Table of contents

1. Introduction 14
1.1 Overview 14
1.2 Purpose of the Environment Plan 14
1.3 Environment Plan summary 14
1.4 Structure of the Environment Plan 15
1.5 Description of the titleholder 16
1.5.1 Details of titleholder and nominated liaison person 17
1.5.1.1 Titleholder 17
1.5.1.2 Nominated liaison person 17
1.5.2 Arrangements for notifying change 17
1.6 Woodside Management System 17
1.6.1 Woodside Management System purpose 17
1.6.2 Environment and Biodiversity Policy 19
1.7 Description of relevant requirements 19
1.7.1 *Offshore Petroleum and Greenhouse Gas Storage Act 2006* (Cth) 19
1.7.2 *Environment Protection and Biodiversity Conservation Act 1999* (Cth) (EPBC Act) 20
1.7.2.1 Recovery plans and threat abatement plans 20
1.7.2.2 Australian Marine Parks 20
1.7.2.3 World Heritage properties 21
2. Environment Plan process 22
2.1 Overview 22
2.2 Environment Plan process 22
2.3 Establish the context 23
2.3.1 Describe the activity 24
2.3.2 Describe the existing environment 24
2.3.3 Environmental legislation and other requirements 24
2.3.4 Impact and risk management 24
2.3.4.1 Impact and risk identification and analysis 24
2.3.4.2 Decision support framework 25
2.3.4.3 Decision support framework tools 26
2.3.4.4 Decision calibration 27
2.3.5 Control measures 27
2.3.6 Impact and risk classification 28
2.3.6.1 Impact classification 28
2.3.6.2 Risk classification 29
2.4 Impact and risk evaluation 30
2.4.1 Demonstration of ‘as low as reasonably practicable’ 30
2.4.2 Demonstration of acceptability 31
2.5 Recovery plan and threat abatement plan assessment 31
2.6 Environmental performance objectives/outcomes, standards and measurement criteria 32
2.7 Implement, monitor, review and report 32
2.8 Stakeholder consultation 32
3. Description of the activity 33
3.1 Overview 33

3.2 Location 34
3.3 Operational Area 36
3.4 Timing 36
3.5 Subsea intervention activities 36
3.5.1 Connection of integrated well control package 38
3.5.2 Underwater acoustic positioning 39
3.5.3 Marine growth removal 39
3.6 Project vessels 39
3.7 Support operations 40
3.7.1 Helicopters 40
3.7.2 Remotely operated vehicle 40
3.7.3 Resupply 40
3.8 Contingency operations 40
3.8.1 Well kill 40
3.8.2 Emergency shutdown and disconnect 41
4. Description of the existing environment 42
4.1 Overview 42
4.2 Regional context 45
4.3 Matters of national environmental significance (EPBC Act) 47
4.4 Physical environment 47
4.5 Habitats and biological communities 49
4.6 Protected species 50
4.6.1 Fish, sharks and rays 50
4.6.1.1 Whale sharks 54
4.6.2 Marine reptiles 54
4.6.3 Marine mammals 60
4.6.4 Seabirds and migratory shorebirds 66
4.6.4.1 Wedge-tailed shearwater 72
4.6.5 Seasonal sensitivities for protected species 72
4.7 Key ecological features 74
4.7.1 Ancient Coastline at 125 Depth Contour 76
4.8 Protected places 76
4.9 Socioeconomic environment 79
4.9.1 Cultural values and heritage 79
4.9.1.1 Native Title 79
4.9.1.2 Coastally adjacent Indigenous groups 79
4.9.1.3 Marine Parks 82
4.9.1.4 Indigenous protected areas 82
4.9.1.5 Sea Country values 83
4.9.1.6 Summary of cultural features and heritage values 110
4.9.1.7 Historic sites of significance 116
4.9.1.8 Historic underwater heritage 116
4.9.1.9 World, National and Commonwealth Heritage listed places 116
4.9.2 Commercial fisheries 116
4.9.3 Traditional and customary fishing 123
4.9.4 Tourism and recreation 123

4.9.5 Commercial shipping 123
4.9.6 Oil and gas facilities, infrastructure and other industries 125
4.9.7 Submarine communications infrastructure 127
4.9.8 Defence 127
5. Stakeholder consultation 129
5.1 Summary 129
5.2 Consultation – general context 130
5.3 Identification of relevant persons for consultation 133
5.3.1 Regulation 25(1)(a),(b) and (c) 133
5.3.2 Identification of relevant persons under Regulations 25(1)(a),(b) and (c) 134
5.3.3 Regulation 25(1)(d) 134
5.3.4 Identification of relevant persons under Regulation 25(1)(d) 135
5.3.5 Regulation 25(1)(e) 141
5.3.6 Identification of relevant persons under Regulation 25(1)(e) 141
5.3.7 Persons or organisations Woodside chooses to contact 141
5.3.8 Assessment of relevant persons for the proposed activity 141
5.4 Consultation material and timing 142
5.4.1 Sufficient information 142
5.4.2 Reasonable period for consultation 145
5.4.3 Discharge of Regulation 25 146
5.5 Context of consultation approach with Traditional Owners 146
5.5.1 Approach to methodology – Woodside's interpretation of Tipakalippa Appeal 146
5.5.2 Consultation method 147
5.5.3 Identification of relevant persons 149
5.5.4 Opportunity to self-identify and identifying other individuals 150
5.5.5 Sufficient information 150
5.5.6 Reasonable period for consultation 151
5.5.7 Discharge of Regulation 25 151
5.6 Providing feedback and assessment of merit of objections or claims 151
5.7 Ongoing consultation 152
6. Environmental impact and risk assessment, performance outcomes, standards and measurement criteria 153
6.1 Overview 153
6.2 Impacts and risks not deemed credible or outside the scope of this Environment Plan 156
6.2.1 Shallow/nearshore activities 156
6.2.2 Ongoing management of wells 156
6.3 Cumulative impacts 156
6.4 Environmental performance outcomes, standards and measurement criteria 156
6.5 Presentation 157
6.6 Planned activities (routine and non-routine) 159
6.6.1 Physical presence: interaction with other marine users 159
6.6.2 Physical presence: disturbance to seabed 164
6.6.3 Routine and non-routine acoustic emissions 169
6.6.4 Routine and non-routine discharges: subsea fluids and fugitive hydrocarbons 178
6.6.5 Routine and non-routine discharges: vessel utility systems (bilge water, grey water, sewage, putrescible wastes and deck drainage water) 183

6.6.6 Routine atmospheric and greenhouse gas emissions: fuel combustion and cold venting.....191
6.6.7 Routine and non-routine: external lighting on the project vessels.....196
6.7 Unplanned activities (accidents, incidents, emergency situations).....202
6.7.1 Quantitative spill risk assessment methodology.....202
6.7.1.1 Worst case scenarios.....203
6.7.1.2 Environment that may be affected (EMBA) and hydrocarbon contact thresholds.....203
6.7.1.3 Operational and scientific monitoring.....206
6.7.1.4 Hydrocarbon characteristics.....206
6.7.2 Unplanned hydrocarbon release: wellbore release.....211
6.7.3 Unplanned hydrocarbon release: vessel collision.....226
6.7.4 Unplanned discharges: hydrocarbon and chemical spills from vessel and subsea activities.....237
6.7.5 Unplanned discharges: release of solid hazardous and non-hazardous wastes (including dropped objects).....242
6.7.6 Physical presence (unplanned): interactions with marine fauna.....247
6.7.7 Physical presence (unplanned): introduction of invasive marine species.....252
6.7.8 Physical presence (unplanned): interaction with live infrastructure.....258
6.8 Recovery plan and threat abatement assessment.....262
6.9 Cultural features and heritage values assessment.....276
7. Implementation strategy.....288
7.1 Overview.....288
7.2 Systems, practices, and procedures.....288
7.2.1.1 Environmental selection criteria.....288
7.2.2 Woodside invasive marine species risk assessment process.....290
7.2.2.1 Objective and scope.....290
7.2.2.2 Risk assessment process.....291
7.2.3 Unexpected finds procedure.....293
7.2.4 Offshore Seabird Management Plan.....293
7.3 Roles and responsibilities.....294
7.4 Training and competency.....300
7.4.1 Overview.....300
7.4.2 Inductions.....300
7.4.3 Petroleum Activity-specific environmental awareness.....300
7.4.4 Management of training requirements.....300
7.5 Monitoring, auditing, and managing non-conformance and review.....300
7.5.1 Monitoring.....300
7.5.2 Auditing.....301
7.5.2.1 Light well intervention vessel activities.....301
7.5.2.2 Marine assurance.....302
7.5.2.3 Risk assessment.....302
7.5.3 Management of non-conformance.....303
7.5.4 Review.....303
7.5.4.1 Management review.....303
7.5.4.2 Learning and knowledge sharing.....304
7.5.4.3 Review of impacts, risks and controls across the life of the Environment Plan.....304
7.6 Management of knowledge.....304
7.7 Management of Newly Identified Impacts and Risks.....305
7.8 Management of change and revision.....305

1. INTRODUCTION

1.1 Overview

Woodside Energy Limited (Woodside), as titleholder under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) (referred to as the Environment Regulations), proposes to undertake the following activities within title area(s) WA-9-L, WA-11-L and WA-16-L:

- light well intervention (LWI) activities on the Cossack-4H (CK4) and Lambert-3 (LH3), Wannea-7ST1 (WA7) and Wannea-8 (WA8) wells using a light well intervention vessel (LWIV). The wells are tied back to the Okha floating production, storage and offloading facility (FPSO).
- routine and non-routine support activities, including support vessel and helicopter operations.

These activities will hereafter be collectively referred to as the Petroleum Activity and form the scope of this Environment Plan (EP). The activities are described in Section 3. This EP has been prepared as part of the requirements under the Environment Regulations, as administered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

1.2 Purpose of the Environment Plan

In accordance with the objectives of the Environment Regulations, the purpose of this EP is to demonstrate that:

- the potential environmental impacts and risks, planned (routine and non-routine) and unplanned, that may result from the Petroleum Activity are identified
- appropriate management controls are implemented to reduce impacts and risks to a level that is 'as low as reasonably practicable' (ALARP) and acceptable
- the Petroleum Activity is carried out in a manner consistent with the principles of ecologically sustainable development (ESD), as defined in Section 3A of the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (Cth) (EPBC Act).

1.3 Environment Plan summary

Table 1-1 summarises the content of this EP, as required by section 35(7).

Table 1-1: Environment Plan summary

EP summary material requirement	Relevant section of this EP containing EP summary material
The location of the activity	Section 3.2
A description of the receiving environment	Section 4
A description of the activity	Section 3
Details of the environmental impacts and risks	Section 6
The control measures for the activity	Section 6
The arrangements for ongoing monitoring of the titleholder's environmental performance	Section 6.9
Response arrangements in the oil pollution emergency plan	Appendix G and Appendix H
Consultation already undertaken and plans for ongoing consultation	Section 5
Details of the titleholder's nominated liaison person for the activity	Section 1.5.1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

1.4 Structure of the Environment Plan

The EP has been structured to reflect the process and requirements of the Environment Regulations, as outlined in Table 1-2.

Table 1-2: Process phases, applicable Environment Regulations and relevant section of the Environment Plan

Criteria for acceptance	Content requirements/relevant regulations	Elements	Section of EP
Section 34(a): Is appropriate for the nature and scale of the activity	Section 21: • Environmental assessment Section 22: • Implementation strategy for EP Section 24: • Other information in EP	The principle of 'nature and scale' is applicable throughout the EP	Section 3 Section 6 Section 6.9
Section 34(b): Demonstrates that the environmental impacts and risks of the activity will be reduced to ALARP Section 34(c): Demonstrates that the environmental impacts and risks of the activity will be of an acceptable level	Sections 21(1) to 21(7): • 21(1) Description of the activity • 21(2) and (3) Description of the environment • 21(4) Requirements • 21(5) and (6) Evaluation of environmental impacts and risks • 21(7) Environmental performance outcomes and standards Sections 24(a) to 24(b): • a statement of the titleholder's corporate environmental policy • a report on all consultations under section 25 of any relevant person by the titleholder	Set the context (activity and existing environment) Define 'acceptable' (the requirements, the corporate policy, relevant persons) Detail the impacts and risks Evaluate the nature and scale Detail the control measures – ALARP and acceptable	Section 3 Section 4 Section 5 Section 6 Appendix A Appendix B Appendix E
Section 34(d): Provides for appropriate environmental performance outcomes, environmental performance standards and measurement criteria	Section 21(7): • Environmental Performance Outcomes and standards	Environmental performance outcomes (EPOs) Environmental performance standards (EPSs) Measurement criteria (MCs)	Section 6
Section 34(e): Includes an appropriate implementation strategy and monitoring, recording and reporting arrangements	Section 22: • Implementation strategy for EP	Implementation strategy, including: • Environmental Management System • performance monitoring • Oil Pollution Emergency Plan and scientific monitoring • ongoing consultation	Section 6.9
Section 34(f): Does not involve the activity or part of the activity, other than arrangements for environmental monitoring or for	Sections 21(1) to 21(3): • 21(1) Description of the activity • 21(2) Description of the environment • 21(3) Without limiting paragraph 21(2)(b), relevant values and sensitivities may include any of the following:	No activity, or part of the activity, undertaken in any part of a declared World Heritage property	Section 3 Section 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Criteria for acceptance	Content requirements/relevant regulations	Elements	Section of EP
responding to an emergency, being undertaken in any part of a declared World Heritage property within the meaning of the EPBC Act	– (a) the world heritage values of a declared World Heritage property within the meaning of the EPBC Act – (b) the national heritage values of a National Heritage place within the meaning of that Act – (c) the ecological character of a declared Ramsar wetland – (d) the presence of a listed threatened species or listed threatened ecological community – (e) the presence of a listed migratory species – (f) any values and sensitivities that exist in, or in relation to, part or all of: ▪ (i) a Commonwealth marine area, or ▪ (ii) Commonwealth land		
Section 34(g): (i) the titleholder has carried out the consultations required by section 25 (ii) the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate	Section 25: • Consultation with relevant authorities, persons and organisations, etc. Section 24(b): • a report on all consultations between the titleholder and any relevant person	Consultation undertaken in the preparation of this EP	Section 5 Appendix E
Section 34(h): Complies with the Act, this instrument and any other regulations made under the Act	Section 21(4)(a): • describe the requirements, including legislative requirements, that apply to activity and are relevant to the environmental management of the activity Section 23: • Details of the titleholder and nominated liaison Section 24(a): • a statement of the titleholder's corporate environmental policy Section 24(c): • details of all reportable incidents in relation to the proposed activity	All contents of the EP must comply with the *Offshore Petroleum and Greenhouse Gas Storage Act 2006* (Cth) (OPGGS Act) and the Environment Regulations	Section 1.5.1 Section 7.11 Appendix A Appendix B

1.5 Description of the titleholder

Woodside Energy Ltd is the titleholder for this activity, on behalf of the joint venture partners detailed in Table 1-3:

Table 1-3: Joint venture participants for relevant petroleum titles and pipeline license

Petroleum Titles / Pipeline License	Joint Venture Participants
WA-9-L, WA-11-L and WA-16-L[1]	BP Developments Australia Pty Ltd, Chevron Australia Pty Ltd, Woodside Energy (North West Shelf) Pty Ltd, Shell Australia Pty Ltd,

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Petroleum Titles / Pipeline License	Joint Venture Participants
	Japan Australia LNG (MIMI) Pty Ltd, CNOOC NWS Private Ltd and Jadestone Energy (CWLH) Pty Ltd,

[1] The Titleholders of these Titles are the registered holders of the Titles but have agreed to exercise their rights in the Titles through two separate Joint Ventures (one for Gas activities and one for Oil activities). The Oil Joint Venture Participants are Woodside Energy Ltd, Woodside Energy (North West Shelf) Pty Ltd and Jadestone Energy (CWLH) Pty Ltd and the Gas Joint Venture Participants are Woodside Energy Ltd, Woodside Energy (North West Shelf) Pty Ltd, BP Developments Australia Pty Ltd, Chevron Australia Pty Ltd, Japan Australia LNG (MIMI) Pty Ltd, Shell Australia Pty Ltd and CNOOC NWS Private Limited.

1.5.1 Details of titleholder and nominated liaison person

In accordance with section 23 of the Environment Regulations, details of the titleholder, liaison person and arrangements for notifying about changes are described below.

1.5.1.1 Titleholder

Woodside Energy Ltd

11 Mount Street

Perth, Western Australia

T: 08 9348 4000

Australian Company Number: 63 005 482 986

1.5.1.2 Nominated liaison person

Nicolas Wirtz

Corporate Affairs Manager

11 Mount Street

Perth, Western Australia

Telephone: 08 9348 4000

Email: feedback@woodside.com

1.5.2 Arrangements for notifying change

If the titleholder, titleholder's nominated liaison person, or the contact details for either change, NOPSEMA will be notified in writing within two weeks or as soon as practicable.

1.6 Woodside Management System

The Woodside Management System (Our WMS) defines the core mandatory activities that support safeguarding the business and enabling its people to achieve objectives, manage uncertainty and meet obligations to deliver value for the company and its stakeholders.

1.6.1 Woodside Management System purpose

Our WMS is a series of integrated business processes that contribute to value delivery. A process is defined as the core mandatory activities that are material to converting inputs to outputs to deliver value from the defined business area. A process must reflect relevant corporate drivers and may have associated tools that support its implementation. The Our WMS activities are divided into two categories: Deliver Value Chain, for activities directly involved in value delivery; and Enable Value Chain, for activities supporting the enterprise and value delivery (Figure 1-1). The Health, Safety and Environment (HSE) sub-category is included in the Enable Value Chain category. Given this, there is interdependence between processes across these activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

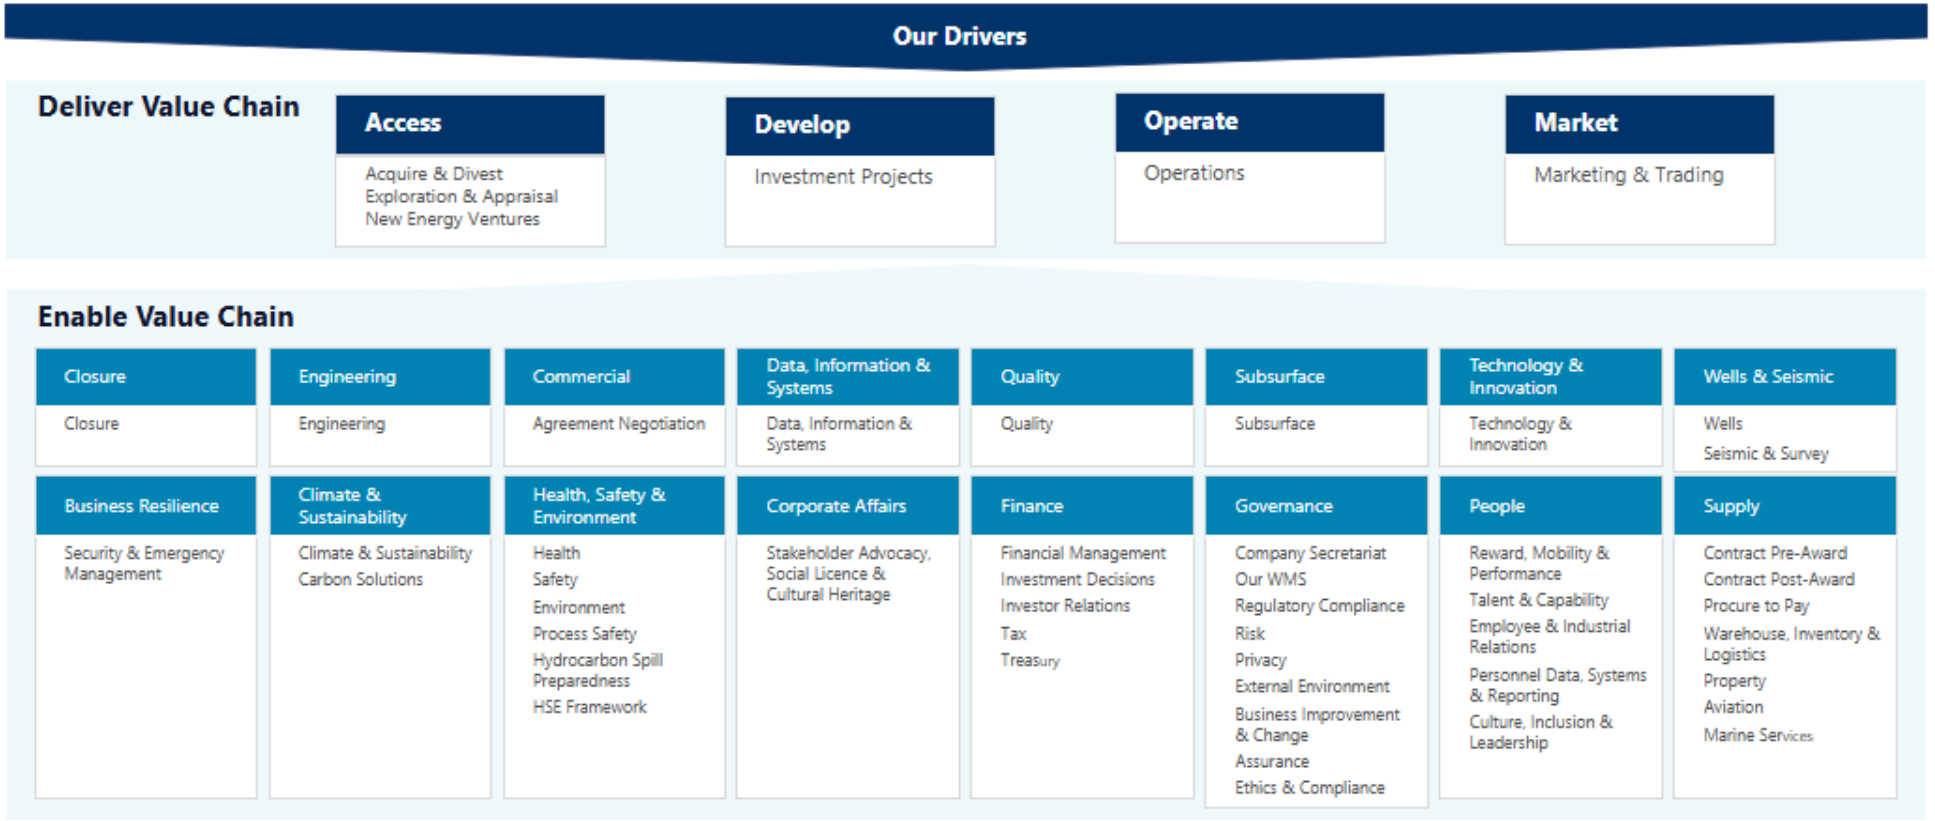

Figure 1-1: The Woodside Management System structure

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Our WMS content is structured in a hierarchy as illustrated in Figure 1-2. This hierarchy begins with the 'why' through Our Drivers, which are defined by the Board and Executive. It is followed by the 'what' with Our Expectations, which establish mandatory requirements for executing process activities to deliver value in accordance with the relevant Our Drivers. Finally, it includes the 'how' through Tools, which support the implementation, execution or understanding of Our Expectations. Additionally, there is non-WMS content that is subordinate to, but sits outside, Our WMS.

Adaptations of Our WMS tools may, as applicable and justified, be created for regional application.

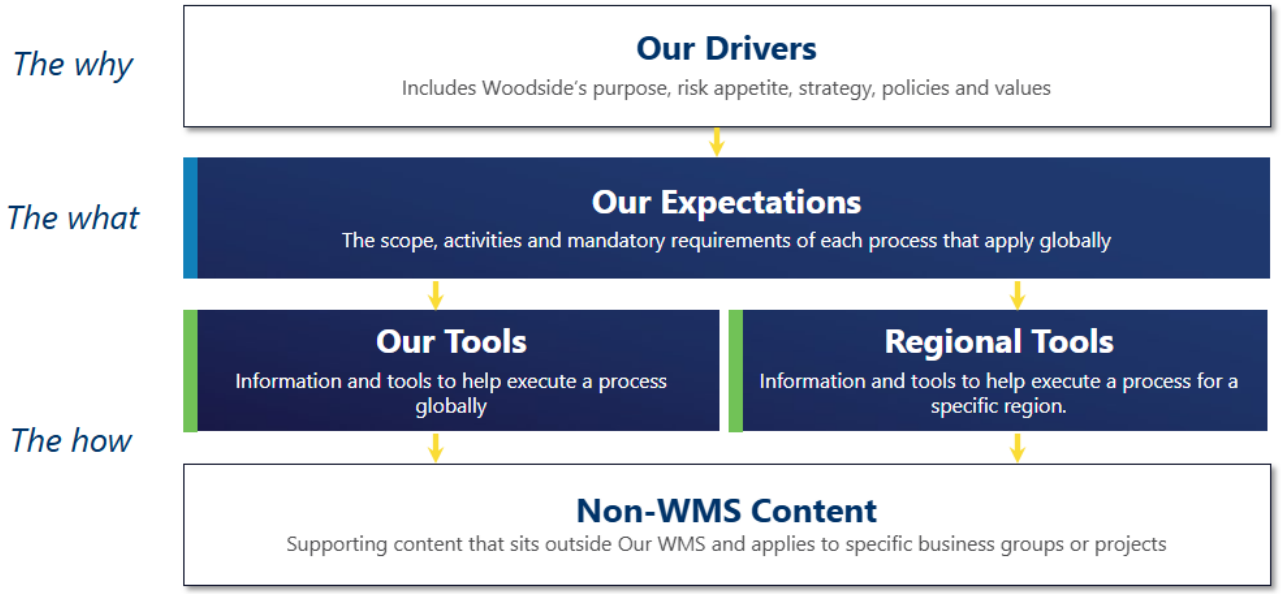

Figure 1-2: The Woodside Management System information structure and document hierarchy

1.6.2 Environment and Biodiversity Policy

In accordance with section 24(a) of the Environment Regulations, Woodside's Environment and Biodiversity Policy is provided in Appendix A of this EP.

Please note the Environment and Biodiversity Policy is reviewed regularly and is updated as required. The policy is made available on our website: https://www.woodside.com/who-we-are/corporate-governance-and-policies. This EP will be implemented in accordance with the current Environment and Biodiversity Policy as shown on our website.

1.7 Description of relevant requirements

In accordance with section 21(4) of the Environment Regulations, the requirements, including legislative, that apply to the activity and are relevant to managing the risks and impacts of the Petroleum Activity are detailed in Appendix B and summarised in the next paragraphs.

1.7.1 *Offshore Petroleum and Greenhouse Gas Storage Act 2006* (Cth)

The OPGGS Act legislates offshore petroleum activities beyond three nautical miles (NM) of the mainland (and islands) to the outer extent of the Australian Exclusive Economic Zone at 200 NM.

Under the OPGGS Act, the Environment Regulations apply to petroleum activities in Commonwealth Waters and are administered by NOPSEMA. The objective of the Environment Regulations is to ensure petroleum activities are performed in a manner:

- consistent with the principles of ESD
- by which the environmental impacts and risks of the activity will be reduced to ALARP
- by which the environmental impacts and risks of the activity will be of an acceptable level.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

This EP has been prepared in accordance with the relevant requirements of the OPGGS Act and the Environment Regulations.

1.7.2 *Environment Protection and Biodiversity Conservation Act 1999* (Cth) (EPBC Act)

The EPBC Act includes the objective to protect and manage nationally and internationally important flora, fauna, ecological communities and heritage places in Australia. These are defined under Part 3 of the EPBC Act as 'matters of national environmental significance' (MNES). The EPBC Act sets a regime that aims to ensure actions taken on (or impacting upon) Australian land or waters are consistent with the principles of ESD.

In relation to offshore petroleum activities in Commonwealth waters, the requirements of the EPBC Act are administered by NOPSEMA. The Streamlining Offshore Petroleum Environmental Approvals Program Report (NOPSEMA, 2014) requires any offshore petroleum activities, authorised by the OPGGS Act, to be conducted in accordance with an accepted EP whereby the definition of 'environment' covers all matters protected under Part 3 of the EPBC Act.

This EP will not be separately assessed under the EPBC Act as the Petroleum Activity falls within the class of actions approved under the NOPSEMA-endorsed program discussed above, and does not activate an exclusion provision requiring separate assessment of the Petroleum Activity under the EPBC Act.

1.7.2.1 Recovery plans and threat abatement plans

Under Section 139(1)(b) of the EPBC Act, the Environment Minister must not act inconsistently with a recovery plan for a listed threatened species or ecological community or a threat abatement plan for a species or community protected under the Act. Similarly, under section 268 of the EPBC Act:

> *'A Commonwealth agency must not take any action that contravenes a recovery plan or a threat abatement plan.'*

In respect to offshore petroleum activities in Commonwealth waters, these requirements are implemented by NOPSEMA. Specifically:

- NOPSEMA will not accept an EP that proposes activities that will result in unacceptable impacts to a listed threatened species or ecological community
- NOPSEMA will not accept an EP that is inconsistent with a recovery plan or threat abatement plan for a listed threatened species or ecological community
- NOPSEMA will have regard to any approved conservation advice in relation to a threatened species or ecological community before accepting an EP.

Section 6.8 contains an assessment of the Petroleum Activity against all relevant recovery plans and threat abatement plans.

1.7.2.2 Australian Marine Parks

Under the EPBC Act, Australian Marine Parks (AMPs) are recognised for conserving marine habitats and the species that live and rely on them. The Director of National Parks is responsible for managing AMPs (supported by Parks Australia) and is required to publish management plans for them. Under section 362 of the EPBC Act, other parts of the Commonwealth Government must not perform functions or exercise powers in relation to these parks that are inconsistent with management plans. Therefore, NOPSEMA is required to consider potential impacts from petroleum activities on AMPs.

Conservation objectives have been allocated to specific zones within AMPs based on the Australian International Union for Conservation of Nature (IUCN) reserve management principles outlined in Schedule 8 of the Environment Protection and Biodiversity Conservation Regulations 2025 (EPBC Regulations 2025). The principles for each zone determine what activities are acceptable within a protected area under the EPBC Act. The Operational area does not overlap any AMPs. AMPs that are overlapped by the environment that may be affected (EMBA) are presented in Section 4.7.1.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

1.7.2.3 World Heritage properties

Australian World Heritage properties are listed as MNES under the EPBC Act and must be assessed accordingly in EPs.

Schedule 5 of the EPBC Act establishes the Australian World Heritage management principles, which are designed to ensure World Heritage properties within Australia are managed in a way that maintains their values. The Operational area and EMBA do not overlap any World Heritage properties (Section 4.7.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2. ENVIRONMENT PLAN PROCESS

2.1 Overview

This section outlines the process Woodside follows to prepare the EP once an activity has been defined as a Petroleum Activity. This includes a description of the environmental risk management methodology that is used to identify, analyse and evaluate risks to meet ALARP and acceptability requirements, and to develop EPOs and EPSs. This section also describes Woodside's risk management methodologies applicable to implementation strategies applied during the Petroleum Activity.

2.2 Environment Plan process

Figure 2-1 illustrates the EP development process. Each element is discussed in the next sections.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

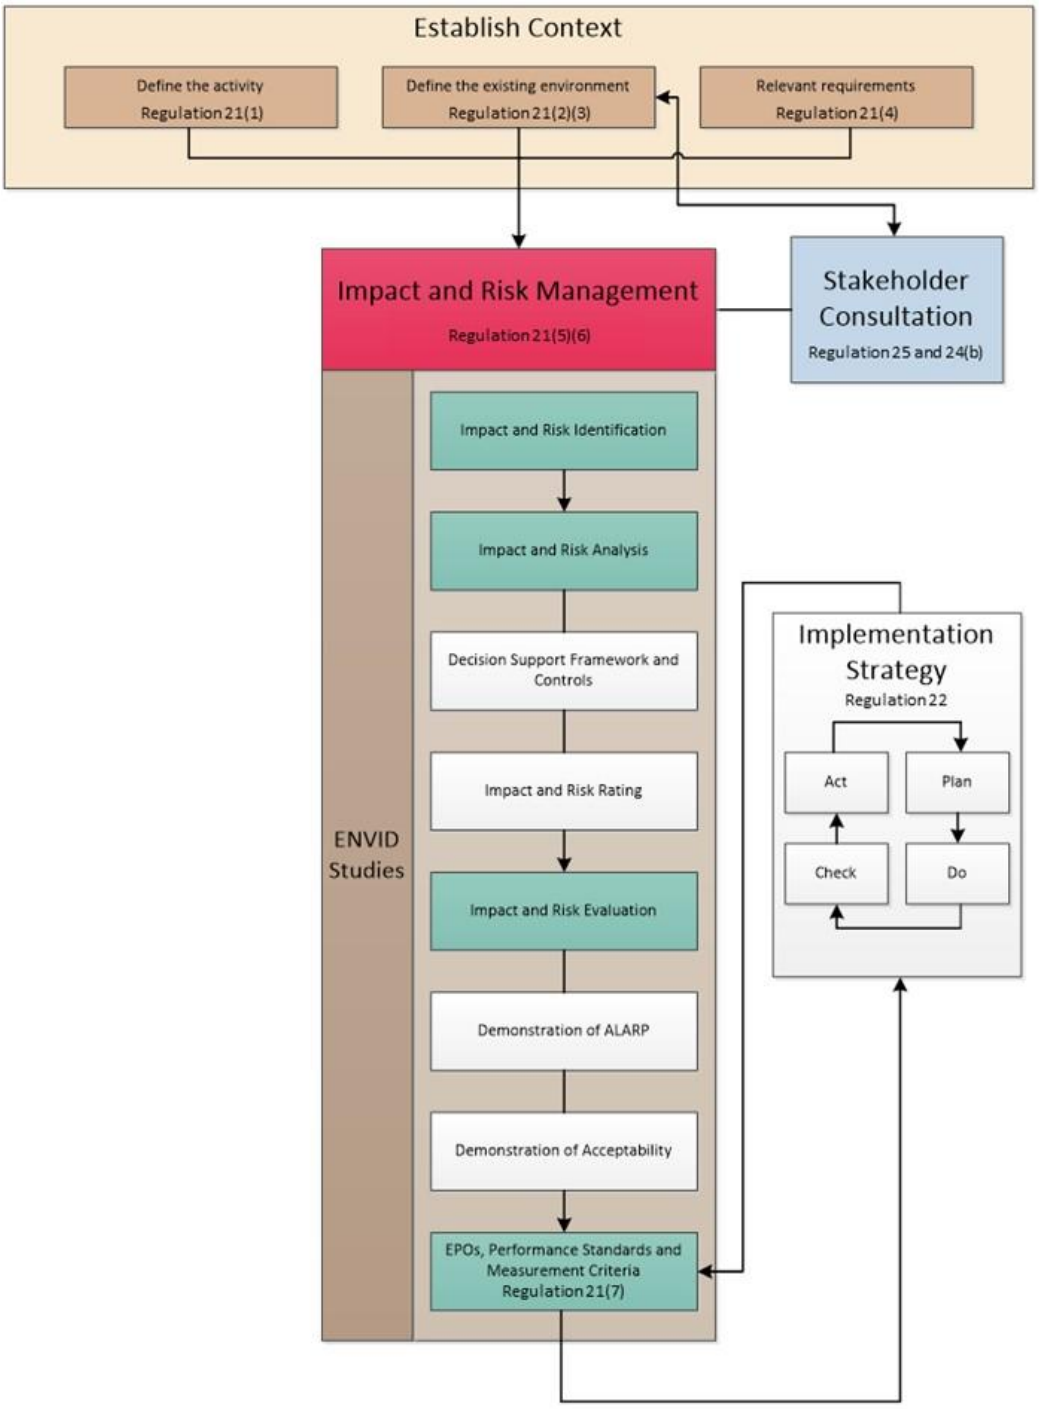

Figure 2-1: Environment Plan development process

2.3 Establish the context

Context is established by considering the proposed activities associated with a Petroleum Activity, and the environment in which it is planned to take place.

Describing the activity involves the evaluation of whether the activity meets the definition of a 'Petroleum Activity' as defined in the Environment Regulations. The activity is then described in relation to the location, what is to be undertaken and how—this allows for the identification of environmental aspects for each activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2.3.1 Describe the activity

The EP describes the activity including the following:

- The location or locations of the activity;
- General details of the construction and layout of the facility used in undertaking the activity;
- An outline of the operational details of the activity and proposed timetables for undertaking the activity;
- Additional information relevant to consideration of environmental impacts and risks of the activity.

The 'what' and 'how' are described in the context of 'environmental aspects' to inform the risk and impact assessment for planned (routine and non-routine) and unplanned (accidents, incidents, emergency conditions) activities.

This activity is described in Section 3 and is referred to as the Petroleum Activity

2.3.2 Describe the existing environment

The values and sensitivities relevant to environment where the Petroleum Activity is proposed to be undertaken have been identified in Section 4.6, to the extent required to inform impact and risk assessment to environmental receptors from the Petroleum Activity.

A full description of relevant environmental values and sensitivities is contained within the Master Existing Environment document provided at Appendix I.

2.3.3 Environmental legislation and other requirements

Relevant legislation and other requirements that apply to the Petroleum Activity are presented in Section 1.7 and Appendix B. These requirements were considered when developing this EP.

2.3.4 Impact and risk management

2.3.4.1 Impact and risk identification and analysis

The first step of impact and risk management is to identify all credible sources of environmental impacts and risks, include those directly and indirectly associated with the Petroleum Activity and potential emergency and accidental events. This may include environment impacts and risk that are a consequence of the proposed activity but are not within Woodside's control. In this EP:

- planned (routine and non-routine) activities, including contingent activities, have the potential for inherent changes to the environment, are termed environmental 'impacts.''
- unplanned events, including potential emergency and accidental events which have the potential to result in a change to the environment, are termed environmental 'risks.''

An environmental impacts and risks identification and assessment workshop (ENVID) was undertaken by multidisciplinary teams comprising relevant operational, technical and environmental personnel with sufficient breadth of knowledge, training, and experience to reasonably assure that risks and impacts were identified, and their potential environmental consequences assessed. Impacts and risks were identified, during the workshop, for both planned (routine and non-routine) activities and unplanned (accidents/incidents/emergency conditions) events. During this process, risks identified as not applicable (not credible) were removed from the assessment.

During the ENVID, environmental impacts and risks were assessed, and controls were assigned to manage the impact or risk. The ENVID also helped to identify relevant stakeholders to consult when developing this EP (Section 5). The output of the ENVID, an environmental impacts and risk register, was then used as a basis to develop the risk and impact assessment section of this EP (Section 6).

The environmental impact and risk assessments presented in this EP has been informed by historic as well as more recent hazard and environmental risk identification studies (e.g. HAZID/ENVID) and consequence modelling studies for high consequence, low probability environmental risks. These studies have been reviewed and revalidated, as required, for the revision of this. Further, feedback from NOPSEMA to

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside across Woodside's portfolio of environment plans has been considered and integrated, where relevant.

Impacts, risks and potential consequences were identified based on planned and potential interaction with the activity (based on the description in Section 4), the existing environment (Section 4) and the outcomes of Woodside's stakeholder engagement process (Section 6). The environment outputs of applicable risk and impact workshops and associated studies are referred to as ENVID in this EP.

Impacts and risks were evaluated and tabulated for each planned activity and unplanned events respectively. Environmental impacts and risks were recorded in an environmental impacts and risk register. The output of the workshop is used to present the risk assessment and form the basis of EPOs, EPSs, and MC. This information is presented in Section 6.9, following the format presented in Table 2-1.

Table 2-1: Example of layout of identification of risks and impacts in relation to risk sources

Impact evaluation summary													
Source of impact	***Environmental value potentially impacted***						***Evaluation***						
	Marine Sediment	Water Quality	Air Quality (incl Odour)	Ecosystems/ Habitat	Species	Socio-economic	Decision Type	Consequence/ Impact	Likelihood	Risk Rating	ALARP Tools	Acceptability	Outcome
Summary of source of impact/risk													

2.3.4.2 Decision support framework

To support the impact and risk assessment process and Woodside's determination of acceptability, Woodside's HSE risk management procedures include using a decision support framework based on principles set out in the Guidance on Risk Related Decision Making (Oil and Gas UK, 2014). Application of the decision support framework confirms:

- activities do not pose an unacceptable environmental risk
- appropriate focus is placed on activities where the impact or risk is anticipated to be acceptable and demonstrated to be ALARP
- appropriate effort is applied to manage risks and impacts based on the uncertainty of the risk, the complexity and the risk rating; as in, potential higher-order environmental impacts are subject to further evaluation and assessment.

The framework allows a decision type (A, B, or C) to be selected for each impact and risk, based on several criteria; the decision type is documented in the environmental impacts and risk register. Figure 2-2 summarises the framework, criteria and resulting level of assessment for each decision type, discussed further below.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

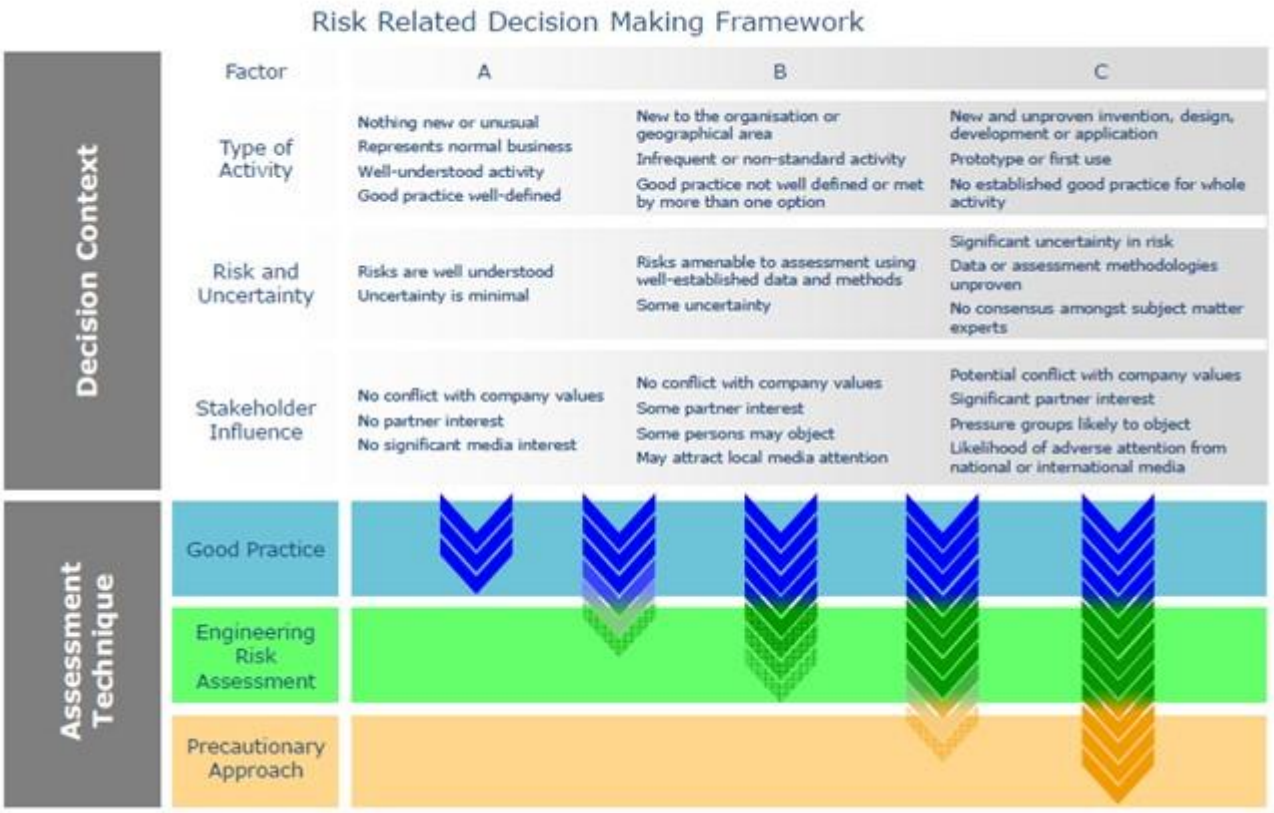

Figure 2-2: Risk-related decision-making framework

Source: Oil and Gas UK (2014)

2.3.4.2.1 Decision Type A

Decision Type A risks and impacts are well understood and established practice; they are generally recognised as good industry practice and are often embodied in legislation, codes and standards, and use professional judgement.

2.3.4.2.2 Decision Type B

Decision Type B risks and impacts typically involve greater uncertainty and complexity and are considered higher-order impacts and risks. These impacts and risks may deviate from established practice or have some lifecycle implications, and therefore require further engineering risk assessment to support the decision and ensure the risk is ALARP.

2.3.4.2.3 Decision Type C

Decision Type C risks and impacts typically have significant risks related to environmental performance. Such risks typically involve greater complexity and uncertainty, therefore requiring a precautionary approach. The risks may result in significant environmental impact, significant project risk or exposure, or may elicit negative stakeholder concerns. For these risks or impacts, in addition to Decision Type A and B tools, company and societal values need to be considered by undertaking broader internal and external stakeholder consultation as part of the risk assessment process.

2.3.4.3 Decision support framework tools

The below framework tools were applied, as appropriate, when assessing each impact and risk to help identify control measures based on the selected decision type described above:

- **Legislation, codes and standards (LCS):** identifies the requirements of legislation, codes and standards that are to be complied with for the activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **Good industry practice (GP):** identifies further engineering control standards and guidelines Woodside may apply above that needed to meet the LCS.
- **Professional judgement (PJ):** uses relevant personnel with the knowledge and experience to identify alternative controls. Woodside applies the hierarchy of control as part of the risk assessment to identify any alternative measures to control the risk.
- **Risk-based analysis (RBA):** assesses the results of probabilistic analyses such as modelling, quantitative risk assessment and cost-benefit analysis to help select control measures during the risk assessment process.
- **Company values (CV):** identifies values identified in Woodside's code of conduct, policies and Our Values. Views, concerns and perceptions are to be considered from internal Woodside stakeholders directly affected by the planned impact or potential risk.
- **Societal values (SV):** identifies and addresses the views, concerns and perceptions of relevant stakeholders.

2.3.4.4 Decision calibration

To confirm the decision type and the control measures are suitable, the following tools may be used for calibration (i.e. checking):

- **LCS/verification of predictions:** verification of compliance with applicable LCS and GP
- **peer review:** independent peer review of PJs, supported by RBA, where appropriate
- **benchmarking:** where appropriate, benchmarking against a similar facility or activity type or situation that has been deemed to represent acceptable risk
- **internal stakeholder consultation:** consultation within Woodside to inform the decision and verify CV are met
- **external stakeholder consultation:** consultation to inform the decision and verify SV are considered.

Where appropriate, additional calibration tools may be selected specific to the decision type and the activity.

2.3.5 Control measures

Once impacts and risks have been identified, the potentially impacted receptors have been identified and understood, and the decision type has been selected, impact and risk reduction measures (i.e. controls) can be applied. Controls are prioritised and categorised in accordance with the hierarchy of controls listed below, where risk reduction measures at the top of the hierarchy take precedence over those further down:

- elimination of the impact or risk by removing the hazard[1]
- substitution of a hazard with a less hazardous one
- engineering controls, including design measures, to prevent or reduce the frequency, or detect or control, the impact or risk event (limiting the magnitude, intensity and duration), such as:
  1– prevention: design measures that reduce the likelihood of a hazardous event occurring
  2– detection: design measures that facilitate early detection of a hazardous event
  3– control: design measures that limit the extent/escalation potential of a hazardous event
  4– mitigation: design measures that protect the environment if a hazardous event occurs
  5– response equipment: design measures or safeguards that enable cleanup/response after a hazardous event
- procedures and administration, including management systems and work instructions to prevent or mitigate environmental exposure to hazards

[1] *A hazard has the potential to cause harm to the environment.*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- emergency response and contingency planning, including methods to enable recovery from the impact of an event, such as protection barriers deployed near the sensitive receptor.

2.3.6 Impact and risk classification

Environmental impacts and risks are assessed to determine their potential impact consequence level or risk rating, which can then be evaluated, along with other criteria, against the ALARP and acceptability requirements under the Environment Regulations. The full process for impact and risk classification is described in the subsections below.

2.3.6.1 Impact classification

Using the Woodside Environment Risk and Impact Rating Tool as a guide, environmental impacts are assessed to determine the potential consequence level. The process for determining the consequence levels is described in Section 2.3.6.1.1.

2.3.6.1.1 Assign the consequence level

The consequence level (Severe, Major, Moderate, Minor, Localised and Low-Level, and No Lasting Effect) is determined through a classification framework that incorporates:

- significance[2] of the feature of area
- scale of the impact on the feature (e.g. species, population, habitat) or area (size)
- recoverability, defined as the ability of the feature or area to naturally recover from the impact within a nominal period.

2.3.6.1.2 Consequence level descriptions

Table 2-2 describes the possible environment, community and culture consequence levels for each identified impact and risk, assuming all controls (preventative and mitigative) are absent or have failed. Where multiple receptors have the potential to be impacted, the worst-case consequence level is carried into the final impact and risk assessment and evaluation.

[2] *For the purposes of describing the Woodside Environment Risk and Impact Rating Tool, references to significance in impact and risk classification, use significance as defined in the Woodside Environment Risk and Impact Rating Tool.*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 2-2: Woodside impact and impact risk matrix (environment and community and culture) consequence descriptions

Environment	*Social and cultural*		*Consequence level*
Severe impact on a sensitive feature(s) or receiving environment, such as permanent impairment on a highly sensitive area or feature.	Severe, long-term impact to a community, social infrastructure or highly valued areas or items of international cultural and social significance.	***Severe***	***A***
Major impact on environmental feature(s) or area(s), such as impact on feature or area of national importance with limited ability to recover.	Major, long-term impact to a community, social infrastructure or highly valued areas/items of national cultural significance.	***Major***	***B***
Moderate impact on environmental feature(s) or area(s), such as impact on feature or area of heightened sensitivity with limited ability to recover.	Moderate, medium-term impact to a community, social infrastructure of highly valued areas or items of national cultural significance.	***Moderate***	***C***
Minor impact on environmental feature(s) or area(s) such as impact on feature of low significance with some ability to recover.	Minor, short-term impact to a community or areas/items of cultural significance.	***Minor***	***D***
Localised and low-level impact on environmental feature(s) or area(s) of low significance.	Slight, short-term impact to a community or areas/items of cultural significance.	***Localised and Low Level***	***E***
No lasting effect, localised impact not significant to environmental receptors.	Temporary localised impact not significant to areas/items of cultural significance.	***No Lasting Effect***	***F***

2.3.6.2 Risk classification

The risk rating process assigns a level of risk to each risk event, measured in terms of consequence (Section 2.3.6.1.1) and likelihood (Section 2.3.6.1.2). The assigned risk rating is determined with controls in place; therefore, the risk rating is determined after identifying the decision type and appropriate control measures. The risk ratings are assigned using the Woodside risk matrix (refer to Table 2-4).

2.3.6.2.1 Assign the likelihood Level

Likelihood is determined based on the chance of the selected worst-case consequence occurring, assuming reasonable effectiveness of preventative and mitigative controls (Table 2-3)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 2-3: Woodside risk matrix likelihood levels

	Likelihood description					
	Remote	***Highly unlikely***	***Unlikely***	***Possible***	***Likely***	***Highly likely***
Frequency	1 in 100,000–1,000,000 years	1 in 10,000–100,000 years	1 in 1,000–10,000 years	1 in 100–1,000 years	1 in 10–100 years	>1 in 10 years
Experience	Unheard of in the industry	Has occurred once or twice in the industry	Has occurred many times in the industry but not in the company.	Has occurred once or twice in the company.	Has occurred frequently in the company.	Has occurred frequently the location or activity.
Likelihood level	***0***	***1***	***2***	***3***	***4***	***5***

2.3.6.2.2 Determine the risk rating

The risk rating is derived from the consequence and likelihood levels determined above, in accordance with the Woodside Risk Matrix summarised in Table 2-4This risk rating is used as an input into the risk evaluation process and ultimately for prioritising further risk reduction measures. Once each risk is treated to ALARP, the risk rating articulates the ALARP baseline risk in the environmental impacts and risk register for the EP (Section 2.4).

Table 2-4: Woodside risk matrix determination of risk rating

Consequence level	Likelihood level					
	0	***1***	***2***	***3***	***4***	***5***
A	A0	A1	A2	A3	A4	A5
B	B0	B1	B2	B3	B4	B5
C	C0	C1	C2	C3	C4	C5
D	D0	D1	D2	D3	D4	D5
E	E0	E1	E2	E3	E4	E5
F	F0	F1	F2	F3	F4	F5

Risk rating
Severe
Very High
High
Moderate
Low

NOTE: Very High and Severe risks based on HS&E impacts are intolerable – Action Required

2.4 Impact and risk evaluation

In accordance with sections 34(a), 34(b), 34(c) and 21(5)(b) of the Environment Regulations, Woodside applies the following process to demonstrate ALARP and acceptability for environmental impacts and risks, appropriate to the nature and scale of each impact or risk.

2.4.1 Demonstration of 'as low as reasonably practicable'

The descriptions in Table 2-5 articulate how Woodside demonstrates that each impact and risk identified within this EP is ALARP.

Table 2-5: Summary of Woodside's criteria for 'as low as reasonably practicable' demonstration

Risk	Impact	Decision type
Low and moderate (C, D, E or F level consequence)	***No Lasting Effect, Localised and Low Level, or Minor***	***A***
Woodside demonstrates these impacts, risks and decision types are reduced to ALARP if: • identified controls meet legislative requirements, industry codes and standards, applicable company requirements and industry guidelines, or		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Risk	Impact	Decision type
• further effort towards impact and risk reduction (beyond using opportunistic measures) is not reasonably practicable without sacrifices that are grossly disproportionate to the benefit gained.		
High, very high or severe (A or B level consequence)	***Moderate and above (C, B or A)***	***B and C***
Woodside demonstrates these higher order risks, impacts and decision types are reduced to ALARP where it can be shown GP and RBA have been employed, if legislative requirements are met, societal concerns are accounted for, and the alternative control measures are grossly disproportionate to the benefit gained.		

2.4.2 Demonstration of acceptability

The descriptions in Table 2-6 articulate how Woodside demonstrates that each impact and risk identified within this EP are acceptable.

Table 2-6: Summary of Woodside's criteria for acceptability

Risk	Impact	Decision type
Low and moderate (C, D, E or F level consequence)	***No Lasting Effect, Localised and Low Level, or Minor***	***A***
Woodside demonstrates these lower order impacts, risks and decision types are 'broadly acceptable' if they meet the ALARP requirements for lower order risks and impacts described above (Table 2-5).		
High, very high or severe (A or B level consequence)	***Moderate and above (C, B or A)***	***B and C***
Woodside demonstrates these higher order risks, impacts and decision types are 'acceptable if ALARP' if it can be demonstrated using GP and RBA, if legislative requirements are met and societal concerns are accounted for, and the alternative control measures are grossly disproportionate to the benefit gained. In undertaking this process for moderate and high risks, Woodside evaluates: • the principles of ESD as defined under the EPBC Act • the internal context – the proposed controls and consequence/risk level are consistent with Woodside policies, procedures and standards • the external context – consideration of the environment consequence and stakeholder acceptability are considered • other requirements – the proposed controls and consequence/risk level are consistent with national and international industry standards, laws and policies and consideration of applicable plans for management and conservation advice, conventions and significant impact guidelines (e.g. MNES). Additionally, very high and severe risks require 'escalated investigation' and mitigation. If after further investigation the risk remains in the very high or severe category, the risk requires appropriate business engagement with increasing involvement of senior management in accordance with Woodside's Risk Management Procedure to accept the risk. This includes due consideration of regulatory requirements.		

