lawyer Shane Simpson, said when it came to attribution, they regarded the word of the APY artists as being of "utmost importance". They excluded the video from their probe because the Young work depicted in it was not part of Ngura Pulka.

The Australian revealed on Friday four of the 28 cleared paintings, including one by National Gallery of Australia board member Scales, had been withdrawn from the exhibition, while six recently created works were added.

The NGA said Scales's painting was withdrawn from Ngura Pulka for governance reasons, following her reappointment to the National Gallery Council by Mr Burke.

The APYACC has issued defamation proceedings in relation to The Australian's reporting on the alleged scandal. They have consistently denied any wrongdoing and the proceedings are ongoing.

These proceedings are cited prominently in the exhibition catalogue, which also includes an essay by ABC First Nations journalist turned academic Daniel Browning, who attacks The Australian's coverage of the art saga and states: "I am always horrified when Aboriginal people become a news 'story'."

Browning also backs the approach of the experts who conducted the probe for the NGA, endorsing and paraphrasing their view that "If an artist asserts that they are the sole creator of this or that work, they should be believed".

Coober Pedy opal miner and artist George Cooley's painting, Blue Ground Country, is among the new paintings added to the show, and Cooley said in a speech that the APY artists affected by the saga "went through some hard times about three, 3½ years ago."

He thanked influential galleries, including the Art Gallery of South Australia and Art Gallery of NSW, who he said had "stood by us over the last three years" and revealed there were plans to tour Ngura Pulka internationally.

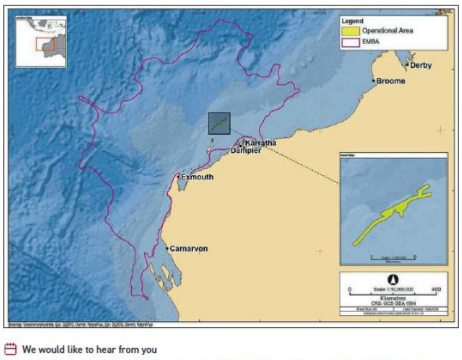
After the allegations reported by Walkley Award-winning former reporter for The Australian Greg Bearup, the APYACC was dumped from the Indigenous Art Code, the body that regulates First Nations art's ethical standards.

In the same year, the art collective was investigated by the SA, NT and federal governments.

Then NT arts minister Chansey Peach told The Australian this review found "substantial wrongdoing" in all nine areas it investigated, including claims of white interference in the making of Indigenous work, fraud and bullying. The findings were not made public and the matter was referred to the consumer watchdog, which found no breaches of consumer law.

The exhibition continues until August 23.

Goodwyn Alpha Facility Operations Environment Plan



Woodside has led the development of the LNG industry in Australia and today aims to thrive through the global energy transition. Woodside consults with relevant persons to gather feedback to inform its Commonwealth Environment Plans.

Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP)

Woodside plans to continue operating the GWA facility to receive and process gas and condensate from offshore fields. Gas and condensate will be exported via the Interfield Line to the Karratha Gas Plant onshore. The EP also covers commissioning of up to seven production wells, and vessel-based inspection, monitoring and maintenance activities.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. In the highly unlikely event a hydrocarbon release does occur, the whole EMBA would not be affected.

We would like to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the activities under this EP, we would like to hear from you by **14 May 2026.**

Rapist's escape highlights new detention crisis

EXCLUSIVE

LACHLAN LEEMING
NSW POLITICAL CORRESPONDENT

The Albanese government had been warned of major security flaws in the country's immigration detention network less than a month before a convicted child rapist allegedly escaped in Sydney's west.

Michael Angok, 30, was arrested on Sunday afternoon following a multi-agency manhunt, after allegedly escaping from Bankstown Hospital, where he had been transported from Villawood Immigration Detention Centre for treatment on Wednesday.

The escape has raised new security concerns and questions over the management of the nation's detention centres, with a report by the commonwealth ombudsman – quietly released last month – warning of an increase in violent incidents and escapes as the network transitioned between operators.

The ombudsman was scathing of the 2025 handover from Serco to Secure Journeys, with the March report stating staff at centres were struck by burnout, adding poor management of the network of detention centres was evidenced by "the increase in incidents, escapes and the exacerbation of pre-existing issues during and after the transition period".

The report highlighted how there had been 12 escapes in the past year, before Angok fled last week.

The list of escapes included an instance where an immigration detainee stabbed two escorting officers with a makeshift weapon before fleeing, as he was being transported to the airport for removal in May last year.

The handover "distinctly lacked process and effective communication", and this led to concern about "increased risk and instability within the centres".

The report also claimed "hostility between outgoing and in-

Angok

coming providers" during the transition.

"Staff at multiple sites in differing roles raised concerns ... that outgoing staff were attempting to sabotage Secure Journeys," the report stated.

Serco rejected the claims in its response to the report.

Opposition home affairs spokesman Jonno Duniam claimed Labor was putting the community at risk due to failures in the immigration detention program.

"The alarm was raised, warnings were ignored, and now we've had a child rapist on the run," Senator Duniam said.

> 'The ombudsman could not have more clearly stressed the need for urgency'
>
> SENATOR JONNO DUNIAM
> OPPOSITION HOME AFFAIRS SPOKESMAN

"The ombudsman could not have more clearly stressed the need for urgency to control this spiralling issue.

"Home Affairs Minister Tony Burke must outline to Australians what he is going to do to rein this in. Silence is not going to cut it; the community deserves answers from this government who shirk their responsibilities when it comes to national security and immigration matters."

The criticism came as police arrested Angok on Sunday afternoon in Sydney's west.

NSW police confirmed officers from the Police Transport Command arrested the child rapist on the corner of Hartley Rd and Terminus Rd in Seven Hills.

Police will allege shoes belonging to the man where seen out the front of a home in the area, with police confirming investigations were continuing to see if he had been harboured.

Police said he was charged on an outstanding warrant and will face Blacktown Local Court on Monday.

Mr Burke's office referred inquiries about the ombudsman's report to the Home Affairs Department.

A departmental spokesman said that measures had been taken to improve immigration detention centre management, including recommendations suggested by the ombudsman such as the increased presence of Australian Border Force officers at centres.

"The department and the Australian Border Force have already implemented a range of actions, including measures specifically acknowledged by the ombudsman, such as an increased and sustained ABF onsite presence and enhanced compliance and audit activity across the detention network," he said.

"The department acknowledges the ombudsman's observation that further work is required and will continue to implement the report's recommendations, including reviewing lessons learned from this transition, strengthening future contract management, and working closely with the ombudsman and other oversight bodies to drive sustained improvement."

The Australian revealed last year the Home Affairs Department missed 17 of 82 performance targets it set for itself in 2024-25 financial year, with the department's annual report outlining a concerning increase in "critical incidents" involving immigrant detainees, including jumps in sexual assaults, escapes and riots.

Escapes more than doubled from three in 2023-24 to seven in 2024-25, while there have been at least 12 escapes in the past year.

Indigenous remains at Rottnest excavation

JACK NIVISON

Bones uncovered in the yard of a Catholic church on Rottnest Island have been revealed to be Indigenous remains, likely associated with the island's grim past as a detention centre for Aboriginal men and boys.

The remains were discovered on Wednesday morning as construction workers were upgrading a bus stop next to the Holy Trinity Church.

The discovery was referred to police by the on-site Noongar cultural heritage monitor.

Cultural heritage monitors are required to attend any sites on Rottnest Island, also known as Wadjemup, which involve digging or ground disturbance because of the area's historical significance.

Police arrived accompanied by a state anthropologist on Thursday, and forensic analysis resulted in the conclusion the bones were "historical in nature and consistent with Indigenous ancestry".

"WA police have liaised with the Whadjuk Aboriginal Corporation (WAC) and Rottnest Island Authority (RIA), who will assume ongoing management of the matter," police said.

In a joint statement, WAC and the RIA on Friday said all works at the bus stop had ceased until further notice, and expressed "sincere regret for the deep distress this incident has caused to Aboriginal people".

"RIA and WAC are working closely together to ensure all appropriate cultural protocols are followed, and that respectful, culturally informed decisions are made regarding the protection and ongoing management of the site," they said.

"RIA and WAC will continue to provide updates on this matter as further information becomes available."

While Rottnest Island is currently known for its easy-access tourism opportunities, friendly quokkas and beachside getaways, the island's history as a prison for Aboriginal men and boys is a source of great pain for the Whadjuk Noongar people.

According to WA state records, 3700 Aboriginal men and boys were imprisoned on the island between 1838 and 1931.

Five fight for life after horror crash

Five people are fighting for life after a multi-car and motorbike crash which left two people trapped inside their vehicles.

Emergency services were called to Tamborine Mountain Road in Mt Tamborine, Queensland, about 10.40am on Sunday after reports that two cars and a motorbike collided.

Police said one car was heading east on the road when it collided with the motorbike and another car driving in the opposite direction.

Multiple paramedic units and three rescue helicopters were called to the scene after reports that six people were injured and two had become trapped.

The motorcyclist, a man in his 50s, suffered "multi-system trauma" and was flown to the Gold Coast University Hospital with life-threatening injuries.

A man and a woman, both aged in their 70s, were transported to hospital via ambulance with life-threatening injuries. The man was initially trapped inside the car and had to be freed before being taken to hospital.

Another three men in their 20s, who were in another car, were also injured in the crash. Two have life-threatening injuries. A third man was trapped inside the vehicle and suffered facial injuries.

Tarmac set-up outrage

Anger grows over AFP's dodgy airport showboating

Former Australian soldier Ben Roberts Smith is arrested.

JOSEPH OLBRYCHT-PALMER

Federal police and war crimes investigators must face a public grilling in Canberra over the controversial airport arrest of war hero Ben Roberts-Smith unless they answer tough questions.

Shadow defence minister James Patterson said Australian Federal Police and the Office of the Special Investigator must "explain" why Australia's most decorated war hero was dragged off a plane in front of his partner and teenage daughters when he had already volunteered to surrender to authorities.

"I don't know what their considerations were, why they chose to arrest him at that time and that place, and it's up to them to explain why it was operationally necessary to do so," Senator Patterson said.

"Operational questions which must be answered by the Federal Police and the OSI."

The AFP even dispatched its own film crew to capture the moment that the Victoria Cross recipient was taken from Qantas flight at Sydney airport on Tuesday. It gave the vision to media outlets once Mr Roberts-Smith was charged with five counts of war crime.

The grandstanding inflamed many of the former SAS soldier's supporters including former prime minister Tony Abbott, and mining billionaire Gina Rinehart. There are also queries over whether sensitive details of the arrest were leaked, with the digital fingerprint of a Nine news story about the arrest showing the file had been created the day before.

Nine was first with the arrest the next morning and also published watermarked footage of Mr Roberts-Smith being marched from a plane by police. The evidence suggests Nine was on to the operation well before it happened.

Both the AFP and OSI have refused to answers questions about the leak. Senator Patterson said both would be grilled over the case in Federal Parliament.

"There will be an opportunity to ask questions of them in Senate estimates," he said. "But there's nothing stopping the AFP explaining that in the meantime, given that it's generated significant community concern . . . I think it is in the public interest for speculation like that to be put to bed."

There is also conjecture as to why he was arrested in Sydney and not Brisbane — with concerns the decision was made to ensure he faced a more diverse jury at trial.

Mr Roberts-Smith was charged with five counts of the war crime of murder, allegedly committed during his service in Afghanistan between 2009-2012. He has always denied the allegations.

Goodwyn Alpha Facility Operations Environment Plan

Woodside has led the development of the LNG industry in Australia and today aims to thrive through the global energy transition. Woodside consults with relevant persons to gather feedback to inform its Commonwealth Environment Plans.

Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP)

Woodside plans to continue operating the GWA facility to receive and process gas and condensate from offshore fields. Gas and condensate will be exported via the Interfield Line to the Karratha Gas Plant onshore. The EP also covers commissioning of up to seven production wells, and vessel-based inspection, monitoring and maintenance activities.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. In the highly unlikely event a hydrocarbon release does occur, the whole EMBA would not be affected.

Publican lived life to the full

OBITUARY

Russell Gordon McKay, a prominent figure in the Pilbara's hospitality industry — known to many as Russ, Rusty, or simply "Rusty Buoy" — lived a life that captured something of WA itself: adventurous, entrepreneurial and deeply connected to the people and places that shaped him.

Born in Perth on January 3, 1948, Russell was the eldest son of Max and Maud (nee Pash) McKay and an older brother to Phillip and Glenn. At five years old a backyard cricket accident cost him the sight in his left eye, but it did little to slow a boy already drawn to action and adventure.

School was never his great passion. After attending City Beach Primary School and Hale School, he moved to Leederville Technical College, though his interests were already shifting towards work and the wider world.

The family's first step into hospitality came with the Grosvenor Hotel in Perth, where Russell was introduced to pub life from the ground up — bagging bottles and learning the rhythms of the trade.

But the defining move came in 1965 when Max purchased the Victoria Hotel in Roebourne, relocating the family to the Pilbara at the beginning of the iron ore boom.

The region was transforming rapidly as new mining developments reshaped the North West, and the pubs were at the centre of social life. Russell worked wherever he was needed — as yardman, cellarman, cleaner and general dogsbody — while observing the business largely run by his mother.

Maud McKay, widely known simply as "Mrs Mac", was the organisational and financial backbone of the family enterprises.

Her insistence on fairness, attention to detail and strong business practices left a lasting impression on Russell.

Despite the family business, Russell's early ambition lay elsewhere. As a young man he dreamt of driving Mack trucks, and under the mentorship of heavy-machinery operator and local legend Merv "The Black Prince" Hunter, he learnt to operate graders and heavy plant while working on road construction. Before long he was driving trucks hauling fuel and freight, work he loved for the freedom it offered.

During this period he also worked as a lumper, loading cargo on to ships at a time when asbestos shipments moved through Pilbara ports.

Eventually the pull of family and opportunity drew him back into hospitality. In 1970 the McKay family opened the Wickham Hotel, built to service the new mining town. Alongside his mother, Russell helped run establishments that became legendary meeting places at a time when the Pilbara was booming with construction workers, miners pastoralists and travellers. At the height of the boom the Victoria Hotel was reputedly the highest beer-selling pub in WA.

Russell McKay

Away from the bar, Russell embraced the outdoor lifestyle. Fishing, diving and boating became lifelong passions. He also developed a love of motorsport, racing stock cars and super-modified vehicles at Roebourne speedway, where he became a two-time club champion and lap-record holder.

In 1970 he married Paula Dean, from Fremantle, who had answered an ad in the paper to be a waitress in Roebourne. Their daughter Kelly was born in 1972.

By the late 1970s the McKay family had broadened their business interests, operating two prawning trawlers out of Nickol Bay while also expanding into metropolitan hospitality with the purchase of the Range View Hotel in Eden Hill. As the focus of the business shifted south, Russell took on what would become the defining project of his career.

In 1985 the family purchased the Herdsman Hotel in Perth. Under Russell's leadership it evolved into one of the city's best-known live music venues during the late 1980s and early 1990s. The Herdy became a hub for touring bands and Australian pub-rock acts. During this era Russell was also the licensee for major outdoor events including the Bindoon Rock Festival, a hugely popular motorcycle and rock music gathering that became part of WA's counterculture history.

As the live-music pub era declined during the 1990s, Russell again demonstrated his adaptability. Recognising the shift towards family dining and community venues, he redeveloped the Herdsman site into the Herdsman Lake Tavern. The transformation proved highly successful, with the venue winning Perth pub of the year in 2002 and 2005.

Throughout the 1990s the McKay family also owned the Odin Tavern in Balcatta, with Russell closely overseeing its management while continuing to develop the Herdsman.

Beyond business, Russell was widely known for his friendships and personality. He had an extraordinary memory for people, stories and detail. A gifted storyteller, he could hold a room with tales from the Pilbara years or from his many adventures on the water and the road.

In 2000 Russell met Vivienne Allan, who became his partner for the remainder of his life. After selling the Herdsman in 2007 the couple moved permanently to Yallingup, a place Russell had loved since holidaying there from the early 1980s.

Retirement suited him well. His days were spent fishing, playing golf, tinkering in his shed and meticulously maintaining their property. Russell and Vivienne also spent several months each winter travelling Australia in their caravan, often drawn to remote roads and coastal camps.

He remained active well into his seventies, still fishing and golfing regularly until mid-2025 when increasing breathlessness led to medical investigations. On July 10, 2025, Russell was diagnosed with mesothelioma, a disease caused by asbestos exposure that can lie dormant for decades.

True to character he approached the diagnosis with pragmatism and humour, focusing less on himself than on ensuring those closest to him would be looked after. He died on January 10, aged 78.

He is survived by his partner Vivienne, daughter Kelly, brother Glenn and a wide circle of friends.

More help in Narelle aftermath

JOE SPAGNOLO

Tourism businesses still suffering from the aftermath of tropical cyclone Narelle can apply for payments of up to $20,000, the WA Government has announced.

Tourism Minister Reece Whitby travelled to Exmouth on Sunday to announce the $1.45 million tourism support package which will provide one-off payments of up to $10,000 to eligible businesses employing fewer than four workers and up to $20,000 for businesses employing four or more staff.

The Government will also release details of a scheme where vouchers offering 50 per cent off selected tours and experiences will be made available.

The vouchers will be supported by marketing campaigns encouraging visitors to explore and support the Coral Coast region.

"We know tourism businesses relying on the busy Easter period have been hit particularly hard, and these payments will help keep them afloat," Roger Cook said on Saturday.

"The message to tourists is clear: many businesses in the region remain open and are ready for business," the Premier said.

"I urge Western Australians to visit, support those businesses, and take advantage of the great offers available."

Exmouth was virtually cut off from the rest of WA after cyclone Narelle tore through the State's north last month.

Last week, Main Roads announced parts of Minilya-Exmouth Road were now open, allowing road trips from Perth to Exmouth via North West Coastal Highway and Burkett Road.

Tourism Council WA chief executive Evan Hall said Exmouth, Shark Bay, Kalbarri, Geraldton, Carnarvon, Coral Bay, Onslow and towns in the Kimberley were ready to welcome visitors.

In addition to the Premier's Relief Payment, payments of up to $20,000 for residents whose home has been severely damaged or destroyed are also being provided under the Premier's Natural Disaster Recovery Fund — and $10,000 for those who have suffered major damage. Funded by Lotterywest, applications for payments opened on Sunday.

Help will be extended to Nexus Airlines. Picture: Katya Minns

Capped regional air fares to remain

SIENNA SEYCHELL

State Government support will be given to airlines operating in regional WA to ensure fares under the Regional Airfare Zone Cap scheme are maintained despite increasing costs of jet fuel.

The help will also extend to airlines operating intra-regional routes, including Nexus Airlines' routes between Geraldton, Karratha, Port Hedland and Broome.

Under the recently revised scheme, regional airfares are capped at a maximum cost of $199 or $299 one-way for low demand flights and $265 or $385 for high demand flights, depending on how far from Perth the regional location is.

The State Government is also allowing larger road trains to travel closer to Perth along Great Northern Highway for a three-month trial to help reduce truck movements and get more goods to regional WA.

Under these changes, 53.5m triple-trailer road trains will be permitted to travel along Great Northern Highway between Wubin and Muchea with strict safety conditions for the vehicle, and drivers are required to have a minimum of three years experience driving vehicles of this length. These changes will help improve productivity and reduce truck movements along this key route connecting Perth to the Wheatbelt, Murchison, Goldfields, Pilbara and Kimberley.

Premier Roger Cook said: "Ensuring airfares remain capped at current prices for regional residents will provide real cost-of-living support for those who need it while allowing larger road trains along a key stretch of Great Northern Highway will help more goods reach regional WA faster. We will continue to work with the transport industry to support their operations and help maintain WA's supply chain resilience."

6.3.5 Koori Mail – 22 April 2026

Employment

EXECUTIVE • PROFESSIONAL • POSITIONS VACANT

Education to employment for young women

FIRST Nations and Torres Strait Islander young women will gain new pathways from education to employment under a new national partnership between Kmart Group and the Stars Foundation.

Having already achieved Indigenous workforce participation of 4.5% across Kmart and Target which is in excess of population, the partnership expands Kmart Group's Indigenous Employment Program and supports young women to transition into meaningful work – strengthening the group's commitment to reconciliation, economic participation and culturally-safe workplaces for Aboriginal and Torres Strait Islander Australians.

The national partnership formalises an already established working relationship between the two organisations, spanning more than ten years. Many of Kmart Group's Deadly Stores work closely with local Stars Programs – particularly across Western Australia and the Northern Territory – creating local education-to-employment opportunities.

Building on that success, the newly established formal partnership will now scale nationally, to increase education-to-employment pathways for Indigenous young women and is already delivering results, with one Stars Program participant set to start a management role at Kmart in Western Australia this month.

Stars Foundation has supported more than 1,300+ alumnae since establishment in 2015 and is currently mentoring and empowering 4,300+ First Nations girls and young women across 80 programs in partner schools across Australia. Through our long-standing partnership, Kmart Group continues to support employment-focused initiatives with Stars, helping to create pathways from education into meaningful work.

"This partnership is about turning potential into real career opportunities for First Nations young women," said Tristram Gray, Chief People and Corporate Affairs Officer at Kmart Group.

"We've already seen what's possible at a local level – now we're working towards scaling that impact nationally, creating clear, supported pathways from school into long-term, meaningful work.

By working alongside Stars Foundation, we're aiming to provide the right support at the right time, so more young women can move confidently from education into employment."

Stars Foundation Founder and CEO, Andrea Goddard, said formalising this partnership with Kmart Group is an important step in scaling opportunities for First Nations young women nationally, ensuring transition into meaningful, long-term work.

"Experience shows that when First Nations young women are supported through school and into employment, the impact extends far beyond the individual – it strengthens families, communities and future generations," said Andrea Goddard.

"We commend Kmart Group on its leadership and commitment to joining Stars in its mission to improve education, health and employment outcomes for First Nations girls and young women."

Kmart Group and the Stars Foundation has begun delivering workshops through Stars Programs, while equipping store leaders to support First Nations young women and girls in their communities.

6.3.6 National Indigenous Times – 28 April 2026

Country hearing rejected

CALLAN MORSE

An Aboriginal woman has been left shocked after a Hobart magistrate rejected an on-Country hearing last week.

Ruth Langford sought the approval of Chief Magistrate Catherine Geason on April 17 for part of a trespass hearing to be held on Aboriginal-owned land at Risdon Cove on Hobart's eastern shore. On April 20, the request was denied.

The request formed part of her defence after she was charged with trespass in two logging coupes last year.

In January 2025 the Yorta Yorta/Dja Dja Wurring woman was arrested at a logging coupe at Snow Hill on Tasmania's east coast before being arrested three months later during a forest protest in the Wellington Range, south of Hobart.

"I was shocked because Tasmania is the only State jurisdiction that chooses not to have on-Country hearings," Ms Langford told National Indigenous Times. "I actually naively had not prepared my response in depth for a rejection. I couldn't fathom how she could say no, given under her act, very clearly, she has the capacity and the power."

Ms Langford's actions are rooted in her cultural obligation to protect Country.

She says Tasmania's forest industry is having a devastating effect on the State's waterways while increasing the risk of "catastrophic" bushfires.

"The current practices, including massacring whole cultural landscapes, have no real benefit to the public," she said. "We have seen for the last decade, report after report ... calling for an immediate end for logging old-growth forest."

"The mismanagement is not only the slaughtering of these once vibrant, rich and healthy ecologies, but we're also seeing a bleed on the public purse."

Ms Langford said Tasmania's forests have immense ecological and environmental value.

"They help protect us from wildfires. They help create healthy waterways, and they retain carbon," she said.

"But most importantly, for our people, those forests are our kin," she said. "They teach us our relational obligations and how to live in healthy ways and healthy societies."

Ms Langford, who is self-representing in court, said she provided all the precedents of on-Country hearings to Ms Geason, which have been held across the country. "We had said very clearly ... this case represented an understanding of my obligation to Country, and in order for her to make a fully informed decision, then she needs to come to Country," Ms Langford said.

Calling the decision "just another day in the colony", Ms Langford said her cause "did not lose anything" from the magistrate's decision.

"But it was a tragic loss for Tasmanian society to see ethical and moral leadership towards healing the injustices and finding a better way to relate to Earth, honouring culture and traditions."

Kids put at risk as funds cut

JOSEPH GUENZLER

The Queensland Government's decision to withdraw funding from Murri Watch's youth cultural support program this month has drawn criticism from Aboriginal and Torres Strait Islander Social Justice Commissioner Katie Kiss, who says it will place children at greater risk in police watch houses.

The program supports Aboriginal and Torres Strait Islander children and young people held in Queensland watch houses, helping ensure detainees' hygiene, food and medical needs are met while in detention.

It is to end on June 30 after the State Government chose not to renew its funding contract. Ms Kiss, a Kaanju and Birri/Widi woman, said the loss exposed a wider failure to invest in prevention and early intervention for First Nations children.

"The Queensland Government's decision to withdraw funding from Murri Watch's Youth Cultural Support in Watch Houses program puts Aboriginal and Torres Strait Islander children at greater risk at the very moment they need protection most," Ms Kiss said.

"It also highlights a deeper failure to invest in what actually keeps them safe: prevention and early intervention."

Goodwyn Alpha Facility Operations Environment Plan

Woodside has led the development of the LNG industry in Australia and today aims to thrive through the global energy transition. Woodside consults with relevant persons to gather feedback to inform its Commonwealth Environment Plans.

Goodwyn Alpha (GWA) Facility Operations Environment Plan (EP)

6.5 Community information sessions

The community information sessions that Woodside has conducted are captured below:

6.5.1 Pilbara Region

6.5.1.1 KDCCI Red Earth Arts Festival (REAF) Markets – 15 May 2026

	Location: Karratha
Activity	Red Earth Arts Festival (REAF) Markets
Date	Friday, 15 May 2026
Description of the consultation	Woodside hosted a stand at the Karratha District Chamber of Commerce (KDCCI) Red Earth Arts Festival (REAF) markets, a community event bringing together local businesses selling local products, a variety of food vendors and community groups. The stand was staffed by members of Woodside's Corporate Affairs team. Woodside displayed a QR code at the stand linking to the 'Consultation activities' page of the Woodside website. Woodside displayed and made available printed Consultation Information Sheets on the GWA Facility Operations EP.
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and to allow individuals to provide feedback on proposed activities, through the following: • An advertisement published in the Pilbara News on 13 May 2026 (see below). • A social media post via Woodside North West Facebook account advising that Woodside would be in attendance at the event (see below). • An advertisement displayed on community noticeboards including Karratha City Plaza (see below). • An EP consultation display with QR code (linked to the 'Consultation activities' page on Woodside's website) displayed at Woodside's stand.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• EP consultation banner with QR code (linked to 'Consultation activities' page on Woodside website), displayed at Woodside's stand along with current EP consultation information sheets (see table below)
Estimated number of individuals / organisations consulted	More than 500 community members attended the event. Woodside spoke to many community members, recording more than 5 conversations.
Summary of Feedback, Objection or Claim	
• Queries around employment opportunities. • General interest in Woodside's supply of DOMGAS to WA. • General interest in updates to Woodside's proposed Browse to North West Shelf Project. • Environment Plan community consultation and approval process discussed and why we want to talk to community. No concerns raised. • Discussions with children about what Woodside does and where gas comes from. • Pleasant interactions with Woodside, Woodside contractor company and near neighbour employees.	
Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2 of the EP).	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Cheaper air fares a lift for tourism

PHOEBE SOLON

Subsidised one-way fares between Perth and the Pilbara, starting at $198, have been announced as efforts continue to support the North West tourism industry after the devastation wrought by cyclone Narelle.

The State Government announced on May 6 that it would renew its "affordable airfares program" for 2026, with travellers able to access the cheap fares to Exmouth through Qantas.

The initiative also covers Broome and Kununurra with Tourism Minister Reece Whitby saying the program was a key part of supporting regional WA.

"Many WA businesses remain ready to welcome visitors after cyclone Narelle, and we encourage people to continue to travel and support local businesses," he said.

"The affordable airfares program delivers significant savings for travellers, which can be reinvested locally, helping grow tourism and jobs in this state's most beautiful and remote areas."

Exmouth shire president Matt Nikkikuk said the return of the program was good news for the Exmouth community and for visitors, as the town continues to rebuild momentum after cyclone Narelle.

"We are very much open for business, and more accessible travel options to our remote region mean stronger support for cyclone-impacted local businesses and operators," he said.

"There is no better time to book and plan ahead to enjoy what this extraordinary place has to offer."

Transport Minister Rita Saffioti highlighted the importance of keeping regional tourism accessible.

"This program is about making it more affordable for people to visit our regions and support local jobs," she said.

The Government said the program had a strong track record, selling nearly 178,000 fares since 2016, including more than 20,000 last year for flights connecting Perth with Broome, Kununurra, and Exmouth.

The program complements other recovery efforts, including a $1.45 million tourism business support package.

BOWLED OVER BY GENEROSITY

Mineral Resources port operations manager Paul Wheeler, far right, with the bowls competition winners.

LAURA NEWELL

Onslow bowls enthusiasts will enjoy newer balls, better jokes and colder drinks thanks to a donation from Mineral Resources.

The Onslow Sports Club has bought 10 new sets of lawn bowls, kitchen equipment, including pie warmer and air fryer, to improve food service capacity, a new projector and three-door bar fridge with cash from Minifer community grants program.

The firm also supports the club's annual barefoot bowls competition, providing a $300 shop Ashburton voucher to the winning team each month. The competition was launched with a free community event on May 1.

With more than 190 members, Onslow Sports Club president Tara Coluta said they brought people together through sport, hospitality and a welcoming atmosphere.

"Minifer support has been fantastic for the club. It's not just about the equipment – it's the ongoing partnership and commitment to our events that's helping make the club more active, successful and a place the whole community can enjoy," she said.

Minifer port operations manager Paul Wheeler, who relocated to Onslow with his family to work on the Onslow Iron project, said the upgrades helped maintain the club's welcoming spirit.

"As someone who lives in Onslow and regularly uses the sports club, it's great to see the positive impact our support is having," he said.

The initiative also covers Broome and Kununurra with Tourism Minister Reece Whitby saying the program was a key part of supporting regional WA.

"Many WA businesses remain ready to welcome visitors after cyclone Narelle, and we encourage people to continue to travel and support local businesses," he said.

"The affordable airfares program delivers significant savings for travellers, which can be reinvested locally, helping grow tourism and jobs in this state's most beautiful and remote areas."

Exmouth shire president Matt Nikkikuk said the return of the program was good news for the Exmouth community and for visitors, as the town continues to rebuild momentum after cyclone Narelle.

"We are very much open for business, and more accessible travel options to our remote region mean stronger support for cyclone-impacted local businesses and operators," he said.

"There is no better time to book and plan ahead to enjoy what this extraordinary place has to offer."

Transport Minister Rita Saffioti highlighted the importance of keeping regional tourism accessible.

"This program is about making it more affordable for people to visit our regions and support local jobs," she said.

The Government said the program had a strong track record, selling nearly 178,000 fares since 2016, including more than 20,000 last year for flights connecting Perth with Broome, Kununurra, and Exmouth.

The program complements other recovery efforts, including a $1.45 million tourism business support package.

Provide your feedback on our Environment Plans

Are you interested in Woodside's proposed activities and operations?

Let's chat at the KDCCI Markets at REAF from 3 pm – 8pm on Friday, 15 May 2026.

If you are an individual, organisation or community group whose functions, interests or activities may be affected by our proposed activities and operations, we want to talk to you.

Find out more or provide feedback:
Phone: 1800 442 977
Email: feedback@woodside.com

Woodside Energy

Pluto LNG Facility update

As operator of the Pluto LNG Facility, Woodside's priority is safe and reliable operations.

Woodside advises it is undertaking planned maintenance at the Pluto LNG Facility, which may result in increased flaring with the potential for dark smoke during some of the maintenance period.

Flaring is essential for the safe operation of a gas plant and is required during some maintenance activities.

Woodside closely monitors and aims to minimise its flaring as part of normal operations.

If you would like further information on these activities, scan the QR code below or call Woodside's Community Line on 1800 634 969.

Woodside Energy

Woodside North West
2d ·

Red Earth Arts Festival's Harmony and HeART is in full swing at The Quarter.

Our friendly team are at the KDCCI Markets from 3pm to 8pm. Let's talk about Woodside's work in the north west, our Environment Plans, current and proposed projects, and share your feedback with the team.

If you would like to know more about our activities on land and sea, we will also be consulting relevant persons in the course of preparing our Environment Plans to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse effects of the proposed activity on the environment.

We welcome your input and wish to provide you with the opportunity to share information and discuss your functions, activities or interests which may be affected by our proposed projects.

6.5.1.2 Dampier Beachside Markets – 7 June 2026

Location	Dampier
Activity	Dampier Beachside Markets
Date	7 June 2026
Description of the consultation	Woodside hosted a stand at the Dampier Beachside Markets, a community event bringing together local businesses selling local products, a variety of food vendors and community groups. The stand was staffed by members of Woodside's Corporate Affairs team. Woodside displayed a QR code at the stand linking to the 'Consultation activities' page of the Woodside website. Woodside displayed and made available printed Consultation Information Sheets on the GWA Facility Operations EP.
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and to allow individuals to provide feedback on proposed activities, through the following: • An advertisement published in the Pilbara News on 3 June 2026. • A social media post via Woodside North West Facebook account advising that Woodside would be in attendance at the event on 7 June 2026 • A social media post via Dampier Beachside Markets - DCA Facebook account advising that Woodside would be in attendance at the event on 4 June 2026 • An advertisement displayed on community noticeboards at Lo's Karratha on 26 May 2026 • An advertisement displayed on community noticeboards at Lo's Karratha, and IGA Good Grocer Karratha on 26 May 2026 • An EP consultation display with QR code (linked to the 'Consultation activities' page on Woodside's website) displayed at Woodside's stand. • EP consultation banner with QR code (linked to 'Consultation activities' page on Woodside website), displayed at Woodside's stand along with current EP consultation information sheets (see table below)
Estimated number of individuals consulted	More than 1000 community members attended the event. Woodside spoke to many community members, recording 20 conversations.
Summary of Feedback, Objection or Claim	
• Queries around employment opportunities. • Discussion around flaring, why Woodside flares, informing community about upcoming flaring activity. no concerns raised - neutral sentiment. • General interest in the Scarborough Energy Project progress and Pluto Train 2 and Train 1 modifications projects. • General interest from Woodside employees around the Browse to NWS project. • General interest in Bass Straight activities. • Patrons shared their views on future of gas in the energy transition. • Environment Plan community consultation and approval process discussed and why we want to talk to community. No concerns raised. • Discussions with children about what Woodside does and where gas comes from. • Pleasant interactions with Woodside, Woodside contractor companies and near neighbour employees.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response
Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2 of this EP).

6.5.1.3 FeNaCING Festival – 1 to 2 August 2026

Location	Karratha
Activity	FeNaCING Festival
Date	1 to 2 August 2026
Description of the consultation	Woodside hosted a stall at the FeNaCING Festival, Karratha, to engage community members on Woodside activities. The stand was staffed by Woodside representatives including from Environment and Corporate Affairs teams. Information was available on Woodside's activities in the north-west region and information sheets on flaring and marine seismic surveys were on display. Printed Consultation Information Sheets were also available, including for the Goodwyn Alpha Facility Operations EP.
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and to allow individuals to provide feedback on proposed activities, through the following: (see evidence table below) • An advertisement published in the Pilbara News on 29 July 2026 edition • A social media post via Woodside North West Facebook account advising that Woodside would be in attendance at the event on 1 August 2026 • A social media post via FeNaCING Festival Facebook account advising that Woodside would be in attendance at the event on 30 July 2026 • An advertisement displayed on community noticeboards at Lo's Karratha on 28 July 2026

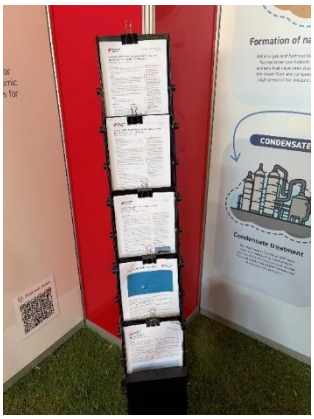
This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

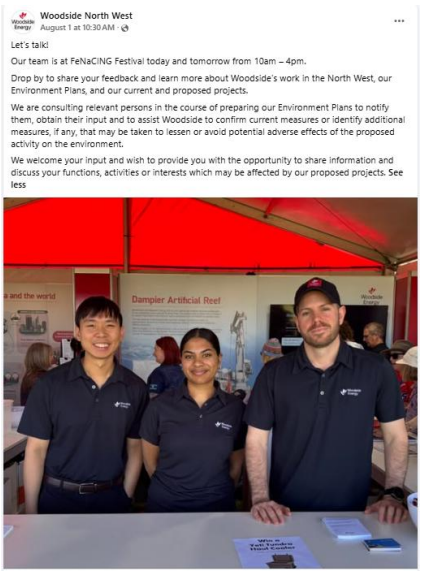
	• An advertisement displayed on community noticeboards at IGA Good Grocer Karratha on 29 July 2026 • An EP consultation display with QR code (linked to the 'Consultation activities' page on Woodside's website) displayed at Woodside's stand.
Estimated number of individuals consulted	More than 10,000 community members attended the event. Woodside spoke to many community members, more than 1,100 engaged in a Woodside quiz, recording approximately 100 meaningful conversations.

Summary of Feedback, Objection or Claim

- Interest in local jobs, training opportunities and local procurement opportunities.
- Interest in Woodside's social contribution activities in City of Karratha.
- Conversations about Woodsides flaring activities.
- Conversations about Woodside's approach to cultural heritage management.
- Query about Woodside's tax contribution.
- Conversation about Woodside's approach to the energy transition and energy security.
- Interest in industry's political influence.
- General conversations about Woodside's activities in Western Australia, including the North West Shelf and Scarborough Energy Project, Pluto Train 2 and Pluto Train 1 modifications.
- Questions relating to the current status of the Browse to North West Shelf concept and considerations for Scott Reef.
- How and why Woodside develops EPs and the EP approval process.
- General interest in Woodside's health, safety and environmental management measures and mitigations, particularly in relation to seismic activities and potential impacts to fauna.
- Discussions with children about what Woodside does and where gas comes from.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response





Whilst feedback was received, there were no objections or claims.

The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

6.6.1.1 Let's Talk – May 2026

Woodside Energy

Let's Talk

Our Plans, Your Say

Edition 7 | May 2026

Deep Orient vessel.

The rundown

Woodside crews aboard the Deep Orient vessel have wrapped up one of their most complex decommissioning campaigns to date, safely delivering the Deep Orient program in Western Australia's North West.

Decommissioning involves removing infrastructure that's no longer required. It's considered from the start of a project and is an ongoing consideration.

The Deep Orient activities spanned the Griffin and Stybarrow fields, as well as Echo Yodel, a subsea tieback to Goodwyn A. These assets stopped producing in 2009, 2015 and 2012 respectively.

Following the safe plugging and abandonment of the wells, crews on the TechnipFMC-operated vessel safely recovered a total of 4,000 tonnes of subsea infrastructure, including 73 kilometres of pipelines. That's around the distance from Woodside's Perth headquarters to Mandurah. They also recovered 37 subsea structures such as Xmas trees, buoys, wellheads and umbilical termination assemblies.

Our decommissioning program is among the largest in Australia. Reducing risk, applying lessons learned and continually improving how we work keeps us focused on safety, the environment and carrying out the work efficiently.

Our focus is also on reducing, reusing, recycling and treating materials before disposal is considered.

In 2025, crews completed a multi-year decommissioning program at the Enfield field, approximately 38 km north of the North West Cape, Western Australia. The program included plugging and abandoning 18 Enfield wells, recovering and deconstructing the Nganhurra riser turret mooring, and removing flexible flowlines, umbilicals and other subsea structures. The deconstruction of the Nganhurra riser turret mooring saw 99.6 per cent of materials reused, repurposed or recycled.

This marks Woodside's first complete lifecycle project, from exploration through development and operations to final decommissioning.

Upcoming engagement opportunities

Woodside is consulting with local community members at events, making it easy to speak to us about our operations, decommissioning activities and proposed projects.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly teams at the locations below, follow the Woodside North West Facebook page or email us at: feedback@woodside.com

You can meet us at:

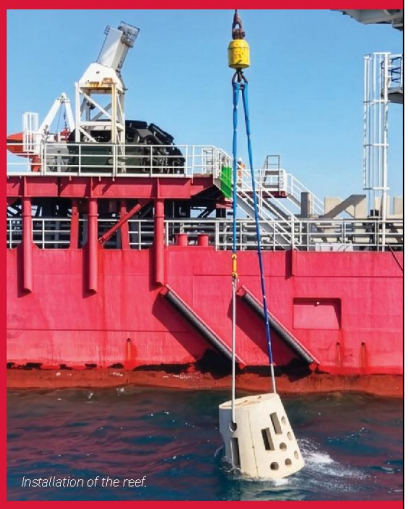
Dampier fishers land a solid catch with new artificial reef

The bold vision of Woodside and Recfishwest to enhance marine life and recreational fishing in the Pilbara has become reality with the successful installation of an artificial reef off the coast of Dampier in north west Australia.



The reef comprises 48 purpose-built concrete modules. They were carefully transported and installed in early December 2025.

The reef sits in some 35 metres of water, about 30 kilometres from the Dampier boat ramp. Over time, the site is expected to become a high-quality fishing location for species such as Spanish mackerel, cobia, emperor, cod and even sailfish.

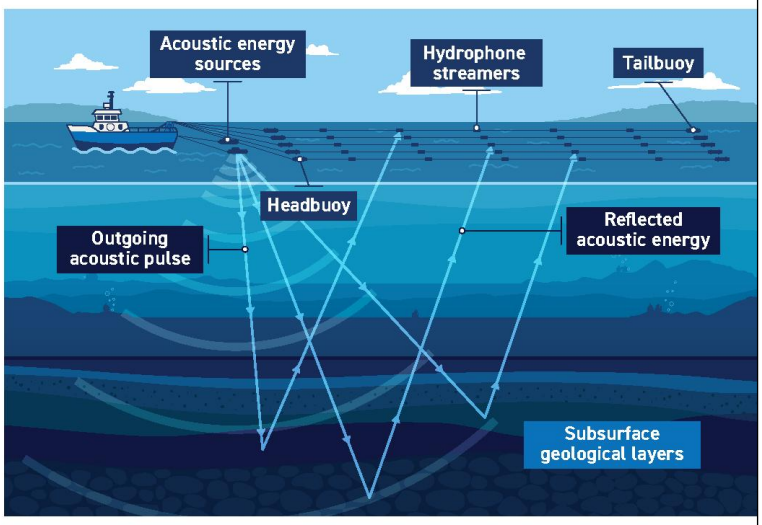
Delivered with the support of the WA Government, the City of Karratha, Traditional Owners and local fishing clubs, the Dampier Artificial Reef represents a significant collaboration to provide an accessible and productive marine environment the community can enjoy now and in the future.

The installation of the reef was funded by Woodside and its Scarborough Joint Venture partners JERA Australia and LNG Japan. Woodside also acknowledges its Enfield Joint Venture partner, Mitsui E&P Australia, for contributing to the acquisition of the concrete modules.

As the reef establishes, we understand Recfishwest plans to share updates with local fishers, families and visitors who are set to enjoy a richer marine environment and better fishing in the years ahead.

Installation of the reef.

Talking point



Pluto 4D M3 Marine Seismic Survey

Woodside's Pluto 4D M3 Marine Seismic Survey Environment Plan covers seismic survey activities in the Carnarvon Basin, north-west Australia, planned for late December 2026 to early February 2027, or the same period in the subsequent year.

Marine seismic surveys are a key technique used for geophysical exploration to understand what lies beneath the seabed, or subsurface. Woodside's seismic surveys are conducted under strict Australian and international regulations and management controls.

Marine seismic surveys are conducted by purpose-built survey vessels that tow specialised equipment placed in an array of long marine streamers. These vessels proceed at low speeds, typically around 4–5 knots (7.4–9.3 kilometres per hour), following predetermined sail lines to systematically map the survey area.

As the vessel moves, a sound source located at its rear releases compressed air as soundwaves into the water column at regular, short intervals. The soundwaves are reflected from subsurface rock layers to the water's surface, a bit like an echo. Sensitive microphones known as hydrophones, which are positioned within the streamers trailing behind the vessel, detect these soundwaves.

Alternatively, hydrophones and motion-sensitive sensors known as geophones can be embedded in small devices called ocean bottom seismic nodes, which are temporarily placed on the sea floor. The recorded sound is processed to generate images of subsurface structures, rock layers and other features for interpretation.

To learn more about marine seismic surveys, including methods that protect the marine environment, watch this video.

Carnaby's black cockatoos. Picture: Dean Arthurell.

Let's talk about... The Watheroo Biodiversity Project

Woodside's Watheroo Biodiversity Project is a collaborative effort to restore landscapes and support biodiversity in WA's northern Wheatbelt.

The project focuses on having positive biodiversity outcomes for habitats, threatened species and ecological function, through working with government agencies, non-government organisations, and local Indigenous and community groups.

As of December 2025, Woodside has planted approximately 5.5 million seedlings across 8,500 hectares in the Watheroo area. The land under reforestation in Watheroo is adjacent to a large area of conservation estate, the Watheroo National Park and connected reserves, as well as a significant area of remnant vegetation currently designated as unallocated Crown land. Together the combined area is over 130,000 hectares.

In addition to generating Australian Carbon Credit Units (for more information, click here), the plantings will provide additional habitat for fauna and create connectivity between these areas of remnant vegetation and conservation estate.*

One highlight of the Watheroo Biodiversity Project is the support for threatened Carnaby's black cockatoos. These large birds are under threat primarily from habitat loss due to historic land clearing. Together with not-for-profit conservation charity group Carnaby's Crusaders, numerous artificial hollows were installed in 2024 and 2025 to address a shortage of natural nesting sites because hollows large enough for the species to nest within typically only form in trees well over 100 years of age.

Additional programs within the project include a large-scale Light Detection and Ranging (LiDAR) survey to provide insight into the current status of the vulnerable malleefowl population in the region, motion detection camera fauna monitoring, annual bird surveys to track change within reforested areas, vegetation surveys to understand current condition of and stressors on remnant vegetation, and management of invasive species.

Woodside recognises that restoring biodiversity is a long-term commitment, and outcomes will continue to be monitored and reported transparently.

**All planting has been completed under the Carbon Credits (Carbon Farming Initiative) (Restoration by Environmental or Mallee Plantings - FullCAM) Methodology Determination 2024, which is authorised by the Carbon Credits (Carbon Farming Initiative) Act 2011.*

You can read more about Woodside's Biodiversity management and initiatives **here**.

Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts. A series of new GPGT surveys are proposed to support potential future activities associated with the Browse to NWS Project.

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs). Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans. Woodside is consulting on these Environment Plans in April-May 2026. For more information, you can view the Consultation Information Sheets.

6.6.2 Karratha Community Update

6.6.2.1 Edition Q1 – March 2026

Karratha Community Update

March 2026

The Scarborough FPU weighs approximately 70,000 tonnes and was towed over 4,000 nautical miles to the Scarborough field in the Carnarvon Basin.

Scarborough sails towards start up

This year marks a defining year for Woodside as the Scarborough Energy Project, including our Pluto Train 2 and Pluto Train 1 Modifications Projects in Karratha, move through final construction, commissioning and start up phases.

Across the Scarborough Energy Project, progress continues to track strongly toward first LNG cargo in the fourth quarter of 2026. The development is now more than 94% complete (excluding Pluto Train 1 modifications) and has already delivered economic benefits to the Karratha and Roebourne communities. Once operating, it is expected to support long-term energy supply for Western Australia and the wider Asia-Pacific region.

Offshore, a major milestone was achieved early this year with the safe arrival of the Floating Production Unit (FPU) at the Scarborough field, 375 km off the coast of Karratha. Hook-up and commissioning activities are underway in preparation for production.

Onshore, work at Pluto Train 2 remains focused on piping and electrical installation, system testing and commissioning, ahead of introduction of Scarborough gas to site later in the year.

Meanwhile, the Pluto Train 1 Modifications Project has ramped up. These modifications will enable the processing of additional Scarborough gas through our existing LNG train at Pluto LNG. New modules are expected to arrive through Dampier Port over the coming months.

Collectively, these projects represent the most significant investment in the region in more than a decade.

Together with our contractors, we've invested more than A$260 million with 200 Pilbara-based businesses. A$149 million of that figure has been invested with Pilbara-based businesses engaged on the Pluto Train 2 Project.

As we approach the finish line and a future with two trains operating at the Pluto LNG Park, we will continue to focus on managing impacts and delivering positive outcomes for the Karratha and Roebourne communities.

Mike Price
Woodside Vice President Pluto Scarborough Asset

Stay up to date on our continued contribution to the local community Woodside North West

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha.

We extend this recognition and respect to First Nations peoples and communities around the world.

Refreshed North West Shelf Visitor Centre

With the support of local Karratha contractors, last year the North West Shelf (NWS) Project Visitor Centre underwent a refresh to enhance the experience for visitors.

The Visitor Centre welcomes thousands of community members through its doors each year, from visitors to the region to school groups. It offers an opportunity to learn more about the NWS Project's history in Karratha, its operations and its ongoing role in supplying energy security in Western Australia and beyond.

Acting Asset Manager NWS Onshore, Perrine Lombart, said working closely with local contractors was a key focus in creating a modern visitor experience.

"We are proud to be part of the Karratha community, and the refreshed Visitor Centre allows us to share our story - from the history of Woodside and the NWS Project, to the important role we play in supporting the communities where we live and work."

The works brought together local contractors, including Birndirri, Impact Digi and C Signs, strengthening the NWS Project's contribution to the regional economy and prioritising local capability. Their involvement drew on longstanding experience of working in the Pilbara.

Jake Throssell, Construction Supervisor at Birndirri, said the project demonstrated the value of working closely with local contractors.

"Working with the Woodside team to deliver the Visitor Centre refresh was a positive experience and we are proud to have contributed to a space that visitors can enjoy for many years to come."

Jason Miltrup, Operations Manager at Impact Digi, said working with Woodside to redesign the Visitor Centre signage has been a great project for the team.