2.5 Recovery plan and threat abatement plan assessment

To demonstrate acceptability, a separate assessment is undertaken to demonstrate the EP is not inconsistent with any relevant recovery or threat abatement plans. This assessment follows the below process:

1. Identify relevant listed threatened species and ecological communities (Section 4.5).
2. Identify relevant recovery plans and threat abatement plans (Section 6.8).
3. List all objectives and (where relevant) the action areas of these plans, and assess whether these objectives and action areas apply to government, the titleholder and the Petroleum Activity (Section 6.8).
4. For those objectives and action areas applicable to the Petroleum Activity, identify the relevant actions of each plan, and evaluate whether impacts and risks resulting from the activity are clearly not inconsistent with that action (Section 6.8).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2.6 Environmental performance objectives/outcomes, standards and measurement criteria

The Environment Regulations define environmental performance outcomes (EPOs) to mean: “a measurable level of performance required for the management of environmental aspects of the activity to ensure that environmental impacts and risks of the activity will be of an acceptable level”. As such, the process of defining an appropriate EPO, has relied on the required levels of performance set either:

- Legislation, such as the OPGGS Act
- regulator guidance notes, such as the Matters of National Environmental Significance – Significant Impact Guidelines (DoE, 2013), or
- specific agreements or expectations with other relevant persons, such as fishers or other marine users.

For each evaluated impact and risk, controls adopted during the ENVID and when demonstrating ALARP are paired with activity-specific EPOs, EPSs and MC. EPOs, EPSs and MC form the basis for monitoring and auditing. They allow Woodside’s environmental performance to be measured when implementing this EP to ensure impacts and risks will be managed to a level that is ALARP and acceptable. EPOs, EPSs and MC are defined for each identified credible impact and risk in Section 6.

2.7 Implement, monitor, review and report

An implementation strategy describes the specific measures and arrangements to be implemented for the duration of the Petroleum Activity. The strategy is based on the requirements of the Environment Regulations, and demonstrates:

- control measures are effective in reducing the environmental impacts and risks of the Petroleum Activity to ALARP and acceptable levels
- EPOs and EPSs set out in the EP are met through monitoring, recording, auditing, managing non-conformance and reviewing
- all environmental impacts and risks of the Petroleum Activity are periodically reviewed in accordance with Woodside’s risk management procedures
- roles and responsibilities are clearly defined, and personnel are competent and appropriately trained to implement the requirements set out in this EP, including in emergencies or potential emergencies
- arrangements are in place for oil pollution emergencies, to respond to and monitor impacts
- environmental reporting requirements are met, including ‘reportable incidents’
- appropriate consultation is undertaken throughout the Petroleum Activity.

The implementation strategy is presented in Section 6.9.

2.8 Stakeholder consultation

Woodside undertakes consultation when preparing EPs. The consultation, along with the process for ongoing engagement and consultation throughout the Petroleum Activity, is presented in Section 5. The full correspondence is provided in Appendix E.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3. DESCRIPTION OF THE ACTIVITY

3.1 Overview

This section has been prepared in accordance with section 21(1) of the Environment Regulations and describes the activities to be undertaken as part of the Petroleum Activity under this EP. The description of the activity includes the location, general details of the Petroleum Activity, and information about supporting activities relevant for considering environmental risks and impacts.

The CK4, LH3, WA-7 and WA-8 wells are tied back to the Okha FPSO, which is designed to separate, process, store and offload oil, and export gas from the Cossack, Wanaea, Lambert and Hermes (CWLH) fields. The wells operate under the Okha FPSO Operations EP.

The Petroleum Activity includes LWI activities on the CK4, LH3, WA7 and WA8 wells.

The CK4 and LH3 wells are currently producing and require temporary well suspension with temporary plugs, xmas tree (XT) changeout and recommissioning. The CK4 well also requires tubing retrievable safety valve (TRSV) remediation after the XT changeout. Once the Petroleum Activity has been completed, the wells will operate under the accepted Okha FPSO Operations EP as part of ongoing production operations.

The WA7 and WA8 wells are currently shut-in and require temporary well suspension with temporary plugs. Once this has been completed these wells will remain suspended. On completion of the Petroleum Activity the wells will be managed under the accepted Okha FPSO Operations EP.

The Petroleum Activity will be undertaken using a LWIV using dynamic positioning (DP) to hold position over each well.

Any future decommissioning or well plug and abandonment will be the subject of a separate EP.

Table 3-1 outlines the activities included within the Petroleum Activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 3-1: Petroleum Activity overview

Item	Description
Petroleum titles	WA-9-L (CK4) WA-16-L (LH3) WA-11-L (WA7) WA-9-L (WA8)
Location	About 122 km north-west of Dampier (CK4) About 134 km north-west of Dampier (LH3) About 121 km north-west of Dampier (WA7) About 123 km north-west of Dampier (WA8)
Water depth	81 m (CK4) 128 m (LH3) 82 m (WA7) 83 m (WA8)
Subsea infrastructure	Wellheads, including subsea vertical xmas trees (XTs) Manifolds, located within ~100 m of the wells Production jumpers Gas lift jumpers
Vessels	Light well intervention vessel (LWIV) Support vessels Remotely operated vehicle (ROV)
Key activities	Connection to XT with subsea intervention system Suspension of well XT changeout –CK4 and LH3 only Tubing retrievable safety valve (TRSV) remediation – CK4 only Cold commissioning of the well –CK4 and LH3 only Operation of the LWIV, support vessels and helicopters

3.2 Location

The Petroleum Activity is in petroleum titles WA-9-L, WA-16-L and WA-11-L, in Commonwealth waters, about 138 km north-west of Dampier. The CK4 well is about 122 km north-west of Dampier and 94 km from the closest coastline. The LH3 well is about 134 km north-west of Dampier and 106 km from the closest coastline. The WA7 well is about 121 km north-west of Dampier and 94 km from the closest coastline. The WA8 well is about 123 km north-west of Dampier and 95 km from the closest coastline (Figure 3-1). Approximate location details for the Petroleum Activity are in Table 3-2.

Table 3-2: Approximate location details for the Petroleum Activity

Well	Water depth (approx. m lowest astronomical tide)	Latitude (WGS84)	Longitude (WGS84)	Petroleum title(s)
Cossack-4H (CK4)	81	19° 33′ 22.909″ S	116° 29′ 35.754″ E	WA-9-L
Lambert-3 (LH3)	128	19° 26′ 58.469″ S	116° 29′ 16.227″ E	WA-16-L
Wanaea-7ST1 (WA7)	82	19° 35′ 31.586″ S	116° 26′ 6.622″ E	WA-11-L
Wanaea-8 (WA8)	83	19° 34′ 40.796″ S	116° 26′ 59.438″ E	WA-9-L

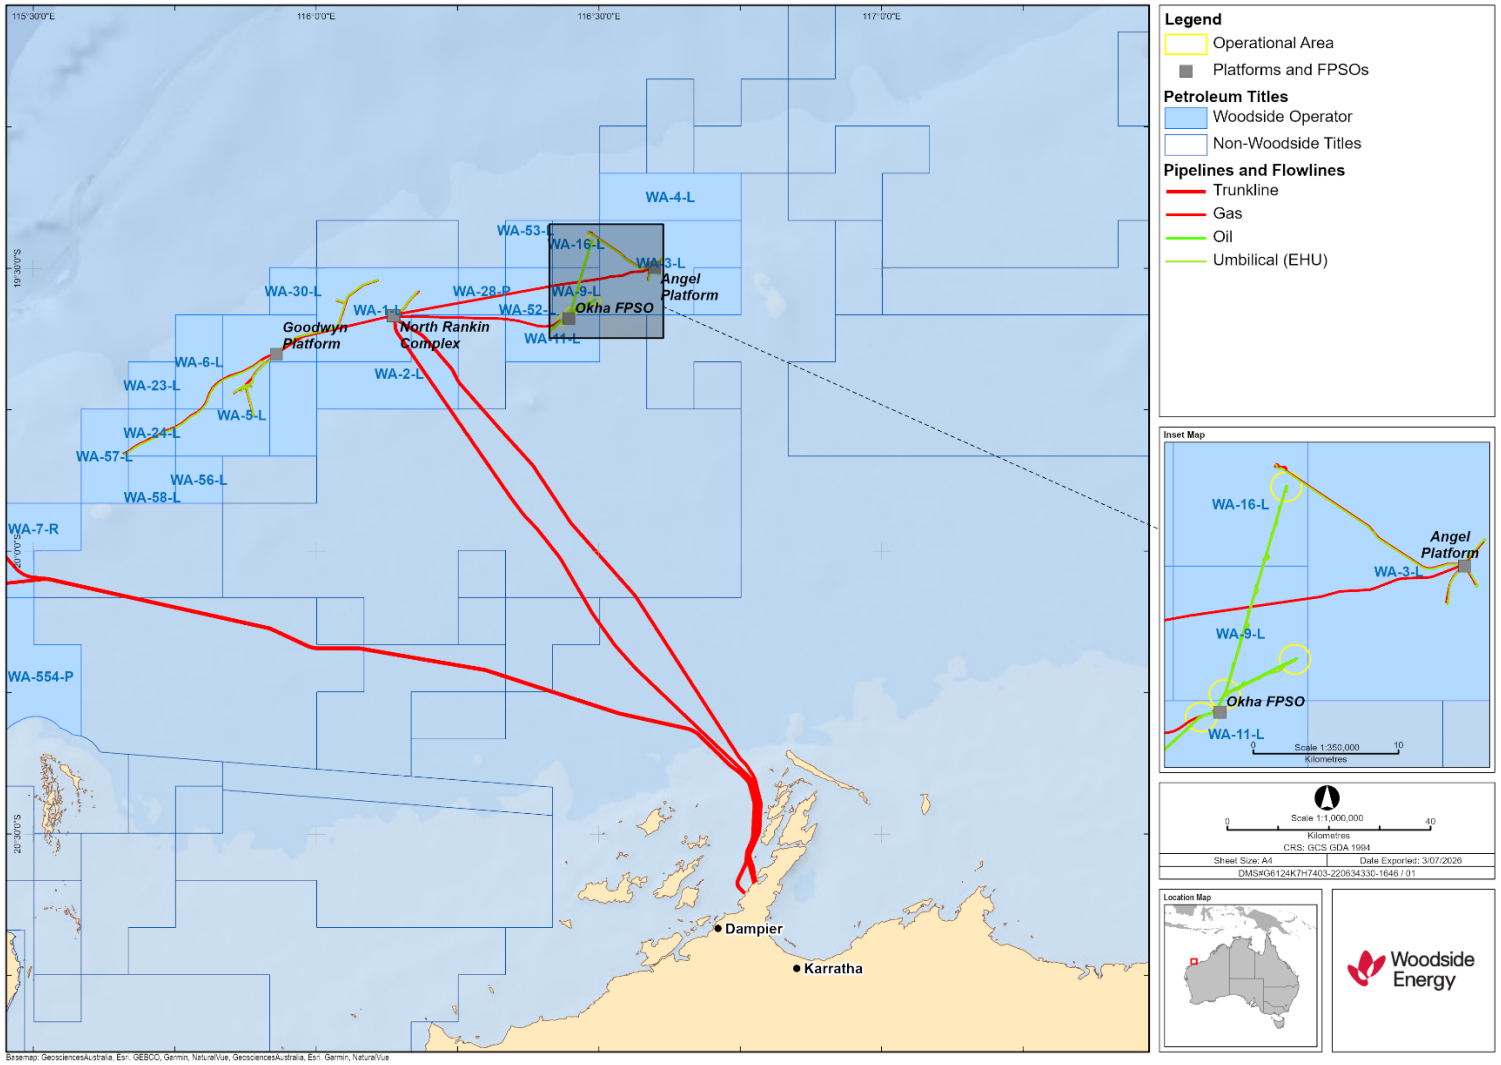

Figure 3-1: Location of the Petroleum Activity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3.3 Operational Area

An ‘Operational area’ is the spatial boundary of the Petroleum Activity, as described, risk-assessed and managed by this EP. For this EP, four Operational areas are defined as a 1 km radius of each well. The Operational area are shown in Figure 3-1 and are between about 2 km to 16 km from one another.

Where relevant in this EP, the Operational area may be distinguished as ‘Operational Area Part 1’ (CK4), ‘Operational Area Part 2’ (LH3), ‘Operational Area Part 3’ (WA7) and/or ‘Operational Area Part 4’ (WA8).

Vessel-related activities within the Operational area will comply with this EP. Vessels supporting the Petroleum Activity when outside the Operational area must adhere to applicable maritime regulations and other requirements. This EP applies to activities undertaken within the Operational area, as described in this section.

3.4 Timing

The Petroleum Activity may occur between Quarter 2 2027 and 2031. The Petroleum Activity duration at each well is presented in Table 3-3. Activities will take place 24 hours a day, seven days a week (Table 3-3). Activities may be undertaken as a single campaign or across separate campaigns depending on schedule, vessel availability, unforeseen circumstances, weather and operational requirements. The EP is intended to remain in force for up to five years from EP acceptance by the regulator.

Table 3-3: Summary of the timing of the Petroleum Activity

Well	Duration	Vessels
CK4	14 to 35 days	LWIV and up to three support vessels (24 hours a day, seven days a week)
LH3	14 to 21 days	
WA7	~15 days	
WA8	~15 days	

3.5 Subsea intervention activities

The Environmental Plan assesses a planned well intervention on wells CK-4, LH-3 WA-7 and WA-8 which will be carried out to improve well barrier integrity. Well intervention work will be carried out with appropriate barriers, i.e. a Light Well Intervention Well Control Package (LWI WCP) or equivalent and Wireline Pressure Containing Equipment. The objective of the intervention is to remove the blanking plug from the lower smart valve in the well. The objective of each well is:

- LH-3 – Conduct a XT changeout
- CK-4 – Remediate TRSV control line leak and conduct a XT changeout
- WA-7 & WA-8 – Install temporary plugs to suspend the wells

The intervention activities for each well are summarised in Table 3-4 . Well suspension and TRSV remediation steps are indicative and may change as detailed design progresses. Detailed design will confirm the exact wireline runs, wire-line retrievable safety valve and suspension configurations. Designing and installing well barriers will be completed in accordance with the NOPSEMA accepted well Operations Management Plan (WOMP) as required under the OPGGS (resource Management and Administration) Regulations 2025.

Table 3-4: LWI scope activity steps

Activity	CK4	LH3	WA7	WA8
1. Isolate the well from the FPSO and flowlines by closing valves on the adjacent manifold	✓	✓	✓	✓
2. Station the LWIV at the well	✓	✓	✓	✓
3. Recover the tree cap	✓	✓	✓	✓
4. Install LWI WCP (refer to Section 3.5.1)	✓	✓	✓	✓

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Activity	CK4	LH3	WA7	WA8
5. LWI suspend the well with temporary plugs	✓	✓	✓	✓
6. Recover LWI well control package (WCP) (refer to Section 3.5.1)	✓	✓	✓	✓
7. Disconnect the Production HFL from XT, recover XT and install new XT	✓	✓	-	-
8. Install LWI WCP (refer to Section 3.5.1)	✓	✓	-	-
9. De-suspend the well and recover the hold open sleeve	✓	✓	-	-
10. Test the TRSV line	✓	-	-	-
11. Remediate the TRSV (contingency): – Lock open the TRSV (deform flow tube). – Drift through the TRSV. – Run the shifting tool. – Run the blind box to move the TRSV communication sleeve. – Install the wire-line retrievable safety valve (WRSV) and lower section of the isolation valve carrier. – Install the upper section of the isolation valve carrier.	✓	-	-	-
12. Recover LWI WCP (refer to Section 3.5.1)	✓	✓	-	-
13. Install the tree cap	✓	✓	✓	✓
14. De-isolate and cold commission the wells	✓	✓	-	-

Local control of the XT from the LWIV may be required. Valve actuation of the XT will result in small releases of subsea control fluids to the marine environment (refer to Table 3-5).

The XTs may be placed on the seafloor during LWI activities. Equipment lay-down is temporary and may require the use of mud mats. All equipment temporarily laid down will be removed on completion of LWI.

Emissions and discharges during the LWI are detailed in Table 3-5.

Table 3-5: Emissions and discharges during the light well intervention

Activity	Typical emissions and discharge
XT cleaning / marine growth removal	500 L acid (sulphamic, citric) per well.
Valve functioning	0.5 to 5 L control fluid per valve actuation.
Wireline runs	250 to 300 L biogrease (lubricator) per well.
Tool string changeout	Up to 150 L Monoethylene glycol (MEG) component of MEG-water mix per wireline run (anticipated average of 10 wireline runs per well). ~5L residual well fluids released per wireline run.
Suspension	10 L suspension / preservation fluid.
Pressure / leak testing	>10 L chemical dye.
Flushing	Residual hydrocarbon or chemical (typically MEG) release volume depends on injection port size, component geometry and pumping rates (<10 L).
Cold commissioning/venting	During well intervention activities, surface returns of hydrocarbon gas from annular spaces will be cold vented in a controlled and safe manner via a choke manifold or through degassing of the stock tank returns. Volume of gas vented may be up to ~5000 m^3 for each well.
XT cap removal	Up to 1000 m^3 gas and 0.5 m^3 liquid hydrocarbons as well as approximately 10 L of other well fluids (e.g. control fluids) per well.
XT repair, replacement and recovery	During removal of XT, release of residual well fluids including control/preservation fluids. Dependent on equipment configuration, typically about 300 L per well.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Activity	Typical emissions and discharge
Release across guide base isolation valves from the manifold during XT replacement (CK4 and LH3 only)	The XT valves and manifold valves will be closed during the XT replacement. While these valves shall be tested to verify their integrity prior to removing the XT, leakage from the production and gas lift jumpers past the valves is credible due to their age and condition. Hydrocarbon released from the 6" production jumper and 2.5" gas lift jumper at CK4 could be up to ~4.20 m^3. Hydrocarbon released from 2.5" production jumper and 2.5" gas lift jumper at LH3 could be ~1 m^3. Should this occur the release is expected to occur gradually over an approximately 32-hour period following removal of the old XT.
Well choke / Production Choke Valve (PCV) change out (contingency)	Release of ~100L combination of well fluids and MEG. Risk of loss of subsea flowline containment during change-out (additional ~100 L).
Hydraulic flying lead (HFL) removal	During removal of the hydraulic flying lead from the XT, a small amount of fluid is expected to be released as poppets in the HFLs engage. There is potential continued release to the environment if poppets allow fluid to weep. These fluids may include water-based hydraulic fluid, hydrocarbons (liquid and/or gas), and chemical injection fluids such as scale inhibitor. Based on the estimated hydraulic flying lead volumes, the potential release volume is up to ~100 L of control fluid and ~15 L of scale inhibitor from each HFL.

3.5.1 Connection of integrated well control package

Intervention will begin with deployment of an integrated well control package (WCP) onto the well (XT) to allow access into the well. The WCP is not physically connected to the LWIV, other than via a control umbilical and a flush-return umbilical. In conjunction with subsea wireline pressure-containing equipment, this enables a contained envelope, known as the lubricator, to be maintained. Between wireline runs the lubricator contents will be flushed back to the LWIV via the flush-return umbilical to remove hydrocarbons from the lubricator. Fluids planned to be used to flush are a mix of drill water and a monoethylene glycol (MEG). Hydraulic control fluids are used to operate the WCP and XT. These systems operate in an open loop. The XT valves will be controlled by the LWIV via an umbilical and ROV, if needed.

The WCP, comprising of a lower and upper WCP, includes a series of independent barriers to seal the well in addition to the XT, to prevent loss of containment.

The WCP will be pressure tested following installation onto the XT to verify the integrity and functionality of the intervention system and associated well barriers. This includes conducting defined function and pressure tests on the WCP well control valves and exposed connections to confirm sealing performance against specified pressure levels. These valves are tested in accordance with Woodside pressure testing guidelines. Testing is performed on deck as part of pre-deployment testing, after deployment following installation onto the XT, and periodically during operations to ensure ongoing barrier integrity and maintain well containment under operating conditions. Wireline pressure-containing equipment, including a stuffing box and grease system, will be rigged up to provide well barriers and control pressure during wireline operations. The grease system comprises a readily biodegradable vegetable-based oil. During wireline operations, this biogrease will be used subsea on top of the lubricator in the pressure control equipment (PCE) to achieve a dynamic seal around the wire. Approximately 50 mL/min would be applied during operations, equating to around 25 L for a single run. The grease would be applied into the PCE with most travelling into the wellbore, though some is likely to be released to the marine environment.

Barrier pressure testing will be conducted upon connecting the WCP to the XT. After this, there will be a function test about every seven days and a barrier pressure test about every 14 days thereafter. Each test will result in 1,000 to 3,000 L of hydraulic/control fluids (e.g. HW443) being discharged, depending on the level of testing required. These tests may be standalone, or may be incorporated into operational procedures.

Pending return to production operations, XT valves will be shut, the WCP will be disconnected and retrieved to surface, and a tree cap will be installed. Well control will be handed back to the Okha FPSO where it will remain shut in until the well resumes production.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3.5.2 Underwater acoustic positioning

Dynamic positioning (DP) of a vessel applies satellite navigation and radio transponders in conjunction with thrusters to maintain the position of the LWIV and support vessels at the required location. Information about the position of the LWIV is provided via a number of seabed transponders, which emit signals that are detected by receivers on the LWIV and used to calculate position.

An array of long baseline (LBL) transponders may be installed on the seabed. The LBL array provides accurate positioning by measuring ranges to three or more transponders deployed at known locations on the seabed and structures. Alternatively, ultra-short baseline transponders (USBL) may be installed on the seabed or mounted to the wellhead. Transmissions from USBL transponders are similar to LBL transponders.

An array of transponders is proposed within a radius of 500 m from the wells. Transmissions are not continuous but consist of short ‘chirps’ with a duration that ranges from 3 to 40 milliseconds. Transponders will not emit any sound when on standby and are planned to only actively emit sound for about six hours per well. When needed for general positioning, they will emit one chirp every five seconds (estimated to be needed for four hours at a time). When needed for precise positioning, they will emit one chirp every second, estimated to be needed for two hours at a time. Transmissions from USBL transponders are similar to LBL transponders.

Transponders may be deployed to the seabed either by a clump weight or mounted on a seabed frame. The standard clump weights used, made of cement or steel, will likely weigh about 80 kilograms (kg). A typical seabed frame is 1.5 m × 1.5 m × 1.5 m in dimension and weighs about 40 kg. After positioning, an ROV will remove the transponders, clump weights and seabed frames.

3.5.3 Marine growth removal

An ROV may remove excess marine growth on the tree cap using high-pressure water or brushes. Table 3-6 lists the removal techniques.

Table 3-6: Marine growth removal

Activity/equipment	Description
Water jetting	Uses high-pressure water to remove marine growth
Brush systems	Uses brushes attached to an ROV to physically remove marine growth
Acid (typically sulfamic acid or equivalent)	Chemically dissolves calcium deposits

3.6 Project vessels

The Petroleum Activity will occur from an LWIV. Specifications of a typical LWIV are presented in Table 3-7. Up to three support vessels may support the Petroleum Activity. Specifications of a typical support vessel are presented in Table 3-8.

Table 3-7: Indicative light well intervention vessel specifications

Attribute	Details
Type	LWIV
Station keeping	Dynamically positioned (DP2)
Length overall	120 m
Breadth	22 m
Draft	7.5 m
Accommodation	Berthing for 120 personnel
Fuel type	Marine diesel
Fuel capacity	Total inventory: 1,100 m³ Largest tank: 165 m³

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 3-8: Indicative support vessel specifications

Attribute	Details
Type	Support vessel
Station keeping	Dynamically positioned (DP2)
Length overall	90 m
Breadth	20 m
Draft	7.5 m
Accommodation	Berthing for 25 personnel
Fuel type	Marine diesel
Fuel capacity	Total inventory: 950 m³ Largest tank: 250 m³

3.7 Support operations

3.7.1 Helicopters

Helicopters are the primary means of transporting passengers and urgent freight to and from the Petroleum Activity. They are also the preferred means of evacuating personnel in an emergency. Helicopters are not expected to be refuelled offshore.

3.7.2 Remotely operated vehicle

ROVs and autonomous underwater vessels (AUV) may undertake activities such as visual surveys, transponder deployment and retrieval, cleaning and LWI support. An ROV and AUV is typically deployed from a support vessel using a crane or an A-frame.

3.7.3 Resupply

Support vessels are used to transport equipment and materials between the LWIV and port (e.g. Dampier, Onslow). If required, one of the vessels may remain at the LWIV to perform standby duties, while others will make regular trips to port for routine, non-routine, and emergency operations. These vessels may also be used to provide ROV operations to support LWI activities.

3.8 Contingency operations

The next sections present contingencies that may be needed, if operational or technical issues occur during the Petroleum Activity. These contingencies have been considered within the relevant impact assessment sections and do not represent significant additional risks or impacts, but may generate additional volumes of fluids being operationally discharged.

3.8.1 Well kill

If it is determined that sufficient barriers are not in place to allow removal of the tree cap on each well, the well may be bullhead killed prior to commencing intervention operations using a modified choke insert. Designing and installing well barriers will be completed in accordance with the NOPSEMA accepted WOMP as required under the OPGGS (resource Management and Administration) Regulations 2025. The likely steps for well kill via modified choke insert are as follows:

- Establish required barriers on the choke manifold
- Recover the choke insert with the LWIV crane
- Deploy a modified choke insert with downline
- Line up and kill the well via the downline using a pumping spread on the LWIV

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The well kill fluid will be a weighted brine, which may also require additives to reduce reservoir permeability post well kill. Table 3-5 describes the expected discharges associated with this contingency activity.

3.8.2 Emergency shutdown and disconnect

An emergency shutdown may be implemented if the LWIV needs to rapidly disengage from the well. The emergency shutdown closes WCP valves (i.e. shutting in the well) and disconnects the umbilicals to break the conduit between the XT and the LWIV. Common examples of when this system may be initiated include when moving the LWIV outside of its operating circle, such as due to a failure of the DP system, or moving the LWIV to avoid a vessel collision, such as a third-party vessel on a collision course with the LWIV. The emergency shutdown aims to leave the wellhead and WCP/PCE in a secure condition but may result in the loss of small volumes of fluids/gases in the umbilical or upper PCE, around the disconnection points from the upper PCE (<50 L).

During a drift-off or drive-off, the LWIV may need to disconnect from the WCP. This will occur autonomously through breakaways in the umbilical connection and guidewires. Before reaching the watch circle limit, the operator will initiate an emergency shutdown to shut in the well. If the operator fails to initiate an emergency shutdown, this will happen autonomously when the umbilical separates. The disconnect aims to leave the wellhead and WCP/PCE in a secure condition but may result in the loss of small volumes of fluids/gases in the umbilical or upper PCE during the disconnection (<1 m^3).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4. DESCRIPTION OF THE EXISTING ENVIRONMENT

4.1 Overview

In accordance with sections 21(2) and 21(3) of the Environment Regulations, this section describes the existing environment that may be affected by the Petroleum Activity (planned and unplanned), as described in Section 3, including details of the particular relevant values and sensitivities of the environment, which were used for the risk assessment.

The EMBA is the largest spatial extent where unplanned events could have an environmental or sociocultural consequence on the surrounding environment. For this EP, the EMBA is the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the event of the worst-case credible spill. The ecological impact thresholds used to delineate the EMBA are defined in Table 4-1.

Woodside recognises hydrocarbons may be visible at lower concentrations than the ecological impact thresholds defined in Table 4-1. These visible hydrocarbons have the potential to cause sociocultural impacts. In respect of this, the EMBA also includes hydrocarbon thresholds where sociocultural impact could occur. Receptors relevant to the sociocultural hydrocarbon thresholds include cultural values and heritage, Commonwealth and state marine protected areas, National and Commonwealth Heritage listed places, areas of tourism and recreation, and commercial and traditional fisheries. For this EP, the sociocultural hydrocarbon thresholds for surface hydrocarbons encompass an area fully within the boundaries of the EMBA for ecological impacts. The EMBA and socioeconomic EMBA are shown in Figure 4-1 and described in Table 4-1.

The EMBA does not represent the predicted coverage of any one hydrocarbon spill nor depict a slick or plume at any specific time. Rather, the EMBA represents a composite of many theoretical paths, integrated over the full duration of the simulations under various metocean conditions.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-1: Hydrocarbon spill thresholds used to define EMBA for surface and in-water hydrocarbons

Hydrocarbon type	Ecological hydrocarbon thresholds[1]	Socio-cultural hydrocarbon thresholds[1]	Planning area for scientific monitoring
Surface	10 g/m² This represents the minimum oil thickness (0.01 mm) at which ecological impacts (e.g. to birds and marine mammals) are expected to occur.	1 g/m² This represents a wider area where a visible sheen may be present on the surface and, therefore, the concentration at which socio-cultural impacts to the visual amenity of the marine environment may occur. However, it is below concentrations at which ecological impacts are expected to occur. This low exposure value also establishes the planning area for operational and scientific monitoring.	
Dissolved	10 ppb The biological effects of hydrocarbons are driven by the fraction of hydrocarbons that are dissolved and therefore bioavailable to aquatic organisms. Toxicity studies show 10 ppb is protective of more than 95% of species for acute exposures, while still capturing the onset of effects in the most sensitive species and life stages (French-McCay 2026; Negri et al. 2021; Bejarano et al. 2017). As dissolved hydrocarbons are within the water column and not visible, impacts to socio-cultural receptors are associated with ecological impacts. Therefore, dissolved hydrocarbons at this threshold also represent the level at which socio-cultural impacts may occur. See Section 6.7.1.		10 ppb This low concentration value establishes the planning area for scientific monitoring within which further analysis can be undertaken to inform monitoring priorities. In the event of a spill, DNP will be notified of AMPs which may be contacted by hydrocarbons at this threshold (Table 7-7).
Entrained	1000 ppb Entrained hydrocarbons have limited bioavailability as toxic effects are driven by the small soluble fraction (typically less than 1% of the oil mass) that dissolves into the water column (French-McCay 2026). As entrained hydrocarbons are within the water column and not visible, impacts to socio-cultural receptors are associated with ecological impacts. Therefore, entrained hydrocarbons at this threshold also represent the level at which socio-cultural impacts may occur. See Section 6.7.1.		
Shoreline	100 g/m² This represents the threshold that could impact the survival and reproductive capacity of benthic epifaunal invertebrates living in intertidal habitat.	10 g/m² This represents the volume where hydrocarbons may be visible on the shoreline but is below concentrations at which ecological impacts are expected to occur. This low exposure value also establishes the planning area for scientific monitoring.	

[1] *Further details, including the source of the thresholds used to define the EMBA in this table, are provided in Section 6.7.1*

4.2 Regional context

The Operational area are in Commonwealth waters within the North-west Marine Region (NWMR), as defined under the Integrated Marine and Coastal Regionalisation of Australia (v4.0) (Department of Sustainability, Environment, Water Population and Communities [DSEWPaC], 2012a), in water depths of about 80 to 128 m. Within the NWMR, the Operational area lie within the NWS Province (Figure 4-2). The EMBA partially overlaps with additional provincial bioregions of the NWMR, including the Northwest Transition, Northwest Province, Central Western Shelf Transition and Central Western Transition.

Woodside's Master Existing Environment (Appendix I) summarises the characteristics of the relevant marine bioregions.

4.3 Matters of national environmental significance (EPBC Act)

Table 4-2 summarises the MNES overlapping the Operational area and EMBA, according to Protected Matters Search Tool (PMST) results (Appendix C). It should be noted the EPBC Act PMST is a general database that identifies areas in which protected species have the potential to occur. The PMST conducts searches to determine the presence or absence of MNES based on a conservative grid-based search. Marine areas >30 km from the coast use 32 km × 32 km grid cells to determine the spatial overlap with listed MNES. Accordingly, the PMST report (Appendix C) can indicate the presence of MNES that do not actually intersect with the Operational area or EMBA. To accurately consider any impacts from the Petroleum Activity on MNES, shapefiles (provided by Department of Climate Change, Energy, the Environment and Water [DCCEEW]) have been assessed using geographic information system software to determine the actual presence and distance to MNES.

More information about these MNES is provided throughout this section and described in detail in Woodside's Master Existing Environment (Appendix I).

Table 4-2: Summary of relevant matters of national environmental significance identified by the EPBC Act Protected Matters Search Tool as potentially occurring within the Operational area and EMBA

MNES	Number of MNES in Operational area	Number of MNES in EMBA
World Heritage properties	0	1
National Heritage places	0	1
Wetlands of International Importance (Ramsar)	0	0
Commonwealth Marine Area	1	4
Listed threatened ecological communities	0	0
Listed threatened species	23	44
Listed migratory species	39	64

4.4 Physical environment

The Operational area are in Commonwealth waters within the NWS Province, in water depths of about 81 m to 128 m (refer to Table 3-2). The bathymetry within the Operational area is generally flat, which is consistent with the broader NWS Province shelf region (Baker et al., 2008). Operational Area Part 2 (LH3) overlaps the 'Ancient Coastline at 125 m Depth Contour' key ecological feature (KEF); refer to Section 4.7. Figure 4-3 shows the bathymetry of the Operational area and immediately adjacent areas.

The Ancient Coastline at 125 m Depth Contour KEF is a distinctive geomorphic feature, with seafloor features combining both soft sediment and hard substrates, including outcrops, terraces, continental slopes and escarpments.

The seabed in the NWS Province has a gentle (0.05º) seaward gradient, extending to a relatively steep outer slope about 200 to 300 km offshore in water depths of around 200 m (Dix, et al., 2005). The continental slope then descends more rapidly from the shelf edge to depths greater than 1,000 m to the north-west (James, et al., 2005).

Woodside's Master Existing Environment (Appendix I) summarises the physical characteristics of the environment within the EMBA.

4.5 Habitats and biological communities

Sediments in the Operational area are broadly consistent with those in the NWS Province and can be inferred from Woodside sampling programs undertaken at Glomar Shoals (about 7 km east of the Operational area) and the Angel facility (about 15 km east of the Operational area).

The sediments in the Operational area are expected to comprise primarily fine sands, very fine sands and silt with large proportions of shell fragments (BMT, 2021; Australian Institute of Marine Science (AIMS), 2014; BMT, 2015; Brewer, et al., 2007). Similarly, surveys conducted in 2014 as part of the Lambert Deep baseline investigations, a development associated with the Angel facility, found the sediments surveyed were classified as sub-littoral sediments. These sediments were predominantly coarse silt and some shell fragments with borrows, mounds, polychaetes and occasional hydroids, interspersed with areas of muddy sand and occasional polychaetes and sparse epibiota (Jacobs, 2014). A reconnaissance survey of the pipeline route linking the Angel platform to North Rankin Complex (which runs through the Operational area) indicated occasional outcrops of cemented substrate occur in localised depressions, and identified a plateau-like structure up to 4 m higher than the flat, unconsolidated soft sediment seabed habitat of the south-west section of the proposed pipeline route (Sinclair Knight Merz, 2006). This indicates the potential for sparse outcrops of hard substrate within the Operational area, which otherwise is predominantly composed of a flat, unconsolidated soft sediment seabed habitat.

The Operational Area Part 2 (LH3) partially overlap the Ancient Coastline at 125 m Depth Contour KEF. Although several areas with sensitive habitat and features are present within this KEF, most of the seabed within the Operational area is likely expansive areas of featureless sandy substrate.

Habitats and ecological communities within the EMBA are briefly described and identified in Table 4-3. A full description of the habitats and ecological communities is contained within the Master Existing Environment document (Appendix I).

Table 4-3: Habitats and communities within the environment that may be affected (distance calculated from Operational area)

Habitat/community	Key locations within the EMBA
Seabed characteristics	
NWS Province	• Overlapping the Operational area
Key Ecological Features	• Ancient Coastline at 125 m Depth Contour KEF overlapping Operational Area Part 2 (LH3) • Various. The KEFs within the EMBA as described in Table 4-15
Reefs, banks and shoals	• Glomar Shoals (7 km east of the Operational area) • Rankin Bank (98 km south-west of the Operational area) • Wilcox Shoal (85 km south of the Operational area)
Marine primary producers	
Coral	• Montebello Islands Group (130 km south-west of the Operational area) • Ningaloo Coast (about 345 km southwest of the Operational area)
Seagrass beds and macroalgae	• Exmouth Gulf (about 332 km southwest of the Operational area) • Ningaloo Reef (about 345 km southwest of the Operational area)
Mangroves	• Montebello Islands Group (130 km south-west of the Operational area) • Ningaloo Reef (about 345 km southwest of the Operational area)
Other communities and habitats	
Plankton	• Plankton is expected throughout the Operational area and EMBA and is expected to be representative of plankton within the wider NWMR, as detailed in Woodside's Master Existing Environment (refer to Section 2.3.2)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Habitat/community	Key locations within the EMBA
Pelagic and demersal fish populations	• Pelagic and demersal fish are expected throughout the Operational area and EMBA and are expected to be representative of pelagic and demersal fish within the wider NWMR, as detailed in Woodside's Master Existing Environment (refer to Section 2.3.2).
Epifauna and infauna	• Epifauna and infauna are expected throughout the Operational area and EMBA and are expected to be representative of epifauna and infauna present the wider NWMR, as detailed in Woodside's Master Existing Environment (refer to Section 2.3.2).

4.6 Protected species

A total of 70 EPBC Act listed species considered to be MNES were identified as potentially occurring within the EMBA, of which a subset of 45 species was identified as potentially occurring within the Operational area. The full list of marine species identified from the PMST reports is provided in Appendix C. Species identified in the PMST that are not known to inhabit shorelines, nor rely on the marine environment for their diet, were not assessed. One conservation-dependent species has also been identified with a potential to occur within the Operational area and EMBA.

Key species identified as potentially occurring within the Operational area and EMBA and biologically important areas (BIAs) or habitat critical to their survival (habitat critical) that overlap the Operational area and EMBA, are described in the next sections. Key threatened and migratory species and associated biologically important behaviours in the EMBA are further described in Woodside's Master Existing Environment (refer to Section 2.3.2).

4.6.1 Fish, sharks and rays

A total of 14 EPBC Act listed threatened and migratory fish species have been identified to potentially occur within the EMBA, of which 12 occur in the Operational area (Table 4-4). All EPBC Act listed species identified in the PMST search is listed in Appendix C.

The Operational area overlap the foraging BIA for whale sharks, northward from Ningaloo along the 200 m isobath (Figure 4-4 and Table 4-4). A high-density foraging area is 357 km south-west of the Operational area and within the EMBA.

BIAs are further described in Woodside's Master Existing Environment (Appendix I).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-4: Threatened and migratory fish, shark and ray species predicted to occur in the Operational area and EMBA

Species name	Common name	EPBC Act (as per PMST report Appendix C)		Potential for interaction	
		Threatened status	***Migratory status***	***Operational area***	***EMBA***
Anoxypristis cuspidata	Narrow sawfish	NA	Migratory	Species or species habitat known to occur in area	Species or species habitat known to occur in area
Carcharhinus longimanus	Oceanic whitetip shark	N/A	Migratory	Species or species habitat likely to occur in area	Species or species habitat likely to occur in area
Carcharias taurus (west coast population)	Grey nurse shark (west coast population)[3]	Vulnerable	N/A	Species or species habitat likely to occur in area	Congregation or aggregation known to occur within area
Carcharodon carcharias	Great white shark	Vulnerable	Migratory	Species or species habitat may occur in area	Species or species habitat known to occur in area
Isurus oxyrinchus	Shortfin mako	N/A	Migratory	Species or species habitat likely to occur in area	Species or species habitat likely to occur in area
Isurus paucus	Longfin mako	N/A	Migratory	Species or species habitat likely to occur in area	Species or species habitat likely to occur in area
Mobula alfredi	Reef manta ray	N/A	Migratory	Species or species habitat likely to occur in area	Species or species habitat known to occur in area
Mobula birostris	Giant manta ray	N/A	Migratory	Species or species habitat likely to occur in area	Species or species habitat known to occur in area
Pristis clavata	Dwarf sawfish, Queensland sawfish	Vulnerable	Migratory	N/A	Species or species habitat known to occur in area
Pristis pristis	Largetooth sawfish	Endangered	Migratory	Species or species habitat may occur in area	Species or species habitat likely to occur in area
Pristis zijsron	Green sawfish, dindagubba, narrowsnout sawfish	Vulnerable	Migratory	Species or species habitat known to occur in area	Species or species habitat known to occur in area

[3] *The grey nurse shark is also identified as a migratory species, but this classification does not apply to the west coast population species.*

4.6.1.1 Whale sharks

Whale sharks (*Rhindocon typus*) are planktivorous sharks feeding on a variety of planktonic organisms, including krill, jellyfish and crab larvae (Last & Stevens, 2009).

Whale sharks form seasonal aggregations at Ningaloo Reef between March and July (Threatened Species Scientific Committee (TSSC), 2015). However, seasonal aggregation can be variable, with whale sharks recorded at Ningaloo year-round (Norman, et al., 2017).

The annual migration of whale sharks occurs along the 200 m isobath of the WA coast between July and November (TSSC, 2015). Timing of their migration to and from Ningaloo coincides with the coral mass spawning period, when there is an abundance of food (krill, planktonic larvae and schools of small fish) in the waters adjacent to Ningaloo Reef (DCCEEW, 2026a). Whale sharks remain within a few kilometres of the shore while at the Ningaloo Reef in water depths between 30 and 50 m (Wilson, et al., 2006). After the aggregation period, their distribution is largely unknown. Satellite tracking (Figure 4-4) has shown the sharks may follow three migration routes from Ningaloo (Wilson, et al., 2006; Meekan & Radford, 2010):

- north-west, into the Indian Ocean
- directly north, towards Sumatra and Java
- north-east, passing through the NWS and travelling along the shelf break and continental slope.

Anecdotal evidence from sightings data collected from Woodside's offshore facilities indicate whale sharks are on the NWS in the months of April, July, August, September and October, corresponding with the whale shark's seasonal migration to and from Ningaloo Reef. However, the numbers of individual whale sharks that transit through the Operational area is expected to be low, based on the number of whale sharks aggregating at Ningaloo and on the migration paths the sharks may follow.

While whale sharks may traverse the vicinity of the Operational area, their presence would be of a relatively short duration and not in significant numbers, given the main aggregations are recorded in coastal waters, particularly the Ningaloo Reef edge (Department of Parks and Wildlife, 2013; Marine Parks and Reserves Authority, 2005).

4.6.2 Marine reptiles

A total of seven EPBC Act listed threatened and migratory marine reptile species have been identified to potentially occur within the EMBA and Operational area (Table 4-6). A full list of EPBC Act listed species identified in the PMST search is provided in Appendix C.

BIAs that overlap the EMBA are presented in Figure 4-4 and Table 4-4. Habitat critical overlapping the EMBA is presented in Figure 4-6 and Table 4-8. The Operational area does not overlap any marine turtle BIAs.

BIAs are further described in Woodside's Master Existing Environment (Appendix I).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-6: Threatened and migratory marine reptile species predicted to occur in the Operational area and EMBA

Species name	Common name	EPBC Act (Cth) (as per PMST report Appendix C)		Potential for interaction	
		Threatened status	*Migratory status*	*Operational area*	*EMBA*
Aipysurus apraefrontalis	Short-nosed sea snake	Critically endangered	N/A	Species or species habitat known to occur in area	Species or species habitat known to occur in area
Aipysurus foliosquama	Leaf-scaled sea snake	Critically endangered	N/A	Species or species habitat likely to occur in area	Species or species habitat known to occur in area
Caretta caretta	Loggerhead turtle	Endangered	Migratory	Species or species habitat likely to occur in area	Breeding known to occur in area
Chelonia mydas	Green turtle	Vulnerable	Migratory	Species or species habitat likely to occur in area	Breeding known to occur in area
Dermochelys coriacea	Leatherback turtle	Endangered	Migratory	Species or species habitat likely to occur in area	Species or species habitat known to occur in area
Eretmochelys imbricata	Hawksbill turtle	Vulnerable	Migratory	Species or species habitat likely to occur in area	Breeding known to occur in area
Natator depressus	Flatback turtle	Vulnerable	Migratory	Congregation or aggregation known to occur in area	Breeding known to occur in area

Table 4-7: Marine turtle BIAs in the EMBA

Species	BIA type	Approx. distance and direction of BIA from Operational area (km)
Flatback turtle	Reproduction (Internesting buffer) (Dampier Archipelago, Montebello Islands)	18 km south (Dampier Archipelago)
	Reproduction (mating) (Montebello Islands, coral reef habitat west of the Montebello group)	130 km south-west (Montebello Islands)
	Reproduction (nesting) (Montebello Islands)	130 km south-west
	Reproduction (internesting) (coral reef habitat west of Montebello Islands)	143 km south-west
	Foraging (Montebello Islands, coral reef habitat west of Montebello Islands)	130 km south-west (Montebello Islands)
	Aggregation (coral reef habitat west of the Montebello Islands)	143 km south-west

4.6.3 Marine mammals

A total of 14 EPBC Act listed threatened and migratory marine mammal species have been identified to potentially occur within the EMBA, of which nine occur in the Operational area (Table 4-9). A full list of EPBC Act listed species identified in the PMST search is provided in Appendix C.

BIAs that overlap the EMBA are presented in Table 4-10, Figure 4-7, Figure 4-8 and Figure 4-9. The Operational area are within 50 km of the migration BIA for humpback whales and pygmy blue whales (Table 4-10, Figure 4-7, and Figure 4-8). Whilst the PMST report for the EMBA (Appendix C) identified the humpback whale resting area BIA, this has been determined to be outside of the EMBA (Figure 4-7).

BIAs are further described in Woodside's Master Existing Environment (Appendix I).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-9: Threatened and migratory marine mammal species predicted to occur in the Operational area and EMBA

Species name	Common name	EPBC Act (Cth) (as per PMST report Appendix C)		Potential for interaction	
		Threatened status	*Migratory status*	*Operational area*	*EMBA*
Balaenoptera borealis	Sei whale	Vulnerable	Migratory	Species or species habitat likely to occur in area	Foraging, feeding or related behaviour likely to occur in area
Balaenoptera edeni	Bryde's whale	N/A	Migratory	Species or species habitat likely to occur in area	Species or species habitat likely to occur in area
Balaenoptera musculus	Blue whale	Endangered	Migratory	Species or species habitat likely to occur in area	Migration route known to occur in area
Balaenoptera physalus	Fin whale	Vulnerable	Migratory	Species or species habitat likely to occur in area	Foraging, feeding or related behaviour likely to occur in area
Balaenoptera omurai	Omura's whale	N/A	Migratory	Species or species habitat likely to occur in area	Species or species habitat likely to occur in area.
Megaptera novaeangliae	Humpback whale	N/A	Migratory	Breeding known to occur in area	Breeding known to occur in area
Orcaella heinsohni	Australian snubfin dolphin	Vulnerable	Migratory	N/A	Species or species habitat likely to occur in area
Orcinus orca	Killer whale	N/A	Migratory	Species or species habitat may occur in area	Species or species habitat may occur in area
Physeter macrocephalus	Sperm whale	N/A	Migratory	Species or species habitat may occur in area	Species or species habitat may occur in area
Sousa sahulensis	Australian humpback dolphin	Vulnerable	Migratory	N/A	Species or species habitat known to occur in area
Tursiops aduncus	Spotted bottlenose dolphin (Arafura/Timor Sea populations)	N/A	Migratory	Species or species habitat may occur in area	Species or species habitat known to occur in area
Dugong dugon	Dugong	N/A	Migratory	N/A	Breeding known to occur in area

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Species name	Common name	EPBC Act (Cth) (as per PMST report Appendix C)		Potential for interaction	
		Threatened status	*Migratory status*	*Operational area*	*EMBA*
Eubalaena australis	Southern right whale	Endangered	Migratory	N/A	Species or species habitat likely to occur in area
Balaenoptera bonaerensis	Antarctic minke whale, dark-shoulder minke whale	N/A	Migratory	N/A	Species or species habitat likely to occur in area

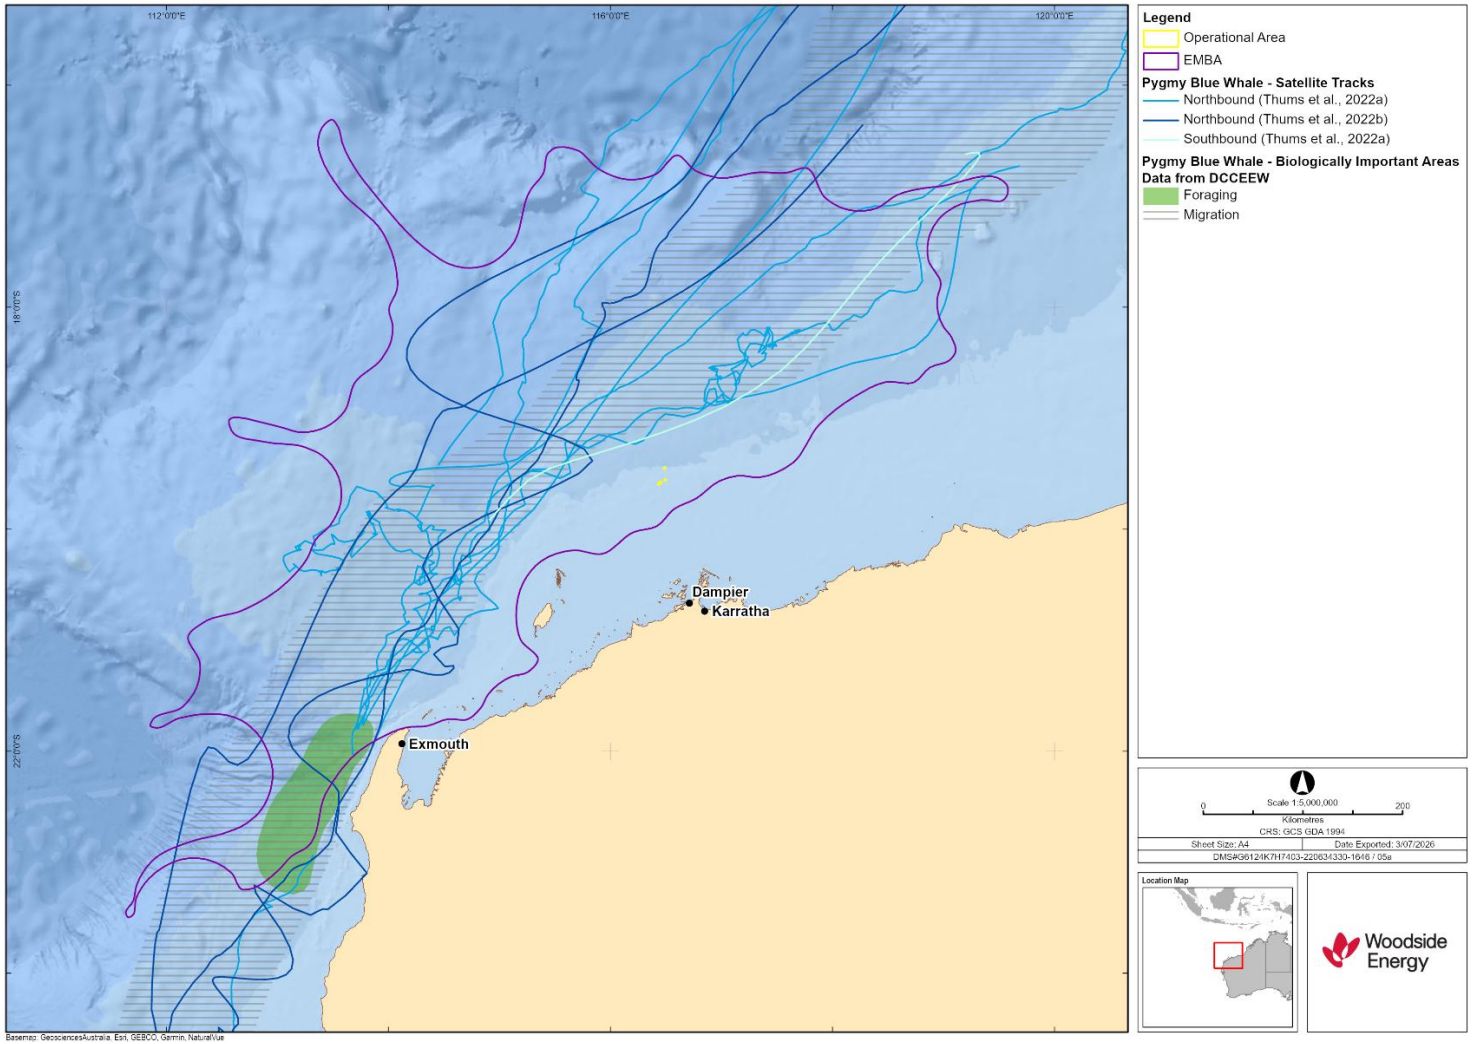

Table 4-10: Marine mammal BIAs in the EMBA

Species	BIA type	Approx. distance and direction from Operational area (km)
Humpback whale	Migration (north and south) (100 km offshore in the Kimberley Region, Houtman Abrolhos Islands, West Coast – Bunbury to Lancefield including Rottnest Island)	34 km south
Pygmy blue whale	Migration (Augusta to Derby along the shelf edge)	43 km north
	Foraging (Ningaloo)	366 km south-west
Dugong	Reproduction (breeding, calving and nursing) (Exmouth Gulf and Ningaloo Reef)	353 km south-west
	Foraging (Exmouth Gulf and Ningaloo Reef at high density seagrass beds)	353 km south-west
Southern right whale	Reproduction (Exmouth Gulf and Ningaloo Reef)	390 km south-west
	Migration (Exmouth Gulf and Ningaloo Reef)	390 km south-west

4.6.4 Seabirds and migratory shorebirds

A total of 35 EPBC Act listed threatened seabirds and migratory shorebird species have been identified to potentially occur within the EMBA, of which 17 occur in the Operational area (Table 4-12). A full list of EPBC Act listed species identified in the PMST search is provided in Appendix C.

BIAs that overlap the EMBA are presented in Table 4-12 and Figure 4-10. Operational Area Part 1 (CK4) overlaps a reproduction BIA for wedge-tailed shearwaters (Table 4-12, Figure 4-10).

BIAs of seabirds and migratory shorebirds in the EMBA are further described Woodside's Master Existing Environment (Appendix I).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-12: Threatened and migratory seabird and migratory shorebird species predicted to occur in the Operational area and EMBA

Species name	Common name	EPBC Act (Cth) (as per PMST report Appendix C)		Potential for interaction	
		Threatened status	*Migratory status*	*Operational area*	*EMBA*
Actitis hypoleucos	Common sandpiper	N/A	Migratory	Species or species habitat may occur in area	Species or species habitat known to occur in area
Anous stolidus	Common noddy	N/A	Migratory	Species or species habitat may occur in area	Species or species habitat likely to occur in area
Apus pacificus	Fork-tailed swift	N/A	Migratory	N/A	Species or species habitat likely to occur in area
Ardenna carneipes	Flesh-footed shearwater, fleshy-footed shearwater	N/A	Migratory	N/A	Species or species habitat likely to occur in area
Ardenna pacifica	Wedge-tailed shearwater	N/A	Migratory	Breeding known to occur in area[4]	Breeding known to occur in area
Calidris acuminata	Sharp-tailed sandpiper	Vulnerable	Migratory	Species or species habitat may occur in area	Species or species habitat likely to occur in area
Calidris canutus	Red knot, knot	Vulnerable	Migratory	Species or species habitat may occur in area	Species or species habitat may occur in area
Calidris ferruginea	Curlew sandpiper	Critically endangered	Migratory	Species or species habitat may occur in area	Species or species habitat known to occur in area
Calidris melanotos	Pectoral sandpiper	N/A	Migratory	Species or species habitat may occur in area	Species or species habitat may occur in area
Calonectris leucomelas	Streaked shearwater	N/A	Migratory	Species or species habitat likely to occur in area	Species or species habitat likely to occur in area
Charadrius leschenaultii	Greater sand plover, large sand plover	Vulnerable	Migratory	N/A	Species or species habitat likely to occur in area
Charadrius veredus	Oriental plover, oriental dotterel	N/A	Migratory	N/A	Species or species habitat may occur in area

[4] *The wedge-tailed shearwater was not captured in the PMST but a breeding BIA overlaps the Operational Areas (LH3); therefore, the wedge-tailed shearwater may interact with the Petroleum Activity.*

4.6.4.1 Wedge-tailed shearwater

The wedge-tailed shearwater (*Arena pacific*) is a pelagic, marine seabird known from tropical and subtropical waters (DCCEEW, 2025e). Its distribution is widespread across the Indian and Pacific oceans, with most pairs breeding in Australia, mostly on islands in WA between Rottnest Island in the south to Ashmore Reef in the north (DCCEEW, 2025e).

Adults are absent from their breeding colonies during the interbreeding period and return from their tropical Indian Ocean over-wintering grounds from late June onwards to re-excavate their burrows (Pendoley Environmental, 2019). This species is highly synchronous in timing of breeding; all eggs within a colony are laid within a 10-day period (Pendoley Environmental, 2019). Once hatched, adults leave the burrows to forage locally during the day, returning at night to feed chicks until they are ready to fledge (Nicholson, 2002). Due to the high synchronicity in egg laying, fledging is restricted to the first two weeks of April (Nicholson, 2002).