"We're proud to have played a role in transforming the space into a modern and engaging environment for visitors."

Cameron Inch, Director of C Signs, said the project was a valuable opportunity for local businesses.

Visitors are warmly welcome to experience the refreshed centre.

"Being part of the Visitor Centre refresh allowed us to bring the NWS Project's history and operations into focus and showcase the capabilities of our small business."

The Visitor Centre will be open from Tuesday, 7 April 2026, more details below:

Street Address:
Burrup Road, Burrup Peninsular, Dampier WA, 6713
Opening Times:
April - October
School term: 10am - 2pm, Tuesday and Wednesday
School holidays: 10am - 2pm, Tuesday - Friday

Follow the Woodside North West Facebook page for updates to opening hours here.

Woodside welcomes new apprentices and trainees

New starters at Woodside Training Academy.

Woodside are delighted to welcome the 2026 trainee and apprentice cohort across our North West operations.

This year, 23 Karratha-based recruits will be hosted at the Woodside Training Academy, 13 are local school leavers. Employed by Programmed Skilled Workforce, roles include service operator trainees, apprentices, pathway trainees and school-based trainees.

The new recruits now form part of a broader group of 63 apprentices and trainees developing their skills across Woodside's Karratha Gas Plant, Pluto LNG Park and Karratha Supply Facilities.

Reflecting our commitment to diversity, 47% of recruits this year are women and 52% are Indigenous, strengthening our future workforce and continuing our long-standing investment in local capability.

We can't wait to see where this journey takes our newest team-mates.

Pluto LNG and flare maintenance underway

In 2026, Woodside is undertaking a series of important works at Pluto LNG as we prepare to integrate the exiting facility with the Scarborough Energy Project. This includes improvement works to our flare system and a major planned maintenance campaign, known as a turnaround, commencing in May 2026.

Together with the upcoming commissioning and start-up of the new Pluto Train 2 facilities later this year, these staged works support the safe and reliable operations of Pluto LNG.

The turnaround includes a planned shutdown of parts of the facility so essential inspections, repairs, and upgrades can be carried out safely. This work can't be done while the plant is operating. To make the systems safe to execute the maintenance and project scopes, hydrocarbons need to be removed. This is the primary source of flaring during a turnaround.

Alongside preparation for the turnaround, Woodside is carrying out improvement activities on Pluto LNG's flare systems as part of our regular maintenance program. These works will help ensure the facility continues to operate safely and reliably, improve how gas is burned in the flare and reduce smoke where possible. It also ensures the flare system is ready to support future operations.

Flare improvement works are being completed in stages and are expected to continue in the first half of 2026. A testing stage is required to confirm systems are operating as intended before returning to normal operations.

Increased flaring is expected at Pluto LNG during these activities, particularly during system testing and restart works. This may include larger flames, increased noise, and occasional visible smoke, which is managed and reported in line with regulatory requirements.

Woodside adheres to regulatory requirements governing emissions, including those from flaring activities, and we implement robust monitoring to minimise environmental impacts.

To learn more about flaring, we invite you to view a short animation by scanning the QR code. You can also contact the Woodside Community Information Line on 1800 634 988.

Learn more about Woodside controlled flaring here.

Locals land a solid catch with new artificial reef

Recreational fishers in Dampier and Karratha have something to get excited about, with Recfishwest and Woodside Energy successfully installing a new artificial reef near Rosemary Island. The project has been years in the making with aims to boost local marine life and create a high-quality fishing destination for Pilbara residents and visitors.

The reef is made up of 48 purpose-built concrete modules, transported and lowered into place in December 2025. Within days, the first marine species began moving in. Acting EVP and COO Australia, Breyden Lonnie said the project reflects Woodside's commitment to supporting the region.

"Woodside is excited to collaborate with Recfishwest and the local fishing community to bring this new reef to life," he said. "The reef is expected to provide a productive marine habitat for diverse species of algae and corals, supporting an abundance of fish life."

Situated in approximately 35 metres of water and roughly 30 kilometres from the Dampier boat ramp, the reef's modules have been engineered with complex internal spaces that encourage coral growth, protect juvenile fish and support larger species such as spanish mackerel, cobia, emperor, cod and even sailfish. For local fishers it is expected to become a new fishing hotspot.

It's not all about fishing action. The reef is also expected to support local tourism and economic activity. Similar artificial reefs like Exmouth's King Reef, have shown how previously barren seafloor can transform into thriving ecosystems supporting more than 150 species within a few years.

The Dampier Artificial Reef is a true community effort, delivered with support from the WA Government, the City of Karratha, Traditional Owners and local fishing clubs.

Dampier Artificial Reef coordinates.

48 concrete modules were carefully lowered into place.

Recfishwest will provide updates as the reef continues to establish. For now, Pilbara anglers can look forward to a fresh fishing hotspot right on Dampier's doorstep.

The installation of the reef was funded by Woodside and its Scarborough Joint Venture partners; JERA Australia and LNG Japan. Woodside also acknowledges its Enfield Joint Venture partner Mitsui E&P Australia, for contributing to the acquisition of the concrete modules for the reef.

Murujuga Ranger vessel Nyamina sets sail

Representatives from Murujuga Aboriginal Corporation (MAC) Rangers and Circle of Elders, State Government and Woodside Energy joined together recently to celebrate the launch of the new Murujuga Ranger vessel, the Nyamina.

Named after the dugongs that inhabit Murujuga Sea Country, the Nyamina is a custom-built 5.8 metres rigid-hulled inflatable boat, designed for inshore waters and safe landing and unloading on beaches.

The vessel was funded by the State Government via Lotterywest and Woodside Energy, which contributed support towards the vessel, additional camera equipment and two years of operating costs.

Guided by the Murujuga Circle of Elders, the vessel will support ongoing collaboration between Rangers, government agencies and researchers in the management of Sea Country. It also provides the opportunity for Rangers to gain diverse skills and qualifications, including coxswain certification.

MAC Chairperson Peter Hicks said "The launch of this vessel is a proud moment for Murujuga, our Rangers, and for the ongoing care of our World Heritage listed Murujuga Cultural Landscape, which extends across the Burrup Peninsula, the islands of the Dampier Archipelago, and Sea Country."

Matthew Turnbull, General Manager Scarborough Business shares Woodside's pride in co-funding the vessel, supporting Ranger-led management of Murujuga and long-term outcomes for cultural heritage and Country. He says "MAC Rangers play a critical role in protecting cultural heritage, monitoring Country and supporting research across the World Heritage Listed Murujuga Cultural landscape."

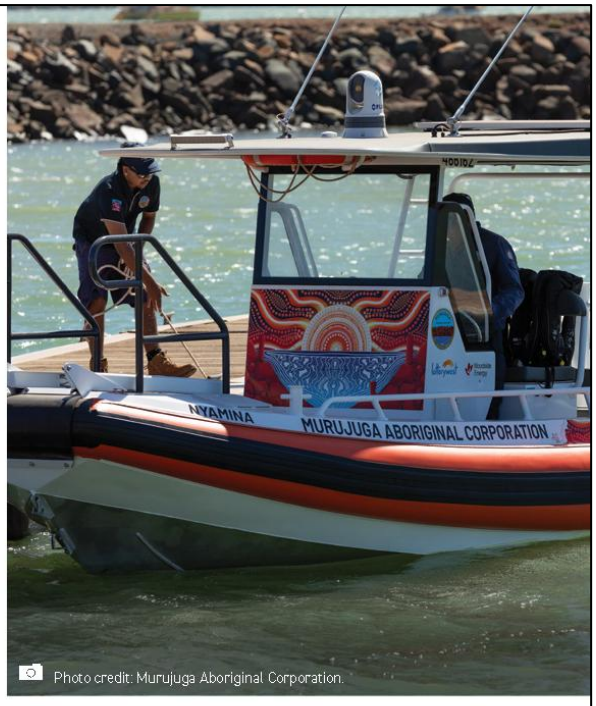

Photo credit: Murujuga Aboriginal Corporation.

"The launch of Nyamina gives the Rangers greater capability to manage Sea Country and to continue this important work safely and independently."

Watch the official launch on MAC's YouTube here.

KGP sets new record for lowest flaring

In 2025, Woodside achieved record low flaring performance at Karratha Gas Plant with flared quantities less than 10% of their peak in 2013.

This success reflects years of continuous improvement, which Matt Ladner, Senior Emissions and Production Optimisation Engineer, credits to a strong culture focused on emissions reduction, safety and reliability.

"It's a testament to the dedication of our engineering and operations teams who have embedded low-flaring practices into daily routines and decision making," says Matt.

"The record has been a result of a reliable plant and playing the long game in identifying and implementing flare reduction opportunities," explains Matt.

Flaring targets are set each year based on planned maintenance activities and expected plant reliability.

In 2025, Woodside implemented solutions to reduce our daily flaring by removing permanent gas supply to the flare, as well as optimised LNG plant maintenance and equipment restart improvements.

Woodside Community Grants

Applications now open

The Woodside Community Grants program is part of our commitment to help build local capacity and develop opportunities for community wellbeing.

If your club or organisation has a great idea or needs extra support, Woodside wants to hear from you. Grants of up to $5000 are available to support community initiatives in the City of Karratha, Shire of Exmouth and Town of Onslow.

Applications close Tuesday, 31 March 2026.

Find out more about Woodside Community Grants here.

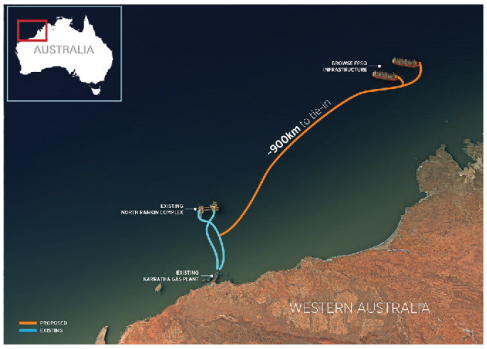
6.6.2.2 Edition Q2 – June 2026

Karratha Community Update

June 2026

Proposed Browse to North West Shelf Project continues to progress

The proposed Browse to North West Shelf (NWS) Project (Browse) presents a significant opportunity for Karratha, Western Australia and our regional partners.



As Australia's biggest undeveloped offshore gas resource, Browse offers long-term energy security to power homes and businesses and could create thousands of jobs and considerable economic benefits and tax revenue.

Importantly, processing Browse natural gas through the existing NWS infrastructure will keep the Karratha Gas Plant (KGP) operating, supporting local jobs in the region and helping Woodside continue its long-standing support for the Karratha and Roebourne communities.

The Browse project will develop gas fields in the Browse Basin, approximately 425 kilometres north of Broome, with gas transported via subsea pipelines to existing NWS infrastructure near Karratha.

A key focus of the project is carbon management. The development concept includes carbon capture and storage (CCS) infrastructure, designed to capture and permanently store a significant portion of carbon dioxide produced from the gas fields. This could reduce the project's emissions and lower the carbon intensity of gas supplied through the NWS.

Minimising environmental impacts is also central to project planning. The project is undergoing environmental assessment processes with both the Western Australian Environmental Protection Authority and the Commonwealth Department of Climate Change, Energy, the Environment and Water. As this assessment has progressed, Woodside has continued to provide updated scientific data and committed to additional measures aimed at minimising environmental impacts to marine life, including pygmy blue whales and green turtles. These changes include design, operational and monitoring controls, including spatial setbacks from sensitive receptors, vessel speed and noise management measures, and enhanced monitoring programs focused on key habitats such as Sandy Islet.

This image is conceptual only, not to scale. Developments are subject to joint venture approvals, regulatory approval and relevant commercial arrangements.

These measures build on more than 30 years of research carried out by Woodside and its joint venture partners at Scott Reef and in surrounding waters.

Browse is currently in the concept definition phase. As planning continues, Woodside has committed to ongoing engagement with regulators, Traditional Owners, local communities in the Pilbara and key stakeholders as the project is progressed.

For more information, view the Browse fact sheet here

Browse to deliver long-lasting benefits

MORE JOBS
4,760

Direct and indirect full-time equivalent jobs estimated across Australia at peak operations.[2]

Equivalent to staffing around 80 Western Australian public schools for a year.[3]

MORE TAX
A$56.2 BILLION

In estimated taxes, royalties and excise, including ~A$19.8 billion in Petroleum Resource Rent Tax (PRRT).

Equivalent to funding one new hospitalevery year for 31 years.[4]

STRONGER ECONOMY
~A$141 BILLION

Estimated uplift in Gross Domestic Product (GDP).[5]

On average, economic activity in Australia is expected to increase by around A$2.9 billion each year over the life of the Project, equivalent to more than 5 per cent of Australia's average annual GDP growth.[6]

Headline economic Figures are based on Deloitte Access Economics' independent modelling.[1]

1. Deloitte Access Economics, Browse to NWS Economic Impact Assessment, May 2026. Report commissioned by Woodside as Operator on behalf of the Browse Joint Venture. 2. Reflects broader supply chain and service industry roles generated across all regions. 3. Department of Education's 2024-25 Annual Report. 4. Women and Babies Hospitals - WA Government (2025) Budget Paper No. 2 Volume 1. 5. 2025 real undiscounted terms. Uplift over the life of the Project. A$34.2 billion in present value terms. Discounted at seven per cent per annum. 6. Australian Bureau of Statistics, Australian National Accounts 2024-25.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first people.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha.

We extend this recognition and respect to Indigenous Peoples and communities around the world.

Sharing stories from Ngarluma and Yindjibarndi Country

Sharon Warrie, Art Development Camp. Perth 2025. Photo by Marnie Richardson courtesy of FORM

The Woodside-operated Pluto LNG Project's community partnership with FORM is supporting Roebourne (Ieramugadu) artists to share important cultural stories from Ngarluma and Yindjibarndi Country.

As part of the community partnership, last year FORM worked with local artists to present the Where We Come From: The Artists of Ngarluma and Yindjibarndi Country exhibition at FORM Gallery in Perth. The exhibition showcased art that highlights rich cultural histories, lived experiences and strong connections to Country.

The project was shaped to tell these stories in an authentic and meaningful way. The result was a community-led exhibition that celebrated culture while also giving artists hands-on experience in curation, exhibition design and public engagement, helping build skills for future opportunities in arts.

More than 3,300 people visited the exhibition, taking part in guided tours, storytelling sessions, panel discussions and children's workshops, gaining a deeper understanding of local culture and identity.

Woodside is proud to support initiatives like this as part of our broader investment in Roebourne, helping strengthen local capability, culture and community wellbeing.

Woodside's 2026 Academy Awards

Woodside is proud to welcome 25 apprentices and trainees who have graduated from the Woodside Training Academy, marking an important milestone as they transition into roles across our business.

The Woodside Training Academy Graduation and Awards, held at the Red Earth Arts Precinct in Karratha, celebrated the cohort's achievements and recognised the dedication, resilience and perseverance shown throughout their training journey.

Academy Team Lead, Jacqui Meeson said the event was an opportunity to acknowledge both the collective success of the cohort and the outstanding contribution of the individuals.

"The award recipients were recognised not only for their technical capability, but for their commitment to learning, teamwork and living Woodside's values," Jacqui said.

"We are incredibly proud of what this group has achieved and look forward to their continued contribution to our workforce."

The ceremony also acknowledged the important role of mentors, supervisors and trainers who supported the graduates along the way. Pluto Asset Manager, Kate Bardill, thanked those across the business who contributed to developing future talent.

"Our graduates have built strong technical foundations and demonstrated the behaviours that will set them up for success," she said.

Woodside continues to invest in building local capability through its long-standing partnership with Programmed Training Services. Around 80 apprentices and trainees are currently hosted across the Australian business, developing skills and experience that will support the future of our operations in Western Australia.

Woodside's 2026 Training Academy graduates on stage in Karratha, celebrating the successful completion of their apprenticeships and traineeships.

Roebourne school upgrade opens doors for students

Students and families in Ieramugadu (Roebourne) are now enjoying new and upgraded facilities at Roebourne District High School, following completion of the latest stage of the school's redevelopment.

The new facilities include additional classrooms for advisory programs, dedicated pastoral care spaces and preparation areas for teachers, Aboriginal and Islander Education Officers, and student support services, helping create a more supportive and engaging learning environment.

The redevelopment is part of a multi-stage project focused on improving education outcomes in Roebourne, while embedding Indigenous history, culture and language into the design and daily life of the school.

Woodside contributed A$20 million towards the project through the Resources Community Investment Initiative, as part of our broader, long-term investment in the Roebourne community.

In 2025, Woodside and its Joint Venture participants also invested more than A$5.7 million in programs supporting education and community wellbeing in Roebourne.

Woodside Chief Executive Officer, Liz Westcott said the opening marked an important milestone.

"For Woodside, supporting communities means working in partnership and investing for the long term," Liz said.

"Education has always been central to that commitment in Roebourne, and these new facilities reflect what can be achieved when community, government and industry work together."

Students from Ieramugadu (Roebourne) at the opening of the new and upgraded facilities alongside WA Premier Roger Cook and Woodside CEO Liz Westcott.

For more than a decade, Woodside has worked alongside the school and educators through the Karratha and Roebourne Education Initiative, supporting literacy and numeracy development, strengthening student engagement and pathways beyond school.

Celebrating creativity and connection at REAF

Woodside and our joint venture partners were pleased to support the City of Karratha's Red Earth Arts Festival (REAF) for another year, with a vibrant 2026 program bringing the community together through arts, culture and creativity.

At The Quarter, our continued support helped deliver a range of free, family-friendly activities, transforming the space into a lively hub of artistic and cultural activity. A highlight was the Harmony & HeART community event, featuring live entertainment, roving performers, markets and activities for all ages.

The 'Silent Observers' installation brought tree disc artworks to life through projection mapping, creating an engaging and immersive visual experience.

Artists from Yinjaa-Barni Art Group painted and displayed artworks on site, welcoming the community to watch the creation of several pieces and engage in conversations. They also hosted a kids' workshop, where young creatives could learn about culture and storytelling through art, creating their own pieces to take home.

The evening program featured roving entertainment, stage performances, music, food trucks and the Karratha & Districts Chamber of Commerce and Industry markets. Woodside employees at the Woodside stall enjoyed the opportunity to engage with the community, share updates on our activities in the north west and hear local feedback in a relaxed and welcoming environment.

Thanks to the City of Karratha for featuring the four-day festival delivered a diverse mix of performances, workshops and experiences across Karratha and surrounding communities, including Roebourne, Dampier, Cossack and Point Samson.

Audiences enjoyed a strong line-up of local, national and Indigenous artists, including the West Australian Opera Gala and theatre performances such as Blacksheep and Shadow Boxing, alongside live music, comedy and cultural storytelling.

REAF continues to grow as a much-loved event in the region, and Woodside and its joint venture partners are proud to support community events that contribute to the vibrancy and liveability of the Pilbara.

Pluto Train 2 project update

As operator of the Pluto LNG facility, Woodside's priority is safe and reliable operations.

We are undertaking work to support the commissioning and start-up of Pluto Train 2 as part of the Scarborough Energy Project. The project is currently on track for first cargo in Q4 2026.

This will result in increased flaring with the potential for some visible dark smoke.

Woodside closely monitors and aims to minimise flaring as part of our normal operations.

EXECUTIVE SUMMARY

Woodside Energy Limited (Woodside) has developed its oil spill preparedness and response position for the GWA Facility Operations, hereafter known as the Petroleum Activity.

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to As Low as Reasonably Practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental impacts resulting from an unplanned loss of hydrocarbon containment associated with the Petroleum Activity described in the Environment Plan (EP). This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness.

A summary of the key facts and references to additional detail within this document are presented below.

Table 0-1: Summary of the key details for assessment

Key details of assessment	Summary	Reference to additional detail
Worst Case Credible Scenarios (WCCS)	**MEE-01 Scenario-01:** 76-day Subsea release of 300,985 m³ of Yodel-3 Condensate at 19° 45' 4.365" S 115° 43' 44.79" E, in 132 m water depth. 300,985 m^3 over 76 days of Yodel-3 condensate. 2.50 % residual component of 7,524.6 m^3 or 99 m^3 per day	Section 2.2
	MEE-01 Scenario-02: Long-term (68-day) uncontrolled surface release of 171,033 m^3 of GWA Condensate (GWA03) from the GWA Platform at 19° 39' 12.809" S 115° 55' 42.57" E. 171,033 m^3 over 68 days of GWA-03 condensate. 1.6% residual component of 2,736.5 m^3 or 40.2 m^3 per day.	
	MEE-05 Scenario-08: Short-term (Instantaneous) Surface Release of Marine Diesel Oil after a Vessel Fuel Tank Rupture near the GDA05 Well at 19° 45' 10.681" S, 115° 52' 42.898" E Instantaneous release of 1,000 m^3. 5% residue component of 50 m^3.	
Hydrocarbon Properties	**Yodel-3 Condensate** Yodel-3 Condensate (API 54.4) is a mixture composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which would begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 63.1% of the oil mass should evaporate within the first 12 hours (BP < 180 °C), a further 25.3% should evaporate within the first 24 hours (180 °C < BP < 265 °C), and a further 9.1% should evaporate over several days (265 °C < BP < 380 °C). Approximately 2.5% of the oil is shown to be persistent **GWA Condensate (GWA03)** GWA condensate (GWA03) is a mixture of volatile and persistent hydrocarbons with high proportions of volatile and semi-volatile components. In favourable evaporation conditions, about 71.6% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 19.8% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 7.0% should evaporate over several days (265 °C < BP < 380 °C). Approximately 1.6% of the oil is shown to be persistent. **Marine Diesel Oil (MDO)** In general, about 6% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 35% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 54% should evaporate over several days (265 °C < BP < 380 °C). Approximately 5% of the oil is shown to be persistent.	Section 6.8 of the EP Appendix A of the First Strike Plan

<tr><td>Modelling Results</td><td colspan="3">Stochastic modelling:
A quantitative, stochastic assessment has been undertaken for credible spill scenarios to help assess the environmental risk of a hydrocarbon spill.
A total of 100 replicate simulations were completed for the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (25 simulations per quarter).

Deterministic modelling:
Deterministic modelling was undertaken for MEE-01 Scenario-02 (WCCS) to establish the following for response planning purposes:
• Minimum time to floating oil contact with offshore edge(s) of any shoreline receptor polygon (at a threshold of 10 g/m^2).
• Minimum time to commencement of oil accumulation at any shoreline receptor (at a threshold of 100 g/m^2).
• Maximum cumulative oil volume accumulated across all shoreline receptors (at concentrations in excess of 100 g/m^2).
• Maximum cumulative oil volume accumulated at any individual shoreline receptor (at concentrations in excess of 100 g/m^2).</td><td>Section 2.3</td></tr>

1 INTRODUCTION

1.1 Overview

Woodside Energy Ltd. (Woodside) has developed its oil spill preparedness and response position for the Goodwyn Alpha (GWA) Facility operations, hereafter known as the Petroleum Activity. This document outlines Woodside's decisions and techniques for responding to a hydrocarbon loss of containment event and the process for determining its level of hydrocarbon spill preparedness.

1.2 Purpose

This document, together with the documents listed below, meet the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations) relating to hydrocarbon spill response arrangements.

- The Goodwyn Alpha Facility Operations Environment Plan (EP)
- Hydrocarbon Spill Australia Regulatory Framework[1]
- The Goodwyn Alpha Facility Operations Oil Pollution Emergency Plan (OPEP) including
  - Oil Pollution First Strike Plan (FSP)
  - Operational and Scientific Monitoring Bridging Implementation Plan (OSM BIP)[2]
  - Relevant Operations Plans
  - Relevant Tactical Response Plans (TRPs)
  - Relevant Supporting Plans
  - Data Directory.

1.3 Scope

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to ALARP and an acceptable level. It achieves this by evaluating response options to address the potential environmental risks and impacts resulting from an unplanned loss of hydrocarbon containment associated with the Petroleum Activity described in the EP. This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness. It should be read in conjunction with the documents listed in Table 1-1. The location of the Petroleum Activity is shown in Figure 3-1 of the EP.

1.4 Oil spill response document overview

The documents outlined in Table 1-1 and Figure 1-1 are collectively used to manage the preparedness and response for a hydrocarbon release.

The Oil Pollution First Strike Plan (FSP) contains a pre-operational Net Environmental Benefit Analysis (NEBA) summary, outlining the selected response techniques for this Petroleum Activity. Relevant Operational Plans to be initiated for associated response techniques are identified in the FSP and relevant forms to initiate a response are appended to the FSP.

The process to develop an Incident Action Plan (IAP) begins once the oil pollution FSP is underway. The IAP includes inputs from monitor and evaluate and operational monitoring activities and the operational NEBA (Section 4). Planning, coordination and resource management are initiated by the Corporate Incident

Management Team (CIMT). In some instances, technical specialists may be utilised to provide expert advice. The planning may also involve liaison officers from supporting government agencies.

During each operational period, field reports are continually reviewed to evaluate the effectiveness of response operations. In addition, the operational NEBA is continually reviewed and updated to confirm the response techniques implemented continue to result in a net environmental benefit (Section 4).

The response will continue as described in Section 5 until the response termination criteria have been met.

2 RESPONSE PLANNING PROCESS

This document details Woodside's process for identifying potential response options for the hydrocarbon release scenarios, identified in the EP. Figure 2-1 outlines the interaction between Woodside's response, planning, preparedness and selection process.

This structure has been used because it shows how the planning and preparedness activities inform a response and provides indicative guidance on what activities would be undertaken, in sequential order, if a real event were to occur. The process also evaluates alternative, additional and/or improved control measures specific to the Petroleum Activity.

The Goodwyn Alpha Facility Operations Oil Pollution First Strike Plan (FSP) then summarises the outcome of the response planning process and provides initial response guidance and a summary of ongoing response activities if an incident were to occur.

2.1 Response planning process outline

This document is expanded below to provide additional context on the key steps in determining capability, evaluating ALARP and hydrocarbon spill response requirements.

- Section 1: Introduction
- Section 2: Response planning process
  - identification of worst-case credible scenario(s) (WCCS)
  - spill modelling for WCCS.
- Section 3: Identify response protection areas (RPAs)
  - areas predicted to be contacted at concentration >100 g/m^2.
- Section 4: Net environmental benefit analysis (NEBA)
  - pre-operational NEBA (during planning/ALARP evaluation): this must be reviewed during the initial response to an incident to confirm its accuracy
  - selected response techniques prioritised and carried forward for ALARP assessment.
- Section 5: Hydrocarbon spill ALARP process
  - determines the response need based on predicted consequence parameters.
  - details the environmental performance of the selected response options based on need.
  - sets the environmental performance outcomes, environmental performance standards and measurement criteria.
- Section 6: ALARP evaluation
  - evaluates alternative, additional, and improved options for each response technique to demonstrate the risk has been reduced to ALARP.
  - provides a detailed ALARP assessment of selected control measure options against:
    - predicted cost associated with implementing the option
    - predicted change to environmental benefit
    - predicted effectiveness / feasibility of the control measure.
- Section 7: Environmental risk assessment of selected response techniques
  - evaluation of impacts and risks from implementing selected response options.
- Section 8: ALARP conclusion
- Section 9: Acceptability conclusion

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

2.1.1 Response planning assumptions

Figure 2-2 illustrates the initial steps of a response to an oil spill event and, where available, the indicative timing. For the latter stages, the timing will be specific to the selective response option.

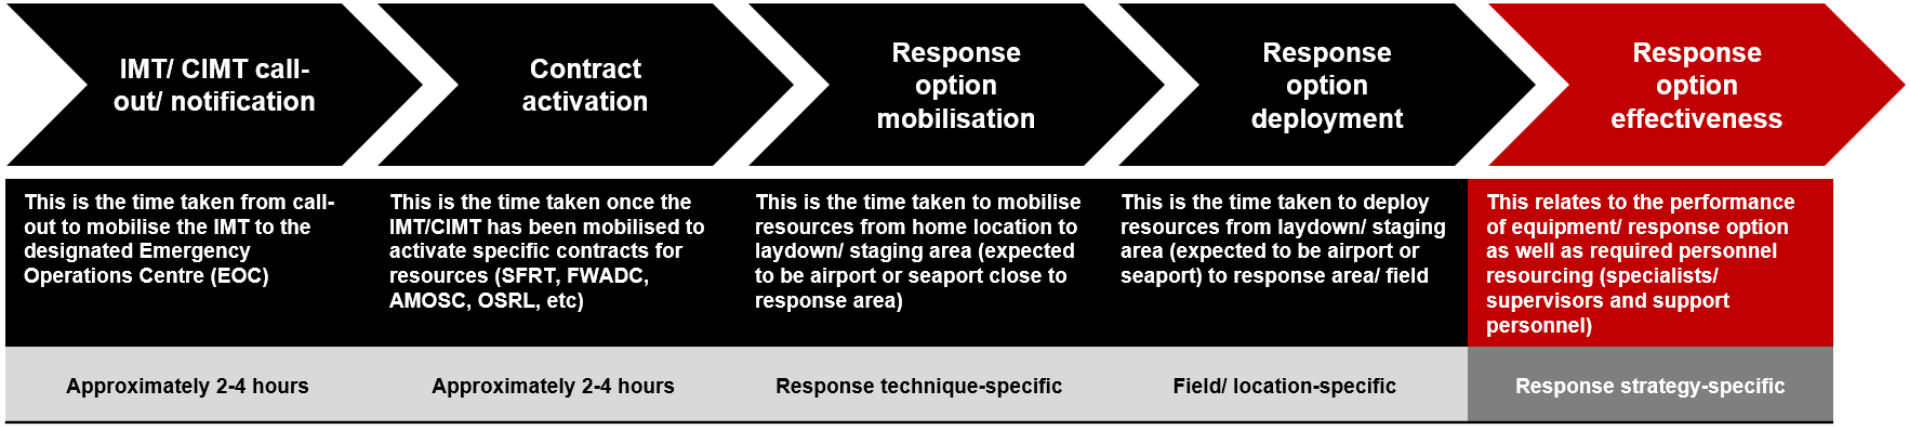

Figure 2-2: Response planning assumption – timing, resourcing and effectiveness

2.2 Environment Plan risk assessment (credible spill scenarios)

Potential hydrocarbon release scenarios from the Petroleum Activity have been identified during the risk assessment process (Section 6 of the EP). Further descriptions of risk, impacts and mitigation measures (which are not related to hydrocarbon preparedness and response) are provided in Section 6.8 of the EP. Six MEEs, which includes 8 credible spill scenarios for the Petroleum Activity, have been selected as representative across types, sources and incident/response levels, up to and including the WCCS.

Table 2-1 presents the credible scenarios for the Petroleum Activity. The WCCSs for the activity are then used for response planning purposes, as all other scenarios are of a lesser scale and extent. By demonstrating capability to manage the response to the WCCSs, Woodside assumes other scenarios that are smaller in nature and scale can also be managed by the same capability. Response performance measures have been defined based on a response to the WCCSs.

The loss of well containment scenarios (MEE-01 Scenario-01, MEE-01 Scenario-02) have been modelled and are considered to determine the WCCS for response planning purposes. The instantaneous release after a loss of marine vessel separation or vessel collision (MEE-05 Scenario-08) has also been considered, given the large instantaneous volume and the surface release.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Table 2-1: Petroleum Activity credible spill scenarios

Credible Spill Scenarios	Scenario selected for planning purposes	Scenario description	Maximum credible volume released (liquid m^3)[1]	Incident level	Hydrocarbon type	Residual proportion	Residual volume (m^3)
MEE-01 Scenario-01 (WCCS)	Yes	Well blowout: hydrocarbon release caused by well loss of containment (subsea)	300,985 m^3 over 76 days	3	Yodel-3 Condensate	2.5%	7,524.62 m^3
MEE-01 Scenario-02 (WCCS)	Yes	Well blowout: hydrocarbon release caused by well loss of containment (surface)	171,033 m^3 over 68 days	3	GWA-03 Condensate	1.6%	2,736.53 m^3
MEE-02 Scenario-03	No	Subsea Loss of Containment: flowlines (GWF-1/ GWF-2) subsea release outboard of SSIV	799.7 m^3 (< 6 hours)	3	GWF4 Rich Fluid (GWF condensate)	8%	63.98 m^3
MEE-02 Scenario-04	No	Subsea Loss of Containment: Subsea release from IFL (including 2TL inventory) downstream of SSIV but within 500 m of GWA facility	8,090 m^3 (< 6 hours)	3	GWA condensate	0.8%	64.72 m^3
MEE-02 Scenario-05	No	Subsea Loss of Containment: Surface release from IFL (including 2TL inventory) from rupture of riser at GWA facility	7,623 m^3 (< 6 hours)	3	GWA Condensate	0.8%	60.98 m^3
MEE-03 Scenario-06	No	Topside loss of containment: Instantaneous release from the GWA facility.	135 m^3	2	Gas and GWA Condensate	Up to 0.8%	Up to 1.08 m^3
			403 m^3		GWA condensate	0.8	3.22 m^3
			343 m^3		MDO	5.0%	1.72 m^3
Scenario-07	No	Marine fuel loss during hydrocarbon bunkering	24 m^3 over 15 minutes	2	MDO	5.0%	1.5 m^3
MEE-05 Scenario-08	Yes	Instantaneous release after a loss of marine vessel separation or vessel collision	1,000 m^3	3	MDO	5.0%	50 m^3

2.2.1 Hydrocarbon characteristics

Hydrocarbon characteristics, including modelled weathering data and ecotoxicity, are included in Section 6.8.2.2 of the EP.

Yodel-3 Condensate (MEE-01 Scenario-01)

Yodel-3 Condensate (API 54.4) contains a low proportion (2.5% by mass) of hydrocarbon compounds that will not evaporate at atmospheric temperatures (residual). These compounds will persist in the marine environment; however, most of the hydrocarbons that comprise this oil (97.5%) will volatilise at ambient temperatures.

The mixture is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which would begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 63.1% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 25.3% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 9.1% should evaporate over several days (265 °C < BP < 380 °C).

The unweathered hydrocarbon mixture has low density (0.76 g/cm^3) and very low dynamic viscosity (0.54 cP). The pour point of the whole mixture (< -36 °C) indicates that it will remain in a liquid state over the annual temperature range observed on the North West Shelf.

Selective evaporation of the lower boiling-point components will lead to a shift in the physical properties of the remaining mixture, including an increase in the density, viscosity and pour point. Given the low density, viscosity and pour point of the mixture, it is expected that even after weathering the hydrocarbon mixture will not solidify and will remain less dense than seawater.

The whole oil has low asphaltene content (< 0.1%), indicating a low propensity for the mixture to take up water to form water-in-oil emulsion over the weathering cycle. The whole oil also contains ~ 5% wax, therefore there is potential for residual hydrocarbons to be found as wax in the marine environment if this oil is spilled.

Soluble aromatic hydrocarbons contribute approximately 8.7% by mass of the whole oil, mostly in the C11-C20 range of hydrocarbons. These compounds would evaporate slowly if exposed to the atmosphere, leaving the potential for dissolution of a proportion of them into the water column.

The results for the constant-wind case indicate that Yodel-3 Condensate will have a tendency to evaporate fairly rapidly, with 88% of the spilled volume predicted to evaporate and around 10% remaining on the water surface after the first 24 hours under light winds. Negligible levels of entrainment and dissolution are expected under these light wind conditions.

A slightly reduced evaporation rate is predicted in the first 24 hours for the variable-wind case. Increased entrainment and dissolution rates are predicted in this case, with a corresponding decrease in the floating oil proportion to negligible levels. The variable-wind case also indicates that, once entrained, the oil tends to remain in the water column and may not resurface even during calm wind periods.

GWA-03 Condensate (MEE-01 Scenario-02)

GWA-03 Condensate is a mixture of volatile and persistent hydrocarbons with high proportions of volatile and semi-volatile components. In favourable evaporation conditions, about 71.6% of the oil mass should evaporate within the first 12 hours; a further 19.8% should evaporate within the first 24 hours; and a further 7.0% should evaporate over several days. Only about 1.6% of the oil is shown to be persistent (RPS Group 2021).

The whole oil has a low asphaltene content (< 0.5%), indicating a low propensity for the mixture to take up water to form water-in-oil emulsion over the weathering cycle.

Soluble, aromatic, hydrocarbons contribute approximately 13.2% by mass of the whole oil. Around 9.6% by mass is highly soluble and highly volatile. A further 3.6% by mass has semi-to-low volatility. These compounds dissolve more slowly but tend to persist in soluble form for longer. Discharge onto the water surface will favour the process of evaporation over dissolution under calm sea conditions, but increased entrainment of oil and dissolution of soluble compounds can be expected under breaking wave conditions (RPS Group 2021).

The mass balance forecast for the constant-wind case for GWA-03 Condensate shows that about 91.4% of the oil is predicted to evaporate within 24 hours. Under calm conditions, the majority of the remaining oil on the water surface will weather at a slower rate due to being comprised of the longer-chain compounds with

higher boiling points. Evaporation of the residual compounds will slow significantly, and they will then be subject to more gradual decay through biological and photochemical processes.

GWF4 Rich Fluid (GWF Condensate) (MEE-02 Scenario-03)

The GWF Condensate is made of high proportions of highly volatile hydrocarbons. In general, about 62 % of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 20 % should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 10% should evaporate over several days (265 °C < BP < 380 °C). Approximately 8% of the oil is shown to be persistent. The aromatic content of the oil is approximately 17.1 %.

If released in the marine environment and in contact with the atmosphere (i.e., surface spill), approximately 82 % by mass of this oil is predicted to evaporate over the first couple of days depending upon the prevailing conditions, with further evaporation slowing over time. The heavier (low volatility) components of the oil tend to entrain into the upper water column due to wind-generated waves but can subsequently resurface if wind-waves abate. Therefore, the heavier components of this oil can remain entrained or on the sea surface for an extended period, with associated potential for dissolution of the soluble aromatic fraction. Further, the GWF Condensate contains 8% of heavy hydrocarbons (persistent compounds) that are likely to remain on the sea surface for longer periods.

The mass balance forecast for the constant-wind case for GWF Condensate shows that approximately 82% of the oil is predicted to evaporate within 24 hours. Under these calm conditions, most of the remaining oil on the water surface will weather at a slower rate due to being comprised of the longer-chain compounds with higher boiling points. Evaporation of the residual compounds will slow significantly, and they will then be subject to more gradual decay through biological and photochemical processes.

Under the variable-wind case, where the winds are of greater strength, entrainment of GWF Condensate into the water column is indicated to be greater than the constant wind case. Approximately 24 hours after the spill, around 20% of the oil mass is forecast to have entrained and 73% is forecast to have evaporated. The increased level of entrainment in the variable-wind case will result in a higher percentage of biological and photochemical degradation, where the decay of the floating slicks and oil droplets in the water column occurs at an approximate rate of 1% per day with an accumulated total of ~ 7% after 7 days, in comparison to a rate of ~ 0.13% per day and an accumulated total of 0.88% after 7 days in the constant wind case.

GWA Condensate (MEE-02 Scenario-04 and Scenario-05, and MEE-03 Scenario-06)

GWA Condensate is a mixture of volatile and persistent hydrocarbons with high proportions of volatile and semi-volatile components. In favourable evaporation conditions, about 65.9% of the oil mass should evaporate within the first 12 hours, a further 22.5% should evaporate within the first 24 hours and a further 10.8% should evaporate over several days. About 0.8% of the oil is shown to be persistent (RPS Group 2021).

The whole oil has a low asphaltene content (<0.5%), indicating a low propensity for the mixture to take up water to form water-in-oil emulsion over the weathering cycle.

Soluble, aromatic, hydrocarbons contribute approximately 16.3% by mass of the whole oil. About 9.1% by mass is highly soluble and highly volatile. A further 7.2% by mass has semi-to-low volatility. These compounds dissolve more slowly but tend to persist in soluble form for longer. Discharge onto the water surface will favour the process of evaporation over dissolution under calm sea conditions, but increased entrainment of oil and dissolution of soluble compounds can be expected under breaking wave conditions (RPS Group 2021).

The mass balance forecast for the constant-wind case for GWA Condensate shows that about 88.4% of the oil is predicted to evaporate within 24 hours. Under calm conditions, the majority of the remaining oil on the water surface will weather at a slower rate due to being comprised of the longer-chain compounds with higher boiling points. Evaporation of the residual compounds will slow significantly, and they will then be subject to more gradual decay through biological and photochemical processes (RPS Group 2021).

Marine Diesel Oil (MEE-03 Scenario-06, Scenario-07 and MEE-05 Scenario-08)

MDO is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. In general, about 6% of the oil mass should evaporate within the first 12 hours (boiling point < 180°C); a further 35% should evaporate within the first 24 hours (180°C < boiling point < 265°C); and a further 54% should evaporate over several days (265°C < boiling point < 380°C). About 5% of the oil is shown to be persistent. The aromatic content of the oil is about 3%.

The mass balance forecast for the constant-wind case for MDO shows that about 41% of the oil is predicted to evaporate within 24 hours. Under these calm conditions the majority of the remaining oil on the water surface

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

weathers at a slower rate due to comprising the longer-chain compounds with higher boiling points. Evaporation of the residual compounds slows significantly and is then subject to more gradual decay through biological and photochemical processes.

Under the more realistic variable-wind case, where the winds are of greater strength, entrainment of MDO into the water column is indicated to be significant. About 24 hours after the spill, around 72% of the oil mass is forecast to have entrained and a further 24% is forecast to have evaporated, leaving only a small proportion of the oil floating on the water surface (<1%). The residual compounds tend to remain entrained beneath the surface under conditions that generate wind waves (about >6 m/s).

The increased level of entrainment in the variable-wind case results in a higher percentage of biological and photochemical degradation, where the decay of the floating slicks and oil droplets in the water column occurs at an approximate rate of 2.4% per day with an accumulated total of ~16% after seven days, in comparison to a rate of ~0.2% per day and an accumulated total of 1.3% after seven days in the constant-wind case. Given the large proportion of entrained oil and the tendency for it to remain mixed in the water column, the remaining hydrocarbons decay and/or evaporate over time scales of several weeks to a few months. This long weathering duration extends the area of potential effect.

2.3 Hydrocarbon spill modelling

Oil spill trajectory modelling (OSTM) tools are used for environmental impact assessment and during response planning to understand spatial scale and timeframes for response operations. Woodside recognises there is a degree of uncertainty related to the use of modelling data and has subsequently utilised conservative approaches to volumes, weathering, spatial areas, timing and response effectiveness to scale capability to need.

The Oil Spill Model and Response System (OILMAP) and Integrated Oil Spill Impact Model System (SIMAP) models are both used for stochastic and deterministic trajectory modelling. They have been developed over three decades of planning, exercises, actual responses, several peer reviews, and validation studies. OILMAP was originally derived from the United States Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Type A model (French et al. 1996), for assessing marine transport, biological impact and economic damage that was also used under the United States Oil Pollution Act 1990 Natural Resource Damage Assessment (NRDA) regulations. Notable spills where the model has been used and validated against actual field observations include, Exxon Valdez (French McCay 2004), North Cape Oil Spill (French McCay 2003), along with an assessment of 20 other spills (French McCay and Rowe, 2004). In addition, test spills designed to verify fate, weathering and movement algorithms have been conducted regularly and in a range of climate conditions (French and Rines 1997; French et al. 1997; Payne et al. 2007; French McCay et al. 2007).

Further to this, the algorithms have been updated using the latest findings from the Macondo/Deepwater Horizon well blowout in the Gulf of Mexico and validated according to the Deepwater Horizon (DWH) oil spill in support of the NRDA (Spaulding et al. 2015; French McCay et al. 2015, 2016). Finally, the OILMAP and SIMAP models have been used extensively in Australia to prosecute pollution offences, predict discharge locations and likely spill volumes based on weathering and surveillance observations, and has been used as expert witness evidence in Australian court proceedings, aiding the prosecution to determine spill quantum estimates.

2.3.1 Stochastic modelling

Quantitative, stochastic assessments have been undertaken for the credible spill scenarios (refer to Table 2-1) to help assess the environmental consequences of a hydrocarbon spill.

A total of 100 replicate simulations were completed for each of the scenarios to test trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (25 simulations per quarter). Further details relating to the assessments for the scenarios can be found in Section 6 of the EP.

2.3.1.1 Environmental impact thresholds – Environment that May Be Affected (EMBA) and hydrocarbon exposure

The outputs of the stochastic spill modelling are used to assess the potential environmental impact from the credible scenarios. The stochastic modelling results are used to delineate areas of the marine and shoreline environment that could be exposed to hydrocarbon levels exceeding environmental impact threshold

concentrations. The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA and is discussed further in Section 6 of the EP. As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean mechanism of transportation, a different EMBA is presented for each fate within the EP.

A conservative approach – adopting accepted accumulation thresholds for impacts on the marine environment – is used to define the EMBA. These hydrocarbon thresholds are presented in Table 2-2 below and described in Section 6 of the EP.

Table 2-2: Summary of thresholds applied to the stochastic hydrocarbon spill modelling to determine the EMBA and inform operational and scientific monitoring

Hydrocarbon	Surface hydrocarbon (g/m^2)	Dissolved hydrocarbon (ppb)	Entrained hydrocarbon (ppb)	Accumulated hydrocarbon (g/m^2)
EMBA				
Condensate	1	10	1,000	10
Diesel	1	10	1,000	10
Operational and scientific monitoring (OSM) assessment (see ANNEX C)				
All hydrocarbon types	1	10	10	10

2.3.2 Deterministic modelling

Response planning

Woodside uses deterministic modelling to evaluate risks and impacts and response capability requirements. For planning and scaling the clean-up element of the response, deterministic modelling is undertaken where initial stochastic modelling has indicated that hydrocarbons are present at the minimum feasible clean-up thresholds of >50 g/m^2 (for floating hydrocarbons) and/or >100 g/m^2 (for shoreline accumulations), and where such shoreline contact is predicted at multiple locations. The deterministic modelling outputs are then used to scale the required capability for the offshore (surface dispersant and containment and recovery) and/or shoreline responses.

Deterministic results are provided in both shapefile and data table format with each row of the data table representing a 1 km^2 cell. This cell size has been used as it represents the approximate area that a single containment and recovery operation or surface dispersant operation (single sortie or vessel spraying) can effectively treat in one ten-hour day. Smaller cell sizes have been considered but would not change the response need as the potential distance between cells would not allow multiple cells to be treated per day by response operations. Additionally, a 1 km^2 cell is expected to allow averaging of threshold concentrations and mass across the spatial extent to represent a conservative approach (patches of oil and windrows) to response planning that simulates feedback from monitor and evaluate activities in a real event.

Deterministic modelling was carried out on MEE-01 Scenario-02 as the WCCSs and used for response planning purposes. A sample of the deterministic results is provided below as an indication of the data format and content.

- Column A and B provide the latitude and longitude of the cell
- Column C is the elapsed time since the release occurred
- Column D represents the average concentration across the cell in g/m^2
- Column E represents the viscosity of the hydrocarbon in centistokes (cSt) at sea surface temperature
- Columns F and G represent the mass of hydrocarbon across the entire cell in kg and m^3 respectively.

Table 2-3: Example Deterministic modelling data

Latitude	Longitude	Time_hour	Conc_gm²	Visc_cSt	Mass_kg	Mass_
A	B	C	D	E	F	G
-19.657033	115.929029	6	29.578148	1.222765	29660.828114	29.660828
-19.648000	115.929029	6	1.879379	12.017308	1884.740233	1.884740
-19.657033	115.929029	12	22.487072	0.764680	22549.930364	22.549930
-19.648000	115.929029	12	2.592590	8.125653	2599.985957	2.599986
-19.657033	115.929029	18	27.117618	1.286506	27193.420231	27.193420
-19.648000	115.919473	24	2.861783	34.524643	2869.949754	2.869950
-19.638968	115.919473	24	1.075811	40.968575	1078.943342	1.078943

The deterministic modelling data provides an indication of the response need by displaying the potential surface area and volume treated or recovered by response operations. Existing capability is reviewed to approximate the surface area and volumes that can be treated or removed and a range of alternate, improved and additional options to reduce risks and impacts to ALARP are considered.

A key consideration in the evaluation of response capability is the understanding that no single response strategy or even combination of offshore response strategies will treat or remove 100% of the surface hydrocarbons in either surface area or volume. Even with the significant resources available to Woodside through existing capability and third-party resources, the primary offshore response strategies of surface dispersant application and containment and recovery will only treat or recover a minor volume (<30%) of the available surface hydrocarbons based on previous response experience.

Operational and Scientific Monitoring

Deterministic modelling for planning Operational and Scientific Monitoring (OSM) activities is undertaken where stochastic modelling predicts that the existing response capability to resource monitoring at receptors forecast to be contacted by floating, shoreline and/or dissolved hydrocarbons (at >10% probability and within the initial 14 days), has been exceeded. Deterministic modelling undertaken for planning OSM activities for this Petroleum Activity is detailed in Annex C.

Woodside is committed to a realistic, scalable response capability commensurate to the level of risk and able to be practically implemented and feasibly sustained.

2.3.3 Response planning thresholds for surface and shoreline hydrocarbon exposure

Thresholds to determine the EMBA and inform OSM are used to predict and assess environmental impacts, however they do not appropriately represent the thresholds at which an effective clean-up response can be implemented.

Additional response thresholds are used for response planning and to determine areas where response techniques would be most effective. Deterministic modelling is then used to assess the nature and scale of a response. These thresholds are provided as a guide for response planning based on case studies that have demonstrated some response strategies (e.g. containment and recovery, chemical dispersant application) require certain oil spill thicknesses and conditions to be effective.

Response planning thresholds assist with understanding worst-case spill scenario response strategy capability requirements when used in conjunction with oil spill trajectory modelling results. Modelling informs the predicted spatial extent of the spill at certain response thresholds, which in turn can inform response strategy capability.

2.3.3.1 Surface hydrocarbon concentrations

Table 2-4: Surface hydrocarbon thresholds for response planning

Surface hydrocarbon threshold (g/m^2)	Description	Bonn Agreement Oil Appearance Code	Mass per area (m^3/km^2)
>10	Predicted minimum threshold for commencing monitor and evaluate[3]	Code 3 – Dull metallic colours	5 to 50
50	Predicted minimum floating oil threshold for containment and recovery and surface dispersant application [4]	Code 4 – Discontinuous true oil colour	50 to 200
100	Predicted optimum floating oil threshold for containment and recovery and surface dispersant application	Code 5 – Continuous true oil colour	>200
Shoreline hydrocarbon threshold (g/m^2)	**Description**	**National Plan Guidance on Oil Contaminated Foreshores**	**Mass per area (m^3/km^2)**
100	Predicted minimum shoreline accumulation threshold for shoreline assessment operations	Stain	>100
250	Predicted minimum threshold for commencing shoreline clean-up operations	Level 3 – Thin Coating	200 to 1000

The surface thickness of oil at which dispersants are typically effective is approximately 100 g/m^2. However, substantial variations occur in the thickness of the oil within the slick, and most fresh crude oils spread within a few hours, so overall the average thickness is 0.1 mm (or approx. 100 g/m^2 ITOPF 2011). Additionally, the recommended rate of application for surface dispersant is typically one part dispersant to 20 or 25 parts of spilled oil. These figures assume a 0.1 mm slick thickness, averaged over the thickest part of the spill, to calculate a litres/hectare application rate from vessels and aircraft. In practice this can be difficult to achieve as it is not possible to accurately assess the thickness of the floating oil.

Some degree of localised over-dosage and under-dosage is inevitable in dispersant response. An average oil layer thickness of 0.1 mm is often assumed, although the actual thickness can vary over a wide range (from less than 0.0001 mm to more than 1 mm) over short distances (International Petroleum Industry Environment Conservation Association [IPIECA] 2015).

Guidance from the Australian Maritime Safety Authority (AMSA 2020) indicates spreading of spills of Group II or III products will rapidly decrease slick thickness over the first 24 hours of a spill resulting in the potential requirement of up to a ten (10) fold increase in capability on day 2 to achieve the same level of performance.

Further guidance from the European Maritime Safety Authority (EMSA) states spraying the 'metallic' looking area of an oil slick (Bonn Agreement Oil Appearance Code [BAOAC] 3, approx. 5 – 50 µm) with dispersant from spraying gear designed to treat an oil layer 0.1 mm (100 µm) thick, will inevitably cause dispersant over-treatment by a factor of 2 to 20 times (EMSA 2012).

Therefore, dispersant application should be concentrated on the thickest areas of an oil slick and Woodside intends on applying surface dispersants to only BAOAC 4 and 5. Spraying areas of oil designated as BAOAC Code 4 (Discontinuous true oil colour) with dispersant will, on average, deliver approximately the recommended treatment rate of dispersant.

Spraying areas of oil designated as BAOAC Code 5 with dispersant (Continuous true oil colour and more than 0.2 mm thick) will, on average, deliver approximately half the recommended treatment rate of dispersant.

3 Monitor and evaluate will be undertaken from the outset of a spill whether or not this threshold has been reached. Monitoring is needed throughout the response to assess the nature of the spill, track its location and inform the need for any additional monitoring and/or response techniques. It also informs when the spill has entered State Waters and control of the incident passes to statutory authorities e.g. Western Australia Department of Transport and Major Infrastructure (WA DTMI) or AMSA.

4 At 50 g/m^2, containment and recovery and surface dispersant application operations are not expected to be particularly effective. This threshold represents a conservative approach to planning response capability and containing the spread of surface oil.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Repeated application of these areas of thicker oil, or increased dosage ratios, will be required to achieve the recommended treatment rate of dispersant (EMSA 2012).

Guidance from the National Oceanic and Atmospheric Administration (NOAA) in the United States is found in the document: Characteristics of Response Strategies: A Guide for Spill Response Planning in Marine Environments 2013 (NOAA 2013). This guide outlines advice for response planning across all common techniques, including surface dispersant spraying and containment and recovery. It states oil thickness can vary by orders of magnitude within distinct areas of a slick, thus the actual slick thickness and oil distribution of target areas are crucial for determining response method feasibility. Further to this, ITOPF also states in terms of oil spill response, sheen can be disregarded as it represents a negligible quantity of oil, cannot be recovered or otherwise dealt with to a significant degree by existing response techniques, and is likely to dissipate readily and naturally (ITOPF, 2014a, 2014b).

Figure 2-4 below from AMSA's Identification of Oil on Water – Aerial Observation and Identification Guide (AMSA, 2014) shows expected percent coverage of surface hydrocarbons as a proportion of total surface area. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

From this information and other relevant sources (Allen and Dale, 1996, EMSA, 2012, Spence, 2018) the surface threshold of 50 g/m2 was chosen as an average/equilibrium thickness for offshore response operations (50 g/m2 is an average of 50% coverage of 0.1 mm Bonn Agreement Code 4 – discontinuous true oil colour, or 25% coverage of 0.2 mm Bonn Agreement Code 5 – continuous true oil colour which would represent small patches of thick oil or wind-rows).

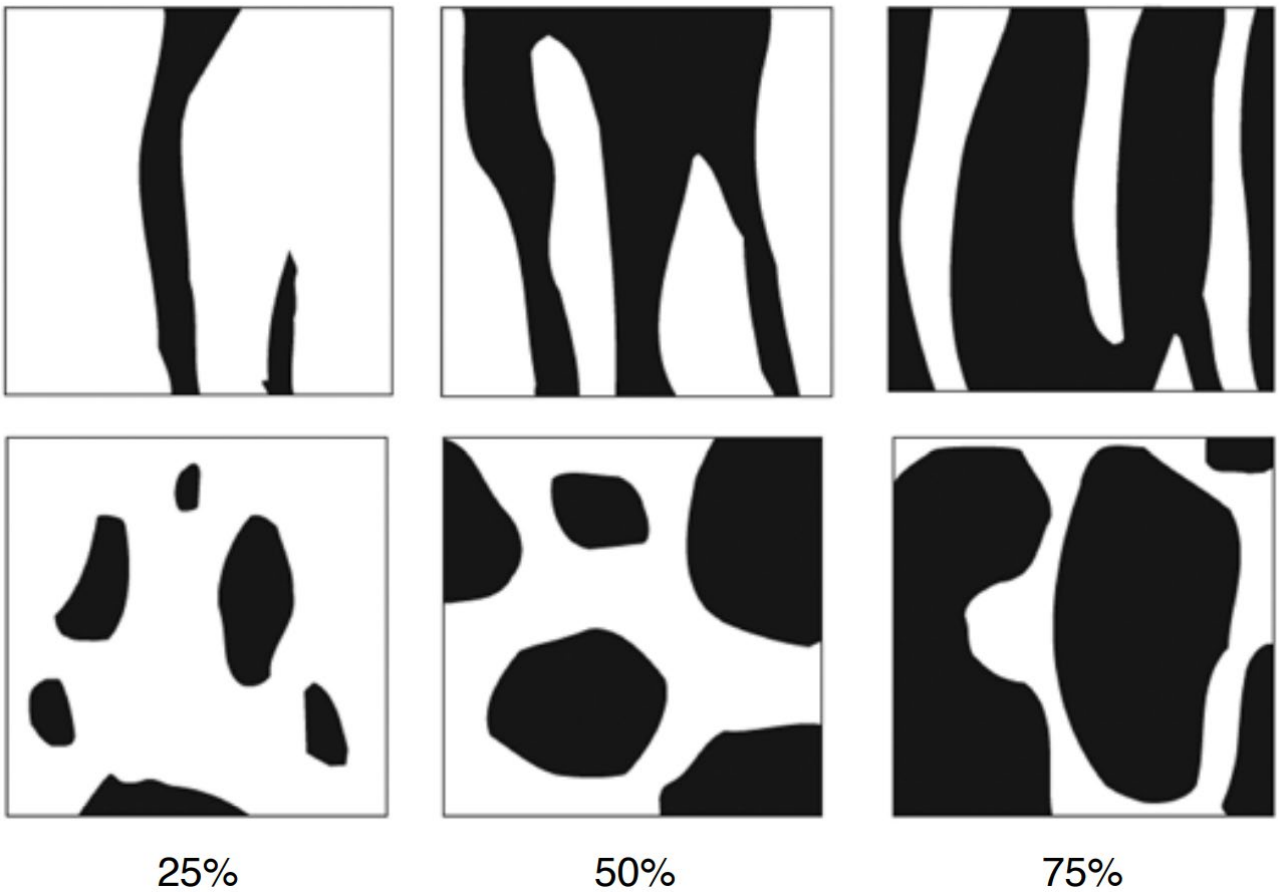

Figure 2-4: Proportion of total area coverage (AMSA, 2014)

Figure 2-5 illustrates the general relationships between on-water response techniques and slick thickness. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

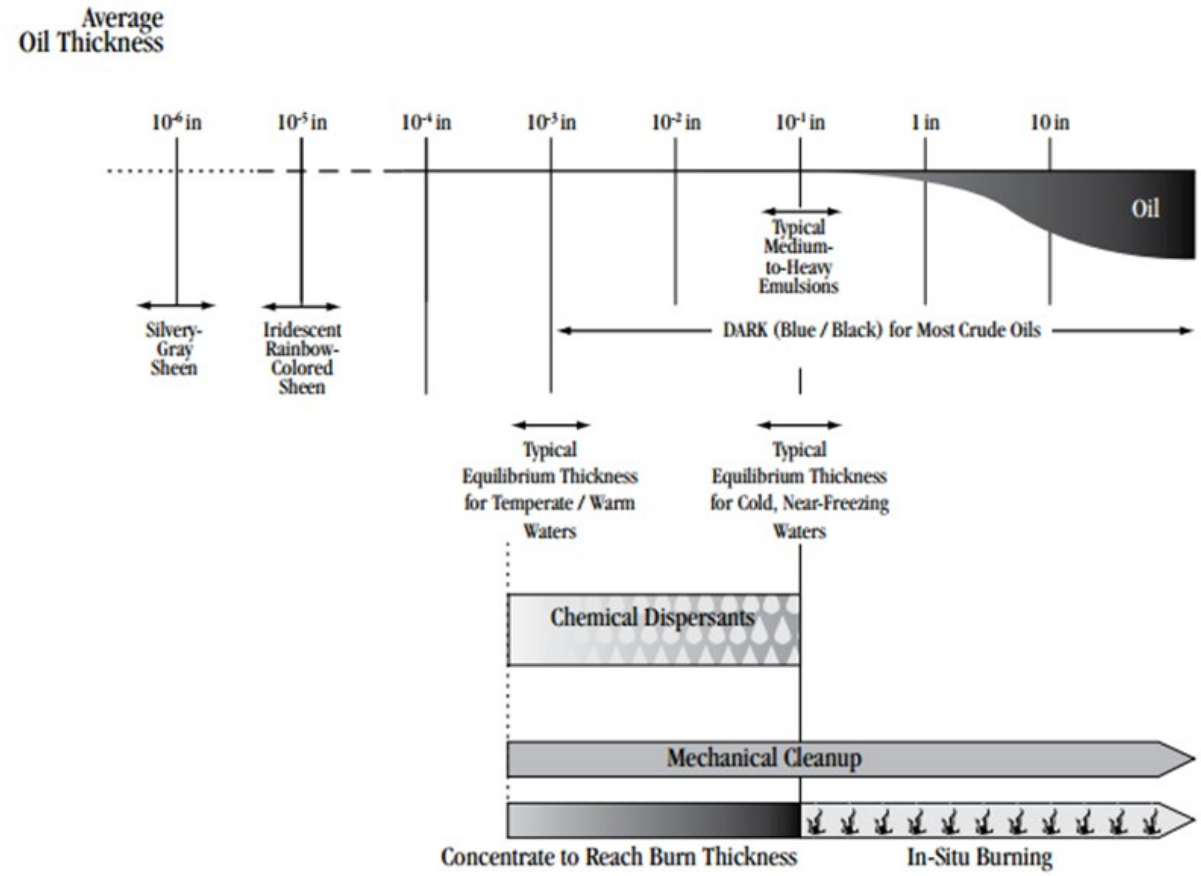

Figure 2-5: Oil thickness versus potential response options (from Allen & Dale 1996)

Wind and wave influence on the feasibility of response operations are also considered below (adapted from NOAA 2013):

- Mechanical clean-up: effectiveness drops significantly because of entrainment and/or splash-over as short period waves develop beyond 2–3 ft. (0.6–0.9m) in height. The ability to contain and recover oil decreases rapidly as the slick thickness becomes less than a thousandth of an inch (0.025 mm) (i.e., very low oil encounter rates). Waves and wind can also be limiting factors for the safe operation of vessels and aircraft.
- Dispersants: effective dispersion requires a threshold amount of surface mixing energy (typically a few knots of wind and a light chop) to be effective. At higher wind and sea conditions, dispersant evaporation and wind-drift will limit chemical dispersion application effectiveness; and, there is a point (~25-kt winds, 10-ft waves) where natural dispersion forces become greater, particularly for light oils. Because of droplet size versus slick thickness constraints and application dose-rate limitations, dispersants work best on slick thicknesses of a few thousandths (approx. 50 g/m2) to hundredths of an inch (approx. 250 g/m2). Improved dispersants, higher dose rates, and multiple-pass techniques may extend the thickness limitation to 0.1 inch (2.5 mm) or more.

As offshore response operations (surface dispersant and containment and recovery) are intended to be undertaken at the thickest part of the slick, 50 g/m^2 and 100 g/m^2 (aligning with the lower limit of BAOAC 4 and midpoint of BAOAC 5) have been utilised by Woodside in deterministic modelling to identify the most likely locations for surface dispersant application and containment and recovery operations.

2.3.3.2 Surface hydrocarbon viscosity

Table 2-5: Surface hydrocarbon viscosity thresholds

Surface viscosity threshold (cSt)	Description	European Maritime Safety Authority (EMSA)	Viscosity at sea temperature (cSt)
5,000*	Predicted optimum viscosity for surface dispersant operations	Generally possible to disperse	500-5,000
10,000*	Predicted maximum viscosity for effective surface dispersant operations	Sometimes possible to disperse	5,000-10,000

*Measured at sea surface temperature

Further to the required thickness for surface dispersant application and containment and recovery to be deployed effectively as outlined above, changes to viscosity will also limit the treatment of offshore response techniques. As outlined in the EMSA Manual on the Applicability of Oil Spill Dispersants (EMSA, 2012), guidance around changes to viscosity and likely effectiveness of surface dispersant application is provided.

This includes the following statements: “It has been known for many years that it is more difficult to disperse a high viscosity oil than a low or medium viscosity oil. Laboratory testing had shown that the effectiveness of dispersants is related to oil viscosity, being highest for modern ‘Concentrate, UK Type 2/3’ dispersants at an oil viscosity of about 1,000 or 2,000 mPa (1,000 – 2,000 cSt) and then declining to a low level with an oil viscosity of 10,000 mPa (10,000 cSt). It was considered that some generally applicable viscosity limit, such as 2,000 or 5,000 mPa (2,000 – 5,000 cSt), could be applied to all oils.”

However, modern oil spill dispersants are generally effective up to an oil viscosity of 5,000 mPa (5,000 cSt) or more, and their performance gradually decreases with increasing viscosity; oils with a viscosity of more than 10,000 cSt are in most cases, no longer dispersible. Guidance from CEDRE (EMSA, 2012) also indicates products with a range of 500 – 5,000 cSt at sea temperature are generally possible to disperse, while 5,000 – 10,000 cSt at sea temperature above pour point are sometimes possible to disperse, with products beyond 10,000 cSt at sea temperature below pour point are generally impossible to disperse.

To support decision making and response planning, a threshold of 10,000 cSt at sea temperature was chosen as a conservative estimate of maximum viscosity for surface dispersant spraying operations.

The thresholds described above are compared with the modelling results for the WCCS (Table 2-6).

2.3.4 Spill modelling results

Details of the scenario and modelling inputs are included along with modelling results in Table 2-6.

Table 2-6: Worst case credible scenario modelling results

Scenario description	Results		
	MEE-01 Scenario-01	**MEE-01 Scenario-02**	**MEE-05 Scenario-08**
WCCS – total volume released Refer to Section 2.1.1 for detailed hydrocarbon characteristics	Hydrocarbon release caused by loss of well containment subsea in 132 m water depth 300,985 m^3 of Yodel condensate over 76 days	Hydrocarbon release caused by loss of well containment surface 171,033 m^3 of GWA-03 condensate over 68 days	Hydrocarbon release caused by a loss of marine vessel separation or vessel collision Instantaneous surface release of 1,000m^3 of MDO
WCCS – residual volume remaining post-weathering	2.5% residue or 7,524.62 m^3 99 m^3 per day	1.6% residue or 2,736.53 m^3 40 m^3 per day	5.0% residue or 50 m^3
Location	19° 45' 4.365" S, 115° 43' 44.79" E	19° 39' 12.809" S, 115° 55' 42.567" E	19° 45' 10.681" S, 115° 52' 42.898" E
Modelling results			
Surface area of hydrocarbons (>50 g/m^2)	Area data not available from stochastic modelling – floating oil at 50 g/m^2 extends up to 10 km from the release location and is present at Rankin Bank (9.46 days)	1 km^2 on day 3 2 km^2 on day 4 1 km^2 on day 5 Surface hydrocarbons return to 0 km^2 (0 m^3) thereafter. (Q2, Run 15)	Area data not available from stochastic modelling – floating oil at 50 g/m^2 extends up to 30 km from the release location. No contact at any RPA.
Surface area of hydrocarbons (>50 g/m^2 and <10,000 cSt)		1 km^2 on day 3 2 km^2 on day 4 1 km^2 on day 5 Surface hydrocarbons return to 0 km^2 (0 m^3) thereafter. Floating hydrocarbons are not predicted to exceed 10,000 cSt (Q2, Run 15)	
Minimum time to floating hydrocarbon contact with the offshore edge(s) of any shoreline receptor polygon (at a concentration of 10 g/m^2)	7 hours at Rankin Bank	Floating oil at 10 g/m^2 extends up to 20 km from the release location. No contact at any RPA.	Floating oil at 10 g/m^2 extends up to 54 km from the release location. No contact at any RPA.
Minimum time to commencement of hydrocarbon accumulation at any shoreline receptor (at a concentration of 100 g/m^2)	NA – No shoreline contact at 100 g/m^2	Muiron Islands – 71.4 days (6 m^3) (Q2, Run 2)	NA – No shoreline contact at 100 g/m^2
Maximum cumulative hydrocarbon volume accumulated at any individual shoreline receptor (at a concentration of 100 g/m^2).	NA – No shoreline contact at 100 g/m^2	Muiron Islands – 6 m^3 (71.4 days) (Q2, Run 2)	NA – No shoreline contact at 100 g/m^2
Maximum cumulative hydrocarbon volume accumulated across all shoreline receptors contacted by accumulated hydrocarbons (at a concentration of 100 g/m^2)	NA – No shoreline contact at 100 g/m^2	Muiron Islands – 6 m^3 (71.4 days) (Q2, Run 2)	NA – No shoreline contact at 100 g/m^2
Minimum time to dissolved hydrocarbon contact with the offshore edges of any receptor polygon (at a threshold of 10 ppb)	7 hours at Rankin Bank	Data not available	18 hours at Rankin Bank
The full list of response protection areas (RPAs) predicted from modelling is available in Table 3-1. Locations prioritised for operational and scientific monitoring are detailed in ANNEX C.

From the above modelling results, MEE-01 Scenario 2 is considered to be the WCCS and has been used as the basis for assessing and scaling response planning in Section 4.5. The other scenarios may also be considered if feasibility of response techniques differs. Modelling predicts the following:

- Surface hydrocarbon concentrations >10 g/m^2 may extend up to a maximum of 99 km from the release location (MEE-01 Scenario-01), 20 km (MEE-01 Scenario-02), and 54 km (MEE-05 Scenario-08).
- Surface >50 g/m^2 (the minimum feasible threshold for surface dispersant application and containment and recovery) is predicted at Rankin Bank at a probability of 2% for MEE-01 Scenario-01. For MEE-01 Scenario-02, this threshold is limited to within 1 km of the release location and does not contact any RPA. MEE-05 Scenario-08 also predicts contact at this threshold within 30 km of the release location; however, surface dispersant application and containment and recovery are not considered appropriate for spills of MDO.
- Shoreline accumulation ≥100 g/m^2 is predicted to occur at Muiron Islands only (71.4 days) at a probability of 2% (MEE-01 Scenario-02).
- Response operations cannot be implemented if the safety of response personnel cannot be guaranteed. Safety circumstances that limit the execution of this control measure include volatile concentrations of hydrocarbons in the atmosphere, high winds (>20 knots), waves and/or sea states (>1.5m waves) and high ambient temperatures.

3 IDENTIFY RESPONSE PROTECTION AREAS (RPAs)

In a response, monitor and evaluate – including trajectory modelling and vessel/aerial observations – would be used to predict RPAs that may be impacted. For the purposes of planning and appropriately scaling a response, modelling has been used to identify RPAs as outlined below in Figure 3-1.

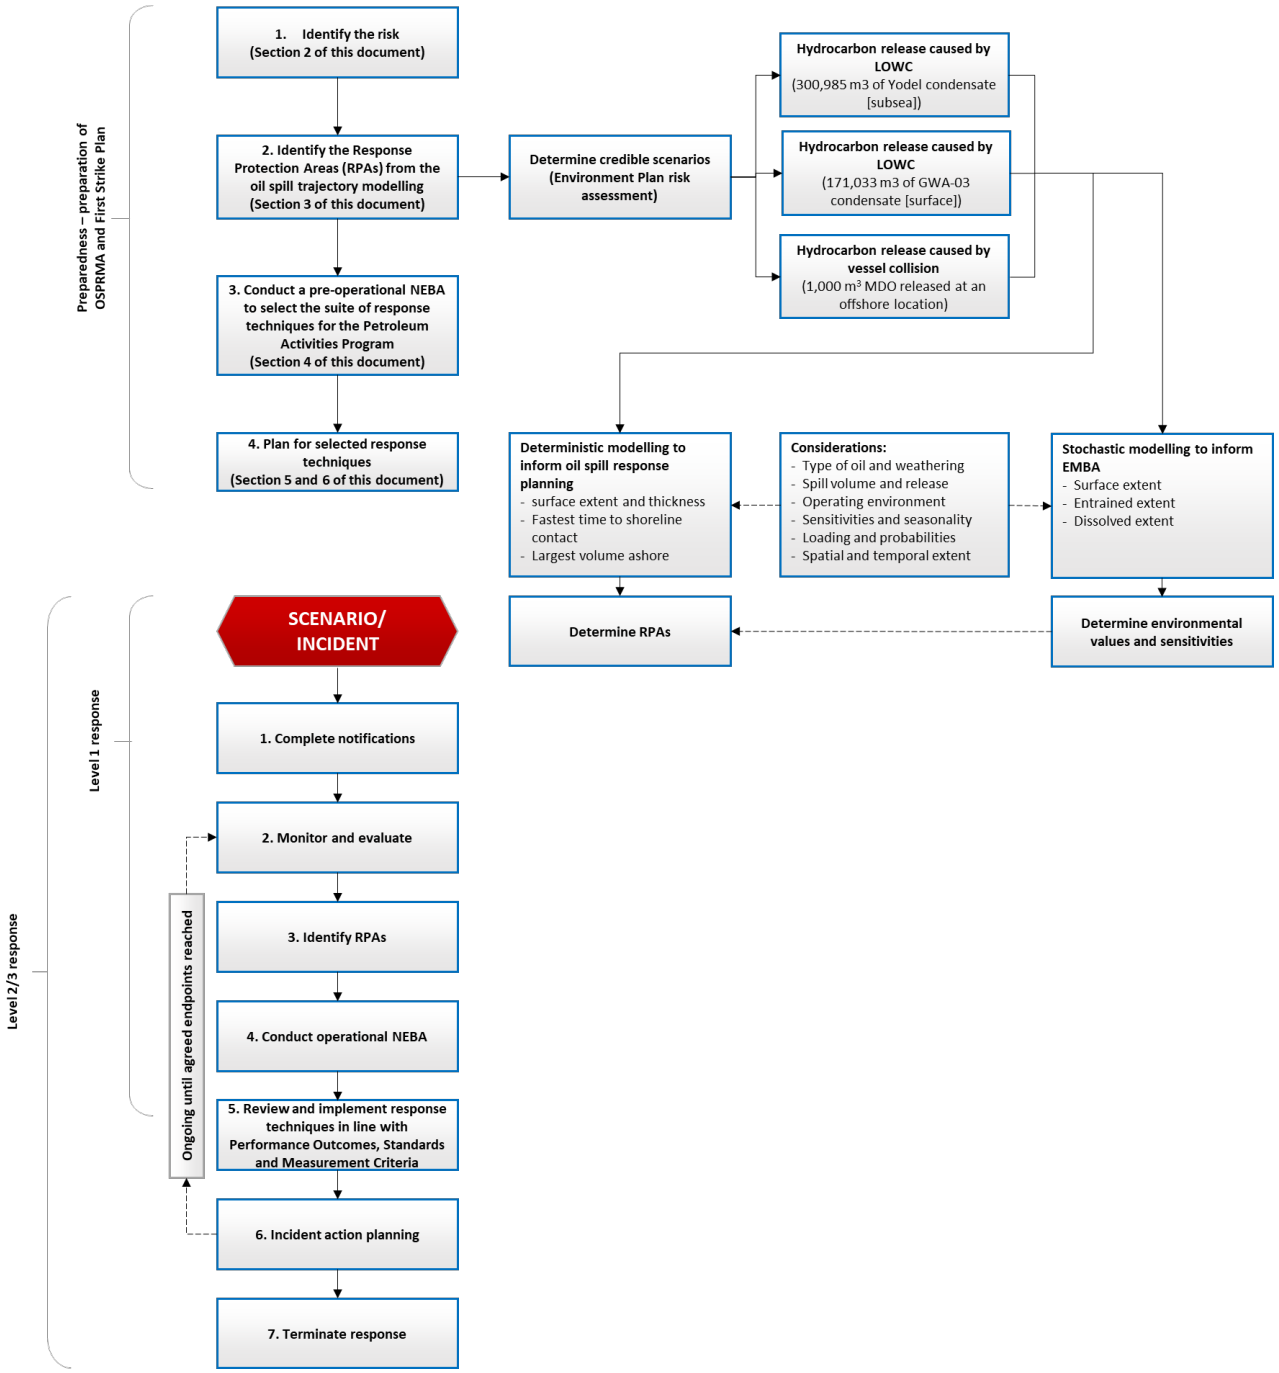

Figure 3-1: Identify Response Protection Areas (RPAs) flowchart

3.1 Identified sensitive receptor locations

Section 6.8 of the EP includes the list of sensitive receptor locations that have been identified by stochastic modelling as meeting the requirements outlined below:

- receptors with the potential to incur surface, entrained or shoreline accumulation contact above environmental impact thresholds

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

- receptors within the EMBA which meet the following:
  - a number of priority protection criteria/categories
  - International Union of Conservation of Nature (IUCN) marine protected area categories
  - high conservation value habitat and species
  - important socio-economic/heritage value.

3.2 Identify Response Protection Areas (RPAs)

RPAs have been selected on the basis of their environmental ecological, social, economic, cultural and heritage values and sensitivities and the ability to conduct a response based on the minimum response thresholds (Section 2.3.3). It is important to note that the figures outlined in Table 3-1 are the combined results of the individual worst-case runs and do not indicate a single worst case credible scenario (where the timings and volumes are all expected from one release).

From the identified sensitive receptors described in Section 6.8 of the EP, only those which a shoreline response could feasibly be conducted (accumulation > 100 g/m^2 for shoreline assessment and/or contact with surface slicks >10 g/m^2 for monitor and evaluate) have been selected for response planning purposes. While not discounting other sensitivities, these RPAs have been used as the basis for demonstrating the capability to respond to the nature and scale of a spill from the WCCS and prioritising response techniques.

Table 3-1 outlines locations which were identified from the modelling runs for the WCCS but does not constitute the full list of Priority Protection Areas (PPAs) potentially contacted from stochastic modelling (as per EMBA definition) (see Section 6.8 of the EP). Other PPA outliers were identified from the modelling and have been included in the assessment of capability in Sections 5 and 6.

Additional sensitive receptors are presented the existing environment description (Section 4 of the EP) and impact assessment section (Section 6.8 of the EP) for each respective spill scenario. The pre-operational NEBA (Section 4) considers the results from the stochastic modelling to allow consideration of all feasible response techniques are considered in the planning phase, therefore additional receptors are also included in the pre-operational NEBA.

The RPAs identified in Table 3-1 are used to plan for the nature and scale of a shoreline response.

4 NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

A Net Environmental Benefit Analysis (NEBA) is a structured process to consider which response techniques are likely to provide the greatest net environmental benefit.

The NEBA process is stage 3 of the preparedness process and typically involves four key steps outlined in Figure 4-1: evaluate data, predict outcomes, balance trade-offs, and select response options. These steps are followed both in the planning/ preparedness process and during a response.

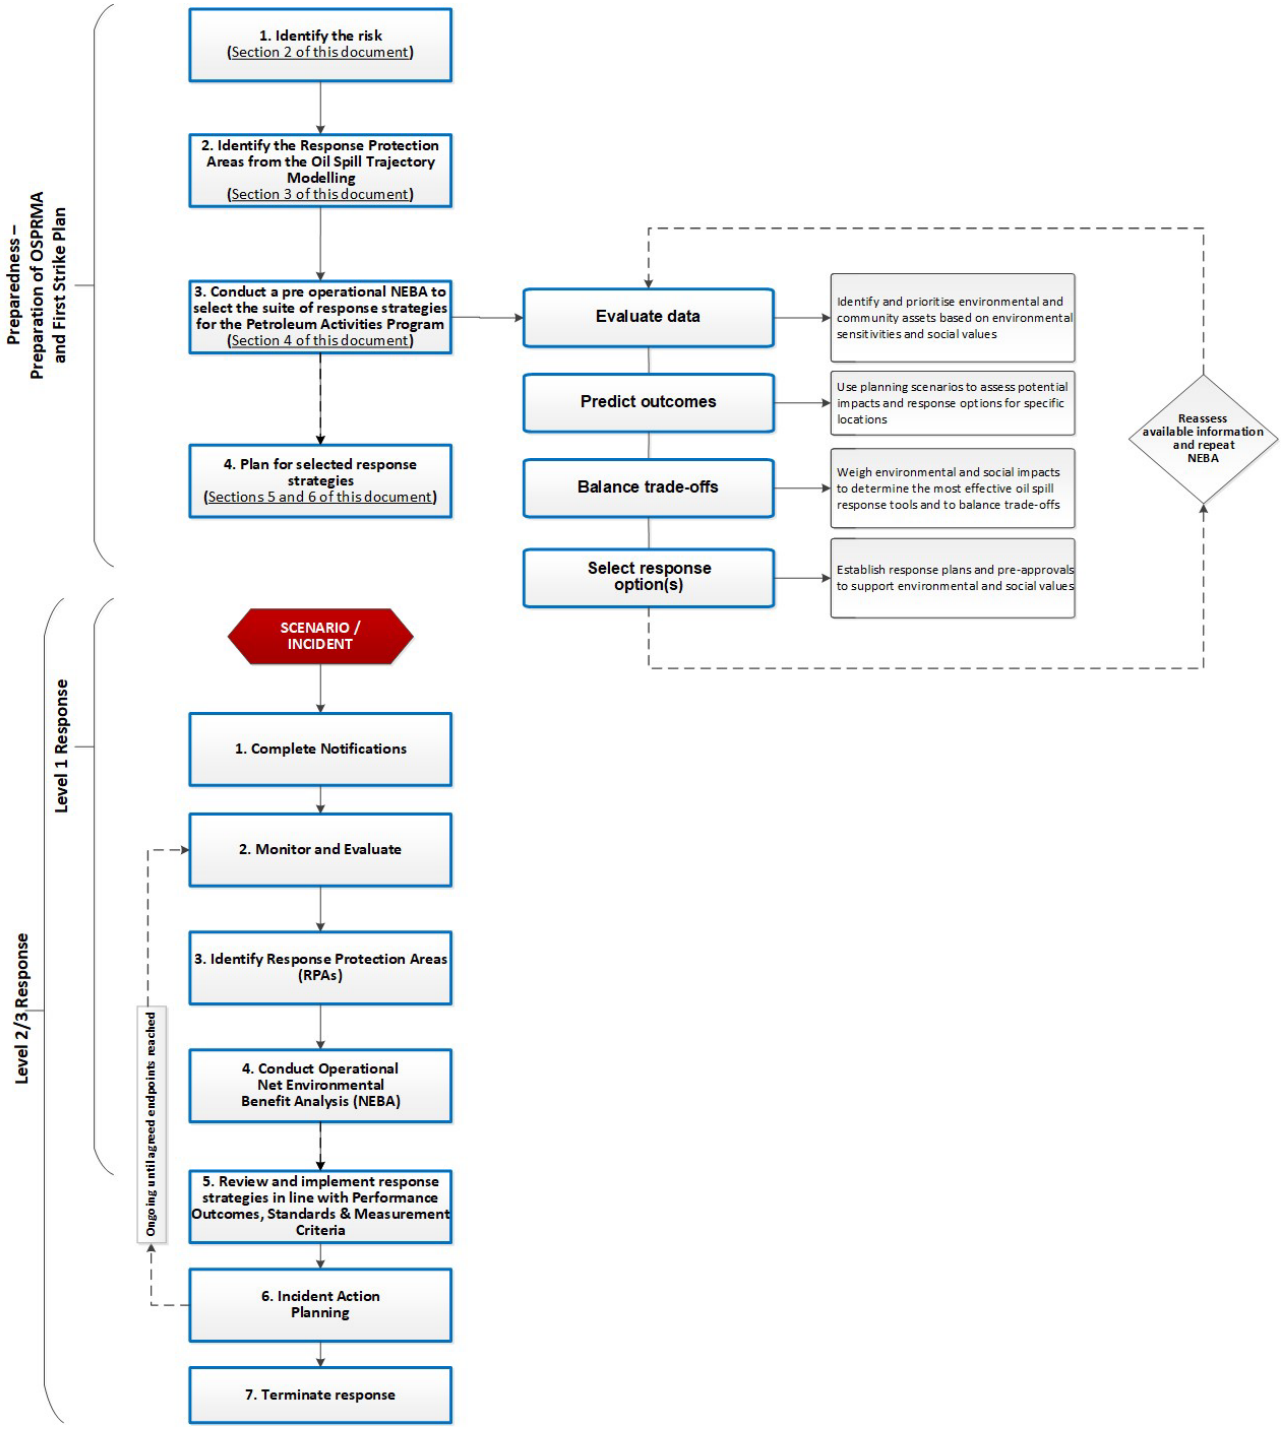

Figure 4-1: Net Environmental Benefit Analysis (NEBA) flowchart

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

4.1 Pre-operational / Strategic NEBA

The pre-operational NEBA identifies positive and negative impacts to sensitive receptors from implementing the response techniques. Feasibility is considered by assessing the receptors potentially impacted above response thresholds (Section 2.3.3) and the surface concentrations (Section 2.3.3.1) from the deterministic modelling.

Completing a pre-operational NEBA is a key response planning control that reduces the environmental risks and impacts of implementing the selected response techniques. Comprehensive details of the pre-operational NEBA for this Petroleum Activity are contained in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.2 Stage 1: evaluate data

Woodside identifies and prioritises environmental and community assets based on environmental sensitivities and social values, informed through the use of trajectory modelling. Interpretation of stochastic oil spill modelling determines the EMBA for the release, which defines the spatial area that may be potentially impacted by the Petroleum Activity activities.

4.2.1 Define the scenario(s)

Woodside uses scenarios identified from the risk assessment in the EP to assess potential impacts and response options for specific locations. The WCCS is then selected for deterministic modelling and is used for this pre-operational NEBA. Outlier locations with potential environmental impacts, selected from the stochastic modelling may also be included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/effectiveness and scale of the response. Modelling results are available in Table 2-6 and Table 3-1.

4.3 Stage 2: predict outcomes

Woodside uses planning scenarios to assess potential impacts and response options for specific locations. Locations with potential environmental impacts, selected from the stochastic modelling are included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/ effectiveness of a response.

4.4 Stage 3: balance trade-offs

Woodside considers environmental impacts and response effectiveness/ feasibility to determine the most effective oil spill response tools and balance trade-offs, using an automated NEBA tool. The tool considers potential benefits and impacts associated with a response at sensitive receptors and then considers the effectiveness/ feasibility of the response to select the response techniques carried forward to the ALARP assessment. The NEBA can be found in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.5 Stage 4: select best response options

To select the response technique, all the other stages in the NEBA process are considered and used to establish response plans and any pre-approvals to support protection of identified environmental and social values.

The response techniques implemented may vary according to a particular spill. The hydrocarbon type released and the sensitivities of the receptors (both ecological and socio-economic) may influence the response. The pre-operational NEBA broadly evaluates each response technique and supports decisions on whether they are feasible and of net environmental benefit. Response techniques that are not feasible or beneficial are rejected at this stage and not progressed to planning.

Further risks and impacts from implementing these selected response options are outlined in Section 7.

4.5.1 Determining potential response options

The available response techniques based on current technology can be summarised under the following headings:

- monitor and evaluate

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

- source control
  - remotely operated vehicle (rov) intervention
  - debris clearance and/or removal
  - capping stack
  - relief well drilling
- source control via vessel SOPEP
- subsea dispersant injection
- surface dispersant application:
  - aerial dispersant application
  - vessel dispersant application
- mechanical dispersion
- in-situ burning
- containment and recovery
- shoreline protection and deflection:
  - protection
  - deflection
- shoreline clean-up:
  - phase 1 – mechanical clean-up
  - phase 2 – manual clean-up
  - phase 3 – final polishing
- oiled wildlife response (including hazing)

Support functions may include:

- waste management
- operational and scientific monitoring

Table 4-1, Table 4-2 and Table 4-3 include scenario-specific assessments of feasible response options and justification for the exclusion of inappropriate options. These options are evaluated against the scenario parameters including oil type, volume, characteristics, prevailing weather conditions, logistical support, and resource availability to determine deployment feasibility.

A shortlist of the feasible response options is then carried forward for the ALARP assessment. This assessment will typically result in a range of available options, that are deployed at different areas (at-source, offshore, nearshore and onshore) and different times during the response. The NEBA process assists in prioritising which options to use where and when, and timings throughout the response.

Table 4-1: Response technique evaluation – Subsea Loss of Well Containment (MEE-01 Scenario-01)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: Yodel-03 Condensate				
Monitor and evaluate	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. Pre-emptive assessment of sensitive receptors at risk – triggered once monitor and evaluate informs likely RPAs at risk.	Monitoring of a condensate spill is a feasible response technique and an essential element of all spill response incidents. Outputs will be used to guide decision making on the use of other monitoring/response techniques and providing required information to regulatory agencies including AMSA and Western Australia Department of Transport and Major Infrastructure (WA DTMI).	Yes	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via well intervention using ROV and hotstab	Controlling a loss of well containment at source via well intervention would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	In the event of the worst-case scenario with a loss of well containment during operations, well intervention via ROV would be attempted.	Yes	Source control intervention via ROV may be feasible (depending on local concentration of atmospheric volatiles) and would reduce quantity of hydrocarbons entering the marine environment.
Source control via debris clearance and capping stack	Controlling a loss of well containment at source via capping stack would be an effective way to limit the quantity of hydrocarbon entering the marine environment.	Woodside will have a source control emergency response plan (SCERP) that will cover the Petroleum Activity. Capping the Yodel Updip well (MEE-01 Scenario-01) is considered feasible based on worst-case discharge rates. Though all capping stack deployment technologies are unproven, in the event of a loss of well containment, and where deployment is feasible, the use of a proven subsea deployment method such as a heavy lift vessel, which is more commonly used in industry, is a more reliable and, in turn, ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack would be attempted with a heavy lift vessel. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement. The locations of suitable vessels for capping stack deployment are monitored monthly. Consideration to mobilise the capping stack from the supplier on a suitable vessel but then hand over to another vessel to conduct the capping activity will also be made to meet response time frames.	Yes	Conventional/ vertical capping stack deployment with a heavy lift vessel will be attempted at the discretion of the vessel master on the day, giving due regard to the safety of the vessel and crew. Circumstances that limit the safe execution of this control measure include lower explosive limit (LEL) concentrations, volatile concentrations of hydrocarbons in the atmosphere, weather window, waves and/or sea states and high ambient temperatures.
Source control via relief well drilling	A release of condensate will be over approximately 76 days. Relief well drilling is one of the primary options to stop the release.	For a spill from the Yodel Updip well (MEE-01 Scenario-01), relief well drilling will be a feasible means of stopping a loss of well containment event. Relief well drilling is a widely accepted and utilised technique.	Yes	Relief well drilling will be the main technique employed to control a loss of well containment event.
Subsea dispersant injection	Application of subsea dispersant may reduce the scale and extent of hydrocarbons reaching the surface and thus may reduce spill volumes contacting predicted RPAs. SSDI can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals and fish, which may be otherwise unaffected. Entrained oil plume likely to be increased resulting in greater spatial extent of entrained oil.	The goal of SSDI is to decrease the volume of oil that rises to the water surface to reduce exposure to floating hydrocarbons and minimise shoreline accumulations. Whilst modelling predicts hydrocarbons present at >50 g/m^2 threshold on the surface, this is temporally and spatially limited and, additionally, no shoreline accumulations are predicted. The use of SSDI would also not be required in order to deploy a capping stack and unnecessary use of SSDI would increase the complexity of SIMOPS operations around the wellhead.	No	The use of SSDI would potentially expose subsea organisms and habitats to increased dispersed and entrained hydrocarbon levels without providing a net environmental or safety benefit.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5. It has the potential to reduce the magnitude, probability, extent, contact and accumulation of hydrocarbon on shorelines receptors when suitable encounter rates can be achieved. It also has the potential to reduce the magnitude and extent of contact with submerged receptors by removing oil before further natural entraining/dissolving of hydrocarbons occurs.	Modelling of a condensate spill from a subsea well loss of containment predicts that floating oil will be prone to rapid spreading and evaporation. Floating oil is predicted to meet the 50 g/m^2 minimum concentration required for containment and recovery at Rankin Bank (day 7) and thus may be feasible. Shoreline contact at >100 g/m^2 is not predicted at any RPA. Offshore metocean conditions may limit effectiveness of containment and recovery operations and corralling volatile hydrocarbons such as condensate may pose a risk to response personnel. If real-time monitor and evaluate techniques detect hydrocarbons at appropriate thresholds, metocean conditions are suitable, and the safety of	Potentially	If real-time monitor and evaluate techniques detect hydrocarbons at appropriate thresholds, metocean conditions are suitable, and the safety of response personnel can be guaranteed, containment and recovery may be an appropriate response option.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
		response personnel can be guaranteed, containment and recovery may be an appropriate response option.		
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce volatile organic compounds (VOCs) in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	Surface dispersant application may potentially provide a net environmental benefit where its use would reduce the volume of shoreline oiling in sensitive regions. At certain times it may not provide an environmental benefit, for example, during coral spawning seasons due to coral larvae being highly sensitivity to dispersants (Negri et al, 2018). Whilst modelling predicts hydrocarbons present at >50 g/m^2 threshold on the surface (MEE-01 Scenario-01), this is temporally and spatially limited and, additionally, no shoreline accumulations are predicted for either LOWC scenarios. The use of surface dispersant would therefore potentially expose subsea organisms and habitats to increased dispersed and entrained hydrocarbon levels without providing a net environmental benefit.	No	The use of surface dispersant would therefore potentially expose subsea organisms and habitats to increased dispersed and entrained hydrocarbon levels without providing a net environmental benefit.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved and where calm metocean conditions can be confirmed. Use of this technique would also cause an increase the release of atmospheric pollutants.	There is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which would be difficult to achieve. Furthermore, this technique may be prevented from being undertaken due to personnel safety issues arising from predicted high local concentrations of atmospheric volatiles.	No	The safety concerns and the predicted low effectiveness associated with implementing an in-situ burning response outweigh the potential environmental benefit.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of sensitive resources and can be used to corral oil into slicks thick enough to skim effectively.	Stochastic modelling does not predict any shoreline contact at feasible response thresholds. If real-time monitor and evaluate and operational monitoring activities indicate surface hydrocarbons are moving toward shorelines, pre-emptive assessments of sensitive receptors at risk and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DTMI (for Level 2/3 spills).	No	Stochastic modelling does not predict any shoreline contact at feasible response thresholds.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m^2.	Stochastic modelling does not predict any shoreline contact at feasible response thresholds. If real-time monitor and evaluate and operational monitoring activities indicate hydrocarbons will contact shorelines, pre-emptive assessments of sensitive receptors at risk, shoreline assessments and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DTMI (for Level 2/3 spills).	No	Stochastic modelling does not predict any shoreline contact at feasible response thresholds.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	In the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists. Due to the likely volatile atmospheric conditions surrounding a condensate spill, response options may be limited to hazing to ensure the safety of response personnel.	Yes	This technique may prevent impact to and/or treat oiled wildlife providing net environmental benefit.

Table 4-2: Response technique evaluation – Surface Loss of Well Containment (MEE-01 Scenario-02)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: GWA Condensate				
Monitor and evaluate	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • Pre-emptive assessment of sensitive receptors at risk – triggered once monitor and evaluate informs likely RPAs at risk.	Monitoring of a condensate spill is a feasible response technique and an essential element of all spill response incidents. Outputs will be used to guide decision making on the use of other monitoring/response techniques and providing required information to regulatory agencies including AMSA and Western Australia Department of Transport and Major Infrastructure (WA DTMI).	Yes	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via well intervention using ROV and hotstab	Controlling a loss of well containment at source via BOP intervention would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	Source control via well intervention using ROV and hotstab for a loss of well containment at the GWA Platform (MEE-01 Scenario-02) is not feasible due to it being a platform wellhead positioned above sea level.	No	Source control via well intervention using ROV and hotstab is not feasible at the GWA Platform due to it being a platform wellhead positioned above sea level.
Source control via debris clearance and capping stack	Controlling a loss of well containment at source via capping stack would be an effective way to limit the quantity of hydrocarbon entering the marine environment.	Source control via capping stack for a loss of well containment at the GWA Platform (MEE-01 Scenario-02) is not feasible due to it being a platform wellhead positioned above sea level.	No	Capping stack is not feasible at the GWA Platform as the wellhead is positioned above sea level.
Source control via relief well drilling	A release of condensate will be over approximately 68 days. Relief well drilling is one of the primary options to stop the release.	For MEE-01 Scenario-02, relief well drilling will be a feasible means of stopping a loss of well containment event. Relief well drilling is a widely accepted and utilised technique.	Yes	Relief well drilling will be the main technique employed to control a loss of well containment event.
Subsea dispersant injection	Application of subsea dispersant may reduce the scale and extent of hydrocarbons reaching the surface and thus may reduce spill volumes contacting predicted RPAs. SSDI can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals and fish, which may be otherwise unaffected. Entrained oil plume likely to be increased resulting in greater spatial extent of entrained oil.	GWA08 is a platform wellhead, therefore, SSDI is not feasible for this surface release scenario.	No	GWA08 is a platform wellhead, therefore, SSDI is not feasible for this surface release scenario.
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce volatile organic compounds (VOCs) in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	Surface dispersant application may potentially provide a net environmental benefit where its use would reduce the volume of shoreline oiling in sensitive regions. At certain times it may not provide an environmental benefit, for example, during coral spawning seasons due to coral larvae being highly sensitivity to dispersants (Negri et al, 2018). Whilst modelling predicts that hydrocarbons will be present at the minimum required surface threshold for feasible use of surface dispersant (>50 g/m^2), this peaks at 2 km^2 on day 4 and there are no further hydrocarbons present at >50 g/m^2 by day 6. Shoreline contact is predicted at one RPA (Muiron Islands) on day 71.4 (6 m^3). The use of surface dispersant would therefore potentially expose subsea organisms and habitats to increased dispersed and entrained hydrocarbon levels without providing a net environmental benefit of significance.	No	The use of surface dispersant would potentially expose subsea organisms and habitats to increased dispersed and entrained hydrocarbon levels without providing a net environmental benefit.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5. It has the potential to reduce the magnitude, probability, extent, contact and accumulation of hydrocarbon on shorelines receptors when suitable encounter rates can be achieved. It also has the potential to reduce the magnitude and extent of contact with submerged receptors by removing oil before further natural entraining/dissolving of hydrocarbons occurs.	Whilst modelling predicts that hydrocarbons will be present at the minimum required surface threshold for feasible containment and recovery operations (>50 g/m^2), this peaks at 2 km^2 on day 4 and there are no further hydrocarbons present at >50 g/m^2 by day 6. Shoreline contact at >100 g/m^2 is predicted at one RPA (Muiron Islands) on day 71.4 (6 m^3). Offshore metocean conditions may limit effectiveness of containment and recovery operations and corralling volatile hydrocarbons such as condensate may pose a risk to response personnel. If real-time monitor and evaluate techniques detect hydrocarbons at appropriate thresholds, metocean conditions are suitable, and the safety of response	Potentially	If real-time monitor and evaluate techniques detect hydrocarbons at appropriate thresholds, metocean conditions are suitable, and the safety of response personnel can be guaranteed, containment and recovery may be an appropriate response option.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
		personnel can be guaranteed, containment and recovery may be an appropriate response option.		
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of sensitive resources and can be used to corral oil into slicks thick enough to skim effectively.	Modelling predicts first shoreline accumulation will occur on day 71.4 at Muiron Islands (6 m^3) allowing adequate time to deploy this technique. If real-time monitor and evaluate and operational monitoring activities indicate surface hydrocarbons are moving toward shorelines, pre-emptive assessments of sensitive receptors at risk and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DTMI (for Level 2/3 spills). Protection strategies can be used for targeted protection of sensitive resources. Access to sensitive areas may cause more negative impact than benefit.	Yes	RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event. If RPAs are deemed to be at risk, based on real-time monitor and evaluate techniques during a spill event, shoreline protection and deflection techniques will be employed to minimise hydrocarbon accumulation providing net environmental benefit.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m^2.	Modelling predicts first shoreline accumulation at feasible response thresholds (>100 g/m^2) will occur on Day 71.4 at Muiron Islands (6 m^3) allowing adequate time to deploy this technique. If real-time monitor and evaluate and operational monitoring activities indicate hydrocarbons will contact shorelines, pre-emptive assessments of sensitive receptors at risk, shoreline assessments and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DTMI (for Level 2/3 spills). Can reduce or prevent impact on sensitive receptors in most cases. Must confirm, through shoreline assessment, that sensitive sites will benefit from clean-up activities as the response itself may cause more negative impact than benefit through disturbance of habitats and species.	Yes	RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event. If RPAs are at risk, based on real-time monitor and evaluate techniques during a spill event, shoreline clean-up techniques will be deployed to expedite clean-up of the impacted sites. Removal of hydrocarbons will help shorten the recovery window unless shoreline type is of a sensitive nature. This technique can help prevent remobilisation of hydrocarbon and impact on shorelines.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	In the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists. Due to the likely volatile atmospheric conditions surrounding a condensate spill, response options may be limited to hazing to ensure the safety of response personnel.	Yes	This technique may prevent impact to and/or treat oiled wildlife providing net environmental benefit.