This species is seen in north-west WA from June to April (Department of Biodiversity, Conservation and Attractions, 2017). The breeding season in the Pilbara region occurs between November and April (Department of Biodiversity, Conservation and Attractions, 2017). Breeding behaviours are typically nocturnal in wedge tailed shearwaters, with adults returning to and departing the colony, and fledglings departing the colony at night. In the lead up to fledging, chicks also leave their burrows to exercise their wings. This species forages relatively close to breeding islands and its diet consists of squid, fish and crustaceans (DSEWPaC, 2012b), tracking studies found that foraging activities at sea were more frequent during the day compared to night (Catry, et al., 2009; Weimerskirch, et al., 2020).

Studies indicate wedge-tailed shearwaters breeding on the Muiron Islands (north) undertake extensive foraging trips during the incubation period (1,200 to 1,400 km) and shorter trips during chick rearing (<300 km) (Cannell, et al., 2019). Longer foraging trips took individuals north-west, offshore towards oceanic seamounts. Conversely, the shorter trips tended to include waters west and north-west of the Muiron Islands (Cannell, et al., 2019). In addition to the Muiron Islands, this dual foraging strategy, whereby parents alternate or mix short and long trips, have been recorded in wedge-tailed shearwaters breeding in the east of Australia (Peck & Congdon, 2005), and New Caledonia (Weimerskirch, et al., 2005). However, divergent foraging strategies have been detected between colonies, which is linked to the proximity of colonies to high productivity waters (Peck & Congdon, 2005; Weimerskirch, et al., 2005).

The Operational Area Part 1 (CK4) overlaps with the reproduction (breeding) BIA for this species, extending from the Montebello Islands (~130 km south-west of the Operational area), and may overlap with foraging wedge-tailed shearwaters during incubation.

4.6.5 Seasonal sensitivities for protected species

Seasonal sensitivities for protected migratory species identified as potentially occurring within the Operational area are identified in Table 4-14. Seasonal sensitivities for species in the wider NWMR are described in Woodside's Master Existing Environment (Appendix I).

Table 4-14: Key seasonal sensitivities for protected migratory species identified as occurring in the Operational area

Species	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Fish, sharks and rays												
Whale shark – foraging (northward from Ningaloo)[1]												
Mammals												
Pygmy blue whale – northern migration[2]												
Pygmy blue whale – southern migration[3]												
Humpback whale – northern migration[4]												

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Species	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Humpback whale – southern migration[5]												
Omura's whale[6]												
Fin whale[7]												
Marine reptiles[8]												
Flatback turtle (Pilbara genetic stock) - nesting												
Flatback turtle (Pilbara genetic stock) - hatching												
Green turtle (NWS genetic stock) – nesting												
Green turtle (NWS genetic stock) – hatching												
Hawksbill turtle (WA genetic stock) – nesting												
Hawksbill turtle (WA genetic stock) – hatching												
Loggerhead turtle (WA stock) – nesting												
Loggerhead turtle (WA stock) – hatching												
Seabirds and shorebirds												
Wedge-tailed shearwater (breeding/foraging)[9] *Fledgling emergence (first two weeks of April)				*								
Red knot – non-breeding season (NWMR)[10]												
Common sandpiper – non-breeding season[11]												
Sharp-tailed sandpiper – non-breeding season[11]												
Curlew sandpiper – non-breeding season[11]												
Streaked shearwater – non-breeding season[11]												
Lesser frigatebird – non-breeding season[11]												
Great frigatebird – non-breeding season[11]												
Eastern curlew – non-breeding[11]												
Roseate tern – breeding[11]												
Australia fairy tern - breeding[12]

4.7 Key ecological features

One KEF overlaps the Operational area (Part 2 only). KEFs within the Operational area and EMBA are identified in Table 4-15 and described in the Master Existing Environment document (Appendix I).

Figure 4-11 shows the spatial overlap with KEFs and the Operational area.

Table 4-15: Key ecological features within the Operational area and EMBA

Key ecological feature	Distance (minimum) and direction from Operational area to KEF (km)
Ancient Coastline at 125 m Depth Contour	Operational Area Part 2 (LH3) only
Glomar Shoals	7 km east
Continental Slope Demersal Fish Communities	105 km east
Canyons Linking the Cuvier Abyssal Plain and the Cape Range Peninsula	286 km south-west
Commonwealth Waters Adjacent to Ningaloo Reef	344 km south-west
Exmouth Plateau	225 km west
Mermaid Reef and Commonwealth waters surrounding Rowley Shoals	315 km north-east

4.7.1 Ancient Coastline at 125 Depth Contour

The Ancient Coastline at 125 m Depth Contour KEF is recognised for its biodiversity values (unique sea-floor feature with ecological properties of regional significance), which apply to the benthic and pelagic habitats within the feature (DSEWPaC, 2012a).

Parts of the KEF, particularly where it exists as a rocky escarpment, are thought to provide biologically important habitats in areas otherwise dominated by soft sediments (DSEWPaC, 2012a). The escarpment-type features may also facilitate mixing within the water column due to upwelling, providing a nutrient-rich environment. Little is known about fauna associated with the hard substrate of the escarpment, but it is likely to include sponges, corals, crinoids, molluscs, echinoderms and other benthic invertebrates representative of hard substrate fauna in the NWS bioregion (DSEWPaC, 2012a).

Although the KEF adds extra habitat types to a representative system, the habitat types are not unique to the coastline as they are widespread on the upper shelf (Falkner, et al., 2009).

4.8 Protected places

No protected places overlap the Operational area. Protected places within the EMBA are identified in Table 4-16 and presented in Figure 4-12. Woodside's Master Existing Environment (Appendix I) outlines the values and sensitivities of protected places and other sensitive areas in the EMBA. Whilst the PMST search (Appendix C) identifies the Carnarvon Canyon AMP, Montebello State Marine Park and Jurabi Coastal Park to be within the EMBA, these have been determined to be outside of the EMBA (Figure 4-12).

Table 4-16: Established protected places and other sensitive areas overlapping the EMBA

	Distance and direction from Operational area to protected place or sensitive area (km)	IUCN category* or relevant park zone overlapping the Operational area or EMBA
AMPs		
NWMR

4.9 Socioeconomic environment

4.9.1 Cultural values and heritage

Woodside recognises the 'environment' for the purpose of the evaluation required under the Environment Regulations includes:

- the heritage value of places
- the social, economic and cultural features of the broader environment.

In this section, the heritage value of places within the Operational area and EMBA and the cultural features of these areas are described. Cultural values and heritage as they relate to the wider NWMR are described in the Master Existing Environment document (Appendix I).

4.9.1.1 Native Title

For the Petroleum Activity in this EP, there are one native title claims or determinations, overlapping the EMBA and 14 that are coastally adjacent. Table 4-17 lists these; however, it does not differentiate between claims and determinations, as it is acknowledged that rights and interest may exist within either of these.

There are no ILUAs overlapping the EMBA and 26 that are coastally adjacent (Table 4-17).

Figure 4-13 shows the relevant native title claims or determinations and ILUAs relevant to the EMBA. Further description of how Woodside considers native tile rights and interest is provided in Appendix E.

4.9.1.2 Coastally adjacent Indigenous groups

To identify cultural features and heritage values which may exist outside of a native title claim, determination and ILUA areas, Woodside considers native title claims, determinations and ILUAs coastally adjacent to the EMBA to be an instructive means of identifying potentially relevant Indigenous groups to be consulted (see Section 5.3.4).

4.9.1.3 Marine Parks

Woodside assesses cultural values within marine park management plans where the Operational area or EMBA overlaps a Marine Park.

Woodside considers these management plans to determine whether cultural features and heritage values have been identified, and whether there are specified Traditional Custodians or representative bodies to contact regarding potential cultural features and heritage values. The cultural features and heritage values determined to be relevant are outlined in Table 4-19.

No marine parks overlap the Operational area. However, the EMBA overlaps multiple Commonwealth and State marine parks (refer to Section 4.8). Where these plans specify identifiable representative bodies who may hold knowledge of heritage values or cultural features – including but not limited to Registered Native Title Bodies Corporate – these bodies are consulted (Section 5 and Appendix E). Consultation with these groups may identify heritage values and cultural features beyond those addressed in the marine park management plans. Identifiable representative bodies were specified for the marine parks overlapped by the EMBA (Table 4-18).

The Management Plan for the Ningaloo Marine Park and Muiron Islands Marine Management Area 2005–2015: Management Plan Number 52 (Marine Parks and Reserves Authority, 2005) (relating to the Muiron Islands Marine Management Area and Ningaloo Marine Park) notes the aesthetic values of the seascape as a cultural value and that “Panoramic vistas of turquoise lagoon waters, reefs, beaches, breaking surf and the blue open ocean beyond the reef line are major attractions of the reserves.” In particular, the plan notes that “Inappropriate structures along the coastline, on the islands and in the surrounding waters have the potential to degrade the aesthetic values of the reserves. Coastal developments and maritime infrastructure projects must therefore be planned with careful consideration of this issue.”

As the Petroleum Activity described in this EP does not include the addition of any structures within these parks, no impact on the aesthetic values of these parks is anticipated.

Table 4-18: Summary of the Operational area’ and EMBA overlap with Commonwealth and State marine park management plan areas

Marine Park Management Plan	Operational area overlap	EMBA overlap	Specified bodies
Commonwealth Marine Park Management Plan			
Montebello AMP	No	Yes	Yamatji Marlpa Aboriginal Corporation
Gascoyne AMP	No	Yes	Yamatji Marlpa Aboriginal Corporation
Ningaloo AMP	No	Yes	Nganhurra Thanardi Garrbu Aboriginal Corporation Yamatji Marlpa Aboriginal Corporation

Muiron Islands Marine Management Area	No	Yes	No Identifiable Body Specified
National Park Management Plan			
Cape Range National Park	No	Yes	No Identifiable Body Specified

4.9.1.4 Indigenous protected areas

Indigenous Protected Areas are areas of land and sea managed by Indigenous groups as protected areas for conserving biodiversity through voluntary agreements with the Australian Government.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No Indigenous Protected Areas overlap the Operational Area or EMBA.

4.9.1.5 Sea Country values

Sea Country values of marine ecosystems are further described in Woodside's Master Existing Environment document (Appendix I). An impact to marine ecosystems has the potential to impact cultural values where the impact is detectable within Sea Country. Potential impacts to these cultural values are assessed in Section 6.

Woodside initiates consultation on cultural values of Sea Country where Traditional Custodians or representative institutions are identified, or self-identify, as relevant persons.

Cultural features or heritage values related to marine species within the Operational area or EMBA raised by Traditional Custodians when preparing the EP are outlined in Table 4-20. Values identified in publicly available literature are summarised in Table 4-19.

4.9.1.5.1 Desktop assessment of Sea Country values

Publicly available sources were assessed for any records of previously identified Sea Country values or cultural features that may overlap with the EMBA or Operational area. Where cultural features or Sea Country values were identified, these are summarised in Table 4-19 according to the Indigenous groups (where identified or inferable) who hold these values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-19: Cultural features and heritage values identified in publicly available literature

Indigenous group	Features and values	Source	Potential for overlap	
			Operational Area	EMBA
Gnulli (Baiyungu, Thalanyji, Yinggarda)	Feature: resources including marine animals.	FCA (2019)	Possible (unspecified)	Possible (unspecified)
	Value: Traditional Knowledge Value: Access to Country Traditional knowledge holds that ancestors live on the land and in the water. Therefore, Indigenous people have obligations to access and care for these places (e.g., keeping them clean).		Possible (unspecified) No access restrictions beyond Operational Area	Possible (unspecified) No access restrictions beyond OA
	Feature: Archaeological Sites Heritage sites in the Ningaloo region include shell middens, artefact scatters, skeletal material/burial sites, camps, meeting places, hunting places and water sources.	DBCA (2020)	No	Unlikely (Shoreline accumulation only)
	Feature: resources including gajalbu (emu), • Bundgurdi (kangaroo) • Bardurra (bush turkey) • Majun (marine turtles) • Turtle eggs • Bundgurdi (kangaroo), • Fish • Shellfish • Plants		Possible (marine turtles, fish, shellfish) No (all other values)	Possible (marine turtles, fish, shellfish) No (all other values)

Indigenous group	Features and values	Source	Potential for overlap	
			Operational Area	EMBA
	Value: certain species, including fish and seafood, must not be eaten during initiation rituals due to their sacredness to the creation being Barrimirndi. Breaking this law may lead to cyclones.		Unlikely (activities and fauna present but not consumed)	Possible (activities and fauna present)
	Feature: tangible and intangible heritage.	Macfarlane and McConnell (2017)	Possible (submerged)	Possible (submerged)
	Feature: archaeological evidence of varied occupation and adaptation.		Possible (submerged)	Possible (submerged)
	Value: a distinct way of life centred around the use of limited water and coastal resources.		Possible (unspecified)	Possible (unspecified)
	Feature: Potential for UCH in bonaparte basin (Kimberly and Arnhem Land)	Norman et al. (2024)	No	No
	Value: Sea Country The terms 'Sea Country' or 'Saltwater Country' refer to coastal, island and marine environments that together make up the traditional estates of maritime Indigenous groups in Australia (Smyth 1997): The ocean, or saltwater country, is not additional to a clan estate on land, it is inseparable from it. As on land, saltwater country contains evidence of the Dreamtime events by which all geographic features, animals, plants and people were created. It contains sacred sites, often related to these creation events, and it contains tracks, or Songlines along which mythological beings travelled during the Dreamtime or creation period. The sea, like the land, is integral to the identity of each clan, and clan members have a kin relationship to the important marine animals, plants, tides and currents.	Dermot (2008)	Yes	Yes
	Value: Responsibility for managing Sea Country	Australian Marine Parks (2018)	Possible (unspecified)	Possible (unspecified)
	Value: Management of Sea Country Aboriginal people of north-western Australia have been sustainably using and managing their sea country for tens of thousands of years, in some cases since before rising sea levels created these marine environments.		Possible (unspecified)	Possible (unspecified)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Indigenous group	Features and values	Source	Potential for overlap	
			Operational Area	EMBA
	Value: Traditional Fishing and Hunting Fishing, hunting and the maintenance of culture and heritage through ritual, stories and traditional knowledge continue as important uses of nearshore and adjacent areas.		No	Possible (unspecified)
	Value: Sea Country		Yes	Yes
	Value: Totemic Species		Possible (unspecified)	Possible (unspecified)
	Value: Access to Sea Country Value: Marine resources Value: Rights to hunt, fish and gather Three native title determinations have been made over sea country within the Kimberley Marine Park. These determinations recognise in law that native title exists over sea country and preserve continuing rights to access sea country to hunt, fish, gather and use the resources of the waters for personal, domestic, communal, cultural and spiritual needs.		Unlikely (unspecified)	Unlikely (unspecified)
	Value: Ashmore Reef Traditional Indonesian fishers have also visited and used the northern coast of Australia and its islands and reefs since at least the early eighteenth century. Evidence of this, for example grave sites, is found within the Ashmore Reef Marine Park.		No	No

4.9.1.5.2 Indigenous archaeological heritage assessment

Indigenous archaeological heritage in relation to the NWMR is described in Woodside's Master Existing Environment document (Appendix I).

The Department of Planning, Lands and Heritage Aboriginal Heritage Inquiry system was searched, which showed one Registered Aboriginal Sites and no Lodged Aboriginal Sites for the EMBA (Appendix E). The exact location, access and traditional practices for some of these sites may not be disclosed and if required, such as in the event of a major oil spill, would involve prioritising further consultation with key contacts within Department of Planning, Lands and Heritage and relevant local Indigenous communities.

4.9.1.5.3 Submerged cultural heritage values

More information about Indigenous archaeological heritage in relation to the Ancient Landscape in the NWMR is described in Woodside's Master Existing Environment (Appendix I).

An assessment of the potential impacts on archaeological material by the proposed activity is discussed in Sections 6.6.2 and 6.9.

4.9.1.5.4 Feedback received via consultation to inform Existing Environment Description

Indigenous Peoples cultural values are communally held. This is reflected in Vision 3 of Dhawura Ngilan that 'Aboriginal and Torres Strait Islander heritage is managed…according to community ownership' (Heritage Chairs of Australia and New Zealand., 2020). Dhawura Ngilan also specifically notes that 'Aboriginal and Torres Strait Islander…intangible knowledge systems, which are held in songlines and language, are endangered. This knowledge is held by Elders and the community…' Through consultation with relevant persons, Registered Native Title Bodies Corporate have identified or raised topics relating to environmental values of cultural interest. These include a broad interest in the marine fauna, including whales and turtles Appendix E.

During consultation, BTAC advised it has a cultural obligation to care for the environmental values of Sea Country. During consultation specific to another Woodside EP, BTAC raised the importance of archaeological sites on nearshore islands. Given the EMBA for this activity extends to nearshore areas coastally adjacent to BTAC native title lands, these values may be relevant in the event of an unplanned hydrocarbon spill.

Feedback received on potential cultural features and heritage values during consultation are described in Table 4-20.

Woodside has committed to ongoing engagement to further understand these values. Should feedback be received (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its management of change (MOC) and revision process (refer to Section 7.8).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-20: Summary of feedback received via consultation to describe the existing environment

Relevant Indigenous group / individuals	Consultation context	Description of value / feature / interest	Potential for overlap	
			Operational Area	EMBA
Buurabalayji Thalanyji Aboriginal Corporation	Raised during the course of consultation for another EP	Value: Connection to Sea Country *Enduring deep connection to sea country north of Onslow, extending out to Islands off the Pilbara coast such as the Montebello islands, Barrow Island and the Mackerel Islands*	Possible (unspecified)	Possible (unspecified)
Karajarri Traditional Lands Association	Consultation for this EP	*No values raised*	-	-
Kariyarra Aboriginal Corporation	Raised during the course of consultation for another EP	Value: Turtles	Possible	Possible
		Value: Access to Sea Country (1) Accessing Sea Country for fishing, trapping, crabbing catching turtle, hunting dugong, using stingray barbs for spears and collecting shellfish. (2) Visiting offshore islands at low tide	No (all)	Possible (all)
		Value: Marine species resources Resource species of cultural interest to Kariyarra people include marine mammals, fish, molloscs including bivalves, gastropods and cephalopods.	Possible	Possible
		Value: The existence of intangible cultural heritage including the Yinta (associated with Sea Country). *Yinta are significant cultural/spiritual sites, often a pool or water source but possibly a hill or other feature. These are, at least generally, associated with creation beings and are a core part of cultural rights to land in determining who can use or speak for an area.*	Possible (unspecified)	Possible (unspecified)
		Interest: Coastal Landforms (Cultural interest)	No	Possible
		Interest: Coastal Native Vegetation (Cultural interest)	No	Possible
		Feature: Cultural interest in cultural heritage sites associated with the coast and the ocean.	Possible (unspecified)	Possible (unspecified)

Relevant Indigenous group / individuals	Consultation context	Description of value / feature / interest	Potential for overlap	
			Operational Area	EMBA
		Value: Traditional fishing and gathering rights in the ocean	Possible (unspecified)	Possible (unspecified)
		Value: Cultural interest in intangible cultural heritage associated with the coast and the ocean. (1) Presence of mythic snakes	Possible (unspecified)	Possible (unspecified)
		Value: Intergenerational Knowledge *In addition to their immediate value as sustenance, the gathering and preparation of these resources are informed by cultural knowledge, and an inability to use these resources may result in a loss of ability to transfer that knowledge to future generations. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these communities may be impacted where there is an impact at the species/population level. Impacts to resource collection would be limited to temporary exclusion in areas where there are hydrocarbons present, including shoreline accumulation. Relevant cultural authorities will be engaged in the event of a spill that may affect them...*	Possible (unspecified)	Possible (unspecified)
		Value: Cultural obligations to care for Country, including Sea Country. Value: Secret Habitat Totems associated with Sea Country	Possible (unspecified)	Possible (unspecified)
		Interest: Assertion of sea rights in native title claim area Interpreted as general connection to country, assertion of rights to access country and cultural obligation to care for environmental values of sea country (1) Having duties to look after and protect all KACs Sea Country.	No (based on distance to NT determined area)	Possible
		Value: Marine resources Concern raised about the potential for diseases due to adverse event [hydrocarbon spill]	Possible (unspecified)	Possible (unspecified)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Relevant Indigenous group / individuals	Consultation context	Description of value / feature / interest	Potential for overlap	
			Operational Area	EMBA
		Value: Responsibility to care for Sea Country Value Marine Resources *the most important thing is the preservation of sea life and coastal areas. The ocean provides critical food sources to their community and Kariyarra Traditional Owners are coastal people so they have a strong connection to the area and a responsibility to preserve the area for future generations.*	Possible (unspecified)	Possible (unspecified)
		Value: Nearshore Islands Islands off Port Hedland - Little Turtle, North turtle and Bedout	No (location specific)	No (location specific)
	Consultation for this EP	Value: River systems are important to the food chain.	No	No
		Value: Marine Resources: ▪ Shellfish ▪ Cockles ▪ Oysters ▪ Clam shells, ▪ Concha shells (Nanku) ▪ Mullets	Possible (all)	Possible (all)
		▪ Sea cow (dugong)	No	
Murujuga Aboriginal Corporation	Raised during the course of consultation for another EP	Value: Mermaid Sound (1) The ecosystem health of Mermaid Sound	No	No
		Value: Whales (1) Whales and other species of totemic importance need to be protected, including their populations, biodiversity, and migration patterns. (2) A whale Thalu is an increase at the totemic site that brings whales into the beach.	Possible (all)	Possible (all)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Relevant Indigenous group / individuals	Consultation context	Description of value / feature / interest	Potential for overlap	
			Operational Area	EMBA
		Value: Dolphins There are cultural ceremonies associated with communicating with dolphins	Possible	Possible
		Value: Dugongs Dugongs are a food source associated with seagrasses near Gidley Island	No	Possible
		Value: Fish Specific mentions of fish included There are Thalu ceremonies associated with increasing fish stocks	Possible	Possible
		Value: Sea Snakes Sea snakes were specifically mentioned as culturally important species	Possible	Possible
		Value: Turtles (1) Flatback, green, hawksbill, loggerhead and leatherback turtles; Songline The Songline associated with the turtle comes from Fortescue to Withnell Bay. This song is sung by four or five tribes for day and night without consuming food or water. (2) Flatback, green, hawksbill, loggerhead and leatherback turtles: They are culturally important species that moves through Mermaid Sound. Turtles are most often seen in shallower areas and where there are seagrasses. (3) Most beaches are nesting sites for turtles, including those on Gidley and Legendre Islands... which also identifies Rosemary Island as the most important hawksbill turtle nesting site in Western Australia.	Possible (turtles) No (1,2,3)	Possible (turtles, 3) No (1,2)

4.9.1.6 Summary of cultural features and heritage values

Woodside has developed a robust understanding of cultural features and heritage values relevant to the Petroleum Activity through examination of publicly available information, studies and consultation with relevant persons under section 25 of the Environment Regulations.

The cultural features and heritage values identified in Sections 4.9.1.1 to 4.9.1.7 confirm whether there is any potential for these to exist within the Operational area or EMBA. As previously described, topics that have been raised in the context of an interest linked to the natural environment are impact and risk assessed in Sections 6.6 and 6.7. Assessment of heritage values beyond environmental value is addressed in Section 6.9.

Cultural features and heritage values identified through both consultation and desktop assessment are summarised in Table 4-21.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-21: Summary of cultural features and heritage values

Identified cultural features and heritage values	Context	EP source		Potential for overlap	
		Consultation feedback	Desktop literature assessment	Operational Area	EMBA
Archaeological heritage and landscapes					
Coastal/ island archaeological sites	Coastal archaeological sites include shell middens, artefact scatters, skeletal material/burial sites, camps, meeting places, hunting places and water sources.	✓	✓	No	Possible (shoreline accumulation areas)
Petroglyphs	Petroglyphs are a form of rock art. Petroglyphs are a prominent feature particularly at Murujuga where it is found on hard, volcanic rock.	✓	x	Possible (submerged)	Possible
Fish traps	Stone arrangements constructed in intertidal areas which fill with fish at high tide and trap them at low tide	✓	✓	Possible (submerged)	Possible
Submerged archaeological sites	The Ancient Landscape extends between 12 m and 130 m below current sea level. Ancient occupation of this area may have left traces through now submerged archaeological sites.	✓	✓	Possible	Possible
Rivers, waterholes, tidal channels and seeps	Water sources on the Ancient Landscape which may be culturally significant or archeologically prospective. Traditional knowledge retains knowledge of some water sources on the Ancient landscape and some submerged waterholes are related to a Kangaroo songline.	✓	✓	Possible	Known to occur
Submerged calcarenite ridges/ paleo beach barrier systems	Calcarenite ridges that have formed at former coastal sand dunes have the potential to encase and preserve artefacts from disturbance during inundation where these formed following human occupation.	x	✓	Possible	Known to occur

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Identified cultural features and heritage values	Context	EP source		Potential for overlap	
		Consultation feedback	Desktop literature assessment	Operational Area	EMBA
Submerged hills	Hills on the Ancient Landscape which may be culturally significant or archeologically prospective. As sea level rose these hills would have become islands and eventually submerged.	x	✓	Possible	Known to occur
Madeleine Shoals	Archaeologically prospective location on the submerged landscape, including igneous geology which has the potential to include rock art.	x	x	No	Known to occur
Karst depressions/ Ravines and valleys between submerged ridges	Natural depressions with the potential to contain artefacts displaced during inundation.	x	x	Possible	Possible
Intangible values					
Songlines	Publicly available literature has noted songlines continue beyond the coast and across the submerged landscape	✓	✓	Possible (unspecified)	Possible (unspecified)
Creation / dreaming sites, sacred sites and ancestral beings	Publicly available literature talks to creation/dreaming and ancestral beings, including water serpents, connected to or originating from the sea generally.	✓	✓	Possible (unspecified)	Possible (unspecified)
Ceremonial sites	Places where ceremony (e.g. Thalu ceremonies) are performed. All identified ceremonial sites are located onshore.	✓	✓	No	Possible (unspecified)
Cultural obligations to care for Country	Cultural obligation to care for the environmental values of Sea Country. Exclusion of Traditional Custodians from Sea Country or decision making processes may inhibit ability to care for Country.	✓	✓	Possible (unspecified)	Possible (unspecified)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Identified cultural features and heritage values	Context	EP source		Potential for overlap	
		Consultation feedback	Desktop literature assessment	Operational Area	EMBA
Knowledge of Country / customary law and transfer of knowledge	The preservation and transmission of knowledge is dependent on the preservation of the environment generally. Exclusion of Traditional Custodians from Sea Country may inhibit the transfer of knowledge.	✓	✓	Possible (unspecified)	Possible (unspecified)
Connection to Country	Connection to Country is described in publicly available literature as “important to the Traditional owners’ spirituality and religion”. Connection to Country may be damaged where people are displaced or disrupted (e.g. during colonisation) or where there is a loss of technical skills or environmental knowledge	✓	✓	Possible (unspecified)	Possible (unspecified)
Access to Country	Limitations on Traditional Custodians accessing or enjoying areas of Sea Country	✓	✓	Possible (unspecified)	No (no limitations on access beyond the OA)
Kinship systems and totemic species	Traditional Custodians have connection to species through kinship and totemic systems.	✓	✓	Possible (unspecified)	Possible (unspecified)
Resource collection	An individual may have obligation to care for or not consume a species to which they are kin.	✓	✓	Possible (unspecified)	Possible (unspecified)
Marine ecosystems and species					
Marine species	Generally raised in engagement with Indigneous Peoples and literature	✓	✓	Likely	Likely
Marine mammals: Whales	• Generally raised in engagement with Indigneous Peoples • Thalu species of totemic importance • Linked to songlines and dreaming stories • Humpback whales in particular	✓	✓	Possible	Possible

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Identified cultural features and heritage values	Context	EP source		Potential for overlap	
		Consultation feedback	Desktop literature assessment	Operational Area	EMBA
Marine mammals: Dolphins	Culturally important species	✓	✓	Possible	Possible
Marine mammals: Dugongs	• Culturally important species • Used as a resource	✓	✓	No	Possible
Marine reptiles: Marine turtles	• Culturally important species and migration • There are Thalu ceremonies associated with turtles • Turtles and turtle eggs as a resource	✓	✓	Possible	Possible
Marine reptiles: Sea snakes	Culturally important species	✓	✓	Possible	Possible
Fish: Fish, sharks and rays	• Culturally important species • Used as a resource • There are Thalu ceremonies associated with increasing fish stocks • Fish, including bream and sting rays are totemic species • Fish, including sharks and rays raised as a natural environment interest	✓	✓	Possible	Possible
Cephalopods: Squid and Octopus	• Thalu species of totemic importance • Resource	✓	✓	Possible	Possible
Seabirds	• Culturally important species • Birds (including shags, seagulls and osprey) and bird eggs as a resource	✓	✓	Possible	Possible
Benthic habitats: Coral	Culturally important with regard to connection to habitats and use of reefs for resources	✓	✓	No	Likely
Benthic habitats: Seagrass	• Culturally important species • Protection of animals.	✓	✓	No	Likely

4.9.1.7 Historic sites of significance

Historic sites of significance and heritage value are found along foreshores of the NWMR. Heritage places are protected in WA under the *Heritage Act 2018*.

There are no sites of historic cultural heritage significance within the Operational area. Woodside's Master Existing Environment (Appendix I) describes cultural heritage sites that may be within the EMBA.

4.9.1.8 Historic underwater heritage

The protection of historic underwater heritage under Commonwealth and State legislation is described in Appendix B.

The Australasian Underwater Cultural Heritage database records all known Maritime Cultural Heritage (shipwrecks, aircraft, relics and other underwater cultural heritage) in Australian waters. The Australian National Shipwreck Database lists all known shipwrecks in Australian waters. A search of these databases indicated there are no sites within 10 km of the Operational area.

4.9.1.9 World, National and Commonwealth Heritage listed places

No listed heritage places overlap the Operational area. World, National and Commonwealth heritage places within the EMBA are identified in Table 4-22. Woodside's Master Existing Environment (Appendix I) the values and sensitivities of these places.

Table 4-22: World, National and Commonwealth Heritage listed places within the EMBA

Listed place	Distance and direction from Operational area to listed place (km)
World Heritage places	
The Ningaloo Coast	313 km south-west
National Heritage places	
The Ningaloo Coast	313 km south-west
Commonwealth Heritage places	
Ningaloo Marine Area – Commonwealth waters	339 km south-west

4.9.2 Commercial fisheries

Commonwealth and State fishery management areas are located within the Operational area and EMBA.

To identify if they have fished within and their potential to interact with the Operational area and EMBA, the most recently available five-year period of catch and effort data were used. The datasets were obtained from the Australian Bureau of Agricultural and Resource Economics and Sciences and from the WA Department of Primary Industries and Regional Development (DPIRD) FishCube. Five years was deemed an appropriate period to represent potential future fishing effort over the lifecycle of this EP.

This information was used to determine relevant fisheries for consultation who may be impacted by the proposed Petroleum Activity. Table 4-23 provides an assessment of the potential interaction and Woodside's Master Existing Environment (Appendix I) further detail on the fisheries that were identified through desk-based assessment and consultation (Section 5).

No Commonwealth managed fisheries were identified as having a potential interaction with the Petroleum Activity within the Operational area; however, three were identified as potentially interacting with the EMBA (Table 4-23). Four State managed fisheries were identified as having potential to interact with the Operational area (Figure 4-14), and 13 were identified within the EMBA (Table 4-23). Fishing tour operators were identified as having potential to interact with the Petroleum Activity in the Operational area and EMBA (Table 4-23).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-23: Commonwealth and State commercial fishery management areas overlapping the Operational area and EMBA

Fishery	Potential for interaction during the Petroleum Activity (x = no spatial overlap; ✓= spatial overlap; blue shading = possibility of interaction)		Description
	Operational Area	EMBA	
Commonwealth managed fisheries			
Southern Bluefin Tuna Fishery	✓	✓	The Southern Bluefin Tuna Fishery management area overlaps the EMBA and Operational area. The fishery spans the Australian Fishing Zone; however, since 1992, most Australian catch has concentrated in south-eastern Australia (Patterson, et al., 2025b). Fishing mainly occurs in the Great Australian Bight during summer months, and off the New South Wales coastline during winter months (Australian Fisheries Management Authority, 2025). Fishery Status Reports indicate there has been no fishing effort reported within the Operational Area or the EMBA in the last five years. Woodside considers there to be no potential for interaction between this fishery and the Petroleum Activity.
Western Skipjack Fishery	✓	✓	The Western Skipjack Tuna Fishery management area overlaps the Operational area and the EMBA. The fishery spans the Australian Fishing Zone west of Victoria and the Torres Strait. The fishery is not currently active, and no fishing has occurred since 2009 (Patterson & Dylewski, 2025). Woodside considers there to be no potential for interaction between this fishery and the Petroleum Activity.
Western Tuna and Billfish Fishery	✓	✓	The Western Tuna and Billfish Fishery management area overlaps the EMBA and Operational area., While most Australian catch has concentrated in south-eastern Australia and occasionally off south-western Australia and South Australia (Patterson, et al., 2025a), vessels have been in the fishery in 2024. Fishery Status Reports indicates recent activity inside the EMBA. Woodside considers it a possibility that interactions with the fishery may occur within the EMBA.
North-West Slope Trawl Fishery	×	✓	The North-West Slope Trawl Fishery management area overlaps the EMBA only. The fishery targets several scampi species, with recent catches largely dominated by Australian scampi. Between one to six vessels have been active in the fishery since 2005, with three vessels operating in the 2023–2024 season (Keller, et al., 2025a). Fishery Status Reports indicate recent activity inside the EMBA. Woodside considers it a possibility that interactions with the fishery may occur within the EMBA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Fishery	Potential for interaction during the Petroleum Activity (x = no spatial overlap; ✓= spatial overlap; blue shading = possibility of interaction)		Description
	Operational Area	EMBA	
Western Deepwater Trawl Fishery	×	✓	The Western Deepwater Trawl Fishery management area overlaps the EMBA. Fishery Status Reports indicate recent activity inside the EMBA, with one vessel active in the 2023–24 season, and between zero and three vessels historically active within the fishery since 2005–06 (Keller, et al., 2025b). Total trawl-hours have been variable but relatively low since 2005–06. In 2023–24, 15 trawl-hours were recorded in the fishery, compared to zero hours recorded in 2022–23 and 76 trawl-hours recorded in 2021–22 (Keller, et al., 2025a). The Western Deepwater Trawl Fishery primarily targets ruby snapper (Etelis spp.) and other finfish, and historically targeted deepwater bugs (Ibacus spp.). Woodside considers it a possibility that interactions with the fishery may occur within the EMBA
State managed fisheries			
Western Australian Abalone Managed Fishery	✓	✓	The Western Australian Abalone Managed Fishery overlaps the Operational area and EMBA. Most catch associated with this fishery is concentrated around the south of Western Australia, particularly along the south coast (Strain, et al. 2024a). There has been no fishing effort reported in the EMBA in the last five years. Woodside considers there to be no potential for interaction between this fishery and the Petroleum Activity.
Mackerel Managed Fishery (Area 2)	✓	✓	The Mackerel Managed Fishery management area overlaps both the Operational area and EMBA, with catch data showing the fishery has been active in all areas. However, catch data overlapping the Operational area show there were only catches reported in the 60 NM block and not in the 10 NM block over the past five years, which reduces the likelihood that any recent activity has occurred in the Operational area. Catch data show the fishery has reported catches as recently as 2024 along the north-west coast of Western Australia and is therefore likely to be operating in the EMBA. There were 15 vessels operating in the fishery in the 2023 season, with 242 t of catch recorded, predominantly from the Kimberley region (Area 1) (Lewis & Rynvis, 2024). Woodside considers it a possibility that interactions with the fishery may occur within the Operational Area and EMBA.
Marine Aquarium Fish Managed Fishery	✓	✓	The Marine Aquarium Fish Managed Fishery overlaps the Operational area and the EMBA. This fishery is diver-based and typically restricted to relatively shallow waters (less than 30 m) (Newman, et al., 2024); therefore, it is unlikely it would be operating in the Operational area, where waters depths are over 100 m. Fishing effort has been recorded in the blocks overlapping the EMBA in the last five years, but was not reported in the Operational area. Woodside considers it a possibility that interactions with the fishery may occur within the EMBA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Fishery	Potential for interaction during the Petroleum Activity (x = no spatial overlap; ✓= spatial overlap; blue shading = possibility of interaction)		Description
	Operational Area	EMBA	
North Coast Shark Fishery	✓	✓	The North Coast Shark Fishery management area overlaps the Operational area and EMBA; however, no catch data has been reported in either area. The last reported fishing activity from this fishery was in the 2008–2009 fishing season (Braccini & Rynvis, 2023). Woodside considers there to be no potential for interaction between this fishery and the Petroleum Activity.
Onslow Prawn Managed Fishery	✓	✓	The Onslow Prawn Managed Fishery management area overlaps the Operational area and the EMBA, with catch data reported in the EMBA in the last five years, south of the Operational area near Exmouth. The last reported catch for this fishery was in the 2023–2024 season, with relatively low catch and effort (Koeford, et al., 2024b). No fishing effort has been recorded in the Operational area in the last five years. Woodside considers it a possibility that interactions with the fishery may occur within the EMBA.
Pearl Oyster Managed Fishery	✓	✓	The Pearl Oyster Managed Fishery management area overlaps the Operational area and EMBA. Fishing effort is diver-based, mostly focused on shallow coastal waters, primarily off the coast of Eighty Mile Beach and smaller catch from the Lacepede Islands (Strain, et al., 2024b). No fishing effort has been recorded in the Operational area or EMBA in the last five years. Woodside considers there to be no potential for interaction with this fishery and the Petroleum Activity.
Pilbara Crab Managed Fishery	✓	✓	The Pilbara Crab Managed Fishery management area overlaps the Operational area and the EMBA, with catch data only reported in the EMBA. Catch data for this fishery suggests it mostly operates around Dampier and Nikol Bay. Woodside considers it a possibility that interactions with the fishery may occur within the EMBA.
Pilbara Fish Trawl (Interim) Managed Fishery	✓	✓	The Pilbara Fish Trawl (Interim) Managed Fishery management area overlaps the Operational area and the EMBA, with catch data reported in both areas. The fishery has remained consistently active in the Operational area and the EMBA, recording catches in each of the last five years. The fishery targets over 50 demersal scalefish species, with most catch comprising the red emperor (*Lutjanus sebae*), Rankin cod (*Epinephelus rankini*) and bluespotted emperor (*Lethrinus punctulatus*). The fishery landed 74% (1,907 t) of total commercial catches of the demersal scale fish in the Pilbara in 2023 (Wakefield, et al., 2024). Woodside considers it is possible that interactions with the fishery may occur in the Operational area and EMBA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Fishery	Potential for interaction during the Petroleum Activity (x = no spatial overlap; ✓= spatial overlap; blue shading = possibility of interaction)		Description
	Operational Area	EMBA	
Pilbara Trap Managed Fishery	✓	✓	The Pilbara Trap Managed Fishery management area overlaps the Operational area and EMBA, with catch data reported across all areas. Catch effort for this fishery was reported consistently across the NWS. Three vessels operated in the fishery in 2023, with a catch landing of 22% (573 t) of the demersal scale fish in the Pilbara (Wakefield, et al., 2024). Woodside considers there to be potential for interaction in the Operational area and EMBA.
Pilbara Line Fishery (Condition)	✓	✓	The Pilbara Line Fishery management area overlaps the Operational area and EMBA, with catch data reported across all areas. The Pilbara Line Fishery (Condition) targets similar species to the Pilbara Trap and Trawl fisheries, but with a higher proportion of catch comprising deeper offshore species, including goldband snapper (Pristipomoides multidens) and ruby snapper (*Etelis boweni*). Of the total commercial catches of demersal scalefish in the Pilbara in 2023, 4% (114 t) was taken by the Pilbara Line Fishery (Condition). The total annual catch taken by the fishery has remained relatively consistent over the past decade throughout the NWS (average of 120 t per year) (Wakefield, et al., 2024) Catch effort for this fishery has been reported consistently across the NWS. Woodside considers there to be potential for interaction in the Operational area and EMBA.
Specimen Shell Managed Fishery	✓	✓	The Specimen Shell Managed Fishery management area overlaps the Operational area and EMBA, with catch data only reported in the EMBA. Most of the recent catch data show the fishery is active south of the Operational area and has consistently reported catch over the last five years along the WA coast. The fishery is largely diver-based, targeting specimen shells in water depths mostly <30 m. Woodside considers there to be potential for interaction with this fishery in the EMBA.
South-West Coast Salmon Fishery	✓	✓	The South-West Coast Salmon Fishery management area overlaps the Operational area and EMBA; however, no catch data were reported in these areas. No fishing occurs north of the Perth metropolitan area, despite the managed fishery boundary extending to Cape Beaufort (WA/Northern Territory border). Woodside considers there to be no potential for interaction with this fishery.
West Coast Deep Sea Crustacean Managed Fishery	✓	✓	The West Coast Deep Sea Crustacean Managed Fishery management area overlaps the Operational area and EMBA. However, no catch data was reported in the Operational area. The fishery is prohibited from fishing landwards of the 150 m isobath (Tuffley & Wiberg, 2024). Most catch is taken in depths of 500 m to 800 m. Woodside considers there to be no potential for interaction with this fishery.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Fishery	Potential for interaction during the Petroleum Activity (x = no spatial overlap; ✓= spatial overlap; blue shading = possibility of interaction)		Description
	Operational Area	EMBA	
Exmouth Gulf Prawn Fishery	×	✓	The Exmouth Gulf Prawn Managed Fishery is a trawl fishery operating in Exmouth Gulf. Target species are generally in <50 m water depth. The fishery management area overlaps the EMBA, with catch limited to the spatial extent within the Exmouth Gulf and Muiron Islands in the southwest of the EMBA. Six vessels were active in the Exmouth Gulf during the 2023 season, with a total catch of 653 t in 2023 (Koeford, et al., 2024a). In previous years the fishery landed catches of 898 t in 2022, 777 t in 2021 and 673 t in 2020 (Wilkin, et al., 2023). The fishery's catch mostly comprises western king prawns (*Penaeus latisulcatus*), brown tiger prawns (Penaeus esculentus) and blue endeavour prawns (*Metapenaeus endeavouri*) (Koeford, et al., 2024a). Woodside considers it a possibility that interactions with the fishery may occur within the EMBA
Gascoyne Demersal Scalefish Fishery	×	✓	This fishery management area does not overlap with the Operational area; however, overlaps with the EMBA. FishCube data reports fishing effort occurs within the EMBA over the last five years. Woodside considers it a possibility that interactions with the fishery may occur within the EMBA
West Australian Sea Cucumber Fishery	×	✓	The Western Australian Sea Cucumber Fishery management area overlaps the EMBA. The fishery operates as wader- and diver-based in the Pilbara, Kimberley and Gascoyne regions and is typically restricted to coastal waters outside of the Operational area. Catch data overlapping the EMBA show there are only catches reported in the 60 NM block and not in the 10 NM block over the past five years, which reduces the likelihood that any recent activity has occurred in the EMBA. Woodside considers it a possibility that interactions with the fishery may occur within the EMBA.
Nickol Bay Prawn Managed Fishery	×	✓	The Nickol Bay Prawn Managed Fishery management area overlaps the EMBA, with catch data reported over the past five years. The fishery operates in nearshore and offshore waters of the Pilbara region along the NWS. Trawling has been reported to occur at several locations along the Pilbara coast to the east of the Burrup Peninsula, including within the waters of Nickol Bay. Woodside considers it a possibility that interactions with the fishery may occur within the EMBA.
Tour operators	✓	✓	Fishing tour operators are permitted to operate across WA State waters and must report monthly logbook records of customer fish catches. FishCube data indicate tour operator fishing effort is highest around Ningaloo and the Muiron Islands and at Barrow Island and the Montebello Islands. The FishCube data reported active tour operators at 10 NM overlapping the Operational area in the last five years. Woodside considers it a possibility that interactions with tour operators may occur in the Operational area and EMBA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.9.3 Traditional and customary fishing

There are no traditional or customary fisheries within the Operational area, as these are typically carried out in shallow coastal waters and areas with structures such as reef. The WA Recreational Fishing Guide (2024) states that First Nations people do not need a recreational fishing licence, in any waters, if it is in accordance with continuing tradition, for individual or familial consumption, and not for a commercial purpose. It is recognised that offshore waters of Barrow Island and Montebello Islands have a history of fishing when areas were occupied (as from historical records) (Department of Environment Conservation, 2007).

Traditional fishing methods in the NWMR are further described in Woodside's Master Existing Environment (Appendix I).

4.9.4 Tourism and recreation

The Operational area are located offshore of the North West tourism region, which includes parts of the Gascoyne and Pilbara regions. Tourism is concentrated in the vicinity of population centres such as Broome, Dampier, Exmouth, Coral Bay and Shark Bay. While FishCube data (2019 to 2024) indicates tour operators have been present in the Operational area, based on the location, their presence during the Petroleum Activity is expected to be minimal.

Due to the distance from access nodes, such as Dampier and Onslow (about 120 km south and 269 km south-west from the Operational area), recreational fishing effort is expected to be restricted to relatively large vessels and hence interactions are considered unlikely.

Tourism and recreation in the context of the wider NWMR is described in Woodside's Master Existing Environment (Appendix I).

4.9.5 Commercial shipping

The Australian Maritime Safety Authority (AMSA) has introduced a network of marine fairways across the NWMR to reduce the risk of vessel collisions with offshore infrastructure. It is noted that none of these fairways intersect with the Operational area; the nearest fairway is about 34 km from the Operational area (Figure 4-15). Vessel tracking data suggest shipping is concentrated in the major shipping channel from the Port of Dampier.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

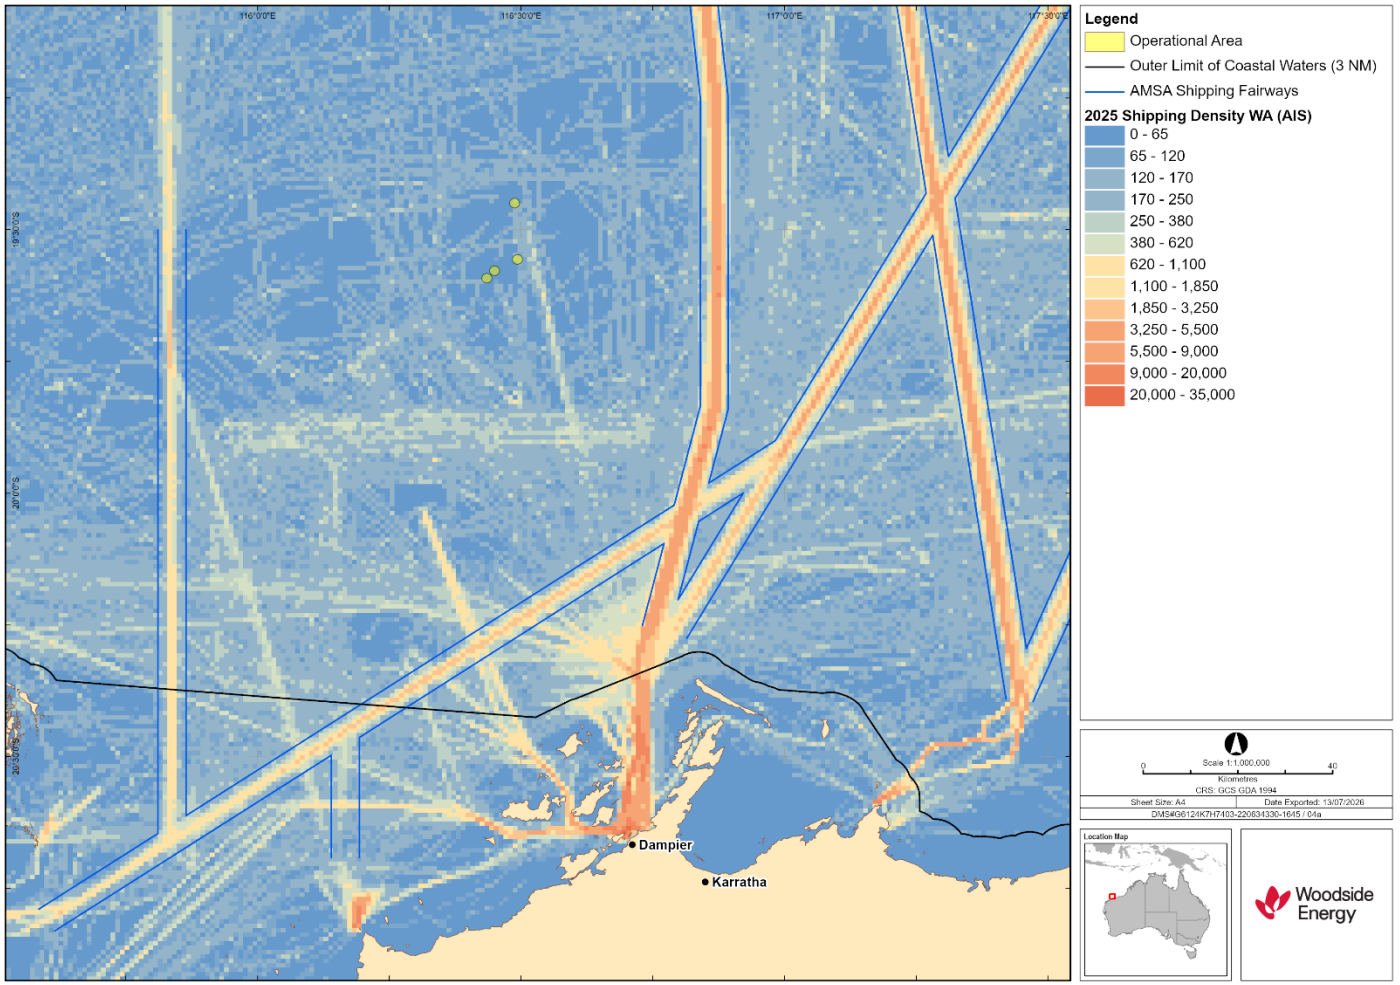

Figure 4-15: Vessel density map for the Operational Area

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.9.6 Oil and gas facilities, infrastructure and other industries

Infrastructure associated with the ongoing production through the Okha FPSO from the operation of the CK-4, LH-3, WA-7 and WA-8 wells, and several additional wells, are within the Operational Area including manifolds, umbilicals and flowlines.

The Okha FPSO is within the Operational area, its swing radius being approximately 950 m from both WA7 and WA8 wells. (Figure 4-16).

The Woodside Angel facility, North Rankin Complex and Goodwyn platform are located within 50 km of the Operational area, with other oil and gas facilities located within the region (Figure 4-16).

Woodside's Master Existing Environment (Appendix I) describes current oil and gas development within the EMBA, also shown in Figure 4-16.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.9.7 Submarine communications infrastructure

The Petroleum Activity is in a region with submarine communications infrastructure. However, this infrastructure is located greater than 10 km from the Operational area.

4.9.8 Defence

There are designated defence practice and training areas in the offshore marine waters off Ningaloo and the North West Cape in the EMBA; the North West Exercise Area accessed by Royal Australian Air Force Base Learmonth and the Learmonth Air Weapons Range practice area (Figure 4-17). The Operational area does not overlap these defence training areas.

5. STAKEHOLDER CONSULTATION

5.1 Summary

Woodside consults relevant persons in the course of preparing an EP in accordance with regulation 25 of the Environment Regulations. (In this Section, references to 'regulations' are to the Environment Regulations, unless otherwise stated).

The consultation process is designed to identify relevant persons and provide them with sufficient information and a reasonable period to allow them to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities. This enables Woodside to assess the merits of objections or claims about the adverse impact of each activity to which the EP relates that are received from relevant persons and for Woodside to adopt appropriate measures (if any) in response to those objections or claims so that the activity is carried out in a manner by which the environmental impacts and risks of the activity will be reduced to as low as reasonably practicable (ALARP) and will be of an acceptable level.

Consultation is informed by both the Environment Regulations and the findings of relevant Courts, including the Full Federal Court in the *Santos NA Barossa Pty Ltd v Tipakalippa [2022]* FCAFC 193 (Tipakalippa Appeal) (see Section 5.2 and 5.5.1) and *Munkara v Santos NA Barossa Pty Ltd (No 3) [2024]* FCA 9 (Munkara Case).

For this EP, Woodside has considered both the Operational Area and the broader EMBA in undertaking consultation (see further discussion in Section 5.2). The broadest extent of the EMBA has been determined by reference to the highly unlikely event of a hydrocarbon release resulting from activities in the Operational Area (see Section 4).

Woodside's consultation methodology is divided into two parts:

- the first section (Section 5.2 to 5.5) provides an overview of Woodside's consultation methodology for its EPs, including how we apply regulation 25(1) to identify relevant persons
- the second section (Section 5.6 to 5.7) details Woodside's approach to accepting feedback and assessment of the merits of each objection or claim about the adverse impact of each activity to which the EP relates, and engaging in ongoing consultation for this EP.

Woodside's consultation record is in Appendix F and includes a summary of the following:

- assessment and identification of relevant persons
- consultation information provided to relevant persons, feedback received, Woodside's assessment of the merits of objections or claims and Woodside's response to relevant persons and other persons or organisations Woodside chose to consult
- engagement with persons or organisations that Woodside chose to contact who are 'not relevant' persons for the purposes of regulation 25(1) (see Section 5.3.7)
- opportunities provided to persons or organisations to participate in consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

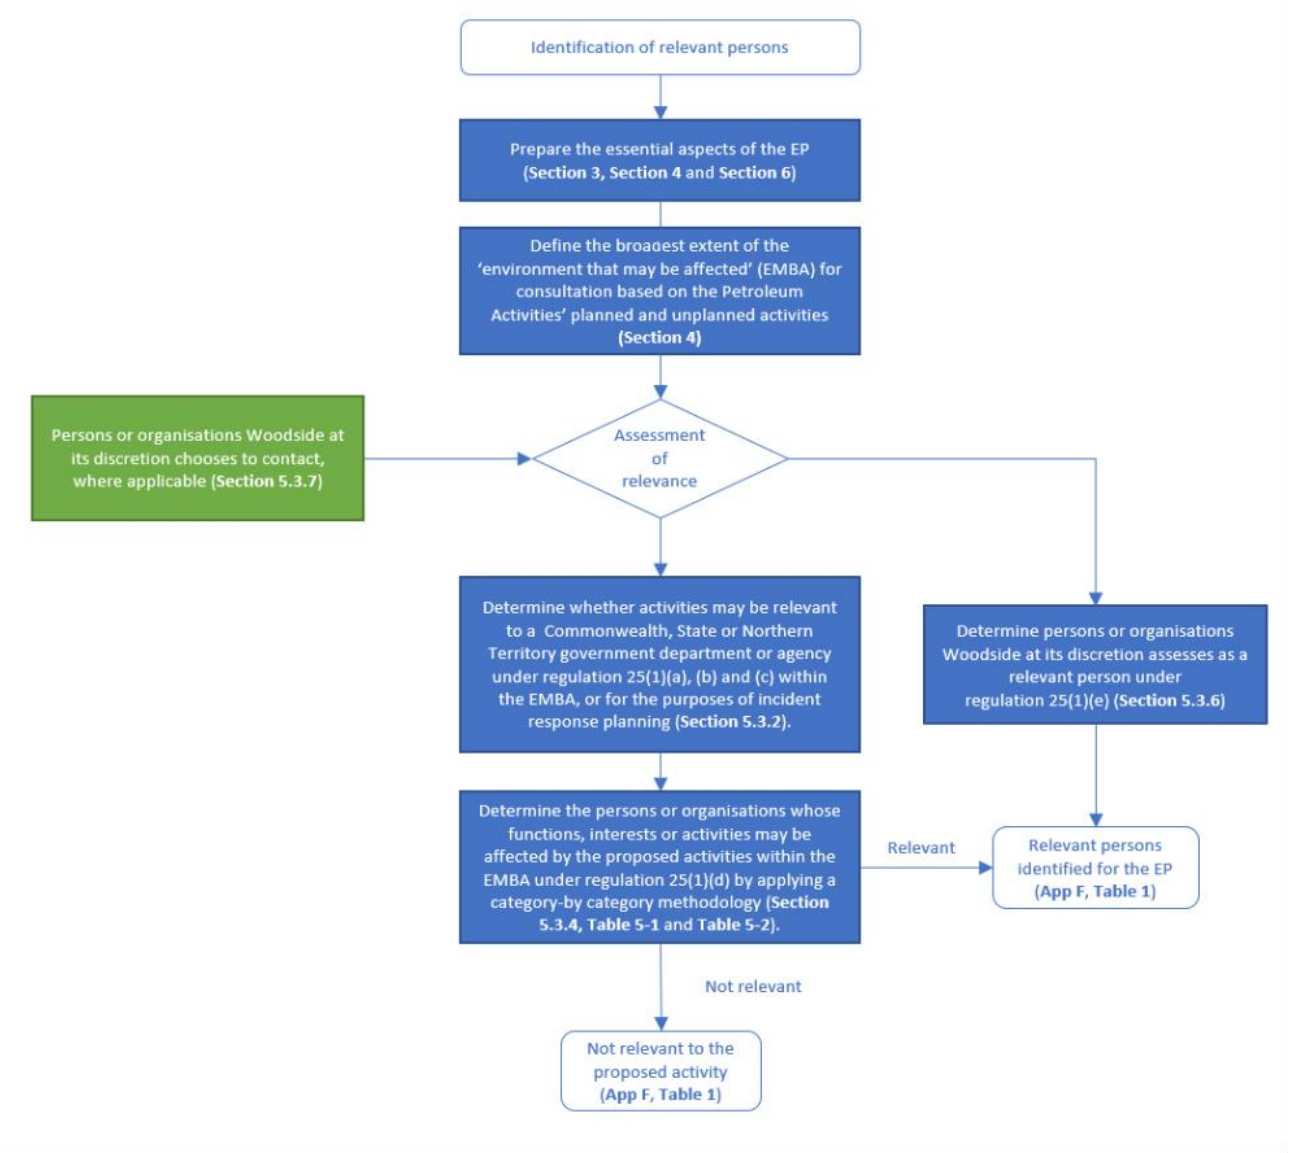

Figure 5-1: Overview of Woodside's methodology to identify relevant persons

5.2 Consultation – general context

Woodside has a portfolio of quality oil and gas assets and more than 40 years of operating experience. We have a strong history of working with local communities, the relevant regulators and a broad range of persons and organisations, to better understand the potential risks and impacts associated with our proposed activities and to develop appropriate measures to manage them.