Table 4-3: Response technique evaluation – vessel collision

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: MDO				
Monitor and evaluate	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. Pre-emptive assessment of sensitive receptors at risk – triggered once monitor and evaluate informs likely RPAs at risk.	Monitoring of an MDO spill is a feasible response technique and outputs will be used to guide decision making on the use of other monitoring/response techniques and providing information to regulatory agencies including AMSA and WA DTMI. Practicable techniques that could be used for this scenario include predictive modelling, surveillance and reconnaissance and monitoring of hydrocarbon presence in water. Modelling does not predict impact of any shoreline receptors at threshold, however, pre-emptive assessment of sensitive receptors at risk and monitoring of contaminated resources would be utilised if any sensitive shoreline receptors are deemed to be at risk of impact.	Yes	Monitoring the spill will be necessary to: validate trajectory and weathering models determine the location and state of the slick provide forecasts of spill trajectory determine appropriate response techniques determine effectiveness of response techniques confirm impact pathways to receptors provide regulatory agencies with required information.
Source control via vessel SOPEP	Controlling the spill of diesel at source would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	A spill of diesel from a vessel collision will be instantaneous and source control will be limited to what the vessel or facility can safely achieve whilst responding to the incident.	Yes	Ability to stop the spill at source will be dependent upon the specific spill circumstances and whether or not it is safe for response personnel to access/isolate the source of the spill.
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce volatile organic compounds (VOCs) in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	This technique is not suitable for MDO spills as this hydrocarbon type is prone to rapid spreading and evaporation. Surface dispersants are not considered effective when applied on thin surface films such as MDO as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon resulting in the unnecessary addition of chemicals to the marine environment. The volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon thus this response technique is deemed inappropriate.	No	Surface dispersants are not considered effective when applied on thin surface films such as MDO resulting in the unnecessary addition of chemicals to the marine environment.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved.	Use of in-situ burning as a response technique for MDO is unfeasible as the minimum slick thickness cannot be attained due to rapid spreading. In addition, there is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which is unlikely to be achieved. Furthermore, entering a volatile environment to undertake this technique would be unsafe for response personnel and its used would unnecessarily cause an increase the release of atmospheric pollutants.	No	Diesel characteristics are not appropriate for the use of in-situ burning and would unnecessarily cause an increase the release of atmospheric pollutants.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5. It has the potential to reduce the magnitude, probability, extent, contact and accumulation of hydrocarbon on shorelines receptors when suitable encounter rates can be achieved. It also has the potential to reduce the magnitude and extent of contact with submerged receptors by removing oil before further natural entraining/dissolving of hydrocarbons occurs.	This technique is not suitable for MDO spills as it is prone to rapid spreading and evaporation and is deemed unsuitable for effective containment and recovery operations. The volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon thus this response technique is deemed inappropriate.	No	Containment and recovery would be an inappropriate response technique for a spill of MDO. Corralling a volatile hydrocarbon such as MDO is deemed unsafe for response personnel thus this response strategy is not considered feasible. In addition to the safety issues, most of the spilled diesel would have been subject to rapid evaporation prior to the commencement of containment and recovery operations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of sensitive resources and can be used to corral oil into slicks thick enough to skim effectively.	An MDO spill would be prone to rapid spreading and evaporation and modelling predicts that no shoreline receptors will be contacted at response threshold (>100 g/m^2). Furthermore, the volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Monitor and evaluate and operational monitoring will, however, be deployed from the outset of a spill to track the spill location and fate in real-time.	No	In addition to safety issues and the rapid spreading and evaporation of the diesel, the modelling undertaken predicts that no shoreline receptors would be contacted at feasible response thresholds.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m^2.	An MDO spill would be prone to rapid spreading and evaporation and modelling predicts that no shoreline receptors will be contacted at response threshold (>100 g/m^2). Furthermore, the volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Monitor and evaluate and operational monitoring will, however, be deployed from the outset of a spill to track the spill location and fate in real-time	No	In addition to safety issues, the modelling undertaken predicts that no shoreline receptors would be contacted by floating oil concentrations at a recoverable threshold and a spill of MDO is unlikely to accumulate at concentrations appropriate for shoreline clean-up techniques.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	Due to the likely volatile atmospheric conditions surrounding a diesel spill, response options may be limited to hazing to ensure the safety of response personnel. The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. Monitor and evaluate and operational monitoring will, however, be deployed from the outset of a spill to track the spill location and fate in real-time. Thus, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists.	Yes	The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. However, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken as and where required.

5 HYDROCARBON SPILL ALARP PROCESS

Woodside's hydrocarbon spill ALARP process is aligned with guidance provided by NOPSEMA in *ALARP Guidance Note N-04300-GN0166* (2022) and *Oil Spill Risk Management Guidance Note N-04750-GN1488 A382148* (2026) and is set out in the 'Woodside Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) Guidelines'.

From the identified response planning need and pre-operational NEBA/ spill impact mitigation assessment (SIMA), Woodside conducts a structured, semi-quantitative hydrocarbon spill process which has the following steps:

- considers the response planning need identified in terms of surface area (km^2) and available surface hydrocarbon volumes (m^3) against existing Woodside capability
- considers alternative, additional, and improved options for each response technique/control measure by providing an initial and, if required, detailed evaluation of:
  - predicted cost associated with adopting the control measure
  - predicted change/environmental benefit
  - predicted effectiveness/feasibility of the control measure.
- evaluates the risks and impacts of implementing the proposed response techniques, and any further control measures with associated environmental performance to manage these additional risks and impacts.

Woodside considers the risks and impacts from a hydrocarbon spill to have been reduced to ALARP when:

- a structured process for identifying and considering alternative, additional, and improved options has been completed for each selected response technique
  - the analysis of alternate, additional, and improved control measures meets one of the following criteria:
  - all identified, reasonably practicable control measures have been adopted; or
  - no identified reasonably practicable additional, alternative and/or improved control measures would provide further overall increased proportionate environmental benefit; or
  - no reasonably practical additional, alternative, and/or improved control measures have been identified.
- where an alternative, additional and/or improved control measure is adopted, a measurable level of environmental performance has been assigned
- higher order impacts/ risks have received more comprehensive alternative, additional, and improved control measure evaluations and do not just compare the cost of the adopted control measures to the costs of an extreme or clearly unreasonable control measure
- cumulative effects have been analysed when considered in combination across the whole activity.

The response technique selection is based on the risk assessment conducted in the EP. The risk assessment identifies the type of oil, volume of release, duration of release, predicted fate, weathering and the EMBA (along with other requirements such as time to impact and predicted volumes ashore). Modelling is then used to inform the NEBA and the prioritisation of suitable response options. The scale of the response techniques selected in the pre-operational NEBA is informed through the assessment of results from deterministic modelling.

For the purpose of the ALARP assessment, the following terms and definitions have been used:

- response techniques are considered the control measures that reduce consequences from hydrocarbon spill events. The terms 'response technique' and 'control measure' are used interchangeably
- cost is defined as the time, effort and/or trouble taken in financial, safety, design/storage/installation, capital/lease, and/or operations/maintenance terms to adopt a control measure

5.1 Monitor and evaluate

Monitor and evaluate includes the gathering and evaluation of data to inform the oil spill response planning and operations. It includes fate and trajectory modelling, spill tracking, weather updates and field observations. This response option is deployed in some capacity for every event.

Techniques may include:

- predictive modelling of hydrocarbons to assess resources at risk
- surveillance and reconnaissance to detect hydrocarbons and resources at risk
- pre-emptive assessment of sensitive receptors at risk

Woodside maintains an *Operational Monitoring Operational Plan*. If shoreline contact is predicted, Response Protection Areas (RPAs) will be identified and assessed before contact. If shorelines are contacted, a shoreline assessment survey (SCAT) will be completed to guide effective shoreline clean-up operations per arrangements detailed in Woodside's Operational and Scientific Monitoring Bridging Implementation Plan (OSM-BIP) (see Section 5.9). This plan includes the process for the CIMT to mobilise resources depending on the nature and scale of the spill.

The proximity of Dampier/ Karratha to the spill event location means that multiple logistical options are available to monitor the spill in relatively short timeframes. The primary mobilisation base for initial monitoring activities would be Dampier/ Karratha. However, in the unlikely event of an extended spill with potential to impact receptors further afield, monitoring activities may also be mobilised from Dampier/ Karratha.

5.1.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- floating surface oil in sufficient concentrations for effective monitor and evaluate and operational monitoring activities is expected to be present in open water with surface concentrations of 10 g/m^2 up to 99 km from the release location (MEE-01 Scenario-01).
- the shortest timeframe that shoreline contact from floating oil at 100 g/m^2 is predicted is 71.4 days at Muiron Islands (6 m^3) (MEE-01 Scenario-02).
- the time to contact for oil at concentrations of dissolved hydrocarbons greater than 10 ppb 7 hours at Rankin Bank (MEE-01 Scenario-01)
- arrangements for support organisations who provide specialist services or resources should be tested regularly.
- plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.
- the duration of the spill may extend up to 76 days (MEE-01 Scenario-01) with response operations extending to 3 months based on the predicted time to shoreline contact and execution of source control operations.

5.1.2 Environmental performance based on need

Table 5-1: Environmental performance – monitor and evaluate

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
1	Oil spill trajectory modelling	1.1	Initial modelling available within 6 hours using the Rapid Assessment Tool	1, 3B, 3C, 4
		1.2	Detailed modelling available within 4 hours of RPS receiving information from Woodside	
		1.3	Detailed modelling service available for the duration of the incident upon contract activation	
2	Tracking buoy	2.1	Tracking buoy located on facility/ lead vessel and ready for deployment 24/7	1, 3A, 3C, 4
		2.2	Deploy tracking buoy from facility/ lead vessel within 2 hours as per the First Strike Plan.	1, 3A, 3B, 4
		2.3	Contract in place with service provider to allow data from tracking buoy to be received 24/7 and processed.	1, 3B, 3C, 4
		2.4	Data received to be uploaded into Woodside common operating picture (COP) daily to improve the accuracy of other Operational Monitoring techniques.	1, 3B, 4
3	Satellite imagery	3.1	Contract in place with 3rd party provider to enable access and analysis of satellite imagery. Imagery source/type requested on activation of service.	1, 3C, 4
		3.2	3rd party provider will confirm availability of an initial acquisition within 2 hours	1, 3B, 3C, 4
		3.3	First image received with 24 hours of Woodside confirming to 3rd party provider its acceptance of the proposed acquisition plan.	1
		3.4	3rd party provider to submit report to Woodside per image. Report is to include a polygon of any possible or identified slick(s) with metadata.	1
		3.5	Data received to be uploaded into Woodside COP daily to improve accuracy of other Operational Monitoring techniques.	1, 3B, 4
		3.6	Satellite Imagery services available and employed during response	1, 3C, 4
4	Aerial surveillance	4.1	Two trained aerial observers available to be deployed by day 1 from resource pool.	1, 2, 3B, 3C, 4
		4.2	One aircraft available for two sorties per day, available for the duration of the response from day 1	1, 3C, 4
		4.3	Observer to compile report during flight as per FSP. Observers report available to the IMT within 2 hours of landing after each sortie.	1, 2, 3B, 4
		4.4	Unmanned Aerial Vehicles/Systems (UAV/UASs) to support Shoreline Contamination Assessment Technique (SCAT), containment and recovery and surface dispersal and pre-emptive assessments as contingency if required.	1, 2
5	Pre-emptive assessment of sensitive receptors	5.1	10 days prior to any predicted impact, in agreement with WA DTMI (for Level 2/3 incidents), deployment of Two specialists from resource pool in establishing the status of sensitive receptors.	1, 2, 3B, 3C, 4

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
		5.2	Daily reports provided to IMT on the status of the receptors to prioritise Response Protection Areas (RPAs) and maximise effective utilisation of resources.	1, 3B, 4

The control measures and capability of Woodside and its third-party service providers are shown to support monitor and evaluate activities up to and including the identified WCCS. This is demonstrated by the following:

- Woodside has a documented, structured and tested capability for Operational Monitoring operations including internal trajectory modelling capabilities, tracking buoys located offshore and contracted aerial observation platforms with access to trained observers.
- Woodside and its third-party service providers seek to maintain sufficient capability for the duration of the response.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.1.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

5.2 Source control and well intervention

The worst-case credible scenario for a loss of well containment, is considered to be major damage to, or complete loss of, the Xmas tree from a producing well. This scenario would result in an uncontrolled flow from the well as outlined in the EP. In the event of a complete break or separation of the tree, the primary response would be relief well drilling.

Woodside is a signatory to a MoU between Australian offshore operators to provide mutual aid to facilitate and expedite mobilising a MODU and drilling a relief well, if a [subsea scenario] incident were to occur. The MoU commits the signatories to share rigs, equipment, personnel and services to assist another operator in need.

5.2.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- prior to any source control activities, Woodside will implement protocols to confirm that the site is safe including subsea ROV surveys and surface air monitoring.
- hydrocarbons will flow from the well until one of the following interventions can be made:
  - direct intervention to close Xmas tree (subsea wells only)
  - closure of the Tubing Retrievable Safety Valve (TRSV)
  - capping stack is deployed (subsea wells only)
  - a relief well is drilled and first attempt at well kill within 76 days for the worst-case loss of well containment scenario (MEE-01 Scenario-01).
- arrangements for support organisations who provide specialist services or resources should be tested regularly.
- plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.
- the duration of the spill may extend up to 76 days (MEE-01 Scenario-01) with response operations extending to three months based on the predicted time to shoreline contact and execution of source control operations.

In addition, a number of assumptions are required to estimate the response need for source control. These assumptions have been described in the table below.

Table 5-2: Response planning assumptions – source control

Response planning assumptions	
Safety considerations	Source control operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site, in accordance with the Woodside Management System (WMS). Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.
Feasibility considerations	Woodside's primary source control option would be ROV intervention followed by relief well drilling for the GWA Facility Operations and GWA Facility Operations wells. The following approaches outline Woodside's hierarchy for relief well drilling; • Primary – Review internal drilling programs and MODU availability to source an appropriate rig operating within Australia with an approved Safety Case; • Alternate – Source and contract a MODU through Australian Energy Producers (AEP) Memorandum of Understanding (MoU) that is operating within Australia with an approved Safety Case; • Contingency – Source and contract a MODU outside Australia with an approved Australian Safety Case

5.2.2 Environmental performance based on need

Table 5-3: Environmental performance – source control

Environmental Performance Outcome		To stop the flow of hydrocarbons into the marine environment		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
6	Subsea First Response Toolkit (SFRT)	6.1	Oceaneering support staff available all year round, via contract, to assist with the mobilisation, deployment, and operation of the SFRT equipment.	1, 3B, 3C
		6.2	Intervention vessel with minimum requirement of a working class ROV and operator.	1, 3C
		6.3	Mobilised to site for deployment within 11 days.	1, 3B, 3C
		6.4	Open communication line to be maintained between IMT and infield operations to confirm awareness of progress against plan(s).	1, 3A, 3B
7	Well intervention	7.1	Frame agreements with ROV providers in place to be mobilised upon notification. ROV equipment deployed within 7 days.	1, 3B, 3C
		7.2	Source control vessel will have the following minimum specifications: • active heave compensated crane, rated to at least 150 T in shallower water and 250 T in deeper water. • at least 90 m in length • deck has water/electricity supply • deck capacity to hold at least 110 T of capping stack.	1, 3B, 3C
		7.3	Identify source control vessel availability within 24 hours and begin contracting process. Vessel mobilised to site for deployment within 16 days for conventional capping.	1, 3B, 3C
		7.4	Well intervention attempt made using ROV and SFRT within 11 days.	1, 3B, 3C
		7.5	Capping stack on suitable vessel mobilised to site within 16 days. Deployment and well intervention attempt will be made once plume size is acceptable and safety and metocean conditions are suitable.	1, 3C
		7.6	Contract in place for access to equipment and staff to assist with the mobilisation, deployment, and operation of well intervention equipment.	1, 3B, 3C
		7.7	MODU mobilised to site for relief well drilling within 21 days for a locally available rig and up to 36 days for a rig from outside of the region.	1, 3C
		7.8	First well kill attempt completed within 76 days (MEE-01 Scenario-01 - for worst-case LOWC scenario).	1, 3B, 3C
		7.9	Open communication line(s) to be maintained between IMT and infield operations to confirm awareness of progress against plan(s).	1, 3A, 3B
		7.10	Monthly monitoring of the availability of MODUs through existing market intelligence including current Safety Case history, to meet specifications for relief well drilling. Titleholders of suitable MODUs notified.	3C
8	Support vessels	8.1	Access to 24/7 vessel tracking software to monitor availability of suitable vessels to meet specifications for source control.	3C

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Environmental Performance Outcome		To stop the flow of hydrocarbons into the marine environment		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
		8.2	Frame agreements for installation support vessels (ISVs) require vessels to maintain in-force safety case approvals covering ROV operations and provide support in the event of an emergency.	1, 3B, 3C
		8.3	MODU and vessel contracts include clause outlining requirement for support in the event of an emergency	1, 3C
9	Safety Case	9.1	Woodside will prioritise MODU or vessel(s) for intervention work(s) that have an existing safety case	1, 3C
		9.2	Woodside Planning, Logistics, and Safety Officers (on roster/Call 24/7) to assist in expediting the safety case assessment process as far as practicable.	1, 3C
		9.3	Woodside will maintain minimum safe operating standards that can be provided to MODU and vessel operators for Safety Case guidance.	1, 3C

The resulting source control capability has been assessed against the WCCS. The range of techniques provide a feasible and viable approach to relief well drilling operations to stop the well flowing.

- The health and safety, financial, capital and operations/maintenance costs of implementing the alternative, additional or improved control measures identified and not carried forward are considered grossly disproportionate to the insignificant environmental benefit gained and/or not reasonably practicable for this Petroleum Activity.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.2.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

5.3 Source Control via vessel Shipboard Oil Pollution Emergency Plan (SOPEP)

Vessel source control will be conducted, where feasible and in accordance with MARPOL 73/78 Annex I, by the Vessel Master under the Shipboard Oil Pollution Emergency Plan (SOPEP) triggered by any loss of containment from the Petroleum Activity vessels.

The SOPEP provides guidance to the Master and Officers on board the vessel with respect to the extra steps to be taken when an unexpected pollution incident has occurred or is likely to occur. The SOPEP contains all information and operational instructions required by International Maritime Organization (IMO) Resolution MEPC.54 (32) adopted on 6 March 1992, as amended by resolution MEPC.86 (44) adopted on 13 March 2000.

Its purpose is to set in motion the necessary actions to stop or minimise oil discharge and mitigate its effects and outlines responsibilities, pollution reporting requirements, procedures and resources needed in the event of a hydrocarbon spill from vessel activities.

In the event of the WCCS vessel collision event, the vessel master may engage precautionary marine manoeuvres to avoid collision or commence pumping operations to transfer MDO and thus minimise the release.

5.3.1 Environmental performance based on need

Woodside has established control measures, environmental performance outcomes, performance standards and measurement criteria to be used for vessel-source oil spill response during the Petroleum Activity which are detailed in Section 6.8 of the EP. The vessel master's roles and responsibilities are described in EP Section 7.5.

Performance standards for each contracted Petroleum Activity vessel are detailed in the vessel's specific SOPEP.

These standards maintain availability of sufficient resources and are adequately tested for successful implementation of the SOPEP in the event of a hydrocarbon spill.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

5.4 Containment and Recovery

Containment and recover is used to reduce damage to sensitive resources by the physical containment and mechanical removal of hydrocarbons from the marine environment. It has a lower capacity for removing surface oil than the application of dispersant but avoids potential additional impacts created by the resulting increase in entrained hydrocarbons in the water column.

Weathering and spreading of hydrocarbons will significantly reduce containment and recovery effectiveness. In the event of an ongoing loss of well control, modelling predicts fresh hydrocarbons reaching the surface may be heavily weathered and present in small discrete patches. Containment and Recovery is also weather and sea–state dependent. Periods of downtime can be expected.

Wind direction in the vicinity of the Petroleum Activity indicate south-westerly winds in summer months and easterly winds in the winter period. Average wind speeds across the year near the release site vary in the range of 5.2-6.6 m/s (Beaufort ~3-4), with year-round maximum speeds of 24.1 m/s (Beaufort ~9-10) (RPS modelling input data, 2026). Industry guidance indicates that maximum wind speeds for safe and effective containment and recovery operations are ~10 m/s (20 knots, Beaufort ~5) (IPIECA, 2015b) therefore, at times, it is expected that open water containment and recovery operations would not be a feasible response technique.

The *Containment and Recovery Operational Plan* details the mobilisation and resource requirements for response operations including the logistics, support and facility arrangements to manage the movement of personnel and resources.

5.4.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which response need is based:

- surface hydrocarbons meeting minimum threshold concentration (>50 g/m^2) for feasible containment and recovery operations are predicted to peak on day 4 at 2 km^2 (115.3 m^3) (MEE-01 Scenario-02) based on deterministic model: Q2, Run 15.
- surface hydrocarbons meeting minimum threshold concentration (>50 g/m^2) for feasible containment and recovery operations are predicted within 10 km^2 of the release location (MEE-01 Scenario-01) based on stochastic modelling.
- containment and recovery is not appropriate for spills of MDO (CS-03 and CS-04).
- the duration of the spill may be up to 76 days (MEE-01 Scenario-01) with offshore response operations extending to 3 months based on the predicted time to shoreline contact and execution of source control operations (MEE-01 Scenario-02).
- containment and recovery is not appropriate for spills of MDO (MEE-05 Scenario-08).
- arrangements for support organisations who provide specialist services (logistics services for mobilising equipment, trained Offshore Supervisors and waste disposal) and/or resources (vessels, containment and recovery equipment, transfer pumping systems) should be tested regularly.
- plans, procedures and support documents need to be in place for Operational and Support Sections. these should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for Containment and Recovery. These assumptions have been described in the table below.

Table 5-4: Response Planning Assumptions – Containment and Recovery

Response Planning Assumptions	
Safety considerations	Containment and recovery operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Response Planning Assumptions		
Technique	Predicted performance range (% of surface oil volume available predicted to be recovered by response technique)	
Containment and recovery	Lower	5%
	Upper	10%
	The predicted performance range for containment and recovery is based on; • remaining surface oil available for containment and recovery following weathering • monitor and evaluate activities observing surface oil at minimum BAOAC 4 (discontinuous true oil colour) or BAOAC 5 (continuous true oil colour) • safe for deployment, within range of vessels and aircraft • encounter rate of approximately 50-75% (50-25% of surface coverage is not surface oil)	
Response Capability details		
Containment and recovery operation	One containment and recovery operation includes; • 2 x suitable vessels (vessel specifications as per Marine Operations Plan) • 1 x boom system (min 800 mm overall height and approximately 200 m length) with all required ancillaries) or • 1 x suitable vessel (vessel specifications as per Marine Operations Plan) • 1 x single ship system (min 800 mm overall height and approximately 200 m length) with all required ancillaries) and • 1 x skimmer (min 20 m^3/hr) with all required ancillaries • Temporary storage (min 100 m^3) • 1-2 x trained supervisor per operation • 8-10 x support personnel per operation	
Physical properties	Surface Threshold • Lower – 50 g/m^2 (equates to 100 g/m2 with approximately 50% coverage and/or 200 g/m^2 with approximately 25% coverage) – BAOAC 4 – discontinuous true oil colour – lower threshold 50 g/m2 • Optimum – 100 g/m^2 (equates to >100 g/m^2 with approximately 100% coverage and/or 200 g/m^2 with approximately 50% coverage) – BAOAC 5 – Continuous true oil colour – lower threshold 200 g/m2	
Expected effectiveness	One containment and recovery operation is expected to be able to contain and recover approximately 22.5 – 67.5 m^3 per day (10 hr operation) includes one (1) change out of temporary waste storage equipment (if required) Based on the following assumptions: • boom system with 70 m opening = 0.07 km • vessel moving at 0.7 kn = 1.3 km/h • area covered per hour = 0.07 km x 1.3 km = 0.09 km^2 • area covered per day = 0.09 km^2 x 10 hours = 0.9 km^2 / day • recovery per day (low) = 0.9 km^2 x 50 g/m^2 x 50% coverage = 22.5 m^3/ 10-hour day • recovery per day (high) = 0.9 km^2 x 100 g/m^2 x 75% = 67.5 m^3/ 10-hour day Increased surface oil concentration may result in increased recovery capacity providing other conditions and oil properties remain suitable for containment and recovery. For planning purposes, conservative concentrations outlined above have been used.

5.4.2 Environmental performance based on need

Table 5-5: Environmental performance – containment and recovery

Environmental Performance Outcome		To reduce consequences to surface and shoreline receptors.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
10	Vessel-based recovery systems	10.1	Woodside maintains an integrated fleet of vessels, including vessels with at least 10 t bollard pull. Additional vessels can be sourced through existing contracts/frame agreements	1, 3A, 3B, 3C, 4
		10.2	2 containment and recovery operations would be deployed within 48 hours (if required).	
		10.3	2 additional containment and recovery operations using 3rd party provider resources would be deployed by day 4.	
		10.4	Each operation will have internal or added 100 m^3 of liquid waste storage onboard.	
11	Response teams	11.1	Deployment of 2 containment and recovery teams would be available within 48 hours and 4 containment and recovery teams available by day 4.	1, 2, 3A, 3B, 3C, 4
		11.2	Deployment team will be comprised of: • 1-2 trained specialists per operation • 8-10 personnel for support • Personnel sourced through resource pool	1, 2, 3B, 4
		11.3	Teams will segregate liquid and solid wastes at the earliest opportunity.	
		11.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s)	1, 3A, 3B
12	Response systems	12.1	Rapid sweep systems and active boom systems to be prioritised for mobilisation in the event of a response.	1, 3C
13	Management of Environmental Impact of the response risks	13.1	The boom will be monitored and maintained to ensure trapped fauna are released as early as possible, with Containment and Recovery activities occurring in daylight hours only.	1
		13.2	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	
		13.3	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	

Woodside has assessed the resulting containment and recovery capability against the WCCS and surface release scenarios.

Due to reduction in available surface oil based on movement of the slick and ongoing weathering, the efficiency of this response technique decreases significantly over the initial week. From Day 6, surface concentrations are predicted to be below thresholds for effective offshore response for MEE-01 Scenario-02.

- Surface concentration and mass vary for each time step based on spreading and weathering algorithms within the model. Woodside has reviewed the deterministic modelling data based on the response planning assumptions outlined above to determine the response need and required capability.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

- For MEE-01 Scenario-02, deterministic modelling predicts that there will be sufficient volumes (peak volume of 115.3m^3 on Day 4 and peak surface area of 2km^2 on Day 4) of surface hydrocarbons for containment and recovery operations to recover. Woodside's existing capability is sufficient to recover the expected surface hydrocarbons throughout the incident.
- From Day 6, there are no longer sufficient surface hydrocarbons to recover. Woodside's existing capability is insufficient to recover the expected surface hydrocarbons.
- Containment and recovery operations would target the thickest parts (BAOAC 4-5) at the leading edge of the surface slick and as close to the spill source as is feasible. This approach aims to mitigate the spread of the oil and maximise encounter rate in order to reduce potential shoreline accumulations.
- The efficiency of this response technique will decrease significantly as the slick moves, breaks into wind-rows and weathers resulting in less surface concentrations available for effective offshore recovery.
- At times, the capability will be limited by safety or logistics including number of available vessels and/or maintenance of feasible safe simultaneous operations (SIMOPS).
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

5.5 Shoreline Protection and Deflection

The placement of containment, protection or deflection booms on and near a shoreline is a response technique to reduce the potential volume of hydrocarbons contacting or spreading along shorelines, which may reduce the scale of shoreline clean-up. Hydrocarbons contained by the booms would be collected where practicable.

Shorelines would be protected where accessible via vessel or shore. Where hydrocarbon contact has already occurred, there may still be value in deploying protection equipment to limit further accumulations and preventing remobilisation of stranded hydrocarbons.

Shoreline protection and deflection equipment would be mobilised to selected locations, where the following conditions were met:

- Sea-states and hydrocarbon characteristics are safe to deploy protection and deflection measures,
- Oil trajectory has been identified as heading towards identified RPAs.

5.5.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest timeframe that shoreline contact from floating oil above threshold is predicted to be 71.4 days at Muiron Islands (6 m^3) (MEE-01 Scenario-02).
- Pre-emptive assessment and shoreline assessments will be mobilised prior to shoreline contact at 100 g/m^2, which occurs on day 71.4 at Muiron Islands (MEE-01 Scenario-02).
- The duration of the spill may be up to 76 days (MEE-01 Scenario-01) with shoreline response operations extending to 3 months based on the predicted time to shoreline contact and execution of source control operations (MEE-01 Scenario-02).
- Arrangements for support organisations who provide specialist services (trained personnel, protection and deflection equipment) and/or resources and should be tested regularly.
- Tactical Response Plans (TRPs) for Response Protection Areas (RPAs) along with other relevant plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for Shoreline Protection and Deflection. These assumptions have been described in the table below.

Table 5-6: Response Planning Assumptions – Shoreline Protection and Deflection

Response Planning Assumptions	
Safety considerations	Shoreline protection and deflection operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • safe for deployment and conditions within range of vessels • high ambient temperatures.
Shoreline Protection and Deflection	One Shoreline Protection and Deflection operation may include; • Quantity of shoreline sealing boom (as outlined in TRP) • Quantity of fence or curtain boom (as outlined in TRP) • 1-2 trained supervisors • 8-10 personnel/ labour hire Specific details of each operation would be tailored to the Tactical Response Plan implemented (where available).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.5.2 Environmental performance based on need

Table 5-7: Environmental Performance – Shoreline protection and deflection

Environmental Performance Outcome		To stop hydrocarbons encountering particularly sensitive areas		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
14	Response teams	14.1	In liaison with WA DTMI (for Level 2/3 incidents), relevant Tactical Response Plans (TRPs) will be identified in the First Strike plan for activation 10 days prior to a predicted impact.	1, 3A, 3C, 4
		14.2	In liaison with WA DTMI (for Level 2/3 incidents), mobilise teams to RPAs 5 days prior to a predicted impact. Teams to contaminated RPAs comprised of: • 1-2 trained specialists per operation • 8-10 personnel/labour hire • Personnel sourced through resource pool.	1, 2, 3B, 3C, 4
		14.3	In liaison with WA DTMI (for Level 2/3 incidents), 1 operation mobilised to each identified RPA. Expected to be 1 RPAs by day 71.4 (operation as detailed above).	1, 3A, 3B, 4
		14.4	12 trained personnel available 5days prior to a predicted impact for each identified RPA. Sourced through resource pool.	1, 2, 3A, 3B, 3C, 4
		14.5	Open communication line to be maintained between IMT and infield operations to confirm awareness of progress against plan(s)	1, 3A, 3B
		14.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline operations: • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel	1, 3B, 4
15	Response equipment	15.1	Equipment mobilised from closest stockpile 5 days prior to a predicted impact.	1, 3A, 3C, 4
		15.2	Supplementary equipment mobilised from AMOSC and State stockpiles 5 days prior to a predicted impact.	1, 3C, 4
		15.3	Supplementary equipment mobilised from OSRL 10 days prior to a predicted impact.	
		15.4	Woodside maintains integrated fleet of vessels. Additional vessels can be sourced through existing contracts/frame agreements	1, 3A, 3C, 4
16	Management of Environmental Impact of the response risks	16.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		16.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	

The resulting shoreline protection and deflection capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline protection and deflection at identified RPAs.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Under optimal conditions, during the subsea and surface releases the capability available exceeds the need identified. It indicates that, the shoreline protection and deflection capability have the following expected performance:

- Modelling predicted shoreline impact at feasible response thresholds at Muiron Islands only, within 71.4 days (6 m^3) (MEE-01 Scenario-02).
- Existing capability allows for mobilisation and deployment of shoreline protection operations by Day 1-2 (if required). Given shoreline contact at RPAs is not predicted until Day 71.4 at Muiron Islands, the existing capability is considered sufficient to mobilise and deploy protection at RPAs prior to hydrocarbon contact, guided by the ongoing monitor and evaluate activities.
- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth and Port Hedland, and the management of response generated waste. From previous assessment of accommodation in this region, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day for an ongoing operation.
- TRPs have been developed for all identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.5.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.6 Shoreline Clean-up

Shoreline clean-up may be undertaken using a broad range of techniques when floating hydrocarbons contact shorelines. The timing, location and extent of shoreline clean-up activities can vary from one scenario to another, depending on the hydrocarbon type, sensitivities and values contacted, shoreline type and access, degree of oiling, and area oiled.

Shoreline clean-up is typically undertaken as a three-phase process:

- phase one (gross contamination removal) involving the collection of bulk oil, either floating against the shoreline or stranded on it
- phase two (moderate to heavy contamination removal) involving removal or in-situ treatment of shoreline substrates such as sand or pebble beaches, and
- phase three (final treatment or polishing) involving removal of the remaining residues of oil.

As phase one typically involves recovery of floating and pooled oil, and phase three removes minor volumes, they have not been considered in the assessment of response need for the scenarios identified.

The *Shoreline Clean-up Operational Plan* details the mobilisation and resource requirements for a shoreline clean-up operation including the logistics, support and facility arrangements to manage the movement of personnel and resources.

The *Shoreline Clean-up Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Woodside would activate and mobilise trained and competent personnel in shoreline assessment before or following shoreline contact at response thresholds.

Shoreline clean-up consists of different manual and mechanical recovery techniques to remove hydrocarbons and contaminated debris from a shoreline; this is to minimise ongoing environmental contamination and impact. The National Plan also provides guidance on shoreline clean-up techniques as outlined in National Plan Guidance *Response assessment and termination of cleaning for oil contaminated foreshores* (AMSA 2015).

5.6.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest timeframe that shoreline contact from floating oil is predicted is 71.4 days (8 m^3) at Muiron Islands (MEE-01 Scenario-02).
- The duration of the spill may extend up to 76 days (MEE-01 Scenario-01) with shoreline response operations extending to 3 months (MEE-01 Scenario-02) based on the predicted time to shoreline contact and execution of source control operations.
- Pre-emptive assessment and shoreline assessments will be mobilised prior to shoreline contact.
- Following Shoreline Assessment and agreement of prioritisation with WA Department of Transport and Major Infrastructure and Major Infrastructure, clean-up operations would commence until agreed termination criteria are reached.
- Arrangements for support organisations who provide specialist services (trained personnel, labour hire, shoreline clean-up, and site management equipment) and/or resources and should be tested regularly.
- Tactical Response Plans (TRPs) for Response Protection Areas (RPAs) along with other relevant plans, procedures and support documents should be in developed and in place for Operational and Support Sections. These should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for shoreline clean-up. These assumptions have been described in the table below.

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Table 5-8: Response Planning Assumptions – Shoreline Clean-up

Response planning assumptions: Shoreline clean-up	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
Manual shoreline clean-up operation (Phase 2)	One, manual shoreline clean-up operation (Phase 2) may include: • 1–2 x trained supervisor • 8–10 x personnel/ labour hire • Supporting equipment for manual clean-up including rakes, shovels, plastic bags etc.
Physical properties	Surface Threshold • Lower – 100 g/m^2–100% coverage of 'stain' – cannot be scratched off easily on coarse sediments or bedrock – Expected trigger to undertake detailed shoreline survey • Optimum – 250 g/m^2 – 25% coverage of 'coat' – can be scratched off with a fingernail on coarse sediments – Expected trigger to commence clean-up operations
Efficiency (m^3 oil recovered per person per day)	Manual shoreline clean-up (Phase 2) – approximately 0.25–1 m^3 oil recovered per person per 10 hour day is based on moderate to high coverage of oil (100 g/m^2–1,000 g/m^2) with manual removal using shovels/rakes, etc. from studies of previous response operations and exercises

Table 5-9: Shoreline Clean-up techniques and recommendations

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Natural recovery	Allowing shoreline to self-clean; no intervention undertaken.	Remote and inaccessible shorelines for personnel, vehicles and machinery. Other clean-up techniques may cause more damage than allowing the shoreline to naturally recover. Natural recovery may be recommended for areas with mangroves and coral reefs due to their sensitivity to disturbance from other shoreline clean-up techniques. High-energy shorelines: where natural removal rates are high, and hydrocarbons will be removed over a short timeframe.	Low-energy shorelines: these areas tend to be where hydrocarbon accumulates and penetrates soil and substrates.	May be employed, if the operational NEBA identifies that other clean-up techniques will have a negligible or negative environmental impact on the shoreline. May also be used for buried or reworked hydrocarbons where other techniques may not recover these.
Manual recovery	Use of manpower to collect hydrocarbons from the shoreline. Use of this form of clean-up is based on type of shoreline.	Remote and inaccessible shorelines for vehicles and machinery. Areas where shorelines may not be accessible by vehicles or machinery and personnel can recover hydrocarbons manually. Where hydrocarbons have formed semi-solid to solid masses that can be picked up manually. Areas where nesting and breeding fauna cannot or should not be disturbed.	Coral reef or other sensitive intertidal habitats, as the presence of a response may cause more environmental damage then allowing them to recover naturally. For some high-energy shorelines such as cliffs and sea walls, manual recovery may not be recommended as it may pose a safety threat to responders.	May be used for sandy shorelines. Buried hydrocarbons may be recovered using shovels into small carry waste bags, but where possible the shoreline should be left to naturally recover to prevent any further burying of hydrocarbons (from general clean-up activities).
Sorbents	Sorbent boom or pads used to recover fluid or sticky hydrocarbons. Can also be used after manual clean-up to remove any residues from crevices or from vegetation.	When hydrocarbons are free-floating close to shore or stranded onshore. As a secondary treatment method after hydrocarbon removal and in sensitive areas where access is restricted.	Access for deploying and retrieving sorbents should not be through soft or sensitive habitats or affect wildlife.	Used for rocky shorelines. Sorbent boom will allow for deployment from small shallow draught vessels, which will allow deployment close to shore where water is sheltered and to aid recovery. Sorbents will create more solid waste compared with manual clean-up, so will be limited to cleaning rocky shorelines.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Vacuum recovery, flushing, washing	The use of high volumes of low-pressure water, pumping and/or vacuuming to remove floating hydrocarbons accumulated at shorelines.	Suited to rocky or pebble shores where flushing can remobilise hydrocarbons (to be broken up) and aid natural recovery. Any accessible shoreline type from land or water. May be mounted on barges for water-based operations, on trucks driven to the recovery area, or hand-carried to remote sites. Flushing and vacuum may be useful for rocky substrate. Medium- to high-energy shorelines where natural removal rates are moderate to high. Where flushed hydrocarbons can be recovered to prevent further oiling of shorelines.	Areas of pooled light, fresh hydrocarbons may not be recoverable via vacuum due to fire and explosion risks. Shorelines with limited access. Flushing and washing not recommended for loose sediments. High-energy shorelines where access is restricted.	High volume low pressure (HVLP) flushing and washing into a sorbent boom could be used for rocky substrate, if protection booming has been unsuccessful in deflecting hydrocarbons from these areas.
Sediment reworking	Movement of sediment to surf to allow hydrocarbons to be removed from the sediment and move sand via heavy machinery.	When hydrocarbons have penetrated below the surface. Recommended for pebble/cobble shoreline types. Medium- to high-energy shorelines where natural removal rates are moderate to high.	Low-energy shorelines as the movement of substrate will not accelerate the natural cleaning process. Areas used by fauna which could potentially be affected by remobilised hydrocarbons.	Use of wave action to clean sediment: appropriate for sandy beaches where light machinery is accessible.
Vegetation cutting	Cutting vegetation to prevent oiling and reduce volume of waste and debris.	Vegetation cutting may be recommended to reduce the potential for wildlife being oiled. Where oiling is restricted to fringing vegetation.	Access in bird-nesting areas should be restricted during nesting seasons. Areas of slow-growing vegetation.	May be used on shorelines where vegetation can be safely cleared to reduce oiling.
Cleaning agents (OSCA)	Application of chemicals such as dispersants to remove hydrocarbons.	May be used for manmade structures and where public safety may be a concern.	Natural substrates and in low-energy environments where sufficient mixing energy is not present.	Not recommended for shorelines. Could be used for manmade structures such as boat ramps.

5.6.2 Environmental performance based on need

Table 5-10: Environmental performance – shoreline clean-up

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
17	Shoreline responders	17.1	In liaison with WA DTMI (for Level 2/3 incidents), deployment of 1 shoreline clean-up teams to contaminated RPAs comprised of: • 1-2 trained specialists per operation • 8-10 personnel/labour hire • personnel sourced through resource pool within 24 hours of request from the IMT.	1, 2, 3A, 3B, 3C, 4
		17.2	Relevant Tactical Response Plans (TRPs) will be identified in the first strike plan for activation 5 days prior to a predicted impact.	1, 3A, 3C, 4
		17.3	Clean-up operations for shorelines in line with results and recommendations from SCAT outputs	1, 3A, 3B
		17.4	All shoreline clean-up sites will be zoned and marked before clean-up operations commence.	
		17.5	In liaison with WA DTMI (for Level 2/3 incidents), mobilise and deploy up to 1 shoreline clean-up operations 5 days prior to a predicted impact.	1, 2, 3A, 3C, 4
		17.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline clean-up operations: • all personnel in a response will receive an operational/safety briefing before commencing operations • gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel	1, 3B, 4
		17.7	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s)	1, 3A, 3B
18	Shoreline clean up equipment	18.1	Contract in place with 3rd party providers to access equipment.	1, 3A, 3C, 4
		18.2	Equipment mobilised from closest stockpile (detail in activity specific ALARP) 5 days prior to a predicted impact.	
		18.3	Supplementary equipment mobilised from AMOSC and State stockpiles 5 days prior to a predicted impact.	1, 3C, 4
		18.4	Supplementary equipment mobilised from OSRL 10 days prior to a predicted impact.	
19	Management of Environmental Impact of the response risks	19.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		19.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
		19.3	Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves	
		19.4	Removal of vegetation will be limited to moderately or heavily oiled vegetation	
		19.5	Oversight by trained personnel who are aware of the risks.	
		19.6	Trained unit leaders brief personnel prior to operations of the environmental risks of presence of personnel on the shoreline.	

The resulting shoreline clean-up capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the Petroleum Activity.

The shoreline clean-up capability has the following expected performance (if required during a response):

- Modelling predicts first shoreline impact at Muiron Islands (8 m^3) on day 71.4 (MEE-01 Scenario-02).
- Existing capability allows for mobilisation and deployment of 1 shoreline clean-up operation within 24 hours (if required). Within 48 hours, Woodside can mobilise up to 15 response operations comprising its team of trained response personnel from Karratha (the 'Burrup Response Team'), Woodside's personnel/ labour hire contract, and appropriate shoreline response equipment. This capability increases to 20 operations by day 4 and would also include team leads from Woodside, AMOSC, AMOSC Core Group and/or OSRL together with existing personnel/ labour hire contracts. Teams would comprise 1 supervisor with 8 personnel/ labour hire up to 2 supervisors with 10 personnel/ labour hire. Each individual within a team is predicted to be able to remove 0.25 m^3 to 1 m^3 oil/ oiled waste per day dependent upon the nature of the shoreline oiling.
- Assessment of response capability indicates that for a worst-case scenario the actual teams required would meet the available capability and the response would be completed by end of month 3.
- Woodside has considered deployment of additional personnel to undertake shoreline clean-up operations but is satisfied that the identified level of resource is balanced between cost, time and effectiveness.
- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth and Dampier and management of response generated waste. From previous assessment of accommodation in Exmouth and Dampier, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day for an ongoing operation.
- TRPs have been developed for all identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.6

This document is protected by copyright. 5.7 Oiled wildlife response (including hazing)

Oiled wildlife response (OWR) includes wildlife surveillance/reconnaissance, wildlife hazing, pre-emptive capture, and the capture, cleaning, treatment, and rehabilitation of animals that have been oiled. In addition, it includes the collection, post-mortem examination, and disposal of deceased animals that have succumbed to the effects of oiling.

For a petroleum activity spill in Commonwealth waters, Woodside will act as the Control Agency and will be responsible for the wildlife response. In such circumstances, Woodside would implement a response in accordance with the *Oiled Wildlife Operational Plan*, the WA Oiled Wildlife Response Plan (WAOWRP) (DBCA, 2022a) and the WA OWR Manual (DBCA, 2022b). The *Oiled Wildlife Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Oiled wildlife operations would be implemented with advice and assistance from the Oiled Wildlife Advisor from the Department of Biodiversity, Conservation and Attractions (DBCA).

The key plan for OWR in WA is the WAOWRP (DBCA, 2022a). The WAOWRP establishes the framework for preparing and responding to potential or actual wildlife impacts during a spill and sets out the management arrangements for implementing an OWR in conjunction with the DTMI *State Hazard Plan – Maritime Environmental Emergencies* (SHP-MEE). It is the responsibility of DBCA to administer the WAOWRP under the direction of the DTMI. The WA OWR Manual (DBCA, 2022b) supports, and should be used in conjunction with, the WAOWRP. The purpose of the WA OWR Manual is to standardise the operating procedures, protocols and processes for an OWR during a spill event in WA waters, and to create alignment between the wildlife response processes and the overall incident response (DBCA, 2022b).

If a spill occurs in WA State waters or enters State waters, DBCA is the Jurisdictional Authority for wildlife, for level 2/3 spills, and will also lead the oiled wildlife response under the control of the DTMI. DBCA is the State Government agency responsible for administering the *Biodiversity Conservation Act 2016 (BC Act)* which has provisions for authorising activities that affect wildlife.

For level 1 spills in State waters, Woodside will be the Control Agency, including for wildlife response. It is, however, also an expectation that for level 2/3 petroleum activity spills, Woodside will conduct the initial first-strike response actions for wildlife response and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

Woodside retains specialist personnel to support and manage oiled wildlife operations, including trained and competent responders for deployment in Exmouth and Dampier. Additional personnel would be sourced through Woodside's arrangements to support an oiled wildlife response as required.

5.7.1 Response need based on predicted consequence parameters

Wildlife response priority areas and assessment of wildlife impact

French-McCay et al. (2002), based on a review of existing literature at the time, determined lethal thresholds for floating and shoreline oil for the external coating of wildlife to be 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation. It should however be noted that toxicity thresholds for wildlife are likely to be highly variable due to differences in species sensitivity, type of hydrocarbon, type of exposure (ingestion or external oiling), life-stage, and on-water versus land habitat.

For planning purposes, determination of wildlife priority protection areas is based on stochastic modelling of the worst-case spill scenarios at 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation (acknowledging that impacts to wildlife may occur at lower concentrations), the known presence of wildlife, and in consideration of the following:

- Presence of high densities of wildlife, threatened species, and/or endemic species with high site fidelity
- Greatest probability of shoreline accumulation
- Shortest timeframe to contact

Table 5-11 outlines the wildlife response areas for this activity. At the time of a spill, identification and allocation of wildlife RPA's should also take into consideration any key biological activities. Additional detail regarding species and their key biological activities within the vicinity of the Petroleum Activity are described in Section 4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

For WA, the Pilbara and Kimberley Regional Oiled Wildlife Plans (DBCA [formerly Department of Parks and Wildlife), 2014) provide useful information relating to wildlife priority response areas in their respective regions.

Table 5-11: Key at-risk species potentially in Response Protection Areas and open ocean

Species	Montebello MP	Rankin Bank	No Name Shoal	Wilcox Shoal	Muiron Islands & MMA
Marine turtles	✓				✓
Whale sharks	✓				✓
Seabirds and/or migratory shorebirds	✓				✓
Cetaceans – migratory whales	✓				✓
Cetaceans – dolphins and porpoises	✓	✓	✓	✓	✓
Dugongs					✓
Sharks and rays	✓	✓	✓	✓	✓

The following statements identify the key parameters upon which a wildlife response need can be based:

- Floating oil at >10 g/m^2 is predicted at Rankin Bank within 7 hours (MEE-01 Scenario-01).
- The shortest timeframe for shoreline accumulation at response thresholds (>100 g/m^2) is predicted to be 71.4 days at Muiron Islands & MMA (6 m^3).
- At sea there are likely to be low numbers of at risk or impacted wildlife, and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and operational and scientific monitoring are more likely to be the focus of response efforts.
- As the surface oil approaches shorelines and as oil accumulates on the shoreline, potential for oiled wildlife impacts is likely to increase as well as opportunities to rescue wildlife.
- It is estimated that the wildlife impact would be between medium and high, as defined in the WAOWRP (DBCA, 2022a) (Table 5-12).

Table 5-12: WAOWRP Guide for rating wildlife impact of an oil spill (DBCA, 2022)

Wildlife Impact Rating	Low	Medium	High
What is the likely duration of the wildlife response?	<3 days	3-10 days	>10 days
What is the likely total intake of animals?	<10	11-25	>25
What is the likely daily intake of animals?	0-2	2-5	>5
Are threatened species, or species protected by treaty, likely to be impacted, either directly or by pollution of habitat or breeding areas?	No	Yes – possible	Yes – likely
Is there likely to be a requirement for building primary care facility for treatment, cleaning and rehabilitation?	No	Yes – possible	Yes – likely

Tactics

Where there is imminent or actual impact to wildlife, Woodside will activate the Wildlife Division and follow the oiled wildlife incident management framework and implementation plan outlined in the Woodside *Oiled Wildlife Operational Plan*.

In Commonwealth waters, Woodside will be responsible for the planning and implementation of the OWR in its entirety. Noting that at sea, and in comparison to the shoreline, there are likely to be less wildlife impacted by an oil spill and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and integration with operational and scientific monitoring are more likely to be the focus of the OWR.