The length of time that we have operated in Commonwealth and State waters, and the history of continued engagement with a wide range of persons and organisations, enables Woodside to develop an extensive consultation list to inform its consultation process. This consultation list is not used as a definitive list of persons to consult but, rather, assists Woodside as an input to its understanding of relevant persons with whom to consult on a Petroleum Activity. The information in the consultation list has been captured from years of experience; it contains insights relating to the type of information particular persons or organisations want to receive during consultation, the appropriate method of consultation for relevant persons and includes appropriate contact details, which are reviewed and updated periodically.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside acknowledges NOPSEMA's GL2086 – *Consultation in the course of preparing an environment plan guideline* (May 2023) as well as judicial guidance in the *Tipakalippa Appeal* on the intent of consultation, as follows:

- At paragraph 54 of the appeal decision: … *provide a basis for NOPSEMA's considerations of the measures, if any, that a titleholder proposes to take or has taken to lessen or avoid the deleterious effect of its proposed activity on the environment, as expansively defined.*
- At paragraph 89 of the appeal decision: …*its purpose is to ensure that the titleholder has ascertained, understood and addressed all the environmental impacts and risks that might arise from its proposed activity. Consultation facilitates this outcome because it gives the titleholder an opportunity to receive information that it might not otherwise have received from others affected by its proposed activity. Consultation enables the titleholder to better understand how others with an objective stake in the environment in which it proposes to pursue the activity perceive those environmental impacts and risks. As the Regulations expressly contemplate, it enables the titleholder to refine or change the measures it proposes to address those impacts and risks by taking into account the information acquired through the consultations. Objectively, the scheme intends that this is likely to improve the minimisation of environmental impacts and risks from the activity.*

The *Tipakalippa Appeal* and *Munkara Case* have also been further considered in the context of specific methods for consultation with Indigenous relevant persons (Section 5.5.1).

To undertake consultation, Woodside has developed a methodology for identifying relevant persons in accordance with regulation 25(1) (Section 5.3). This methodology is consistent with NOPSEMA's Guideline and demonstrates that, to meet the requirements of regulation 34 (criteria for EP acceptance) when preparing the EP, Woodside understands:

- our planned activities in the Operational Area, being the area in which our planned activities are proposed to occur (see Section 3.3)
- the geographical extent to which the environment may be affected (EMBA) by risks and impacts from our activities (unplanned) (identified in Section 4.1 and assessed in Section 6.7).

Woodside has undertaken consultation in the course of preparing this EP in compliance with regulation 25, which requires a Titleholder to:

- consult with each of the following (a relevant person) in the course of preparing an EP:
  - 1– each Commonwealth, State or Northern Territory agency or authority to which the activities to be carried out under the EP may be relevant
  - 2– if the plan relates to activities in the offshore area of a State – the Department of the responsible State Minister
  - 3– if the plan relates to activities in the Principal Northern Territory offshore area – the Department of the responsible Northern Territory Minister
  - 4– a person or organisation whose functions, interests or activities may be affected by the activities to be carried out under the EP
  - 5– any other person or organisation that the Titleholder considers relevant (regulation 25(1)).
- give each relevant person sufficient information to allow the relevant person to make an informed assessment of the possible consequences of the activity on their functions, interests or activities (regulation 25(2))
- allow a relevant person a reasonable period for the consultation (regulation 25(3))
- tell each relevant person that the Titleholder consults with, that the relevant person may request that particular information it provides in the consultation not be published and any information subject to such a request is not to be published (regulation 25(4)).

Further, Woodside seeks to carry out consultation in a manner that:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- is consistent with the principles of ecologically sustainable development (ESD) set out in section 3A of the EPBC Act – see Section 2
- is intended to reduce the environmental impacts and risks from the activity to ALARP and an acceptable level (regulation 4)
- is intended to minimise harm to the relevant person and the environment from the proposed petroleum activities and to enable Woodside to consider measures that may be taken to mitigate the potential adverse environmental impacts from the petroleum activity
- is collaborative. Woodside respects that, for a relevant person, consultation is voluntary. Where the relevant person seeks to engage, Woodside engages with the relevant person with the aim of seeking genuine and meaningful two-way dialogue
- provides opportunities for relevant persons to provide feedback throughout the life of the EP through its ongoing consultation process (refer to Section 5.7 and Section 7.10).

An overview of Woodside's consultation approach is outlined at Figure 5-2.

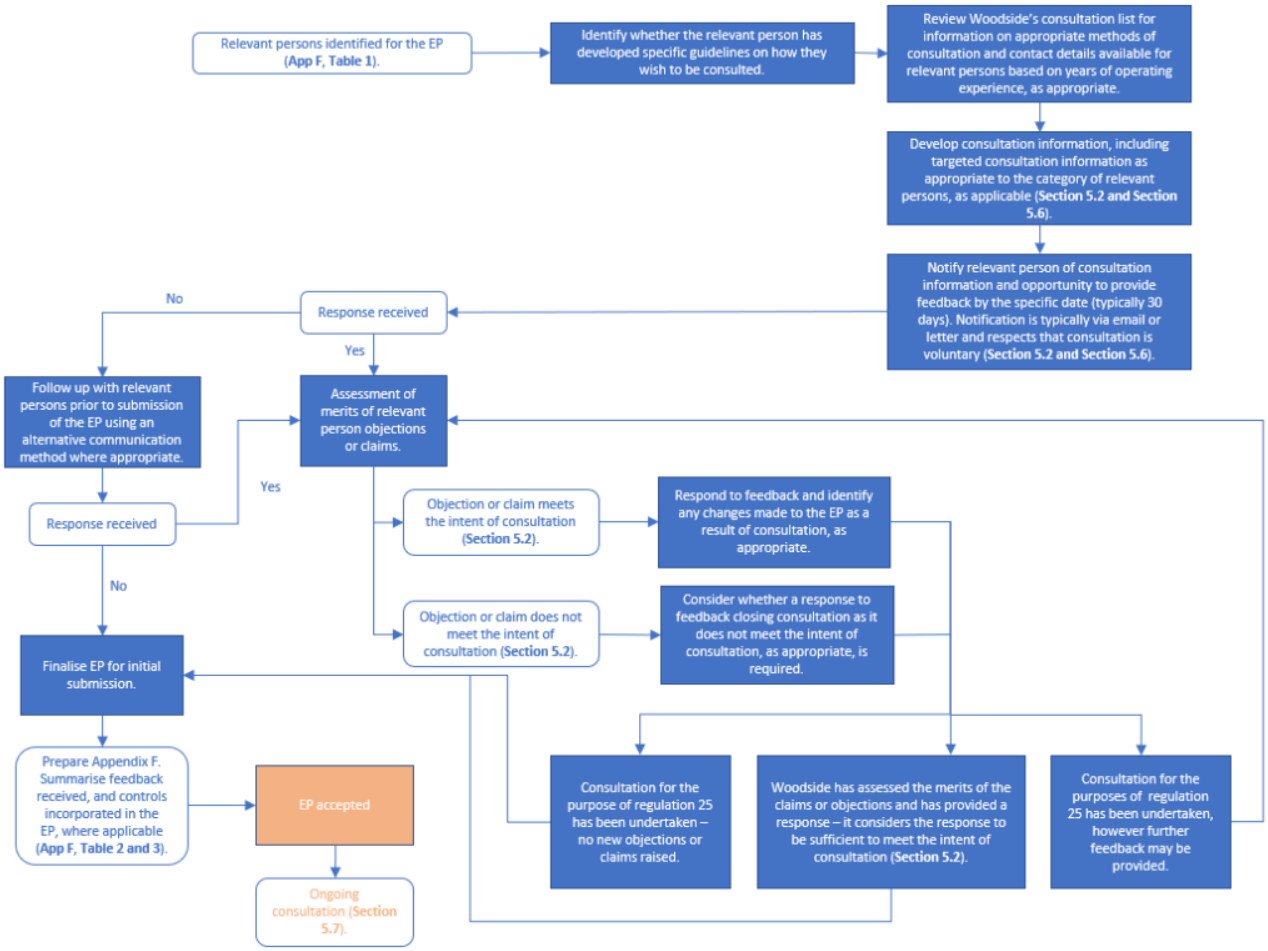

Figure 5-2: Overview of Woodside's consultation approach

The methodology for consultation for this activity has been informed by various guidelines and relevant information for consultation on planned activities, including:

Federal Court:

5.3 Identification of relevant persons for consultation

5.3.1 Regulation 25(1)(a),(b) and (c)

The relevant inquiry for determining relevant persons under regulations 25(1)(a) and (b) is whether the activities to be carried out under the EP may be relevant to one of the government departments or agencies in those regulations. The government departments and agencies relevant to the EP are listed in Appendix F,

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 1. In accordance with regulation 25(1)(b), Woodside consults with the Department of the relevant State Minister.

5.3.2 Identification of relevant persons under Regulations 25(1)(a),(b) and (c)

Woodside's methodology for identifying relevant persons under regulations 25(1)(a), (b) and (c) is as follows:

- Woodside considers the defined responsibilities of each of the departments and agencies to which the activities to be carried out in the EMBA under the EP may be relevant. This list of relevant departments and agencies is formulated by reference to the responsibilities of the government departments, as set out on their websites, in NOPSEMA's *GL1887 – Consultation with Commonwealth agencies with responsibilities in the marine area guideline* (January 2024), which describes where the Department is a relevant agency under the Environment Regulations, as well as experience and knowledge that Woodside has gained from years of operating. This list is revised from time to time, for example, for the purposes of accommodating government restructures, renaming of departments, shifting portfolios and/or to account for new agencies that might arise.
- Woodside has categorised government department or agency groups as follows:

Government departments / agencies – marine	Agencies with legislated responsibilities for use of the marine environment.
Government departments / agencies – environment	Agencies with legislated responsibilities for the protection of the environment.
Government departments / agencies – industry	The legislated Department of the responsible Commonwealth, State or Northern Territory Minister for Industry.

- Woodside considers each of the responsibilities of the departments and agencies, determining whether those responsibilities overlap with potential risks and impacts specific to the Petroleum Activity in the EMBA. The assessment is both activity and location based.
- Woodside acknowledges the roles and responsibilities of government departments and agencies acting on behalf of various industry participants. For example, AMSA – Marine Safety is responsible for the safety of vessels and the seafarers who are operating in the domestic commercial shipping industry; and AHO is responsible for maritime safety and Notices to Mariners. To undertake proposed activities in a manner that prevents a substantially adverse effect on the potential displacement of marine users, Woodside therefore consults AMSA – Marine Safety and AHO on its proposed activities. Woodside considers each of the responsibilities of the departments and agencies and determines those that would either be involved in the incident response itself or in relation to the regulatory or decision-making capacity with respect to planning for the unlikely event of a worst-case hydrocarbon release incident response specific to the Operational Area. Feedback received, if any, is assessed in accordance with the intended outcome of consultation.
- The list of government departments and agencies assessed as relevant is set out in Appendix F, Table 1.
- Feedback received, if any, is assessed in accordance with the intended outcome of consultation and summarised at Appendix F, Table 2 and Table 3 as appropriate to the relevance assessment.

Woodside does not consult with departments or agencies with interests that do not overlap with risks and impacts specific to the Petroleum Area in the EMBA or would not be involved in incident response planning.

5.3.3 Regulation 25(1)(d)

To identify a relevant person for the purposes of regulation 25(1)(d), the meaning of "*functions, interests or activities*" needs to be understood. In regulation 25(1)(d), the phrase "*functions, interests or activities*" should be construed broadly and consistently with the objects of the Environment Regulations (regulation 4) and the objects of the EPBC Act (Section 3A).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

In developing its methodology for consultation, Woodside acknowledges the guidance below from NOPSEMA's *GL2086 – Consultation in the course of preparing an environment plan guideline* (May 2023):

Functions	Refers to a power or duty to do something.
Interests	Conforms to the accepted concept of 'interest' in other areas of public administrative law and includes any interest possessed by an individual whether or not the interest amounts to a legal right or is a proprietary or financial interest or relates to reputation.
Activities	Broader than the definition of 'activity' in regulation 5 of the Environment Regulations and is likely be directed to what the relevant person is already doing.

Woodside's methodology for determining 'relevant persons' for the purpose of regulation 25(1)(d) includes consideration of:

- whether a person or organisation has functions interests or activities that overlap with the Operational Area and EMBA
- whether a person or organisation's functions, interests or activities may be affected by Woodside's proposed planned or unplanned activities

5.3.4 Identification of relevant persons under Regulation 25(1)(d)

Relevant persons under regulation 25(1)(d) are defined as a person or organisation whose functions, interests or activities may be affected by the activities to be carried out under the EP. In identifying relevant persons, Woodside considers:

- the planned activities to be carried out under the EP (described in Section 3)
- the EMBA by unplanned activities (identified in Section 4 and assessed in Section 6).
- To identify relevant persons who fall within regulation 25(1)(d), Woodside adopts the following methodology, and then undertakes consultation with relevant persons.
- As a general proposition, Woodside assesses whether a person or organisation is a relevant person having regard to:
- whether a person or organisation has functions, interests or activities that overlap with the Operational Area and EMBA
- whether a person or organisation's functions, interests or activities may be affected by Woodside's proposed planned or unplanned activities to be carried out under the EP.

This assessment will include applying judgement, knowledge and considering available, relevant literature.

To assist in identifying the full range of relevant persons, Woodside considers the impacts and risks associated with its proposed activities and considers the broad categories of relevant persons who may be affected by the activities to be carried out under the EP. The broad categories are identified in Table 5-1 below and identification methodology applied as set out in Table 5-2.

The list of those persons or organisations assessed as relevant persons or organisations Woodside separately chose to contact is set out in Appendix F, Table 1.

Feedback received, if any, is assessed in accordance with the intended outcome of consultation and applying the categories of relevant persons methodology outlined in Table 5-2..

Feedback from relevant persons is summarised at Appendix F, Table 2. Feedback from persons assessed as 'not relevant' but whom Woodside chose to contact, or self-identified and Woodside assessed as 'not relevant', are summarised at Appendix F, Table 3.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 5-1: Categories of relevant persons

Category	Explanation
Commercial fisheries (Commonwealth and State) and peak representative bodies	Commonwealth or State Commercial Fishery with a fishery management plan recognised under the *Commonwealth Fisheries Management Act 1991* (Cth) and the *Western Australian Fish Resources Management Act 1994* (WA), which may be amended from time to time. Commonwealth peak fishery representative bodies are identified by AFMA. WAFIC is the peak representative body for state fishers in Western Australia.
Recreational marine users and peak representative bodies	Charter boat, tourism and dive operators identified by DPIRD specific to the location of the proposed activity. Representative bodies are the recognised peak organisation(s) for recreational marine users.
Titleholders and Operators	Registered holder of an offshore petroleum title or greenhouse gas (GHG) title under the OPGGS Act and associated regulations.
Peak industry representative bodies	Recognised peak organisation(s) for the oil and gas sector.
Traditional Custodians (individuals and/or groups/entity)	Traditional Custodians are Indigenous Australians with cultural rights and interests or cultural functions or who perform cultural activities over particular lands and waters. Where an Indigenous person, group or entity self-identifies and asserts cultural rights, functions, interests or activities they will be considered under the definition of Traditional Custodian for the purpose of this EP (as appropriate).
Nominated Representative Corporations	Nominated representative corporations are Traditional Custodians nominated representative institutions such as Prescribed Body Corporates (PBC). PBCs are established under the Native Title Act 1993 (Cth) by Traditional Custodians to represent their entire Traditional Custodian group (defined broadly by reference to descents from an ancestor set who were known to be the Traditional Custodians at the time of European colonisation) and their interests including, among other things, management and protection of cultural values.
Native Title Representative Bodies	A Representative Aboriginal/Torres Strait Islander Body (RATSIB) is a regional organisation appointed under the Native Title Act 1993 with prescribed functions, set out in Part 11 of the Native Title Act 1993, which relate to: facilitation and assistance; certification; dispute resolution; notifications; agreement making. They are also known, and referred to here, as Native Title Representative Bodies.
Local government and recognised local community reference/liaison groups or organisations	Local government body formed under the Local Government Act 1995 (WA). Recognised local community reference or liaison group or organisation in relation to oil and gas matters.
Other non-government groups, organisations or individuals	Non-government organisation with public website material targeting the proposed activity. Individual who demonstrates the proposed activity could potentially impact their interests, functions or activities.
Research institutes and local conservation groups or organisations	Research institutes are government or private institutions that conduct marine or terrestrial research. Local conservation groups are local non-government organisation that regularly conduct conservation activities focused on the local environment or wildlife.

Table 5-2: Methodology for identifying relevant persons within the EMBA undertaken under Regulation 25(1)(d) – by category

Category	Relevant person identification methodology
Commercial fisheries (Commonwealth and State) and peak representative bodies	Woodside assesses relevance for commercial fisheries (Commonwealth and State) and their representative bodies using the following next steps in its methodology: • Defining the parameters having regard to timing, location and duration of the proposed petroleum activity. • Confirming whether the EMBA overlaps with the fisheries management area (i.e., the spatial area the fishery is legally permitted to fish in) (see Section 4.9.2). • Woodside acknowledges WAFIC's consultation guidance[6], that Titleholders develop separate consultation strategies for significant unplanned events (for example an oil spill) where Titleholders can demonstrate the likelihood of such events occurring is extremely low. WAFIC's guidance is that consultation on unplanned events resulting in an emergency scenario should only be undertaken if an incident occurs (see Appendix D). • For Commonwealth and State commercial fisheries, Woodside assesses the potential spatial and temporal extent for interaction with the fishery by reviewing AFMA, ABARES and DPIRD Fishcube data within the Operational Area and EMBA (see Section 4.9.2). Assessment of relevance: • State commercial fisheries that have been assessed as having a potential for interaction within the Operational Area or EMBA (see Section 4.9.2) are assessed as relevant to the proposed activity. However, to avoid over consulting and as requested in WAFIC's guidance, Woodside only consults individual licence holders based on WAFIC's advice. Woodside also utilises WAFIC's consultation service whereby WAFIC: – directly consults fishery licence holders that are assessed as having a potential for interaction in the Operational Area – consults fisheries that are assessed as having a potential for interaction in the EMBA only in the event of an unplanned emergency scenario. • Commonwealth commercial fisheries that have been assessed as having a potential for interaction within the Operational Area or EMBA (see Section 4.9.2) are assessed as relevant to the proposed activity. Where a relevant fishery is identified, or where Woodside chooses to contact fisheries at its discretion, Woodside consults directly with individual licence holders in that fishery. • A Commonwealth fishery's representative body is assessed as relevant where the EMBA overlaps the fishery's management area, even where the fishery itself has been assessed as not relevant based on potential for interaction. This recognises the representative body's role in representing fishing entitlements and broader fisheries considerations within the management area. Recognised Commonwealth fishery representative bodies are identified by AFMA through information on its website. For State fisheries, representative bodies are assessed as relevant where the fishery they represent is assessed as relevant based on potential for interaction. WAFIC is the only recognised State fishery representative body.
Recreational marine users and peak representative bodies	Woodside assesses relevance for recreational marine users and peak representative bodies using the following next steps in its methodology:

[6] *Consultation Approach for Unplanned Events - WAFIC*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Using Woodside knowledge and operating experience, applying knowledge of recreational marine users in the area. This assessment is both activity and location based. • Defining the parameters having regard to timing, location and duration of the proposed petroleum activity. • Assessing the potential spatial and temporal extent for interaction with recreational marine users by reviewing DPIRD Fishcube data to assess whether there has been activity within the EMBA in the past 5 years. Assessment of relevance: • Recreational marine users that have been active in the past 5 years within the EMBA are assessed as relevant to the proposed activity. Woodside is provided with the contact details of charter, boat tourism and dive operators specific to the region of the EMBA by DPIRD to consult with the relevant persons. • If Woodside has identified recreational marine users as relevant persons, then Woodside also consults identified peak recreational marine user representative bodies. For example, Recfishwest represents the interests of recreational fishers. These representative bodies are identified via Woodside's existing consultation list, which is updated as appropriate via advice from known groups and DPIRD.
Titleholders and Operators	Woodside assesses relevance for other Titleholders and Operators using the following steps in its methodology: • Using GPInfo to determine overlap with other Titleholders' or Operators' permit areas within the EMBA. • Using Woodside knowledge and operating experience, applying knowledge of other operators in the area. • Woodside produces a map showing the outcome of this assessment. Assessment of relevance: • Titleholders and Operators whose permit areas are identified as having an overlap within the EMBA are assessed as relevant.
Peak industry representative bodies	Woodside assesses relevance for peak industry representative bodies using the following steps in its methodology: • Review of peak industry representative bodies responsibilities that Woodside actively participates in, with consideration of overlap between industry focus area and Woodside's proposed activities within the EMBA. • Review of Woodside's existing consultation list. • Website search to identify whether any additional peak industry representative bodies have been created whose responsibilities may overlap with Woodside's proposed activities within the EMBA. Assessment of relevance: • Peak industry representative bodies whose responsibilities are identified as having an overlap with Woodside's proposed activities within the EMBA are assessed as relevant.
Traditional Custodians (individuals and/or groups/entity) and Nominated Representative Corporations	Consistent with its understanding of the matters discussed in Section 4.9, to identify Traditional Custodian groups or individuals, Woodside: • Uses existing systems of recognition to identify Indigenous groups who overlap or are coastally adjacent to the EMBA (for example, recognition provided under Native Title or cultural heritage legislation, or marine park management plans, or identification by other Indigenous groups or entities) • Notifies and invites consultation with Indigenous people through their nominated representative corporation (for example Prescribed Bodies Corporate (PBCs)); or, in the case of Native Title and where appropriate, the Native Title Representative Body

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Requests the nominated representative body to forward the notifications and invitations to consult to their members (members are individual communal rights holders); • Requests advice as to other Indigenous groups or individuals that should be consulted • Advertises widely so as to invite self-identification and consultation by Indigenous groups and individuals. Further detail to Woodside's methodology is as follows. Woodside uses the databases of the National Native Title Tribunal: • To understand whether there are any Native Title Claims (historical or current) or determinations overlapping or coastally adjacent to the EMBA • To understand whether there are any relevant Indigenous Land Use Agreements (ILUAs), registered with the National Native Title Tribunal that overlap or are adjacent to the EMBA that may identify Traditional Custodians or representative bodies to contact regarding potential cultural values. Where there is a positive determination of Native Title, contacting the PBC or, where their representative is a Native Title Representative Body, contacting the Native Title Representative Body. Where appropriate, contacting the relevant Native Title Representative Body to request a list of any Indigenous groups asserting Traditional Custodianship over an area of coastline adjacent to the EMBA. Review of Commonwealth and State Marine Park Management Plans that overlap the EMBA which may identify Traditional Custodians or representative bodies to contact regarding potential cultural values. In Victoria, using the Victorian Aboriginal Heritage Council data to determine whether there are any Registered Aboriginal Parties (RAP) appointed under the Aboriginal Heritage Act 2006 (Vic), that overlap or are adjacent to the EMBA. Indigenous groups or individuals identified by a Traditional Custodian, nominated representative corporation, Native Title Representative Body. Request to the PBC to distribute Woodside consultation materials through its membership. Woodside is unable to contact this membership through any other means. Woodside has a number of public notification and information sharing processes by which individual Traditional Custodians can become aware of the proposed activity, its risks and impacts, and self-identify. Individuals that consider their functions, interests or activities may be affected by a proposed activity are provided an opportunity to self-identify for each EP. Woodside does not presume that self-identification for an activity, covered by another EP, automatically means that an individual/s functions, interests and activities may be affected by other activities where EMBAs overlap. This decision is for the individual to make. The public notification, information sharing, and consultation processes Woodside puts in place enables Traditional Custodians to become aware of proposed activities, assess risks and impacts to their values, and enable individuals to self-identify. Assessment of relevance: • Traditional Custodian groups, entities or individuals and Nominated Representative Corporations who are identified through the above methodology and overlap or are coastally adjacent to the EMBA are assessed as relevant.
Native Title Representative Bodies	Woodside assesses relevance for Native Title Representative Bodies using the following steps in its methodology: • A Representative Aboriginal/Torres Strait Islander Body (RATSIB) is a regional organisation appointed under the Native Title Act 1993 with prescribed functions set out in Part 11 of the Native Title Act 1993, which relate to: facilitation and assistance; certification; dispute

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	resolution; notifications; agreement making. They are also known, and referred to here, as Native Title Representative Bodies. • Review of National Native Title Tribunal RATSIB areas that overlap or are coastally adjacent to the EMBA. Assessment of relevance: • Where the area for which a Native Title Representative Body is recognised under the Native Title Act 1993, overlaps with the EMBA or is coastally adjacent to the EMBA, Woodside will assess the Native Title Representative Body as relevant.
Local government and recognised local community reference/liaison groups or organisations	Woodside assesses relevance for local government and recognised local community reference/liaison groups or organisations using the following steps in its methodology: • Review of Woodside maps (developed based on data from the WA Local Government, Sport and Cultural Industries 'My Council' database and WA Local Government Association (WALGA) Local Government Directory maps to assess overlap between the local government's defined area of responsibility and the EMBA. • Woodside hosts regular community reference/liaison group meetings. Members represent a cross-section of the community and local towns interests. Representatives are from community and industry and generally include Woodside, State Government (for instance relevant Regional Development Commissions), Local Government, Indigenous Groups, Industry representative bodies, community and industry organisations. Woodside considers these reference/liaison groups to be the appropriate recognised representatives of the local community for the oil and gas sector. • Woodside reviews the community reference/liaison group's terms of reference to determine its area of responsibility and overlap with the EMBA. For example, the Exmouth Community Liaison Group's area of responsibility in relation to Woodside's operational, development and planning activities, is defined in the terms of reference as the Exmouth sub-basin. Comparatively, the Karratha Community Liaison Group's area of responsibility is the Pilbara region (i.e., onshore). Assessment of relevance: • The local government whose defined area of responsibility overlaps the EMBA is assessed as relevant. • The community reference/liaison group whose defined area of responsibility overlaps the EMBA is assessed as relevant and consulted collectively via the relevant reference/liaison group.
Other non-government groups, organisations or individuals	Woodside assesses relevance for other non-government groups, organisations or individuals using the following steps in its methodology: • Review of Woodside's existing consultation list. • Website search of registered non-government groups or organisations (i.e., registered with an Australian Business Number (ABN) and publicly available contact information) that may have public website and/or social media material specific to the proposed activity at the time of development of the EP. • Organisation has a publicly available statement (or purpose) that clearly describes their collective functions, interests or activities. • Review of current website and/or social media material to identify targeted information which demonstrates functions, interests or activities relevant to the potential risks and impacts associated with planned activities associated with the EMBA. • Review of an organisation's/individual's feedback to consider whether their functions, interests or activities within the EMBA may be affected by the activities to be carried out under the EP. Considering interests outside the EMBA would be considered too remote and contrary to the purpose of EP consultation. Assessment of relevance:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Registered non-government groups or organisations with current targeted public material specific to the proposed activity at the time of developing the EP and who have demonstrated functions, interests or activities relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation will be assessed as relevant. • Individual demonstrates their functions, interests or activities may be impacted will be assessed as relevant.
Research institutes and local conservation groups or organisations	Woodside assesses relevance for research institutes and local conservation groups or organisations using the following steps in its methodology: • Review of Woodside's existing consultation list. • Website search for research institutes that may operate within the EMBA. This assessment is both activity and location based. • Website search for local conservation groups or organisations that regularly conduct conservation activities within the EMBA. Assessment of relevance: • Where there is known research being undertaken by a research institute within the EMBA, the research institute that is conducting the research will be assessed as relevant. • Local environmental conservation groups who regularly conduct conservation activities or have demonstrated conservation functions, interests or activities within the EMBA are assessed as relevant. This assessment is both activity and location based.

5.3.5 Regulation 25(1)(e)

In addition to assessing relevance under regulation 25(1)(d), Woodside has discretion to categorise any other person or organisation as a relevant person under regulation 25(1)(e).

5.3.6 Identification of relevant persons under Regulation 25(1)(e)

Woodside adopts a case-by-case approach for each EP to assess relevance under regulation 25(1)(e).

5.3.7 Persons or organisations Woodside chooses to contact

In addition to undertaking consultation with relevant persons under regulation 25(1), from time to time there are persons or organisations that Woodside chooses to contact in relation to a proposed activity. For example, these are persons or organisations:

- that are 'not relevant' pursuant to regulation 25(1) but that Woodside has chosen to seek additional guidance from, for example, to inform the correct contact person that Woodside should consult, or engage with
- that are 'not relevant' pursuant to regulation 25(1) but have been contacted as a result of consultation requirements changing or updated guidance from the Regulator
- where it is unclear what their functions, interests or activities are, or whether their functions, interests or activities may be affected. In this circumstance, engagement is used to inform relevance under Woodside's methodology. Woodside follows the same methodology for assessing a person or organisation's relevance as it does during its initial assessment (as described in Figure 5-1 and Section 5.3). The result of Woodside's assessment of relevance during the development of the EP is outlined at Appendix F, Table 1.

5.3.8 Assessment of relevant persons for the proposed activity

The result of Woodside's assessment of relevant persons in accordance with regulation 25(1) is outlined at Appendix F, Table 1 and Appendix F, Table 2.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Persons or organisations that Woodside assessed as 'not relevant' but chose to contact at its discretion in accordance with Section 5.3.7, or self-identified and Woodside assessed as 'not relevant', are summarised at Appendix F, Table 1 and Appendix F, Table 3.

5.4 Consultation material and timing

Regulation 25(2) provides that a Titleholder must give each relevant person sufficient information to allow the relevant person to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of the relevant person. Regulation 25(3) provides that the Titleholder must allow a relevant person a reasonable period for the consultation.

As set out in Section 5.2, Woodside notifies relevant persons of the proposed activities, respecting that consultation is voluntary, and collaborates on a consultation approach where further engagement is sought by the relevant person. The consultation process aims to be appropriate for the category of relevant persons and not all persons or organisations will require the same level of engagement. Woodside recognises that the level of engagement is dependent on the nature and scale of the Operational Area. Woodside acknowledges published guidance for good practice consultation, relevant to different sectors and disciplines. Woodside's methodology for providing relevant persons with sufficient information as well as a reasonable period of time to provide feedback is set out in this section.

5.4.1 Sufficient information

Woodside produces a Consultation Information Sheet for each EP. This is provided to relevant persons and organisations and is also available on Woodside's website for interested parties to access and to provide feedback on. The Consultation Information Sheet typically includes:

- a description of the proposed petroleum activity
- the Operational Area
- where the activity will take place
- the timing and duration of the activity
- a location map of the Operational Area and EMBA
- a description of the EMBA
- relevant exclusion zones
- a summary of relevant risks and mitigation and management control measures relevant to the proposed petroleum activity

It also sets out contact details to provide feedback to Woodside.

The level of information necessary for a person or organisation to understand the impacts of the proposed activity on their functions, interests or activities may vary and may depend on the degree to which a relevant person is affected. For example, Woodside considers that relevant persons who may be impacted by planned activities in the Operational Area, as a result of temporary displacement due to exclusion zones, may require more targeted information relevant to their functions, interests or activities. Sufficient information may have been provided to a relevant person even where all documents requested by a relevant person have not been provided. Woodside acknowledges NOPSEMA's brochure entitled *Consultation on offshore petroleum environment plans information for the community*, which advises persons being consulted that they may inform Titleholders that they only want to be consulted in the very unlikely event of an oil spill.

Woodside places advertisements in selected local, state and national newspapers. This typically includes:

- the name of the EP Woodside is seeking feedback on
- an overview of the activity
- the consultation feedback date
- the ways in which a person or organisation can provide feedback.

Advertising in the local paper in the area of the activity is also consistent with the public notification process under section 66 of the Native Title Act 1993 for Native Title applications. Woodside typically aligns

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

advertisement feedback timeframes with the timing described below. Feedback received is assessed in accordance with Section 5.3 to determine relevance and evidenced in Appendix F, Table 1 as appropriate.

Woodside utilises a range of tools to provide sufficient information to relevant persons, which may include one or more of the following:

- Consultation Information Sheet available on Woodside's website and shared directly with relevant persons
- Summary Consultation Information Sheet, presentations or summaries specific to a particular relevant person group
- subscription available on Woodside's website to receive notification of new Consultation Information Sheets for Woodside EPs
- emails
- letters
- phone calls
- face-to-face meetings (virtual or in person) with presentation slides or handouts as appropriate
- Let's Talk newsletter – digital and hard copy
- maps outlining a person or organisation's defined area of responsibility in relation to the proposed activity, for example a fisheries management area or defence training area
- community meetings, as appropriate
- attendance at on-the-ground community events or planned regional roadshows
- broader awareness campaigns on the how to be involved in the EP consultation process

Woodside recognises that information may be provided to relevant persons in an iterative manner during the consultation process. Woodside considers that genuine two-way engagement may be demonstrated via information on incorporation of controls, where applicable, being provided to the relevant person so that the relevant persons understand how their input has been considered in the development of the EP.

Woodside communicates with relevant persons in different ways. Woodside recognises that, as part of genuine two-way dialogue, these forms of communication may evolve including, for example due to changes to organisation representation, as relationships are further established, or a preference for an alternative form of communication is expressed by a person or organisation. There might be limitations in how Woodside can consult with relevant persons.

Typical forms of communications for categories of relevant persons are set out below.

Category of relevant person	Typically accepted form of communication
Government departments / agencies – marine	Woodside applies NOPSEMA's guideline for engagement with Commonwealth government departments or agencies (GL1887 – Consultation with Commonwealth agencies with responsibilities in the marine area – January 2024) by using email for its consultation unless another form of communication is requested. Other forms of communication, such as phone calls, meetings and/or presentation briefings are used on request.
Government departments / agencies – environment	
Government departments / agencies – industry	
Commercial fisheries and peak representative bodies	**Commonwealth commercial fisheries**: Email is used as the primary form of communication with Commonwealth commercial fisheries in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request. **State commercial fisheries and recreational marine users**: The Western Australian Department of Primary Industries and Regional Development (DPIRD) has responsibility for managing the Fish Resources Management Act 1994 and Aquatic Resources Management Act 2016, which limits the provision of contact details from the register to the name and business address of licence
Recreational marine users and peak representative bodies	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	holders. Alternative forms of communication are at the licence holder's discretion. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request. **Peak representative bodies**: Email is used as the primary form of communication with commercial fishery and recreational marine user peak representative bodies in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Titleholders and Operators	Email is used as the primary form of communication between Titleholders and operators in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Peak industry representative bodies	Email is used as the primary form of communication with peak representative bodies in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Traditional Custodians and nominated representative corporations	There are many forms of communication that Woodside uses on a case-by-case basis and as appropriate to or requested by the specific group, such as email, phone calls, meetings and community forums. Other forms of communication are used on request.
Native Title Representative Bodies	There are many forms of communication that Woodside uses on a case-by-case basis and as appropriate to or requested by the specific group, such as email, phone calls, meetings and community forums. Other forms of communication are used on request.
Historical heritage groups or organisations	NOPSEMA's guideline (GL1887 – Consultation with Commonwealth agencies with responsibilities in the marine area – January 2024) for engagement with government departments or agencies is used as a reference for Woodside's approach for communicating with historical heritage groups or organisations. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Local government and recognised local community reference/liaison groups or organisations	**Local government:** NOPSEMA's guideline guideline (GL1887 – Consultation with Commonwealth agencies with responsibilities in the marine area – January 2024 for engagement with local government is used as a reference for Woodside's approach for communicating with historical heritage groups or organisations. **Community reference/liaison groups and chambers of commerce**: Email and presentations are used as the primary form of communication with local community reference/liaison groups or organisations in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Other non-government groups or organisations	Email is used as the primary form of communication with Other non-government groups or organisations. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Research Institutes and Local conservation groups or organisations	Email is used as the primary form of communication with research institutes and local conservation groups or organisations. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.

Information which is provided to relevant persons for the purposes of consultation on this EP is summarised at Appendix F, Table 2.

Appendix F, Table 3 sets out the information which is provided to persons or organisations that are 'not relevant' for the purposes of regulation 25 but which Woodside has chosen to contact.

When engaging in consultation, Woodside notifies relevant persons that, in accordance with regulation 25(4), the relevant person may request that the Titleholder notifies NOPSEMA that particular information the

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

person or organisation provides in the consultation not be published, and that information subject to that request will not be published under the Environment Regulations.

5.4.2 Reasonable period for consultation

Woodside seeks to consult in order to support preparation of its EP. Woodside recognises that what constitutes a reasonable period for consultation should be considered on a case-by-case basis, with reference to the nature, scale and complexity of the activity.

Woodside recognises that information may need to be provided to relevant persons in an iterative manner during the consultation process. Woodside considers that genuine two-way engagement may be demonstrated via information on incorporation of controls, where applicable, being provided to the relevant person so that the relevant person understands how their input has been considered in the development of the EP.

Woodside's methodology allows relevant persons a reasonable period for consultation (regulation 25(3)). A reasonable period for all relevant persons, including Traditional Custodians, to participate in consultation for this EP has been provided.

The consultation period under this EP has satisfied benchmark periods under other relevant legislative processes:

- Regulation 30 sets out a public consultation period of 30 days.
- The Department of Mines, Petroleum and Exploration (DMPE) *Guidelines for Consultation with Indigenous People by Mineral Explorers* directs a period of 21-30 days of consultation with traditional owners.

This period of consultation demonstrates that Woodside has provided a "*reasonable period*" for relevant persons to consult in accordance with regulation 25(3). Commentary in the Tipakalippa Appeal judgment limits consultation to a process that must be capable of being discharged within a reasonable time:

"it must be taken to be the regulatory intention that the consultation requirement cannot be one that is incapable of being complied with within a reasonable time..."[7]

Woodside seeks feedback in order to support preparation of its EP. What constitutes a reasonable period for consultation is considered on a case-by-case basis, with reference to the person being consulted and the nature, scale and complexity of the activity.

Woodside's typical approach to providing a reasonable period for consultation is as follows:

- advertising in selected local, state and national newspapers to give persons or organisations the opportunity to understand the activity and identify whether their functions, interests or activities may be affected
- providing consultation materials directly to identified relevant persons as well as persons who are 'not relevant' but Woodside chose to contact and providing a target date for feedback. Woodside acknowledges that feedback may be received from relevant persons following the target date
- acknowledging that the way in which Woodside provides consultation information may vary depending on the relevant person or organisation and, may depend on the degree to which a relevant person or organisation is affected. Different consultation processes may be required for relevant persons and organisations depending on the information requirements
- following up with relevant persons prior to EP submission. Where possible, Woodside will endeavour to use an alternative method of communication to contact the relevant person
- engaging in two-way dialogue with relevant persons or organisations where feedback is received.

Appendix F, Table 2 and Table 3 sets out a history of ongoing consultation and demonstrates that a reasonable period of consultation has been provided.

Woodside considers that consultation for this EP has closed.

[7] *Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193 at paragraph [136].*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

As detailed in Section 5.6, if comments and feedback are received after the EP has been submitted, Woodside will consider those comments and update controls as appropriate and at all stages of the life of the EP as per Woodside's ongoing consultation approach described in Section 5.7.

5.4.3 Discharge of Regulation 25

The Full Federal Court made clear in the Tipakalippa Appeal that consultation should be approached in a "*reasonable*", "*pragmatic*" and "*not so literal*" way, so that consultation obligations were capable of being met by Titleholders (Section 5.5.1)[8]. Consultation is a "*real world activity*" and must be capable of reasonable discharge[9]. The Full Federal Court referred to Native Title cases as an illustration that reasonable limits should be applied to consultation efforts to ensure the process is workable[10].

When the Titleholder demonstrates that it has provided sufficient information and a reasonable period for consultation, then regulation 25 consultation requirements are met[11]. Meeting these obligations requires evaluative judgement to determine reasonable satisfaction of the consultation obligation and, as such, the Regulator uses its discretion to determine if these criteria are met. The nature of the person being consulted and their function, interest and activity that may be affected, will inform the manner of consultation and the reasonable period to be afforded[12].

While a Titleholder is required to provide an opportunity to consult, the Titleholder is not required to obtain consent to engage in the activity from a person being consulted, or confirmation from a person being consulted, that consultation is complete. The Federal Court has commented that a "reasonable opportunity" for consultation must be afforded to relevant persons[13]. A reasonable opportunity may not be every opportunity requested and is limited to reasonable opportunities to consult.

Woodside has completed steps required to discharge its consultation obligations. Woodside has provided sufficient information and a reasonable period of time to enable relevant persons to make an informed assessment of the possible consequences of the activity on their functions, interests or activities; and sufficient time to provide relevant feedback for Woodside to assess relevant persons' objections or claims. Woodside has also provided a reasonable opportunity for there to be genuine two-way dialogue on a person's claims or objections.

Woodside has discharged its duty under regulation 25 and considers that it is complete.

Appendix F, Table 2 and Table 3 of this EP set out the history of consultation under regulation 25. To the extent a relevant person says that they have further information to share or claims that consultation under regulation 25 has not been completed, Appendix F, Table 2 and Table 3 provide reasons why Woodside considers consultation under regulation 25 has been met, in relation to that relevant person.

5.5 Context of consultation approach with Traditional Owners

To comply with regulation 25, Woodside identifies and consults Traditional Custodians whose functions, interests or activities may be affected by the activities under an EP.

5.5.1 Approach to methodology – Woodside's interpretation of Tipakalippa Appeal

Woodside has implemented a consultation methodology consistent with regulation 25 and guidance provided in the *Tipakalippa* Appeal (Section 5.2). Woodside's consultation methodology allows for a sufficiently broad capture of Traditional Custodian relevant persons, provides for informed consultation, follows cultural protocols and allows a reasonable opportunity for consultation with Traditional Custodians whose functions, interests or activities may be affected by the activity described in this EP (Section 5.5.3 to 5.5.7).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside notes the Full Federal Court discussed several Native Title Act 1993 (Cth) cases in response to a submission made in that case that a requirement under regulation 25 to consult "*each and every*" relevant person would be "*unworkable*". The reference to Native Title cases dealt with how decision-making processes under the NTA requiring "*all*" members of a group to be contacted for communal approval are interpreted by courts in a "*reasonable*", "*pragmatic*" and "*not so literal*" way[14], and how obligations to consult "*each and every*" person under regulation 25 should be interpreted in a similarly pragmatic way, so that consultation is workable. The reference to NTA authorities was made by analogy:

"It can be seen that the terms of [the native title legislation] are somewhat absolute – "all". However, [the native title legislation] has consistently been construed in a way that is not so literal … The cases concerning [the native title legislation] … have reiterated … that [the native title legislation] does not require that "all" of the members of the relevant claim group be involved in the decision. The key question will be whether a reasonable opportunity to participate in the decision-making process has been afforded by the notice for a relevant meeting."[15]

"We consider the authorities in relation to processes under the NTA to be illustrative of how a seemingly rigid statutory obligation to consult persons holding a communal interest may operate in a workable manner"[16] (emphasis added).

"…there is no definition of what constitutes "consultation for the purpose of Reg11A [now regulation 25] ... A titleholder will need to "demonstrate" to NOPSEMA that what it did constituted consultation appropriate and adapted to the nature of the interests of the relevant persons"[17] (emphasis added).

The Judgment in the *Tipakalippa Appeal* makes it clear that a Titleholder will have some decisional choice in identifying which person(s) are to be approached, how the information will be given to allow the "*relevant person*" to assess the possible consequence of the proposed activities on their functions, interests or activities, and how the requisite consultation is undertaken[18]. Consultation is not fixed to a rigid process and will be adapted so that it is informed by the relevant person or group. Woodside has met its regulation 25 requirements through its consultation methodology (Section 5.2).

Consistent with the *Tipakalippa Appeal*, Woodside considers NTA-style "*full group*" meetings are not required for there to be compliance with regulation 25. Nominated representative corporations (such as PBCs established under the NTA) have a designated role of representing the views of their member Traditional Custodians. They have established methods for engaging with their own members. Woodside will not undermine the purpose and authority of nominated representative corporations by requiring full group meetings where the nominated representative corporations have not requested engagement of members via full group meetings. It is not appropriate for Titleholders to direct or challenge the nominated representative corporations on how to engage with their members.

Woodside's approach described below demonstrates that sufficient information and a reasonable opportunity is provided to individual Traditional Custodians to provide feedback on Woodside activities beyond the opportunity provided to nominated representative corporations.

5.5.2 Consultation method

Woodside's Indigenous Affairs team has experience in engaging and working with Traditional Custodian organisations and individuals, including within the Commonwealth Native Title and cultural heritage systems, and state and territory cultural heritage and land rights systems. The team understands the complexities of making information accessible to groups and individuals and engaging in accordance with Traditional Custodian groups' established channels of communication and methods of consultation. Woodside's Indigenous Affairs team exercises its professional judgement and is respectful of long-standing relationships (where in place) when considering consultation with Traditional Custodian groups. The Indigenous Affairs team's approach is also informed by the established systems of recognition for Traditional Custodian groups and their nominated representative corporations within particular jurisdictions.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

For example, the methodology for engaging with Traditional Custodian groups in the Northern Territory ('not relevant' for this EP) tends to centre around engagement through Aboriginal land councils (under the *Aboriginal Land Rights (Northern Territory) Act 1976 (Cth*)) as well as community meetings that target clan groups where they do not have PBCs or other nominated representative corporations to represent them.

By contrast, recognition for Traditional Custodian groups and their nominated representative corporations in Western Australia falls under the *Native Title Act 1993 (Cth)* because the vast majority of the Western Australian coastline is settled under the Native Title regime. This means that the methodology and process for consultation in Western Australia places greater emphasis on, but is not limited to, Native Title Representative Bodies and PBCs.

Native Title determinations provide certainty about the appropriate Traditional Custodian groups that have the cultural authority to speak for country adjacent to the EMBA and help Woodside to identify Traditional Custodian persons and groups asserting Traditional Custodianship. The Judgment in the *Tipakalippa Appeal* endorses methods of consultation with groups of relevant persons that are appropriate and adapted to the characteristics of groups[19]. Woodside's consultation methodology is adapted and appropriate to the recognised systems of communal interests in Western Australia.

In Western Australia (relevant for this EP), Woodside has sought to follow the established, effective and respectful means of communication used by Native Title Representative Bodies and nominated representative corporations (including PBCs) with their respective Traditional Custodian communities. Woodside follows these processes for the appropriate broad capture of individuals' awareness of our activities, to self-identify (Section 5.5.2), and to provide feedback to inform the management of environmental impacts and risks.

Using these processes, Woodside communicates information about EPs by:

- advertising in relevant Indigenous and non-Indigenous newspapers. This encourages self-identification, by advertising proposed activities widely through newspapers that have national and intra-state circulation, i.e., Koori Mail, National Indigenous Times, The West Australian.
- creating carefully considered Summary Consultation Information Sheets with content developed by Woodside's Indigenous Affairs Team to remove jargon and present information in a simplified format.
- directing contact through nominated representative corporations.
- using social media (i.e. Facebook/Instagram), texts, phone calls and emails. These mediums are the preferred communication methods used by Traditional Custodians throughout Western Australia and, on that basis, used by Native Title Representative Bodies and other government agencies and industry, to engage with Traditional Custodians or call meetings. Indigenous Australian woman, Professor Bronwyn Castle, through 10 years of research found *"Social media is an intrinsic part of daily life. The use of Facebook is around 20 per cent higher [among Indigenous people] than the national average across all geographical locations"* (Social media mob: being Indigenous online, Professor Bronwyn Carlson (2018)).
- For ongoing consultation post Regulation 25 consultation, Woodside supports ongoing engagement with Traditional Custodians. Woodside is committed to ongoing engagement and support to care for and manage country, including Sea Country.
- basing members of its Indigenous Affairs team in Karratha and Roebourne who serve as on-Country points of contact for Traditional Custodian organisations and individuals. These team members have broad local knowledge and established, on-the-ground relationships within communities. This helps contribute to positive outcomes including distributing information and providing notice to the community to support Traditional Custodian attendance and involvement at Woodside's information sessions and Community roadshows.
- ensuring that from the commencement of engagement with Traditional Custodians, Woodside seeks direction on how they prefer to be consulted and has consulted accordingly. Consultation processes that are informed by Traditional Custodians and co-designed on a case-by-case basis and includes their

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

direction as to cultural protocols, structure of consultation and who to appropriately consult with (such as elders).

- holding meetings on Country at a place and time agreed with Traditional Custodians and offering and providing financial assistance for meeting expenses (as appropriate).
- providing information specifically designed to be easily understood, to reach all relevant people, and give a reasonable period of time for those people to make an informed assessment of the possible consequences of the proposed activity on them.

The Indigenous Affairs team approach to consultation is also consistent with the Federal Court's decision in the *Munkara Case*. The *Munkara Case* notes that the word "*culture*" (and hence the word "*cultural*") has a communal aspect to it. To establish cultural features, it is necessary that the beliefs and values are held by the relevant people *as a people*. For values, features or beliefs that are expressed by an individual to be "*cultural*" they cannot simply be an individual's belief - the belief must have a communal aspect too, and demonstrate that the "*individual beliefs are broadly representative of the beliefs of other members of the group*"[20]. The phrase "*cultural features*", when applied to "people" as constituent parts of an ecosystem, is not directed to idiosyncratic views or beliefs of an individual[21]. When the Indigenous Affairs team is told that a particular value is cultural by an individual Traditional Owner, that information is taken back to the relevant cultural authority to test its broad acceptance. In the case of gender sensitive information, that information would be restricted to the specific gender within the community.

5.5.3 Identification of relevant persons

To undertake consultation, Woodside has developed a methodology for identifying relevant persons, in accordance with regulation 25(1) (Section 5.2 and 5.3).

Specific to Woodside's approach for identifying relevant Traditional Custodians, Woodside's Indigenous Communities Policy and consultation approach is guided by Traditional Custodians by directing consultations through their nominated representative corporation. This has been implemented by Woodside through consultation with a nominated representative corporation, where that corporation has advised Woodside that it acts as the representative body for a Traditional Custodian group and has requested that Woodside engage with it as the representative body for that Traditional Custodian group.

Woodside asks nominated representative corporations (such as PBCs) and Native Title Representative Bodies to identify individuals that should be consulted, and enables individuals to self-identify in response to national and local advertising, social media and community engagement opportunities (Section 5.5.4). Where there is a nominated representative corporation for an area, unless directed by the nominated representative corporation, Woodside does not directly approach individuals for consultation, because this has the potential to undermine the role of the nominated representative corporation. Approaching individuals directly is a practice that is no longer considered acceptable because of divisions it has been shown to cause in communities. In addition to asking for the identification of individuals, Woodside also asks nominated representative corporations to distribute consultation information to whomever the nominated representative corporations deem appropriate, including members of the nominated representative corporations who are communal rights holders.

Having said this, as set out in further detail in Section 5.5.4 below, individuals are also given the opportunity to self-identify, consult and provide their own feedback on the proposed activity. When approached in this way, Woodside will engage individuals as relevant persons and will also (subject to any confidentiality or cultural restrictions) advise the nominated representative body of the consultation where it relates to cultural values. These methods of consultation are consistent with requirements for notification under the *Native Title Act 1993 (Cth),* such as under the future act provisions (section 29), which requires notification of the Native Title Representative Body, the PBC (or nominated representative) and notification through newspapers. The notification process has been selected as a respectful, practical and pragmatic analogue for consultation with Indigenous peoples, rather than requiring members to be notified via a formal authorisation process which

[20] *Munkara v Santos NA Barossa Pty Ltd (No 3) [2024] FCA 9 at [205]*

[21] *Munkara v Santos NA Barossa Pty Ltd (No 3) [2024] FCA 9 at [205]*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

seeks, from members, authorisation of agreements and Native Title/compensation claims under the *Native Title Act 1993 (Cth)*[22].

In this consultation, Woodside requested nominated representative corporations to identify any potential individual relevant persons for consultation. Woodside requests nominated representative corporations to distribute consultation materials to their members. However, Woodside recognises that the process is voluntary and that it cannot compel nominated representative corporations (such as PBCs) to do so. Woodside also recognises that it would not be appropriate to seek to audit the nominated representative corporations for compliance with any member consultation request.

5.5.4 Opportunity to self-identify and identifying other individuals

Woodside requests nominated representative corporations and Native Title Representative Bodies to identify other individuals to consult with or individuals who may seek to self-identify for a proposed activity. Woodside also advertises broadly through Indigenous, national and local advertising, social media and community engagement opportunities to provide individuals with an opportunity to consult. Woodside does not directly approach individuals for consultation, as this undermines the role of the nominated representative corporations (Section 5.5.3 5.5.4). Woodside's approach to providing individual Traditional Custodians the opportunity to self-identify and consult for an EP is as follows:

- Woodside applies the principles of self-determination when consulting with Traditional Custodians by consulting through the Traditional Custodians authorised representative entities.
- Recognising the function of nominated representative corporations (such as PBCs) and Native Title Representative Bodies to represent communal interests and manage cultural values, Woodside requests that the information provided to representative entities is provided to their members but Woodside recognises the process is voluntary and Woodside cannot compel them to do so, nor seek to audit the representative entities for compliance with any request.
- Representative entities cannot provide membership details to Woodside due to individual confidentiality requirements.
- Woodside requests advice as to who else Woodside should be consulting but recognises the process is voluntary and cannot compel nominated representative corporations to provide this information.
- Modern Indigenous engagement practises rely on the building and maintaining of respectful relationships. To date, most nominated representative corporations have requested the building of that relationship, where one is not already in place.
- While Woodside has, in some cases, approached individual directors and Elders outside of this process due to requirements imposed in EP consultation, this approach is considered inappropriate by modern Indigenous engagement standards, fundamentally undermining the authority of the authorised representative entity and can be detrimental to the relationship.