In State waters, Woodside will conduct the initial first-strike response actions for wildlife and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

If a protracted response is likely, requiring preventative actions and/or wildlife rescue, and formal hand over to the Control Agency (in State waters) has not yet occurred, the Wildlife Division will be responsible for the development of the Wildlife Division portion of the IAP. Preventative actions, such as hazing, along with capture, intake and treatment require a higher degree of planning, approval (licenses) and skills and will be planned for and carried out under the IAP as outlined in the *Oiled Wildlife Operational Plan* and in accordance with the WAOWRP (DBCA, 2022a) and WA OWR Manual (DBAC, 20022b).

The oiled wildlife response technique targets key wildlife populations at risk within Commonwealth open waters and the nearshore waters as described in Section 4 of the EP.

This document is protected by copyright. 5.7.2 Environmental performance based on need

Table 5-13: Environmental Performance – Oiled Wildlife Response (OWR)

Environmental Performance Outcome		OWR is conducted in accordance with the Western Australian Oiled Wildlife Response Plan (WAOWRP, 2022) to meet legislative requirements to house, release or euthanise wildlife under the *Biodiversity Conservation Act 2016*.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
20	Wildlife response arrangements	20.1	Oiled Wildlife Operational Plan in place and utilised during a response to plan, coordinate, implement and terminate operations	1, 3A, 4
		20.2	Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by OMP: Marine Fauna Assessment and in liaison with DBCA.	1
21	Wildlife response equipment	21.1	Maintain contract with AMOSC for immediate access to oiled wildlife response equipment.	1, 3C, 4
		21.2	Maintain contract with OSRL to access additional oiled wildlife response equipment.	1, 3C, 4
22	Wildlife responders	22.1	Two Oiled Wildlife Team Members to supervise the oiled wildlife operations who have completed an OWR Management course.	1, 2, 3B
		22.2	Maintain contract with AMOSC for immediate access to trained oiled wildlife response specialists	1, 3B, 3C
		22.3	Maintain contract with OSRL to access additional trained OWR specialists	1, 3B, 3C
		22.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
23	Management of environmental impacts of response risks	23.1	Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan.	1

The resulting wildlife response capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to response at identified RPAs.

Under optimal conditions, during the subsea or surface release, the capability available meets the need identified. It indicates that, the wildlife response capability has the following expected performance:

- undertake OWR first strike response:
  - mobilisation of monitor and evaluate and/or OMP: Marine Fauna Assessment to identify wildlife and RPAs contacted or at imminent risk of contact by hydrocarbons.
- availability and mobilisation of trained OWR personnel to supervise OWR activities.
- access to wildlife resources (personnel and equipment) to meet the needs where there are medium or high levels of wildlife impact.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

5.8 Waste Management

Waste management is considered a support technique to wildlife response, containment and recovery and shoreline clean-up. Waste generated and collected during the response that will require handling, management and disposal may consist of:

- Liquids (hydrocarbons and contaminated liquids) collected during containment and recovery, shoreline clean-up and wildlife response, and/or
- Solids/semi-solids (oily solids, garbage, contaminated materials) and debris (e.g. seaweed, sand, woods, and plastics) collected during containment and recovery, shoreline clean-up and wildlife response.

Expected waste volumes during an event are likely to vary depending on oil type, volume released, response techniques employed and how weathering of hydrocarbons. Waste management, handling and capacity should be scalable to maintain continuous response operations.

All waste management activities will follow the Environment Protection (Controlled Waste) Regulations 2004 and the waste will be managed to minimise final disposal volumes. Waste treatment techniques will consider contaminated solids treatment to allow disposal to landfill and solids with high concentrations of hydrocarbon will be treated and recycled where possible or used in clean fill if suitable.

The waste products would be transported from response locations to the nearest suitable staging area/waste transfer station for treatment, disposal or recycling. Waste will be transferred with appropriately licensed vehicles. Containers will be available for temporary waste storage and will be:

- labelled with the waste type
- provided with appropriate lids to prevent waste being blown overboard
- bunded if storing liquid wastes.
- processes will be in place for transfers of bulk liquid wastes and include:
  - inspection of transfer hose undertaken prior to transfer
  - watchman equipped with radio visually monitors loading hose during transfer
  - tank gauges monitored throughout operation to prevent overflow

The *Oil Spill Preparedness Waste Management Support Plan* details the procedures, capability and capacity in place between Woodside and its primary waste services contractor to manage waste volumes generated from response activities.

5.8.1 Response need based on predicted consequence parameters

Table 5-14: Response Planning Assumptions – Waste Management

Response planning assumptions: Waste management	
Waste loading per m^3 oil recovered (multiplier)	Containment and Recovery – approximately 10x multiplier for oily waste generated by containment and recovery operations
	Shoreline clean-up (manual) – approximately 5-10x multiplier for oily solid and liquid wastes generated by manual clean-up.
	Oiled wildlife response – approximately 1 m^3 of oily solid and liquid waste generated for each wildlife unit cleaned

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

5.8.2 Environmental performance based on need

Table 5-15: Environmental Performance – Waste Management

Environmental Performance Outcome		To minimise further impacts, waste will be managed, tracked and disposed of in accordance with laws and regulations.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
24	Waste Management	24.1	Contract with waste management services for transport, removal, treatment and disposal of waste	1, 3A, 3B, 3C, 4
		24.2	Access to at least 213 m^3 of solid and liquid waste storage available within 2 days upon activation of 3rd party contract.	
		24.3	Access to up to 675 m^3 by end of Day4.	
		24.4	Decanting in accordance with National Plan guidelines to occur in daylight hours into the apex of the boom once hydrocarbon/water has settled in storage container.	
		24.5	Recovered hydrocarbons and wastes will be transferred to licensed treatment facility for reprocessing or disposal.	
		24.6	Waste management provider support staff available year-round to assist in the event of an incident with waste management as detailed in contract.	
		24.7	Open communication line to be maintained between IMT and waste management services to ensure the reliable flow of accurate information between parties.	1, 3A, 3B
		24.8	Waste management to be conducted in accordance with Australian laws and regulations	1, 3A, 3B, 3C, 4
		24.9	Waste management services available and employed during response	
25	Management of environmental impacts of response risks	25.1	Teams will segregate liquid and solid wastes at the earliest opportunity.	1, 3A, 3B, 3C, 4

The resulting waste management capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to waste management at identified RPAs.

Given the largest shoreline volumes ashore are predicted in 71.4 days at a maximum volume of 6 m^3, and the capability available exceeds the need identified.

It indicates that the waste management capability has the following expected performance:

- Offshore operations may generate up to an additional 392 m^3 for one week of offshore operations (MEE-01 Scenario-02).
- Shoreline and nearshore operations may generate up to 72 m^3 over 3 months of operations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section .
- Woodside's waste contractor has access to approximately 120,000 m^3 to treat overall waste volumes. The waste management requirements are within Woodside's and its service providers existing capacity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

5.9 Operational and Scientific monitoring

Operational and scientific monitoring (OSM) is a key component of the environmental management document framework for offshore petroleum activities, which includes activity EPs and OPEPs. The key elements and differences between operational monitoring and scientific monitoring include:

- Operational Monitoring (OM) – undertaken during the course of the spill and includes any physical. chemical and biological assessments that may guide operational decisions such as selecting the appropriate response and mitigation methods and/or to determine a response activity. This monitoring is additional to the activities (aerial/vessel surveillance, tracking buoys, oil spill trajectory modelling and satellite tracking) performed as part of the Monitor and Evaluate Strategy (Section 5.1). Information needs to be collected and processed rapidly to suit response needs, with a lower level of sampling and accuracy needed than for scientific purposes. For the OMP initiation and termination criteria during a Level 2-3 spill event refer to Table 9-1 of the Joint Industry OSM Framework.
- Scientific Monitoring (SM) – the principal tool for determining the extent, severity and persistence of possible environmental impacts from a hydrocarbon spill and for informing resultant remediation activities. Consequently, such studies are required to account for natural or sampling variation, and study designs must be robust and produce defensible data. Scientific monitoring is typically conducted over a wider study area, extending beyond the spill footprint, and a longer time period, extending beyond the spill response. For the Scientific Monitoring Plan (SMP) initiation and termination criteria during a Level 2-3 spill event refer to Table 9-2 of the Joint Industry OSM Framework (APPEA [now Australian Energy Producers (AEP)] 2021).

Woodside has developed a Woodside OSM Bridging Implementation Plan (OSM-BIP) [2], which describes a program of monitoring oil pollution that will be adopted in the event of a hydrocarbon spill incident (Level 2–3) to marine waters. It aligns with the Joint Industry OSM Framework (APPEA [now AEP] 2021) and describes how this Framework applies to Woodside activities and spill risks.

A series of Operational Monitoring Plans (OMPs) and Scientific Monitoring Plans (SMPs) form part of the Joint Industry OSM Framework and provide detail on monitoring design, standard operating procedures, data management, quality assurance and quality control and reporting.

Table 5-16 lists the Joint Industry OMPs and SMPs that are relevant to the Petroleum Activity. The aims/objectives of each OMP and SMP are listed in Tables 5-1 and 6-1 of the Joint Industry OSM Framework (APPEA [now AEP] 2021) respectively. Woodside confirms it has reviewed these aims/objectives and determined they are all appropriate to address the potential impacts, risks and response activities of this activity, noting that dispersant application is not a suitable response strategy for this activity.

The OSM-BIP is structured so that it can provide a flexible framework that can be adapted to individual spill incidents. The Combined OSM Planning Area (refer to section 2.1 of the OSM-BIP), derived from all Woodside worst-case scenarios, represents the geographical extent of the Woodside OSM-BIP.

The OSM requirements for this activity's credible spill scenarios, including monitoring priorities, implementation timeframes and capability is provided in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

Woodside will review the initiation criteria for OMPs and SMPs (provided in Table 9-1 [OMPs] and Table 9-2 [SMPs] of the Joint Industry Operational and Scientific Monitoring Framework (AEP, 2021)) during the preparation of the initial IAPs, and subsequent IAPs. If any initiation criteria are met, then that relevant OMP and/or SMP will be activated via the OSM Services Provider.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Table 5-16: Joint industry OSM plans relevant to the Petroleum Activity

Operational Monitoring	Relevant for the activity	Scientific Monitoring	Relevant for the activity
OM1: Hydrocarbon Characterisation	✓	SM1: Water Quality Impact Assessment	✓
OM2: Hydrocarbon in Water Assessment	✓	SM2: Sediment Quality Impact Assessment	✓
OM3: Hydrocarbon in Sediment Assessment	✓	SM3: Intertidal & Coastal Habitat Assessment	✓
OM4a: Dispersant Effectiveness Monitoring (Subsea)	×	SM4: Seabirds and Shorebirds Assessment	✓
OM4b: Dispersant Effectiveness Monitoring (Surface)	×	SM5: Marine mega-fauna Assessment	✓
OM5: Rapid Marine Fauna Surveillance	✓	SM6: Benthic habitat Assessment	✓
OM6: Shoreline Clean-up Assessment (SCAT)	✓	SM7: Marine fish and elasmobranch assemblages assessment	✓
		SM8: Fisheries Impact Assessment	✓
		SM9: Heritage Features Assessment	✓
		SM10: Social Impact Assessment	✓

5.9.1 Response need for Shoreline Clean-Up Assessment (SCAT) based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- SCAT will be mobilised to RPAs contacted at 100 g/m^2.
- The shortest timeframe for shoreline accumulation at 100 g/m^2 predicted by modelling is 71.4 days at Muiron Islands (MEE-01 Scenario-02).

In addition, a number of assumptions are required to estimate the response need for SCAT. These assumptions have been described in Table 5-17. Consequently, for planning purposes and based on the modelling results for shortest time to contact at 100 g/m^2 there is one RPA (Muiron Islands) requiring 2 SCAT specialists. These resourcing requirements can be met via the resourcing arrangements outlined in Table 8-3 of the OSM-BIP.

Table 5-17: Response Planning Assumptions – SCAT

Response planning assumptions: SCAT	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
SCAT	Deployment of 2 x specialists in SCAT from resource pool for each of the RPAs with predicted impacts

5.9.2 Summary – operational and scientific monitoring

A detailed OSM preparedness assessment is provided in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

The ALARP assessment for operational and scientific monitoring (Section 6.9) considers alternate, additional, and/or improved control measures on each selected response technique.

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Known, reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness determined to be medium. The OSM program's main objectives can be met, with no additional, alternative or improved control measures providing further benefit.

This document is protected by copyright. 5.9.3 Environmental performance based on need

Table 5-18: Operational and scientific monitoring

Environmental Performance Outcome		Implement OSM programs to assess and report on the impact, extent, severity, persistence and recovery of sensitive receptors contacted by a spill or affected by spill response.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
26	OSM arrangements	26.1	Maintain access to OSM expertise qualified to fulfil OSM Implementation Lead role during a Level 2/3 spill event per Joint Industry OSM Framework requirements.	3A, 3B, 3C, 4
		26.2	OSM Implementation Lead responsible for overseeing implementation of OMP and SMP components in accordance with the Woodside OSM Bridging Implementation Plan[2].	
27	Access to adequate OSM capability to provide both initial and ongoing monitoring	27.1	Maintain contract with third-party OSM Services Provider to provide access to suitably qualified and competent personnel and equipment to assist in the implementation of monitoring in accordance with the capability and resourcing requirement described in Sections 8–10 of the OSM-BIP and the activity-specific capability assessment in Table C - 8 and Table C - 9 in ANNEX C.	3A, 3B, 3C, 4
		27.2	Obtain monthly capability reports from OSM Service Provider to demonstrate the capability described in Section 10 of the OSM-BIP is available throughout the activity	
		27.3	Annual testing of OSM Service Provider standby arrangements and activation process	
28	Baseline studies assurance	28.1	Annual review of environmental baseline data for all locations where spill modelling has predicted contact at relevant hydrocarbon thresholds within 7 days	3C
29	OSM-BIP maintenance	29.1	Annual review will be conducted according to the criteria in Section 11 of the OSM-BIP	3A, 3B, 3C, 4
30	OSM response	30.1	OMPs and SMPs will be activated in accordance with the initiation criteria provided in Tables 9-1 and 9-2 of the Joint Industry OSM Framework (APPEA [now AEP] 2021)	1
		30.2	Initiation criteria of OMPs and SMPs will be reviewed during the preparation of the initial Incident Action Plan (IAPs) and subsequent IAPs; and if any criteria are met, relevant OMPs and SMPs will be activated	
		30.3	If the OSM Implementation Lead identifies that additional monitoring capability is required beyond that described in Section 10 of the OSM-BIP, the need for these resources will be identified as soon as practicable and mobilised through the OSM Services Provider Contract, which includes provisions for scaling up personnel to meet monitoring program requirements	
		30.4	Decisions regarding co-mobilisation of monitoring teams will be determined following a spill event, as part of the Incident Action Planning process. These decisions will be made by the CIMT in consultation with the OSM Services Provider and relevant stakeholders, with due consideration given to safety, access to sensitive receptors, timing, and data quality requirements	
		30.5	OSM to be conducted in accordance with the Woodside OSM-BIP and, where relevant to the activity, the assessment detailed in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Environmental Performance Outcome		Implement OSM programs to assess and report on the impact, extent, severity, persistence and recovery of sensitive receptors contacted by a spill or affected by spill response.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
		30.6	Monitoring prioritisation will be undertaken in accordance with the process and checklist provided in Table 13-1, informed by the guidance in Section C.2 of the OSPRMA	
		30.7	Mobilisation and implementation of OMPs and SMPs will be undertaken in accordance with the indicative timeframes and sequencing described in Section C.3 of the OSPRMA and Part B of the OSM-BIP	
		30.8	Implementation of OSM will comply with the minimum standards listed in Appendix A of the Joint Industry OSM Framework	
		30.9	Once Scientific Monitoring data reports are drafted, they will be peer reviewed by an expert panel for data integrity	
		30.10	OMPs and SMPs will be terminated in accordance with the termination criteria provided in Table 9-1 and 9-2 of the Joint Industry OSM Framework (APPEA [now AEP] 2021)	
31	Shoreline Clean-up Assessment Technique (SCAT)	31.1	Mobilisation within 24 hours, in agreement with WA DTMI (for Level 2/3 incidents), deployment of 2 x specialist(s) in SCAT from resource pool for each of the Response Protection Areas (RPAs) with predicted impacts	1, 2, 3B, 3C, 4
		31.2	Reports from OM6: Shoreline Clean-up Assessment will be provided to the IMT daily, detailing the assessed areas to maximise effective utilisation of resources.	1, 3B, 4
		31.3	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		31.4	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		31.5	Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations	
		31.6	Vehicular access will be restricted on dunes, turtle nesting beaches an in mangroves	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.10 Incident Management System (IMS)

The Incident Management System (IMS) is both a control measure and a measurement criteria. As a control measure the IMS function is to prompt, facilitate and record the completion of the key response planning processes detailed below (see Sections 5.10.1, 5.10.2 and 5.10.3. As a measurement criteria, the IMS records the evidence of the timeliness of all response actions included in the environmental performance standards and the plans used of the Petroleum Activity.

As the IMS does not directly remove hydrocarbons spilt into the marine environment there is no direct relationship to the response planning need.

5.10.1 Incident action planning

The CIMT will be required to collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist the IMT with the execution of that plan. The site-based Incident Commander (IC) may request the CIMT to complete notifications internally within Woodside, to relevant persons/ organisations and government agencies as required. Depending on the type and scale of the incident either the CIMT DM or IC will be responsible for ensuring the development of the IAP. Incident Action Planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.

5.10.2 Operational NEBA process

In the event of a response Woodside will confirm that the response techniques adopted at the time of EP and OPEP acceptance remain appropriate to reduce the consequences of the spill. This process verifies that there is a continuing net environmental benefit associated with continuing the response technique through the operational NEBA process. This process manages the environmental risks and impacts of response techniques during the spill response, An operational NEBA will be undertaken throughout the response, for each operational period.

The operational NEBA will consider the risks and benefits of conducting and response activity. For example, if vessels are required for access to nearshore or onshore areas, anchoring locations will be selected to minimise disturbance to benthic habitats. Vessel cleanliness would be commensurate with the receiving environment. The operational NEBA will consider the risks and benefits of conducting other response techniques.

The operational NEBA process is also used to terminate a response. Using data from operational and scientific monitoring activities the response to a hydrocarbon spill will be terminated in accordance with the termination process outlined in the Joint Industry OSM Framework (APPEA, 2021). In effect the operational NEBA will determine whether there is net environmental benefit to continue response operations.

5.10.3 Consultation engagement process

Woodside will consult relevant persons/ organisations are engaged during the spill response in accordance with internal standards. This process requires that Woodside will:

- Undertake all required notifications (including government notifications) for relevant persons/ organisations in the region (identified in the First Strike Plan). This includes notification to mariners to communicate navigational hazards introduced through response equipment and personnel.
- In the event of a response, identify and engage with relevant persons/ organisations and continually assess and review.

5.10.4 Environmental performance based on need

Table 5-19: Environmental Performance – Incident Management System

Environmental Performance Outcome		To support the effectiveness of all other control measures and monitor/record the performance levels achieved.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.11)**
32	Operational SIMA	32.1	Confirm that the response techniques adopted at the time of acceptance remain appropriate to reduce the consequences of the spill within 24 hours.	1, 3A
		32.2	Record the evidence and justification for any deviation from the planned response activities.	
		32.3	Record the information and data from operational and scientific monitoring activities used to inform the SIMA.	
33	Stakeholder engagement	33.1	Prompt and record all notifications (including government notifications) for persons/ organisations in the region are made	
		33.2	In the event of a response, identification of relevant persons/ organisations will be re-assessed throughout the response period.	
		33.3	Undertake communications in accordance with: • Functional Support Team Guideline – Reputation • External Communication and Continuous Disclosure Procedure	
34	Personnel required to support any response	34.1	Action planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident are appropriate to the situation at the time.	1, 3B
		34.2	A duty roster of trained and competent people will be maintained to maintain minimum manning requirements are met all year round.	3C
		34.3	Immediately activate the CIMT with personnel filling one or more of the following roles: • CIMT Incident Commander • CIMT Deputy Incident Commander • Operations Section Chief • Planning Section Chief • Logistics Section Chief • Documentation Unit Leader • Safety Officer • Environment Unit Leader • Human Resources Officer • Public Information Officer • Situation Unit Leader • Finance Section Chief • Source Control Section Chief	1, 2, 3B, 3C, 4
		34.4	Collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist with the execution of that plan.	
		34.5	Security and Emergency Management (S&EM) advisors will be integrated into CIMT to monitor performance of all functional roles.	
		34.6	Continually communicate the status of the spill and support Woodside to determine the most appropriate response by delivering on the responsibilities of their role.

5.11 Measurement criteria for all response techniques

Woodside measures compliance with environmental performance outcomes and standards through four primary mechanisms. The aforementioned performance tables identify which of these four mechanisms monitors the readiness and records the effectiveness and performance of the control measures adopted.

1. The Incident Management System

The Incident Management System (IMS) supports the implementation of the Crisis and Emergency and Crisis Management Procedure Standard. The IMS provides a near real-time, single source of information for monitoring and recording an incident and measuring the performance of those control measures.

The Crisis and Emergency Management (CEM) Standard defines the management framework, including roles and responsibilities, to be applied to any size incident (including hydrocarbon spills). The organisational structure required to manage an incident is developed in a modular fashion and is based on the specific requirements of each incident. The structure can be scaled up or down. The IAP process formally documents and communicates the:

- Incident objectives
- Status of assets
- Operational period objectives
- Response techniques (defined during response planning)
- The effectiveness of response techniques.

The information captured in the IMS (including information from personal logs and assigned tasks/close outs) confirms the response techniques implemented remain appropriate to reduce the consequences of the spill. The system also records all information and data that can be used to support the site-based IMT, development and the execution of the IAP.

2. The CEM Competency Dashboard

The CEM competency dashboard records the number of trained and competent responders that are available across Woodside to participate in a response.

This number varies dependent on expiry of competency certificates, staff attrition, internal rotations, leave and other absences. As such the Dashboard is designed to identify the minimum manning requirements and to identify sufficient redundancy to cater for the variances listed above.

Figure 5-1 shows the minimum manning numbers for the different hydrocarbon spill response roles and the number of qualified persons against those roles.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

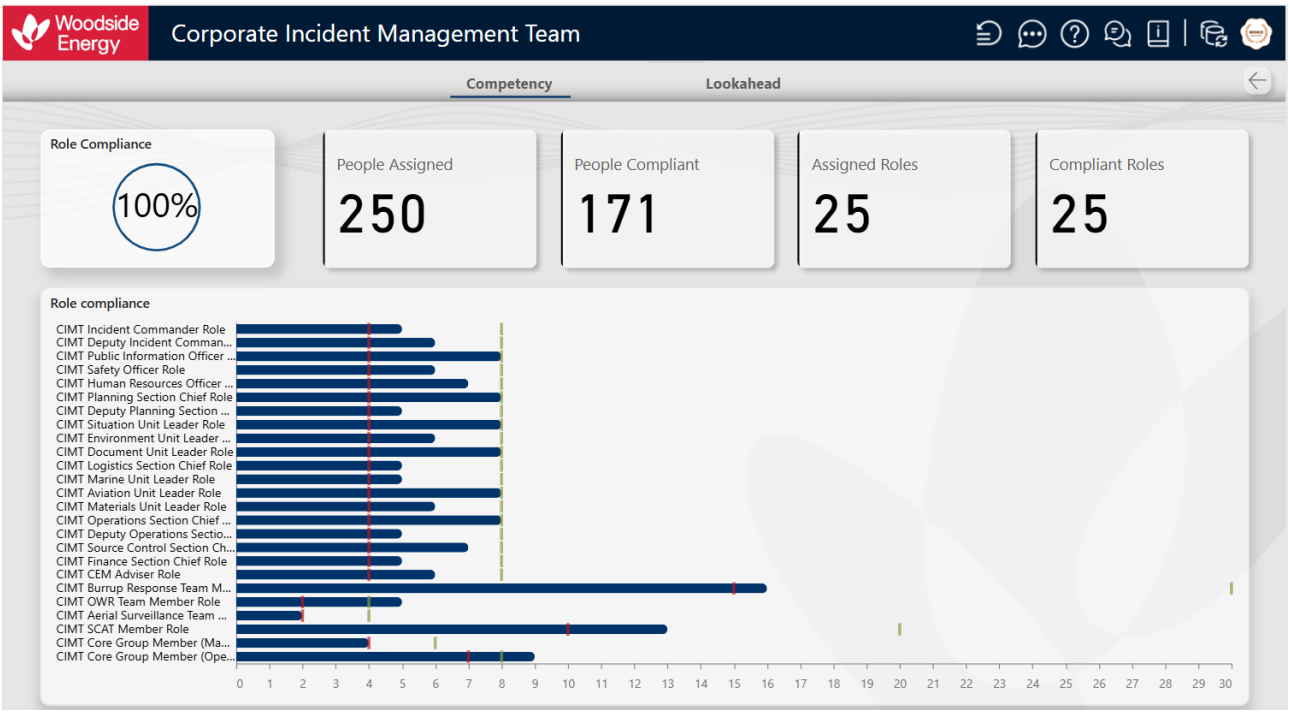

Figure 5-1: Example screenshot of the CEM dashboard

The Dashboard is one of Woodside's key means of monitoring its readiness to respond. It also demonstrates Woodside's ability to meet the requirements of the environmental performance standards that relate to filling certain response roles.

Figure 5-2 shows an example of the SCAT role and the training modules required to show competence.

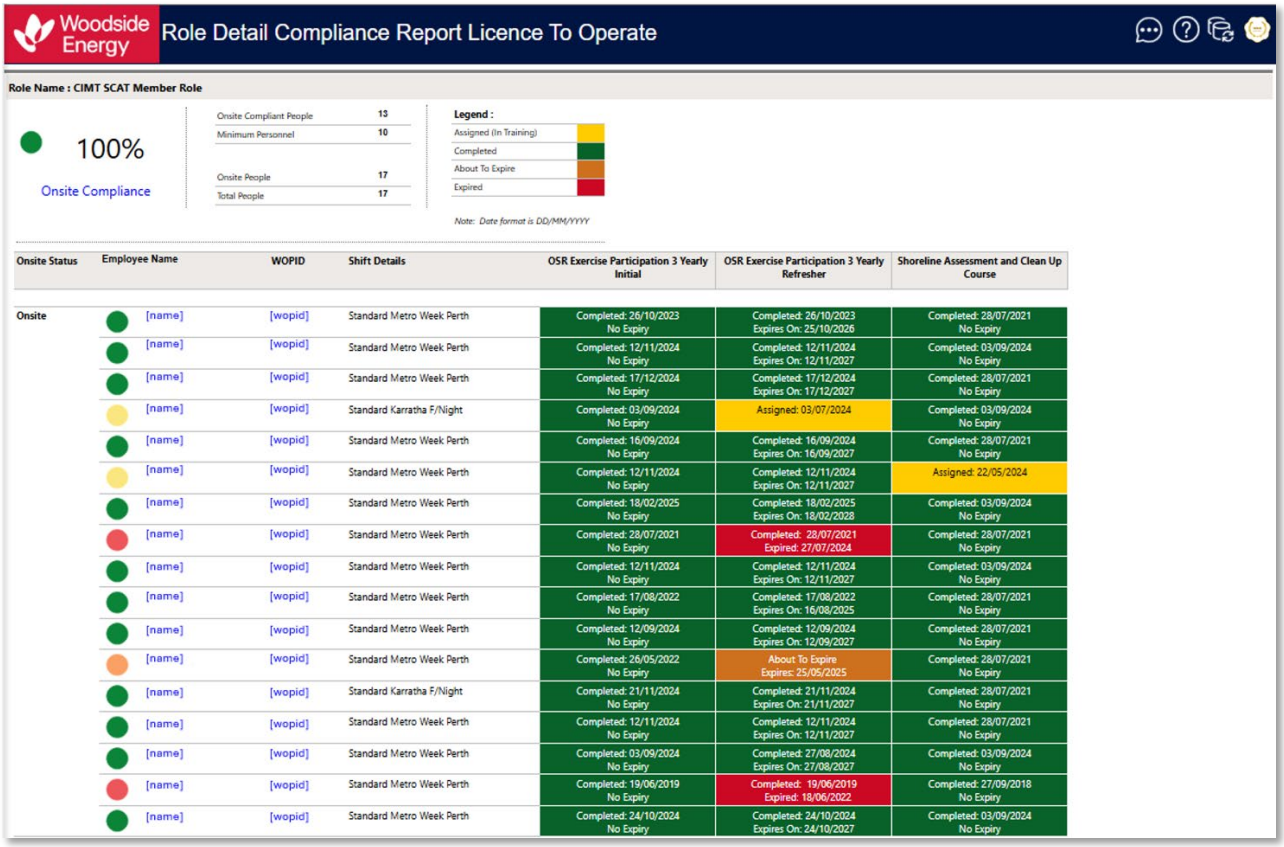

Figure 5-2: Example screenshot for the SCAT role

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Woodside also maintains a pool of trained responders which is composed of but not limited to personnel from the following organisations:

- Australian Marine Oil Spill Centre (AMOSC) core group
- AMOSC
- Oil Spill Response Limited (OSRL)
- Marine Spill Response Corporation (MSRC)
- Woodside contracted workforce

3. The Hydrocarbon Spill Preparedness Assurance Process

The Hydrocarbon Spill Response Team uses Woodside's assurance process to track compliance over three key control areas:

a. **Plans** – confirms all plans (including: Hydrocarbon Spill Australia Regulatory Framework, first strike plans, operational plans, support plans and tactical response plans) are current and in line with regulatory and internal requirements.

b. **Competency (personnel and testing)** – confirms the competency dashboard is up to date and there are the minimum numbers across CIMT, Crisis Management Team (CMT) and hydrocarbon spill response roles. The hydrocarbon spill training plan and exercise schedule, including testing of arrangements is also tracked. The Testing of Arrangements (ToA) register tracks the testing of all hydrocarbon spill response arrangements, key contracts and agreements in place with internal and external parties to ensure compliance.

c. **Capability (equipment and contracts)** – tracks and monitors capability that could be required in a hydrocarbon incident, including but not limited to: integrated fleet[7] vessel schedule, dispersant availability, rig/vessels monitoring, equipment stockpiles, tracking buoy locations and the CIMT duty roster.

The assurance process records how each commitment listed in the performance tables above is managed for ongoing compliance monitoring. The level of compliance can be reviewed in real time and is reported on a monthly basis through the CEM Function.

4. The Hydrocarbon Spill Planning Standard, Hydrocarbon Spill Planning Work Instruction (Australia), Hydrocarbon Spill Capability and Competency Standard, and Hydrocarbon Spill Response Standard

The Hydrocarbon Spill Planning Standard sets out how to plan and prepare for a liquid hydrocarbon spill to the marine environment. (Note, this standard does not apply to scenarios relating to gas releases in the marine environment). This standard details the requirement for an OPEP to be developed, maintained, reviewed, and approved by appropriate regulators (where applicable).

The Hydrocarbon Spill Planning Work Instruction (Australia) details planning for hydrocarbon spill response preparedness including:

- Developing OPEPs.
- Defining how spill scenarios are developed on an activity specific basis
- Priority response receptor determination.
- ALARP determination.

The Hydrocarbon Spill Capability and Competency Standard details:

- Developing spill training requirements and ongoing maintenance of training and competency for personnel
- Developing requirements for spill exercising / testing of spill response arrangements
- Maintaining access to identified equipment, personnel and contracts.
- Ensuring compliance and assurance is undertaken in accordance with external and internal requirements.

7 The Integrated fleet consists of vessels from multiple operators that have been contracted to Woodside to undertake a number of duties including hydrocarbon spill response.

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

The Hydrocarbon Spill Response Standard details requirements for appropriate hydrocarbon spill response standards including:

- safeguarding the safety and health of people (responders and communities)
- stopping the source of the spill as quickly as possible
- minimising the environmental and community impact

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

6 ALARP EVALUATION

This section should be read in conjunction with Section 5 which is the capability planned for this activity.

6.1 Monitor and evaluate – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.1 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.1.1 Monitor and evaluate – Control Measure Options Analysis

6.1.1.1 Alternative Control Measures

Alternative Control Measures considered *Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Aerostat (or similar inflatable observation platform) for localised aerial surveillance.	Lead time to Aerostat surveillance is disproportionate to the environmental benefit. The system also provides a very limited field of visibility around the vessel it is deployed from.	Long lead time to access (>10 days). Each system would require an operator to interpret data and direct vessels accordingly. Requires multiple systems for shoreline use.	Purchase cost per system is approximately A$300,000.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No

6.1.1.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional personnel trained to use systems.	Current arrangement provides an environmental benefit in the availability of trained personnel facilitating access to Monitor and evaluate data used to inform all other response techniques. No improvement required.	Woodside considers no improvement can be made, all personnel in technical roles e.g. intelligence unit are trained and competent on the software systems. Personnel are trained and exercised regularly. Use of the software and systems forms part of regular work assignments and projects.	Cost for training in-house staff would be approximately A$25,000.	This option is not adopted as the current capability meets the need.	No
Additional satellite tracking buoys to enable greater area coverage.	Increased capability does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	Tracking buoy on location at manned facility and additional needs are met from Woodside-owned stocks in King Bay Support Facility (KBSF) and Exmouth or can be provided by service provider.	Cost for an additional satellite tracking buoy would be A$200 per day or A$6000 to purchase.	This option is not adopted as the current capability meets the need, but additional units are available if required.	No
Additional trained aerial observers.	Current capability meets need. Woodside has access to a pool of trained, competent observers at strategic locations to allow timely and sustainable response. Additional observers are available through current contracts with AMOSC and OSRL.	Aviation standards and guidelines confirm all aircraft crews are competent for their roles. Woodside maintains a pool of trained and competent aerial observers with various home base locations to be called upon at the time of an incident. Regular audits of oil spill response organisations maintain training and competency.	Cost for additional trained aerial observers would be A$2000 per person per day.	This option is not adopted as the current capability meets the need, but additional observers are available via response contractors if required.	No

6.1.1.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster turnaround time from modelling contractor.	Improved control measure does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	External contractor on CIMT roster to be called as soon as required. However initial information needs to be gathered by CIMT team to request an accurate model. External contractor has person on call to respond from their own location.	Modelling service with a faster activation time would be achieved via membership of an alternative modelling service at an annual cost of A$50,000 for 24hr access plus an initial A$5000 per modelling run.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No
Nighttime aerial surveillance.	The risk of undertaking the aerial observations at night is disproportionate to the limited environmental benefit. The	Flights will only occur when deemed safe by the pilot. The risk of night operations is disproportionate to the	No improvement can be made without risk to personnel health and safety and breaching Woodside's Golden Safety Rules.	This option is not adopted as the safety considerations outweigh any environmental benefit gained.	No

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
	images would be of low quality and as such the variable is not adopted.	benefit gained, as images from sensors (IR, UV, etc). will be low quality. Flight time limitations will be adhered to.			

6.1.2 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

6.2 Source Control – ALARP Assessment

Woodside has based its response planning on the worst-case credible scenarios (as described in Section 2.2). This includes the following selection of primary source control and well intervention techniques which would be conducted concurrently:

- direct ROV intervention on Xmas tree (subsea wells only)
- debris clearance and/or removal
- capping stack (subsea wells only)
- relief well drilling.

6.2.1 ROV Intervention

Following confirmation of an emergency event, Woodside would mobilise inspection class ROVs to assess the status of the wellhead. The ROV available on the MODU can be deployed for this purpose within 48 hours. Work class ROVs for well intervention are also available through the existing frame agreements and are available for deployment within seven days (Table 6-1).

As Woodside holds Frame Agreements for vessels along with contracts for ROV providers and pilots, inspection activities using ROVs are expected to commence within seven days.

A hydraulic accumulator contained as part of the SFRT can be mobilised and deployed with well intervention attempted within 11 days.

Table 6-1: ROV timings

	Estimate ROV inspection duration for GWA Facility Operations
Source and mobilise vessel with work class ROV	2 days
Liaise with Regulator regarding risks and impacts*	4 days
Undertake ROV Inspection	1 day
TOTAL	**7 days***

** Based on timings from the Report into the Montara Commission of Enquiry, submission and discussion of revised documentation for limited activities inside the Petroleum Safety Zone (water deluge operations) to manage personnel risks and impacts was up to 20 days.*

6.2.1.1 Safety Case considerations

Woodside has assessed against the NOPSEMA safety case guidance (NOPSEMA N-09000-GN1661), confirming that vessels conducting subsea intervention operations are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements to be in place. In the event of an emergency, Woodside has access to suitable vessels (ISVs) for well intervention through existing frame agreements. The frame agreements for ISV vessels require the vessels to maintain in-force safety case approval covering a range of subsea activities. This would cover the requirement for intervention operations such as subsea manifold installation, maintenance and repair, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case Scenario from those presented in Figure 6-3 for implementing this response would be “no safety case revision required”. Timeframes for well intervention are detailed in Figure 6-2 and would be implemented concurrently to the actions required by the “no Safety Case” revision scenario detailed in Figure 6-3, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.2.2 Debris clearance and/or removal

The Woodside Source Control Response Procedure details the mobilisation and resource requirements for implementing this strategy. Debris clearance may be required as a prerequisite to deployment of the capping stack. The AMOSC SFRT would be mobilised from Fremantle. The mobilisation of the SFRT would take place in parallel with mobilisation of the capping stack to ensure initial ROV surveys and debris clearance have commenced before the arrival of the capping stack. The SFRT comprises ROV-deployed cutters and tools that are used to remove damaged or redundant items from the wellhead and allow improved access to the well. The SFRT can be mobilised and deployed with well intervention attempted within 11 days.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

6.2.2.1 Safety Case considerations

Woodside has assessed against the NOPSEMA safety case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting debris clearance and removal operations are not classified as an "associated offshore place" but as a facility and therefore require the appropriate Safety Case arrangements in place. In the event of an emergency, Woodside has access to suitable ISVs for these operations through existing frame agreements. The frame agreements for ISVs require the vessels to maintain in-force safety case approval covering a range of subsea activities. This would cover the requirement for debris clearance and removal operations such as subsea manifold installation, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case Scenario, from those presented in Figure 6-3 for implementing this response would be "no safety case revision required". Timeframes for debris clearance and removal equipment deployment are detailed in Figure 6-2 and would be implemented concurrently to the actions required by the "No Safety Case" revision scenario detailed in Figure 6-3, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.2.3 Capping stack

The Petroleum Activity will be covered by a Source Control Emergency Response Plan (SCERP) detailing the mobilisation and resource requirements for implementing this strategy. A capping stack is designed to be installed on a subsea well and provides a temporary means of sealing the well, until a permanent well kill can be performed through either a relief well or well re-entry.

In the event of a loss of well containment, the use of a subsea deployment method such as a heavy lift vessel, which is more commonly used in industry, is a more reliable and, in turn, ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack with a heavy lift vessel with a 150 T crane capacity in shallower waters or 250 T crane in deeper waters could be feasible.

Woodside assumes that sourcing conventional capping stack deployment vessels would be per the SCERP. This plan has pre-identified vessel specifications for the capping stack deployment and Woodside monitors the availability and location of these vessels on a monthly basis. Woodside maintain several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement. The supply arrangements and reliability to achieve the required mobilisation time will be revalidated prior to spud. Consideration to mobilise the capping stack from the supplier on a suitable vessel but then hand over to another vessel to conduct the capping activity will also be made to meet response time frames.

A capping stack will be mobilised to site within 16 days. Woodside will monitor the conditions around the wellsite and deployment for well intervention attempt will be undertaken once plume size is acceptable and safety and metocean conditions are suitable.

6.2.3.1 Safety Case considerations

Woodside has assessed against the NOPSEMA safety case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting capping stack are not classified as an "associated offshore place" but as a facility and therefore require the appropriate Safety Case arrangements in place.

The 16-day timeframe to mobilise the vessel is based on the following assumptions:

- existing frame agreement vessel, located outside the region with approved Australian Safety Case
- a safety case revision and scope of validation is required
- vessel meets the technical requirements for deploying capping stack as per the Source Control Emergency Response Plan
- vessel has an active heave compensated crane, rated to at least 150 T for shallow waters or 250 T in deeper waters and at least 90 m in length and a deck capacity to hold at least 110 T of capping stack.

Timeframes for capping stack deployment detailed in Figure 6-2 would be implemented concurrently with the actions required for the Safety Case revision development scenarios detailed in Figure 6-3 and Table 6-3.

Woodside will execute the capping stack response in the fastest possible timeframe, provided the required safety and metocean conditions allow. Woodside has considered a broad range of alternate, additional, and improved options as outlined later in Section 6.2.5.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

6.2.4 Relief well drilling

The options analysis detailed in this section considers options to source, contract and mobilise a MODU and ensure necessary regulatory approvals are in place to meet timelines for relief well drilling. The screening for relief well drilling MODUs is based on the following and the process used for GWA Facility Operations is illustrated in Figure 6-1:

- Primary – review internal Woodside drilling programs and MODU availability to source an appropriate MODU operating within Australia with an approved Safety Case.
- Alternate – source and contract a MODU through AEP MOU that is operating within Australia with an approved Safety Case.
- Contingency – Source and contract a MODU outside Australia with an approved Australian Safety Case.

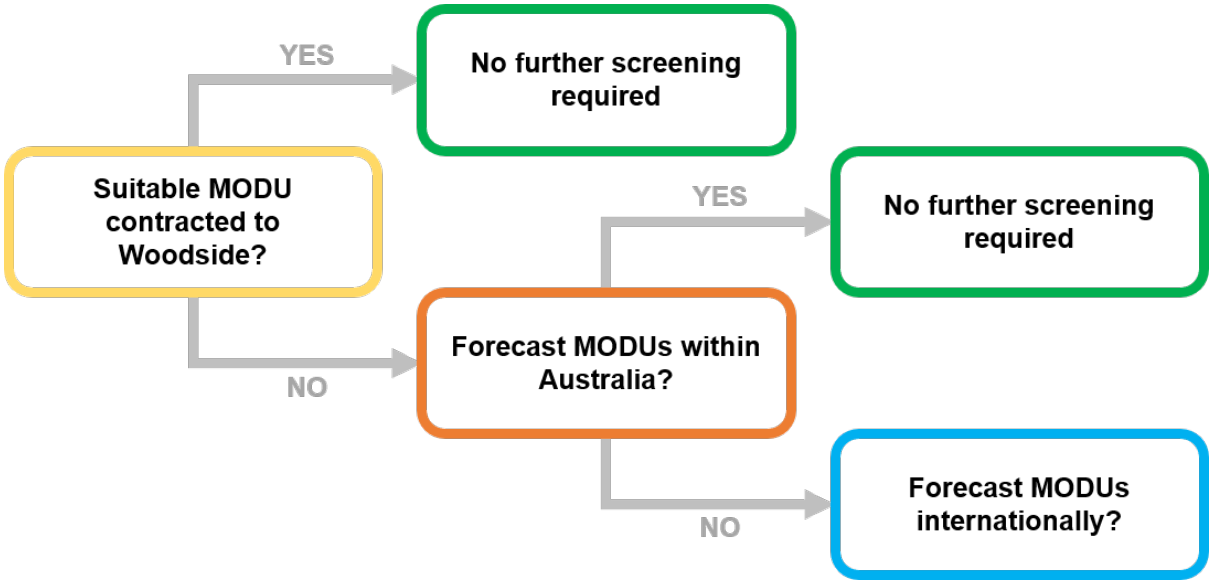

Figure 6-1: GWA Facility Operations process for sourcing relief well MODU

In the event the Woodside contracted MODUs are unsuitable, screening is extended to all MODUs operating in Australian Waters including those outside of the North West Shelf region. Screening of a relief well MODU from international waters is undertaken where there is low confidence in local (Australian) availability. For these circumstances, Woodside will screen for suitable MODUs in closest proximity to the North West Shelf region e.g. South East Asia, and relevant additional controls will be implemented as detailed in Section 6.2.6 and/or Section 6.2.7.

If a suitable international MODU is not identified, an internal review will be undertaken, NOPSEMA notified, and the issue tabled at the Australian Energy Producers' Drilling Industry Safety Committee (AEP DISC). A review of the significance of the change in risk will be undertaken in accordance with Woodside's environment management of change requirements and relevant regulatory triggers. Based on the detail provided, mobilisation of a suitable and available MODU in North West Shelf region is expected to be achieved within 21 days and from South East Asia within 36 days. If a MODU was available in South East Australia, mobilisation is estimated to be 47 days. Woodside will seek to execute relief well drilling in the fastest possible timeframe.

The detail of these arrangements demonstrates that the risks have been reduced to ALARP and Acceptable levels through the control measures and performance standards outlined in Section 5.2.

6.2.4.1 Relief Well drilling timings

The duration of a blowout (from initiation to a successful kill) for the worst-case loss of well containment scenario is assessed as 76 days (MEE-01 Scenario-01) for the Petroleum Activity. Relief wells for other wells within the field are expected to be similar duration.

Details on the steps and time required to drill a relief well is shown in Table 6-2. Moored MODUs are suitable for the Petroleum Activity. A moored MODU has been used as the basis for the time estimate below.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

To validate the effectiveness of the relief MODU supply arrangements through the AEP MoU, an exercise to test the mobilisation period forms part of Woodside's three-yearly Hydrocarbon Spill Arrangements Testing Schedule. Testing of these arrangements are facilitated by an external party and includes suspension of the assisting operator's activities, contracting the MODU, vessel safety case revision and transit to location.

Table 6-2: Relief well drilling timings for the worst-case loss of well containment scenario (MEE-01 Scenario-01)

Estimated Relief Well Duration	Moored Days (local MODU)		Moored Days (regional MODU)	
Rig mobilisation				
Secure and suspend well. Complete Relief well design. Secure relief well materials.	8.0	21.0 days	8.0	36.0 days
Transit to location based on mobilisation from within the region	2.0		17.0	
Backload and loadout bulks and equipment, complete internal assurance of relief well design.	2.0		2.0	
Contingency for unforeseen event	9.0		9.0	
Mooring activities and relief well construction operations	26		26	
Intersection & well kill comprising the following stages:				
Drill out shoe, conduct formation integrity test and drill towards intersection point	8.0	14.0 days	8.0	14.0 days
Execute well-specific ranging plan to accurately intersect wellbore in minimum timeframe	2.0		30	
Pump kill weight drilling fluid per the relief well plan. Confirm well is static with no further flow	2.0		2.0	
Contingency for unforeseen technical issues	9.0		9.0	
Total discharge duration	**61 days (local MODU)**		**76.0 days (regional MODU)**	

Woodside has considered a broad range of alternate, additional, and improved options as outlined in Section 6.2.5.

Intersect and kill duration is estimated at 14 days. This is a moderately conservative estimate. During the intersect process, the relief well will be incrementally drilled and logged to accurately approach and locate the existing well bore. This will result in the highest probability of intersecting the well on the first attempt and thus will reduce the overall time to kill the well

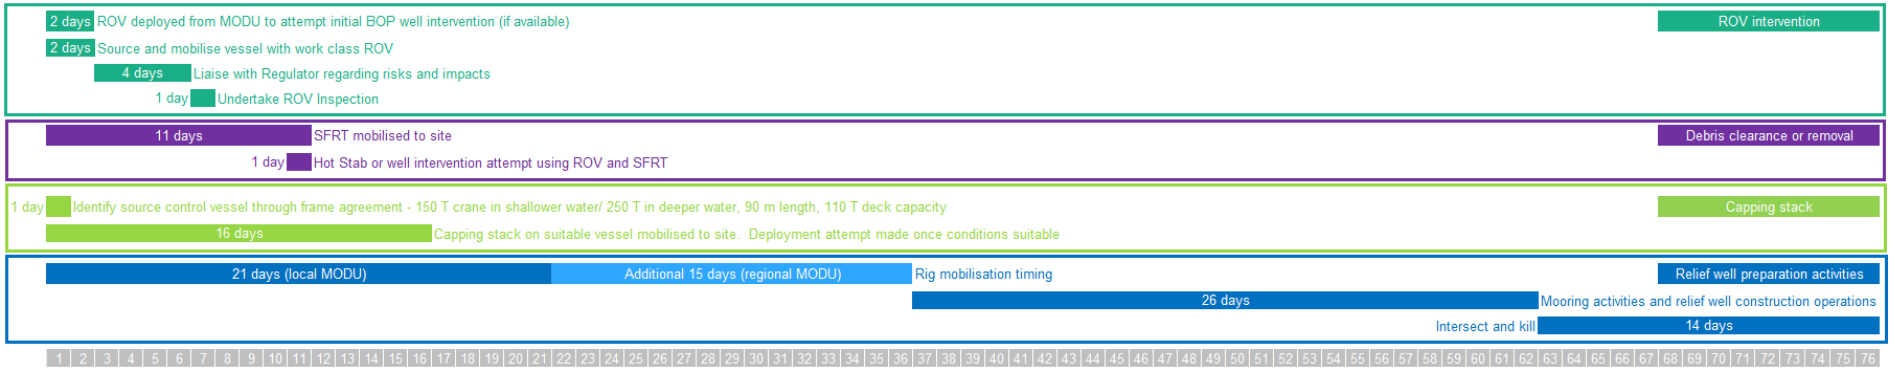

Figure 6-2: Source control and well intervention response strategy deployment timeframes for the worst-case loss of well containment scenario (MEE-01 Scenario-01) for the Petroleum Activity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

6.2.4.2 Safety Case considerations

Woodside recognises that it will not be the Operator or holder of the Safety Case for the MODU and/or vessels involved in relief well activities. In the event that a revision to the Operator's Safety Case is required for relief well drilling, Woodside has identified measures to ensure timely response and optimise preparedness as far as practicable that can be undertaken to expedite a straightforward Safety Case revision for a MODU/ vessel to commence drilling a relief well. Performance standards associated with these measures have been included in Section 5.2. Section 6.2.6 details ALARP controls to improve activation and mobilisation arrangements including maintenance of an 'Emergency Response Tactical Response Plan' to assist in accelerating Safety Case revision(s).