For this proposed activity, Woodside requested nominated representative corporations (including PBCs) and Native Title Representative Bodies to identify any potential individual relevant persons for consultation, and to distribute consultation materials to their member base. However, Woodside recognises the process is voluntary and it cannot compel them to do so nor seek to audit the representative entities for compliance with any request. Woodside has not been directed to engage individual Traditional Custodians by nominated representative corporations for this proposed activity. Woodside has nevertheless provided reasonable opportunity for individual Traditional Custodians to engage in consultation through appropriate and adapted consultation methods.

5.5.5 Sufficient information

Woodside recognises that the information sufficient to allow a person or organisation to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities may vary and may depend on the degree to which a relevant person is potentially affected.

[22] *Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193, at [104]*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside produces Consultation Information Sheets for each EP which is provided to relevant persons and organisations for the purpose of seeking feedback on the activity (Section 5.4.1). In response to feedback from Traditional Custodians on information provisions, Woodside has tailored effective consultation methods for its activities. These methods are specifically designed for Traditional Custodians, so that information is provided in a form that is readily accessible and appropriate. The targeted Summary Information Sheet is developed and reviewed by Woodside's Indigenous Affairs Team to ensure that content is appropriate to the intended recipients, which is then provided to relevant Traditional Custodian groups. Phone calls are made to provide context to the consultation.

Where face-to-face consultation meetings are requested, Woodside coordinates engagement at the Traditional Custodians location of choice (where practicable) and with their nominated attendees. Along with members of Woodside's Indigenous Affairs engagement team, key project personnel and environmental experts are typically present to enable effective communication and prompt response to questions. Materials for these sessions incorporate visual aids such as photos, maps and videos, and plain language suitable for people with a non-technical background.

During consultation, Woodside provides relevant persons with additional information as appropriate in response to requests. There is no requirement to provide relevant persons with all information or documents requested and a Titleholder will have provided sufficient information even where it has not provided all information or documents requested.

Woodside has sought to provide sufficient information to individual members of nominated representative corporations (such as PBCs) by providing information to representative bodies and requesting dissemination with members. However, Woodside recognises consultation is voluntary and it cannot compel them to do so, nor would it be appropriate to seek to audit the representative entities for compliance with any request.

5.5.6 Reasonable period for consultation

Woodside seeks to consult in order to support preparation of its EP. Woodside recognises that what constitutes a reasonable period for consultation should be considered on a case-by-case basis, with reference to the nature, scale and complexity of the activity (Section 5.4.2).

5.5.7 Discharge of Regulation 25

Woodside's consideration and approach to discharging regulation 25 for relevant persons is discussed in Section 5.4.3. In addition to this, Woodside has considered the application of regulation 25 specific to Traditional Custodians based on the Tipakalippa Appeal.

In relation to Traditional Custodian relevant persons (and all relevant persons), Woodside has discharged its duty under regulation 25 of the Environment Regulations. Woodside considers that consultation under regulation 25 is complete (Section 5.4.3).

5.6 Providing feedback and assessment of merit of objections or claims

There are a number of ways in which feedback can be provided. Feedback can be provided through the Woodside feedback email or via the Woodside feedback toll free phone line as outlined in the Consultation Information Sheet and the Woodside website. Where appropriate, consultation may also be supported by phone calls or meetings. An EP feedback form is also available on Woodside's website enabling relevant persons to provide feedback on proposed activities, or to request additional information.

Woodside consults widely on its EPs and notes that feedback is received in various forms. Feedback that is considered inappropriate or that puts the environment, health, safety or wellbeing of Woodside employees or operations at risk will not be tolerated. Woodside respects people's rights to protest peacefully and lawfully but actions that put the environment, health, safety or wellbeing of Woodside employees or operations at risk go beyond those boundaries.

Woodside accepts feedback and engages in consultation in order to achieve the aims set out in Section 5.2. Woodside recognises that there are persons and organisations that take a view that Woodside's operations and/or growth projects should be stopped or at least delayed as far as possible. Whilst Woodside assesses the merits of objections or claims received, it acknowledges NOPSEMA's guidance in its brochure entitled Consultation on offshore petroleum environment plans information for the community, which states that relevant persons are free to respond on any matter and raise any concern, however this may not be able to

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

be considered if it is outside the scope or purpose of the EP and approval process, for example, statements of fundamental objection to offshore petroleum activities or information containing personal threats or profanities. Under regulation 34(g), there is no requirement for a relevant person to agree or confirm that they have been adequately consulted.

During consultation, relevant persons may seek to introduce other issues (such as agreements) that are not specific to EP consultation. While concepts of agreements may be associated with broader consultation processes, consultation for specific EPs can occur in parallel.

Feedback from relevant persons is reviewed and an assessment of the merits is made of information provided as well as objections or claims about the adverse impact of each activity to which the EP relates. This might, for instance, be done through a review of data and literature and for relevance to the nature and scale of the activity outlined in the EP. Consistent with the aim of consultation in Section 5.2, Woodside will consider information received when reviewing and designing measures to put in place to minimise harm to relevant persons and where reasonable or practical to further manage impacts and risks to ALARP and acceptable levels.

Woodside considers feedback during consultation from relevant persons and other persons Woodside chose to contact (see Section 5.3.4 and 5.3.7). This information is summarised in Appendix F, Table 1 and Table 2 of the EP and includes a statement of Woodside's response, or proposed response, if any, to each objection and claim.

In accordance with regulation 26(8), sensitive information (if any) in an EP, and the full text of any response by a relevant person to consultation under regulation 25, must be contained in the sensitive information part of the plan and not anywhere else in the plan.

5.7 Ongoing consultation

Consultation can continue to occur during the life of an EP, including after an EP has been accepted by NOPSEMA.

As per Woodside's ongoing consultation approach (refer to Section 7.10), feedback and comments received from relevant persons continue to be assessed and responded to, as required, throughout the life of an EP, including during its assessment and once accepted, in accordance with the intended outcome of consultation.

Should consultation feedback be received following the acceptance of an EP that identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Revision process as appropriate (see Section 7.8).

6. ENVIRONMENTAL IMPACT AND RISK ASSESSMENT, PERFORMANCE OUTCOMES, STANDARDS AND MEASUREMENT CRITERIA

6.1 Overview

This section presents the impact and risk analysis and evaluation, EPOs, EPSs and MC for the Petroleum Activity, using the methodology described in Section 2 of this EP. Impacts and risks associated with the Petroleum Activity are summarised in Table 6-1 and evaluated throughout this section.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 6-1: Environmental impact analysis summary of planned and unplanned activities

Aspect	EP section	Risk rating				Acceptability of impact/risk
		Impact/ consequence	Potential impact/consequence level	Likelihood	Current risk rating	
Planned activities (routine and non-routine)						
Physical presence: disturbance to other marine users	Section 6.6.1	F	No lasting effect. Localised impact not significant to environmental receptor.	-	-	Broadly acceptable
Physical presence: disturbance to seabed	Section 6.6.2	F	No lasting effect. Localised impact not significant to environmental receptor.	-	-	Broadly acceptable
Routine and non-routine discharges: generation of noise from project vessels and helicopter operations	Section 6.6.3	F	No lasting effect. Localised impact not significant to environmental receptor.	-	-	Broadly acceptable
Routine and non-routine discharges: subsea fluids and fugitive hydrocarbons	Section 6.6.4	E	Slight and low-level impact on environmental feature/s or area/s of low significance attributes.	-	-	Broadly acceptable
Routine and non-routine discharges: vessel utility systems (bilge water, grey water, sewage, putrescible wastes and deck drainage water)	Section 6.6.5	F	No lasting effect. Localised impact not significant to environmental receptor.	-	-	Broadly acceptable
Routine atmospheric and greenhouse gas emissions: fuel combustion and cold venting	Section 6.6.6	F	No lasting effect. Localised impact not significant to environmental receptor.	-	-	Broadly acceptable
Routine and non-routine: external lighting on the project vessels	Section 6.6.7	E	Slight and low-level impact on environmental feature/s or area/s of low significance attributes.	-	-	Broadly acceptable
Unplanned activities (accidents, incidents, emergency situations)						
Unplanned hydrocarbon release: wellbore release	Section 6.7.2	D	Minor impact on environmental feature/s or area/s such as impact on feature of low significance with some ability to recover	1	M	Acceptable if ALARP

6.2 Impacts and risks not deemed credible or outside the scope of this Environment Plan

During the ENVID, one risk was identified as either being outside the scope of this EP, or not relevant to the Petroleum Activity. This is described below.

6.2.1 Shallow/nearshore activities

The Petroleum Activity is in water depths between about 81 m and 128 m, about 120 km from the nearest town (Dampier). Consequently, risks and impacts associated with shallow and nearshore activities, such as anchoring and vessel grounding, were assessed as not credible.

6.2.2 Ongoing management of wells

After the intervention activities described in this EP are complete, the management of the wells will resume under the Okha FPSO Operations EP. Environmental impacts and risks associated with ongoing management of the wells, such as production of well fluids, including associated greenhouse gas (GHG) emissions, and maintenance of subsea well infrastructure is described and assessed under the accepted Okha FPSO Operations EP.

6.3 Cumulative impacts

Woodside has assessed the cumulative impacts of the Petroleum Activity in relation to other petroleum activities that could realistically result in overlapping temporal and spatial extents. The following has been identified:

- Infrastructure and activities relating to the Okha and Angel offshore facilities and the ongoing operations of subsea infrastructure (refer to Section 4.9.6).

Where relevant, cumulative impacts are considered in the risk and impact assessments in Sections 6.6 and 6.7.

6.4 Environmental performance outcomes, standards and measurement criteria

Section 21(7) of the Environment Regulations requires that an EP includes EPOs, EPSs and MC that address legislative and other controls to manage the environmental risks and impacts of the Petroleum Activity to ALARP and an acceptable level.

As defined in section 5 of the Environment Regulations, an EPO ‘for an activity, means a measurable level of performance required for the management of environmental aspects of the activity to ensure that environmental impacts and risks of the activity will be of an acceptable level’.

The EPOs, EPSs and MC specified in this EP are consistent with legislative requirements and Woodside’s standards and procedures. They have been developed based on the LCS, GP and PJ outlined in Section 2.3.5 and Section 2.3.6 as part of the acceptability and ALARP justification process. A breach of these EPOs or EPSs constitutes a ‘Recordable Incident’ under the Environment Regulations (refer to Section 7.11.4).

For the physical and biological receptors within the EMBA, Woodside has set EPOs that are consistent with the Matters of National Environmental Significance – Significant impact guidelines 1.1 (Department of the Environment, Water, Heritage and the Arts, 2013). EPOs are set so they are consistent with the principles of ESD as defined in section 3A of the EPBC Act, and demonstrated through the acceptability process (described in Section 2.4.2), which is applied to the aspects and receptors in Section 4. The EPOs for planned activities have been set at a level of environmental performance that considers the planned activities and associated level of environmental impact.

For social receptors, including fishing and other commercial activities, the EPOs that have been set reflect the requirements in section 280(2) of the OPGGS Act, in that the activities undertaken as part of developing the Petroleum Activity should not interfere with other marine users, to a greater extent than is necessary for the exercise of rights conferred by the titles granted.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6.5 Presentation

The environmental impact and risk analysis and evaluation, demonstration of ALARP and acceptability, EPOs, EPSs and MC are presented in tabular form throughout this section, as shown in the example below. Italicised text in this example table denotes the purpose of each part of the table, with reference to the relevant sections of the Environment Regulations and this EP.

6.6 Planned activities (routine and non-routine)

6.6.1 Physical presence: interaction with other marine users

Context		
Project vessels – Section 3.6	Socioeconomic – Section 4.9	Stakeholder consultation – Section 5

Impact evaluation summary

Source of impact	***Environmental value potentially impacted***						***Evaluation***						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socioeconomic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Presence of LWIV and support vessels excluding or displacing other marine users from the Operational area (commercial fishing, commercial shipping, tourism and recreation)						X	A	F	-	-	LCS GP	Broadly acceptable	EPO 1

Description of source of impact

An LWIV, supported by one or more dynamically positioned support vessels, will be in the Operational area temporarily to undertake the Petroleum Activity (refer to Section 3.6). The presence of these vessels and the LWIV in the Operational area presents an opportunity for interaction with third-party marine users. A temporary 500 m radius safety exclusion zone will be maintained around the LWIV. Marine users are requested to avoid this area during the LWI activities for safety purposes.

As described in Section 3.4, the duration of activities per well ranges from 14 to 35 days (refer to Table 3-3), and may be undertaken across separate campaigns depending on schedule, vessel availability, weather and operational requirements. Activities will be conducted 24 hours per day, seven days per week.

The temporary presence of the LWIV, support vessels and associated safety exclusion zone represents the primary source of interaction with other marine users within the Operational area.

Impact assessment

Environmental value(s) potentially impacted

Commercial fishing

Three Commonwealth fishery areas overlap the Operational area, including the Southern Bluefin Tuna Fishery, Western Skipjack Fishery and Western Tuna and Billfish Fishery (refer to Table 4-23). However, catch and effort data show no recorded fishing effort for these fisheries and there is no potential for interaction with the Petroleum Activity.

While 13 State commercial fisheries areas overlap the Operational area, four fisheries are active including the Mackerel Managed Fishery (Area 2), Pilbara Fish Trawl (Interim) Managed Fishery, Pilbara Trap Managed Fishery and Pilbara Line Fishery (Condition) (refer to Table 4-23), which have a potential for interaction with the Petroleum Activity.

The presence of temporary exclusion zones and vessels in the Operational area may restrict the use of the areas by the fishery, and any other commercial fisheries that were identified as having potential (but unlikely) to use the Operational area. Given the temporary exclusion zones are relatively small (500 m around the LWIV) and temporary, the area from which fishing vessels may be displaced at any one time is negligible when compared to the area available to fish.

Given the short duration of the Petroleum Activity (refer to Section 3.4), the temporary presence of the LWIV and support vessels in the Operational area may result in localised interference, including navigational avoidance and short-term displacement of any commercial fishing vessels in the immediate vicinity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Displacement of recreational fishing

Tourism and recreation activity in the Operational area is expected to be infrequent due to the offshore location and water depths (refer to Section 4.9.4). There are no emergent features within the Operational area that would attract tourism or recreational use. No recreational or charter fishing operators have been identified as potentially occurring within the Operational area.

If tourism or recreational vessels were to transit through the Operational area, they may be temporarily excluded from the 500 m safety exclusion zone around the LWIV for the duration of the Petroleum Activity. Given this small area, the potential impact is considered temporary and localised.

Commercial shipping

Shipping near the Operational area is mainly related to the resources industry (refer to Section 4.9.5). To reduce the likelihood of interactions between commercial vessels and offshore facilities, AMSA has introduced shipping fairways within which commercial vessels are advised to navigate. The fairways are not mandatory, but AMSA strongly recommends commercial vessels remain within the fairways when transiting the region. Using shipping fairways is considered good seafaring practice, with Australian Ship Reporting System data from AMSA indicating cargo ships and tankers routinely navigate within the established fairways.

No recognised shipping lanes overlap the Operational area; the nearest fairway is about 38 km north-west of the Operational area (refer to Section 4.9.5).

The potential impacts associated with this Petroleum Activity may include displacement of vessels as they make slight course alterations to avoid the LWIV and support vessels. Considering the highly localised and temporary nature of the impact, no lasting effect on commercial shipping activities is anticipated.

Oil and gas

Other oil and gas facilities are in the vicinity of the Operational area (refer to Section 4.9.6). The CK4, LH3, WA7 and WA8 wells are part of the Woodside Okha facilities, and Okha FPSO and subsea production infrastructure are within the Operational area.

The WA7 and WA8 wells are the closest wells to the Okha FPSO, being about 950 m to the west and 950 m to the north of the Okha FPSO swing radius respectively. The Petroleum Activity will be managed within Woodside to avoid disrupting the Okha facility operations. There are not expected to be any impacts to oil and gas operators from the Petroleum Activity.

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[25]***	***Benefit in impact reduction***	***Proportionality***	***Control adopted***
Legislation, codes and standards				
Vessels comply with Marine Orders for safe vessel operations, specifically: • Marine Order 21 (Safety and emergency arrangements) • Marine Order 27 (Safety of navigation and radio equipment) • Marine Order 30 (Prevention of collisions).	F: Yes. CS: Minimal cost. Standard practice.	Compliance with Marine Orders 21, 27 and 30 is required under Australian regulations and is standard practice for commercial vessels as applicable to vessel size, type and class. Compliance reduces the likelihood of adverse interactions between other marine users and the Petroleum Activity.	Legislative requirement – must be adopted.	Yes C 1.1

ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts associated with presence of the LWIV and support vessels during the Petroleum Activity. As no reasonably practicable additional or alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that, given the adopted controls, the presence of the LWIV and support vessels during the Petroleum Activity may result in temporary and localised impact with no lasting effect to commercial fishing, recreational fishing and shipping activity. Further opportunities to reduce the impacts and risks have been investigated above. The adopted controls are considered good oil field practice or industry best practice and meet AMSA and AHO expectations as advised during consultation. Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

EPOs, EPSs and MC			
EPOs	***Controls***	***Performance standards***	***Measurement criteria***
EPO 1 Prevent adverse interactions between LWIV and support vessels and other marine users during the Petroleum Activity.	C.1.1 Vessels comply with Marine Orders for safe vessel operations, specifically: • Marine Order 21 (Safety and emergency arrangements) • Marine Order 27 (Safety of navigation and radio equipment) • Marine Order 30 (Prevention of collisions).	PS 1.1.1 Contracted vessels comply with Marine Orders as required by vessel size, type and class.	MC 1.1.1 Marine verification records demonstrate compliance with relevant Marine Orders.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact evaluation summary

Source of impact	***Environmental value potentially impacted***						***Evaluation***						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socioeconomic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Disturbance to seabed from ROV operations	X	X		X			A	F	-	-	LCS GP ES	Broadly acceptable	EPO 2 EPO 3
Disturbance to seabed from placement and recovery of transponders and clump weights on seabed	X	X		X			A	F	-	-			
Disturbance to seafloor from equipment laydown	X	X		X			A	F	-	-			

Description of source of impact

ROVs

ROVs may be used during LWI activities for visual survey, transponder deployment and retrieval, cleaning and for intervention support. The use of ROVs may result in temporary seabed disturbance and suspension of sediment, causing increased turbidity as a result of working close to, or occasionally on, the seabed. ROVs and AUVs are typically deployed from a vessel using a crane or an A-frame. The footprint of a typical work class ROV is about 2.5 m by 1.7 m (4.25 m²).

Subsea cleaning, sediment and marine growth removal and other preparation activities

Subsea cleaning and preparation activities include removing marine growth from infrastructure such as the XTs (refer to Section 3.5.3). Removing marine growth may be done in various ways (water jetting, brush systems, acid). Methods that have the potential to impact the seabed include the use of high-pressure water or brush systems mounted on an ROV.

An ROV may be used to relocate sediment material around the well location to allow inspection or intervention works. Relocating sediment involves using an ROV-mounted suction pump to remove sediment that has built up around the well infrastructure. This will cause localised and temporary impacts to water quality from increased turbidity and may cause localised and temporary impacts to benthic habitats.

Underwater acoustic positioning – seabed equipment placement

An array of LBL or USBL transponders may be installed on the seabed to support LWI activities. Transponders may be deployed to the seabed either by a clump weight or mounted on a seabed frame:

- Standard clump weights (cement or steel) typically weigh about 80 kg.
- A typical seabed frame is 1.5 m × 1.5 m × 1.5 m in dimension and weighs about 40 kg.

On completion of the positioning operation, the array transponders moored by clump weight will be recovered by means of an acoustic release and the clump weights removed from the seabed. The transponders mounted on seabed frames will be removed by ROV.

Equipment laydown

Equipment such as ROV frames and baskets may be placed on the seafloor during LWI activities. Equipment laydown is temporary and all equipment will be removed once the activities are complete.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Localised seabed disturbance may occur if subsea XTs need to be wet parked. Placement of XTs on the seabed will result in temporary seabed disturbance and suspension of sediment, causing increased turbidity.

Impact assessment

Environmental value(s) potentially impacted

Seabed disturbance from the Petroleum Activity can be categorised into two potential impacts:

- direct physical disturbance of benthic habitat
- indirect disturbance to benthic habitats from sedimentation.

Physical disturbance to benthic habitats

Subsea cleaning activities and the placement of seabed equipment such as transponders, clump weights, frames or temporary intervention components are likely to result in localised and short-term physical disturbance of benthic habitats. ROV operations are likely to result in impacts ranging from localised to short term, physical modification to the seabed and localised disturbance to soft sediments.

The Operational area are expected to consist primarily of sandy substrate and soft sediments (refer to Section 4.5). Broad-scale bathymetric surveys around the Operational area show the seabed is relatively flat and featureless. Communities in the area are expected to largely consist of low-density sessile benthic biota and mobile epifauna.

Physical impacts from the Petroleum Activity are expected to be for the most part confined to sediment-burrowing infauna associated with the soft sediment seabed. Impacts to epifauna associated with hard substrate could occur but would represent a small proportion of the wider representative biota. ROV activities near the seafloor and associated sediment relocation activities may result in localised impacts to deepwater biota, as a result of elevated turbidity and the clogging of respiratory and feeding parts (turbidity) of filter-feeding organisms. However, elevated turbidity would only be expected to be localised and of no lasting effect, and is therefore not expected to have any significant impact on environment receptors, particularly given the low densities of benthic organisms at the water depths of the Operational area.

Water and sediment quality

Temporary increases in turbidity and suspended sediment concentrations may occur when ROVs work close to the seabed or when high-pressure water jetting is used to remove marine growth from infrastructure. These effects are expected to be localised to the immediate working area and short-lived, as disturbed sediments will rapidly settle once activities cease. Water jetting will be limited to what is necessary to complete cleaning.

Resuspended sediment loads are not likely to be significant due to the relatively small footprint of disturbance. Given the short nature of each activity, and the small footprint, any impacts to water and sediment quality are likely to be localised and of no lasting effect.

Key ecological feature – Ancient Coastline at 125 metre Depth Contour

The Operational Area Part 2 (LH3) overlaps the Ancient Coastline at 125 m Depth Contour KEF (Figure 4-11). Benthic habitat surveys in the region indicate benthic habitats within the KEF are characterised by sand interspersed with areas of rubble and outcroppings of limestone pavement (AIMS, 2014; RPS, 2011). Such habitats are widely distributed in the NWMR. No significant escarpments, species of conservation significance, emergent features or areas of high biological productivity characteristically associated with the Ancient Coastline at 125 m Depth Contour KEF have been observed in Operational Area Part 2 (LH3). As Operational Area Part 2 (LH3) only overlap a small portion of the KEF (see Figure 4-11) and values of the KEF have not been identified, the ecological functions of the KEF are not predicted to be impacted by the Petroleum Activity.

Cultural features and heritage values

Refer to Section 6.9 for an assessment of potential impacts to cultural features and heritage values from the Petroleum Activity. Control measures related to underwater cultural heritage have been captured in the tables below to demonstrate that impacts are reduced to ALARP and are of an acceptable level.

Cumulative impacts

Cumulative impacts are not expected. Seabed disturbance will be limited in extent and duration, and activities are spatially and temporally separated from other regional petroleum operations.

6.6.3 Routine and non-routine acoustic emissions

Context		
Project vessels – Section 3.6 Helicopters – Section 3.7 Underwater acoustic positioning – Section 3.5.2	Protected species – Section 4.6	Stakeholder consultation – Section 5

Impact evaluation summary

Source of impact	***Environmental value potentially impacted***						***Evaluation***						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socioeconomic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Generation of noise from LWIV and support vessels					X		A	F	-	-	LCS GP PJ	Broadly acceptable	EPO 4
Generation of atmospheric noise from helicopter transfers within the Operational area					X		A	F	-	-			
Generation of acoustic signals from positioning equipment (transponders)					X		A	F	-	-			

Description of source of impact

LWIV and support vessels will generate noise in the air and underwater, due to the operation of thruster engines, propeller cavitation, plugging operations, onboard machinery and other activities. These noises will contribute to and can exceed ambient noise levels, which range from around 90 dB re 1 µPa (root square mean sound pressure level (rms SPL)) under very calm, low wind conditions, to 120 dB re 1 µPa (rms SPL) under windy conditions (McCauley, 2005).

The following information describes the source sound levels for the LWIV, with support vessels. The most significant noise source will be the operation of thruster engines while operating the DP systems on the support vessels and LWIV.

Indicative timing for activities is provided in Section 3.4 and may occur throughout the year.

Vessel operations

Support vessels will not anchor within the Operational area due to water depth; therefore, vessels will use DP. The LWIV will have DP capability to assist with positioning where required. Vessels maintain DP for varying durations during the Petroleum Activity, depending on the activity being undertaken.

The main source of noise from a DP vessel relates to using thrusters McCauley (1998) measured underwater broadband noise equivalent to about 182 dB re 1 µPa at 1 m (rms SPL) from a support vessel holding station in the Timor Sea; similar noise levels are expected to be generated by support vessels used for this Petroleum Activity. The LWIV is expected to have a broadband source level of 181.0 dB re 1 μPa^2m^2. This is based on an installation vessel of greater length and a greater level of installed propulsion, the Deep Orient which JASCO has previously performed measurements of sound levels (Quijano and McPherson 2021).

Woodside commissioned JASCO (JASCO 2026) to undertake sound transmission loss modelling for the GWF4 Drilling and Subsea Installation activities to consider cumulative noise emissions. The scenarios considered included several permutations of support vessels and the MODU undertaking drilling activities, one of these scenarios is considered representatively conservative to inform the impact assessment for the Okha LWI activities.

The modelling study scenario considered the following sound-producing activities (four vessels) within close proximity (3 km) of each other in the Yodel field of 120 m water depth:

- a MODU drilling under DP (source level of 186.7 dB re 1 μPa^2m^2) being supplied by an OSV under DP (source level of 187.6 dB re 1 μPa^2m^2)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- a second OSV under DP on stand-by in the field (source level of 187.6 dB re 1 μPa^2m^2)
- an installation vessel under DP conducting subsea installation (source level of 181 dB re 1 μPa^2m^2)

The modelling is considered to be a conservative representation for the cumulative vessel activities associated with this Petroleum Activity as the modelled source levels are higher or equivalent and the modelled scenarios (and resulting distances to thresholds and effect criteria). The presence of more than four vessels in the Operational area is highly unlikely. The modelled scenario is also in a similar depth of water to the Operational area (80 m – 128 m) which is a key influence on sound propagation with deeper locations typically resulting in greater noise extents than shallower waters.

The modelling study indicated that the maximum extent from the source to SPL behavioural noise effect criteria for all marine mammals was predicted to be 14.9 km.

The modelling study indicated that exceedances of PTS and TTS thresholds for low frequency (LF) cetaceans may occur out to a maximum of 0.17 km and 4.33 km, respectively. For HF and VHF cetaceans, the maximum distances at which sound levels dropped below PTS and TTS thresholds were 0.10 km and 1.49 km respectively.

PTS and TTS thresholds are based on a cumulative metric that that reflects the dosimetric impact of noise levels over a 24 hour period based on the assumption that an animal is consistently exposed to such noise levels at a fixed position.

For turtles, the modelling indicated that the potential for PTS and TTS onset would be limited to within hundreds of meters for PTS and up to 3.89 km (TTS). However, marine turtles within the Operational Area are expected to be transient, and unlikely to remain within this vicinity 24- hours, and therefore PTS and TTS thresholds are not expected to be reached. Behavioural impacts to marine turtles from continuous noise sources generated by the Petroleum Activity are expected to be short-term and localised.

Generation of acoustic signals from positioning equipment (transponders)

An array of LBL or USBL transponders may be installed on the seabed for metrology and positioning (refer to Section 3.5.2). This is proposed within a radius of 500 m from the location of the wells for the duration of the Petroleum Activity.

Transponder emissions are intermittent and only active when positioning is needed. Each acoustic pulse has a duration of three to 40 milliseconds. Emission frequency depends on the operational mode:

- general positioning: one chirp every five seconds, typically for around four hours
- precise positioning: one chirp every one second, typically for around two hours.

Total active emission time is expected to be about six hours per well. When not actively positioning, all transponders remain silent.

Helicopter transfers

Helicopter activities may occur in the Operational area, including landing and take-off on the vessel helidecks. Sound emitted from helicopter operations is typically below 500 Hz (Richardson, et al., 1995). The peak received level diminishes with increasing helicopter altitude, but the duration of audibility often increases with increasing altitude. Richardson, et al. (1995) reports that helicopter sound is audible in air for four minutes before it passes over underwater hydrophones, but detectable underwater for only 38 seconds at 3 m depth and 11 seconds at 18 m depth. Received underwater noise levels of a Bell 212 helicopter flying at an altitude of 152 m have been measured by Jiminez-Arranz, et al. (2020) at 109 dB re 1 µPa (rms), while Berrow, et al. (2002) measured a Sikorsky air-sea rescue helicopter at 110 dB re 1 µPa at 91 m.

Impact assessment

Environmental value(s) potentially impacted

Receptors

The Operational area is in waters about 80 to 130 m deep (Section 4.4). The fauna associated with these areas are predominantly pelagic species of fish, with migratory species such as cetaceans, whale sharks and marine turtles in the area seasonally (Section 4.6.4.1). Noise interference is a key threat to multiple migratory and threatened cetaceans and marine turtles identified as potentially occurring within the Operational area.

Marine mammals

The Operational area does not intersect any BIAs for marine mammals. The pygmy blue whale migration BIA is about 43 km from the Operational area and the humpback whale migration BIA is about 34 km from the Operational area (refer to Figure 4-7 and Figure 4-8).

Marine reptiles

The Operational area is unlikely to represent important habitat for marine turtles, given the absence of potential nesting or foraging habitat (i.e. no emergent islands, reef habitat or shallow shoals) and the water depth (deeper than 50 m). The Recovery Plan for Marine Turtles (Commonwealth of Australia, 2017) specifies a 60 km internesting buffer for flatback turtles, and 20 km internesting buffer for green, hawksbill and loggerhead turtles. The 60 km internesting buffer for flatback turtles (Commonwealth of Australia, 2017) is based primarily on longshore movements in nearshore

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

coastal waters or travel between island rookeries and the adjacent mainland (Whittock, et al., 2016). Whittock, et al. (2016) defined suitable internesting habitat as water 0 to 16 m deep and within 5 to 10 km of the coastline, while unsuitable internesting flatback habitat was defined as waters >25 m deep and >27 km from the coastline. There is no evidence to date to indicate flatback turtles swim out to deep offshore waters during the internesting period (Whittock, et al., 2016).

A flatback turtle reproduction (internesting) BIA is located 18 km south of the Operational area (Figure 4-5). As inferred in the paragraph above and given the Operational area' distance from shore (>100 km), the presence of flatback turtles within the Operational area is likely to be restricted to individual turtles infrequently transiting the area.

Fish, sharks and rays

Whale sharks may traverse offshore NWS waters, including the Operational area, during their migrations to and from Ningaloo Reef, and a BIA for foraging whale sharks overlaps the Operational area (Figure 4-4). This BIA is centred on the 200 m isobath and whale sharks are most likely to be present in July to November. Whale shark presence within the Operational area is expected to be limited to individuals, and their presence would be transitory and of a short duration.

There are no known fish aggregation areas in the Operational area.

Potential impact of noise

Elevated underwater noise can affect marine fauna, including cetaceans, fish, turtles, sharks and rays, in three main ways (Richardson, et al., 1995; Simmonds, et al., 2004):

- by causing direct physical effects on hearing or other organs; hearing loss may be temporary (temporary threshold shift (TTS); referred to as auditory fatigue), or permanent (permanent threshold shift (PTS); injury)
- by masking or interfering with other biologically important sounds, including vocal communication, echolocation, signals and sounds produced by predators or prey
- through disturbance leading to behavioural changes or displacement from important areas (e.g. BIAs); the occurrence and intensity of disturbance is highly variable and depends on a range of factors relating to the animal and situation.

Exposure to sufficiently intense sound may lead to an increased hearing threshold. If this shift is reversed and the hearing threshold returns to normal, the effect is called a TTS. Southall, et al. (2007) defined TTS as a threshold shift of 6 dB above the normal hearing threshold. If the threshold shift does not return to normal, PTS has occurred. Threshold shifts can be caused by acoustic trauma from a very intense sound of short duration, as well as from exposure to lower-level sounds over longer time periods (Houser, et al., 2017).

Marine mammals

Marine mammals, particularly cetaceans, rely heavily on underwater sound for communication, social behaviour, navigation, predator and prey detection and reproduction (Weilgart, 2007; Erbe, 2012). Anthropogenic underwater noise may result in masking, behavioural disturbance, TTS or PTS, physiological stress and, in extreme situations, physical injury (Erbe, 2012).

The thresholds that could result in a behavioural response for cetaceans as a result of continuous (e.g. vessel) noise are presented in Table 6-2. As discussed within Accomando, et al. (2025) and National Marine Fisheries Service (NMFS, 2024), intense noise exposures can cause auditory injury (without PTS occurring). Table 6-2 thresholds have been adopted by the United States National Oceanic and Atmospheric Administration (NOAA), including updated thresholds for auditory injury, which includes PTS and TTS, adopted in October 2024 (NMFS, 2024). The adopted thresholds are based on best data available and published in peer-reviewed literature, and represent conservative internationally accepted and applied impact evaluation thresholds for continuous (non-impulsive) and impulsive sound sources. Table 6-2 includes continuous and impulsive thresholds.

Table 6-2: Thresholds for permanent threshold shift, temporary threshold shift and behavioural response onset for low, high and very high frequency cetaceans

Hearing group	Impulsive					Continuous		
	PTS onset		*TTS onset*		*Behaviour response*	*PTS onset*	*TTS onset*	*Behaviour response*
	SEL_{24h}	*PK*	SEL_{24h}	*PK*	*PK*	SEL_{24h}	SEL_{24h}	*SPL*
Low frequency cetaceans	183	222	168	216	160	197	177	120
High frequency cetaceans	193	230	178	224	160	201	181	120
Very high frequency cetaceans	159	202	144	196	160	181	161	120

Sources: PTS and TTS – NMFS (2024); behavioural response – NOAA (2019).

Sound exposure level accumulated from multiple impulses over 24 hours (SEL_{24h}) expressed as dB re 1 $\mu Pa^2.s$; PK and SPL expressed as dB re 1 µPa.

Frequency-specific hearing sensitivity differs among marine mammals, influencing how they are affected by noise exposure. To predict the effects of noise exposure on different groups of cetaceans, blue whales, humpback whales and other large mysticete (baleen) whales are categorised as low-frequency cetaceans, while odontocetes (toothed whales and dolphins) are categorised as high-frequency or very-high-frequency cetaceans (Southall, et al., 2019).

For continuous noise, only frequency-weighted sound exposure level (SEL) metrics are provided in the literature for PTS and TTS impacts, while for impulsive noise, thresholds have been defined for both SEL and peak (PK) SPL. Behavioural response metrics are provided rms SPL. Estimated SEL provides a metric that integrates cumulative exposures. For PTS and TTS to occur, 24 hours is a suitable timeframe to estimate SEL, while the PK and rms SPL metrics do not depend on duration of exposure.

, The potential for received levels to exceed weighted SEL thresholds defined for PTS or TTS for marine mammals is considered very low, due to their mobility and ability to avoid the sound sources. It is not credible that a cetacean would remain in close proximity to the vessels for the continuous 24 hour period required to have an impact.

The cetacean behavioural threshold may be exceeded up to a maximum distance of 14.9 km however this does not enter any BIAs or reach within ~ 20 km of one and therefore would only be expected to impact individuals transiting near the Operational area. The Petroleum activity is short term and the cetaceans have no restrictions in movement in the open ocean environment.

Transponders are the only source of impulsive noise planned during the Petroleum Activity. The typical frequencies of 18 to 26 kHz produced by the transponders are most audible to high-frequency cetaceans, such as toothed whales and dolphins, rather than low-frequency cetaceans, and the source levels (180 to 206 dB re 1 µPa at 1 m SPL) rapidly attenuate within a very short distance from the source, such that PTS or TTS are not considered credible. Based on empirical spreading loss estimates measured by Warner & McCrodan (2011), received levels from USBL transponders are expected to exceed the cetacean behavioural response threshold for impulsive sources (160 dB) out to about 42 m.

Considering proximity of the pygmy blue whale and humpback whale migration BIAs to the Operational area, it is possible individuals may transit in and around the Operational area during migratory periods. However, only transient individuals or small groups are expected and impacts are anticipated to be limited to behavioural disturbance / avoidance behaviour. Migrating pygmy blue whales are unlikely to occur in the Operational area in high numbers, with observed and modelled distributions of pygmy blue whales occurring further offshore in deeper water (Double, et al., 2014; Thums, et al., 2022). The pygmy blue whale migration BIA is also about 43 km from the closest Operational Area. The Operational area are surrounded by open water, with no restrictions (e.g. shallow waters, embayments) to an animal's ability to avoid the activities. No impacts, beyond behavioural are predicted to occur from LWIV or support vessels' noise on individuals using these areas. The potential for impacts from underwater noise is therefore not inconsistent with the requirements of the Conservation Management Plan for the Blue Whale (Commonwealth of Australia, 2015a); refer to Section 6.8.

Helicopter noise would only be relevant during take-off and landing. Underwater transmission from helicopter engines is minimal due to reflection at the sea surface, and cetaceans are unlikely to be near the LWIV during these operations because of ongoing vessel noise. Therefore, impacts to marine mammals from helicopter noise are unlikely.

Marine turtles

The Recovery Plan for Marine Turtles (Commonwealth of Australia, 2017) notes there is limited information available about the impact of noise on marine turtles, and the impact of noise on turtle stocks may vary depending on whether exposure is short (acute) or long term (chronic). Electro-physical studies have indicated the best hearing range for marine turtles is 100 to 700 Hz (Bartol & Musick, 2003). McCauley, et al. (2000) observed the behavioural response of caged green and loggerhead turtles to impulsive sound (an approaching seismic airgun). For received levels above 166 dB re 1 µPa SPL, the turtles increased their swimming activity, and above 175 dB re 1 µPa they began to behave erratically, which was interpreted as an agitated state. Conservatively, the 166 dB re 1 µPa SPL was used as the threshold level for a behavioural disturbance response (McCauley, et al., 2000) within the impact assessment. No quantitative (numerical) thresholds have been developed for behavioural effects from continuous sources (e.g. vessel noise) on marine turtles. However, Popper, et al. (2014) propose qualitative impact criteria for near-field, intermediate and far-field exposures. Accomando, et al. (2025) presented revised thresholds for auditory injury and TTS for impulsive and continuous sound exposures (Table 6-3). The thresholds in Table 6-3 are considered appropriate for the assessment of impacts on marine turtles from impulsive and continuous acoustic discharges from the Petroleum Activity.

Marine turtles	184	230	169	224	166	198	178	(N) High (I) Moderate (F) Low	(N) Moderate (I) Moderate (F) Low

Source: Auditory injury and TTS thresholds – Accomando, et al. (2025); behavioural response threshold (impulsive) – McCauley, et al. (2000); behavioural and masking response thresholds (continuous) – Popper, et al. (2014).

Note: The sound units provided in the table above for continuous noise are based on relative risk (high, medium and low) for marine turtles at three distances from the source, defined in relative terms as near (N – tens of metres), intermediate (I – hundreds of metres) and far (F – thousands of metres) (after Popper, et al. 2014).

Given the thresholds outlined in Table 6-3, it is reasonable to expect marine turtles may demonstrate avoidance or attraction behaviour to the noise generated by the Petroleum Activity. Potential impacts from predicted noise levels from the LWIV and support vessels and helicopters will be limited to temporary and localised changes in behaviour at the individual level, which are considered temporary with no lasting effect. It is not credible that a turtle would remain in close proximity to the vessels for the continuous 24 hour period required to have an impact.

Based on empirical spreading loss estimates measured by Warner & McCrodan (2011), received levels from USBL transponders are expected to exceed the marine turtle behavioural response threshold for impulsive sources (160 dB) out to about 36 m. Transponders typically operate at frequencies of 21 to 31 kHz, which is well outside the peak hearing frequency range of turtles (0.1 to 2 kHz). Therefore, no impacts are expected to occur.

Sharks, rays and fish

All fish species can detect noise sources, although hearing ranges and sensitivities vary substantially between them. Sensitivity to sound pressure seems to be functionally correlated in fishes to the presence and absence of gas-filled chambers in the sound transduction system. These enable fishes to detect sound pressure and extend their hearing abilities to lower sound levels and higher frequencies (Ladich & Popper, 2004). Based on their morphology, Popper, et al. (2014) classified fishes into three animal groups:

- fishes with swim bladders whose hearing does not involve the swim bladder or other gas volumes
- fishes whose hearing does involve a swim bladder or other gas volume
- fishes without a swim bladder that can sink and settle on the substrate when inactive.

Sound exposure criteria applicable to continuous sound sources are presented in Table 6-4. Popper, et al. (2014) propose relative risk criteria (high, moderate, low) for injury, impairment and behavioural effects to fishes at three distance categories: near (N – tens of metres from the source), intermediate (I – hundreds of metres from the source), and far (F – kilometres from the source).

Table 6-4: Impact thresholds to fish, sharks and rays for continuous noise

Receptor	Mortality potential mortal injury	Impairment			Behaviour
		Recoverable injury	TTS	Masking	
Fish: no swim bladder	(N) Low (I) Low (F) Low	(N) Low (I) Low (F) Low	(N) Moderate (I) Low (F) Low	(N) High (I) High (F) Moderate	(N) Moderate (I) Moderate (F) Low
Fish: swim bladder not involved in hearing	(N) Low (I) Low (F) Low	(N) Low (I) Low (F) Low	(N) Moderate (I) Low (F) Low	(N) High (I) High (F) Moderate	(N) Moderate (I) Moderate (F) Low
Fish: swim bladder involved in hearing	(N) Low (I) Low (F) Low	170 dB SPL for 48 hours	158 dB SPL for 12 hours	(N) High (I) High (F) High	(N) High (I) Moderate (F) Low
Fish eggs and fish larvae	(N) Low (I) Low (F) Low	(N) Low (I) Low (F) Low	(N) Low (I) Low (F) Low	(N) High (I) Moderate (F) Low	(N) Moderate (I) Moderate (F) Low

Note: The sound units provided in Table 6-4 include relative risk (high, medium and low) for fish (all types) at three distances from the source, defined in relative terms as near (N – tens of metres), intermediate (I – hundreds of metres) and far (F – thousands of metres) (Popper, et al., 2014).

None of the noise sources are expected to result in mortality of fish, of any type described by Popper, et al. (2014). Pelagic fish species, including sharks and rays, may display behavioural responses, such as avoidance of the area, near the LWIV and support vessels. While continuous noise levels associated with vessels may exceed recoverable

injury and TTS thresholds for Type 3 species, for pelagic species, it is unlikely individuals will remain within areas of exceeded noise levels. The Operational area are not known to be important spawning or aggregation habitat for commercially caught targeted species. Therefore, no impacts to fish stocks are expected. Transponders' typical operating frequencies of 21 to 31 kHz are well outside the hearing frequency range of fish. Therefore, no impacts are expected.

A foraging BIA for whale sharks overlaps the Operational area (Figure 4-4). As a cartilaginous fish lacking a swim bladder, whale sharks are categorised as a Type 1 fish. Thresholds for mortality or injury from impulsive noise (more than 213 dB re 1 μPa².s, Popper, et al. (2014)) are greater than any noise source of the Petroleum Activity. Type 1 fish are considered a low risk of mortality or injury from continuous noise sources (Popper, et al., 2014) and thresholds for TTS (193 dB re 1 μPa².s) exceed predicted continuous noise source levels from the Petroleum Activity. In summary, impacts to whale sharks foraging within the BIA are not expected.

Cultural features and heritage values

Refer to Section 6.9 for an assessment of potential impacts to cultural features and heritage values from the Petroleum Activity. Related control measures that demonstrate that impacts are reduced to ALARP and are of an acceptable level have been captured in Section 6.9.

Cumulative sound sources

Cumulative noise may occur due to the presence the Okha FPSO, which operates with continuous noise sources for production, processing and offloading activities. The LWI activities will introduce additional noise from the LWIV and up to three support vessels. Modelling for cumulative noise from Okha Operations and the Petroleum activity (four vessels) has been considered above, with the presence of more than the 4 vessels, including the Okha FPSO, in the Operational area being highly unlikely.

For potential cumulative impacts of noise from the Petroleum activity and the subsea infrastructure in the area, noise modelling (JASCO Applied Sciences, 2024) has considered underwater noise emissions from operation of wellheads at Woodside's seabed assets and evaluated the potential for accumulated SEL over a 24-hour period. The maximum distances from the noise source to where the marine mammal behavioural response criterion of 120 dB re 1 μPa (SPL) was not exceeded was predicted to be less than 200 m. Noise is not predicted to ensonify the entire water column at or above 120 dB re 1 μPa (SPL) and overlap and of the Petroleum activity noise from vessels.

The additional noise in the area from the Petroleum activity will be short term (14 to 35 days per well). Cumulative impacts from the two activities are considered to be behavioural impacts to individuals only with no BIAs present in close proximity (as described in the sections above), and temporary with no lasting effect.

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[28]***	***Benefit in impact reduction***	***Proportionality***	***Control adopted***
Legislation, codes and standards				
Implement EPBC Regulations 2025 Part 8 Division 8.1 Interacting with cetaceans, which includes[29]: • Vessels will not travel faster than 6 knots within 300 m of a cetacean (caution zone) • Vessels will not approach closer than 50 m for a dolphin or 100 m for a whale (except animals bow riding).	F: Yes. CS: Minimal cost. Standard practice.	EPBC Regulations 2025 Part 8 Division 8.1 includes requirements relating to the speed vessels can travel within particular distances of cetaceans. Reducing the travel speed of vessels can also reduce the sound levels that are produced, reducing the potential impact on cetaceans from vessels.	Legislative requirement – must be adopted.	Yes C 4.1

[28] *Qualitative measure.*

[29] *For safety reasons, the distance requirements are not applied for a vessel holding station or with limited manoeuvrability, e.g. loading, back-loading, bunkering, close standby cover for overside working and emergency situations.*

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[28]***	***Benefit in impact reduction***	***Proportionality***	***Control adopted***
• If the cetacean shows signs of being disturbed, support vessels will immediately withdraw from the caution zone at a constant speed of less than 6 knots.				
Vessels will not deliberately approach greater than 8 knots within 250 m of a whale shark and not allow the vessel to approach closer than 30 m of a whale shark.	F: Yes. CS: Minimal cost. Standard practice.	Complying can potentially reduce the underwater noise footprint of a vessel.	Benefit outweighs cost/sacrifice.	Yes C 4.2
Good practice				
Vessels will not travel faster than 6 knots within 300 m of a turtle (caution zone). If the turtle shows signs of being disturbed, vessels will immediately withdraw from the caution zone at a constant speed of less than 6 knots.	F: Yes. CS: Minimal cost. Standard practice.	Implementation will reduce the likelihood of a collision with a turtle. The consequence of a collision is unchanged.	Benefits outweigh cost/sacrifice. Control is also standard practice.	Yes C 4.3
Use of dedicated marine fauna observers (MFOs) on vessels for the duration of the Petroleum Activity to watch for whales and provide direction on and monitor compliance with Part 8 of the EPBC Regulations 2025.	F: Yes. However, activity support vessel bridge crews already maintain a constant watch during operations in compliance with the Woodside Marine – Charterers Instructions, on the requirements of vessel and whale interactions. In the event of a cetacean (or other sensitive fauna) near vessels, it is unlikely DP (the most significant source of underwater noise expected during the Petroleum Activity) will be deactivated, given it is a safety-critical requirement for vessels to hold station. As such, an MFO implementing management or shutdown zones is considered to be ineffective. CS: Additional cost of MFOs.	As support vessel bridge crews already maintain a constant watch during operations, additional MFOs would not further reduce the likelihood or consequence of impact.	Disproportionate – cost/sacrifice outweighs benefit to be gained.	No

None identified.				
Professional judgement – Engineered solution				
None identified.				
ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts associated with routine and non-routine acoustic emissions. As no reasonably practicable additional or alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts are considered ALARP.				

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that, given the adopted controls, routine acoustic emissions may result in localised impact not significant to environmental receptors and of no lasting effect. Further opportunities to reduce the impact have been investigated above. The impacts are consistent with good oil field practice and industry best practice. Relevant recovery plans and conservation advice have been considered during the impact assessment, and the Petroleum Activity is not considered to be inconsistent with the overall recovery objectives and actions of these recovery plans and conservation advice (Section 6.8). Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

EPOs, EPSs and MC

Description of source of impact

Subsea fluids (well intervention fluids, control fluids and other subsea fluids)

Subsea fluids released during LWI activities include those during pressure/leak testing, valve functioning, flushing, hot-stab connection or changeout, XT recovery and installation and TRSV remediation (as identified in Table 3-5). Typical discharges during the LWI activities are included in Section 3.5.

Wireline pressure-containing equipment onboard includes a grease system comprised of a readily biodegradable vegetable-based oil. During wireline operations, about 50 mL/min would be applied through the wellbore (~25 L for a single run) and some may be released to the environment under normal operations.

An emergency shutdown may be implemented if the LWIV needs to rapidly shut in the well (refer to Section 3.8.2). An emergency shutdown isolates the well by closing WCP valves and disconnecting umbilicals, leaving the XT and WCP/PCE in a secure condition. This may result in the release of small volumes of fluids or gases from the umbilical or upper PCE at the disconnection points (<50 L).

During a drift-off or drive-off event, the LWIV will autonomously separate from the WCP via breakaway connections, and the system will shut in the well if an emergency shutdown has not already been initiated. This may result in a slightly larger release of trapped fluids from the umbilicals or PCE, generally <1 m^3, before the system isolates.

As presented in Table 3-5, during removal of the hydraulic flying lead from the XT, it may be possible for trapped fluids and gas to be released to the environment. Based on the estimated volume of the hydraulic flying leads, this release is estimated to be up to ~100 L and comprised predominantly of hydraulic fluid.

Overall, subsea fluid discharges associated Petroleum Activity are expected to be intermittent, low volume and consistent with standard LWI activities.

Fugitive Hydrocarbons

As presented in Table 3-5, during removal of the XT cap, and XT, finite trapped volumes of hydrocarbons (Cossack light crude and gas) may be released to the environment. The volume estimated under the XT cap at each well is up to 1000 m^3 of gas and 0.5 m^3. As described in in Table 3-5, a small amount of hydrocarbons remaining in hydraulic flying leads may also drain to the environment following disconnection from XT.

Release across isolation valves at the manifold during XT replacement

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

As presented in Table 3-5, the XT valves and manifold valves will be closed during the XT replacement. While these valves shall be tested to verify their integrity prior to removing the XT, fluids and gas from the production and gas lift jumpers may pass the valves due to their age and condition. It is expected to take up to 32- hours to changeout an XT. Over this time, up to 4.20 m^3 of reservoir fluids containing water and hydrocarbons could be released gradually from the 6" production jumper and 2.5" gas lift jumper at CK4 and up to 0.98 m^3 could be released from the 2.5" production jumper and 2.5" gas lift jumper at LH3.

Marine growth removal

It may be necessary to remove marine growth from the XTs and tree-cap interfaces using mechanical or chemical methods (refer to Section 3.5.3). Marine growth may be removed by ROV using high-pressure water jetting or brushes. Where chemical removal is needed to dissolve calcium-based deposits, sulfamic, citric acid or equivalent (about 500 L per well) may be applied. These activities may result in small, localised discharges of acid-treated marine growth and disturbed biological material.

Impact assessment

Environmental value(s) potentially impacted

Water Quality

Subsea control fluids are water-based hydraulic fluids containing about 3% active ingredients. Modelling for another offshore drilling project indicates a release of subsea control fluids during function testing is expected to reach a dilution of 3,000 times within a maximum displacement of the plume within 98 m distance from the release site (BP Azerbaijan, 2013). Based on this information, concentrations of subsea control fluid are expected to be about 10 ppm within 100 m of each well. Using a conservative ocean current speed of 0.1 m/s, fluids would be expected to travel 100 m (and thus reach concentrations of 10 ppm) in about 16 minutes. Changes in water quality would comprise the presence of low-toxicity contaminants for a short duration and extent in the water column above the seabed. Given the small volumes associated with this discharge and limited exposure times due to rapid dilution, any potential impact to this aspect is expected to be localised and short term. There is potential for some toxins in the control fluid to accumulate in the sediment, but due to the very small volumes and rapid dispersal, it is considered localised and of no lasting effect.

The wireline grease is comprised primarily of vegetable-based oils and is considered non-toxic to aquatic organisms. It contains no Convention for the Protection of the Marine Environment of the North-East Atlantic (OSPAR Convention) sub (phase-out) components and is readily biodegradable (>70% biodegradation over 28 days). Given the relatively small volumes of potential discharges, low toxicity, readily biodegradable nature and rapid dispersion in the open ocean environment of Operational area, any potential impacts to water quality from these discharges are likely to be localised and of no lasting effect.

The use of water jetting and acid washing to remove marine growth on subsea infrastructure will result in temporary suspension of organic matter and localised increase in turbidity. Water jetting will be limited to what is necessary to clean infrastructure for LWI to take place. Due to the very minor quantities of acid used, the limited duration and rapid dispersion in the water column, impacts to the marine environment are expected to be localised and of no lasting effect.

During removal of the XT cap, it may be possible for a finite trapped volume of hydrocarbons (Cossack light crude and gas) to be released to the environment. The volume estimated under the XT cap may be up to 1000 m^3 gas and 0.5 m^3 liquid hydrocarbons as well as approximately 10 L of other well fluids (e.g. control fluids) per well. Releases are expected to disperse and dissolve within the water column. Toxic impacts are expected to be of short duration and highly localised. Impacts are likely be restricted to small organisms such as plankton and larvae within the water column.

During XT changeout fluids and gases are also expected to be released to the environment, which may include Cossack light crude and gas, control and preservation fluids. Release is expected to occur rapidly at first, as the XT is removed, and then to reduce. The degree of reduction will vary depending on the subsea equipment and valve condition. Given the valve integrity will be confirmed to meet relevant Woodside standards prior to XT changeout, contents of associated jumpers are expected to release gradually following removal of the old XT until installation of the new XT, which is expected to take up to 32-hours. These discharges are expected to disperse and dissolve within the water column due to buoyancy, water currents and water depth. These discharges have potential for slight, localised decrease in water quality at planned discharge locations and potential impacts on marine biota.

Marine Sediments

Accumulation of contaminants in sediments depends primarily on the volume and concentration of particulates in discharges or constituents that adsorb onto seawater particulates, the area over which those particulates could settle onto the seabed (dominated by current speeds and water depths), and the resuspension, bioturbation, and microbial decay of those particulates in the water column and on the seabed.

Given the subsea discharges are expected to rapidly mix in the water column and become diluted, accumulation in sediments at a measurable level is not expected to occur.

Key Ecological Features

Although the Ancient Coastline at 125 m Depth Contour KEF overlaps Operational Area Part 2 (LH3), the values and sensitivities of this KEF occur on a broad scale outside of Operational Area Part 2. As described in the consequence evaluation above, the LWI discharges within the Operational area is not expected to result in a lasting effect to water quality, and no change in sediment quality is predicted. Therefore these discharges are unlikely to cause a change in habitats or communities at a measurable level and will not change the viability of the population or ecosystem.

(single block isolation) shall be in place, with the following conditions: ▪ The residual risks must be shown to be ALARP by a documented isolation risk assessment. Procedures and response plans for the activity must be developed and implemented and address all applicable hazards appropriately, including provision for closing additional isolation valves.				
Capture hydrocarbons under the XT cap prior to its removal.	F: No. Due to design of the XT, there is no technically feasible option to capture the fluids under the XT cap prior to its removal. CS: Not considered – control not feasible.	Not considered – control not feasible.	Not considered – control not feasible.	No
ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts associated with subsea routine and non-routine discharges. As no reasonably practicable additional or alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that, given the adopted controls, any subsea discharges during LWI may result in localised and low-level impact on environmental feature(s) or area(s) of low significance. Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

6.6.5 Routine and non-routine discharges: vessel utility systems (bilge water, grey water, sewage, putrescible wastes and deck drainage water)

Context		
Project vessels – Section 3.6	Physical environment – Section 4.4 Habitats and biological communities – Section 4.5	Stakeholder consultation – Section 5

Impact evaluation summary

Source of impact	***Environmental value potentially impacted***						***Evaluation***						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socioeconomic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Routine discharge of sewage, greywater and putrescible waste		X					A	F	-	-	LCS PJ	Broadly acceptable	EPO 6
Routine discharge of deck water, drainage systems and bilge water		X					A	F	-	-			
Routine discharge of brine or cooling water to the marine environment		X					A	F	-	-			
Non-routine discharge of firefighting media		X					A	F	-	-			

Description of source of impact

The LWIV and support vessels routinely generate or discharge:

- small volumes of treated sewage, putrescible wastes and grey water to the marine environment (impact assessment based on approximate discharge of 15 m³ per vessel per day), using an average volume of 75 L per person per day and a maximum of 200 persons on board; however, it is noted vessels such as support vessels will have considerably less persons on board
- routine or periodic discharge of relatively small volumes of bilge water from bilge tanks that receive fluids from many parts of the LWIV and support vessels; bilge water can contain water, oil, detergents, solvents, chemicals, particles and other liquids, solids or chemicals
- variable water discharge from the LWIV and support vessels' decks directly overboard or via deck drainage systems; sources could include rainfall events and deck activities such as cleaning and wash-down of equipment and decks
- cooling water from machinery engines or mud cooling units and brine water produced during the desalination process of reverse osmosis to produce potable water onboard the LWIV and support vessels.

Non-routine LWIV and support vessels' discharges may include firefighting media. The LWIV and support vessels may be equipped with firefighting foam systems that typically supply 3% aqueous film forming foam (AFFF) concentrates. These concentrates may be mixed with seawater and discharged where helideck testing requirements (typically annual) fall within the on-hire period, and in an emergency.

Environmental risks relating to the unplanned disposal or discharges from the LWIV and support vessels are addressed in Section 6.7.4 to 6.7.5.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact assessment

Environmental value(s) potentially impacted

Water quality

Sewage, greywater and putrescible waste

The principal environmental impact associated with the ocean disposal of sewage, greywater and putrescible waste is eutrophication, which can result from the addition of nutrients such as phosphates and nitrates. Other constituents of these discharges may include ammonia, faecal coliforms, volatile organics, phenols, surfactants and trace metals.

Offshore monitoring during previous Woodside campaigns (e.g. Torosa-4 appraisal drilling) demonstrated a 10 m^3 sewage discharge diluted to about 1% of its original concentration within 50 m of the discharge point (Woodside, 2011). No elevation in nutrient or contaminant parameters (e.g. nitrogen, phosphorus, metals) was detected above background at 50 m, 100 m or 200 m. Similar behaviour is expected for this Petroleum Activity, due to:

- the offshore, open-ocean location
- short duration of vessel presence at each well (refer to Section 3.4 for duration at each well)
- high mixing and dispersive environment of the NWS
- transient nature of vessels, aiding dispersion.

Studies in Australian offshore waters show nutrient enrichment from vessel sewage in exposed open ocean areas is significantly less impactful than in enclosed or semi-enclosed marine environments (McIntyre & Johnston, 1975).

Given the small volumes involved, rapid dilution, and the naturally high assimilative capacity of the NWS, impacts to water quality from sewage, greywater and putrescible wastes are expected to be localised, temporary and with no lasting effect.

Deck drainage and bilge water

Deck drainage and treated bilge water from the LWIV and support vessels may contain trace hydrocarbons, detergents, oils, cleaning agents, rust particles or suspended solids. These substances may cause a slight, short-lived increase in turbidity or a minor decline in water quality immediately adjacent to the discharge point.

Deck drainage from general operations (washdown, rainfall runoff, minor fluid residues) is discharged intermittently and in very small volumes relative to the receiving environment.

Impacts from deck and bilge discharges are expected to be highly localised, rapidly diluted and without lasting effect.

Brine or cooling water

The key physicochemical stressors that are associated with reject brine and cooling water discharge include salinity, pH, temperature and chemical toxicity.

Water quality of the surrounding environment may be altered by adding chemicals and increasing salinity. Scale inhibitors and biocides are commonly used within the systems described above to prevent fouling. Scale inhibitors are typically low molecular weight phosphorous compounds that are water soluble, and only have acute toxicity to marine organisms about two orders of magnitude higher than typically used in the water phase. The biocides typically used in the industry are highly reactive and degrade rapidly.

The potential impacts on water quality due to cooling water discharge include chlorine toxicity and increased water temperatures.

Reject brine water is typically 20 to 50% higher in salinity to the surrounding water and will sink through the water column, where it will be rapidly mixed with receiving waters and dispersed by ocean currents, decreasing in salinity rapidly as distance from the source increases.

Generally, reject brine and cooling water containing chemical additives are inherently safe at the low dosages used. They are usually consumed in the inhibition process, so there is little or no residual chemical concentration remaining upon discharge.

Given the very small scale of brine and cooling-water discharges associated with the LWIV and support vessels (significantly lower than FPSOs), potential effects are limited to the area immediately adjacent to the discharge point.

Impacts are assessed as localised and temporary, with no lasting effect.

Firefighting media

AFFFs typically comprise a mix of organic and fluorinated surfactants. However, novel and emerging AFFF products may also comprise fluorine-free formulations. When discharged in bodies of water, both fluorine-containing and fluorine-free AFFF formulations may deplete dissolvable oxygen content. However, when diluted in low concentrations such as in the event of helideck system testing, or use in an emergency to suppress fire, these foams are considered to have relatively low toxicity (Department of Environmental and Heritage Protection, 2016). Further, concerns regarding toxicity of AFFF discharges are typically associated with land and waterways near sites with frequent or prolonged applications. This includes military sites such as defence areas and civilian sites such as airports and industrial areas (Moody, et al., 2000; Hu, et al., 2016). The non-routine discharge of AFFF in open water environment

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

of the Operational area during helideck system testing or in the emergency event of a fire are not consistent with these conditions.

Given the toxicological effects of AFFFs are associated with sites of frequent or prolonged applications and the notion that non-routine AFFF discharges during the Petroleum Activity would be expected to rapidly disperse in the open water environment of the Operational area, it is expected any impacts would be localised and short term in nature.

Additionally, potential impacts of AFFF discharge through helideck system testing or in an emergency are outweighed by the environmental, health and safety benefits that are achieved by preventing more severe adverse impacts that could result from an uncontrolled emergency.

Marine fauna

Discharge of food waste into the marine environment has the potential to attract some opportunistic marine fauna, including fish and seabirds, to the area in response to the increased food availability or indirectly because of attraction of prey species. However, given the small quantities of food waste to be disposed, and the temporary nature of the activity, any attraction is likely to be localised, temporary and of no lasting effect.

It is possible marine fauna transiting the localised area may come into contact with LWIV and support vessel discharges (e.g. marine turtles, humpback whales, whale sharks) as they traverse the Operational area (see Section 4.6 for presence). While the likely presence of marine fauna varies at different times of the year depending on migration, foraging and breeding patterns in the region, the potential for impact remains low due to the localised nature of discharges and rapid dilution in the open ocean waters of the Operational area.

Key ecological feature – Ancient Coastline at 125 m Depth Contour

The Operational Area Part 2 overlaps the Ancient Coastline at 125 m Depth Contour KEF (Figure 4-11). Given the water depths and open ocean environment, impacts to the values of the KEF are not expected. As such, no significant impacts from the planned discharges that are listed above are anticipated because of the minor quantities involved, the expected localised mixing zone, and high level of dilution into the open-water marine environment.

Cold venting of residual gas			X				A	F	-	-			
Small volume gas releases subsea			X				A	F	-	-			

Description of source of impact

Internal combustion engines and incinerators

Atmospheric emissions will be generated by the LWIV, support vessels and helicopters from internal combustion engines (including all equipment and generators, which may be powered by diesel or liquefied natural gas) and incineration activities (including onboard incinerators) during the Petroleum Activity. Emissions associated with these operations will include sulfur dioxide, nitrogen oxides, ozone depleting substances, carbon dioxide, particulates and volatile organic compounds (VOCs). The LWIV and support vessels will use marine diesel oil to power vessel engines, waste incinerators, generators and mobile and fixed plant and equipment for the duration of the Petroleum Activity.

The Petroleum Activity is expected to take between 14 to 35 days at each well (activities will take place 24 hours, seven days a week); refer to Section 3.4 for durations per well.

The LWIV will be accompanied by at least one, but up to three, support vessels. Support vessels with DP capability will primarily be used to for supply, but may perform other support duties as required.

It is estimated an LWIV could consume up to about 50 t/d of marine diesel. Emissions from support vessels are significantly lower than from the LWIV because of lower fuel use and more intermittent operation.

Helicopters may be used occasionally to transfer personnel or urgent freight between shore and the LWIV. Total aviation fuel use over the Petroleum Activity is estimated to be around 10,000 L. Compared with marine fuel combustion, helicopter emissions represent a very small proportion of the overall emissions profile. Emissions will be released at altitude along flight paths and are rapidly diluted.

GHG emission sources and quantities relating to fuel combustion are as summarised in Table 6-5. Calculations are based on the emission factors for fuel combustion for transport energy, as stipulated in the National Greenhouse and Energy Reporting (Measurement) Determination 2008.

Table 6-5: Greenhouse gas emissions sources and quantities

Source	GHG emission volumes (tonnes of carbon dioxide equivalents)
LWIV operations	8,826
Support vessel operations	1,370

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Helicopter operations	22
Total estimated GHG emission	**10,218**

Cold venting and small hydrocarbon gas releases

Small volumes of gas may be released directly to the atmosphere during intervention and cold commissioning, including:

- cold commissioning/residual gas venting: up to ~5000 m³ of gas per well during depressurisation of small-bore lines and equipment
- hydrocarbon releases after XT cap removal: volumes of trapped gas/vapour up to 1000 m³ may be released when the tree cap is removed to access the XT
- emergency shutdown/drift-off scenarios: small volumes of gas and fluid (<1 m^3) in umbilicals and upper PCE may be released as the system depressurises.

These releases are non-routine and short duration. Given the quantities and expected rapid atmospheric dispersion, they contribute only marginally to the overall emissions footprint.

Impact assessment

Environmental value(s) potentially impacted

Fuel combustion has the potential to result in localised, temporary reduction in air quality and contribution to GHG emissions. Given the short duration and the offshore location of the Petroleum Activity (>100 km north-west of Dampier), which will lead to the rapid dispersion of the low volumes of atmospheric emissions, the potential impacts are expected to be localised and of no lasting effect.

Atmospheric emissions generated from vessel fuel combustion and minor cold-venting during the well intervention activities have the potential to cause direct impacts to seabirds if individuals are within the immediate vicinity of concentrated releases. Extended exposure to elevated air pollutants has been shown to cause respiratory distress and illness in birds (Sanderfoot & Holloway, 2017). One BIA for wedge-tailed shearwater breeding overlaps the Operational area (Operational Area Part 1 only), with the breeding period occurring from August to April (Section 4.6.4). Given there are no significant releases of atmospheric emissions from the Petroleum Activity and the support vessels will be moving, facilitating dispersion in an open offshore environment, extended emissions exposure will not occur to any marine fauna species. Injury or mortality to fauna as a result of atmospheric releases are not expected.

GHG emissions from the Petroleum Activity are estimated based on fuel use assumptions for the LWIV and support vessels. Calculated GHG emission estimates represent <0.001% of Australia's total emissions estimated from 2024 (446.4 megatons of carbon dioxide equivalents (DCCEEW, 2024b)).

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[34]***	***Benefit in impact reduction***	***Proportionality***	***Control adopted***
Professional judgement – Engineered solution				
None identified.				
ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts associated with routine atmospheric and GHG emissions. As no reasonably practicable additional or alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that, given the adopted controls, routine atmospheric and GHG emissions from fuel combustion and venting may result in localised impacts not significant to environmental receptors and of no lasting effect. The adopted controls are considered consistent with legislation, codes and standards, and professional judgment and meet the requirements of Australian Marine Orders. Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

6.6.7 Routine and non-routine: external lighting on the project vessels

Context		
Project vessels – Section 3.6	Protected species – Section 4.6 Socioeconomic environment – Section 4.9	Stakeholder consultation – Section 5

Impact evaluation summary

Source of impact	*Environmental value potentially impacted*						*Evaluation*						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socioeconomic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
External light emissions onboard LWIV and support vessels					X		A	E	-	-	GP PJ	Broadly acceptable	EPO 8

Description of source of impact

Routine light emissions include light sources that alter the ambient light conditions in an environment. The LWIV and support vessels will routinely use external lighting to navigate and conduct safe operations at night throughout the Petroleum Activity. External light emissions from the LWIV and support vessels are typically managed to maintain good night vision for crew members. Lighting will also be used to communicate the vessel's presence to other marine users (i.e. navigation and warning lights). Lighting is required for safely operating LWIV and support vessels and cannot reasonably be eliminated.

The LWIV and support vessels that may be needed for the Petroleum Activity are outlined in Section 3.6. External lighting is on vessel decks, with most external lighting directed towards working areas such as the main decks. These areas are typically <20 m above sea level for the LWIV and support vessels. Indicative timing for activities is provided in Section 3.4 and may occur throughout the year.

Lighting from the LWIV and support vessels may appear as a direct light source from an unshielded lamp with direct line of sight to the observer or through sky glow. Direct lighting falling upon a surface is referred to as light spill. Sky glow is the diffuse glow caused by light that is screened from view, but through reflection and refraction creates a glow in the atmosphere.

The visibility and extent of these light sources depend on lighting height above sea level, weather, sea state and cloud cover. Previous monitoring of similar vessel types has shown that while lights may be visible at long distances under clear conditions, light density (Lux) reduces rapidly with increasing distance. Measurements undertaken in Woodside's 2014 monitoring program indicated mobile offshore drilling unit navigational lighting attenuated to <1.00 Lux at about 300 m and 0.03 Lux at about 1.4 km, values comparable to natural deep-twilight and quarter-moon conditions. Based on these data, light spill from the LWIV and support vessels is expected to attenuate to <1.00 Lux within several hundred metres of the source.

Underwater lighting will be generated intermittently when ROVs or AUVs undertake inspection, marine growth removal, transponder deployment or subsea tool positioning. Due to rapid attenuation of light under water and the directional nature of ROV lighting, underwater light will remain localised to the immediate vicinity of the ROV and subsea structures (i.e. within metres).

Impact assessment

Environmental value(s) potentially impacted

Lighting from the LWIV and support vessels may appear from direct unshielded light sources or through skyglow. Where direct light falls upon the ocean, this area of light is referred to as light spill. Skyglow is the diffused glow reflected and refracted in the atmosphere, caused by light that is screened from view.

Receptors that have important habitat within a 20 km buffer of the Operational area were considered as having potential for interaction, based on recommendations of the National Light Pollution Guidelines for Wildlife Including Marine Turtles, Seabirds and Migratory Shorebirds (DCCEEW, 2023). The 20 km buffer provides a precautionary limit based on observed effects of skyglow on marine turtle hatchlings (15 to 18 km) and fledgling seabirds grounded in response to artificial light 15 km away (DCCEEW, 2023).

Light emissions can affect fauna in two main ways:

- Behavioural: many organisms are adapted to natural levels of lighting, the natural changes associated with the day and night cycle, and the night-time phase of the moon. Artificial lighting has the potential to create a constant level of light at night that can override these natural levels and cycles.
- Orientation interference: organisms such as marine turtles and birds may also use lighting from natural sources to orient themselves in a certain direction at night. In instances where an artificial light source is brighter than a natural source, the artificial light may act to override natural cues, leading to disorientation.

Marine fauna expected within the Operational area are predominantly pelagic fish and zooplankton. The Operational area overlap or are within 20 km of BIAs and habitat critical areas, which are sensitive to light emissions. Specifically:

- a wedge-tailed shearwater breeding/foraging BIA, which overlaps the Operational area (Figure 4-10)
- a flatback turtle reproduction (internesting) BIA, 18 km south of the Operational area (Figure 4-5).

Marine turtles

Light emissions interacting with turtle nesting behaviour is widely considered detrimental because of its ability to alter important nocturnal activities, including choice of nesting sites and hatchlings' orientation or navigation to the sea (Witherington & Martin, 2003).

The most significant risk to marine turtles from artificial lighting is the potential disorientation of hatchlings after they emerge from nests, although the behaviour of breeding adult turtles can also be affected (DCCEEW, 2023). The Recovery Plan for Marine Turtles in Australia 2017–2027 (Commonwealth of Australia, 2017) considers light pollution a threat to hatchling orientation, survivability/predation and sea-finding behaviours, and can disrupt nesting behaviours of mature females.

Hatchlings

Turtle hatchlings emerge from the nest and orient towards the sea. After entering the water, hatchlings use wave direction and currents to orient and travel into offshore waters. Impacts to the sea-finding behaviour of hatchlings are more common for light sources behind a beach, as lighting offshore will orient emerging hatchlings towards the sea. Sea-finding behaviour of hatchlings is also impacted by light type and intensity, with broader spectrum or 'whiter' light sources (e.g. light emitting diodes and metal halide lamps) having more of an impact on hatchling sea-finding orientation compared to a narrow spectrum of light, such as low pressure sodium lighting (Gomez Isaza, et al., 2025).

Artificial light at close distances can impact hatchling dispersal once they are in the water. Light spill may 'entrap' hatchling swimming behaviour. During the early part of their offshore dispersal, hatchlings exhibit slower swimming speeds, reducing the success of their seaward dispersion and causing them to spend more time in the predator-rich nearshore waters (Thums, et al., 2016; Truscott, et al., 2017; Wilson, et al., 2018).

Flatback turtle hatchlings do not undertake oceanic migrations offshore to deep, pelagic waters. Instead, juveniles grow to maturity in shallow coastal waters close to their natal beaches (Musick & Limpus, 1996). The nearest turtle nesting beach is Dampier Archipelago, more than 90 km away from the Operational area. At this distance, skyglow and light spill from the LWIV and support vessels will not reach any nesting beach and impacts to hatchlings are not anticipated.

Adults

Artificial lighting may affect where turtles choose to emerge to the beach, the success of nest construction, whether nesting is abandoned, and the seaward return of adults (Salmon, et al., 1995; Witherington, 1992; Pendoley Environmental, 2020). However, such lighting impacts typically arise from residential and industrial development overlapping the coastline, rather than from offshore activities.

The internesting period is the duration between each successive clutch during that season. The females remain close to rookeries or beaches; therefore, designated and defined buffer zones have been gazetted immediately seaward from nesting beaches. While the flatback turtle reproduction (internesting buffer) BIA is 18 km south of the Operational area, this represents offshore habitat used by adults for resting and movement between nesting events, not a light-sensitive life stage, and marine turtles do not use light cues to guide internesting behaviours (Pendoley, 2000). To date, there is no evidence to suggest internesting turtles are attracted to light from offshore vessels (Pendoley Environmental, 2020b). As such, light emissions from the facility and vessels are unlikely to result in displacement of, or behavioural changes to, individuals in these life stages. Given the water depth of the Operational area and lack of preferred foraging habitat, marine turtles are expected to be present in very low numbers only over the area where light could be visible from the Petroleum Activity.

Light emissions from the LWIV and support vessels are unlikely to result in more than localised behavioural disturbance to transient individuals, with slight and short-term effect to the species.

Seabirds

Artificial lighting can attract and disorient seabird species, resulting in behavioural changes such as circling of light sources or disrupted foraging, or injury and mortality near the light source as a result of collision (Gatson, et al., 2014).

The most vulnerable life stages for seabirds and migratory shorebirds are nesting adults or fledglings. Nesting or fledgling seabirds and migratory shorebirds are vulnerable to artificial lighting within 20 km of the nesting location (DCCEEW, 2023). A breeding BIA for the wedge-tailed shearwater overlaps the Operational area (Operational Area Part 1 only) (see Figure 4-10). The nearest potential seabird roosting habitat is over 100 km southeast of the Operational area.

Adult shearwaters are vulnerable to artificial lighting during the breeding cycle, when returning to and leaving the nesting colony to maintain nesting sites or to forage. Foraging wedge-tailed shearwaters may be attracted to sources of light emissions to feed on fish drawn to the light; however, the species feeds predominantly during the day, in association with pelagic predators (Catry, et al., 2009). Most foraging trips are short, with single-day foraging trips significantly more common than any other length, with birds returning to nesting and roosting sites between trips. The numbers of wedge-tailed shearwaters in the Operational area at night is expected to be low, given the primarily diurnal foraging behaviour, and behavioural impacts to the species are considered to be highly unlikely. Given the foraging behaviours of roosting shearwaters, artificial light from the Operational area is not predicted to disrupt critical breeding behaviours within important nesting habitat or displace seabirds from nesting habitat.

Fledgling shearwaters are predominantly impacted by onshore lighting sources, which can override sea-finding cues and attract fledglings further inland, preventing them from reaching the sea (Mitkus, et al., 2018). Artificial light can also impact important behaviour of nesting adults (e.g. attending adult nests, maintaining nest sites) or confuse shearwater species, resulting in injury or mortality from birds colliding with structures (Cianchetti-Benedetti, et al., 2018). Given the offshore location of the Operational area, about 100 km from the nearest landfall, impacts to the survivability of fledglings from artificial lighting from the Petroleum Activity are not expected.

Fish

Lighting from ROV, LWIV and support activities during the Petroleum Activity may result in the localised aggregation of fish. These aggregations of fish due to light are considered localised and temporary and any long-term changes to fish species composition or abundance is considered highly unlikely. This localised increase in fish extends to those comprising the whale shark's diet. However, as a large proportion of the diet comprises krill and other planktonic larvae, it is unlikely a light source would lead to a significant increase in whale shark abundance in the vicinity of the LWIV or support vessels. Similarly, any localised impacts to marine fish are not expected to impact on any commercial fishers in the area.

Cultural features and heritage values

Refer to Section 6.9 for an assessment of potential impacts to cultural features and heritage values from the Petroleum Activity. Related control measures that demonstrate that impacts are reduced to ALARP and are of an acceptable level have been captured in Section 6.9.

Cumulative impacts

Cumulative lighting may occur due to the presence of other infrastructure and activities associated with the CWLH fields, particularly the Okha FPSO which operates with continuous lighting for production, processing and offloading activities. The CK4, LH3, WA7 and WA8 wells form part of this existing production system, and the local ambient light regime in the broader CWLH area is therefore influenced by the Okha FPSO and associated field operations.

The LWI activities will introduce additional light sources from the LWIV and up to three support vessels. However, these additional light sources will be short term (14 to 35 days per well, refer to Section 3.4), temporary and limited in number. Lighting on these vessels will primarily consist of navigation lights and operational deck lighting that is needed for safe marine operations and will cease once the well intervention is completed and vessels depart.

Since the wider Operational area already experience ongoing operational lighting from the Okha FPSO and associated infrastructure and the Petroleum Activity represents only a temporary increase in lighting that is restricted to the duration of the Petroleum Activity, the contribution of LWI related lighting is not expected to be significant. In addition, the CWLH fields are more than 100 km from the nearest turtle nesting beaches. Cumulative impacts are not anticipated.

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[35]***	***Benefit in impact reduction***	***Proportionality***	***Control adopted***
	additional impacts from other sources, such as interference with other marine users, noise, vessel discharges, or potential for unplanned risks.			
Professional judgement – Substitute				
Substitute external lighting with light sources designed to minimise impacts to seabirds, shorebirds and marine turtles: • Use intermittent lights instead of fixed. • Use motion sensors to turn lights on only when needed. • Use luminaires with spectral content appropriate for the species present. • Avoid high-intensity light of any colour.	F: Yes. Replacing external lighting with the alternative lighting is technically feasible, although is not considered to be practicable. CS: Significant cost sacrifice. Retrofitting all external lighting on the vessels would result in considerable cost and time expenditure. Considerable logistical effort to source enough inventory of the range of light types aboard vessels.	Given the distance from sensitivities (e.g. turtle nesting beaches) and the potential impacts to marine turtles, nesting seabirds and fledglings during this Petroleum Activity, implementation of alternative vessel lighting would not result in a reduction of consequence. Potential for minor reduction in impacts to individual foraging seabirds that may transit the Operational area, as outlined in the National Light Pollution Guidelines (DCCEEW, 2023).	Disproportionate – cost/sacrifice outweighs benefit to be gained.	No
Professional judgement – Engineered solution				
None identified.				
ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts associated with routine and non-routine vessel lighting. As no reasonably practicable additional or alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that, given the adopted controls, planned light emissions from the Petroleum Activity may result in localised and low-level impacts to species with no lasting effect. A breeding BIA for the wedge-tailed shearwater overlaps the Operational area. Conservation advice and the National Light Pollution Guidelines (DCCEEW, 2023) were considered during the impact evaluation and the Petroleum Activity is determined to be consistent with these. Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

6.7 Unplanned activities (accidents, incidents, emergency situations)

6.7.1 Quantitative spill risk assessment methodology

As part of the risk identification process, Woodside identified the range of credible hydrocarbon spill scenarios that may occur during the Petroleum Activity.

Quantitative hydrocarbon spill modelling was undertaken by RPS (RPS, 2019; RPS, 2025), on behalf of Woodside, using a three-dimensional (3D) hydrocarbon spill trajectory and weathering model, Spill Impact Mapping and Analysis Program (SIMAP), which is designed to simulate the transport, spreading and weathering of specific hydrocarbon types under the influence of changing meteorological and oceanographic forces. Near-field subsurface discharge modelling was performed using OILMAP, which predicts the droplet sizes that are generated by the turbulence of the discharge as well as the centreline velocity, buoyancy, width and trapping depth (if any) of the rising gas and oil plumes. The OILMAP output parameters were used as input into SIMAP.

The algorithms in the SIMAP model are based on the best available scientific knowledge and are updated when necessary, in response to significant advances in knowledge. Recent improvements were implemented to the entrainment algorithm, which were adjusted to implement the findings of published data based on field research performed during the Macondo spill event in the Gulf of Mexico (Spaulding, et al., 2017; Li, et al., 2017; French McCay, et al., 2018).

A stochastic modelling scheme was followed in this study, whereby SIMAP was applied to repeatedly simulate the defined credible spill scenarios using different samples of current and wind data. These data samples were selected randomly from an historic time-series of wind and current data representative of the study area. Results of the replicate simulations were then statistically analysed and mapped to define contours of percentage probability of contact at identified thresholds around the hydrocarbon release point. The simulations that show something unusual or unexpected make an important contribution to the overall outcomes and fate of the hydrocarbon.

The model simulates surface releases and uses the unique physical and chemical properties of a hydrocarbon type to calculate rates of evaporation and viscosity change, including the tendency to form OIW emulsions. Moreover, the unique transport and dispersion of surface slicks and in-water components (entrained and dissolved) are modelled separately. Thus, the model can be used to understand the wider potential consequences of a spill, including direct contact of hydrocarbons due to surface slicks (floating hydrocarbon) and exposure of organisms to entrained and dissolved aromatic hydrocarbons in the water column. The model also calculates the accumulation of hydrocarbon mass that arrives on each section of shoreline over time, considering any mass that is lost to evaporation and subsequent removal by current and wind forces.

During each simulation, the SIMAP model records the location (by latitude, longitude and depth) of each particle (representing a given mass of hydrocarbons) on or in the water column, at regular time steps. For any particles that contact a shoreline, the model records the accumulation of hydrocarbon mass that arrives on each section of shoreline over time, less any mass that is lost to evaporation and subsequent removal by current and wind forces.

The collective records from all simulations are then analysed by dividing the study region into a 3D grid. For surface hydrocarbons (floating oil), the sum of the mass in all hydrocarbon particles located within a grid cell, divided by the area of the cell, provides hydrocarbon concentration estimates in that grid cell at each model output time interval. For entrained and dissolved aromatic hydrocarbon particles, concentrations are calculated at each time step by summing the mass of particles within a grid cell and dividing by the volume of the grid cell. The process is also subject to spreading filters that are applied to represent the expected mass distribution of each distinct particle. The concentrations of hydrocarbons calculated for each grid cell, at each time step, are then analysed to determine whether concentration estimates exceed defined threshold concentrations.

Hydrocarbon spill modelling assessments by RPS undergo initial sensitivity modelling to determine appropriate time to add to the simulation after cessation of the spill. The amount of time after the spill is based on the time needed for the modelled concentrations to practically drop below threshold concentrations anywhere in the model domain in the test cases. This assessment is done by post-processing the sensitivity test results and analysing time-series of median and maximum concentrations in the water and on the surface.

6.7.1.1 Worst case scenarios

As part of the risk identification process, Woodside identified the range of credible hydrocarbon spill scenarios that may occur from the petroleum activities. In assessing the potential impacts of an unplanned hydrocarbon release, representative worst-case scenarios (in terms of volume and location) were identified. They include:

- Scenario 1: An intervention wellbore seabed release of 550 m^3 of Cossack light crude from the CK4 or LH3 wells, over a duration of 12 hours (refer to Section 6.7.2).
- Scenario 2: A tree changeout wellbore seabed release of 45 m^3 of Cossack light crude from the CK4 or LH3 wells, instantaneously (refer to Section 6.7.2).
- Scenario 3: A loss of containment from an 8-inch production flowline within the Okha subsea system releasing 414 m^3 of Cossack light crude, over a duration of 12 hours (refer to Section 6.7.2).
- Scenario 4: A short-term (instantaneous) surface release of 250 m^3 of marine diesel from the CK4 or LH3 wells, representing a worst-case loss of fuel tank integrity after a vessel collision (refer to Section 6.7.3).
- Scenario 5: A short-term (instantaneous) seabed release of 441 m3 of Cossack light crude from a dropped object rupturing the 8-inch production flowline, which holds the largest liquid hydrocarbon inventory within the Okha subsea system. Note, this hydrocarbon release scenario and associated controls are included within Section 6.7.5 of the accepted Okha FPSO Operations EP.

6.7.1.2 Environment that may be affected (EMBA) and hydrocarbon contact thresholds

The outputs of the quantitative hydrocarbon spill modelling are used to assess the environmental consequence by delineating which areas of the marine environment could be exposed to hydrocarbon levels that exceed selected hydrocarbon threshold concentrations if a credible hydrocarbon spill scenario occurs. The summary of the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA.

The EMBA covers a larger area than the area that is likely to be affected during any single spill event, as the model was run for various weather and metocean conditions. The EMBA represents the total extent of all the locations where hydrocarbon thresholds could be exceeded from all modelling runs. Furthermore, as the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean mechanism of transportation, a different EMBA is presented for each hydrocarbon fate. Together, these EMBAs define the spatial extent for the existing environment described in Section 4.

The spill modelling outputs are presented as areas that meet threshold concentrations for surface, entrained and dissolved hydrocarbons for the modelled scenarios. Surface spill concentrations are expressed as grams per square metre (g/m2), with entrained and dissolved aromatic hydrocarbon concentrations expressed as parts per billion (ppb). An additional threshold has been included to define the boundary within which socio-cultural impacts may occur, based on visible surface oil (1 g/m^2) impacting on the visual amenity of the marine environment. Each hydrocarbon threshold is presented in Table 6-6 and described in below.

Table 6-6: Thresholds applied to the quantitative hydrocarbon spill risk modelling results

Hydrocarbon Type	Ecological hydrocarbon thresholds				Socio-cultural hydrocarbon thresholds	
	Surface Hydrocarbon (g/m^2)	***Entrained hydrocarbon (ppb)***	***Dissolved aromatic hydrocarbon (ppb)***	***Accumulated hydrocarbons (g/m^2)***	***Surface Hydrocarbon (g/m^2)***	***Accumulated hydrocarbons (g/m^2)***
Cossack light crude	10	1,000	10	100	1	10
Diesel	10	1,000	10	100	1	10

6.7.1.2.1 Surface hydrocarbon threshold concentrations

The spill modelling outputs defined the EMBA for surface hydrocarbons resulting from a spill (contact on surface waters) using a threshold of ≥10 g/m² (dull metallic colours) based on the relationship between film thickness and appearance (Bonn Agreement 2015) (Table 6-7).

This threshold concentration is used to define an area within which ecological impacts to the marine environment may occur from surface hydrocarbons. It represents the minimum oil thickness (0.01 mm) at which ecological impacts (e.g. to birds and marine mammals) are expected to occur.

Thresholds for registering biological impacts resulting from contact of surface slicks have been estimated by different researchers at about 10–25 g/m² (French et al. 1999; Koops et al. 2004; NOAA 1996). Potential impacts of surface slick concentrations in this range for floating hydrocarbons may include harm to seabirds through ingestion from preening of contaminated feathers, or the loss of the thermal protection of their feathers. The 10 g/m² threshold is the reported level of oiling to instigate impacts to seabirds and is also applied to other wildlife, though it is recognised that 'unfurred' animals, where hydrocarbon adherence is less, may be less vulnerable. 'Oiling' at this threshold is taken to be of a magnitude that can cause a response from the most vulnerable wildlife such as seabirds. Due to weathering processes, surface hydrocarbons will have a lower toxicity due to change in their composition over time. Potential impacts to shoreline sensitive receptors may be markedly reduced in instances where there is extended duration until shoreline contact.

Woodside recognises that hydrocarbons may be present beyond the ecological impact EMBA, at concentrations that may be visible but are not expected to cause ecological impacts. The threshold for visible surface oil (1 g/m²) has therefore been used to define an additional boundary within which socio-cultural impacts to the visual amenity of the marine environment may occur. This area is referred to as the socio-cultural EMBA. Potential impacts to socio-cultural values assessed within these EMBAs include:

- protected areas
- national and Commonwealth Heritage listed places
- tourism and recreation
- fisheries.

Table 6-7: The Bonn Agreement oil appearance code

Appearance (following Bonn visibility descriptors)	Mass per area (g/m²)	Thickness (µm)	Volume per area (L/km²)
Discontinuous true oil colours	50 to 200	50 to 200	50,000 to 200,000
Dull metallic colours	5 to 50	5 to 50	5000 to 50,000
Rainbow sheen	0.30 to 5.00	0.30 to 5.00	300 to 5,000
Silver sheen	0.04 to 0.30	0.04 to 0.30	40 to 300

6.7.1.2.2 Dissolved hydrocarbon threshold concentration

Dissolved hydrocarbons present a narcotic effect resulting from uptake into the tissues of marine organisms. This effect is additive, increasing with exposure concentration or with time of exposure (French-McCay 2002; NRC 2005). The dissolved aromatic threshold of 10 ppb has been selected as a threshold to approximate the potential toxic effects, particularly sublethal effects to sensitive species (French-McCay 2026).

Dissolved hydrocarbons represent the bioavailable fraction of oil in the water column and are therefore the most appropriate metric for assessing potential toxic effects to marine organisms. Toxicity studies consistently demonstrate that adverse biological effects are driven by exposure to dissolved oil components, rather than total oil mass or the physical presence of oil droplets, because only dissolved hydrocarbons can cross biological membranes and interact with target tissues. Acute toxicity datasets and species sensitivity distributions show that the majority of marine species experience no acute effects at dissolved hydrocarbon concentrations at or below 10 ppb, indicating that this concentration is protective of more than 95% of species for acute exposures (French-McCay 2026; Negri et al. 2021; Bejarano et al. 2017).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Experimental and modelling studies demonstrate that toxic effects may begin to occur in the most sensitive species and life stages at dissolved concentrations on the order of 10 ppb, including early biological and sub-lethal responses (French-McCay 2026; Bejarano et al. 2014; McGrath et al. 2018). As such, 10 ppb represents a lower-bound, biologically meaningful exposure value, rather than an arbitrary screening threshold. Use of this concentration is therefore appropriate for identifying ecological features that may be affected by dissolved oil and for assessing potential environmental consequences, while avoiding the implication that widespread or severe toxicity is expected. The 10 ppb dissolved hydrocarbon exposure value thus provides a conservative yet scientifically grounded basis for impact assessment of the dissolved-phase hydrocarbon fate.

As dissolved hydrocarbons are within the water column and not visible, impacts to socio-cultural receptors are expected to be associated with ecological impacts. Therefore, dissolved hydrocarbons at this threshold also represent the level at which socio-cultural impacts may occur. The application of this threshold is conservative as the 10 ppb is an instantaneous value while ecological studies are based on an exposure duration of typically 48 to 96 hours and therefore accounts for uncertainty in consequence from hydrocarbons spills on ecological, social, economic and cultural features of the environment.

6.7.1.2.3 Entrained hydrocarbon threshold concentrations

Entrained hydrocarbons in the water column consist of oil droplets containing a mixture of soluble, semi-soluble and insoluble compounds. The toxicologically relevant fraction of entrained oil is limited to the proportion of hydrocarbons that are able to dissolve from droplets into the surrounding water, with multiple experimental and modelling studies demonstrating that toxicity is driven by the dissolved fraction, rather than by droplet mass, and that dissolved hydrocarbons typically represent a small proportion (on the order of ~1%) of fresh oil, with these soluble components lost rapidly as oil weathers (Forth et al. 2017; Redman & Parkerton 2015; French-McCay 2026). Consequently, entrained oil droplets increasingly comprise non-bioavailable material over time, and entrained hydrocarbon concentrations are therefore a poor proxy for toxicity at low concentrations (Forth et al. 2017; Parkerton et al. 2018).

Given this established relationship between oil composition, dissolution processes and weathering, entrained oil concentrations must be substantially higher than dissolved effect thresholds before biologically meaningful exposure is plausible. French-McCay et al. (2018) demonstrate a direct correlation between entrained oil mass and the dissolved fraction derived from it, indicating that entrained concentrations two orders of magnitude greater than dissolved concentrations are required to represent equivalent exposure potential. On this basis, an entrained hydrocarbon exposure value of 1,000 ppb represents a scientifically justified lower-bound threshold for identifying ecological features that may be affected by entrained oil and for assessing potential environmental consequences. This threshold appropriately reflects the limited bioavailability and declining toxicity of entrained oil droplets, while remaining conservative for impact assessment purposes (French-McCay et al. 2018; Negri et al., 2024).

As entrained hydrocarbons are within the water column and not visible, impacts to socio-cultural receptors are expected to be associated with ecological impacts. Therefore, entrained hydrocarbons at this threshold also represent the level at which socio-cultural impacts may occur. The application of this threshold is conservative as the 1,000 ppb is an instantaneous value whereas laboratory-based ecological studies typically assess toxicity over exposure durations of 48 to 96 hours, such that use of an instantaneous exposure value provides a precautionary margin to account for uncertainty in the assessment of potential ecological, social, economic and cultural consequences of hydrocarbon spills.

6.7.1.2.4 Accumulated hydrocarbon threshold concentrations

Owens et al. (1994) define accumulated hydrocarbon <100 g/m² to have an appearance of a stain on shorelines. French-McCay (2009) defines accumulated hydrocarbons ≥100 g/m² to be the threshold that could impact the survival and reproductive capacity of benthic epifaunal invertebrates living in intertidal habitat. A threshold of ≥100 g/m² has been adopted as the threshold for shoreline accumulation and has been included in the EMBA.

Woodside recognises that hydrocarbons may be present beyond the ecological impact EMBA at low concentrations that may be visible but are not expected to cause ecological impacts. The threshold for visible shoreline accumulation (10 g/m²) has therefore been used to define an additional boundary within which socio-cultural impacts to the visual amenity of the marine environment may occur.

6.7.1.3 Operational and scientific monitoring

A planning area for scientific monitoring is also described in Annex C of the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) (Appendix G). This planning area has been set with reference to a low exposure values of 1 g/m^2 for surface hydrocarbons, 10 g/m^2 for accumulated hydrocarbons, and 10 ppb for both entrained and dissolved.

An operational scientific monitoring program may be activated following a release event with the potential to contact sensitive environmental receptors. This would consider receptors at risk (ecological and socio-economic) and any identified pre-emptive baseline areas for the worst-case credible spill scenario or other identified unplanned hydrocarbon releases associated with the operational activities.

6.7.1.4 Hydrocarbon characteristics

Table 6-8 summarises the characteristics of the hydrocarbons used as the basis for the modelling studies, then used to assess credible hydrocarbon spills. More detail about the characteristics of these hydrocarbons is provided in the next subsections.

The hydrocarbon used in the worst case scenario spill modelling was Cossack Light Crude which is produced from the CK4 well. The two Wanaea wells would release Wanaea Crude in a wellbore release and LH3 would release Hermes Crude.

The existing Cossack Light Crude spill modelling is considered conservative relative to the credible release scenarios from the Wanaea and Hermes wells because the modelled release volume (773 m³) exceeds the maximum estimated release volume (550 m³) by approximately 41%. Although compositional differences may result in some variation in plume behaviour, the larger release volume and similar API gravities support the use of the existing modelling as a conservative basis for assessment of potential environmental impacts. Cossack Light Crude has a higher reported wax content than Wanaea, which may support increased persistence, and has the lowest reported GOR of the three crude types, which is expected to result in a greater proportion of hydrocarbons remaining in the liquid phase relative to the other crude oils.

Table 6-8: Characteristics of the hydrocarbon types used for modelling and ecotoxicological studies

Hydrocarbon type	Density (g/m³)	Viscosity (cP)	Component	Volatile (%)	Semi-volatile (%)	Low volatility (%)	Residual (%)	Aromatics (%)
			Boiling point (°C)	<180	180 to 265	265 to 380	>380	Of whole oil <380
Cossack (Okha) light crude	0.7875 at 15°C	1.4 at 20°C	% total	52.2	20.5	12.0	15.3	14.5
			% aromatics	3.7	1.3	9.5	-	-
Marine diesel	0.829 at 25°C	4.0 at 25°C	% total	6	34.6	54.4	5	3
			% aromatics	1.8	1.0	0.2	-	-

6.7.1.4.1 Cossack light crude

Cossack Light Crude (API 48.1) contains a moderate proportion (15.3% by mass) of hydrocarbon compounds that will not evaporate at atmospheric temperatures. These compounds will persist in the marine environment.

The unweathered mixture has a dynamic viscosity of 1.40 cP. The pour point of the whole oil (-24°C) ensures it will remain in a liquid state over the annual temperature range observed on the NWS.

The mixture is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere.

Evaporation rates will increase with temperature, but in general about 52.2% of the oil mass should evaporate within the first 12 hours (boiling point <180°C); a further 20.5% should evaporate within the first

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

24 hours (180°C < boiling point <265°C); and a further 12.0% should evaporate over several days (265°C < boiling point <380°C).

Selective evaporation of the lower boiling-point components will lead to a shift in the physical properties of the remaining mixture, including an increase in the viscosity and pour point. Although removal of the volatile compounds through evaporation and dissolution will result in an increase in density of the remaining oil, the mixture is unlikely to solidify or sink as it weathers.

The whole oil has low asphaltene content (<0.05%), indicating a low propensity for the mixture to take up water to form water-in-oil emulsion over the weathering cycle.

Soluble aromatic hydrocarbons contribute about 14.5% by mass of the whole oil, with a moderate proportion (7.4%) in the C4 to C10 range of hydrocarbons. These compounds will evaporate rapidly, reducing the potential for dissolving a proportion of them into the water.

In terms of weathering, modelling indicates a moderate proportion of Cossack light crude will tend to persist on the sea surface (about 15% after seven days) during calm wind conditions, with negligible levels of entrainment (<0.5%) and around 75% of the spilled volume expected to evaporate within the first 24 hours (Figure 6-1). For variable strength winds, modelling indicates a higher percentage of Cossack light crude is likely to entrain and dissolve in the water column. About 24 hours after the spill, around 24% of the oil mass is forecast to have entrained and a further 66% is forecast to have evaporated, leaving only a small percentage (around 0.5%) of the oil floating on the sea surface (Figure 6-2).

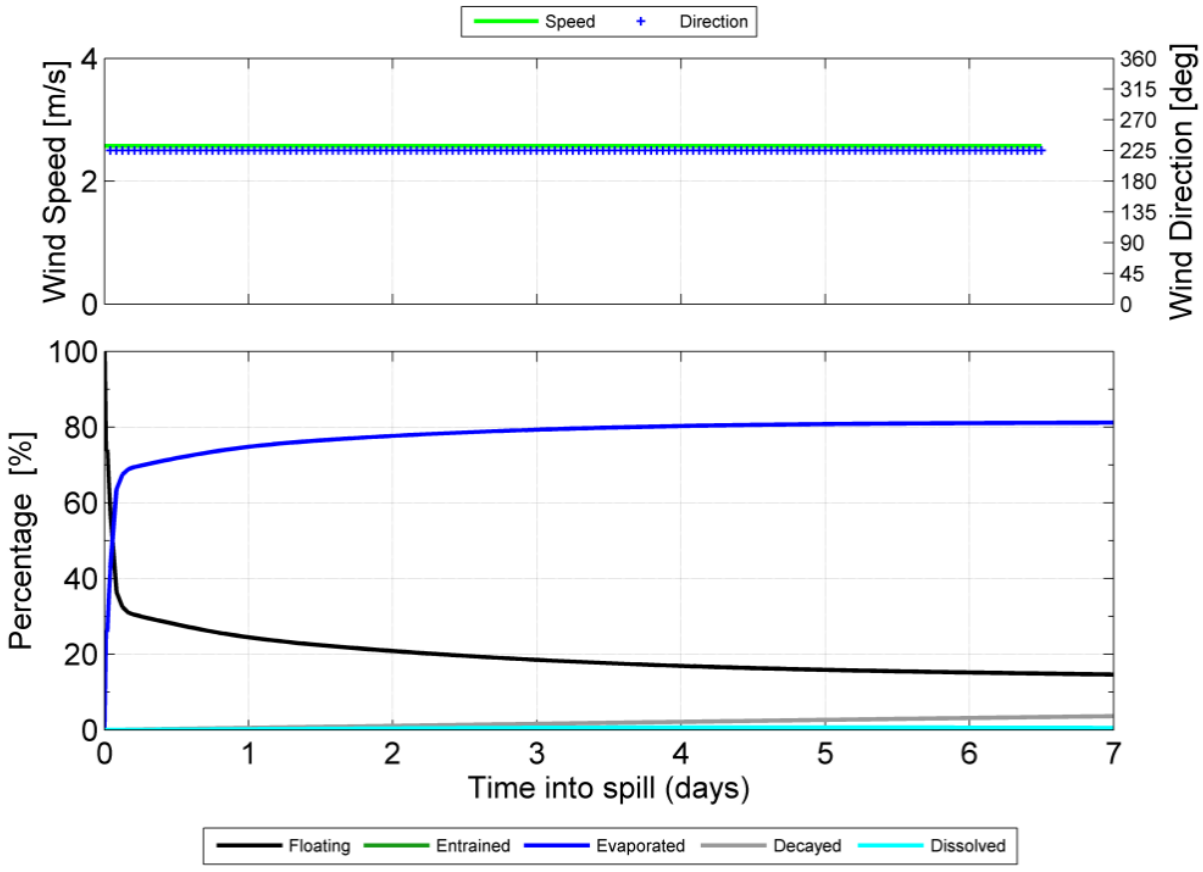

Figure 6-1: Proportional mass balance plot representing the weathering of Cossack light crude spilled onto the water surface as a one-off release (50 m³ over one hour) and subject to a constant five knots (2.6 m/s) wind at 27°C water temperature and 25°C air temperature

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

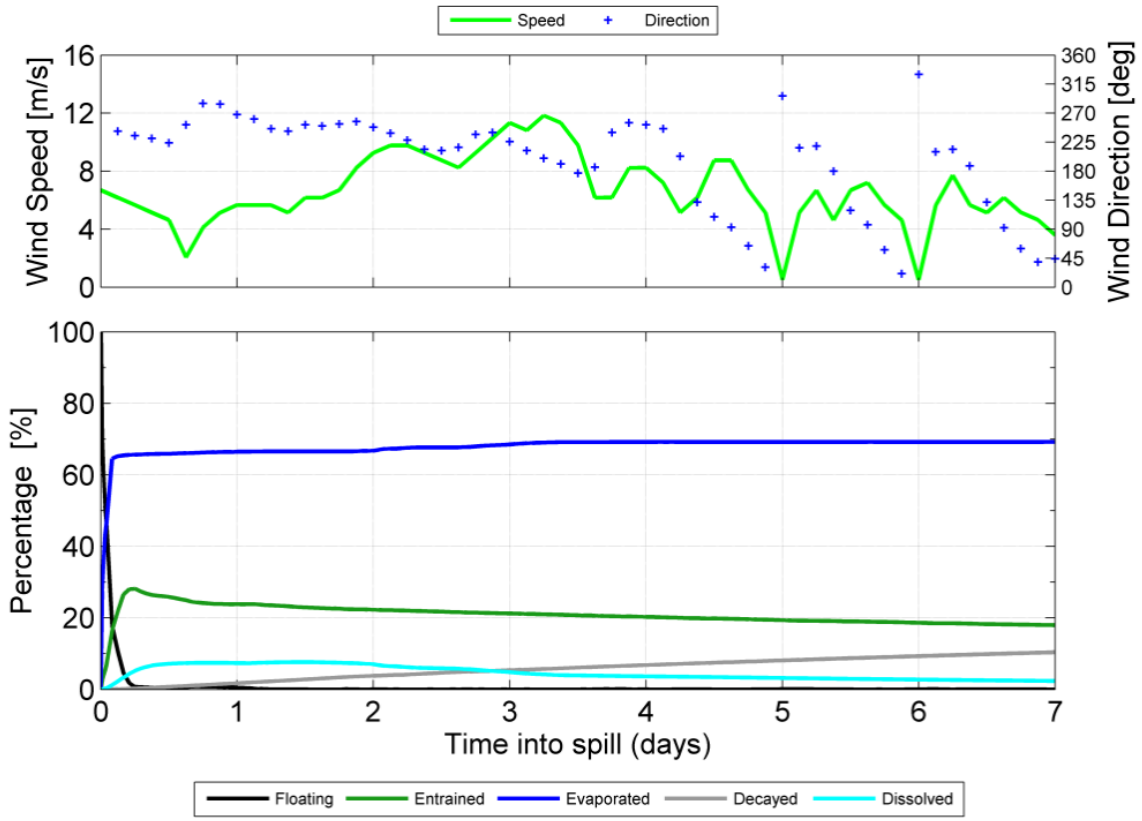

Figure 6-2: Proportional mass balance plot representing the weathering of Cossack light crude spilled onto the water surface as a one-off release (50 m³ over one hour) and subject to variable wind at 27°C water temperature and 25°C air temperature

6.7.1.4.2 Marine diesel

Marine diesel is a processed oil that is formulated entirely from the products of distillation. As in, it does not contain residues of distillation that are added to heavier fuel oils. This product is more accurately described as marine gas oil (MGO). Like all oils, MGO is a complex mixture of hydrocarbon compounds that vary by volatility and solubility. The physical and chemical properties of MGO will determine the way this oil behaves in the marine environment. SIMAP calculations account for the initial density and viscosity of the whole, unweathered oil mixture as well as the volatility and solubility of component hydrocarbons summarised as pseudo-components. Multiple grades of MGO are commercially available, which vary in viscosity and the proportion of longer-chain hydrocarbons (ExxonMobil; online source). The modelling applied specifications from assays of distillate marine fuel grade MGO, which is the most common fuel oil used by small to moderate sized vessels in warm water and temperate environments.

MGO fuels, in general, have relatively low viscosity and density and will consequently spread rapidly as a floating film on calm seas. This spreading will enhance the rate of evaporation of the more volatile components, but evaporation will then slow as the mixture evolves towards higher proportions of the low-volatile and non-volatile components.

The residual compounds (boiling point >380°C) will resist evaporation and will require the slower process of degradation (photo and biological) to degrade. The residual mixture will be composed of long-chain alkanes, cycloalkanes and other hydrocarbon compounds with complex molecular structures that will be subject to microbial degradation over the longer term (weeks to tens of weeks after release).

The low viscosity of MGO fuels requires relatively low wave energy to break up floating slicks and suspend MGO as droplets mixed into the wave-affected layer of the ocean surface. These suspended droplets will be buoyant but will remain suspended when there is enough wave energy. Waves generated by wind speeds as low as six to seven knots on the open ocean will start to suspend films of floating MGO. Entrainment rates will increase significantly as sea conditions become more energetic. One effect of suspension will be reduction of the evaporation rates of the component hydrocarbons.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

In addition to being volatile, the aromatic components, present at a relatively low proportion of the unweathered mixture (about 3%), are soluble and may dissolve into the water column from slicks and entrained droplets. Both the solubility and volatility of these compounds vary with the complexity of the hydrocarbon molecules. Around 1.8% of the mixture is contributed by mono-aromatic hydrocarbon compounds that are both highly volatile and highly soluble, and will tend to evaporate rapidly either directly from slicks, or from the water if they first dissolve from the slicks. Semi-volatile (di-aromatic hydrocarbons) and low-volatile components (polyaromatic hydrocarbons) contribute around 1.2% of the unweathered mixture that will tend to persist in solution if they dissolve.

In terms of weathering, the mass balance forecast for the constant, low-wind case (Figure 6-3) for the marine diesel specifications indicates rapid evaporation of the mixture over the first 12 hours, then progressively slower evaporation over the following days. About 38% of the oil is predicted to evaporate within the first 12 hours and another about 2% over the next 12 hours. Around 5% of the remaining mass would evaporate over the next six days. A relatively small (about 2%) conversion of the mass to simpler compounds by microbial and photo-degradation is indicated over the first week for these conditions.

Under the stronger and more variable-wind case (Figure 6-4), where wind speeds exceeding eight knots were allowed for at times, significant entrainment of marine diesel into the water column is indicated. About 24 hours after the spill, around 74% of the oil mass is forecast to have entrained and a further 26% is forecast to have evaporated, leaving only a small proportion of the oil floating on the water surface (<1%). The entrained component remained sub-surface under the conditions imposed. The increased level of entrainment in the variable-wind case will result in a higher dissolution of the soluble compounds, with dissolved hydrocarbons forecasted at about 0.5% of the original mass after 12 hours in comparison to <0.01% in the low-wind case.

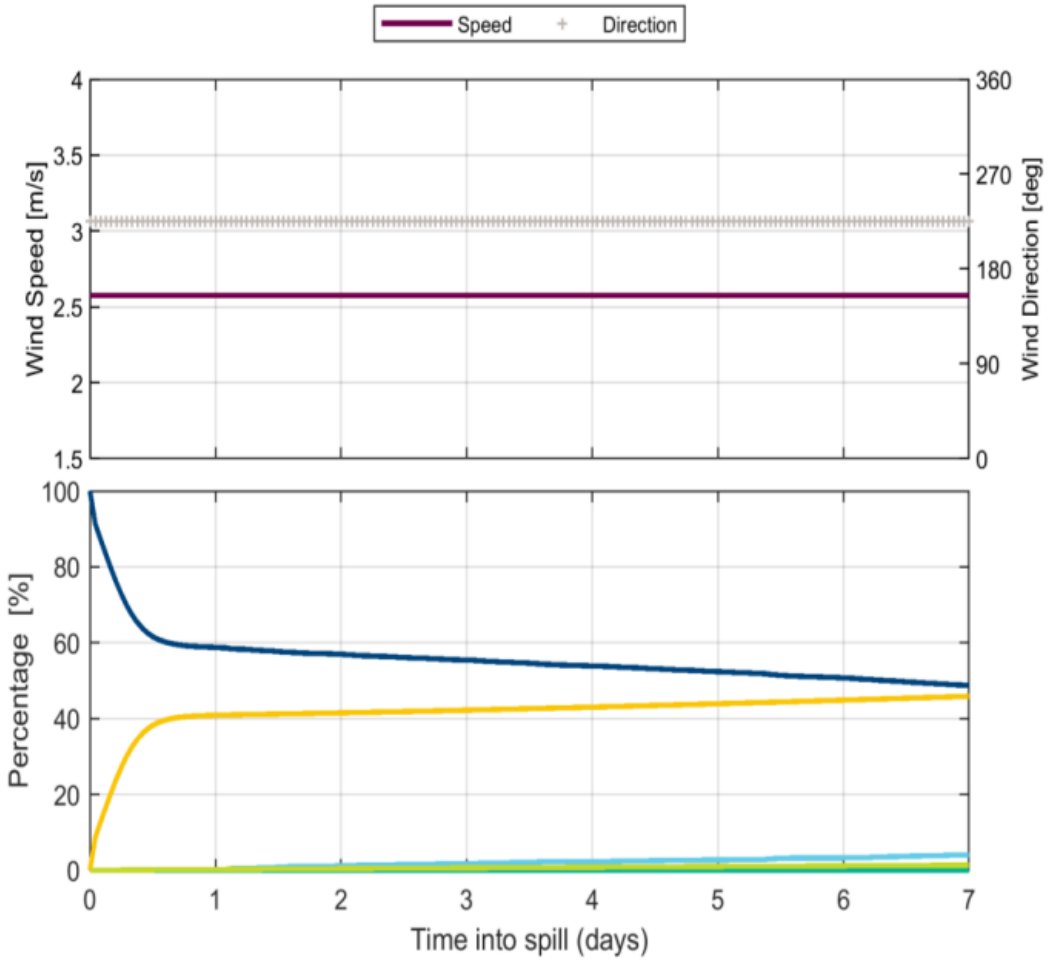

Figure 6-3: Proportional mass balance plot representing the weathering of marine diesel spilled onto the water surface as a one-off instantaneous release of 50 m³ and subject to a constant 5 kn (2.6 m/s) wind at 27°C water temperature and 25°C air temperature

Loss of hydrocarbons to marine environment due to wellbore release during LWI		X		X	X	X	B	D	1	M	LCS GP PJ RBA CV SV	Acceptable if ALARP	EPO 9

Description of source risk

Background

Woodside has identified a loss of wellbore release as a credible spill scenario. A wellbore release is an uncontrolled release of reservoir hydrocarbon or other well fluids to the environment.