These include;

- Access to Safety and Risk discipline personnel with specialist knowledge.
- Monitoring internal and external MODUs and vessel availability in the region and extended area through contracted arrangements on a monthly basis, with a two-year lookahead.
- Prioritisation of MODUs/vessels with current or historical contracting arrangements. Woodside maintains records of previous contracting arrangements and companies. All current contracts for vessels and MODUs are required to support Woodside in the event of an emergency.
- Leverage mutual aid arrangements such as the AEP MOU for vessel and MODU support.
- Woodside Planning and Logistics, and Safety Officers (on-Roster/Call 24/7) which can articulate need for, and deliver Woodside support, in key delivery tasks including sitting with potential outside operators.
- Ongoing strategic industry engagement and collaboration with NOPSEMA to work toward time reductions in regulatory approvals for emergency events.

Woodside has identified three safety case revision development and submission scenarios for a MODU and plotted these alongside the relief well preparation activities in Figure 6-3. The assumptions for each of the cases are detailed in subsequent Table 6-3.

A relief well Safety Case Revision would leverage the previously accepted Safety Case Revision for the Petroleum Activity, including the associated site-specific well hazards. As such, there is less new detail for the regulator to review and should present a short review timeframe with no impact expected to the commencement of relief well drilling activities.

Table 6-3: Safety case revision conditions and assumptions

Case	No safety case revision required	Safety case revision and submission	Safety case revision and scope of validation
Description	Vessel/MODU has a safety case in place appropriate for activities.	Vessel/MODU has an existing safety case, however, a revision is required.	Vessel/MODU has an existing safety case, however, a revision is required plus scope of validation.
Conditions/ assumptions	Assumes that existing vessel/MODU safety case covers working under the same conditions or the loss of containment is not severe enough to result in any risk on the sea surface.	Safety case timing assumes vessel/MODU selected and crew and available for workshops and safety case studies.	Safety case timing assumes vessel/ MODU selected and crew and available for workshops and safety case studies.
		Assumes nil scope of validation. This assumes that the vessel for source control allows for working in a hydrocarbon environment and control measures are already in place in the existing safety case. For MODU, it assumes that the relief well equipment is already part of the MODU facility and MODU safety case.	Validation will be required for new facilities only. The time needed for the validator to complete the review (from the last document received) and prepare validation statement is undetermined. This is not accounted for here as the safety case submission is not dependent on the validation statement, however the safety case acceptance is.
		Assumes safety case preparation is undertaken 24/7.	Assumes safety case preparation is undertaken 24/7.

6.2.5 Source Control – Control Measure Options Analysis

The assessment described in Section 6.2.1, 6.2.2, 6.2.3 and 6.2.4 outline the primary and alternate approach respectively that Woodside would implement for relief well drilling.

Woodside has outlined the options considered against the activation, mobilisation (improved options), deployment (alternate and additional options) process described in Section 2.1.1 that provides an evaluation of:

- predicted cost associated with adopting the option
- predicted change/environmental benefit
- predicted effectiveness/feasibility of the option

Alternative, Additional and Improved options have been identified and assessed against the base capability described in Section 5 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical.

- Alternative options, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control.
- Additional control measures are evaluated in terms of their ability to reduce an impact or risk when added to the existing suite of control measures.
- Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Options where there is not a clear justification for their inclusion or exclusion may be subject to a detailed assessment.

6.2.6 Activation/Mobilisation – Control Measure Options Analysis

This section details the assessment of alternative, additional or improved control measures that were considered to ensure the selected level of performance in Section 5.2 reduces the risk to ALARP. The Alternative, Additional and Improved control measures that have been assessed and selected are highlighted in green and the relevant performance of the selected control is cross referenced. Items highlighted in red have been considered and rejected on the basis that they are not feasible or the costs are clearly grossly disproportionate compared to the environmental benefit.

6.2.6.1 Alternative Control Measures

Alternative Control Measures considered *Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Contract and run a rig on standby or warm stack on the north-west shelf, shared for all Woodside activities.	A standby MODU shared across all Woodside activities is likely to provide a moderate environmental benefit as it will maintain or may reduce the 21-day sourcing, contracting and mobilisation time. This could reduce the volume and duration of the release through shorter time to kill the well and thus may reduce impacts on receptors and sensitivities.	This option is not considered feasible for all Woodside activities as there are a large range of well depths, complexities, geologies and geophysical properties across all Woodside's operations. The large geographic area of Woodside activities also means that the MODU is unlikely to be in the correct location at the right time when required.	Estimate for 12 months of operations: US$ 500k/day (0.66FX) plus A$ 30M startup would total A$307M. This is considered disproportionate to the environmental benefit potentially achieved by reducing mobilisation time. Further, there are additional health, safety and environmental impacts associated with running a rig on standby.	The costs and complexity of having a MODU and maintaining this arrangement for the duration of the Petroleum Activities Program are disproportionate to the environmental benefit gained.	No
Standby MODU shared across AEP MOU Titleholders	A standby MODU shared across all titleholders who are signatories to the AEP MOU is likely to provide a minor environmental benefit as it will maintain or may reduce the 21-day sourcing, contracting and mobilisation time. This could reduce the volume and duration of the release through shorter time to kill the well and thus may reduce impacts on receptors and sensitivities. Running a MODU on standby together with the required support vessels/ aircraft, however, will result in increased atmospheric emissions from burning fuel. The MODU may also increase seabed damage. Deployment of such resources will also increase SIMOPs complexity and elevate health and safety risks to personnel.	This option is not considered feasible for a number of Titleholders due to the remote distances and regions in which Titleholders operate within Australia, as well as a substantial range of well depths, types, complexities, geologies and geophysical properties across the range of Titleholders.	Costs are dependent upon the number of AEP MOU Titleholders involved. Additional costs and complexity involved given commercial arrangements that would need to be addressed.	The costs and complexity of having a MODU and maintaining a shared arrangement for the duration of the Petroleum Activities Program, together with increased environmental, SIMOPs and health and safety risks, are disproportionate to the environmental benefit gained.	No
Mobilise Equinox MODU from Victoria with associated additional time impact and water depth limitations	Longer mobilisation duration than 36 days (estimated 47 days), leading to increased relief well drilling timeframe.	This option is considered feasible however it would result in longer MODU mobilisation time.	Potential for higher cost of mobilisation compared with relief well rigs from South East Asia.	Considered not to be the primary option given increased mobilisation timeframes compared with mobilising a rig from South East Asia. Possible that this option could be activated in parallel with the South East Asia mobilisation, or in the event South East Asia rig mobilisation is unsuccessful.	Evaluate

Alternative Control Measures considered *Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Mobilise relief well MODU from further afield e.g. Africa, Gulf of America with associated additional mobilisation time impact	Longer mobilisation duration, leading to increased relief well drilling timeframe.	This option is considered feasible, however it would result in longer mobilisation timeframes.	Potential for higher cost of mobilisation compared with relief well rigs from local/ regional vicinity.	Considered not to be the primary option given increased mobilisation timeframes compared with mobilising a rig from local/ regional vicinity.. Possible avenue in the event that attempts to mobilise a rig from local/ regional vicinity are not successful.	Evaluate

6.2.6.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical additional control measures identified					

6.2.6.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Monitor internal drilling programs for rig availability	Woodside may be conducting other campaigns that overlap with the Petroleum Activity, potentially providing availability of a relief well drilling rig within Woodside. The environmental benefit of monitoring other drilling programs internally is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbon to the environment.	Woodside monitors vessel and MODU availability through market intelligence services. Woodside will continually monitor other drilling and exploration activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations.	Associated cost of implementation is minimal to the environmental benefit gained. Woodside has outlined control measures and performance standards.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	Yes
Monitor external activity for rig availability	The environmental benefit achieved by monitoring drilling programs and rig movements across industry provides the potential for increased availability of suitable rigs for relief well drilling. Additional discussions with other Petroleum Titleholders may be undertaken to potentially gain faster access to a rig and reduce the time taken to kill the well and therefore volume of hydrocarbons released.	Woodside will source a relief well drilling rig in accordance with the AEP MOU on rig sharing in the unlikely event this is required. Commercial and operational provisions do not allow Woodside to discuss current and potential drilling programs in detail with other Petroleum Titleholders.	Associated cost of implementation is moderate to the environmental benefit gained. Woodside will continually engage with other Titleholders and Operators regarding activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	Yes
Monitor status of Registered Operators/ Approved Safety cases for rigs	Woodside can monitor the status of Registered Operators for rigs operating within Australia (and therefore safety case status) on a monthly basis. This allows for a prioritised selection of rigs in the event of a response with priority given to those with an existing safety case.	The environmental benefit of monitoring rigs is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbon to the environment.	The cost is minimal.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	Yes
Create an 'Emergency Response Tactical Response Plan' focused explicitly on meeting the requirements of rig permissioning under accelerated timeframe	NOPSEMA require Safety Case(s) in the event of a relief well scenario. Preparing an Emergency Response Tactical Response Plan with sample Scope of Validations for a variety of rig types and additional required equipment to support relief well drilling (i.e. critical services) may streamline the process for obtaining a Safety Case in the event of a loss of well control scenario.	This option is considered feasible.	Minor administrative cost associated with the development of an Emergency Response Tactical Response Plan and maintaining its currency overtime.	This option provides benefit in terms of streamlining the process for obtaining a Safety Case in the event of relief well rig mobilisation from South East Asia. The ER Tactical Response Plan will contain sample Scope of Validations for a variety of rig types and would include any additional equipment to support relief well drilling (e.g critical services) as well as dynamic kill such as pumps.	Yes

requirements of a relief well scenario.				The framework will not be populated with rig specifics; these would be updated at the time of source control event.	

6.2.7 Deployment Options Analysis

6.2.7.1 Alternative Control Measures

Alternative Control Measures considered *Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.2.7.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Offset capping alternative to conventional capping stack deployment	While the use of an offset capping system could reduce the quantity of hydrocarbon entering the marine environment, the mobilisation lead times for both a capping system and required vessels/ support equipment, would minimise any environmental benefit gained over conventional capping.	The base case considerations for offset installation equipment (OIE) requires a coordinated response by four to seven vessels working simultaneously outside of the 500m exclusion zone, introducing complex SIMOPS issues. Due to the OIE's scale, fabrication of equipment (e.g. mooring anchors) outside of the contractor's scope of supply is likely to require engagement of international suppliers, further increasing complexity and uncertainty in associated time frames. Screening indicates that mobilising some components of the OIE (which are based in Italy) can only be done by sea and is likely to erode any time savings realised through killing the well via a relief well. The March 2019 OSRL exercise in Europe tested deployment of the OIE. It highlighted that a >600 T crane vessel would be required for deployment to allow for a useable hook-height for the crane to conduct the lift of the carrier. Vessels with such capability and a current Australian vessel Safety Case are not locally or readily available.	Due to risks, uncertainty and complexity of this option, and the inability to realise any environmental gains, any cost would be disproportionate to the benefits gained.	Woodside has confidence in availability of suitable relief well MODUs across the required drilling time frame thus the OIE would provide no advantage. Implementation of OIE has been assessed as a complex and unfeasible SIMOPs operation, precluded by a combination of the site-specific metocean and worst-case discharge conditions at the Petroleum Activity location. Implementation of a novel technology such as OIE culminates in low certainty of success while at the same time increasing associated health and safety risks. As such the primary source control response and ALARP position remains drilling a relief well.	No
Dual vessel capping stack deployment	While the use of dual vessel to deploy the capping system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the feasibility issues surrounding a dual vessel capping deployment in the water depths at the GWA Facility Operations well (~132 m), together with mobilisation lead times for both a cap and required vessels and support equipment, would minimise any environmental benefit.	A dual vessel deployment is somewhat feasible provided a large enough deck barge can be located. Deck barges of 120 m are not, however, very common and will present a logistical challenge to identify and relocate to the region. Further, the longer length barges may need mooring assist to remain centred over the well. The capping stack would be handed off from a crane vessel to the anchor handler vessel (AHV) work wire outside of the exclusion zone. The AHV would then manoeuvre the barge into the plume to get the capping stack over the well. In this method, the barge would be in the plume, but the AHV and all personnel would be able to maintain a safe position outside of the gas zone. The capping stack would actually be lowered on the AHV work wire so a crane would not be required on the barge.	Due to there being minimal environmental benefits gained by the prolonged lead times needed to execute this technique, plus a potential increase in safety issues, any cost would be disproportionate to the benefits gained.	Given there is minimal environmental benefit and an increase in safety issues surrounding SIMOPS and deployment in shallow waters, this option would not provide an environmental or safety benefit.	No
Subsea Containment System alternative	While the use of a subsea containment system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven	The timing for mobilisation, deployment and activation of the subsea containment system is likely to be longer (>90 days), than the expected	Woodside has investigated the logistics of reducing this timeframe by pre-positioning equipment but the costs of purchasing dedicated equipment by	This option would not provide an environmental benefit.	No

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
to capping stack deployment	technology. Additionally, the system is unlikely to be feasibly deployed and activated for at least 90 days following a blowout due to equipment requirements and logistics. No environmental benefit is therefore predicted given the worst-case release duration of 76 days (MEE-01 Scenario-01) before drilling of a relief well under the adopted control measure.	worst-case release duration of 76 days (MEE-01 Scenario-01) relief well drilling operations based on the location, size and scale of the equipment required, including seabed piles that can only be transported by vessel.	Woodside for this Petroleum Activities Program is not considered reasonably practical and are considered disproportionate to the environmental benefit gained.		
Pre-drill and suspend relief well overburden section, for each well.	Whilst this option may potentially decrease relief well drilling timing, it represents additional environmental impacts associated with discharge of additional drill cuttings and fluids along with benthic habitat disturbance.	This option is not considered feasible due to the uncertainties related to the location and trajectory of the intervention well, which may vary according to the actual conditions at the time the loss of containment event occurs. Top-hole may have to be relocated, due to location being unsafe or unsuitable and further works will be required each year to maintain the top holes.	Not practicable: Cost estimated at ~ $40M per well. Further, the control would not be effective as no relief well rig would be available while drilling pre-drill wells. Significant HSE impact due to increase in drilling and completions operations associated with pre-drilling relief wells.	This option would not provide an environmental benefit due to the additional environmental impacts coupled with a lack of significantly improved relief well timings.	No
Purchase and maintain mooring system	Purchasing and maintaining a mooring system could provide a moderate environmental benefit as it may reduce equipment sourcing time. However, due to the continued need for specialists to install the equipment plus sourcing a suitable vessel, the timeframe reduction would be minimal.	Woodside is not a specialist in installing and maintaining moorings so would require specialists to come in to install the moorings and would also require specialist vessels to be sourced to undertake the work.	The cost of purchasing, storing and maintaining pre-lay mooring systems with anchors, chains, buoys and ancillary equipment is considered grossly disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit as timeframe reductions would be minimal.	No
Contract in place with Wild Well Control and Oceaneering	Woodside has an agreement in place with Wild Well Control Inc and Oceaneering to provide trained personnel in the event of an incident. This will ensure that competent personnel are available in the shortest possible timeframe.	Having contracts in place to access trained, competent personnel in the event of an incident would reduce mobilization times. This option is considered reasonably practicable.	Minimal cost implications – Woodside has standing contract in place to provide assistance across all activities.	This control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	Yes

6.2.7.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Maintaining relief well drilling supplies	There is not predicted to be any reduction in relief well timing or spill duration from Woodside maintaining stocks of drilling supplies (mud, cement, etc.)	It would be feasible to source some relief well drilling supplies such as casing but the actual composition of the cement and mud required will need to be specific to the well. This option is also not deemed necessary as the lead time for sourcing and mobilising these supplies is included in the 21-36 days for sourcing and mobilising a rig.	The capital cost of Woodside purchasing relevant drilling supplies is expected to be approximately $600K with additional costs for storage and ongoing costs for replenishment. These costs are considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit.	No

6.2.8 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- Alternative:
  - relief well rig mobilised from South East Asia region
  - mobilise Equinox MODU from Victoria with associated additional time impact and water depth limitations (EVALUATE)
  - mobilise relief well rig from further afield than South East Asia: Africa, GOM with associated additional mobilisation time impact (EVALUATE)
- Additional:
  - contract in place with Wild Well Control and Oceaneering to supply trained, competent personnel
- Improved:
  - monitor internal drilling programs for MODU availability

6.3 Source Control via Vessel SOPEP – ALARP Assessment

Alternative, additional and improved options have been assessed against the base capability described in Section 5.3 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.3.1 Source Control via Vessel SOPEP – Control Measure Options Analysis

6.3.1.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.3.1.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical additional control measures identified					

6.3.1.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.3.2 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

6.4 Containment and Recovery – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.4.1 Existing Capability – Containment and Recovery

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours/ 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

Table 6-4: Existing Capability – Containment and Recovery

E	Existing Capability													
E3	Existing level of containment and recovery capability available (m^3 recovered per day)													
Existing capability – Containment and Recovery		**Day 1**	**Day 2**	**Day 3**	**Day 4**	**Day 5**	**Day 6**	**Day 7**	**Week 2**	**Week 3**	**Week 4**	**Month 2**	**Month 3**
	By Volume – m^3												
E3.1	Predicted oil recovered by containment and recovery (lower) – m^3	0	23	23	34	45	56	68	473	630	630	2520	2520
E3.2	Predicted oil recovered by containment and recovery (upper) – m^3	68	135	203	270	405	405	405	3915	4725	4725	18,900	18,900
	By Surface Area– km^2												
E3.3	Predicted surface area treated by containment and recovery (lower) – km^2	0	2	2	3	4	5	6	42	56	56	224	224
E3.4	Predicted surface area treated by containment and recovery (upper) – km^2	1	2	3	4	6	6	6	58	70	70	280	280

For E3 – Containment and Recovery, the range of figures shows the predicted recovery rates of surface oil at 50 g/m² for the lower figures and 200 g/m² for the upper figures using conventional booming systems in a J or U configuration with an encounter rate of 25-50% surface oil meaning 75%-50% of the area within the booming system has surface oil that is not within threshold concentrations <50 g/m²).

6.4.2 Response Planning: GWA Platform loss of well containment scenario (MEE-01 Scenario-02)

The deterministic modelling run showing the minimum time to commencement of oil accumulation at any shoreline receptor (at threshold of 100 g/m²) and for the cumulative oil volume accumulated across all shoreline receptors (at concentrations in excess of 100 g/m²) indicates that first shoreline impact is predicted to occur at Muiron Islands on day 71.4 (6 m^3).

Modelling results at defined response thresholds (>50 g/m²), where containment and recovery is likely to be effective, indicate that the surface area available for feasible response operations will reach a weekly peak of 2 km^2 on day 4. Viscosity alone is unlikely to prevent containment and recovery operations, but very high viscosity combined with low surface concentrations (<50 gm²) are unlikely to continue to provide a net environmental benefit. As this spreading and weathering occur, there will be limitations on available surface area that can be treated as shown in Section 5.4

Table 6-5: GWA Platform loss of well containment scenario (MEE-01 Scenario-02) – Release volumes

GWA Platform loss of well containment scenario (MEE-01 Scenario-02) – Containment and Recovery		**Day 1**	**Day 2**	**Day 3**	**Day 4**	**Day 5**	**Day 6**	**Day 7**	**Week 2**	**Week 3**	**Week 4**	**Month 2**	**Month 3**
	Oil on sea surface												
A	Total volume of oil released (surface) – m^3	240	240	240	240	240	240	240	1,680	1,680	1,512	6,048	5,376
B	Total volume of surface oil remaining after weathering (per day) – m^3	4	4	4	4	4	4	4	27	27	24	97	86

A – This volume represents the total volume of hydrocarbons released from the identified Worst-Case Credible discharge (MEE-01 Scenario-02). The total volume for this spill is released over approximately 68 days at a rate of 10 m^3 / hr

B – The GWA Condensate (GWA03) contains a relatively low proportion (~1.6% by mass) of hydrocarbon compounds that will not evaporate at atmospheric temperatures. These compounds will persist in the marine environment. The unweathered mixture has a dynamic viscosity of 0.540 *cP. The pour point of the whole oil ensures that it will remain in a liquid state over the annual temperature range observed on the North West Shelf. The mixture is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 71.6% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 19.8% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 7.0% should evaporate over several days (265 °C < BP < 380 °C).*

Table 6-6: GWA Platform loss of well containment scenario (MEE-01 Scenario-02) – Treatable hydrocarbons

GWA Platform loss of well containment scenario (MEE-01 Scenario-02)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
C	**Treatable hydrocarbons following weathering**												
C1	Total volume of surface oil >50 g/m^2 – m^3	0	0	53	115	50	0	0	0	0	0	0	0
C2	Total surface area >50 g/m^2– km^2	0	0	1	2	1	0	0	0	0	0	0	0

C1 – indicates the total remaining volume of hydrocarbons in cubic metres (m^3) on the sea surface above 50 g/m^2. Based on the information outlined in Section 2.3.3 regarding surface concentration thresholds, this is the total volume of oil that can be treated by containment and recovery and surface dispersant spraying operations.

C2 – indicates the total surface area in square kilometres (km^2) of hydrocarbons above 50 g/m^2. This is the total surface area of BAOAC 4 and above that can be treated by containment and recovery and surface dispersant spraying operations.

6.4.2.1 Response Planning Need: GWA Platform loss of well containment scenario (MEE-01 Scenario-02) – Summary

Table 6-7: GWA Platform loss of well containment scenario (MEE-01 Scenario-02) – Response Planning Need

GWA Platform loss of well containment scenario (MEE-01 Scenario-02)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3

D3	Bonn Agreement Oil Appearance Code (BAOAC) 3, 2 and 1 – Sheen												
	Volume of surface oil BAOAC 3, 2 and 1 (<50 g/m^2) – m^3	121	172	377	879	984	96	22	501	1,335	89	2138	26

Offshore response operations will always be guided by monitor and evaluate and operational monitoring activities to target the thickest part of the slick, typically BAOAC 5 – continuous true oil colour with a surface oil concentration >200 g/m^2 and BAOAC 4 – discontinuous true oil colour with a surface oil concentration between 50 and 200 g/m^2. For a surface release, the thickest oil is typically in the leading edge of the slick, driven by wind and currents. As the spill continues to weather and spread over a number of days and weeks, the surface concentration and surface area of continuous oil colour spreads and reduces to discontinuous true oil colour and finally sheen as shown above.

The response need is calculated from the surface area and volume of treatable hydrocarbons following weathering as outlined in Table 6-6. Containment and recovery operations would target the leading edge of the slick where surface concentration thresholds are met and/or to target discrete patches of thick oil at BAOAC 4 and 5.

The surface area of thickest oil (BAOAC 4 and 5) available for containment and recovery reaches a peak of approximately 2 km^2 on day 4 only where surface concentration thresholds are met. Within 24 hours, Woodside has available 1 containment and recovery operation capable of recovering up to 68 m^3 surface oil and covering an area of 1 km^2. Availability of containment and recovery operations increases to 2 by day 2, 3 by day 3, 4 by day 4, and 6 by day 5. Thus, by day 5, the recovery capacity is estimated to be up to 405 m^3 covering an area of 6 km^2. If ongoing containment and recovery operations were required and feasible, details of capability from week 2 to month 3 are included in Table 6-4.

Woodside acknowledges that no single response strategy or even combination of offshore response strategies will treat or remove 100% of the surface hydrocarbons in either surface area or volume. Woodside would require the inclusion of other response techniques to be initiated concurrently and recognises that multiple passes from vessels may be required to recover a greater proportion of the oil. Woodside is committed to a realistic, scalable response capability that is commensurate to the level of risk and able to be practically implemented and sustained within the logistical constraints of remote areas.

6.4.3 Containment and Recovery – Control Measure Options Analysis

6.4.3.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Dedicated Response Vessel in region (exclusive to Woodside)	The environmental benefits associated with containment and recovery are described above. The additional environmental benefit obtained from immediate access to this equipment, permitting deployment as soon as conditions became favourable, would result in a negligible environmental benefit – 11.25-67.5 m^3 of oil recovered per operating unit per day.	Chartering and equipping additional vessels on standby has been considered. The option is reasonably practicable but the sacrifice (charter costs and organisational complexity) is significant, particularly when compared with the anticipated effectiveness of dispersant operations to treat the spill which are available from day 2. The effectiveness of this control (encounter rate, weather dependency, availability) is rated as very low.	The cost (A$15 m per annum for the Petroleum Activity) and organisational complexity of employing a dedicated response vessel is considered disproportionate to the insignificant environmental benefit to be realised by implementing this control.	This option is not adopted as it has low effectiveness and cost is disproportionate to the minimal potential environmental benefit.	No
Dedicated Response Vessel in region (shared resource)	The environmental benefit would be similar to that described above for Woodside integrated fleet vessels.	Additional containment and recovery resources and capability can be contracted should the need arise.	The cost and complexity of implementing and maintain this alternative control measure is considered high given the predicted effectiveness. Even with consideration of shared costs, the minor benefit of this control measure does not justify the cost.	This option is not adopted as it has low effectiveness and cost is disproportionate to the minimal potential environmental benefit.	No
Regional oil spill response contractor	This option may achieve minor incremental improvements in surface oil and residual oil volumes similar to those described for integrated fleet vessels. However, given the likely vessel transit times involved to/from the offshore spill location, this option is unlikely to realise material environmental benefits additional the capability selected.	No current private response contracting capability exists that would significantly improve response timing or effectiveness in the Dampier or Exmouth regions.	N/A – not currently feasible	This option is not adopted as it is not currently feasible.	No

6.4.3.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Train additional Woodside personnel in Exmouth to coordinate containment and recovery operations	Limited environmental benefit to be gained by training additional personnel as the number of operations will be governed by the availability of response vessels.	Current capability meets need. Woodside has a pool of trained, competent offshore responders / team leaders at strategic locations to ensure timely and sustainable response. Additional personnel are available through current contracts with AMOSC and OSRL and agreements with AMSA. Marine standards & guidelines ensure vessel masters are competent for their roles. Regular audits of oil spill response organisations ensure training and competency is maintained.	Minor additional cost regarding training and maintenance of competency.	This option is not adopted as the current capability meets the need.	No

6.4.3.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Prioritise rapid sweep systems (NOFI Buster series, Desmi Speed Sweep, etc.) for	Although each rapid sweep containment and recovery operation could remove an additional 10-45 m^3 per operation per day, the environmental benefit of containment and recovery as a response technique is minor. This response technique is not considered to be as effective as surface dispersant	Rapid sweep systems allow containment and recovery operations to be undertaken at speeds of up to 3 knots. This allows for greater encounter rates and surface coverage. AMOSC has recently purchased a Speed Sweep system and a number of NOFI systems are available through Mutual Aid arrangements.	Additional costs for prioritising rapid sweep systems are negligible	Although containment and recovery remains a low-efficiency response technique, this control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

mobilisation from service providers	application to prevent hydrocarbons reaching the shore.				
Prioritise active booming systems (Ro-skim, etc.) for mobilisation from service providers	Although each active booming system could remove an additional 10-45 m^3 per operation per day, the environmental benefit of containment and recovery as a response technique is minor. This response technique is not considered to be as effective as surface dispersant application to prevent hydrocarbons reaching the shore.	Active booming systems allow containment and recovery operations without the need for an additional skimming system. This allows for greater effectiveness and continued skimming operations. Active booming systems are available through OSRL and Mutual Aid arrangements and would be prioritised for mobilisation.	Additional costs for prioritising active booming systems are negligible	Although containment and recovery remains a low-efficiency response technique, this control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	Yes
Pre-position additional containment and recovery equipment (Exmouth)	It is unlikely that faster mobilisation and deployment from Exmouth would significantly increase response effectiveness or removal of oil to create an increased environmental benefit	Facilities at Exmouth are currently limited by tides and draft for the loading and unloading of vessels with heavy plant and equipment. Access to the Navy Pier to provide an additional loading location is subject to Defence Force approval and cannot be relied upon for rapid approval in the event of an oil spill.	Limited additional cost considerations.	This option is not adopted as the complexity is disproportionate to the minimal potential environmental benefit due to the low efficiency of containment and recovery as a response technique.	No
Re-locate containment and recovery equipment on in-field vessels	The additional environmental benefit obtained from faster mobilisation and deployment would be limited by safety considerations during the initial period following the release. Once operations were considered safe, the vessels would increase recovery capacity to 11.25-67.5 m^3/day per operation. The limited oil treatment of containment and recovery and expected effectiveness of dispersant application from vessels indicates the preference would be for greater surface dispersant application capability.	Operations close to the release location are unlikely to be feasible during the initial period due to the uncertainty of the situation and potential safety impacts on personnel. Vessels may require time to return to port and load equipment, fuel etc. to allow response duration to be the maximum possible once deployed. Shortening the timeframes for vessel availability would require equipment to be pre-positioned on-board vessels.	The cost and organisational complexity of employing two dedicated response vessels (approximately A$15 m per year per vessel) is considered disproportionate to the limited environmental benefit to be realised by adopting this control	This option is not adopted as the cost is disproportionate to the minimal potential environmental benefit due to the low efficiency of containment and recovery as a response technique.	No
Purchase or pre-position larger skimmers	The environmental benefit of containment and recovery for the loss of well control scenario is minor. This response strategy is not considered to be as effective as surface dispersant application to prevent hydrocarbons reaching the shore.	Larger systems such as the Desmi Octopus or Transrec with >200 m^3 per hour capacity, could improve recovery rates, however are not readily available in Australia and not easily compatible with booming, waste and hydraulic power systems. If required and deemed to be of benefit, these systems are available through Service Providers such as OSRL.	Cost of purchasing Octopus system is A$600,000 plus additional transport, training and commissioning costs and ongoing maintenance costs. Cost for pre-positioning in Australia for the life of the asset/activity is greater than the purchase costs.	This option is not adopted as the cost is disproportionate to the minimal potential environmental benefit due to the low efficiency of containment and recovery as a response technique.	No

6.4.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional:
  - Prioritise rapid sweep systems (NOFI Buster series, Desmi Speed Sweep, etc.) for mobilisation from service providers
  - Prioritise active booming systems (Ro-skim, etc.) for mobilisation from service providers
- Improved: none selected

This document is protected by copyright. 6.5 Shoreline Protection and Deflection – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.5 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.5.1 Existing Capability – Shoreline Protection and Deflection

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/ pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.5.2 Response Planning: GWA Platform loss of well containment scenario (MEE-01 Scenario-02) – Shoreline Protection and Deflection

Planning for shoreline protection is based upon identification of Response Protection Areas (RPAs) from deterministic modelling and the logistics associated with deploying protection at these locations. The response planning scenarios indicate that this would require effective mobilisation to priority shorelines and maintenance of protection until monitor and evaluate confirms that the locations were no longer at risk. Woodside has identified the RPAs from deterministic modelling results provided from specific scenarios. The full list of RPAs predicted to be contacted by oil above response thresholds are detailed in Table 3-1.

The control measures selected provide capability to mobilise shoreline protection equipment within 24 hours (if required). Modelling predicts that only MEE-01 Scenario-02 may result in shoreline contact at response thresholds (>100 g/m2). The deterministic modelling run demonstrating the minimum time to shoreline contact at a threshold of >100 g/m^2 and the run with the greatest number of locations with accumulations at >100 g/m^2 (both Q2, Run 2) has been selected for response planning and are combined in Table 6-8 below. Initial contact is predicted within 71.4 days at Muiron Islands.

Tactical response plans exist for the RPAs identified. The plans identify values and sensitivities that would be protected at location. To allow for the best use of available shoreline protection and deflection resources, monitor and evaluate and operational monitoring activities will inform the response, targeting RPAs where contact is predicted above response threshold levels.

Table 6-8 below outlines the capability required (number of RPAs predicted to be impacted) against the capability available (number of shoreline protection and deflection operations that can be mobilised and deployed).

Table 6-8: Response Planning – Shoreline Protection and Deflection (MEE-01 Scenario-02)

GWA Platform loss of well containment scenario (MEE-01 Scenario-02)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
	Oil on shoreline (from deterministic modelling) m^3	0	0	0	0	0	0	0	0	0	0	0	6
A	Capability Required												
A1	Number of RPAs contacted (> 100 g/m^2)	0	0	0	0	0	0	0	0	0	0	0	1
B	Capability Available (operations per day)												
B1	SPD operations available – per day (lower)	0	15	15	20	20	20	20	105	105	105	560	560
B2	SPD operations available – per day (upper)	0	15	15	20	20	20	20	140	140	140	560	560
C	Capability Gap (operations per day)												
C1	SPD operations gap – per day (lower)	0	0	0	0	0	0	0	0	0	0	0	0
C2	SPD operations gap – per day (upper)	0	0	0	0	0	0	0	0	0	0	0	0

A1 – the number of Response Protection Areas contacted by surface hydrocarbons above 100 g/m^2

B1 and B2 – the upper and lower number of shoreline protection and deflection operations available (based on response planning assumptions in Section 5.5),

C1 and C2 – the gap between the upper and lower number of shoreline protection and deflection operations required in A1 compared to the operations available in B1 and B2

Table 6-9 presents the indicative tactical response plan for the identified RPAs.

Table 6-9: Indicative Tactical response plan, aims and methods for identified RPAs

Tactical Response Plan	Response aims and methods
Muiron Islands	**First response aim:** Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident **Second response aim**: Pre-clean of potential impact areas (if time allows) using rakes and shovels to move any debris above the high tide line and then segregate appropriately **Third response aim**: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate **Fourth response aim**: Collection and specialist cleaning/rehabilitation of oiled wildlife

Pre-emptive mobilisation of equipment and personnel would commence as soon as practicable prior to oil contact. Additional resources would be mobilised depending on the scale of the event to increase the length or number of shorelines being protected.

A shoreline protection and deflection response would be launched only when monitoring and modelling indicate that contact could occur and monitor and evaluate operations identify spill heading towards RPA(s).

6.5.3 Shoreline Protection and Deflection – Control Measure Options Analysis

6.5.3.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Pre-position equipment at Response Protection Areas (RPAs)	Additional environmental benefit of having equipment prepositioned is considered minor. Equipment is currently available to protect RPAs and additional shorelines, within estimated minimum times until shoreline contact at RPAs, enabling mobilisation of the selected delivery options.	The incremental environmental benefit associated with these delivery options is considered minor and unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release and the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the limited environmental benefit that might be realised. Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options. The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment in Exmouth.	Total cost to preposition protection/ deflection packages at each site of potential impact would be approx. A$6,100 per package per day.	This option is not adopted as the existing capability meets the need.	No

6.5.3.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Supplemented stockpiles of equipment in Exmouth to protect additional shorelines	Additional equipment would increase the number of receptor areas that could be protected from hydrocarbon contact. However, current availability of personnel and equipment is capable of protecting up to 30 km of shoreline, commensurate with the scale and progressive nature of shoreline impact. Additional stocks would be made available from international sources if long term up scaling were necessary. A reduction in environmental consequence from a 'B' rating (serious long-term impacts) is unlikely to be realised as a result of having more equipment available locally.	The incremental environmental benefit associated with these delivery options is considered minor and unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release and the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the limited environmental benefit that might be realised. Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options. The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment in Exmouth.	Total cost for purchase supplemental protection and deflection equipment would be approximately. A$455,000 per package.	This option is not adopted as the existing capability meets the need.	No
Additional trained personnel	The level of training and competency of the response personnel allows the shoreline protection and deflection operation is delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside People & Global Capability Surge Labour Requirement Plan. Additional personnel sourced from contracted OSRO's (OSRL/AMOSC) to manage other responders. Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 		receive a full operational/safety briefing prior to commencing operations.			

6.5.3.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response/ mobilisation time	Given modelling does not predict floating or shoreline impacts at threshold until day 71.4 [MEE-01 Scenario-02], Woodside considers that there is sufficient time for deployment of protection and deflection operations prior to impact.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial protection and deflection response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days. Hydrocarbons are not predicted to accumulate at threshold until day 71.4 at Muiron Islands [MEE-01 Scenario-02] therefore allowing enough time to re-locate existing equipment, personnel and other resources to the most appropriate areas.	The cost of establishing a local stockpile of new mitigation equipment (including protection and deflection boom) closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as the existing capability meets the need.	No

6.5.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

6.6 Shoreline Clean-up – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.6 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.6.1 Existing Capability – Shoreline Clean-up

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.6.2 Response planning: GWA Facility Operations – Shoreline Clean-up

Woodside has assessed existing capability against the WCCS and has identified that the range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover the required shoreline clean-up operations for the Petroleum Activity.

Shoreline contact is only predicted for the GWA Platform loss of well containment scenario (MEE-01 Scenario-02). For this scenario, the deterministic modelling run demonstrating the minimum time to shoreline contact at a threshold of >100 g/m^2 and the run with the greatest number of locations with accumulations at >100 g/m^2 (both Q2 Run 2) has been selected for response planning and the results are detailed in Table 6-10 below. Contact is predicted within 71.4 days at Muiron Islands (6 m^3) only therefore Woodside is satisfied that the current capability is managing risks and impacts to ALARP. These volumes assume no treatment of floating surface oil by containment and recovery prior to contact so are considered very conservative. The full list of RPAs predicted to be contacted by oil is detailed in Table 3-1 and relevant Tactical Response Plans available for identified RPAs are included in Table 6-9.

Due to the time of contact predicted, this response may not be as time critical compared to other response techniques and the scale will depend on the success of other techniques preventing oiling occurring. Further, the potential scale and remoteness of a response coupled with the uncertainty of which locations will be affected precludes the stockpiling or prepositioning of equipment specific to shorelines. The most significant constraint is accommodation and transport of personnel in Exmouth to undertake clean-up operations and to manage wastes generated during the response effort. From previous assessment of facilities in Exmouth, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day.

Table 6-10 below outlines the capability required (volume of oil on the shoreline) against the capability available (number of shoreline clean-up operations that can be mobilised and deployed). This capability is based upon Woodside's access to local response personnel and equipment. In the event of a protracted or worst-case event, Woodside has access to national and international response personnel and equipment which would be scaled to meet the response need. These volumes assume that no offshore mitigations have been applied.

Woodside has identified several options which could be mobilised to achieve defined response objectives. Evaluation considers the benefit in terms of the time to respond and the scale of response made possible by each option. The evaluation of possible control measures is summarised in Section 6.6.3.

Table 6-10: Response Planning – Shoreline Clean-up

Shoreline Clean-up (Phase 2)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3	Month 4
Oil on shoreline (from deterministic modelling) m^3														
	Shoreline accumulation (above 100 g/m^2) - m^3	0	0	0	0	0	0	0	0	0	0	0	6	0
	Oil remaining following response operations - m^3	0	0	0	0	0	0	0	0	0	0	0	0	3
A	Capability Required (number of operations)													
A1	SCU operations required (lower)	0	0	0	0	0	0	0	0	0	0	0	1	0
A2	SCU operations required (upper)	0	0	0	0	0	0	0	0	0	0	0	3	2
B	Capability Available (number of operations)													
B1	SCU operations available - Stage 2 - Manual (lower)	0	15	15	20	20	20	20	105	105	105	560	560	560
B2	SCU operations available - Stage 2 - Manual (upper)	0	15	15	20	20	20	20	140	140	140	560	560	560
C	Capability Gap													
C1	SCU operations gap (lower)	0	0	0	0	0	0	0	0	0	0	0	0	0
C2	SCU operations gap (upper)	0	0	0	0	0	0	0	0	0	0	0	0	0

A1 and A2 – the number of Shoreline Clean-up operations required based on the hydrocarbon volumes ashore above 100 g/m^2

B1 and B2 – the upper and lower number of shoreline clean-up operations available (based on response planning assumptions in Section 5.6),

C1 and C2 – the gap between the upper and lower number of shoreline clean-up operations required in A1 and A2 compared to the operations available in B1 and B2

This document is protected by copyright. 6.6.3 Shoreline Clean-up – Control measure options analysis

6.6.3.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.6.3.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional trained personnel available	The level of training and competency of the response personnel ensures the shoreline clean-up operation is delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside People & Global Capability Surge Labour Requirement Plan. Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety brief prior to commencing operations.	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	No
Additional trained personnel deployed	Maintaining a span of control of 200 competent personnel is deemed manageable and appropriate for this activity. Additional personnel conducting clean-up activities may be able to complete the clean-up in a shorter timeframe, but modelling predicts ongoing stranding of hydrocarbons over a period of weeks. Managing a smaller, targeted response is expected to achieve an environmental benefit through ensuring the shoreline clean-up response is suitable and scalable for the shoreline substrate and sensitivity type. This will ensure there is no increased impact from the shoreline clean-up through the presence of unnecessary personnel and equipment.	The figure of 200 personnel is broken down to include on 1-2 x Trained Supervisors managing 8-10 personnel/labour hire responders. This allows for multiple operational teams to operate along the extended shoreline at different locations. Typically, an additional 30-50% of the tactical workforce is required to support ongoing operations including On-Scene control, logistics, safety/medical/welfare and transport. Personnel on site will include members with the appropriate specialties to ensure an efficient shoreline clean-up. Additional personnel are available through existing contracts with oil spill response organisations, labour hire organisations and environmental panel contractors	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	No

6.6.3.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response/ mobilisation time	Given modelling does not predict floating or shoreline impacts at threshold until day 71.4 (MEE-01 Scenario-02), Woodside considers that there is sufficient time for deployment of clean-up operations prior to impact.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial protection and deflection response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days.	The cost of establishing a local stockpile of new shoreline clean-up equipment closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as the existing capability meets the need.	No

6.7 Oiled Wildlife Response – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.7.1 Existing Capability – Wildlife Response

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.7.2 Oiled Wildlife Response - Control Measure Options Analysis

6.7.2.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Direct contracts with service providers	This option duplicates the capability accessed through AMOSC and OSRL and would compete for the same resources. Does not provide a significant increase in environmental benefit.	These delivery options provide increased effectiveness through more direct communication and control of specialists. However, no significant net benefit is anticipated.	Duplication of capability – already subscribed to through contracts with AMOSC and OSRL	This option is not adopted as the existing capability meets the need.	No

6.7.2.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional wildlife treatment systems	The selected delivery options provide access to call-off contracts with selected specialist providers. The agreements ensure that these resources can be mobilised to meet the required response objectives, commensurate with the progressive nature of environmental impact and the time available to monitor hydrocarbon plume trajectories. Provides response equipment and personnel by Day 3. The additional cost in having a dedicated oiled wildlife response (equipment and personnel) in place is disproportionate to environmental benefit. These selected delivery options provide capacity to carry out an oiled wildlife response if contact is predicted; and to scale up the response if required to treat widespread contamination. Current capability meets the needs required and there is no additional environmental benefit in adopting the improvements.	Although hydrocarbon contact above wildlife response threshold concentrations (>10 g/m2) with offshore waters is expected from day one, given the low likelihood of such an event occurring and that the current capability meets the need, the cost of implementing measures to reduce the mobilisation time is considered disproportionate to the benefit. Additionally, the remote offshore location of the release site, with an earliest impact on day 71, provides sufficient opportunity for the ongoing monitoring and surveillance operations to inform the scale of the response. Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas. Oiled wildlife response capacity would be addressed for open Commonwealth waters through the AMOSC arrangements, as informed by monitor and evaluate. The cost and organisational complexity of this approach is moderate, and the overall delivery effectiveness is high.	Additional wildlife response resources could total A$1,700 per operational site per day.	This option is not adopted as the existing capability meets the need.	No
Additional trained wildlife responders	Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas. The potential environmental benefit of training additional personnel is expected to be low.	Current numbers meet the needs required and additional personnel are available through existing contracts with oil spill response organisations and environmental panel contractors. Additional equipment and facilities would be required to support ongoing response, depending on the scale of the event and the impact to wildlife and maybe sourced via existing contracts with	Additional wildlife response personnel cost A$2,000 per person per day	This option is not adopted as the existing capability meets the need.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

		OSROs. Materials for holding facilities, portable pools, enclosures and rehabilitation areas would be sourced as required.			

6.7.2.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster mobilisation time for wildlife response	Response time is limited by specialist personnel mobilisation time. Current timing is sufficient for expected first shoreline contact. This control measure provides increased effectiveness through faster mobilisation of specialists. However, no significant net environmental benefit is expected due to shoreline stranding times.	Pre-positioning vessels or equipment would reduce mobilisation time for oiled wildlife response activities. However, given the effectiveness of an oiled wildlife response is expected to be low, an earlier response would provide a marginal increase in environmental benefit.	Wildlife response packages to preposition at vulnerable sites identified through the deterministic modelling cost A$700 per package per day. The cost of having dedicated equipment and personnel available to respond faster is considered disproportionate to the environmental benefit.	This option is not adopted as the existing capability meets the need.	No

6.7.3 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

6.8 Waste Management – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.8.1 Existing Capability – Waste Management

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.8.2 Waste Management - Control Measure Options Analysis

6.8.2.1 Alternative Control Measures

Alternative Control Measures considered

Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.8.2.2 Additional Control Measures

Additional Control Measures considered

Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Increased waste storage capability	The procurement of waste storage equipment options on the day of the event will allow immediate response and storage of collected waste. The environmental benefit of immediate waste storage is to reduce ecological consequence by safely securing waste, allowing continuous response operations to occur.	Access to Veolia's storage options provides the resources required to store and transport sufficient waste to meet the need. Access to waste contractors existing facilities enables waste to be stockpiled and gradually processed within the regional waste handling facilities. Additional temporary storage equipment is available through existing contract and arrangements with OSRL. Existing arrangements meet identified need for the Petroleum Activity.	Cost for increased waste disposal capability would be approx. A$1,300 per m^3. Cost for increased onshore temporary waste storage capability would be approx. A$40 per unit per day.	This option is not adopted as the existing capability meets the need.	No

6.8.2.3 Improved Control Measures

Improved Control Measures considered

Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response time	The access to Veolia waste storage options provides the resources to store and transport waste, permitting the wastes to be stockpiled and gradually processed within the regional waste handling facilities. Bulk transport to Veolia's licensed waste management facilities would be undertaken via controlled-waste-licensed vehicles and in accordance with Environmental Protection (Controlled Waste) Regulations 2004. The environmental benefit from successful waste storage will reduce pressure on the treatment and disposal facilities reducing ecological consequences by safely securing waste. In addition, waste storage and transport will allow continuous response operations to occur.	Woodside already maintains an equipment stockpile in Exmouth to enable shorter response times to incidents. This stockpile includes temporary waste storage equipment. Woodside has access to stockpiles of waste storage and equipment in Dampier and Exmouth through existing contracts and arrangements.	The incremental benefit of having a dedicated local Woodside owned stockpile of waste equipment and transport is considered minor and cost is considered disproportionate to the benefit gained given predicted shoreline contact times.	This option is not adopted as the existing capability meets the need.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
	This delivery option would increase known available storage, eliminating the risk of additional resources not being available at the time of the event. However, the environmental benefit of Woodside procuring additional waste storage is considered minor as the risk of additional storage not being available at the time of the event is considered low and existing arrangements provide adequate storage to support the response.				

6.8.3 Selected control measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

6.9 Operational and Scientific Monitoring – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5 with those that have been selected for implementation which are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.9.1 Existing Capability – Operational and Scientific Monitoring

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/ pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.9.2 Operational and Scientific Monitoring – Control Measure Options Analysis

6.9.2.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Dedicated contracted OSM vessel (exclusive to Woodside)	Would provide marginally faster mobilisation time of first-strike monitoring resources. However, the timescale difference would be limited when compared to the availability of in-field support vessels which are equipped with water quality sampling equipment, meaning it would result in very minor to no environmental benefit.	Chartering and equipping additional vessels on standby for operational and scientific monitoring has been considered. The option is reasonably practicable but the sacrifice (charter costs and organisational complexity) is significant, particularly when existing contracted support vessels can be equipped with water quality sampling equipment. Additionally, vessels are not the limiting factor in deployment times, as the majority of operational and scientific monitoring components require trained specialists, who can take >72 hours to mobilise.	The cost and organisational complexity of contracting a dedicated response vessel is considered disproportionate to the marginal environmental benefit by adopting these delivery options.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	No

6.9.2.2 Additional control measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Pre-position a team of trained scientific monitoring personnel on standby in Dampier	Pre-positioning a team of trained scientific monitoring personnel closer to the spill location would result in quicker mobilisation times for one or two priority OMPs or SMPs to be implemented.	A trained team of scientific monitoring personnel positioned in Dampier could result in a more rapid deployment of initial monitoring. However, this option is reliant on suitable vessels being readily available in Dampier and not requiring relocation from nearby ports or adjacent offshore locations.	The costs of having a small team of trained scientific monitoring personnel available on standby in Dampier would be in excess of $3-4M / annum and would be an associated cost to the activity whether there was a spill or not.	The cost of maintaining a team of trained scientific monitoring personnel on standby in Dampier is considered disproportionate, as multiple teams of trained personnel are required to implement multiple OMPs and SMPs. It is considered more cost effective and feasible to pre-position first strike sampling kits on support vessels (see below).	No
Contract additional OSM Service Providers to increase availability of monitoring personnel in the first 2 weeks of the spill	The availability of additional monitoring personnel could theoretically increase the number of receptors and locations able to be monitored, however, the ability to deploy personnel would be subject to a range of feasibility considerations.	This option has been considered and evaluated; however, it has been discounted on the basis that deploying a significantly larger number of monitoring teams concurrently with response operations would introduce additional safety, environmental, and operational risks. The current resource assessment within ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy indicates that up to 27 monitoring teams may be required during the initial two weeks of the response. Expanding this effort further by engaging additional contracted monitoring teams would likely result in increased simultaneous operations (SIMOPs), elevating the potential for vessel interactions, collision risks, anchoring impacts, and waste discharges, thereby increasing the overall risk profile.	Cost to contract an additional OSM Service Provider.	The option to contract an additional OSM Service Provider to increase the number of contracted monitoring teams during the initial stages of the spill response has been assessed and found not to be reasonably practicable due to the elevated safety and environmental risks associated with SIMOPs, including vessel collisions, anchoring impacts, and waste discharges. These risks outweigh the marginal benefit of increased early-stage monitoring coverage, particularly given the scale of the existing response and monitoring deployment already planned.	No

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
		To ensure risk remains ALARP, a staged and scalable approach to resourcing has been adopted. Should additional monitoring capacity be required from week 3 onwards, this will be identified early through ongoing review of monitor and evaluate activities and existing monitoring efforts. Woodside will activate additional resourcing via its existing contract with the OSM Services Provider, thereby ensuring a streamlined and controlled expansion of effort. By this stage of the response, operational response activities are expected to have stabilised, reducing the likelihood and severity of SIMOPs-related risks. In addition, efficiencies may be gained by reallocating existing monitoring teams to other priority receptors where monitoring is still required, particularly in cases where termination criteria have been met at initial locations. This dynamic resourcing approach ensures that additional personnel are only deployed when necessary, thereby supporting both environmental and safety performance outcomes and maintaining ALARP principles throughout the monitoring program.			
Purchase initial water quality / hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection	The availability of initial water quality / hydrocarbon sampling kits on nearby support vessels (and an accompanying technical procedure for sample collection) will provide an opportunity for more rapid initial measurements of hydrocarbon properties and concentrations. This information will provide important initial situational awareness information that will aid decision making in both monitoring and response efforts.	This control measure will improve the availability and timeframe for initial water quality sampling.	Implementing this additional control measure will involve time and effort to source and supply initial sampling kits to the selected supply vessels. There will also be employee time involved in developing and conducting training to vessel crews on the technical procedure for sample collection.	Adoption of this control measure will provide an additional and quicker opportunity for initial water quality sampling, resulting in improved situational awareness for decision making in monitoring and response teams.	Yes
Modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)	Initial aerial surveillance provides important information for decision making in response operations, but can also provide important initial environmental monitoring data. Amending the Woodside Aerial Surveillance Observer Log to include the ability to report on location, presence and type of fauna could assist in a more rapid, effective deployment of specialised OMP teams for Marine Fauna Assessment and Oiled Wildlife Response.	This control measure is considered reasonably practicable to implement.	Cost to modify the Aerial Surveillance Observer Log is minimal and is associated with time and effort of existing employees.	Adoption of this control measure is considered to be beneficial as it could assist in more effective and efficient deployment of fauna monitoring and response efforts.	Yes
Conduct periodical review of existing baseline data sources across receptors predicted to be contacted within 7 days at the low thresholds and a probability ≥10%	This ensures that receptors with deficient baseline data are identified. This a consideration for first-strike monitoring prioritisation and the finalisation of each SMP design	This control measure is considered reasonably practicable to implement.	Cost of contract with Service Provider.	Understanding the presence or absence, suitability and quality of baseline data for receptors predicted to be contacted within 7 days, at a probability ≥ 10%, is an important preparatory measure. Understanding which receptors have insufficient baseline data will help quickly guide monitoring prioritisation and the finalisation of each SMP design and whether there is a need to include alternative designs.	Yes

6.9.2.3 Improved Control Measures considered

Improved Control Measures considered *Improved control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Adoption of the OSRL OSM Supplementary Service Agreement for OSM capability provision	A Joint Industry capability provision has considerable benefits, including an improvement to industry OSM standards; improved reliability in accessing specialist personnel; efficiencies and capability growth associated with shared testing and exercising; and greater depth in Monitoring Service Provider (MSP) capability, with a centralised contract coordinating multiple consultancies and MSPs.	This control measure has already been developed by Industry and is considered reasonably practicable to implement.	Cost of annual subscription to OSRL OSM Supplementary Service Agreement	Adopting this control measure involves additional costs, but the benefits of a Joint Industry OSM capability provision outweighs the costs and therefore this additional measure has been accepted.	Yes
Determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas	Understanding vessel specification requirements for OSM at priority locations will result in quicker mobilisation times, and more effective monitoring, as correctly equipped vessels will be made available at the commencement the monitoring effort.	This control measure is considered reasonably practicable to implement.	Cost to determine vessel specifications is minimal and is associated with time and effort of existing employees.	This control measure would result in the correct vessels being mobilised for monitoring personnel and result in quicker implementation of monitoring.	Yes

6.9.3 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity:

- Alternative: none selected
- Additional:
  - purchase water quality / hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection
  - modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)
  - conduct periodical review of existing baseline data sources for receptors predicted to be contacted within 7 days, at the low thresholds and a probability ≥ 10%.
- Improved: none selected
  - adoption of the OSRL OSM Supplementary Service Agreement for OSM capability provision
  - determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas.

This document is protected by copyright. 6.9.4 ALARP and Acceptability Summary

ALARP and Acceptability Summary		
Operational and Scientific Monitoring		
ALARP Summary	X	Known, reasonably practicable control measures have been adopted
	X	No additional, alternative and improved control measures would provide further benefit
	X	No reasonably practical additional, alternative, and/or improved control measure exists
	The resulting operational and scientific monitoring capability has been assessed against the credible spill scenarios. The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts. Known, reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be Moderate and the overall delivery effectiveness considered Medium. The operational and scientific monitoring's main objectives can be met, with the addition of one alternative control measures to provide further benefit.	
Acceptability Summary	The control measures selected for implementation manage the potential impacts and risks to ALARP. In the event of a hydrocarbon spill for the Petroleum Activity, the control measures selected, meet or exceed the requirements of Woodside Management System and industry best-practice. Operational and scientific monitoring control and activities are compliant with relevant environmental legislation and regulations, including the EPBC Act. Throughout the Petroleum Activity, relevant Australian standards and codes of practice will be followed to evaluate the impacts from a loss of well control. Stakeholder consultation undertaken for the Petroleum Activity did not receive feedback regarding concerns for Scientific Monitoring activities in response to a hydrocarbon spill. The level of impact and risk to the environment has been considered with regards to the principles of ESD; and risks and impacts from a range of identified scenarios were assessed in detail. The control measures described consider the conservation of biological and ecological diversity, through both the selection of control measures and the management of their performance. The control measures have been developed to account for credible case scenarios, and uncertainty has not been used as a reason for postponing control measures.	
On the basis from the ALARP and acceptability summary as presented above and in Sections 6.7 and 6.8 of the EP Woodside considers the adopted controls discussed manage the impacts and risks associated with implementing operational and scientific monitoring activities to a level that is ALARP and acceptable.		

This document is protected by copyright. 7 ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

The implementation of response techniques may modify the impacts and risks identified in the EP and response activities can introduce additional impacts and risks from response operations themselves. Therefore, it is necessary to complete an assessment to ensure these impacts and risks have been considered and specific measures are put in place to continually review and manage these further impacts and risks to ALARP and Acceptable levels. A simplified assessment process has been used to complete this task which covers the identification, analysis, evaluation and treatment of impacts and risks introduced by responding to the event.

7.1 Identification of impacts and risks from implementing response techniques

Each of the control measures can modify the impacts and risks identified in the EP. These impacts and risks have been previously assessed within the scope of the EP. Refer to the EP for details regarding how these risks are being managed. They are not discussed further in this document.

- atmospheric emissions
- routine and non-routine discharges
- physical presence, proximity to other vessels (shipping and fisheries)
- routine acoustic emissions vessels
- lighting for night work/navigational safety
- invasive marine species
- collision with marine fauna
- disturbance to seabed

Additional impacts and risks associated with the control measures not included within the scope of the EP include:

- drill cuttings and drilling fluids environmental impact assessment for relief well drilling
- vessel operations and anchoring
- presence of personnel on the shoreline
- human presence (manual cleaning)
- vegetation cutting
- additional stress or injury caused to wildlife
- secondary contamination from the management of waste

7.2 Analysis of impacts and risks from implementing response techniques

The table below compares the adopted control measures for this activity against the environmental values that can be affected when they are implemented.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 7.3 Evaluation of impacts and risks from implementing response techniques

Drill cuttings and drilling fluids environmental impact assessment for relief well drilling

The identified potential impacts associated with the discharge of drill cuttings and fluids during a relief well drilling activity include a localised reduction in water and seabed sediment quality, and potential localised changes to benthic biota (habitats and communities).

A number of direct and indirect ecological impact pathways are identified for drill cuttings and drilling fluids as follows:

- temporary increase in total suspended solids (TSS) in the water column;
- attenuation of light penetration as an indirect consequence of the elevation of TSS and the rate of sedimentation;
- sediment deposition to the seabed leading to the alteration of the physio-chemical composition of sediments, and burial and potential smothering effects to sessile benthic biota; and
- potential contamination and toxicity effects to benthic and in-water biota from drilling fluids.

Potential impacts from the discharge of cuttings range from the complete burial of benthic biota in the immediate vicinity of the well site due to sediment deposition, smothering effects from raised sedimentation concentrations as a result of elevated Total Suspended Solids (TSS), changes to the physico-chemical properties of the seabed sediments (particle size distribution and potential for reduction in oxygen levels within the surface sediments due to organic matter degradation by aerobic bacteria) and subsequent changes to the composition of infauna communities to minor sediment loading above background and no associated ecological effects. Predicted impacts are generally confined to within a few hundred metres of the discharge point (International Association of Oil and Gas Producers 2016) (i.e. within the EMBA for a hydrocarbon spill event).

The discharge of drill cuttings and unrecoverable fluids from relief well drilling is expected to increase turbidity and TSS levels in the water column, leading to an increased sedimentation rate above ambient levels associated with the settlement of suspended sediment particles near to the seabed or below sea surface, depending on location of discharge. Cuttings with retained (unrecoverable) drilling fluids are discharged below the water line at the MODU location, resulting in drill cuttings and drilling fluids rapidly diluting, as they disperse and settle through the water column. The dispersion and fate of the cuttings is determined by particle size and density of the retained (unrecoverable) drilling fluids, therefore, the sediment particles will primarily settle in proximity to the well locations with potential for localised spread downstream (depending on the speed of

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

currents throughout the water column and seabed) (IOGP 2016). The finer particles will remain in suspension and will be transported further before settling on the seabed.

These conclusions were supported by discharge modelling which was undertaken by Woodside in support of the Greater Enfield Development EP Modelling results indicating that the TSS plume of suspended cuttings will typically disperse to the south-west while oscillating with the tide and diminish rapidly with increasing distance from the well locations. Maximum TSS concentrations predicted for 100 m; 250 m and 1 km distances from the wellsite were 7, 5 and 1 mg/L, respectively. Furthermore, water column concentrations below 10 mg/L remain within 235 m of the discharge location for each modelled well. For all well discharge locations (outside of direct discharge sites), TSS concentration did not exceed 10 mg/l. Nelson et al. (2016) identified <10 mg/L as a no effect or sub-lethal minimal effect concentration.

The low sensitivity of the deep-water benthic communities/habitats within and in the vicinity of relief well locations, combined with the relatively low toxicity of water based muds (WBM and non-water based muds (NWBMs, no bulk discharges of NWBM and the highly localised nature and scale of predicted physical impacts to seabed biota indicate that any localised impact would likely be of a slight magnitude (especially when considering the broader consequence of the loss of well containment (LOC) event a relief well drilling activity would be responding too).

Vessel operations and anchoring

Typical booms used in containment and recovery operations are designed to float, meaning that fauna capable of diving, such as cetaceans, marine turtles and sea snakes can readily avoid contact with the boom. Impacts to species that inhabit the water column such as sharks, rays and fish are not expected. Additionally, some fauna, such as cetaceans, are likely to detect and avoid the spill area, and are not expected to be present in the proximity of containment and recovery operations.

During the implementation of response techniques, where water depths allow, it is possible that response vessels will be required to anchor (e.g. during shoreline surveys). The use of vessel anchoring will be minimal and likely to occur when the impacted shoreline is inaccessible via road. Anchoring in the nearshore environment of sensitive receptor locations will have the potential to impact coral reef, seagrass beds and other benthic communities in these areas. Recovery of benthic communities from anchor damage depends on the size of anchor and frequency of anchoring. Impacts would be highly localised (restricted to the footprint of the vessel anchor and chain) and temporary, with full recovery expected.

Presence of personnel on the shoreline

Presence of personnel on the shoreline during shoreline operations could potentially result in disturbance to wildlife and habitats. During the implementation of response techniques, it is possible that personnel may have minimal, localised impacts on habitats, wildlife and coastlines. The impacts associated with human presence on shorelines during shoreline surveys may include:

- damage to vegetation/habitat to gain access to areas of shoreline oiling;
- damage or disturbance to wildlife during shoreline surveys;
- removal of surface layers of intertidal sediments (potential habitat depletion); and
- excessive removal of substrate causing erosion and instability of localised areas of the shoreline.

Human presence

Human presence for manual clean-up operations may lead to the compaction of sediments and damage to the existing environment especially in sensitive locations such as mangroves and turtle nesting beaches. However, any impacts are expected to be localised with full recovery expected.

Waste generation

Implementing the selected response techniques will result in the generation of the following waste streams that will require management and disposal:

- liquids (recovered oil/water mixture), recovered from containment and recovery and shoreline clean-up operations
- semi-solids/solids (oily solids), collected during containment and recovery and shoreline clean-up operations

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

- debris (e.g. seaweed, sand, woods, plastics), collected during containment and recovery and shoreline clean-up operations and oiled wildlife response.

If not managed and disposed of correctly, wastes generated during the response have the potential for secondary contamination similar to that described above, impacts to wildlife through contact with or ingestion of waste materials and contamination risks if not disposed of correctly onshore.

Cutting back vegetation could allow additional oil to penetrate the substrate and may also lead to localised habitat loss. However, any loss is expected to be localised in nature and lead to an overall net environmental benefit associated with the response by reducing exposure of wildlife to oiling.

Additional stress or injury caused to wildlife

Additional stress or injury to wildlife could be caused through the following phases of a response:

- capturing wildlife
- transporting wildlife
- stabilisation of wildlife
- cleaning and rinsing of oiled wildlife
- rehabilitation (e.g. diet, cage size, housing density)
- release of treated wildlife

Inefficient capture techniques have the potential to cause undue stress, exhaustion or injury to wildlife, additionally pre-emptive capture could cause undue stress and impacts to wildlife when there are uncertainties in the forecast trajectory of the spill. During the transportation and stabilisation phases there is the potential for additional thermoregulation stress on captured wildlife. Additionally, during the cleaning process, it is important personnel undertaking the tasks are familiar with the relevant techniques to ensure that further injury and the removal of water proofing feathers are managed and mitigated. Finally, during the release phase it's important that wildlife is not released back into a contaminated environment.

7.4 Treatment of impacts and risks from implementing response techniques

In respect of the impacts and risks assessed the following treatment measures have been adopted. It must be recognised that this environmental assessment is seeking to identify how to maintain the level of impact and risks at levels that are ALARP and of an acceptable level rather than exploring further impact and risk reduction. It is for this reason that the treatment measures identified in this assessment will be captured in Operational Plans, Tactical Response Plans, and/or First Strike Plans.

Vessel operations and access in the nearshore environment

- the boom will be monitored and maintained to ensure trapped fauna are released as early as possible, with Containment and Recovery activities occurring in daylight hours only (PS 13.1)
- if vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified (PS 13.2, 16.1, 19.1, 31.3).
- shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines (PS 13.3, 16.2, 19.2, 31.4)

Presence of personnel on the shoreline

- oversight by trained personnel who are aware of the risks (PS 19.5)
- trained unit leader's brief personnel of the risks prior to operations (PS 19.6)

Human Presence

- shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations (PS 31.5)
- vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves. (PS 19.3, 31.6)

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

Waste generation

- zoning of response locations to prevent secondary contamination and minimize the mixing of clean and oiled sediment and shoreline substrates (PS 17.4)
- limiting vegetation removal to only that vegetation that has been moderately or heavily oiled (PS 19.4)
- teams will segregate liquid and solid wastes at the earliest opportunity (PS 25.1)

Additional stress or injury caused to wildlife

- operations conducted with advice from the DBCA Oiled Wildlife Advisor and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan (PS 23.1)

8 ALARP CONCLUSION

An analysis of alternative, additional and improved control measures has been undertaken to determine their reasonableness and practicability. The tables in Section 6 document the considerations made in this evaluation. Where the costs of an alternative, additional, or improved control measure have been determined to be clearly disproportionate to the environmental benefit gained from its adoption it has been rejected. Where this is not considered to be the case the control measure has been adopted.

The risks from a hydrocarbon spill have been reduced to ALARP because:

- Woodside has a significant hydrocarbon spill response capability to respond to the WCCS through the control measures identified.
- new and modified impacts and risks associated with implementing response techniques have been considered and will not increase the risks associated with the activity.
- a consideration of alternative, additional, and improved control measures identified any other control measures that delivered proportionate environmental benefit compared to the cost of adoption for this activity ensuring that:
  - known, reasonably practicable control measures have been adopted.
  - no additional, reasonably practicable alternative and/or improved control measures would provide further environmental benefit.
  - no reasonably practical additional, alternative, and/or improved control measure exists.
- a structured process for considering alternative, additional, and improved control measures was completed for each control measure.
- the evaluation was undertaken based on the outputs of the WCCS so that the capability in place is sufficient for all other scenario from this activity.
- the likelihood of the WCCS spill has been ignored in evaluating what was reasonably practicable.

9 ACCEPTABILITY CONCLUSION

Following the ALARP evaluation process, Woodside deems the hydrocarbon spill risks and impacts have been reduced to an acceptable level by meeting all of the following criteria:

- techniques are consistent with Woodside's processes and relevant internal requirements including policies, culture, processes, standards, structures and systems.
- levels of risk/ impact are deemed acceptable by relevant persons/ organisations are aligned with the uniqueness of, and/or the level of protection assigned to the environment, its sensitivity to pressures introduced by the activity, and the proximity of activities to sensitive receptors, and have been aligned with Part 3 of the EPBC Act.
- selected control measures meet requirements of legislation and conventions to which Australia is a signatory (e.g. MARPOL, the World Heritage Convention, the Ramsar Convention, and the Biodiversity Convention etc.). In addition to these, other non-legislative requirements met include:
  - Australian IUCN reserve management principles for Commonwealth marine protected areas and bioregional marine plans.
  - national Water Quality Management Strategy and supporting guidelines for marine water quality.
  - conditions of approval set under other legislation.
  - national and international requirements for managing pollution from ships.
  - national biosecurity requirements.
- industry standards, best practices and widely adopted standards and other published materials have been used and referenced when defining acceptable levels. Where these are inconsistent with mandatory/ legislative regulations, explanation has been provided for the proposed deviation. Any deviation produces the same or a better level of environmental performance (or outcome).

11 GLOSSARY AND ABBREVIATIONS

Term	Description/ definition
~	Approximately
<, ≤	Less than, less than or equal to
>, ≥	Greater then, greater than or equal to
°C	Degrees Celsius
AEP	Australian Energy Producers (formerly Australian Petroleum Production and Exploration Association [APPEA]; from 13 September 2023)
ALARP	As low as reasonably practicable; Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
AMOP	Arctic and Marine Oil Spill Program
AMOSC	Australian Marine Oil Spill Centre
AMSA	Australian Maritime Safety Authority
APPEA	Australian Petroleum Production & Exploration Association (now Australian Energy Producers (AEP); from 13 September 2023)
Availability	The availability of a control measure is the percentage of time that it is capable of performing its function (operating time plus standby time) divided by the total period (whether in service or not). In other words, it is the probability that the control has not failed or is undergoing a maintenance or repair function when it needs to be used.
BAOAC	Bonn Agreement Oil Appearance Code
BC Act	Western Australian *Biodiversity Conservation Act 2016*
BIA	Biologically Important Area
BIP	Bridging Implementation Plan
BP	Boiling point
CEM	Crisis and Emergency Management
CERCLA	United States Comprehensive Environmental Response, Compensation, and Liability Act
CIMT	Corporate Incident Management Team (Level 2 incidents)
CMT	Crisis Management Team (Level 3 incidents)
Control	The means by which risk from events is eliminated or minimised.
Control effectiveness	A measure of how well the control measures perform their required function.
Control measure (risk control measure)	The features that eliminate, prevent, reduce or mitigate the risk to environment associated with Petroleum Activity.
COP	Common Operating Picture
Credible spill scenario	A spill considered by Woodside as representative of maximum volume and characteristics of a spill that could occur as part of the Petroleum Activity.
CS	Credible scenario
cSt	Centistokes
DBCA	Western Australia Department of Biodiversity, Conservation and Attractions
DTMI	Western Australia Department of Transport and Major Infrastructure
DWH	Deepwater Horizon
EMBA	Environment that May Be Affected. The summary of quantitative modelling where the marine environment could be exposed to hydrocarbons levels exceeding hydrocarbon threshold concentrations.

Term	Description/ definition
EMSA	European Maritime Safety Agency
Environment Regulations	Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023
EP	Environment Plan
EPBC Act	Commonwealth *Environment Protection and Biodiversity Conservation Act 1999*
ESI	Environmental Sensitivity Index
FSP	First Strike Plan
ft	Feet (non-metric distance measurement)
GPGT	Geophysical and geotechnical
HSE	Health, safety and environment
HSP	Hydrocarbon Spill Preparedness
HVLP	High volume low pressure
IAP	Incident Action Plan
IC	Incident Commander
IMO	International Maritime Organization
IMS	Incident Management System
IMT	Incident Management Team (Level 1 incidents)
Incident	An event where a release of energy resulted in or had (with) the potential to cause injury, ill health, damage to the environment, damage to equipment or assets or company reputation.
IPIECA	International Petroleum Industry Environment Conservation Association
ITOPF	International Tanker Owners Pollution Federation
IUCN	International Union for Conservation of Nature
KBSF	King Bay Supply Facility
KEF	Key Ecological Feature
KGP	Karratha Gas Plant
km	Kilometre
m	Metre
MARPOL	The International Convention for the Prevention of Pollution From Ships, 1973 as modified by the Protocol of 1978. Also known as MARPOL 73/78.
MDO	Marine Diesel Oil
MEPC	Marine Environment Protection Committee (part of the IMO)
MGO	Marine Gas Oil
mm	Millimetre
MSA	Master Services Agreement
MSP	Monitoring Service Provider
MSRC	Marine Spill Response Corporation
NEBA	Net Environmental Benefit Analysis
NOAA	National Oceanic and Atmospheric Administration
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority (Australia)
NR	Nature Reserve

Term	Description/ definition
NRDA	Natural Resource Damage Assessment
OILMAP	Oil Spill Model and Response System
OM	Operational Monitoring
OMP	Operational Monitoring Plan
OPEP	Oil Pollution Emergency Plan
OSCA	Oil Spill Control Agent
OSM	Operational and Scientific Monitoring
OSPRMA	Oil Spill Preparedness and Response Mitigation Assessment
OSRL	Oil Spill Response Limited
OSTM	Oil Spill Trajectory Modelling
OWR	Oiled Wildlife Response
OWRP	Oiled Wildlife Response Plan
Performance outcome	A statement of the overall goal or outcome to be achieved by a control measure
Performance standard	The parameters against which [risk] controls are assessed to ensure they reduce risk to ALARP. A statement of the key requirements (indicators) that the control measure has to achieve in order to perform as intended in relation to its functionality, availability, reliability, survivability and dependencies.
PPA	Priority Protection Area
ppb	Parts per billion
Preparedness	Measures taken before an incident in order to improve the effectiveness of a response
PS	Performance Standard
Reasonably practicable	... a computation ... made by the owner, in which the quantum of risk is placed on one scale and the sacrifice involved in the measures necessary for averting the risk (whether in money, time or trouble) [showing whether or not] that there is a gross disproportion between them ... made by the owner at a point of time anterior to the accident. (Judgement: Edwards v National Coal Board [1949])
Receptor areas	Geographically referenced areas such as bays, islands, coastlines and/or protected area (World Heritage Area [WHA], Commonwealth or State marine reserve or park) containing one or more receptor type.
Receptor Sensitivities	This is a classification scheme to categorise receptor sensitivity to an oil spill. The Environmental Sensitivity Index (ESI) is a numerical classification of the relative sensitivity of a particular environment (particularly different shoreline types) to an oil spill.
Receptors at risk	Physical, biological and social resources identified as at risk from hydrocarbon contact using oil spill modelling predictions.
Regulator	NOPSEMA are the Environment Regulator under the Environment Regulations.
Reliability	The probability that at any point in time a control measure will operate correctly for a further specified length of time.
Response technique	The key priorities and objectives to be achieved by the response plan Measures taken in response to an event to reduce or prevent adverse consequences.
RPA	Response Protection Area
S&EM	Security and Emergency Management
SCAT	Shoreline Clean-up Assessment Techniques
SCU	Shoreline clean-up

Term	Description/ definition
SHP-MEE	State Hazard Plan – Maritime Environmental Emergencies
SIMA	Spill Impact Mitigation and Assessment
SIMAP	Integrated Oil Spill Impact Model System
SIMOPS	Simultaneous operations
SMP	Scientific Monitoring Plan
SOPEP	Shipboard Oil Pollution Emergency Plan
Survivability	Whether or not a control measure is able to survive a potentially damaging event is relevant for all control measures that are required to function after an incident has occurred.
Threshold	Hydrocarbon threshold concentrations applied to the risk assessment to evaluate hydrocarbon spills. These are defined as: surface hydrocarbon concentration – ≥10 g/m^2, dissolved – ≥10 ppb and entrained hydrocarbon concentrations – ≥1,000 ppb.
ToA	Testing of Arrangements
TRP	Tactical Response Plan
UAS	Unmanned Aerial System
UAV	Unmanned Aerial Vehicle
UK	United Kingdom
VOC	Volatile Organic Compound
WA	Western Australia
WAOWRP	WA Oiled Wildlife Response Plan
WCCS	Worst Case Credible Scenario
WHA	World Heritage Area
Woodside	Woodside Energy Limited

ANNEX A: NET ENVIRONMENTAL BENEFIT ANALYSIS DETAILED OUTCOMES

A NEBA has been conducted to assess the net environmental benefit of different response techniques to selected receptors in the event of an oil spill from the Petroleum Activity for Well LOC (subsea) of Yodel-3 condensate and Well LOC (surface) of GWA03 condensate. The complete list of potential receptor locations within the EMBA within the Petroleum Activity is included in Section 6.8 of the EP.

The locations utilised for the NEBA were limited to the identified RPAs of the Petroleum Activity identified from modelling (see Section 3 for outline of selection). These include receptors which have potential for the following:

- surface contact (>50 g/m^2)
- surface contact (>10 g/m^2 for oiled wildlife response)
- shoreline accumulation (>100 g/m^2) at any time

The detailed NEBA assessment outcomes are shown below. The GWA Facility Operations preoperational NEBAs contains the full assessments.

Table A-1: NEBA assessment technique recommendations for Well LOC (subsea) of Yodel 3 condensate (MEE-01 Scenario-01)

Receptor	Monitor and evaluate	Containment and recovery	Dispersant application: sub-sea	Dispersant application: >20 m water depth and > 10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Well control and intervention
Montebello MP	Yes	No	No	No	Not applicable	Not applicable	Not applicable	Not applicable	Yes	No	No	Yes

NEBA impact ranking classification guidance

To reduce variability between assessments, the following ranking descriptions have been devised to guide the workshop process:

			Degree of impact[8]	Potential duration of impact	Equivalent Woodside Corporate Risk Matrix Consequence Level
Positive	3P	Major	Likely to prevent: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-today business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches) or regulatory designations.	Decrease in duration of impact by > 5 years	N/A
	2P	Moderate	Likely to prevent: • significant impact to a single phase of reproductive cycle of biological receptors • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors.	Decrease in duration of impact by 1–5 years	N/A
	1P	Minor	Likely to prevent impacts on: • significant proportion of population or breeding stages of biological receptors • socio-economic receptors such as: – significant impact to the sensitivity of protective designation; or – significant and long-term impact to business/industry.	Decrease in duration of impact by several seasons (< 1 year)	N/A
	0	Non-mitigated spill impact	**No detectable difference to unmitigated spill scenario.**		
Negative	1N	Minor	Likely to result in: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches), or regulatory designations.	Increase in duration of impact by several seasons (< 1 year)	Increase in risk by one sub-category, without changing category (e.g. Minor (E) to Minor (D))
	2N	Moderate	Likely to result in: • significant impact to a single phase of reproductive cycle for biological receptors; or • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. This level of negative impact is recoverable and unlikely to result in closure of business/industry in the region.	Increase in duration of impact by 1–5 years	Increase in risk by one category (e.g. Minor (D) to Moderate (C or B))
	3N	Major	Likely to result in impacts on: • significant proportion of population or breeding stages of biological receptors • socio-economic receptors resulting in either: – significant impact to the sensitivity of protective designation; or – significant and long-term impact to business/industry.	Increase in duration of impact by > 5 years or unrecoverable	Increase in risk by two categories (e.g. Minor (E) to Major (A))

.

8 NOTE: the maximum likely impact should be considered; for example, if a spill were to directly impact the behaviour that results in an impact to reproduction and/or the breeding population (such as fish failing to aggregate to spawn), then the score should be a 2 or 3 rather than a 1. Similarly, if a change in behaviour resulted in an increased risk of mortality of a population, then it should be scored as a 2 or 3

ANNEX B: MONITOR AND EVALUATE ACTIVATION AND TERMINATION CRITERIA

Table B-1: Monitor and evaluate objectives, triggers and termination criteria

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Predictive Modelling of Hydrocarbons to Assess Resources at Risk	Predictive modelling focuses on the conditions that have prevailed since a spill commenced, as well as those that are forecasted in the short term (1–3 days ahead) and longer term. Predictive modelling utilises computer-based forecasting methods to predict hydrocarbon spill movement and guide the management and execution of spill response operations to maximise the protection of environmental resources at risk. The objectives of predictive modelling are to: • Provide forecasting of the movement and weathering of spilled hydrocarbons • Identify resources that are potentially at risk of contamination • Provide simulations showing the outcome of alternative response options (booming patterns etc.) to inform on-going Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP	Predictive modelling will be triggered immediately following a level 2/3 hydrocarbon spill.	The criteria for the termination of predictive modelling are: • The hydrocarbon discharge has ceased and no further surface oil is visible • Response activities have ceased • Hydrocarbon spill modelling (as verified by surveillance observations) predicts no additional natural resources will be impacted

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Surveillance and reconnaissance to detect hydrocarbons and resources at risk	Surveillance and reconnaissance aims to provide regular, on-going hydrocarbon spill surveillance throughout a broad region, in the event of a spill. The objectives of surveillance and reconnaissance are: • Verify spill modelling results and recalibrate spill trajectory models. • Understand the behaviour, weathering and fate of surface hydrocarbons. • Identify environmental receptors and locations at risk or contaminated by hydrocarbons. • Inform ongoing Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP. • To aid in the subsequent assessment of the short- to long-term impacts and/or recovery of natural resources (assessed in SMPs) by ensuring that the visible cause and effect relationships between the hydrocarbon spill and its impacts to natural resources have been observed and recorded during the operational phase.	Surveillance and reconnaissance will be triggered immediately following a level 2/3 hydrocarbon spill.	The termination triggers for the Surveillance and reconnaissance are: • 72 hours has elapsed since the last confirmed observation of surface hydrocarbons. • Latest hydrocarbon spill modelling results do not predict surface exposures at visible levels.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Pre-emptive assessment of sensitive receptors at risk	Pre-emptive shorelines assessment aims to undertake a rapid assessment of the presence, extent and current status of shoreline sensitive receptors prior to contact from the hydrocarbon spill, by providing categorical or semi-quantitative information on the characteristics of resources at risk. The primary objective of pre-emptive shorelines assessment is to confirm understanding of the status and characteristics of environmental resources, predicted by predictive modelling and surveillance, to be at risk, to further assist in making decisions on the selection of appropriate response actions and prioritisation of resources. Indirectly, qualitative/semi-quantitative pre-contact information collected by pre-emptive shorelines assessment on the status of environmental resources may also aid in the verification of environmental baseline data and provide context for the assessment of environmental impacts, as determined through subsequent SMPs. Pre-emptive shorelines assessment would be undertaken in liaison with WA DTMI as the control agency once the oil is in State Waters (if a Level 2/3 incident).	Triggers for commencing pre-emptive shorelines assessment include: • Contact of a sensitive habitat or shoreline is predicted by predictive modelling and surveillance. • The pre-emptive assessment methods can be implemented before contact from hydrocarbons (once a receptor has been contacted by hydrocarbons it will be assessed via SCAT.	The criteria for the termination of pre-emptive shorelines assessment at any given location are: • Locations predicted to be contacted by hydrocarbons have been contacted. • The location has not been contacted by hydrocarbons and is no longer predicted to be contacted by hydrocarbons (resources should be reallocated as appropriate).

ANNEX C: PETROLEUM ACTIVITY OSM ACTIVITY SPECIFIC REQUIREMENT AND VERIFICATION OF OSM-BIP ADEQUACY

The Woodside OSM-BIP[2] comprehensively presents important information for OSM assessment and implementation, including the process for assessing OSM requirements for each activity. This Annex provides the activity-specific information required for the GWA Facility Operations (hereafter referred to as the Petroleum Activity) OSM Assessment, including:

- OSM Planning Area;
- monitoring priorities;
- mobilisation and implementation timeframes; and
- resourcing requirements and capability assessment.

C.1 Determine if the activity OSM Planning Area fits within the Combined OSM Planning Area

The OSM Planning Area for the Petroleum Activity credible spill scenarios (as shown in Figure C - 1) fits within the Combined OSM Planning Area (Figure 2-1 in the OSM-BIP).

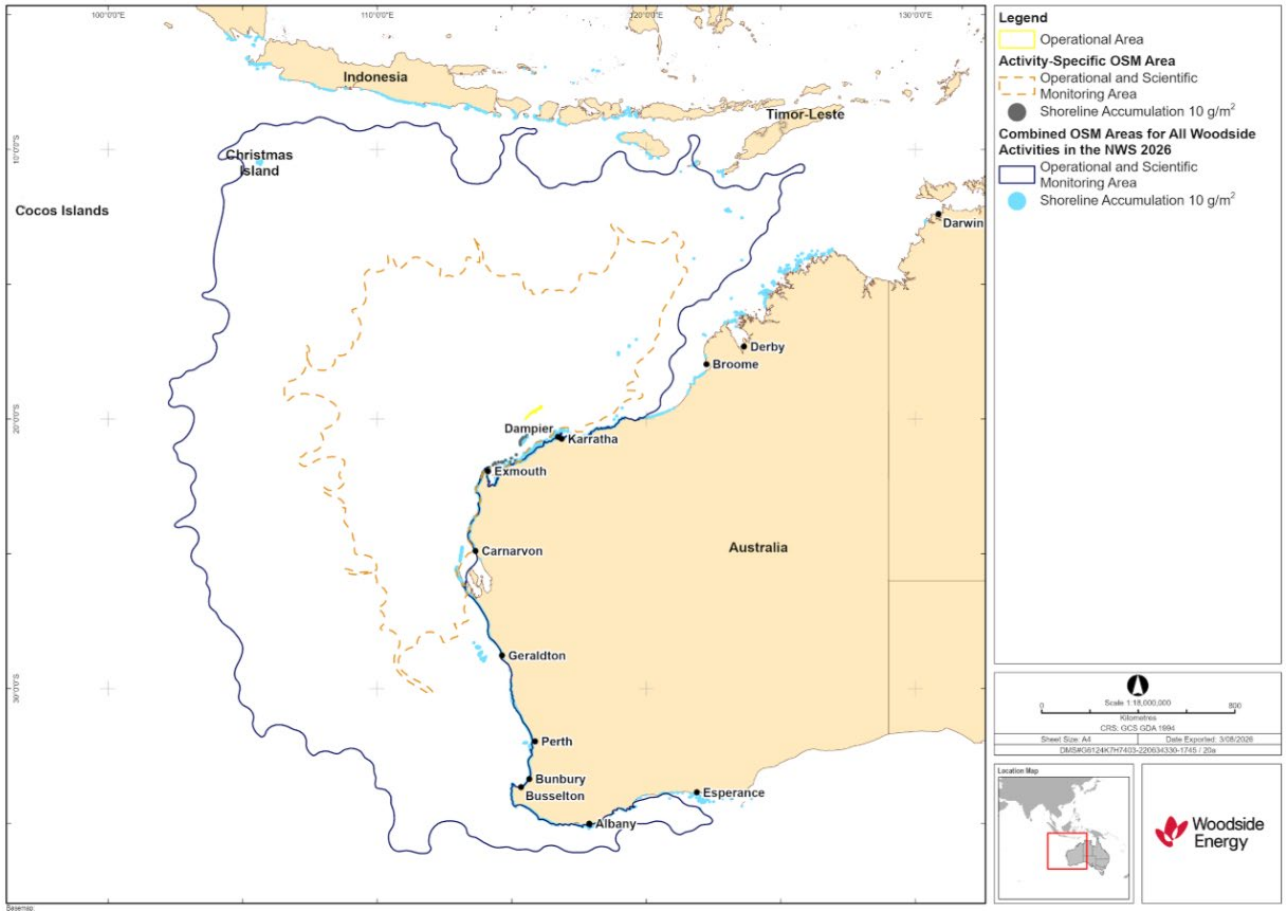

Figure C - 1: Petroleum Activity OSM Planning Area based on the area potentially contacted by the low (below ecological impact) hydrocarbon thresholds in the event of the worst-case credible spill scenarios (MEE-01 Scenario-01, MEE-01 Scenario-02, MEE-02 Scenario-03, MEE-02 Scenario-04, MEE-02 Scenario-05 and MEE-05 Scenario-08)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

C.2 Determine activity-specific monitoring priorities

Assess spill exposure risk using trajectory modelling

Woodside has reviewed the stochastic oil spill modelling results for the worst-case credible spill scenarios listed in Table 2-1 and as outlined in Section 2.2 of the OSM-BIP, identified receptors contacted at a higher probability of rapid contact. Table C - 1 presents the receptors contacted within 14 days at a probability >10% at the low threshold for dissolved (≥10 ppb), entrained (≥10 ppb), floating (≥1 g/m^2), and shoreline contact (≥10 g/m^2).

Evaluate availability of adequate baseline data

The availability of baseline data may influence monitoring priorities. Section 4 of the OSM-BIP outlines Woodside's baseline review and evaluation process. Using the Marine Environment Baseline Database, Woodside has reviewed baseline data for all of the receptors predicted of being rapidly contacted at a higher probability from Petroleum Activity activities (Table C - 1) to help determine which receptors and key features have insufficient or no baseline data available and should be given a higher monitoring priority.

It is anticipated that some receptors and locations may be impacted before monitoring teams can begin the assessments. Given this constraint, and the limited baseline data at many priority monitoring locations and receptors, scientific monitoring will likely need to use a combination of approaches including gradient analysis, impact versus control comparisons, and lines of evidence methodologies. During a spill, it may be necessary to identify additional unaffected control sites for comparative monitoring where possible. As such, control sites have been factored into capability planning in Section C.4.

Consideration of Key Ecological Features, Biologically Important Areas and transient receptors

A number of broadscale ecological features are located within the OSM Planning Area and have been considered in monitoring prioritisation and OSM capability planning for the Petroleum Activity activities. The following Key Ecological Features (KEFs) (and their distances to the Operational Area) are noted in Table 4-15 of the EP:

- Ancient Coastline at 125 m Depth Contour (overlaps Operational Area)
- Continental Slope Demersal Fish Communities (25 km west-southwest from Operational Area)
- Glomar Shoal (45.2 km east from the Operational Area)
- Exmouth Plateau (122 km west from the Operational Area)
- Canyons Linking the Cuvier Abyssal Plain and the Cape Range Peninsula (181 km southwest from the Operational Area)
- Commonwealth Waters Adjacent to Ningaloo Reef (226 km southwest from the Operational Area)
- Western Demersal Slope and associated Fish Communities of the Central Western Province (693 km southwest from Operational Area)

The Ancient Coastline at 125 m Depth Contour KEF overlaps the Petroleum Activity Operational Area, so is at a higher risk of contact with hydrocarbons. All KEFs within the OSM Planning Area are described in detail in Section 4.7 and Appendix C of the EP. These KEFs include subsea receptors therefore, OSM planning and resourcing for this activity includes relevant monitoring requirements, such as water quality, sediment quality, benthic habitats and fish for these features (refer to Table C - 3 and Table C - 9).

The OSM Area also overlaps a number of Biologically Important Areas (BIAs) with protected species potentially occurring in the area, as described in Section 4.6 of the EP and listed in Table C - 3. A number of the BIAs and protected species are located within the geographical extents of other receptors, such as marine turtles within the Montebello Marine Park, so these BIAs and protected species would automatically be included in the relevant SMPs for that receptor (refer to Table C - 6). Where BIAs, protected species and KEFs are situated away from the monitoring priorities, they will be captured in the Offshore Environs monitoring unit described in Table C - 6.

Initial monitoring priorities

Monitoring prioritisation during the initial stages of a spill should focus on sensitive receptors with the highest risk of adverse consequences and where oil spill modelling predicts high probability of rapid contact. During the initial monitoring response, emphasis will be placed on receptors contacted by floating, shoreline, and

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Goodwyn Alpha Facility Operations Environment Plan.

dissolved hydrocarbon phases. If a receptor is only contacted by low concentrations of entrained hydrocarbons and not by any other hydrocarbon phase, it will be considered a lower priority during the initial monitoring response.

To further guide monitoring prioritisation in the event of a spill, Woodside has also compared the availability of baseline data against the WA State-based protection prioritisation evaluation rankings. The WA DTMI protection priority rankings were established through the Western Australian Marine Oil Pollution Risk Assessment process. These rankings evaluate each receptor's vulnerability to marine oil spills, considering impacts from both floating and dissolved oil, as shown in Table C - 4. This information is then used to determine the resultant initial monitoring priorities for the activity.

Table C - 4: Initial monitoring priorities

Receptor	Key sensitivities / values	Relevant key periods	Baseline Priority	DTMI Ranking (Floating oil)	DTMI Ranking (Dissolved oil)	Initial Monitoring Priority
Southern Pilbara – Islands and Shoreline	Mangroves	N/A	Low	3	3	Low
	Turtles Critical nesting habitat for green turtle (*Chelonia mydas*) (endangered), flatback turtle (*Natator depressus*) (data deficient), hawksbill turtle (*Eretmochelys imbricata*) (critically endangered) and loggerhead (*Caretta caretta*) (vulnerable).	Oct to Apr	Low	4	3	Medium
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Australian humpback dolphin (*Sousa sahulensis*) (vulnerable), Indo-Pacific bottlenose dolphin (unknown) and dugong (*Dugong dugon*) (vulnerable) utilise the shallow intertidal waters around islands.	Humpback whale migration: Jun to Oct	High	3	2	Medium
	Birds Staging point/feeding area for migratory shore birds. Seabird nesting, resting and foraging on and around islands.	Migratory shorebirds: Aug to Apr Seabirds: Species dependant	Low	3	2	Low
	Fish Green sawfish (*Pristis zijsron*) (critically endangered).	Unknown	Low	4	5	High
	Coral and other subsea benthic habitats	Coral spawning: Mar & Oct	High	3	4	High
	Socio-economic Recreational fishing/ charter boats, tourism related to water-based activities and nature. Camping beaches.	Year-round	High	4	4	High
Montebello Islands	Mangroves Montebello Islands' mangrove communities are regarded as globally unique.	N/A	High	3	3	Medium
	Turtles Nesting area for green (*Chelonia mydas*) (endangered), flatback (*Natator depressus*) (data deficient), and hawksbill (*Eretmochelys imbricata*) (critically endangered) turtles. The islands are recognised as critical habitat for flatback turtles and for hawksbill turtles, with key sites for the latter including Ah Chong Island, South East Island, and Trimouille Island.	Turtle nesting Nov to Mar	High	4	3	High
	Marine mammals Pygmy blue whale (vulnerable) and humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Resident populations of Indo-Pacific bottlenose dolphin (*Tursiops aduncus*) (unknown and Australian humpback dolphins (*Sousa sahulensis*) (vulnerable). Dugong (*Dugong dugon*) (vulnerable) foraging.	Pygmy blue whale migration: Apr to Aug Humpback whale migration: Jun to Oct	High	3	2	Medium
	Birds Significant seabird nesting and foraging areas. Staging point/feeding area for migratory shore birds.	Seabird: Species dependant Migratory shorebirds: Aug to Apr	High, with the exception of wedge-tailed shearwater on Ah Chong Island (low)	3	2	Medium
	Coral and other subsea benthic primary producers	Coral spawning: Mar & Oct	High	3	4	High
	Socio-economic Pearling (inactive/pearling zones). Very significant for recreational fishing and charter boat tourism (Marine Management Area). Social amenities and other tourism. Nominated place (National Heritage).	Year-round	High	3	2	Medium
Barrow Island	Mangroves	N/A	High	3	3	Medium
	Turtles Regionally and nationally significant green turtle (*Chelonia mydas*) (endangered) (western side) and flatback turtle (*Natator depressus*) (data deficient) (eastern side) nesting. Small numbers of hawksbill turtle (*Eretmochelys imbricata*) (critically endangered) nesting.	Year round, peaking Oct to Jan	High, with the exception of nesting flatback turtles (low)	4	3	High

Receptor	Key sensitivities / values	Relevant key periods	Baseline Priority	DTMI Ranking (Floating oil)	DTMI Ranking (Dissolved oil)	Initial Monitoring Priority
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Resident populations of bottlenose dolphins and Australian humpback dolphin (*Sousa sahulensis*) (vulnerable). Dugong (*Dugong dugon*) (vulnerable) foraging.	Humpback whale migration: Jun to Oct	High	3	2	Medium
	Birds Nationally significant site for migratory shorebirds, serving both as a key staging area during migration and as a non-breeding destination. Double Island has important bird nesting sites (shearwaters and sea eagles).	Migratory shorebirds: Aug to Apr	Low	2	1	Low
	Coral and other subsea benthic primary producers	Coral spawning: Mar & Oct	High	3	4	High
	Socio-economic Significant for recreational fishing and charter boat tourism, Nominated place (National heritage), Industry – Reverse Osmosis Plant and port operations. Petroleum Activities such as Barrow Island petroleum production.	Year-round	High	5	5	High
Muiron Islands	Turtles Turtle nesting – major loggerhead (*Caretta caretta*) (vulnerable) site, significant green turtle (*Chelonia mydas*) (endangered) nesting site, low density hawksbill turtle (*Eretmochelys imbricata*) (critically endangered) nesting, occasional flatback (*Natator depressus*) (data deficient) presence	Loggerhead peak nesting: Nov to Jan Green peak nesting Dec to Jan	High	4	3	High
	Coral and other subsea benthic primary producers	Coral spawning: Mar & Oct	Low	3	4	Medium
	Birds Seabird nesting and foraging. Internationally important shorebird area	Seabird nesting: approximately Sep–Feb Migratory shorebirds: Aug to Apr	High	2	1	Low
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area.	Humpback whale migration: Jun to Oct	High	3	2	Medium
	Fish Shallow macroalgal habitats identified as important juvenile habitat for blue-spotted emperor (*Lethrinus punctulatus*) (least concern).	Year-round	Low	1	1	Low
	Socio-economic and heritage Exmouth gulf prawn fishery (Muiron is western boundary); significant for recreational fishing and charter boat tourism	Prawn fishery – April to November	High	1	2	Low
Montebello AMP	Coral and other subsea benthic primary producers A prominent seafloor feature in the Marine Park is Tryal Rocks consisting of two close coral reefs. The reefs are emergent at low tide.	Coral spawning: Mar & Oct	High	3	4	High
	Turtles Biologically important internesting, foraging, mating, and nesting habitat for turtles.	Nesting green and flatback turtles: Oct to Mar (hawksbill can nest all year)	High	3	3	Medium
	Birds Biologically important breeding habitat for seabirds.	Species dependant	High	3	2	Medium
	Whale shark Biologically important habitat for whale shark (*Rhincodon typus*) (endangered)		High	3	4	High
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area.	Jun to Oct	High	3	2	Medium
	Socio-economic Pearling (inactive/pearling zones). Very significant for recreational fishing and charter boat tourism (Marine Management Area). Shipwreck (Tryal).	Year-round	High	3	2	Medium
Gascoyne AMP	Birds	Species specific	High	3	2	Medium

Receptor	Key sensitivities / values	Relevant key periods	Baseline Priority	DTMI Ranking (Floating oil)	DTMI Ranking (Dissolved oil)	Initial Monitoring Priority
	Biologically important breeding habitat for seabirds: wedge-tailed shearwater (*Ardenna pacifica*) (least concern); roseate tern (*Sterna dougallii*) (least concern)					
	Turtle Biologically important internesting habitat for turtles	Main nesting: Hawksbill July-Mar Loggerhead Sept-Mar	High	3	3	Medium
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Pygmy blue whales (*Balaenoptera musculus brevicauda*) (endangered) foraging and migration area.	Pygmy blue whale migration: Apr to Aug (north bound) and Oct to Dec (south bound) Humpback whale migration: Jun to Oct	High	3	2	Medium
Ningaloo AMP	Coral and other subsea benthic primary producers Commonwealth waters adjacent to Ningaloo Reef (valued for high productivity and aggregations of marine life).	Coral spawning: Mar & Oct	Low	3	4	Medium
	Fish Continental slope demersal fish communities (valued for high levels of endemism and diversity).	-	Low	1	1	Medium
	Shark Foraging habitat for whale sharks (*Rhincodon typus*) (endangered)	Whale sharks – Mar to Jul	Low	3	4	High
	Birds Biologically important breeding habitat for seabirds: fairy tern (*Sternula nereis*) (vulnerable); wedge-tailed shearwater (*Ardenna pacifica*) (least concern); roseate tern (*Sterna dougallii*) (least concern)	Species specific	High	3	2	Medium
	Turtle Biologically important internesting habitat for turtles	Main nesting: Hawksbill July-Mar Green Sept-Mar Flatback Sept-Mar Loggerhead Sept-Mar	Low	4	3	Medium
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Pygmy blue whales (*Balaenoptera musculus brevicauda*) (endangered) foraging and migration area. Dugong (*Dugong dugon*) (vulnerable) breeding, calving, foraging and nursing habitat.	Pygmy blue whale migration: Apr to Aug (north bound) and Oct to Dec (south bound) Humpback whale migration: Jun to Oct	High	3	2	Medium
Argo-Rowley Terrace AMP	Benthic habitat The marine park contains ecosystems typical of two provincial settings: the Northwest Transition, with shelf break, continental slope, and much of the Argo Abyssal Plain, where Mermaid, Clerke, and Imperieuse Reefs form a biodiversity hotspot; and the Timor Province, dominated by warm, nutrient-poor waters in which submarine canyons are key drivers of productivity and marine life aggregations (Parks Australia n.d.).	-	High	3	4	High
	Birds Biologically important resting and breeding habitat for seabirds.	Species specific	High	3	2	Medium
	Marine mammals Migratory pathway for pygmy blue whales (*Balaenoptera musculus brevicauda*). The marine park contains submarine canyons that link the deep Argo Abyssal Plain with the shallower Rowley Terrace and Scott Plateau. These canyons transport sediments downslope and modify currents, creating periodic upwelling that increases surface-water productivity and provides important habitat for the pygmy blue whale.	April to December	High	3	2	Medium
Glomar Shoals	Benthic habitat Rocky hard substrates support diverse sessile benthic communities, including hard and foliose corals, sponges, octocorals, coralline algae and macroalgae. These coral, algal and filter-feeder assemblages provide essential habitat structure and food resources for demersal fish and sea snake populations.	-	Medium	3	4	High
	Fish	-	Medium	1	2	Low

C.3 Mobilisation and timing of OMP and SMP implementation

Table C - 5 provides a list of OMPs and SMPs relevant to Petroleum Activity activities, as well as indicative timeframes for mobilisation of each OMP and SMP for key receptors. In addition, monitor and evaluate activities will capture initial observations of fauna, habitat, and other sensitive receptors. Water samples will be collected during vessel surveillance for OM1: Hydrocarbon Characterisation, when safe to do so. SCAT teams will begin mobilisation within 48–72 hours of notification and will also document fauna observations. This information will be provided to the IMT to aid early decision making per the process outlined in Section 18.1 of the OSM-BIP.