The Well Operations Management Plan (WOMP) explains the appropriate standards and practices, within Our WMS, which are used to manage well integrity and loss of containment risks. The key governing process used to reduce loss of containment risk to ALARP include:

- well lifecycle management
- drilling and completions standards and practices
  - 52B44X4Q6TL2-1706284801-5694 Well Barrier Standard
  - W1000SG0100 Engineering Standard Subsea Isolation
  - 52B44X4Q6TL2-1706284801-8226 Wells Risk Management Standard
  - RWKSCU3PSW7Z-1416383262-1383 Wells Capability and Training Guidance

Industry experience

A risk assessment by AMSA of oil spills in Australian ports and waters (Det Norske Veritas, 2011) concluded that:

- overall national exceedance frequency for oil spills from offshore drilling in Australia is 0.033 for spills of more than one tonne per year, decreasing to 0.008 for spills of more than 100 tonnes per year
- probability of a blowout from a well intervention is one times 10-4 (0.0001, or 0.01%), considerably lower than drilling activities (International Association of Oil and Gas Producers, 2010).

Woodside has a good history of implementing industry standard practice in well design and construction. In the company's 60-year history, it has not experienced any well loss of containment events that have resulted in significant releases or significant environmental impacts.

Therefore, in accordance with the Woodside Risk Matrix, a wellbore release event corresponds to a 'highly unlikely' event as it has occurred many times in the industry, but not in the company.

Credible scenarios – wellbore releases

The credible scenarios for wellbore releases are summarised in Table 6-9 and defined further below.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 6-9: Summary of worst-case subsea wellbore release scenarios

Scenario	*Hydrocarbon*	*Duration*	*Depth*	*Total oil release volume*
Intervention wellbore release	Cossack light crude	12 hours	Seabed	550 m^{3*}
Well suspension wellbore release		Instantaneous		117 m^{3*}
CK4 SCSSV control line loss of containment		Instantaneous		42 m^3

**Whilst the scenario is from any of the wells, the worst-case volume from the LH3 well.*

Intervention wellbore release

With LWI using a LWIV there is no rigid riser connecting the vessel to the wellhead. This means there is no credible scenario in which the vessel could put sufficient load onto the Xmas Tree or Wellhead to cause complete structural failure of the lower well control package, tree or wellhead. It is possible if an umbilical or guidewire snagged during a drive off that the upper well control package could be damaged. For this scenario to occur the below three specific events would have to occur simultaneously:

1. XT valves: production master valve is locked open, pressure safety valve open (manual)
2. vessel drives off [**Event 1**: Vessel DP drift/drive off]
3. guidewires and umbilical weak-link shear (per design)
4. parted guidewire or umbilical snags on lubricator [**Event 2**: GW/Umbilical Snags]
5. lubricator yields and ruptures above WCP
6. guidewire winch brakes fail (wire pays out)/umbilical hoses part
7. subsea intervention device control system (emergency shutdown) fails to close WCP valves [**Event 3**: subsea intervention device system failure]
8. XT and subsea intervention device WCP integrity maintained but valves open
9. surface-controlled subsurface safety valve Hold Open Sleeve (HoS) installed (TRSV will not close)
10. well fluids spill into ocean from ruptured lubricator
11. vessel regains control and ROVs close XT and/or subsea intervention device WCP valves within 12 hours.

The 12 hour response time is based on the LWIV and one of the two available ROVs being operable and able to return to the well to manually close valves once the cause of the DP event is addressed, or the use of a vessel equipped with a suitable ROV in the region.

The volume that could be released over the 12-hour period has been conservatively estimated as a maximum of 550m^3 Cossack light crude based on reservoir modelling for a worst case well blowout from the highest flowing well in the CWLH fields, being LH-3. This volume represents a conservative loss of containment from any of the wells (CK4. LH3, WA7 and WA8).

Well suspension wellbore release

Each well will undergo well suspension with qualified and tested suspension plugs. The plugs placement will be determined to give ALARP LOC risk, and will include both deep and shallow isolations. Wells will be suspended with qualified and tested suspension plugs with the plugs placed to ensure barrier envelopes remain independent. The suspension configuration will be completed as part of the development of the WOMP.

During tree recovery the crane or drill pipe hook load is managed to ensure additional load is not transferred into the wellhead. With the LWI vessel on location there is no credible scenario where a third-party vessel could snag the wellhead. Dropped objects do not present a risk that could result in a release from the wells.

Failure of either of the shallow plugs would result in the loss of the annulus and tubing contents which has been calculated as a maximum for all four wells of 117m^3 of Cossack light crude (LH3 well). This volume represents a conservative loss of containment from any of the wells. Note this release does not apply to WA-7 and WA-8 as they will not have a XT changeout and the integrity of the upper barrier (i.e. the XT) is uncompromised.

Sustained release from the reservoir would require the failure of multiple barriers (suspension plugs/XT). This is not considered credible.

SCSSV Control Line Loss of Containment

During XT change out there is the potential for a loss of containment (gas/ well fluids mix) through TRSV poppet (located on top of Tubing Hanger) when the XT is not present. The worst-case spill volume is based on a release of the total inventory of gas/ well fluids in annulus and tubing connected to the SCSSV control line leak path, which equates to 42m^3 of Cossack light crude.

Flowline Loss of Containment

As described in Section 6.7.8 the worst-case credible hydrocarbon release scenario from a dropped object is a rupture of the 8-inch production flowline, which holds the largest liquid hydrocarbon inventory within the Okha subsea system.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

This could result in a release of up to 414 m^3 of Cossack light crude. This hydrocarbon release scenario and associated controls are included within Section 6.7.5 of the accepted Okha FPSO Operations EP.

Quantitative hydrocarbon spill modelling – wellbore release

Spill modelling was undertaken by RPS on behalf of Woodside, to determine the fate of hydrocarbon released from the wellbore release scenario given it is the worst case volume (RPS, 2026). Table 6-10 presents the modelling inputs for the wellbore release scenario. Given the distance of the wells to one another (2 km to 16 km from one another) and similar water depths and sensitivities, the modelling is considered representative of a spill in any location of the Operational area.

Modelling was undertaken over all seasons to address the potential for the activity timing over any time of year. The overall EMBA for the scenario is based on stochastic modelling, which compiles data from 200 hypothetical worst-case spills under various weather and metocean conditions. This is considered to provide a conservative estimate of the EMBA and the potential impacts from the identified worst-case credible release volumes for loss of containment scenarios.

Table 6-10: Modelling inputs – loss of containment

Scenario	*Depth*	*Hydrocarbon*	*Modelled location*	*Spill duration*	*Total volume*
Intervention wellbore release (LWIV)	Seabed	Cossack light crude	CK4 well location	12 hours	550 m^3

Refer to Section 6.7.1 for the quantitative spill risk assessment methodology and Section 6.7.1.4.1 for a description of Cossack light crude characteristics used to model this scenario.

Consequence assessment
Environmental value(s) potentially impacted

Environment that may be affected

The overall EMBA for the Petroleum Activity is based on stochastic modelling, which compiles data from multiple hypothetical worst-case spill simulations under a variety of weather and metocean conditions (as described in Section 6.7.1).

As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean transport mechanism, a different area is discussed for each hydrocarbon fate. These fates have been outlined below.

Surface hydrocarbons

The modelled surface hydrocarbons are forecast to drift in all directions, with the most likely directions of travel being to the north-east and south-west of the release site. The trajectory will depend on wind and current conditions at the time and may extend up to 43 km from the release site at the 1 g/m^2 threshold (sociocultural impact threshold). At the 10 g/m^2 and 50 g/m^2 thresholds, surface hydrocarbons may extend up to 38 km and 16 km from the release site, respectively.

Modelling results indicate no contact with sensitive receptors by surface (floating) hydrocarbons above the ecological impact threshold of 10 g/m² or sociocultural impact threshold of 1 g/m² at probabilities of 1% or greater.

Entrained hydrocarbons

Quantitative spill modelling results for entrained hydrocarbons are shown in Table 6-11. The modelled entrained hydrocarbons are forecast to potentially drift in all directions, with the most likely directions of travel being to the north-east and south-west of the release site. At the 1000 ppb threshold, entrained hydrocarbons may extend up to 32 km, from the release site.

Modelling results indicate no contact with sensitive receptors by entrained hydrocarbons above the ecological impact threshold of 1000 ppb at probabilities of 1% or greater.

Dissolved hydrocarbons

Quantitative spill modelling results for dissolved hydrocarbons are shown in Table 6-11. The modelled dissolved hydrocarbons at or above 10 ppb are forecast to potentially drift in all directions, with the most likely directions of travel being to the north-east and south-west of the release site, extending up to approximately 662 km from the release site. Contact by dissolved aromatic hydrocarbons at concentrations equal to or greater than 10 ppb is predicted to be greatest at Montebello AMP (2% probability) (Table 6-11).

Accumulated hydrocarbons

Modelling results indicate no contact with sensitive receptors by accumulated shoreline hydrocarbons above the ecological impact threshold of 100 g/m² at probabilities of 1% or greater, nor above the socio-cultural threshold of 10 g/m².

Consequence assessment summary

Table 6-11 presents the full extent of the EMBA. As in, the sensitive receptors and their locations that may be exposed to hydrocarbons (surface, entrained and dissolved) at or above the set threshold concentrations in the unlikely event of a wellbore release during the Petroleum Activity. Details of these receptors are outlined in Section 4. Modelling indicates the spill will remain offshore. The potential biological and ecological impacts of an accidental hydrocarbon release as a result of a wellbore release during the Petroleum Activity are presented in the next sections.

Summary of potential impacts to the physical environment
Water quality
Large volume releases of hydrocarbons have the potential to result in increased concentration of dissolved hydrocarbons. The concentrations of hydrocarbons in the water column will decrease over time once the release has stopped, due to processes such as dispersion, dilution, physical and biological degradation, and evaporation.
Marine sediment quality
Studies of hydrocarbon concentrations in deep-sea sediments in the vicinity of a catastrophic well blowout indicate hydrocarbon from the blowouts can be incorporated into sediments (Romero, et al., 2015). Mechanisms for hydrocarbon contamination of sediments include sedimentation of hydrocarbons and direct contact between submerged plumes and the seabed (Romero, et al., 2015). In the event of a major hydrocarbon release at the seabed, modelling indicates a pressurised release of hydrocarbon would form droplets that would be transported into the water column to the surface (i.e. transported away from the seabed). As a result, the extent of potential impacts to the seabed area at and around the release site would be largely confined to a localised footprint. Marine sediment quality would be reduced because of hydrocarbon contamination for a small area within the immediate release site for a long to medium term, as hydrocarbons in sediments typically undergo slower weathering and degradation (Diercks, et al., 2010; Liu, et al., 2012). Floating and entrained hydrocarbons could sink after extensive weathering and adsorption of sediment particles, which could result in hydrocarbons deposited to the seabed in areas distant from the release location. Such hydrocarbons are expected to be less toxic due to the weathering process.
Summary of potential impacts to protected species
Cetaceans
A range of cetaceans were identified as potentially occurring within the Operational area and wider EMBA (Section 4.6.3). In the event of a wellbore release, surface, entrained and dissolved hydrocarbons exceeding environmental impact threshold concentrations may drift across habitat for cetaceans. Migratory routes and BIAs of cetaceans considered to be MNES may be affected, including humpback whales and pygmy blue whales (northbound and southbound), and southern right whales (migration). Cetaceans that have direct physical contact with surface, entrained or dissolved aromatic hydrocarbons may suffer surface fouling, ingestion of hydrocarbons (from prey, water and sediments), aspiration of oily water or droplets, and inhalation of toxic vapours (Deepwater Horizon Natural Resource Damage Assessment Trustees, 2016). This may result in irritation of sensitive membranes such as the eyes, mouth, digestive and respiratory tracts, and organs. Other potential impacts include impairment of the immune system, neurological damage (Helm, et al., 2015), reproductive failure, other adverse health effects such as lung disease and poor body condition, and mortality (Helm, et al., 2015). Physical contact with hydrocarbons is likely to have biological consequences for these species. Given cetaceans maintain thick skin and blubber, external exposure to hydrocarbons may result in irritation to skin and eyes. Hydrocarbons may also be ingested, particularly by baleen whales (e.g. pygmy blue and humpback), which feed by filtering large volumes of water. Geraci (1988) identified behavioural disturbance through avoidance of spilled hydrocarbons in several species of cetacean, suggesting cetaceans can detect surface slicks. However, observations during spills have recorded larger whales (both mysticetes and odontocetes) and smaller delphinids travelling through and feeding in oil slicks. During the Deepwater Horizon spill, cetaceans were routinely seen swimming in surface slicks offshore and nearshore (Deepwater Horizon Natural Resource Damage Assessment Trustees, 2016). In a review of the impacts of large-scale hydrocarbon spills on cetaceans, it was found exposure to oil from the Deepwater Horizon resulted in increased mortality to cetaceans in the Gulf of Mexico (Deepwater Horizon Natural Resource Damage Assessment Trustees, 2016) and long-term population-level impacts to killer whales were linked to the Exxon Valdez tanker spill (Matkin, et al., 2008). Cetacean populations that reside within the EMBA may be susceptible to impacts if they interact with an area affected by a hydrocarbon spill. Such species are more likely to occupy coastal waters; refer to the 'Mainland and islands (nearshore waters)' section below for more information. Suitable habitat for oceanic toothed whales (e.g. sperm whales) and dolphins is broadly distributed throughout the region and, as such, impacts are unlikely to affect an entire population. Other species identified in Section 4.6.3 may also have transient interactions with the EMBA; refer to Table 4-9 for the list of receptor locations for cetaceans. Pygmy blue, humpback and southern right whales are known to migrate seasonally through the wider EMBA; however, the migration BIAs in the region for these species do not overlap the Operational area (refer to Figure 4-7 Figure 4-8 and Figure 4-9). A wellbore release in May to November would coincide with humpback whale migration through the waters off the Pilbara and the North West Cape. A wellbore release in April to August or October to January would coincide with pygmy blue whale migration along the Pilbara Coast. Pygmy blue, humpback and southern right whales are baleen whales, so are most likely to be significantly impacted by toxic effects when feeding.

Summary of potential impacts to environmental value(s)
However, feeding during migrations is low level and opportunistic, with most feeding occurring in the Southern Ocean. Pygmy blue and humpback whales are baleen whales, so are most likely to be significantly impacted by toxic effects when feeding. However, feeding during migrations is low level and opportunistic, with most feeding occurring in the Southern Ocean. Fresh hydrocarbons (i.e. typically in the vicinity of the release location) may have a higher potential to cause toxic effects when ingested, while weathered hydrocarbons are considered less likely to result in toxic effects. As such, the risk of ingestion of hydrocarbons is low. Pygmy blue, humpback and southern right whale migrations are protracted through time and space (i.e. the whole population will not be within the EMBA), and as such, a spill from a wellbore release is unlikely to affect an entire population. The humpback whale calving BIA in Camden Sound is not predicted to be contacted above threshold concentrations. Hydrocarbons above threshold levels are not predicted to extend into Exmouth Gulf, which is a resting BIA for humpback whales during their southern migration. Whilst dissolved hydrocarbons at the 10 ppb threshold may contact the southern right whale resting area, this area is a significant distance from the Operational Area (390 km south-west). In the event of a wellbore release, the spill may impact individual cetaceans that have direct contact with hydrocarbons within the spill-affected area, but the consequences to marine turtle populations are likely to be minor with some ability to recover over the short-term.
Marine turtles
Adult sea turtles exhibit no avoidance behaviour when they encounter hydrocarbon spills (Aichinger Dias, et al., 2017). Therefore, contact with surface slicks or entrained hydrocarbon can result in hydrocarbons adhering to body surfaces (Gagnon & Rawson, 2010) irritating mucous membranes in the nose, throat and eyes, leading to inflammation and infection (NOAA, 2010). Oiling can also irritate and injure skin, which is most evident on pliable areas such as the neck and flippers (Lutcavage, et al., 1995). A stress response associated with this exposure includes an increase in the production of white blood cells, and even a short exposure to hydrocarbons may affect the functioning of the salt gland (Lutcavage, et al., 1995). Hydrocarbons in surface waters may also impact turtles when they surface to breathe, as they may inhale toxic vapours. Their breathing pattern, involving large ‘tidal’ volumes and rapid inhalation before diving, results in direct exposure to petroleum vapours, which is the most toxic component of the hydrocarbon spill (Milton & Lutz, 2003). This can lead to lung damage and congestion, interstitial emphysema, inhalant pneumonia, and neurological impairment (Gagnon & Rawson, 2010). Contact with entrained hydrocarbons can result in hydrocarbons adhering to body surfaces, irritating mucous membranes in the nose, throat and eyes, and leading to inflammation and infection (NOAA, 2010). The Operational area are unlikely to represent important habitat for marine turtles as there is an absence of potential nesting or foraging habitat for turtles (i.e. no emergent islands, reef habitat or shallow shoals) and the water is deep (around 80 m to 130 m). Stochastic spill modelling indicates that while shoreline accumulation of hydrocarbons is not predicted, some marine turtle habitats may be exposed to entrained hydrocarbons and dissolved aromatic hydrocarbons above threshold concentrations. Therefore potential sublethal exposure risks may be present in the water column, particularly in nearshore foraging and internesting areas. It is acknowledged there are nesting and foraging sites along the mainland coast and islands of the region, and numerous BIAs and habitat critical areas overlap the EMBA (Section 4.6.2). There is also potential for marine turtles to be at submerged shoals such as Rankin Bank, which has the potential to be contacted by dissolved hydrocarbons above the threshold concentration. The shoals and banks may be foraging habitat for marine turtles, given the coral and filter feeding biota associated with these areas. In the event of a wellbore release, the spill may impact individual marine turtles that have direct contact with hydrocarbons within the spill-affected area, but the consequences to marine turtle populations are likely to be minor with some ability to recover over the short-term.
Sea snakes
Impacts to sea snakes from direct contact with hydrocarbons are likely to result in similar physical effects to those recorded for marine turtles. They may include damage to the dermis and irritation to mucus membranes of the eyes, nose and throat (International Tanker Owners Pollution Federation, 2011). They may also be impacted when they return to the surface to breathe and inhale the toxic vapours associated with the hydrocarbons, resulting in damage to their respiratory system. In general, sea snakes frequent the waters of the continental shelf area around offshore islands and potentially submerged shoals (water depths <100 m; see ‘Submerged shoals’ below). Though sea snakes may be in the Operational area and are in the wider EMBA, their abundance is not expected to be high in the deepwater and offshore environment. In the event of a wellbore release, the spill may impact individual sea snakes that have direct contact with hydrocarbons within the spill-affected area, but the consequences to marine turtle populations are likely to be minor with some ability to recover over the short-term.

Summary of potential impacts to environmental value(s)
Sharks, sawfish and rays
Hydrocarbon contact may affect whale sharks through ingesting entrained or dissolved hydrocarbons, particularly if feeding. The Operational area and EMBA overlap the whale shark foraging BIA identified in Section 4.6.1 and Figure 4-4, within which whale sharks are seasonally present between April and October. Impacts to sharks and rays may occur through direct contact with hydrocarbons, or through contamination of the tissues and internal organs, either through direct contact or through consuming prey. As gill-breathing organisms, sharks and rays may be vulnerable to toxic effects of dissolved hydrocarbons entering the body via the gills, and entrained hydrocarbons via coating of the gills, which inhibits gas exchange. Whale sharks are versatile feeders, filtering large amounts of water over their gills and catching planktonic and nektonic organisms (Jarman & Wilson, 2004). Whale sharks at Ningaloo Reef have been observed using two strategies: passive subsurface ram-feeding and active surface feeding (Taylor, 2007). Passive feeding involves swimming slowly at the surface with the mouth wide open. During active feeding, sharks swim high in the water, with the upper part of the body above the surface and the mouth partially open (Taylor, 2007). Individuals in the worst-affected spill areas could ingest toxic amounts of entrained or dissolved aromatic hydrocarbons into their body. Large amounts of ingested hydrocarbons may affect endocrine and immune systems in the longer term. The presence of hydrocarbons may displace whale sharks from the area where they normally feed and rest. Whale sharks may also be affected indirectly by surface, entrained or dissolved aromatic hydrocarbons by contaminating their prey. The preferred food of whale sharks are fish eggs and phytoplankton, which are abundant in the coastal waters of Ningaloo Reef in late summer and autumn, driving the annual arrival and aggregation of whale sharks in this area. If the spill event occurred during the spawning season, this important food supply (in worst spill-affected areas of the reef) may be diminished or contaminated. The contamination of their food supply and the subsequent ingestion of this prey by the whale shark may also result in long-term impacts from bioaccumulation. Other migratory and resident shark species, including oceanic whitetip (*Carcharhinus longim*anus), shortfin and longfin mako (*Isurus oxyrinchus, I. paucus*) and grey nurse (*Carcharias taurus*) sharks may occur within the EMBA (refer to Table 4-4). These species may be exposed to hydrocarbons through dermal contact, gill absorption, or ingestion of contaminated prey. The west coast population of grey nurse shark is listed as vulnerable and migratory, and while congregation or aggregation is known to occur within the EMBA, the likelihood of significant population-level impacts is low due to the transient nature of exposure and the ability of pelagic species to avoid surface slicks. Rays, including reef manta (*Mobula alfredi*) and giant manta (*M. birostris*), are also listed as migratory and are known to occur within the EMBA (refer to Table 4-4). These species may be exposed to hydrocarbons through dermal contact or ingestion during filter feeding. Sawfish species, including green (*Pristis zijsron*), dwarf (*P. clavata*) and freshwater (*P. pristis*), are listed as vulnerable and migratory and are known to occur within the EMBA (refer to Table 4-4). While these benthic species may be considered sensitive to sediment contamination, sediment quality is not expected to be significantly affected by a surface marine diesel release. Given the deep water depths of the Operational area (about 80 to 130 m), surface, entrained and dissolved hydrocarbons are confined to the upper layers of the water column and are not predicted to reach or accumulate in benthic sediments. Therefore, impacts to sawfish are expected to be limited to potential water column exposure and are predicted to be minor and temporary. In the event of a wellbore release, the spill may impact individual sharks, sawfish and rays that have direct contact with hydrocarbons within the spill-affected area, but the consequences to sharks, sawfish and rays populations are likely to be minor with some ability to recover over the short-term.
Seabirds and migratory shorebirds
Offshore waters in the EMBA are potential foraging grounds for seabirds associated with the coastal roosting and nesting habitat. There are confirmed foraging grounds off Ningaloo and the Barrow/Montebello/Lowendal Islands Group. Foraging and reproduction BIAs for multiple seabirds and migratory shorebirds overlap with the EMBA (see Section 4.6.4 and Table 4-13). Seabirds and migratory birds are particularly vulnerable to contact with floating hydrocarbons, which may mat feathers. This may lead to hypothermia from loss of insulation, and to ingestion of hydrocarbons when preening to remove hydrocarbons; both impacts could result in mortality (Hanson, et al., 2007). These floating hydrocarbons are expected to be confined to within 38 km of the release at the 10 g/m^2 threshold. Seabirds generally do not exhibit avoidance behaviour to floating hydrocarbons. Physical contact with surface slicks is by several exposure pathways, primarily immersion, ingestion and inhalation. Such contact with hydrocarbons could result in (AMSA, 2003; International Petroleum Industry Environmental Conservation Association (IPIECA), 2004): • plumage fouling and hypothermia (loss of thermoregulation) • decreased buoyancy and consequent increased potential to drown • inability to fly or feed • anaemia

Summary of potential impacts to environmental value(s)
• pneumonia • irritation of eyes, skin, nasal cavities and mouths. Seabirds generally do not exhibit avoidance behaviour to floating hydrocarbons; exposure may occur through immersion, ingestion or inhalation. Contact with hydrocarbons can result in plumage fouling, hypothermia, reduced buoyancy, impaired flight and feeding ability, and irritation of mucous membranes, with potential for mortality (AMSA, 2013; IPIECA, 2004). Longer-term impacts may include developmental abnormalities in chicks and reduced reproductive success. While the EMBA indicates surface hydrocarbons are confined to open water and do not contact shoreline receptors, the proximity of foraging BIAs suggests individual birds may be exposed during offshore feeding. However, given the localised nature of the spill and the limited spatial extent of surface hydrocarbons, impacts are expected to be short term and unlikely to affect population viability at the regional scale.
Summary of potential impacts to other species
Pelagic fish populations
Fish mortalities are rarely observed to occur as a result of hydrocarbon spills (International Tanker Owners Pollution Federation, 2011). This has generally been attributed to the possibility that pelagic fish can detect and avoid surface waters underneath hydrocarbon spills by swimming into deeper water or away from the affected areas. Fish that have been exposed to dissolved aromatic hydrocarbons can eliminate the toxicants once placed in clean water, so individuals exposed to a spill are likely to recover (King, et al., 1996). Where fish mortalities have been recorded, the spills (resulting from the groundings of the tankers Amoco Cadiz in 1978 and the Florida in 1969) have occurred in sheltered bays. Laboratory studies have shown adult fish can detect hydrocarbons in water at very low concentrations, and large numbers of dead fish have rarely been reported after hydrocarbon spills (Hjermann, et al., 2007). This suggests juvenile and adult fish can avoid water contaminated with high concentrations of hydrocarbons. However, sublethal impacts to adult and juvenile fish may be possible, given long-term exposure (days to weeks) to polycyclic aromatic hydrocarbon concentrations (Hjermann, et al., 2007), which are typically the most toxic components of hydrocarbons. Light molecular weight aromatic hydrocarbons (i.e. one- and two-ring molecules) are generally soluble in water, which increases bioavailability to gill-breathing organisms such as fish. The effects of exposure to oil on the metabolism of fish appears to vary according to the organs involved, exposure concentrations and route of exposure (waterborne or food intake). Oil reduces the aerobic capacity of fish exposed to aromatics in the water and, to a lesser extent, affects fish consuming contaminated food (Cohen, et al., 2005). The liver, a major detoxification organ, appears to be where anaerobic activity is most impacted, probably increasing anaerobic activity to help eliminate ingested oil from the fish (Cohen, et al., 2005). Fish are perhaps most susceptible to the effects of spilled oil in their early life stages, particularly during egg and planktonic larval stages, which can become entrained in spilled oil. Contact with oil droplets can damage feeding and breathing apparatus of embryos and larvae (Fodrie & Heck, 2011). The toxic hydrocarbons in water can result in genetic damage, physical deformities and altered developmental timing for larvae and eggs exposed to even low concentrations over prolonged timeframes (days to weeks) (Fodrie & Heck, 2011). More subtle, chronic effects on the life history of fish because of exposure in early life stages to hydrocarbons include disruption to complex behaviours such as predator avoidance, reproductive and social behaviour (Hjermann, et al., 2007). Prolonged exposure of eggs and larvae to weathered concentrations of hydrocarbons in water has also been shown to cause immunosuppression and to allow expression of viral diseases (Hjermann, et al., 2007). Polycyclic aromatic hydrocarbons have also been linked to increased mortality and stunted growth rates of early life history (pre-settlement) of reef fishes, as well as behavioural impacts that may increase predation of post-settlement larvae (Johansen, et al., 2017). However, the effect of a hydrocarbon spill on a population of fish in an area with fish larvae or eggs, and the extent to which any of the adverse impacts may occur, depend greatly on prevailing oceanographic and ecological conditions at the time of the spill and its contact with fish eggs or larvae. Demersal species are associated with the Ancient Coastline at 125 m Depth Contour KEF, which overlaps Operational Area Part 2. Additional KEFs that may host relatively diverse or abundant fish assemblages compared to the relatively featureless continental shelf habitats within the wider EMBA (see Section 4.7). Mortality and sublethal effects may impact populations located near a well release and within the EMBA for entrained or dissolved aromatic hydrocarbons. Additionally, if prey (infauna and epifauna) surrounding the well location and within the EMBA is contaminated, this can result in the absorption of toxic components of the hydrocarbons (polycyclic aromatic), potentially impacting fish populations that feed on these. Therefore, a worst-case hydrocarbon spill scenario has the potential to result in moderate, medium term impacts to pelagic fish species, with consequence severity dependent on the actual timing, duration and extent of a spill in relation to species' migratory movements and distributions.

Summary of potential impacts to environmental value(s)
Summary of potential impacts to other habitats and communities
Offshore reefs
The quantitative spill risk assessment indicates there is potential for coral reef habitat to be exposed to entrained and dissolved hydrocarbons at the Montebello Islands (Table 6-11), the EMBA also extends to the Ningaloo coast where there known coral reef habitat exist (Table 4-3). These locations support sensitive benthic and intertidal communities, including coral reef systems, macroalgae and associated invertebrate fauna. Floating hydrocarbons are not predicted to impact these locations or accumulate on submerged reef structures or shorelines. Potential impacts to reef-associated biota include physical coating of coral and algal surfaces, which may inhibit photosynthesis and gas exchange, leading to reduced growth or mortality. Sessile organisms such as sponges and soft corals may be affected by dissolved and entrained hydrocarbons through dermal absorption or clogging of feeding structures. Protected species inhabiting these reef systems may also be at risk, particularly if hydrocarbons interfere with feeding or reproductive processes. However, given the limited spatial extent and short duration of hydrocarbon exposure predicted by modelling, and the resilience of many reef communities, impacts are expected to be short term and unlikely to result in population-level effects. No shoreline contact is predicted, and receptors not fully emergent are not expected to accumulate hydrocarbons.
Benthic fauna communities
In the event of a wellbore release at the seabed, the stochastic spill model predicted hydrocarbons droplets would be entrained, rapidly transporting them to the sea surface. As a result, the low-sensitivity benthic communities at the well location are not expected to have widespread exposure to released hydrocarbons.
Shoals and banks
Shoals and banks may occur within the EMBA, including Rankin Bank and Wilcox Shoal (Table 6-11). These features typically support diverse benthic communities, including macroalgae, demersal fish species, and hard and soft corals, and may serve as important habitat and feeding grounds. While hydrocarbons are not predicted to accumulate on submerged receptors, transient exposure to surface slicks may result in short-term ecological stress, particularly for emergent or shallow reef structures. Exposure to entrained hydrocarbons has the potential to result in lethal or sublethal toxic effects to corals and other sensitive sessile benthos in the upper water column, including subtidal corals. Mortality in some coral species is possible and would result in reduced coral cover and a change in the composition of coral communities. Sublethal effects to corals may include polyp retraction, changes in feeding, bleaching (loss of zooxanthellae) and increased mucous production, resulting in reduced growth rates and impaired reproduction (Negri & Heyward, 2000). In the unlikely event of a wellbore release occurring at the time of coral spawning at potentially affected coral locations, or in the general peak period of biological productivity, there is potential for a reduction in successful fertilisation and coral larval survival due to the sensitivity of coral in early life stages to hydrocarbons (Negri & Heyward, 2000). Such impacts are likely to result in failure of recruitment and in settlement of new population cohorts. Some non-coral species may also be affected via direct contact with entrained hydrocarbons, resulting in sublethal impacts and in some cases mortality. This is particularly for the early life stages of coral reef animals (reef-attached fishes and reef invertebrates), which can be relatively sensitive to hydrocarbon exposure. Coral reef fish are site-attached and have small home ranges; as reef residents, they are at higher risk from hydrocarbon exposure than non-resident, more wide-ranging fish species. The exact impact on resident coral communities will depend on actual hydrocarbon concentration, duration of exposure and water depth of the affected communities.
Key ecological features
KEFs potentially impacted by the hydrocarbon spill from a wellbore release are detailed in Section 4.7. Although these KEFs are primarily defined by seabed geomorphological features, they can indicate a potential for increased biological productivity and, therefore, ecological significance. The consequences of a hydrocarbon spill from a wellbore release event are predicted to result in minor impacts to values of the KEFs affected (for the values of each KEF, see Section 4.7 and the Master Existing Environment, (Appendix I). Impacts to benthic habitats are not predicted, as the maximum depth of entrained hydrocarbons above impact threshold is predicted to be 20 m beyond the immediate source. Potential impacts to associated pelagic communities may occur as described above. The KEFs within the EMBA have relatively broad-scale distributions and are unlikely to be significantly impacted. Given the broad spatial extent of most KEFs and the limited duration and footprint of hydrocarbon exposure, impacts are expected to be minor and temporary. The greatest potential for ecological effects is predicted to occur closest to the release location, with no long-term or population-level impacts anticipated.

Summary of potential impacts to environmental value(s)
Summary of potential impacts to air quality
A hydrocarbon release during a wellbore release could result in a short-term reduction in air quality. There is potential for human health effects on workers in the immediate vicinity of atmospheric emissions. The ambient concentrations of VOCs released from diffuse sources are difficult to accurately quantify, although their behaviour and fate is predictable in open offshore environments, as VOC emissions disperse rapidly by meteorological factors such as wind and temperature. VOC emissions from a hydrocarbon release in such environments are rapidly degraded in the atmosphere by reacting with photochemically-produced hydroxyl radicals. Given the highly unlikely likelihood of occurrence of a wellbore release, the temporary nature of any VOC emissions (from either gas surfacing or weathering of liquid hydrocarbons from a wellbore release), the predicted behaviour and fate of VOCs in open offshore environments, and the significant distance from the Operational area to the nearest sensitive airshed (town of Dampier, about 120 km away), a worst-case hydrocarbon spill scenario has the potential to result in minor, short-term impacts to air quality within the EMBA, with impacts predicted to be greatest for areas closest to the potential release location.
Summary of potential impacts to protected areas
The quantitative spill risk assessment results indicate the open-water environment protected within the Montebello AMP may be contacted (refer to Table 6-11), a number of other AMP are also within the EMBA (refer to Table 4-16). In the remote likelihood of a major spill occurring, entrained or dissolved hydrocarbons may contact the identified key receptor locations of islands and mainland coastlines, resulting in the actual or perceived contamination of protected areas as identified for the EMBA. Impact on the protected areas is discussed in the sections above for ecological values and sensitivities, and below for socioeconomic values. Additionally, such hydrocarbon contact may alter stakeholder understanding or perception of the protected marine environment, as these represent areas largely unaffected by anthropogenic influences and contain biologically diverse environments.
Summary of potential impacts to socio-economic value(s)
Fisheries – commercial
Fish exposure to hydrocarbons can result in ‘tainting’ of their tissues. Even very low levels of hydrocarbons can impart a taint or ‘off’ flavour or smell in seafood. Tainting is reversible through the process of depuration, which removes hydrocarbons from tissues by metabolic processes, although it depends upon the magnitude of the hydrocarbon contamination. Fish have a high capacity to metabolise these hydrocarbons while crustaceans (such as prawns) have a reduced ability (Yender, et al., 2002). Seafood safety is a major concern associated with spill incidents. Therefore, actual or potential contamination of seafood can affect commercial and recreational fishing and can impact seafood markets long after any actual risk to seafood from a spill has subsided (Yender, et al., 2002). A spill would result in establishing an exclusion zone around the spill-affected area. There would be a temporary prohibition on fishing activities for a period and subsequent potential for economic impacts to affected commercial fishing operators. Lethal and sublethal effects may impact localised populations of targeted species within the EMBA for entrained or dissolved hydrocarbons. However, entrained hydrocarbons are likely to be confined in the upper water column; therefore, demersal species are less likely to be exposed to hydrocarbons than pelagic species. The predicted EMBA resulting from a wellbore release may impact on Commonwealth and State fisheries identified in Table 4-23 as having a potential for interaction.
Tourism, including recreational activities
Whilst tourism operators have been recorded in the Operational Area (refer to Section 4.9.4), the Operational area are considered too far offshore for significant recreational fishing or tourism activities. However, some tourism activities may occur at the remote offshore islands, reefs and nearshore waters within the EMBA. These activities are expected to be exclusively nature-based tourism. Thus, impacts to the environmental values from a spill event may impact upon tourism activities. Recreational angling activities include shore-based fishing, private boat and charter boat fishing, with peak activity between April and October (Smallwood, et al., 2011) for the Exmouth region. Limited recreational fishing takes place in the offshore waters of the Operational area. Impacts on species that are recreationally fished are described above under ‘Summary of potential impacts to other species’. Impacts to tourism activities are expected to be minor based on the likelihood and nature of contact to environmental values that support tourism activities. Impacts to these values may result in displacement of tourism activity, and potentially minor loss of revenue for tourist operators (e.g. charter fishing cancellations due to fishery closures).

Summary of potential impacts to environmental value(s)
Offshore oil and gas infrastructure
The Operational area are within a region of established oil and gas operations, with additional infrastructure in the broader NWS region. Figure 4-16 shows the facilities, assets and infrastructure overlapping the Operational area and wider region. Avoidance of surface hydrocarbons is a possible response by other vessels. However, such occurrences will likely be limited to proximity to the release site, and other oil and gas activities are unlikely to be impacted.
Cultural features and heritage values
A search of the Australasian Underwater Cultural Heritage Database, which records all known Maritime Cultural Heritage (shipwrecks, aircraft, relics and other UCH) in Australian waters, indicated there are no sites within 10 km of the Operational area and numerous sites within the EMBA (Section 4.9.1.8). Shipwrecks occurring in the subtidal zone will be exposed to entrained and dissolved hydrocarbons, and marine life that shelter and take refuge in and around these wrecks may be affected by in-water toxicity of dispersed hydrocarbons. The consequences of such hydrocarbon exposure may include large fish species moving away, and resident fish species and sessile benthos such as hard corals exhibiting sublethal and lethal impacts (which may range from physiological issues to mortality). Operational areaThe Ningaloo Coast World Heritage place is located in the EMBA (Section 4.9.1.9). Potential impacts to the features of this place are discussed in the sections above. Woodside has extensively consulted with Traditional Custodian groups as described in Section 5 to identify environmental values of cultural interest, as specified in Section 4.9.1. Any cultural values linked to environment receptors have been assessed above. Refer to Section 6.9 for a further assessment of potential impacts to cultural features and heritage values from the Petroleum Activity.
Summary of potential impacts described above
In the highly unlikely event of a major hydrocarbon spill due to a wellbore release, the EMBA includes the areas listed in Table 6-11, including the Montebello AMP. Impacts on the values of the AMPs within the EMBA (identified in Table 4-16) are discussed in the relevant sections above. Additionally, such hydrocarbon contact may alter stakeholder understanding or perception of the protected marine environment, given these represent areas largely unaffected by anthropogenic influences and contain biologically diverse environments.

Demonstration of acceptability	
Acceptability criteria and assessment	***Acceptability statement***
Principles of ESD The impact assessment has considered the relevant principles of ESD: • The conservation of biological diversity and ecological integrity should be a fundamental consideration in decision making. • The principle of inter-generational equity – that the present generation should ensure the health, diversity and productivity of the environment is maintained or enhanced for the benefit of future generations. • Decision-making processes should effectively both long-term and short-term economic, environmental, social and equitable considerations. ***Internal context*** The Petroleum Activity is consistent with Woodside corporate policies, culture, processes, standards, structure and systems as outlined in the demonstration of ALARP and adopted EPO, including: • Woodside Environment and Biodiversity Policy (Appendix A) • Woodside Risk Management Policy (Appendix A). ***External context*** Woodside has considered feedback from relevant persons during the impact assessment (Section 5). During stakeholder consultation with relevant persons, Department of Transport (superseded by	The predicted level of risk from a wellbore release to ecosystems, species, habitat or physical or biological attributes from a loss of marine diesel from a vessel collision is considered an acceptable level (consequence level M – Moderate), given: • Petroleum Activity is consistent with the relevant principles of ESD • proposed controls have considered the environmental consequence and are consistent with Woodside's policies, procedures and standards • feedback from stakeholders has been considered • legislative requirements and industry standards have been adopted • the Petroleum Activity will be managed in a manner that is consistent with management objectives for relevant World Heritage areas, AMPs, recovery plans and conservation plans/advice • predicted level of impact has been reduced to ALARP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Department of Transport and Major Infrastructure (DTMI)) and AMSA (Marine Pollution)) asked to be consulted on oil spill risks with a potential to impact State waters. Woodside provided a copy of the First Strike Plan to DTMI. No additional questions or concerns relating to a hydrocarbon spill resulting from a wellbore release were raised during stakeholder engagement. ***Other requirements*** The impact assessment has been informed by risk-based analysis, including hydrocarbon spill modelling. The proposed control measures are consistent with industry legislation, codes and standards, good practice and professional judgement, including: • American Petroleum Institute Standard 53 for subsea blowout preventer function testing • OPGGS (Resource Management and Administration) Regulations 2025 to have an accepted WOMP and application to permanently plug for abandonment of the wells • NOPSEMA to be notified of reportable and recordable incidents, if required, in accordance with Section 7.11.4 The EMBA overlaps BIAs for threatened and migratory species, as well as State and Commonwealth marine protected areas. The residual risk of accidental loss of marine diesel from a vessel collision is not inconsistent with the relevant objectives and actions of any applicable recovery plans or threat abatement plans. Regard has been given to relevant conservation advice and wildlife conservation plans when assessing potential impacts. As demonstrated in Section 6.8, the Petroleum Activity is not considered to be inconsistent with the overall recovery objectives and actions of these recovery plans and conservation advice.	***Environmental performance consideration*** To manage an accidental hydrocarbon release as a result of a wellbore release to ecosystems, species, habitat or physical or biological attributes to an acceptable level, the following EPO has been applied: • EPO 9: No release of hydrocarbons to the marine environment due to wellbore release. The adopted controls are considered appropriate to manage the risks of the Petroleum Activity and compliance with those controls is considered to demonstrate the EPO has been met.

Hydrocarbon release to the marine environment due to a vessel collision (between project vessels or a third party)		X		X	X	X	A	D	1	M	LCS GP PJ	Acceptable if ALARP	EPO 10

Description of source of risk

The temporary presence of the LWIV and support vessels in the Operational area could result in a navigational hazard for commercial shipping within the immediate area. This navigational hazard could result in a vessel collision and a spill of hydrocarbons if it causes a fuel tank rupture.

Vessels have multiple isolated marine diesel tanks throughout their hulls. The total storage capacity of support vessels used for the Petroleum Activity can be 500 to 1,000 m³, with isolated tanks ranging from 22 to 250 m³. An LWIV can have a total marine diesel storage capacity of more than 2,000 m³, with isolated tanks ranging in size from 50 to 165 m³.

In the unlikely event of a vessel collision involving a vessel during the Petroleum Activity, the vessel will have the capability to pump marine diesel from a ruptured tank to a tank with spare volume to reduce the potential volume of fuel released to the environment.

Industry experience

Registered or foreign flag vessels in Australian waters are required to report events to the Australian Transport Safety Bureau, AMSA or Australian Search and Rescue.

From a review of Australian Transport Safety Bureau's marine safety and investigation reports, one vessel collision occurred in 2011–2012 that spilled 25 to 30 L of oil into the marine environment as a result of a collision between a tug and an activity support vessel off Barrow Island. Two other vessel collisions occurred in 2010, one in the port of Dampier, where a support vessel collided with a barge being towed. Minor damage was reported and no significant injury to personnel or pollution occurred. The second 2010 collision involved a vessel under pilot control in port that connected with a vessel alongside a wharf, causing it to sink. No reported pollution resulted from the sunken vessel. These incidents demonstrate the likelihood of only minor volumes of hydrocarbons being released during the highly unlikely event of a vessel collision.

From 2010 to 2011, Australian Transport Safety Bureau's annual publication defines the individual safety action factors identified in marine accidents and incidents: 42% related to navigation action. Of those, 15% related to poor communication and 42% related to poor monitoring, checking and documentation. Most of these related to grounding, which is deemed not credible for this Petroleum Activity.

Credible spill scenario

For a vessel collision to result in the worst-case scenario of a hydrocarbon spill potentially impacting an environmental receptor, several factors must align:

- The identified causes of vessel interaction must result in a collision.
- The collision must have enough force to penetrate the vessel hull.
- The collision must be in the exact location of the fuel tank.
- The fuel tank must be full, or at least at a volume that is higher than the point of penetration.

The probability of these factors aligning to result in a breach of fuel tanks, resulting in a spill that could potentially affect the marine environment, is considered highly unlikely. Given the offshore location of the Operational area, vessel grounding is not considered a credible risk.

The environmental risk analysis identified and assessed two potential scenarios that could result in a loss of vessel structural integrity, resulting in damage to fuel storage tank(s) and a loss of marine diesel to the marine environment. The scenarios considered damage to single and multiple fuel storage tanks in a project vessel due to combinations of vessel-to-vessel collision scenarios.

The scenarios considered comprised a collision of the project vessels with each other or with a third-party vessel (i.e. commercial shipping, other petroleum-related vessels and commercial fishing vessels). The likelihood of a collision was assessed as being highly unlikely, given the standard vessel operations and equipment in place to prevent collision at sea, the standby role of a support vessel (low vessel speed) and its operation near the LWIV (exclusion areas), and the construction and placement of storage tanks. For the purposes of this assessment, a worst-case instantaneous loss of 250 m³ from a tank on the Offshore Support Vessel has been considered. Potential credible hydrocarbon spill scenarios as a result of vessel collision are summarised in Table 6-12.

Table 6-12: Summary of credible hydrocarbon spill scenario as a result of vessel collision

Scenario	Hydrocarbon volumes	Preventative and mitigation controls	Credibility	Max. possible volume loss
Breach of support vessel fuel tanks due to vessel collision	Offshore Support Vessels have multiple marine diesel tanks typically ranging between 22 to 105 m³ each General Support Vessel have multiple marine diesel tanks typically ranging between 22-105 m³ each.	Typically, double wall tanks that are located midship (not bow or stern) Support vessels are not anchored and steam at low speeds when relocating within the Operational area or providing standby cover. Normal maritime procedures would apply during such vessel movements.	**Credible – Worst Case from an Offshore Support Vessel** A vessel collision could result in a release from a support vessel fuel tank	250 m³ instantaneous
Breach of LWIV fuel tanks due to vessel collision	The LWIV has multiple isolated tanks; the largest volume of a single tank is unlikely to exceed 165 m³	Tank locations midship (not bow or stern). LWIV will be holding station during the Petroleum Activity when undertaking LWI.	**Credible** A vessel collision could result in a release from an LWIV fuel tank	165 m³ instantaneous

Quantitative hydrocarbon risk assessment

To inform the impact assessment, quantitative hydrocarbon spill modelling is referenced for the worst-case hydrocarbon release scenario.

Modelled credible scenario

Spill modelling of an instantaneous 250 m³ surface release of marine diesel within Operational Area Part 1 (the CK4 well location) was undertaken by RPS (2025). Given the distance of the wells to one another (2 km to 16 km from one another) and similar water depths and sensitivities, the modelling is considered representative of a spill at any of the Operational area. The modelled volume is greater than the largest volume of a single tank on the support vessel and is therefore considered conservative to inform the impacts from a vessel collision.

Modelling was undertaken over all seasons to address the potential for the activity timing over any time of year. The overall EMBA for the scenario is based on stochastic modelling, which compiles data from 200 hypothetical worst-case spills under various weather and metocean conditions. This is considered to provide a conservative estimate of the EMBA and the potential impacts from the identified worst-case credible release volumes for loss of containment scenarios.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Refer to Section 6.7.1 for the quantitative spill risk assessment methodology and Section 6.7.1.4.2 for a description of marine diesel characteristics used to model this scenario.

Consequence assessment
Environmental value(s) potentially impacted
Environment that may be affected
The overall EMBA for the Petroleum Activity is based on stochastic modelling, which compiles data from multiple hypothetical worst-case spill simulations under a variety of weather and metocean conditions (as described in Section 6.7.1).
As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean transport mechanism, a different area is discussed for each hydrocarbon fate. These fates have been outlined below.
Surface hydrocarbons
The modelling indicates the spill would be localised and confined to open water, extending to about 13 km (at or above the 10 g/m² impact threshold) from the release location.
Sociocultural hydrocarbon thresholds for surface hydrocarbons, which include the threshold for visible surface hydrocarbons of 1 g/m², may extend to about 63 km from the release site.
Sensitive receptors are not predicted to be contacted by surface hydrocarbons above reported thresholds.
Entrained hydrocarbons
The modelling indicates entrained hydrocarbons at the ecological threshold of 1,000 ppb threshold are predicted to extend 16 km from the release site
Sensitive receptors are not predicted to be contacted by ecological threshold above reported thresholds.
Dissolved hydrocarbons
The modelling indicates dissolved hydrocarbons at the ecological threshold of 10 ppb could potentially occur up to 50 km from the release location.
Sensitive receptors are not predicted to be contacted by dissolved hydrocarbons above reported thresholds.
Accumulated hydrocarbons
Accumulated hydrocarbons above threshold concentrations (100 g/m²) were not predicted by the modelling. Floating oil at concentrations equal to or greater than 1 g/m² are not predicted to contact any shoreline receptors.
Consequence assessment summary
Modelling indicates the spill will remain offshore and are not predicted to contact sensitive receptors (e.g. Marine Parks). The potential biological and ecological impacts of an accidental hydrocarbon release as a result of a vessel collision during the Petroleum Activity are presented in the next sections.

Consequence assessment
Summary of potential impacts to protected species, other habitats and communities, water quality and socioeconomic values
Modelling of a 250 m³ release of marine diesel spill due to vessel collision predicts that no receptors will be contacted by accumulated oil concentrations equal to or greater than 100 g/m² (ecological threshold), and no receptors will be contacted by accumulated oil concentrations equal to or greater than 10 g/m² (sociocultural threshold). No receptors will be contacted by surface hydrocarbon concentrations equal to or greater than 10 g/m² (ecological threshold), and no receptors will be contacted by surface oil concentrations equal to or greater than 1 g/m² (sociocultural threshold). The potential impacts of spilled hydrocarbons to species (protected and otherwise), marine primary producers, other habitats and communities, water quality, marine sediment quality, air quality, protected areas and socioeconomic values are described in Section 6.7.2. The wellbore release EMBA is larger spatially than the vessel collision EMBA; therefore, the potential impacts of entrained hydrocarbons provided in Section 6.7.2, and the scale of impact described, provides a conservative assessment for potential impacts of a 250 m³ release of marine diesel. Impacts specific to a spill of marine diesel are summarised below. It is noted the toxic components in marine diesel include alkylated naphthalenes, which can be rapidly accumulated by marine biota, including invertebrates such as marine oysters, clams, shrimp, as well as a range of vertebrates, such as finfish. Marine diesel also contains additives that contribute to its toxicity. Given the localised area of the potential EMBA and the rapid dispersion, dilution and weathering of a marine diesel spill, it is expected any potential impacts will be low magnitude and temporary in nature. ***Protected species*** As identified in Section 4.6.3, protected species including migrating pygmy blue whales and humpback whales may be encountered within the Operational area, and therefore could be impacted near the marine diesel spill location, where the volatile, water soluble and most toxic components of the diesel may be present. However, the window for exposure to hydrocarbons with the potential for any toxicity effects in these waters would be limited to a few days after the spill. Potential impacts may include behavioural impacts (e.g. avoidance of impacted areas), sub-lethal biological effects (e.g. skin irritation, irritation from ingestion or inhalation, reproductive failure) and, in rare circumstances, organ or neurological damage leading to death. Given the absence of critical habitats or aggregation areas, cetaceans in the area are expected to be transient, and impacts are expected to be limited to individuals or small groups of animals. Impact on the overall population viability of cetaceans is not predicted. No BIAs or habitat critical to the survival of turtles overlap the Operational area (Section 4.6.1.1) and the Operational area are unlikely to represent an important habitat for marine turtles due to the absence of potential nesting or foraging habitat (i.e. no emergent islands, reef habitat or shallow shoals) and the water is deep (~80 m to 130 m). In the event of a worst-case vessel spill of marine diesel, there is a potential that surface and entrained hydrocarbons exceeding impact threshold concentrations (10 g/m² and 100 ppb respectively) will be in offshore waters, extending up to 13 km and 173 km respectively, from the release site. Toxicity of hydrocarbons will be significantly reduced by weathering over such distances, with the volatile and water-soluble (often the most toxic) components expected to have dissipated beyond the vicinity of the spill site. Dissolved aromatic hydrocarbons at concentrations equal to or greater than the 10 ppb threshold are predicted to be limited to within 50 km of the spill site. Low concentrations are only capable of causing sublethal impacts to the most sensitive marine organisms and no lethal or sub-lethal impacts to marine turtles are expected in the BIAs near the Operational area (as identified in Table 4-7). The potential for lethal and sub-lethal impacts to marine turtles is limited to small numbers of transient individuals that may be in offshore waters near the release location. Seabirds may also be exposed to marine diesel on the sea surface or upper water column, if resting or foraging in waters near the spill. Impacts may include mortality due to oiling of feathers or the ingestion of hydrocarbons. However, due to the limited spatial extent of a marine diesel spill and limited window for exposure, population-level impacts are not expected. Other protected species that may occasionally transit through the area, and may potentially be exposed to a marine diesel spill, include shark and ray species such as whale sharks and manta rays. Impacts are again predicted to be limited to a small number of animals, given the low numbers of animals that may transit through the area during the short period when spilled hydrocarbons are present. Given the limited number of animals that may be impacted and the rapid dispersion of marine diesel, it is considered any potential impacts will be minor. ***Other habitats, species and communities*** Within the EMBA for a marine diesel spill resulting from a vessel collision, there is the potential for plankton communities to potentially be impacted where entrained or dissolved hydrocarbon threshold concentrations are exceeded. A range of lethal and sublethal impacts may occur to plankton exposed to entrained or dissolved hydrocarbons within the EMBA. Communities are expected to recover quickly (weeks/months) due to high population turnover. It is therefore considered any potential impacts would be low magnitude and temporary in nature.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Pelagic fish populations in the open water offshore environment of the EMBA are highly mobile and are able to move away from a marine diesel spill. The spill-affected area would be confined to the surface layer and upper 20 to 30 m of the water column. It is therefore unlikely fish populations would be exposed to widespread hydrocarbon contamination. Pelagic fish populations are distributed over a wide geographical area so impacts on populations or species level are considered negligible. Combined with these factors and the rapid dispersion of marine diesel, it is considered any potential impacts will be minor.

Other communities (e.g. demersal fish, benthic infauna and epifauna) and key sensitivities (e.g. KEFs identified in Section 4.7) occur within the EMBA; however, they will not be directly exposed or impacted by a marine diesel spill as hydrocarbons are confined to the upper layers of the water column.

Water quality

It is likely water quality will be reduced at the release location of the spill; however, such impacts to water quality would be temporary and localised in nature due to the rapid dispersion and weathering of marine diesel. The potential impact is therefore expected to be low.

Protected areas

Hydrocarbons at or exceeding impact thresholds are not predicted to contact protected areas.

Cultural values and heritage

Woodside has extensively consulted with Traditional Custodian groups as described in Section 5 to identify environmental values of cultural interest, as specified in Section 4.9.1. Any cultural values linked to environment receptors have been assessed above. Refer to Section 6.9 for a further assessment of potential impacts to cultural features and heritage values from the Petroleum Activity.

Socioeconomic

A marine diesel spill is considered unlikely to cause significant direct impacts on the target species fished by Commonwealth and State fisheries (see Table 4-23) that overlap with the EMBA. The fisheries that operate within the EMBA predominantly target demersal fish species (demersal finfish and crustaceans) that inhabit waters in the range of >60 to 200 m depth, or pelagic species that are highly mobile. Therefore, a marine diesel spill is expected to only result in negligible impacts, considering hydrocarbons are confined to the upper layers of the water column. Visible surface hydrocarbons at or exceeding 1 g/m² may also occur up to 63 km from the release site, which may result in fouling of fishing gear and a perception of impacts to fish stocks by fisheries stakeholders and the public. There is the potential that a fishing exclusion zone would be applied in the area of the spill, which would put a temporary ban on fishing activities and potentially lead to subsequent economic impacts on commercial fishing operators if they were planning to fish within it. Such measures would likely be in place for less than a week and would not result in widespread or long-term impacts to fishing activities.