Table C - 5: Indicative OMP and SMP implementation schedule for OSM activities if initiation criteria are met

Proximity to spill source	Monitoring type	0–48 hours from OSM activation	Within 72 hours of OSM activation	~5–7 days from OSM activation	Weeks 1–2 from OSM activation	Ongoing
Spill site and surrounding waters	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations. • Commence activation and mobilisation of OM personnel.	• OM1: Hydrocarbon Characterisation, where resources are available (e.g. Supply Vessel with onboard sampling equipment). • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM5: Rapid Marine Fauna Surveillance • Continue to finalise OMPs. • Continue to activate and mobilise OM personnel.	• Continued (as per ongoing arrangements)	Continued (as per ongoing arrangements)	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (e.g. Situation Unit) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill.
	SM	• Commence activation and mobilisation process. • Activation of SMP Team Leads.	• Continue to activate and mobilise personnel. • Work on finalising SMPs.	• SM1: Water Quality Impact Assessment • SM2: Sediment Quality Impact Assessment • SM6: Benthic Habitat Assessment • SM7: Marine fish and elasmobranch assemblages assessment	Continued	Continue SMP monitoring until termination criteria are met
Sensitive receptors predicted to be contacted within 7 days	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations. • Commence activation and mobilisation of OM personnel.	• OM1: Hydrocarbon Characterisation • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM5: Rapid Marine Fauna Surveillance • Continue to finalise OMPs. • Continue to activate and mobilise OM personnel.	• Continued (as per on-going arrangements)	Continued (as per on-going arrangements)	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (Situation Unit Lead) and used in the Incident Action Planning process for the next operational period. C.4 Determine the OSM resourcing requirements and assess capability for the activity

To guide the resourcing requirements assessment for the Petroleum Activity, the spill scenario (see Table 2-1) most likely to require the greatest initial capability was selected for further assessment. Selection was based on stochastic modelling results, focussing on the scenario predicted to contact the greatest number of receptors at the low hydrocarbon thresholds for floating, shoreline or dissolved contact within 14 days and at the highest contact probabilities. If a receptor is only contacted by low concentrations of entrained hydrocarbons and not by any other hydrocarbon phase, it will be considered a lower priority during the initial monitoring response as outlined in Section 2.2 of the OSM-BIP. The hydrocarbon release caused by well loss of containment (subsea) (MEE-01 Scenario-01) was identified as the worst-case scenario, affecting the most locations within 14 days and determined to require the greatest OSM capability.

The first 14 days of the response has been selected as the focus area for the OSM resourcing assessment as it is the period during which resources are likely to be overwhelmed, before additional resources (including appropriately qualified personnel, suitable vessels and additional monitoring equipment) can be scaled in locally and from interstate and international resources. Other factors influencing the selection of the scenario with the highest capability requirements were location of the spill, proximity to receptors, and hydrocarbon properties. The OSM Services Provider Contract includes provision of scale-up resources, which would be considered and mobilised as soon as practicable following the spill.

Monitoring Units

Using the stochastic modelling results, Woodside has grouped the monitoring priorities for the Petroleum Activity activities into monitoring 'units' (Table C - 6). These units incorporate all of the possible receptors that may be contacted by the Petroleum Activity scenarios shown in Table C - 1 at a probability >10%. Receptors only contacted by entrained hydrocarbons and no other phase of hydrocarbon were not included. These unit groupings are based on consultation with experienced monitoring personnel and planners, who often group these receptors together for time-bound monitoring projects. The grouping of units is based on factors such as access and distance to ports, SIMOPS of multiple vessels and teams working in a close area, travel time between individual locations/receptors and time taken to collect samples for each SMP.

The monitoring units presented in Table C - 6 also include KEFs, BIAs and transient species. Additional information on the seasonality of the receptors can be found in Appendix B of the OSM-BIP and in Section 4.7 of the EP. Each monitoring unit will require 1-2 teams during the initial response (first 14 days). The number of teams allocated to each unit will depend on the extent of the spill, the outcome of the monitoring prioritisation finalised at the time of the spill (Section 13 of the OSM-BIP), the ALARP assessment, and SIMOPs.

It should be noted that not all monitoring units will be contacted by a single spill and that the list below has been generated from stochastic modelling results.

Table C - 6: Monitoring units for Petroleum Activity activities relevant to stochastic modelling results

Receptors within each Unit	Type
Barrow

Deterministic modelling

To better understand worst-case capability OSM requirements for this activity, deterministic modelling was undertaken for the loss of well containment from the Yodel Updip well, releasing 300,985 m^3 Yodel-3 Condensate (MEE-01 Scenario-01). The deterministic run with the most receptors contacted by dissolved hydrocarbons at ≥10 ppb within 14 days (Q3, Run 09) was selected for further analysis. Deterministic modelling enables oil spill planners to assess the results of a single run from the stochastic oil spill modelling results, helping to assess the possible worst-case capability requirements. The results of this deterministic assessment are presented in Table C - 7.

To help understand which Monitoring Units will be contacted by the worst-case single spill, Figure C - 2 shows the Monitoring Units predicted to be contacted by the floating, shoreline and dissolved hydrocarbon phases.

The resources required to commence operational and scientific monitoring components during weeks 1–2 are presented in Table C - 8 and Table C - 9 respectively, which are based on the locations requiring a baseline review in Table C - 2, the implementation schedule outlined in Table C - 5, and the worst-case deterministic trajectory outlined in Table C - 7, including the resources required for monitoring unaffected control sites.

Woodside's OSM capability arrangements are detailed in Sections 9 and 10 of the OSM-BIP. These sections demonstrate that Woodside has established arrangements to mobilise up to 5-6 teams for most OMPs and SMPs, confirming that the OSM capability requirements for the Petroleum Activity (Table C - 8 and Table C - 9) are satisfied by the existing capability arrangements in the OSM-BIP.

Table C - 8: Resources required for initially implementing operational monitoring plans for the Petroleum Activity spill scenarios

OMP	Week 1 (total)	Week 2 (total)	Arrangement
OM1: Hydrocarbon characterisation*^	1 team spill site and surrounds # 1 team Montebello Unit **Total 2 teams**	1 team spill site and surrounds # 1 team Montebello Unit 1 team Ningaloo Offshore Unit 1 team Ningaloo Nearshore Unit 1 team Southern Pilbara Unit **Total 5 teams**	OSRL OSM Supplementary Service Agreement Woodside Contracted Vessel Providers Laboratory arrangements
OM2: Hydrocarbon in water assessment*	Refer to OMP: Hydrocarbon properties and weathering behaviour at sea resourcing* (all sites)		OSRL OSM Supplementary Service Agreement Woodside Contracted Vessel Providers
OM3: Hydrocarbon in sediment assessment*	Refer to OMP: Hydrocarbon properties and weathering behaviour at sea resourcing* (all sites)		OSRL OSM Supplementary Service Agreement Woodside Contracted Vessel Providers
OM5: Rapid marine fauna surveillance	1 team to conduct aerial surveys for spill site and surrounds and Montebello Unit, 1 team for Ningaloo Offshore, Ningaloo Nearshore and Southern Pilbara (2 observers per aircraft) **Total 2 teams** *Note: Fauna related SMPs are likely to be initiated simultaneously or following aerial assessment with vessel and ground based fauna surveys carried out as part of the relevant fauna SMP.*		OSRL OSM Supplementary Service Agreement Woodside Contracted Vessel Providers Aviation contractors
OM6: Shoreline clean-up assessment	Detail on resources required for shoreline clean-up assessment is presented in Section 5.6.		Australian Marine Oil Spill Centre (AMOSC) Master Services Agreement (MSA) and/or OSRL OSM Supplementary Service Agreement Woodside Contracted Vessel Providers State/Territory Response Teams and AMSA National Response Team
OM7: Air quality modelling (responder health and safety)	**1 model**	**1 model**	3rd party modelling provider / OSRO
Total number of teams	**4 teams**	**8 teams**	

Specific monitoring units are mentioned for planning and guidance purposes based on a worst-case planning approach. In the event of an actual spill, other locations and/or receptors may be contacted and the ability to access these locations (i.e. with consideration of safety and simultaneous operations (SIMOPS)) would be assessed. This would be identified and managed as part of implementation as per the guidance in Section 13 of the BIP.

** Initial co-mobilisation between OMP: Hydrocarbon properties and weathering behaviour at sea, OMP: Water quality assessment, and OMP: Sediment quality assessment*

^ These resources may not be required if relevant scientific monitoring components' initiation criteria have been triggered.

CONTROL AGENCIES AND INCIDENT CONTROLLERS

Source	Location	Level	Jurisdictional Authority/ Hazard Management Agency	Control Agency	Incident Controller
Spill from facility including subsea infrastructure Note: pipe laying and accommodation vessels are considered a "facility" under Australian regulations	Commonwealth waters	1	NOPSEMA	Woodside	Person In Charge (PIC) with support from Onshore Team Leader (OTL)
		2/3		Woodside	Corporate Incident Management Team Incident Commander (CIMT IC)
	State waters	1/2/3	Western Australian Department of Transport and Major Infrastructure (DTMI)	DTMI	DTMI Incident Controller
	Within port limits	1	DTMI	Port Authority	Port Harbour Master
		2/3		Port Authority/ DTMI	Port Harbour Master/ DTMI Incident Controller
Spill from vessel Note: SOPEP should be implemented in conjunction with this document	Commonwealth waters	1	Australian Marine Safety Authority (AMSA)	AMSA	Vessel Master
		2/3		AMSA	AMSA (with response assistance from Woodside)
	State waters	1/2/3	DTMI	DTMI	DTMI Incident Controller
	Within port limits	1	DTMI	Port Authority	Port Harbour Master
		2/3		Port Authority/ DTMI	Port Harbour Master/ DTMI Incident Controller

SPILLS IN STATE/PORT WATERS

In the event of a hydrocarbon spill (hereafter 'spill') where Woodside Energy Ltd ('Woodside') is the responsible party and the spill may impact State waters and shorelines, Woodside (or the Vessel Master) will commence the initial response actions and notify the Western Australian Department of Transport and Major Infrastructure (DTMI). In the event that Woodside is the responsible party for a spill that occurs within port limits or impacts port waters, Woodside will notify the Port Authority and DTMI for all spills.

Initially Woodside will be required to make available an appropriate number of suitably qualified persons to work in the DTMI IMT (APPENDIX F – Woodside Liaison Officer Resources to DTMI). DTMI / the Port Authority's role as the Controlling Agency in State waters/ within port limits does not negate the requirement for Woodside to have appropriate plans and resources in place to adequately respond to a marine hydrocarbon spill incident in State Waters/ within port limits or to commence the initial response actions to a spill prior to DTMI establishing incident control in line with DTMI *Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements* (July 2020). Cost recovery arrangements for offshore marine pollution incidents (MOP) are in accordance with Section 9 of the Guidance Note:

https://www.transport.wa.gov.au/mediaFiles/marine/MAC_P_Westplan_MOP_OffshorePetroleumIndGuidance.pdf

Woodside's Incident Management Structure for a hydrocarbon spill, including Woodside Liaison Officer's command structure within DTMI can be seen at APPENDIX E – Woodside Incident Management Structure.

The coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines is shown in APPENDIX D – Coordination structure for a concurrent hydrocarbon spill in both commonwealth and state waters/ shorelines.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

RESPONSE PROCESS OVERVIEW

For guidance on credible scenarios and hydrocarbon characteristics, refer to APPENDIX A

ALL INCIDENTS

Notify the Woodside Communication Centre (WCC) on:

[1]

If further support required, Incident Commander or delegate to implement this Oil Pollution First Strike Plan per relevant actions detailed in **Table 1-1** and **Table 2-1**.

LEVEL 1

FACILITY INCIDENT	VESSEL INCIDENT
Coordinate pre-identified tactics in **Table 2-1** of this Oil Pollution First Strike Plan. Remember to download each Operational Plan.	Notify AMSA or Port Authority (if within port limits) and coordinate pre-identified tactics in **Table 2-1** of this Oil Pollution First Strike Plan Remember to download each Operational Plan.

If the spill escalates such that the site cannot manage the incident, inform the WCC on:

[1] and escalate to a level 2/3 incident.

LEVEL 2/3

FACILITY INCIDENT	VESSEL INCIDENT
Handover control to CIMT and notify DTMI or Port Authority (if within port limits)	Handover control to AMSA or Port Authority (if within port limits) and stand up CIMT to assist.
Commence quick revalidation of the recommended strategies in **Table 2-1** taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.	If requested by AMSA/Port Authority: Commence quick revalidation of the recommended strategies in **Table 2-1** taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.
Create an Incident Action Plan (IAP) for all ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational Net Environmental Benefit Analysis (NEBA) see the OSPRMA Appendix A	If requested by AMSA/Port Authority: Create an IAP for all ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational NEBA see the OSPRMA Appendix A

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

1. NOTIFICATIONS

The Incident Controller or delegate must ensure the below notifications (Table 1-1) are completed within the designated timeframes.

For spills from a vessel, relevant notifications must be undertaken by a Woodside representative.

Table 1-1: Notifications

In the event of an incident between campaign vessels, also activate relevant vessel Emergency Response Plans and/or Bridging Documents

Timing	By	To	Name	Contact	Instruction	Form	Complete? (✓)
NOTIFICATIONS FOR ALL LEVELS OF SPILL							
Immediately	Offshore Installation Manager (OIM) or Vessel Master	Woodside Communication Centre (WCC)	Corporate Incident Management Team Incident Commander (CIMT IC)	[1]	Verbally notify WCC of event and estimated volume and hydrocarbon type. If further support required, implement this Oil Pollution First Strike Plan per relevant actions detailed in Table 1-1 and Table 2-1.	Verbal	
Within 2 hours	Woodside Site Rep (WSR), CIMT IC or Delegate	National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA[1])	Incident notification office	[2]	Verbally notify NOPSEMA for spills >80 litres[2]. Record notification using Initial Verbal Notification Form or equivalent and send to NOPSEMA as soon as practicable (cc to NOPTA and DMPE).	Link	
Within 3 days	WSR, CIMT IC or Delegate				Provide a written NOPSEMA Incident Report Form as soon as practicable (no later than 3 days after notification) (cc to NOPTA and DMPE) NOPSEMA [2] NOPTA [3] DMPE [4]	[2]	
As soon as practicable	CIMT IC or Delegate	Woodside	Environment Unit Leader	As per roster	Verbally notify Environment Unit Leader of event and seek advice on relevant performance standards from EP	Verbal	
Within 2 hours of becoming aware of a marine pollution incident (MOP) that occurs in or may impact state waters	CIMT IC or Delegate	WA Department of Transport and Major Infrastructure (DTMI)	DTMI Maritime Environmental Emergency Response Unit (MEER) Duty Officer	[5]	Verbally notify DTMI MEER Duty Officer that a spill has occurred and, if required, request use of equipment stored in Karratha. Follow up with a written Marine Pollution Report (POLREP) as soon as practicable following verbal notification. Additionally, DTMI to be notified if spill is likely to extend into WA State waters. Request DTMI to provide Liaison to Woodside IMT.	[5]	
Within 24 hours of Woodside reporting the incident to the appropriate authority	CIMT IC or Delegate	Department of Primary Industries and Regional Development (DPIRD)			Notification to DPIRD via email within 24 hours of Woodside reporting the incident to the appropriate authority [6]	Email	
Within 24 hours of Woodside reporting the incident to the appropriate authority	CIMT IC or Delegate	WA Fishing Industry Council (WAFIC)	Industry Liaison Officer	[7]	Notification to WAFIC via email within 24 hours of Woodside reporting the incident to the appropriate authority: [7]	Verbal/ email	
As soon as practicable if spill arises in or is likely to extend into port limits.	CIMT IC or Delegate	Pilbara Ports	Pilbara Ports Dampier Vessel Traffic Services (VTS)	[8]	Any gas or liquid hydrocarbon release within or close to the Dampier Port boundary should be reported immediately to the Pilbara Ports Dampier VTS	Verbal/ [8]	
As soon as practicable	CIMT IC or Delegate	Department of Climate Change, Energy, the Environment and Water (DCCEEW) Director of National Parks (DNP)	Marine Park Compliance Duty Officer	[9]	The DNP should be made aware of oil/gas pollution incidences which occur within a marine park or are likely to impact on a marine park as soon as possible. Notification should be provided to the 24 hour Marine Compliance Duty Officer. The notification should include: • titleholder details • time and location of the incident (including name of marine park likely to be effected) • proposed response arrangements as per the Oil Pollution Emergency Plan (e.g. dispersant, containment, etc.)	Verbal	

[1] Notification to NOPSEMA must be from a Woodside Representative.

[2] An uncontrolled release of petroleum liquids exceeding 80 litres is required to be reported as a dangerous occurrence related to safety at a facility, under clause 82 of Schedule 3 of the OPGGS Act and Part 4 of the Safety Regulations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Timing	By	To	Name	Contact	Instruction	Form	Complete? (✓)
					• confirmation of providing access to relevant monitoring and evaluation reports when available; and • contact details for the response coordinator. Note that the DNP may request daily or weekly Situation Reports, depending on the scale and severity of the pollution incident		
As soon as practicable if there is potential for oiled wildlife or the spill is expected to contact land or waters managed by WA Department of Biodiversity, Conservation and Attractions	CIMT IC or Delegate	WA Department of Biodiversity, Conservation and Attractions (DBCA)	Duty Officer	[10]	Phone call notification	Verbal	
As soon as practicable	Public Information	Relevant persons/ organisations	To be determined	To be determined	Should it be identified that additional persons such as, but not limited to, commercial fishers or tourism operators may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for Goodwyn Alpha Facility Operations. Relevant persons/ organisations will be re-assessed throughout the response period.	Verbal initially	
As soon as practicable	Public Information	Relevant cultural authorities	To be determined	To be determined	Should it be identified that relevant cultural authorities may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for Goodwyn Alpha Facility Operations. Relevant cultural authorities will be re-assessed throughout the response period.	Verbal initially	
ADDITIONAL NOTIFICATIONS TO BE MADE ONLY IF SPILL IS FROM A VESSEL							
"Without delay" as per *Protection of the Sea (Prevention of Pollution from Ships) Act 1983* (Cth) s 11(1)	Vessel Master	Australian Maritime Safety Authority (AMSA)	Rescue Coordination Centre (RCC)	[11]	Verbally notify AMSA RCC of the hydrocarbon spill. Follow up with a written Harmful Substances Report (POLREP) as soon as practicable following verbal notification.	[11]	
ADDITIONAL LEVEL 2/3 NOTIFICATIONS							
As soon as practicable	CIMT IC or Delegate	AMOSC	AMOSC Duty Manager	[12]	Notify AMOSC that a spill has occurred and follow-up with an email from the **CIMT IC/ CIMT Deputy IC/ CMT Leader** to formally activate AMOSC. Determine what resources are required consistent with the AMOSPlan and detail in a Service Contract that will be sent to Woodside from AMOSC upon activation.	[12]	
As soon as practicable	CIMT IC or Delegate	Oil Spill Response Limited (OSRL)	OSRL Duty Manager	[13]	Notification for all services: • Contact OSRL duty manager and request assistance from technical advisor. • Send the completed notification form to OSRL as soon as practicable.	[13]	
					Mobilisation of response personnel/ equipment: For mobilisation of response personnel/ resources, send the Mobilisation Form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside i.e. **CIMT IC/ CIMT Deputy IC/ CMT Leader**. OSRL can advise the names on the call out authority list, if required.	[13]	
					Mobilisation of Operational and Scientific Monitoring service: For mobilisation of Operational and Scientific Monitoring (OSM) service, send the OSM Mobilisation Form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside i.e. **CIMT IC/ CIMT Deputy IC/ CMT Leader**. OSRL can advise the names on the call out authority list, if required.	[13]	
As soon as practicable if extra personnel are required for incident support	CIMT IC or Delegate	Marine Spill Response Corporation (MSRC)	MSRC Response Manager	[14]	Activate the contract with MSRC (in full) for the provision of up to 14 personnel depending on what skills are required. Please note that provision of these personnel from MSRC are on a best endeavours basis and are not guaranteed.	Verbal	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2. RESPONSE TECHNIQUES

Table 2-1: Response techniques

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO	Cond.					
Monitor and evaluate – tracking buoy	Yes	Yes	ALL	Deploy the oil spill tracking buoy within 2 hours in the event of release of hydrocarbons to the marine environment. If no oil spill tracking buoy is available, mobilise unit from the King Bay Supply Facility (KBSF) stockpile.	Operations	**WITHIN 2 HOURS:** Tracking buoy deployed within 2 hours.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk in Operational Monitoring Operational Plan. Deploy tracking buoy in accordance with Link.
Monitor and evaluate – predictive modelling	Yes	Yes	ALL	Undertake initial modelling using OceansMap and weathering fate analysis using Automated Data Inquiry for Oil Spills (ADIOS) or refer to the hydrocarbon information in Appendix A.	Environment	**WITHIN 24 HOURS:** Initial modelling within 6 hours using the OceansMap tool.	Predictive Modelling of Hydrocarbons to Assess Resources at Risk in Operational Monitoring Operational Plan. *Planning Section to download immediately and follow steps*
	Yes	Yes	ALL	Send Oil Spill Trajectory Modelling (OSTM) form (Appendix B, Form 7) to RPS Response ([15]). Outputs will be uploaded to OceansMap by RPS.	Environment	**WITHIN 24 HOURS:** Detailed modelling within 4 hours of RPS Response receiving information from Woodside.	
Monitor and evaluate – aerial surveillance	Yes	Yes	ALL	Aviation Unit Leader to commence aerial observations in daylight hours. Aerial surveillance observer to complete log in Appendix B Form 8.	Logistics – Aviation	**WITHIN 24 HOURS:** 2 trained aerial observers. 1 aircraft available. Report made available to the IMT within 2 hours of landing after each sortie.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk in Operational Monitoring Operational Plan. *Planning Section to download immediately and follow steps*
Monitor and evaluate – satellite tracking	Yes	Yes	ALL	Environment Unit Leader to action satellite imagery services. This may be obtained via: • AMOSC Duty Manager: [12] • OSRL Duty Manager: [13] • KSAT: [16] • Others identified by CIMT	Environment	**WITHIN 24 HOURS:** Service provider will confirm availability of an initial acquisition within 2 hours. Data received to be uploaded into Woodside Common Operating Picture.	
Revalidate pre-operational NEBA	Yes	Yes	ALL	Environment Unit Leader to revalidate pre-operational NEBA against current situational awareness from monitor and evaluate techniques.	Environment	**WITHIN 24 HOURS**: Revalidate pre-operational NEBA and incorporate into IAP	Pre-operational NEBAs
Monitor and evaluate – pre-emptive assessment of receptors at risk	Yes	Yes	ALL	Consider the need to mobilise resources to undertake pre-emptive assessment of sensitive receptors at risk.	Planning or Environment	In agreement with WA DTMI, deployment of 2 specialists for each of the Response Protection Areas (RPA) with predicted impacts.	Pre-emptive Assessment of Sensitive Receptors in Operational Monitoring Operational Plan.
Operational monitoring – shoreline assessment	Yes	Yes	ALL	Consider the need to mobilise resources to undertake shoreline assessment surveys.	Planning or Environment	In agreement with WA DTMI, deployment of 2 specialists trained in Shoreline Clean-up Assessment Technique (SCAT) for each of the RPAs with predicted impacts.	Mobilise OSM service via OSRL: [13] Refer to OSM Bridging Implementation Plan – Part B for additional implementation information: Link Refer to Joint Industry Operational And Scientific Monitoring Plan Framework for activation criteria and additional supporting information.
Operational and Scientific Monitoring	Yes	Yes	ALL	Consider the need to mobilise OSM resources via third party service provider.	Environment	**WITHIN 4 HOURS**: Notify service provider of spill event. **OSM:** OMPs and SMPs will be activated in accordance with the initiation criteria provided in Tables 9-1 and 9-2 of the Joint Industry OSM Framework (APPEA [now AEP], 2021)	
Surface dispersant	No	No	N/A	This response strategy is not recommended.			
Containment and recovery	No	Potentially	L2/3	Mobilise equipment from Woodside, AMOSC and State stockpiles and relevant personnel. Consider mobilisation of interstate/international containment and recovery equipment and relevant personnel (i.e. OSRL).	Logistics and Planning	**WITHIN 48 HOURS:** 2 containment and recovery operations deployed within 48 hours (if required). **DAY 4:** 2 additional containment and recovery operations using 3rd party provider resources available by day 4 (if required).	Containment and Recovery Operational Plan *Logistics Section to download and follow steps*

3. RESPONSE PROTECTION AREAS

Action: Provide relevant Control Agency with applicable Tactical Response Plans for any Response Protection Areas (RPAs) identified during operational monitoring.

Based on hydrocarbon spill modelling results, no receptors have been identified as priority protection areas, as none have the potential to be contacted by hydrocarbon at or above impact threshold levels within 48 hours of a spill.

Hydrocarbon spill modelling results indicate the sensitive receptors listed below have the potential to be contacted by hydrocarbons beyond 48 hours of a spill:

- Muiron Islands / Muiron Islands Management Area (day 71.4)

Tactical Response plans for this location can be accessed via the link here and include the details of potential forward operating bases and staging areas.

Oil Spill Trajectory Modelling specific to the spill event will be required to determine the regional sensitive receptors to be contacted beyond 48 hours of a spill.

Figure 3-1 illustrates the location of regional sensitive receptors in relation to the Goodwyn Alpha Facility Operations Operational Area.

Consideration should be given to other stakeholders (including mariners) in the vicinity of the spill location. **Table 3-1** indicates the assets within the vicinity of the Goodwyn Alpha Facility Operations Operational Area.

Table 3-1: Assets in the vicinity of the Goodwyn Alpha Facility Operations Operational Area

Asset	Distance and direction from Operational Area	Operator
North Rankin Complex	Adjacent to Operational Area	Woodside
Pluto Platform	12.2 km west	Woodside
Okha FPSO	32.8 km east	Woodside
Angel Platform	49.4 km east north east	Woodside
Wheatstone Platform	12.6 km north west	Chevron
Reindeer Platform	50.4 km south south east	Santos
Wandoo A/B	73.2 km south east	Vermillion
Stag	77.6 km south south east	Jadestone

4. DISPERSANT APPLICATION

Dispersant is not considered an appropriate response strategy for this activity as described in the Goodwyn Alpha Facility Operations Environment Plan Appendix D (Woodside's Oil Spill Preparedness and Response Mitigation Assessment).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5. GLOSSARY AND ABBREVIATIONS

Term	Definition
ADIOS	Automated Data Inquiry for Oil Spills
AEP	Australian Energy Producers (formerly Australian Petroleum Production & Exploration Association)
ALARP	As low as reasonably practicable. Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
AMOSC	Australian Marine Oil Spill Centre
AMSA	Australian Maritime Safety Authority
APPEA	Australian Petroleum Production & Exploration Association (now AEP)
BP	Boiling point
CIMT	Corporate Incident Management Team
CS	Credible Scenario
DBCA	Western Australian Department of Biodiversity, Conservation and Attractions
DCCEEW	Commonwealth Department of Climate Change, Energy, the Environment and Water
DMPE	Western Australian Department of Mining, Petroleum and Exploration
DNP	Director of National Parks
DPIRD	Western Australian Department of Primary Industries and Regional Development
DTMI	Western Australian Department of Transport and Major Infrastructure
EOC	Emergency Operations Centre
EP	Environment Plan
FOB	Forward Operating Base
HMA	Hazard Management Agency
HSE	Health, safety and environment
IAP	Incident Action Plan
IC	Incident Commander
ICC	Incident Control Centre
IMT	Incident Management Team
KBSB	King Bay Supply Base
MDO	Marine Diesel Oil
MEECC	Maritime Environmental Emergency Coordination Centre
MEER	Maritime Environmental Emergency Response
MGO	Marine gas oil
MOP	Marine oil pollution
MSRC	Marine Spill Response Corporation
N/A	Not applicable / available
NEBA	Net Environmental Benefit Analysis
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority (Australia)
OIM	Offshore Installation Manager
OPEP	Oil Pollution Emergency Plan
OSM	Operational and Scientific Monitoring

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Term	Definition
OSPRMA	Oil Spill Preparedness and Response Mitigation Assessment
OSRL	Oil Spill Response Limited
OSTM	Oil Spill Trajectory Modelling
OTL	Onshore Team Leader
PIC	Person In Charge
POLREP	Pollution Report
RCC	Rescue Coordination Centre
RPA	Response Protection Area
SCAT	Shoreline Clean-up Assessment Technique
SMPC	State Marine Pollution Coordinator
SOPEP	Shipboard Oil Pollution Emergency Plan
TRP	Tactical Response Plan
WA	Western Australia
WAFIC	WA Fishing Industry Council
WCC	Woodside Communications Centre
WCCS	Worst Case Credible Scenario
WSR	Woodside representative

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX A – CREDIBLE SPILL SCENARIOS AND HYDROCARBON INFORMATION

Table A - 1: Credible spill scenarios and hydrocarbon information

Scenario	Product	API gravity	Volume	Residue	Weathering rate		Suggested ADIOS2 Analogue[3]
MEE-01 Scenario-01 (WCCS) Well blowout: hydrocarbon release caused by well loss of containment (subsea)	*Yodel-3 Condensate*	54.4°	300,985 m^3	2.5% of 7,524.62 m^3	12 hours (BP < 180 °C)	63.1%	*NWS Condensate*
					24 hours (180 °C < BP < 265 °C)	25.3%	
					Several days (265 °C < BP < 380 °C)	9.1%	
MEE-01 Scenario-02 Well blowout: hydrocarbon release caused by well loss of containment (surface)	*GWA-03 Condensate*	57.6°	171,033m^3	1.6% of 2,736.53 m^3	12 hours (BP < 180 °C)	71.6%	*NWS Condensate*
					24 hours (180 °C < BP < 265 °C)	19.8%	
					Several days (265 °C < BP < 380 °C)	7.0%	
MEE-05 Scenario-08 Instantaneous release after a loss of marine vessel separation or vessel collision	*MDO*	37.2°	1000 m^3	5% residue of 50 m^3	12 hours (BP < 180 °C)	6.0%	Diesel Fuel Oil – Southern USA 1 (API 37.2°)
					24 hours (180 °C < BP < 265 °C)	34.6%	
					Several days (265 °C < BP < 380 °C)	54.4%	

[3] Initial screening of possible ADIOS2 analogues considered hydrocarbons with similar APIs. Suggested selection is based on the closest distillation cut to the Woodside hydrocarbon. Only hydrocarbons with >380°C distillation cuts were included in selection process.

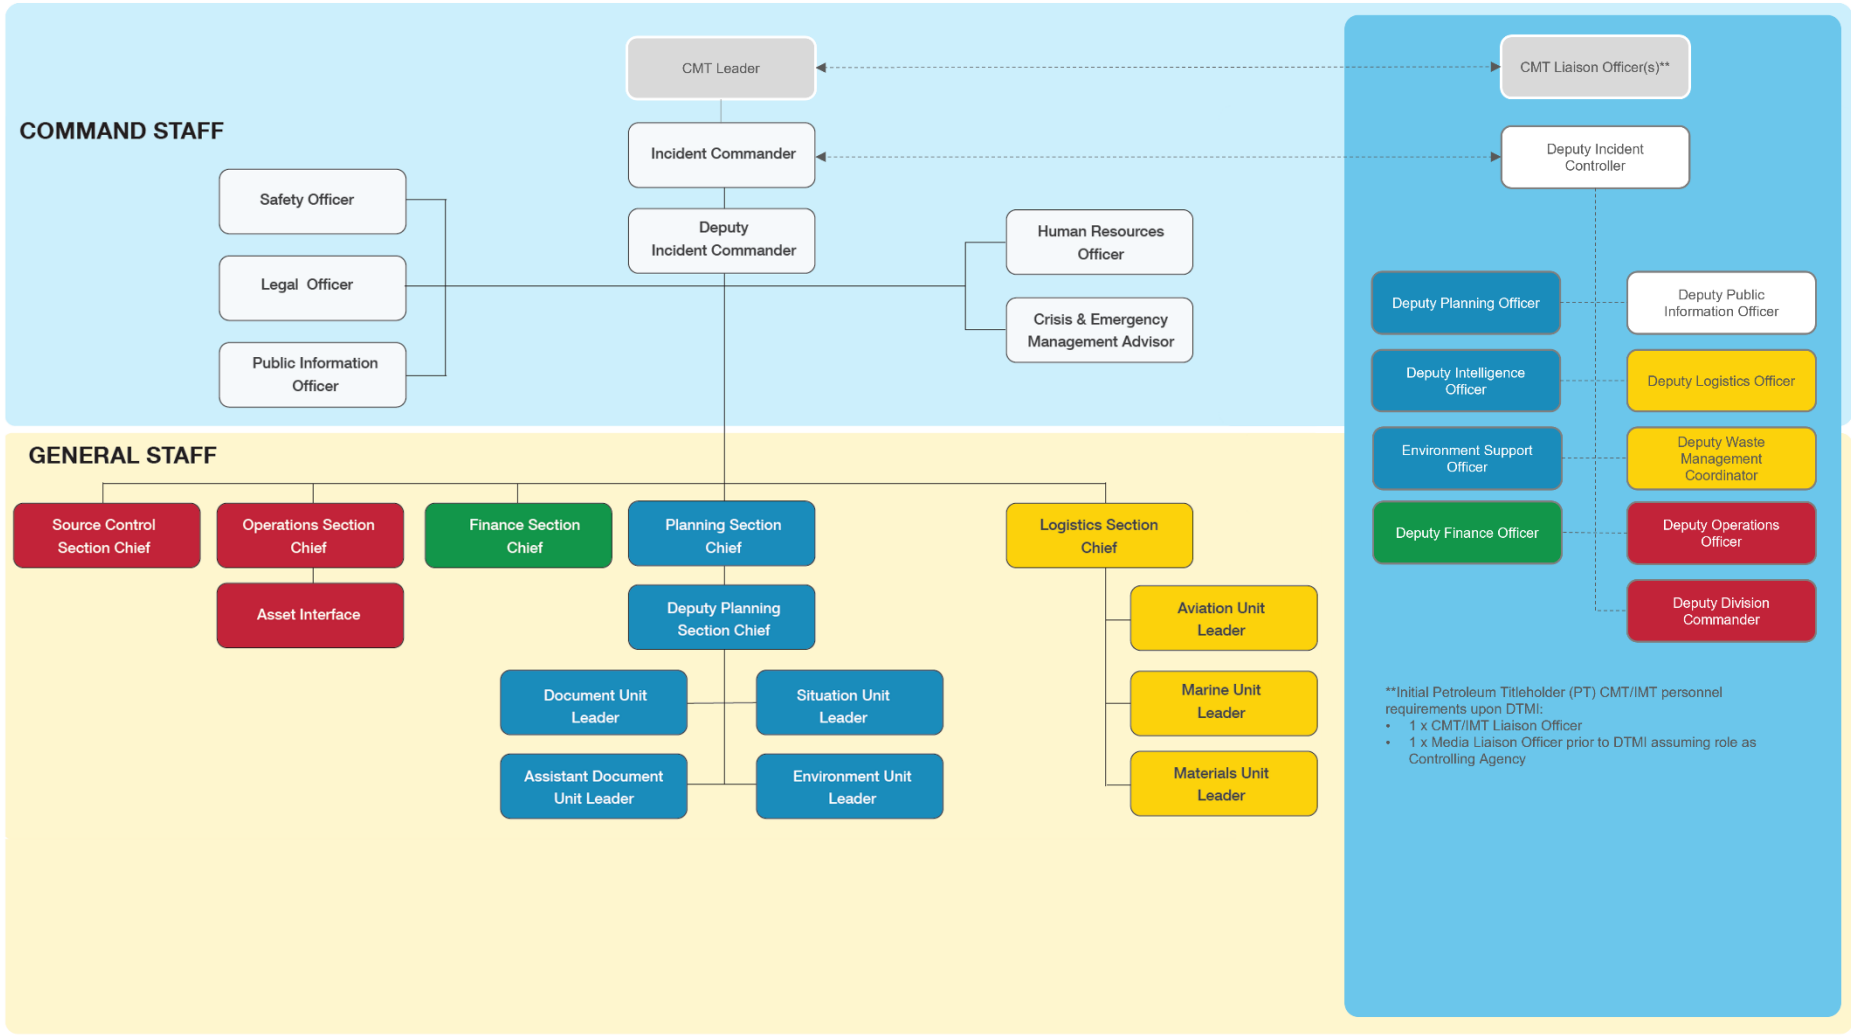
APPENDIX D – COORDINATION STRUCTURE FOR A CONCURRENT HYDROCARBON SPILL IN BOTH COMMONWEALTH AND STATE WATERS/SHORELINES[4]

The Control Agency for a hydrocarbon spill in Commonwealth waters resulting from an offshore petroleum activity is Woodside (the Petroleum Titleholder).



The Control Agency/ Hazard Management Agency (HMA) for a hydrocarbon spill in State waters/shorelines resulting from an offshore petroleum activity is DTMI. DTMI will appoint an Incident Controller and form a separate IMT to only manage the spill within State waters/shorelines.

[4] Adapted from DTMI Offshore Petroleum Industry Guidance Note, Marine Oil Pollution: Response and Consultation Arrangements July 2020. Note: For full structure up to Commonwealth Cabinet/Minister refer to Marine Oil Pollution: Response and Consultation Arrangements Section 6.5, Figure 4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX E – WOODSIDE INCIDENT MANAGEMENT STRUCTURE

Woodside Incident Management Structure for Hydrocarbon Spill (including Woodside Liaison Officers Command Structure within DTMI IMT if required) is shown below. Woodside's CIMT would operate from the Emergency Operations Centre (EOC) at the Woodside headquarters in Perth.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX F – WOODSIDE LIAISON OFFICER RESOURCES TO DTMI

In the event that DTMI is required to establish an IMT, Woodside will make available an appropriate number of appropriately qualified persons to work within the DTMI IMT.

It is an expectation that Woodside's nominated CMT Liaison Officer and the Deputy Incident Controller attend the DTMI Fremantle Incident Control Centre (ICC) as soon as possible after the formal request has been made by the State Marine Pollution Coordinator (SMPC), and that the remaining initial cohort will attend no later than 8 am on the day following the request being formally made to Woodside by the SMPC. For Woodside personnel designated to serve in DTMI's Forward Operating Base (FOB), it is expected that they arrive at the FOB no later than 24 hours from the formal request being made by the SMPC.

Area	Role	Woodside personnel[5]	Key Duties	#
DTMI Maritime Environmental Emergency Coordination Centre (MEECC)	CMT Liaison Officer	CIMT Liaison	• Provide a direct liaison between the CMT and the MEECC. • Facilitate effective communications and coordination between the CIMT Leader and SMPC. • Offer advice to SMPC on matters pertaining to PT crisis management policies and procedures.	1
DTMI IMT Incident Control	Deputy Incident Controller	Deputy Incident Commander (Deputy IC)	• Provide a direct liaison between the PT IMT and DTMI IMT. • Facilitate effective communications and coordination between the PT IC and the DTMI IC. • Offer advice to the DTMI IC on matters pertaining to PT incident response policies and procedures. • Offer advice to the Safety Coordinator on matters pertaining to PT safety policies and procedures, particularly as they relate to PT employees or contractors operating under the control of the DTMI IMT.	1
DTMI IMT Intelligence	Deputy Intelligence Officer	Situation Unit Leader (Intelligence)	• As part of the Intelligence Team, assist the Intelligence Officer in the performance of their duties in relation to situation and awareness. • Facilitate the provision of relevant modelling and predications from the PT IMT. • Assist in the interpretation of modelling and predictions originating from the PT IMT. • Facilitate the provision of relevant situation and awareness information originating from the DTMI IMT to the PT IMT. • Facilitate the provision of relevant mapping from the PT IMT. • Assist in the interpretation of mapping originating from the PT IMT. • Facilitate the provision of relevant mapping originating from the DTMI IMT to the PT IMT.	1
DTMI IMT Intelligence – Environment	Environment Support Officer	Deputy Environment Unit Leader	• As part of the Intelligence Team, assist the Environment Coordinator in the performance of their duties in relation to the provision of environmental support into the planning process. • Assist in the interpretation of the PT OPEP and relevant TRP plans.	1

[5] *These positions would be mobilised, in consultation with DTMI, to align to the actual spill scenario. The selected roles and/or individual personnel would be subject to continued evaluation to ensure continued 'best fit'. For CIMT roster arrangements, contact the WCC. During a prolonged response, additional personnel may be sourced through internal resourcing and mutual Aid agreements such as the AMOSC Core Group via [12].*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside personnel[5]	Key Duties	#
			• Facilitate in requesting, obtaining and interpreting environmental monitoring data originating from the PT IMT. • Facilitate the provision of relevant environmental information and advice originating from the DTMI IMT to the PT IMT.	
DTMI IMT Planning-Plans/ Resources	Deputy Planning Officer	Deputy Planning Section Chief	• As part of the Planning Team, assist the Planning Officer in the performance of their duties in relation to the interpretation of existing response plans and the development of incident action plans and related sub plans. • Facilitate the provision of relevant IAP and sub plans from the PT IMT. • Assist in the interpretation of the PT OPEP from the PT. • Assist in the interpretation of the PT IAP and sub plans from the PT IMT. • Facilitate the provision of relevant IAP and sub plans originating from the DTMI IMT to the PT IMT. • Assist in the interpretation of the PT existing resource plans. • Facilitate the provision of relevant components of the resource sub plan originating from the DTMI IMT to the PT IMT. **(Note this individual must have intimate knowledge of the relevant PT OPEP and planning processes)**	1
DTMI IMT Public Information-Media/ Community Engagement	Deputy Public Information Officer	Deputy Public Information Officer	• As part of the Public Information Team, provide a direct liaison between the PT Media team and DTMI IMT Media team. • Facilitate effective communications and coordination between the PT and DTMI media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DTMI Information and Warnings team. • Offer advice to the DTMI Media Coordinator on matters pertaining to PT media policies and procedures. • Facilitate effective communications and coordination between the PT and DTMI Community Liaison teams. • Assist in the conduct of joint community briefings and events. • Offer advice to the DTMI Community Liaison Coordinator on matters pertaining to the PT community liaison policies and procedures. • Facilitate the effective transfer of relevant information obtained from through the Contact Centre to the PT IMT.	1
DTMI IMT Logistics	Deputy Logistic Officer	Deputy Logistics Section Chief	• As part of the Logistics Team, assist the Logistics Officer in the performance of their duties in relation to the provision of supplies to sustain the response effort. • Facilitate the acquisition of appropriate supplies through the PTs existing OSRL, AMOSC and private contract arrangements. • Collects Request Forms from DTMI to action via PT IMT. **(Note this individual must have intimate knowledge of the relevant PT logistics processes and contracts)**	1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside personnel[5]	Key Duties	#
DTMI IMT Finance-Accounts/ Financial Monitoring	Deputy Finance Officer	Deputy Finance Section Chief	• As part of the Finance Team, assist the Finance Officer in the performance of their duties in relation to the setting up and payment of accounts for those services acquired through the PTs existing OSRL, AMOSC and private contract arrangements. • Facilitate the communication of financial monitoring information to the PT to allow them to track the overall cost of the response. • Assist the Finance Officer in the tracking of financial commitments through the response, including the supply contracts commissioned directly by DTMI and to be charged back to the PT.	1
DTMI IMT Operations	Deputy Operations Officer	Deputy Operations Section Chief	• As part of the Operations Team, assist the Operations Officer in the performance of their duties in relation to the implementation and management of operational activities undertaken to resolve an incident. • Facilitate effective communications and coordination between the PT Operations Section and the DTMI Operations Section. • Offer advice to the DTMI Operations Officer on matters pertaining to PT incident response procedures and requirements. • Identify efficiencies and assist to resolve potential conflicts around resource allocation and simultaneous operations of PT and DTMI response efforts.	1
DTMI IMT Operations – Waste Management	Deputy Waste Management Coordinator	Deputy Waste Coordinator (Materials)	• As part of the Operations Team, assist the Waste Management Coordinator in the performance of their duties in relation to the provision of the management and disposal of waste collected in State waters. • Facilitate the disposal of waste through the PT's existing private contract arrangements related to waste management and in line with legislative and regulatory requirements. • Collects Request Forms from DTMI to action via PT IMT.	1
DTMI FOB Operations Command	Deputy Division Commander	FOB Deputy Incident Commander	• As part of the Field Operations Team, assist the Division Commander in the performance of their duties in relation to the oversight and coordination of field operational activities undertaken in line with the IMT Operations Section's direction. • Provide a direct liaison between the PT FOB and DTMI FOB. • Facilitate effective communications and coordination between the PT Division Commander and the DTMI Division Commander. • Offer advice to the DTMI Division Commander on matters pertaining to PT incident response policies and procedures. • Assist the Safety Coordinator deployed in the FOB in the performance of their duties, particularly as they relate to PT employees or contractors. • Offer advice to the Safety Coordinator deployed in the FOB on matters pertaining to PT safety policies and procedures.	1
			Total	11

APPENDIX G – DTMI LIAISON OFFICER RESOURCES TO WOODSIDE

Once DTMI activates a State waters/ shorelines IMT, DTMI will make available the following roles to Woodside.

Area	DTMI Liaison Role	Personnel Sourced from:	Key Duties	#
Woodside CIMT	DTMI Liaison Officer (prior to DTMI assuming Controlling Agency)/ Deputy Incident Controller – State waters (after DTMI assumes Controlling Agency)	DTMI	• Facilitate effective communications between DTMI's SMPC/ Incident Controller and the Petroleum Titleholder's appointed CMT Leader / Incident Controller. • Provide enhanced situational awareness to DTMI of the incident and the potential impact on State waters. • Assist in the provision of support from DTMI to the Petroleum Titleholder. • Facilitate the provision technical advice from DTMI to the Petroleum Titleholder Incident Controller as required.	1
Woodside CIMT Public Information – Media	DTMI Media Liaison Officer	DTMI	• Provide a direct liaison between the PT Media team and DTMI IMT Media team. • Facilitate effective communications and coordination between the PT and DTMI media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DTMI Information & Warnings team. • Offer advice to the PT Media Coordinator on matters pertaining to DTMI and wider Government media policies and procedures.	1
			Total DTMI Personnel Initial Requirement to Woodside	2

Search Criteria

56 Aboriginal Cultural Heritage (ACH) Register in Shapefile - AU_ENVT_WEL_EP_EMBA_GWA_Ops_Cwth_2025_v3. Warning: Search area complex so results may be inaccurate. Contact DPLH for assistance.

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the *Aboriginal Heritage Act 1972*.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form and we will make every effort to rectify it as soon as possible.

Copyright

Copyright in the information contained herein is and shall remain the property of the State of Western Australia. All rights reserved. This includes, but is not limited to, information from the Register established and maintained under the *Aboriginal Heritage Act 1972*.

Location information data licensed from Western Australian Land Information Authority (WALIA) trading as Landgate. Copyright in the location information data remains with WALIA. WALIA does not warrant the accuracy or completeness of the location information data or its suitability for any particular purpose.

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- **Boundary Reliable (Yes/No):** Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- **Boundary Restricted = No:** Represents the actual location of the ACH as understood by the Department..
- **Boundary Restricted = Yes:** To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- **Culturally Sensitive = No:** Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- **Culturally Sensitive = Yes:** Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.
- **Culturally Sensitive Nature:**
  - **No Gender / Initiation Restrictions:** *Anyone* can view the information.
  - **Men only:** Only *males* can view restricted information.
  - **Women only:** Only *females* can view restricted information.

Status:

- **Register:** Aboriginal cultural heritage places that are assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972*.
- **Lodged:** Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the *Aboriginal Heritage Act 1972.*
- **Historic:** Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the *Aboriginal Heritage Act 1972*. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

Coordinates

Map coordinates are based on the GDA 2020 Datum.

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the Aboriginal Heritage Act 1972.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form and we will make every effort to rectify it as soon as possible.

Copyright

Copyright in the information contained herein is and shall remain the property of the State of Western Australia. All rights reserved. This includes, but is not limited to, information from the Register established and maintained under the Aboriginal Heritage Act 1972.

Location information data licensed from Western Australian Land Information Authority (WALIA) trading as Landgate. Copyright in the location information data remains with WALIA. WALIA does not warrant the accuracy or completeness of the location information data or its suitability for any particular purpose.

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- Boundary Reliable (Yes/No): Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- Boundary Restricted = No: Represents the actual location of the ACH as understood by the Department..
- Boundary Restricted = Yes: To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- Culturally Sensitive = No: Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- Culturally Sensitive = Yes: Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.
- Culturally Sensitive Nature:
  - No Gender / Initiation Restrictions: Anyone can view the information.
  - Men only: Only males can view restricted information.
  - Women only: Only females can view restricted information.

Status:

- Register: Aboriginal cultural heritage places that are assessed as meeting Section 5 of the Aboriginal Heritage Act 1972.
- Lodged: Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the Aboriginal Heritage Act 1972.
- Historic: Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the Aboriginal Heritage Act 1972. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

Coordinates

Map coordinates are based on the GDA 2020 Datum.