Summary of potential impacts to environmental values

In the unlikely event of an unplanned hydrocarbon release to the marine environment due to vessel collision, combined with the adopted controls, it is considered any potential impact to water quality would be minor, localised and temporary in nature compared to background levels and international standards, with localised and temporary impacts to habitats, populations and shipping or fishing concerns.

The highest environmental consequence identified for assessing an unplanned hydrocarbon release to the marine environment due to vessel collision, is defined as D, which equates to minor impact on environmental features of low significance with some ability to recover.

policies, culture, processes, standards, structure and systems as outlined in the demonstration of ALARP and adopted EPO, including: • Woodside Environment and Biodiversity Policy (Appendix A) • Woodside Risk Management Policy (Appendix A). ***External context*** Woodside has considered feedback from relevant persons during the impact assessment (Section 5). As requested during consultation, controls have been adopted to inform other users of the presence of the project vessels during the Petroleum Activity and reduce the potential for vessel collision, including notifications to AHO and AMSA ***Other requirements*** The EMBA overlaps BIAs for threatened and migratory species, as well as State and Commonwealth marine protected areas. The residual risk of accidental loss of marine diesel from a vessel collision is not inconsistent with the relevant objectives and actions of any applicable recovery plans or threat abatement plans. Regard has been given to relevant conservation advice and wildlife conservation plans when assessing potential impacts. As demonstrated in Section 6.8, the Petroleum Activity is not considered to be inconsistent with the overall recovery objectives and actions of these recovery plans and conservation advice.	relevant World Heritage areas, AMPs, recovery plans and conservation plans/advice • predicted level of impact has been reduced to ALARP. ***Environmental performance consideration*** To manage impacts from an accidental marine diesel release as a result of vessel collision to ecosystems, species, habitat or physical or biological attributes to an acceptable level, the following EPO has been applied: • EPO 10: No release of hydrocarbons to the marine environment due to a vessel collision during the Petroleum Activity. The adopted controls are considered appropriate to manage the risks of the Petroleum Activity and compliance with those controls is considered to demonstrate the EPO has been met.

EPOs, EPSs and MC			
EPOs	***Controls***	***Performance standards***	***Measurement criteria***
EPO 10 No release of hydrocarbons to the marine environment due to a vessel collision during the Petroleum Activity.	C 10.1 Comply with Marine Order 30 (Prevention of collisions), including: • adherence to steering and sailing rules, including maintaining lookouts (e.g. visual, hearing, radar), proceeding at safe speeds, assessing risk of collision, and acting to avoid collision (monitoring radar) • adherence to navigation light display requirements, including visibility, light position and shape appropriate to the Petroleum Activity • adherence to navigation noise signals as required.	PS 10.1.1 Project vessels compliant with Marine Order 30 (Prevention of collisions), which requires vessels to always be visible.	MC 10.1.1 Marine assurance inspection records demonstrate compliance with standard maritime safety procedures (Marine Orders 21, 27 and 30).
	C 10.2 Comply with Marine Order 27 (Safety of navigation and radio equipment), including: • navigational systems and equipment mentioned in regulations 19 and 20 of Chapter V of SOLAS for the vessel are type-approved and installed aboard vessels	PS 10.2.1 Project vessels compliant with Marine Order 27 (Safety of navigation and radio equipment).

6.7.4 Unplanned discharges: hydrocarbon and chemical spills from vessel and subsea activities

Context		
Subsea intervention activities – Section 3.5 Project vessels – Section 3.6	Physical environment – Section 4.4 Protected species – Section 4.6	Stakeholder consultation – Section 5

Risk evaluation summary

Source of risk	***Environmental value potentially impacted***						***Evaluation***						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socioeconomic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Accidental discharge of hydrocarbons or chemicals from vessel deck activities and equipment, from subsea ROV hydraulic leaks (typically <100 L)		X			X		A	F	2	L	LCS GP PJ	Broadly acceptable	EPO 11
Minor releases during chemical transfers from support vessels to the LWIV		X			X		A	F	2	L			

Description of source of impact

LWIV, support vessels and ROV operations

Deck spills can result from spills of stored hydrocarbons and chemicals or equipment. Project vessels typically store hydrocarbons and chemicals in various volumes (20 L, 205 L; up to about 4,000 to 6,000 L). Storage areas are typically set up with effective primary and secondary bunding to contain any deck spills. Releases from equipment are predominantly from the failure of hydraulic hoses, which can either be located within bunded areas or outside of bunded or deck areas (e.g. over water on cranes). Operational area

Chemicals that will be used and may be accidentally released include:

- non-process chemicals (maintenance and cleaning chemicals)
- non-process hydrocarbons – i.e. hydraulic fluids used in machinery (including cranes, winches, ROVs), small volumes of fuel.

Non-process chemicals

Non-process chemicals, such as wash chemicals, cleaning chemicals, maintenance and solvents, are generally held onboard in low quantities (typically <50 L containers) and are within chemical cabinets or bunded storage areas on the LWIV and support vessels. Non-process chemical spills may result from human error or damage to a chemical container during handling. Spills are generally captured by the drain system and routed to a holding tank for treatment or disposal onshore. If a spill is not contained on deck or within a bunded area, there would be a release to the marine environment of up to 50 L.

Non-process hydrocarbons

Woodside's operational experience demonstrates spills are most likely to originate from hydraulic hoses and have been less than 100 L, with an average volume <10 L.

Non-process hydrocarbons (hydraulic fluids) are used in hydraulic-powered machinery, such as winches, cranes and ROVs, and are hydrocarbon-based with added chemical component additives. Unplanned discharges are predominantly due to failure of hydraulic hoses or minor leaks from process components or spills during periodic refuelling of hydraulic hoses. Spills or leaks from hydraulic hoses are usually very small volumes (about 1 L) and are typically contained within a bunded or drained area under the equipment mounted on deck. These small on-deck spills

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

are unlikely to reach the marine environment. A burst hydraulic hose on an extended crane could potentially result in hydraulic fluid being sprayed in a fine jet out over the water. However, this would only result in a small volume (about 25 L) being released, due to the small capacity of hydraulic hoses.

The ROV hydraulic fluid is supplied through hoses containing about 20 L of fluid. Hydraulic lines to the ROV arms and other tooling may become caught, resulting in minor leaks to the marine environment. Small-volume hydraulic leaks may occur from equipment operating via hydraulic controls subsea (subsea control fluid).

Hydraulic fluids are medium oils of light to moderate viscosity. They have a relatively rapid spreading rate and will dissipate quickly, particularly in high sea states. Lubricating oils may also be held onboard, typically stored with the non-process chemicals and held in low quantities. These hydrocarbons are more viscous, so in an unplanned discharge the spreading rate of a slick of these oils would be slightly slower.

Woodside's operational experience demonstrates spills are most likely to originate from hydraulic hoses and have been less than 100 L, with an average volume <10 L.

Consequence assessment

Environmental value(s) potentially impacted

Water quality

No significant impacts from the accidental discharges described are anticipated in the deepwater, offshore locations of the Operational area because of the minor quantities involved, the limited duration of activities during the Petroleum Activity (refer to Section 3.4), and high level of dilution into the open water marine environment of the Operational area. The potential impact to water quality will be localised and of no lasting effect.

Unplanned discharges of non-process chemicals or hydrocarbons may temporarily reduce water quality in the immediate vicinity of the release point. However, given the very small volumes, short duration, and the low sensitivity of the receiving environment within the Operational area, any reduction in water quality would be temporary and of no lasting effect.

Marine Sediments

Accumulation of contaminants in sediments depends primarily on the volume and concentration of particulates in discharges or constituents that adsorb onto seawater particulates, the area over which those particulates could settle onto the seabed (dominated by current speeds and water depths), and the resuspension, bioturbation, and microbial decay of those particulates in the water column and on the seabed.

Given the unplanned discharges are expected to rapidly mix in the water column and become diluted, accumulation in sediments at a measurable level is not expected to occur.

Marine fauna

As a result of a change in water quality, further impacts to receptors may occur, which include injury or mortality to marine fauna resulting from exposure to toxins in the released chemicals and hydrocarbons. As surface discharges are rapidly dispersed, and subsea discharges would be of very small volumes, potential impacts would be highly localised and temporary. The likelihood of ecological impacts to marine fauna (including protected species), other communities and habitats will be limited to no lasting effect and restricted to individual animals.

Key Ecological Features

Although the Ancient Coastline at 125 m Depth Contour KEF overlaps Operational Area Part 2, the values and sensitivities of this KEF occur on a broad scale outside of Operational Area Part 2. As described in the consequence evaluation above, the discharge of LWI discharges within the Operational area is not expected to result in a lasting effect to water quality, and no change in sediment quality is predicted. Therefore these discharges are unlikely to cause a change in habitats or communities at a measurable level and will not change the viability of the population or ecosystem.

	equipment requiring use of hydrocarbons and chemicals, and can result in increased risk of leaks from transfers via hose or smaller containers. CS: Not considered – control not feasible.			
A reduction in the volumes of chemicals and hydrocarbons stored onboard the LWIV and support vessels.	F: Yes. Increases the risks associated with transportation and lifting operations. CS: Project delays if required chemicals are not on board. Increases the risks associated with transportation and lifting operations.	No reduction in likelihood or consequence since chemicals will still be needed to enable activities.	Disproportionate – cost/sacrifice outweighs benefit to be gained.	No
ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts and risks associated with unplanned deck and subsea spills. As no reasonably practicable additional or alternative controls were identified that would further reduce the risks and impacts without disproportionate sacrifice, the impacts and risks are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The risk assessment has determined that an unplanned minor discharge of hydrocarbons or chemicals from minor deck spills is unlikely to result in a potential consequence greater than temporary exceedance over national/international water quality standards, with low impact to the marine environment. Further opportunities investigated to reduce the impacts and risks have been described above. The adopted controls are considered good oil field practice and industry best practice and meet legislative requirements (Marine Order 91). Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts and risks to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

6.7.5 Unplanned discharges: release of solid hazardous and non-hazardous wastes (including dropped objects)

Context		
Subsea intervention activities – Section 3.5 Project vessels – Section 3.6 Support operations – Section 3.7	Physical environment –Section 4.4 Habitats and biological communities – Section 4.5 Protected species – Section 4.6	Stakeholder consultation – Section 5

Risk evaluation summary

Source of risk	***Environmental value potentially impacted***						***Evaluation***						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socioeconomic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Accidental loss of hazardous or non-hazardous wastes to the marine environment	X	X		X	X		A	F	2	L	GP	Broadly acceptable	EPO 12
Dropped objects resulting in the disturbance of benthic habitat	X			X			A	F	2	L			

Description of source of impact

The LWIV and support vessels will generate solid wastes, including packaging and domestic wastes such as aluminium cans, bottles, paper and cardboard. Hence, there is the potential for solid wastes to be lost overboard to the marine environment. Equipment that has been recorded as being lost on previous campaigns has primarily been windblown or dropped overboard, and has included things such as personal protective equipment and small tools or materials. These events have occurred during backloading activities, periods of adverse weather and incorrect waste storage.

There is the potential for objects to be dropped overboard from the LWIV and support vessels to the marine environment. Objects that have been dropped during previous offshore activities include small numbers of personal protective gear (e.g. glasses, gloves, hard hats), small tools (e.g. spanners) hardware fixtures (e.g. riser hose clamp) and drill equipment (e.g. drill pipe). However, there is also potential for larger equipment to be dropped during the Petroleum Activity (e.g. subsea XT). The spatial extent in which dropped objects can occur is restricted to the Operational area.

For the Petroleum Activity, the largest dropped object would be a subsea XT during replacement. A subsea XT, once removed, will be between approximately 3.6m (L) x 3.3m (W) x 5.2m (H) 2m. The overall footprint of disturbance within each Operational Area from a subsea XT being dropped is estimated to be minimal and localised (less than 5 m²).

Consequence assessment

Environmental value(s) potentially impacted

Solid wastes

The potential impacts of solid wastes accidentally discharged to the marine environment include direct pollution and contamination of the environment, and secondary impacts relating to potential contact of marine fauna with wastes, resulting in entanglement or ingestion and leading to injury and death of individual animals. The temporary or permanent loss of waste materials into the marine environment is not likely to have a significant environmental impact, based on the location of the Operational area, the types, size and frequency of wastes that could occur, and species present. Given this, impacts will have no lasting effect on any species or water quality.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Water quality

Hazardous solid wastes such as paint cans and oily rags can cause localised contamination of the water through a release of toxins and chemicals. Given the likely small volumes of any unplanned solid waste discharge, and the occasional nature of the event, these would result in temporary and highly localised changes to the water quality.

Physical environment

In the unlikely event of an object being dropped into the marine environment, potential environmental effects would be limited to localised physical impacts on benthic communities. In most cases, objects will be able to be recovered, therefore these impacts will also be temporary. However, there may be instances where objects are unable to be recovered due to health and safety, operational constraints or other factors such as the difficulty of recovering dropped objects at depth. When dropped objects are unable to be recovered, the impact will continue to be localised but would also be long term.

The temporary or permanent loss of dropped objects into the marine environment is likely to result in a localised impact only, as the benthic communities associated with the Operational area are of low sensitivity and are broadly represented throughout the NWMR. As described in Section 4.7, Operational Area Part 2 overlaps the Ancient Coastline at 125 m Depth Contour KEF. Benthic habitat surveys in the region, including within this KEF, indicate benthic habitats within the KEF are characterised by sand interspersed with areas of rubble and outcroppings of limestone pavement (AIMS, 2014; RPS, 2011). Such habitats are widely distributed in the NWMR. No significant escarpments, species of conservation significance, emergent features or areas of high biological productivity characteristically associated with the Ancient Coastline at 125 m Depth Contour KEF have been observed in Operational Area Part 2. Given the nature and scale of risks and consequences from dropped objects, no lasting effect is expected to seabed sensitivities associated with the Operational area. Further, considering the types, size and frequency of dropped objects that could occur, it is unlikely a dropped object would have a significant impact on any benthic community.

Marine fauna

The unplanned discharge of solid wastes can result in mortality to fauna, either through contamination or physical injury depending on the nature of the waste. Marine fauna, including fish, seabirds and shorebirds, marine mammals and marine reptiles, may be impacted through ingestion or entanglement of waste or through exposure to toxic chemicals. Ingestion or entanglement of marine fauna has the potential for physical harm, which may limit feeding and foraging behaviours and thus can result in mortalities. The Threat Abatement Plan for the impacts of marine debris on the vertebrate wildlife of Australia's coasts and oceans (Commonwealth of Australia, 2018) identifies EPBC Act-listed species for which there are scientifically documented adverse impacts resulting from marine debris. Marine turtles and seabirds particularly may be at risk from plastics, which may cause entanglement or are mistaken for food (Commonwealth of Australia, 2018; Commonwealth of Australia, 2017) and ingested, causing damage to internal tissues and potentially preventing feeding activities. In the worst instance this could have a lethal effect on an individual. Marine debris has been identified as threat in the Recovery Plan for Marine Turtles in Australia (2017–2027) (Commonwealth of Australia, 2017) (refer to Section 6.8).

Impacts to species including fish, birds, marine mammals and marine reptiles from the unplanned discharge of solid waste is unlikely, given the low occurrence of unplanned discharges and the location of the activities at significant distance from sensitive habitats. Significant impacts are unlikely to occur at an individual level and will not occur at a population level, nor result in a decrease of the quality of the habitat such that the extent of these species is likely to decline.

While the threat abatement plan for impacts of marine debris on vertebrate marine life does not list explicit management actions for non-related industries (Commonwealth of Australia, 2018), management controls will reduce the risk of unplanned discharge of solid waste.

The temporary or permanent loss of waste materials into the marine environment will have no lasting effect on any species or water quality, based on the types, size and frequency of wastes that could occur.

ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts and risks associated with a release of unplanned solid hazardous and non-hazardous waste. As no reasonably practicable additional or alternative controls were identified that would further reduce the impacts and risks without disproportionate sacrifice, the impacts and risks are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The risk assessment has determined that, given the adopted controls, accidental discharge of solid waste is unlikely to result in a potential consequence above localised, not significant to environmental receptors with no lasting effects. Further opportunities investigated to reduce the impacts and risks have been described above. The adopted controls are considered good oil field practice and industry best practice and meet legislative requirements (Marine Order 95). Relevant recovery plans, conservation advice and threat abatement plans have been considered during the impact assessment, and the Petroleum Activity is not considered to be inconsistent with the overall recovery objectives and actions of these plans and advice (refer to Section 6.8). Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts and risks to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

6.7.6 Physical presence (unplanned): interactions with marine fauna

Context		
Project vessels – Section 3.6 Support operations – Section 3.7	Protected species – Section 4.6	Stakeholder consultation – Section 5

Risk evaluation summary

Source of impact	*Environmental value potentially impacted*						*Evaluation*						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socioeconomic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Accidental collision between project vessels and protected marine fauna within the Operational area					X		A	E	1	L	LCS GP	Broadly acceptable	EPO 13

Description of source of impact

The LWIV and support vessels operating in and around the Operational area may present a potential hazard to cetaceans (e.g. humpback whales) and other protected marine fauna, such as marine turtles and whale sharks. Vessel movements can result in collisions between the vessel (hull and propellers) and marine fauna, potentially resulting in superficial injury, serious injury that may affect life functions (e.g. movement and reproduction), and mortality.

The factors that contribute to the frequency and severity of impacts due to collisions vary greatly due to vessel type, vessel operation (specific activity, speed), physical environment (e.g. water depth), the type of animal potentially present and their behaviours.

Vessels used during the Petroleum Activity may include support vessels, with multiple vessels likely to be used to support the LWIV. Support vessels would typically be stationary or moving at low speeds when supporting the Petroleum Activity. Support vessels do not anchor within the Operational area during the activities due to water depth; therefore, vessels will use DP. During well intervention, the LWIV will remain largely stationary while on DP at the well location.

Consequence assessment

Environmental value(s) potentially impacted

Vessel disturbance is a key threat to some migratory and threatened species identified as occurring within the Operational area, including cetaceans and marine turtles. Relevant conservation actions outlined in these plans are listed in Section 6.8.

Marine mammals

Cetaceans are naturally inquisitive. Their reaction to the approach of a vessel varies. Some species remain motionless when near a vessel, while others are known to be curious and often approach ships that have stopped or are slow moving, although they generally do not approach and sometimes avoid faster moving ships (Richardson, et al., 1995). The Whale and Dolphin Conservation Society (2006) indicates some cetacean species, such as humpback whales, can detect and change course to avoid a vessel.

Collisions between vessels and marine mammals occur more frequently in areas where high vessel traffic and important habitat coincide (Whale and Dolphin Conservation Society, 2006). In Australia, most vessel strikes to known species involved humpback, southern right and sperm whales, in descending order (Peel, et al., 2016). No vessel strike collisions were reported on the northern coast of Australia (Peel, et al., 2016). The behaviour exhibited by

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

whales before vessel collision varies, with some reported as being asleep or unmoving before the collision (Peel, et al., 2016) and others displaying a 'last-second flight response' (Laist, et al., 2001).

The likelihood of a vessel or whale collision being lethal is influenced by vessel speed; the greater the speed at impact, the greater the risk of mortality (Jensen & Silber, 2004; Laist, et al., 2001). Vanderlaan & Taggart (2007) found the chance of lethal injury to a large whale because of a vessel strike increases from about 20% at 8.6 knots to 80% at 15 knots. According to the data of Vanderlaan & Taggart (2007), it is estimated the risk is less than 10% at a speed of four knots. Vessel/whale collisions at this speed are uncommon and, based on the US NOAA database (Jensen & Silber, 2004), there are only two known instances of collisions when the vessel was travelling at less than six knots. Both were from whale-watching vessels that were deliberately placed among whales.

The Operational area are about 43 km from the pygmy blue whale migration BIA and about 34 km from the humpback whale migration BIA. Individuals may transit through the Operational area and increased numbers may occur during whale migration periods (April to July northern migration, October to January southern migration for pygmy blue whales) and migrating humpback whales may be present between about May and November but aggregations are not expected. Given the absence of aggregations, the size of the BIA in total relative to the Operational area, duration of activities within the Operational area and the slow speeds at which vessels operate, collisions with cetaceans are considered highly unlikely.

Whale shark

Whale sharks are at risk from vessel strikes when feeding at the surface. Whale sharks may traverse offshore NWS waters, including the Operational area, during their migrations to and from Ningaloo Reef, and a BIA for foraging whale sharks overlaps the Operational area. However, given the main aggregation area for whale sharks is off the coast of Ningaloo (designated as a foraging BIA with high density prey), which is over 300 km from the Operational area, it is expected whale shark presence within the Operational area would not comprise significant numbers, and their presence would be transitory and of a short duration. There are no constraints preventing whale sharks from moving away from vessels to avoid injury (e.g. shallow water or shorelines). Given the absence of aggregations, the size of the BIA in total relative to the Operational area, duration of activities within the Operational area and the slow speeds at which vessels operate, collisions with whale sharks are considered highly unlikely.

Marine turtles

Turtles are also at risk from vessel strikes, particularly in shallow coastal foraging habitats and internesting areas where there are high numbers of recreational and commercial vessels (Commonwealth of Australia, 2017).

Considering the distance of the Operational area from the nearest nesting beaches (farther than 100 km), it is expected the presence of marine turtles would be very unlikely and only comprise individuals transiting the open, offshore waters for short periods. Given the slow speeds at which support vessels operate, collisions with transiting marine turtles are considered highly unlikely.

It is unlikely vessel movement associated with the Petroleum Activity will have a significant impact on marine turtle populations, given the low presence of transiting individuals and the low operating speed of the support vessels (generally less than eight knots or stationary, unless operating in an emergency).

Seabirds

There is potential for seabirds to be in flight while helicopters are landing or taking off from the LWIV; however, the noise of an approaching helicopter is expected to deter birds form the area. A wedge-tailed shearwater breeding BIA overlaps the Operational area (Figure 4-10); however, the presence of helicopters servicing the Petroleum Activity is not anticipated to impact the breeding activity, given the short duration of the activity and expected low number of helicopter trips required.

Cultural features and heritage values

Refer to Section 6.9 for an assessment of potential impacts to cultural features and heritage values from the Petroleum Activity. Related control measures that demonstrate that impacts are reduced to ALARP and are of an acceptable level have been captured in Section 6.9.

Variation of the timing of the Petroleum Activity to avoid migration and foraging periods.	F: Yes. Avoidance of the migration period is technically feasible, although not considered to be reasonably practicable. CS: Significant cost and schedule delays in contracting a vessel for a specific timeframe.	Negligible reduction in consequence, given the duration and nature of the activity and receiving environment.	Disproportionate – cost/sacrifice outweighs benefit to be gained.	No
Professional judgement – Engineered solution				
None identified.				
ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts and risks associated with unplanned interaction with marine fauna. As no reasonably practicable additional or alternative controls were identified that would further reduce the impacts and risks without disproportionate sacrifice, the impacts and risks are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The risk assessment has determined that, given the adopted controls, unplanned interaction with marine fauna is unlikely to result in a potential consequence greater than a localised and low-level impact on environmental features of low significance. Further opportunities investigated to reduce the impacts and risks have been described above. The adopted controls are considered good oil field practice or industry best practice and meet the requirements of Part 8 (Division 8.1) of the EPBC Regulations. Relevant recovery plans and conservation advice have been considered during the impact assessment, particularly the Conservation Management Plan for the Blue Whale: A Recovery Plan under the EPBC Act 1999 2015–2025 (Commonwealth of Australia, 2015a) and the Recovery Plan for Marine Turtles in Australia 2017–2027 (Commonwealth of Australia, 2017). The residual risk of vessel collision with marine fauna is not inconsistent with the relevant objectives and actions of any applicable recovery plans or threat abatement plans (refer to Section 6.8). Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts and risks to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

6.7.7 Physical presence (unplanned): introduction of invasive marine species

Context		
Project vessels – Section 3.6	Physical environment – Section 4.4 Habitats and biological communities – Section 4.5 Protected species – Section 4.6	Stakeholder consultation – Section 5

Risk evaluation summary

Source of impact	*Environmental value potentially impacted*						*Evaluation*						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socioeconomic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Introduction and establishment of invasive marine species (IMS)				X	X	X	A	D	0	L	LCS GP PJ	Broadly acceptable	EPO 14

Description of source of impact

During the Petroleum Activity, vessels and Immersible equipment have the potential to introduce IMS to the Operational area.

Vessels will be transiting to and from the Operational area, potentially including traffic mobilising from international waters. There is the potential for project vessels to transfer IMS from international waters, Australian waters or coastal waters into the Operational area.

All vessels are subject to some level of marine fouling whereby organisms attach to the vessel hull. This could particularly occur in areas where organisms can find a good attachment surface (e.g. seams, strainers and unpainted surfaces) or where turbulence is lowest (e.g. niches, sea chests), although commercial vessels typically maintain antifouling coatings (AFC) to reduce the build-up of fouling organisms. IMS could be present as biofouling on immersible equipment such as ROVs, and could be translocated to the Operational area and transferred directly to the seafloor or subsea structures where they could establish. Organisms can also be drawn into ballast tanks during onboarding of ballast water as cargo is loaded or to balance vessels under load.

The support vessels have the potential to introduce IMS to the Operational area through marine biofouling (containing IMS), as well as within high-risk ballast water exchange. There is also a remote potential that cross contamination between vessels can also occur (such as IMS translocated between project vessels) during times when vessels need to be alongside each other.

Consequence assessment

Environmental value(s) potentially impacted

IMS are a subset of non-indigenous marine species (NIMS) that have been introduced into a region beyond their natural biogeographic range, resulting in impacts to sociocultural, human health, economic and environmental values. NIMS are species that have the ability to survive, reproduce and establish founder populations. However, not all NIMS introduced into an area will thrive or cause demonstrable impacts; most NIMS around the world are relatively benign and few have spread widely beyond sheltered ports and harbours. NIMS are only considered IMS when they result in impacts to environmental values or have sociocultural, economic or human health impacts.

Once introduced, IMS may prey on local species that had previously not been subject to this kind of predation and therefore not have evolved protective measures against the attack. They may outcompete indigenous species for food, space or light and can also interbreed with local species, creating hybrids such that the endemic species is lost. These changes to the local marine environment result in changes to the natural ecosystem.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

IMS have also proven economically damaging to areas where they have been introduced and established. Such impacts include direct damage to assets (fouling of vessel hulls and infrastructure) and depletion of commercially harvested marine life (e.g. shellfish stocks). IMS have proven particularly difficult to eradicate from areas once established. If the introduction is detected early, eradication may be effective but is likely to be expensive, disruptive and, depending on the method of eradication, harmful to other local marine life.

Potential IMS have historically been introduced and translocated around Australia by natural and human means, including marine fouling and ballast water. Potential IMS vary from one region to another depending on various environmental factors such as water temperature, salinity, nutrient levels and habitat type, which dictate their survival and invasive capabilities. IMS typically require hard substrate in the photic zone, requiring shallow waters to become established. Highly-disturbed, shallow-water environments such as shallow coastal waters, ports and marinas are more susceptible to IMS colonisation, whereas IMS are generally unable to successfully establish in deepwater ecosystems and open-water environments where the rate of dilution and the degree of dispersal are high (Williamson & Fitter, 1996; Paulay et al., 2002; Geiling, 2014).

Despite the potential high consequence of a marine pest establishing within a high value environment as a result of introduction, unlike coastal or sheltered nearshore waters, the offshore open waters of the Operational area are not conducive to IMS settling and establishing, due to the lack of light or suitable habitat to sustain growth or survival.

Project vessels and Immersible equipment needed for the Petroleum Activity have the potential to introduce IMS into the Operational area. Due to the water depths (about 80 m to 130 m) and lack of submerged banks and shoals within the Operational area and surrounding waters, settlement and establishment of IMS is not considered credible. Furthermore, the likelihood is considered highly unlikely, given the open water environment of the Operational area, distance from shorelines (>100 km) and critical habitat, and the control measures to be implemented.

In support of Woodside's assessment of the impacts and risks of IMS introduction associated with the Petroleum Activity, Table 6-13 presents a risk and impact evaluation of the different aspects of IMS translocation.

Table 6-13: Credibility, consequence and likelihood of introducing invasive marine species

IMS introduction location	*Credibility of Introduction*	*Consequence of Introduction*	*Likelihood*
Transfer of IMS from infected vessel to Operational area and establishment on the seafloor or subsea infrastructure	***Not credible*** The Operational area are in offshore, open waters away from shorelines, hard substrate and critical habitat. Therefore, conditions are not conducive to the settlement or establishment of IMS.		
Transfer of IMS from an infected vessel to, and subsequent establishment on, project infrastructure	**Credible** There is potential to transfer marine pests between project vessels within the Operational area.	**Environment – not credible** The translocation of IMS from a colonised project vessel to another vessel via natural dispersion is not credible. This is because of the open-water environment of the Operational area and distance from shorelines and critical habitat. On this basis there is no credible environmental risk. **Reputation – D** If IMS were to establish on a project vessel from another colonised vessel, this could potentially impact the vessel operationally through the fouling of intakes, and potentially cause the infected vessels to be quarantined and requiring costly cleaning. Such introduction would be expected to have minor	**Remote (0)** Interactions between project vessels will be limited during the Petroleum Activity, with minimum 500 m temporary exclusion zones being adhered to around the Petroleum Activity, and interactions limited to short periods of time alongside (as in, during backloading activities). There is also no direct contact (in other words, they are not tied up alongside) during these activities. Spread of marine pests via ballast water or spawning in these open-ocean environments is also considered remote.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		impact to Woodside's reputation, particularly with Woodside's contractors, and may impact future proposals.	
Transfer between project vessels and from project vessels to other marine environments beyond the Operational area.	**Not credible** This risk is considered so remote it is not credible for the purposes of the Petroleum Activity. As described above, the transfer of IMS between project vessels was already considered remote, given the offshore open-ocean environment. Project vessels will be in an offshore, open-ocean, deep environment, where IMS survival is implausible. Furthermore, this marine pest once transferred would need to survive on a new vessel with good hygiene (in other words, has been through Woodside's risk assessment process) and survive the transport back from the Operational area to shore. In the event it was to survive this trip, it would then need conditions conducive to establishing a viable population in the nearshore waters to which the infected vessel travels.		

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/ sacrifice (CS)[51]***	***Benefit in risk reduction[52]***	***Proportionality***	***Control adopted***
Legislation, codes and standards				
Vessels will manage their biosecurity risk associated with biofouling, as outlined in the Australian Biofouling Management Requirements.	F: Yes. CS: Minimal cost. Standard practice.	Reduces the likelihood of transferring marine pests between project vessels within the Operational area. No change in consequence would occur.	Legislative requirement – must be adopted.	Yes C 14.1
Project vessels will manage their ballast water using one of the approved ballast water management options, as outlined in the Australian Ballast Water Management Requirements.	F: Yes. CS: Minimal cost. Standard practice.	Reduces the likelihood of transferring marine pests between project vessels within the Operational area. No change in consequence would occur.	Legislative requirement – must be adopted.	Yes C 14.2
Good practice				
Apply Woodside's IMS risk assessment process to project vessels and relevant immersible equipment that enter the Operational area unless exempt.	F: Yes. CS: Minimal cost. Good practice implemented across all Woodside operations.	The IMS risk assessment process will identify potential risks with additional controls implemented accordingly. In doing so, the likelihood of transfer of IMS between project vessels within the Operational area is reduced. No change in consequence would occur.	Benefits outweigh cost/sacrifice.	Yes C 14.3

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/ sacrifice (CS)[51]***	***Benefit in risk reduction[52]***	***Proportionality***	***Control adopted***
Professional judgement – Eliminate				
Do not discharge ballast water during the Petroleum Activity.	F: Yes however ballast water discharges are critical for maintaining vessel stability. Given the nature of the Petroleum Activity, use of ballast water (including potential discharge) is considered a safety-critical requirement. CS: Not assessed due to safety critical element	Elimination of the potential introduction of IMS, if present within the ballast water.	Legislative requirements (C16.1) are required to be implemented to manage potential ballast water risk to low. Noting the safety critical element and the adopted control (C16.1) this is disproportionate to the risk reduction.	No
Professional judgement – Substitute				
Source project vessels based in Australia only.	F: Potentially. Limiting activities to only use local project vessels could potentially pose a significant risk in terms of time and duration of sourcing a vessel, as well as the ability of the local vessels to perform the required tasks. For example, there are limited installation vessels based in Australian waters. While the project will attempt to source project vessels locally it is not always possible. Availability cannot always be guaranteed when considered competing Oil and Gas activities in the region. In addition, sourcing Australian based vessels only will cause increases in cost due to pressures of vessel availability. CS: Significant cost and schedule impacts due to restrictions of vessel hire opportunities.	Sourcing vessels from within Australian will reduce the likelihood of IMS from outside Australian waters, however, it does not reduce the likelihood of introduction of species native to Australia but alien to the Operational Area and NWMR, or of IMS that have established elsewhere in Australia. The consequence is unchanged.	Disproportionate Sourcing vessels from Australian waters may result in a reduction in the likelihood of IMS introduction to the Operational Area; however, the potential cost of implementing this control is grossly disproportionate to the minor environmental gain (or reducing an already remote likelihood of IMS introduction) potentially achieved by using only Australian based vessels, consequently this risk is considered not reasonably practicable.	No
Inspect all vessels for IMS.	F: Yes. Approach to inspect vessels could be a feasible option. CS: Significant cost and schedule impacts. In addition, Woodside's IMS	Inspecting all vessels for IMS would reduce the likelihood of IMS being introduced to the Operational area. However, this reduction is	Disproportionate – cost/sacrifice outweighs benefit to be gained.	No

6.7.8 Physical presence (unplanned): interaction with live infrastructure

Context		
Relevant Activities Subsea intervention activities – Section 3.5 Project vessels – Section 3.6 Support operations – Section 3.7	**Existing Environment** Regional Context – Section 4.2	**Consultation** Consultation – Section 5

Impact evaluation summary

Source of impact	Environmental value potentially impacted						Evaluation						
	Marine Sediment	Water Quality	Air Quality (incl Odour)	Ecosystems/ Habitat	Species	Socio-economic	Decision Type	Consequence/ Impact	Likelihood	Risk Rating	ALARP Tools	Acceptability	Outcome
Interaction with live infrastructure from dropped objects						X	A	E	1	L	LCS GP	Broadly Acceptable	EPO 15

Description of source of impact

As detailed in Section 4.9.6 there is existing live subsea infrastructure in the Operational Area, which includes a number of tiebacks to the Okha FPSO facility. During the Petroleum Activity, activities may be conducted that present a risk of dropped objects over the nearby live infrastructure.

There is the potential for objects to be dropped overboard from the project vessels over the live infrastructure. Objects that have been dropped during previous offshore activities include small numbers of personal protective gear (e.g. glasses, gloves, hard hats), small tools (e.g. spanners) hardware fixtures (e.g. riser hose clamp) and drill equipment (e.g. drill pipe); however, there is also potential for larger equipment to also be dropped during the activity, particularly during recovery of infrastructure from the seabed. For the Petroleum Activity, the largest dropped object would be a subsea XT during replacement. The spatial extent in which dropped objects can occur is restricted to the Operational Area.

Impact assessment

Environmental value(s) potentially impacted

Interactions with other marine users

In the unlikely event of an object being dropped on live infrastructure there is potential impacts to the infrastructure. Within the Operational Area, there is the infrastructure associated with the tiebacks to the Okha FPSO facility owned by Woodside.

If interactions with live infrastructure were to occur, Woodside would notify the relevant operations team in accordance with the SIMOPS plan. This would trigger responses to assess and respond to any damage caused in accordance with the relevant operations EP for the live infrastructure. Under Regulation 56 of the Environment Regulations, a titleholder may refer NOPSEMA to information previously given to NOPSEMA for another purpose under the OPGGS Act, the Environment Regulations or any other regulations made under the Act, to comply with a requirement on the titleholder under the Environment Regulations to give NOPSEMA information or include information in a document. In accordance with Regulation 56, NOPSEMA is referred to the relevant operations EPs72 submitted by the Operators of the live infrastructure, and accepted by NOPSEMA, for the detail of the Operators' assessment and response in such a scenario. Potential impacts therefore include time and costs associated with inspecting the infrastructure and time and costs associated with any associated repair, which are expected to be slight and short-term in nature.

Potential subsequent loss of containment

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

In the unlikely event of an object being dropped on live infrastructure, and in the further unlikely event of a severe interaction with the infrastructure, there is a possibility that live infrastructure could be ruptured releasing hydrocarbons into the marine environment in such a scenario. In accordance with Regulation 56, NOPSEMA is referred to the relevant operations EPs submitted by the Operators of the live infrastructure, and accepted by NOPSEMA, for the detail of potential impacts, receptors and the extent of the environment that may be affected in such a scenario, being:

- Okha FPSO Facility Operations Environment Plan, Section 6.7.5 (NOPSEMA Doc A1244148, https://docs.nopsema.gov.au/A1244148)

This EP addresses the risks and impacts (interaction with live infrastructure) that arise from the activities under this EP (interaction from dropped objects). This EP also contains controls to prevent such an event from occurring that are within the operational control of this EP. The maintenance and incident response associated with the live infrastructure and/or loss of containment from the live infrastructure is not within the operational control of this EP. As detailed below, the risks and impacts of the activities under this EP are managed to ALARP and an acceptable level by implementing the SIMOPS plan and notifying the relevant Operators in the instance of an interaction with live infrastructure to allow the relevant Operator's detailed response strategies under the relevant operations EPs to be triggered, if required. In the event of a loss of containment caused by an interaction with live infrastructure Woodside will follow direction from the relevant Operator and will respond as per the relevant Operator's requirements. In accordance with Regulation 56, NOPSEMA is referred to the relevant operations EPs submitted by the Operators of. the live infrastructure, and accepted by NOPSEMA, for the detail of the operational control, maintenance and incident response associated with the live infrastructure and/or loss of containment from the live infrastructure

Summary of Potential Impacts to environmental value(s)

Given the adopted controls, it is considered that an interaction with live infrastructure due to a dropped object or anchor drag, were it to occur, will not result in a potential impact greater than localised and low level (i.e. Environment Impact – E).

Demonstration of ALARP				
Control considered	**Control feasibility (F) and cost/sacrifice (CS)[54]**	**Benefit in risk reduction[55]**	**Proportionality**	**Control adopted**
Legislation, codes and standards				
No additional controls identified				
Good practice				
Recover lost equipment and waste and dropped objects where safe and practicable to do so. Consider: • risk to personnel to retrieve the object • whether the location of the object is in recoverable water depths • the object's proximity to subsea infrastructure • ability to recover the object (i.e. nature of object, lifting equipment).	F: Yes. However, it may not always be practicable. Assessed on a case by case basis. CS: Minimal cost. Standard practice.	Potentially reduces consequence by recovering the object or waste container from the environment.	Benefit outweighs cost/sacrifice.	Yes C 12.3

[54] *Qualitative measure.*

[55] *Measured in terms of reduction of likelihood, consequence and current risk rating.*

Demonstration of ALARP				
Control considered	**Control feasibility (F) and cost/sacrifice (CS)[54]**	**Benefit in risk reduction[55]**	**Proportionality**	**Control adopted**
The vessel contractor has procedures for lifts, bulk transfers and cargo loading that require: • the security of loads to be checked before starting lifts • loads to be covered if there is a risk of loss of loose materials • lifting operations to be conducted using the PTW and JSA systems to manage the specific risks of that lift, including consideration of weather and sea state.	F: Yes. CS: Minimal cost. Standard practice.	Reduces the likelihood of a release to the environment by providing procedures to follow to reduce risk during lifts.	Benefit outweighs cost/sacrifice.	Yes C 12.4
Professional judgement – Eliminate

Professional judgement – Engineered solution				
None identified.				
ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2.1) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts and risks associated with a release of unplanned solid hazardous and non-hazardous waste. As no reasonably practicable additional or alternative controls were identified that would further reduce the impacts and risks without disproportionate sacrifice, the impacts and risks are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that disturbance to seabed from dropped objects represents a low current risk rating and is unlikely to result in a risk consequence greater than slight. The adopted controls are considered industry good practice. Relevant recovery plans, conservation advice and threat abatement plans have been considered during the impact assessment, and the Petroleum Activity is not considered to be inconsistent with the overall recovery objectives and actions of these plans and advice (refer to Section 6.8). Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2.1) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts and risks to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

6.8 Recovery plan and threat abatement assessment

This section describes the assessment Woodside has undertaken to demonstrate the Petroleum Activity is not inconsistent with any relevant recovery plans or threat abatement plans. For the purposes of this assessment, the relevant Part 13 statutory instruments (recovery plans and threat abatement plans) are:

- Recovery Plan for Marine Turtles in Australia 2017–2027 (Commonwealth of Australia, 2017)
- Conservation Management Plan for the Blue Whale 2015–2025 (Commonwealth of Australia, 2015a)
- Recovery Plan for the Grey Nurse Shark (*Carcharias taurus*) 2014 (Commonwealth of Australia, 2014)
- Sawfish and River Sharks Multispecies Recovery Plan (Commonwealth of Australia, 2015b)
- Threat Abatement Plan for the impacts of marine debris on the vertebrate wildlife of Australia's coasts and oceans 2018 (Commonwealth of Australia, 2018)
- National Recovery Plan for the Southern Right Whale (DCCEEW, 2024c).

Table 6-14 lists the objectives and (where relevant) the action areas of these plans, and describes whether these objectives and action areas apply to government, the titleholder and the Petroleum Activity. For those objectives and action areas applicable to the Petroleum Activity, the relevant actions of each plan have been identified, and an evaluation has been conducted as to whether impacts and risks resulting from the Petroleum Activity are clearly inconsistent with that action or not. The results are presented in Table 6-15 to Table 6-19.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Recovery Plan for Marine Turtles in Australia			
Long-term recovery objective: Minimise anthropogenic threats to allow the conservation status of marine turtles to improve so they can be removed from the EPBC Act threatened species list	Y	Y	Y
Interim recovery objectives			
Current levels of legal and management protection for marine turtle species are maintained or improved, both domestically and throughout the migratory range of Australia's marine turtles	Y		
The management of marine turtles is supported	Y		
Anthropogenic threats are demonstrably minimised	Y	Y	Y
Trends in nesting numbers at index beaches and population demographics at important foraging grounds are described	Y	Y	
Action areas			
A. Assessing and addressing threats			
A1. Maintain and improve efficacy of legal and management protection	Y		
A2. Adaptatively manage turtle stocks to reduce risk and build resilience to climate change and variability Continue to meet Australia's international commitments to address the causes of climate change	Y	Y	
A3. Reduce the impacts of marine debris	Y	Y	
A4. Minimise chemical and terrestrial discharge	Y	Y	
A5. Address international take within and outside Australia's jurisdiction	Y		
A6. Reduce impacts from terrestrial predation	Y		
A7. Reduce international and domestic fisheries bycatch	Y		
A8. Minimise light pollution	Y	Y	Y
A9. Address the impacts of coastal development/infrastructure and dredging and trawling	Y	Y	
A10. Maintain and improve sustainable Indigenous management of marine turtles	Y

EPBC Act Part 13 statutory instrument	Applicable to:		
	Government	***Titleholder***	***Petroleum activity***
Grey Nurse Shark Recovery Plan			
Overarching objective: To assist the recovery of the grey nurse shark in the wild, throughout its range in Australian waters, with a view to: • improving the population status, leading to future removal of the grey nurse shark from the threatened species list of the EPBC Act • ensuring anthropogenic activities do not hinder the recovery of the grey nurse shark in the near future, or impact on the conservation status of the species in the future	Y	Y	Y
Specific objectives			
Develop and apply quantitative monitoring of the population status (distribution and abundance) and potential recovery of the grey nurse shark in Australian waters	Y		
Quantify and reduce the impact of commercial fishing on the grey nurse shark through incidental (accidental and/or illegal) take, throughout its range	Y		
Quantify and reduce the impact of recreational fishing on the grey nurse shark through incidental (accidental and/or illegal) take, throughout its range	Y		
Where practicable, minimise the impact of shark control activities on the grey nurse shark	Y		
Investigate and manage the impact of ecotourism on the grey nurse shark	Y		
Manage the impact of aquarium collection on the grey nurse shark	Y		
Improve understanding of the threat of pollution and disease to the grey nurse shark	Y	Y	Y
Continue to identify and protect habitat critical to the survival of the grey nurse shark and reduce the impact of threatening processes within these areas	Y	Y	
Continue to develop and implement research programs to support the conservation of the grey nurse shark	Y	Y	
Promote community education and awareness in relation to grey nurse shark conservation and management	Y		
Sawfish and River Sharks Recovery Plan			
Primary objective: To assist the recovery of sawfish and river sharks in Australian waters with a view to: • improving the population status leading to the removal of the sawfish and river shark species from the threatened species list of the EPBC Act	Y	Y	Y

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

EPBC Act Part 13 statutory instrument	Applicable to:		
	Government	***Titleholder***	***Petroleum activity***
• ensuring anthropogenic activities do not hinder recovery in the near future, or impact on the conservation status of the species in the future			
Specific objectives			
Reduce and, where possible, eliminate adverse impacts of commercial fishing on sawfish and river shark species	Y		
Reduce and, where possible, eliminate adverse impacts of recreational fishing on sawfish and river shark species	Y		
Reduce and, where possible, eliminate adverse impacts of Indigenous fishing on sawfish and river shark species	Y		
Reduce and, where possible, eliminate the impact of illegal, unregulated and unreported fishing on sawfish and river shark species	Y		
Reduce and, where possible, eliminate adverse impacts of habitat degradation and modification on sawfish and river shark species	Y	Y	Y
Reduce and, where possible, eliminate any adverse impacts of marine debris on sawfish and river shark species, noting the linkages with the 'Threat Abatement Plan for the impact of marine debris on vertebrate marine life'	Y	Y	Y
Reduce and, where possible, eliminate any adverse impacts of collection for public aquaria on sawfish and river shark species	Y		
Improve the information base to allow the development of a quantitative framework to assess the recovery of, and inform management options for, sawfish and river shark species	Y		
Develop research programs to assist conservation of sawfish and river shark species	Y	Y	
Improve community understanding and awareness in relation to sawfish and river shark conservation and management	Y		
Threat Abatement Plan for the impacts of marine debris on the vertebrate wildlife of Australia's coasts and oceans			
Objectives			
Contribute to long-term prevention of the incidence of marine debris	Y	Y	
Understand the scale of impacts from marine plastic and microplastic on key species, ecological communities and locations	Y	Y	Y
Remove existing marine debris	Y		
Monitor the quantities, origins, types and hazardous chemical contaminants of marine debris, and assess the effectiveness of management arrangements for reducing marine debris	Y

EPBC Act Part 13 statutory instrument	Applicable to:		
	Government	***Titleholder***	***Petroleum activity***
Increase public understanding of the causes and impacts of harmful marine debris, including microplastic and hazardous chemical contaminants, to bring about behaviour change	Y		
National Recovery Plan for the Southern Right Whale			
Long-term recovery objective: Increase population to a level that the conservation status has improved and the species no longer qualifies for listing as threatened under any of the EPBC Act listing criteria	Y	Y	Y
Interim recovery objectives			
Current levels of Commonwealth and State legislative and management protection for southern right whales are implemented, maintained, or improved, so threats continue to be managed and reduced over the life of the plan	Y	Y	
Anthropogenic threats are managed consistent with ecologically sustainable principles to facilitate recovery of southern right whales	Y	Y	Y
Population dynamics, including demographics, distribution, residency and coastal movement across the species range, are monitored and quantified using robust, standardised, best-practice methodology to assess population recovery	Y		
The population structure in Australian waters is clearly characterised to evaluate the degree to which the western and eastern populations are separate and inform the degree of connectivity with other southern right whale populations	Y		
Capability of First Nation Australians, research, citizen science and general community groups is improved to assist in addressing recovery actions of southern right whales in Australia	Y		
Action areas			
<u>A. Assessing and addressing threats</u>			
A1: Maintain, implement and improve efficacy of current legislative and management protection for southern right whales	Y		
A2: Address habitat degradation impacts from coastal and offshore marine infrastructure developments within the species' range	Y	Y	
A3: Understand impacts of climate variability and anthropogenic climate change on the species biology and population recovery	Y	Y	
A4: Manage and mitigate the threat of entanglements from commercial active or discarded fishing gear throughout the species' range in Australian waters	Y		
A5: Assess, manage and mitigate impacts from anthropogenic underwater noise	Y	Y	Y
A6: Manage, minimise and mitigate the threat of vessel strike	Y	Y	Y

Table 6-15: Assessment against relevant actions of the Recovery Plan for Marine Turtles in Australia

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
Recovery Plan for Marine Turtles in Australia	Action Area A3: Reduce the impacts from marine debris.	Action: Support implementation of the 'Threat Abatement Plan for the impacts of marine debris on the vertebrate wildlife of Australia's coasts and oceans'. Priority actions at stock level: • Green turtles, NWS (G-NWS) – Understand the threat posed to this stock by marine debris. • Loggerhead turtles, WA (LH-WA) – Determine the extent to which marine debris is impacting loggerhead turtles. • Flatback turtles, Pilbara (F-Pil) – No relevant actions.	Refer to Section 6.7.5 **Not inconsistent assessment**: The assessment of the accidental release of solid hazardous and nonhazardous wastes has considered the potential risks to marine turtles. Controls have been implemented to reduce the likelihood of accidental release of solid wastes for the duration of the Petroleum Activity.	EPO 12 PS 12.1.1 PS 12.2.1 PS 12.3.1 PS 12.4.1
	Action Area A4: Minimise chemical and terrestrial discharge.	Action: Ensure spill risk strategies and response programs adequately include management for marine turtles and their habitats, particularly in reference to 'slow to recover habitats', such as nesting habitat, seagrass meadows or coral reefs. Priority actions at stock level: • G-NWS – Ensure spill risk strategies and response programs include management for turtles and their habitats. • LH-WA and F-Pil – Ensure spill risk strategies and response programs include management for turtles and their habitats, particularly in reference to slow-to-recover habitats, such as seagrass meadows or corals.	Refer to Sections 6.7.3 and 6.7.4 **Not inconsistent assessment**: The assessment of accidental release of chemicals/hydrocarbons has considered the potential risks to marine turtles. Spill risk strategies and the response program include management measures for turtles and their nesting habitats.	EPO 9 EPO 10 Detailed oil spill preparedness and response performance outcomes, standards and measurement criteria for the Petroleum Activity are presented in Appendix G

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
	Action Area A8: Minimise light pollution.	Action: Manage artificial light within or adjacent to habitat critical to the survival of marine turtles such that marine turtles are not displaced from these habitats. Priority actions at stock level: • G-NWS – As above. • LH-WA – No relevant actions. • F-Pil – Manage artificial light from onshore and offshore sources to ensure biologically important behaviours of nesting adults and emerging/dispersing hatchlings can continue.	Refer to Section 6.6.7 **Not inconsistent assessment**: The assessment of light emissions has considered the potential impacts to marine turtles. Internesting, mating, foraging or migrating turtles are not impacted by light from the Petroleum Activity. Based on the nature and scale of the Petroleum Activity, impacts are limited to localised and temporary behavioural disturbance to isolated transient individuals, which is unlikely to result in displacement of adult turtles from internesting or nesting habitat critical to the survival of marine turtles.	EPO 8 PS 8.1.1 PS 8.2.1
	Action Area B1: Determine trends at index beaches.	Action: Maintain or establish long-term monitoring programs at index beaches to collect standardised data critical for determining stock trends, including data on hatchling production. Priority actions at stock level: • G-NWS – Continue long-term monitoring of index beaches. • LH-WA – Continue long-term monitoring of nesting and foraging populations. • F-Pil – No relevant actions.	**Not inconsistent assessment**: Woodside contributes to Action Area B1 via its support of the Ningaloo Turtle Program.	N/A
	Action Area B3: Address information gaps to better facilitate the recovery of marine turtle stocks.	Action: Understand the impacts of anthropogenic noise on marine turtle behaviour and biology. Priority actions at stock level: • G-NWS – Given this is a relatively accessible stock that is likely to be exposed to anthropogenic noise, investigate the impacts of anthropogenic noise on turtle behaviour and biology and extrapolate findings from the NWS stock to other stocks. • LH-WA – No relevant actions. • F-Pil – No relevant actions.	Refer to Section 6.6.3 **Not inconsistent assessment**: The assessment of acoustic emissions has considered the potential impacts to marine turtles. Noise related to the Petroleum Activity is not expected to result in behavioural response, injury or mortality of individuals, or any other lasting effect.	EPO 4 PS 4.3.1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
Assessment summary The Recovery Plan for Marine Turtles in Australia has been considered when assessing impacts and risks, and the Petroleum Activity is not considered to be inconsistent with the relevant actions of this plan.				

Table 6-16: Assessment against relevant actions of the Blue Whale Conservation Management Plan

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
Blue Whale Conservation Management Plan	Action Area A.2: Assess and address anthropogenic noise.	Action 2: Assess the effect of anthropogenic noise on blue whale behaviour. Action 3: Anthropogenic noise in biologically important areas will be managed such that any blue whale continues to use the area without injury and is not displaced from a foraging area.	Refer to Section 6.6.3 **Not inconsistent assessment**: The assessment of acoustic emissions has considered the potential impacts to cetaceans. Acoustic emissions from project vessels are not expected to reach any pygmy blue whale BIAs. There are no known or possible foraging areas for pygmy blue whales within or adjacent to the Operational area or noise EMBA.	EPO 4 PS 4.1.1
	Action Area A.3: Understand impacts of climate variability and change.	Action 1: Understand impacts of climate variability and change.	Refer to Section 6.6.6 **Not inconsistent assessment:** Section 6.6.6 includes an assessment of the Petroleum Activity's GHG emissions on marine fauna.	EPO 7 PS 7.1.1 PS 7.2.1
	Action Area A.4: Minimise vessel collisions.	Action 3: Ensure the risk of vessel strikes on blue whales is considered when assessing actions that increase vessel traffic in areas where blue whales occur and, if required, appropriate mitigation measures are implemented.	Refer to Section 6.7.6 **Not inconsistent assessment**: The assessment of a vessel collision with marine fauna has considered the potential risks to cetaceans. Vessel collisions with cetaceans, including pygmy blue whales, are highly unlikely to occur, given the low operating speed of support vessels.	EPO 13 PS 4.1.1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
	Action Area B.3: Describe spatial and temporal distribution and define biologically important habitat.	Action 2: Identify migratory pathways between breeding and feeding grounds. Action 3: Assess timing and residency within biologically important areas.	**Not inconsistent assessment**: Woodside contributes to Action Area B.3 via its support of targeted research initiatives, such as satellite tracking of pygmy blue whale migratory movements.	N/A
Assessment summary The Blue Whale Conservation Management Plan has been considered when assessing impacts and risks, and the Petroleum Activity is not considered to be inconsistent with the relevant actions of this plan.				

Table 6-17: Assessment against relevant actions of the Recovery Plan for the Grey Nurse Shark (*Carcharias taurus*)

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
Recovery Plan for the Grey Nurse Shark	Objective 7: Improve understanding of the threat of pollution and disease to the grey nurse shark.	Action 7.1: Review and assess the potential threat of introduced species, pathogens and pollutants.	Refer to Sections 6.6.4 and 6.6.5 **Not inconsistent assessment**: This EP includes an assessment of the impacts from planned discharges to the marine environment.	Refer to Sections 6.6.4 and 6.6.5
			Refer to Section 6.7 **Not inconsistent assessment**: This EP includes an assessment of the impacts from unplanned discharges to the marine environment, including unplanned releases of hydrocarbons.	Refer to Section 6.7 Detailed oil spill preparedness and response performance outcomes, standards and measurement criteria for the Petroleum Activity are presented in Appendix G
Assessment summary The Grey Nurse Shark Recovery Plan has been considered when assessing impacts and risks, and the Petroleum Activity is not considered to be inconsistent with the relevant actions of this plan.				

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 6-18: Assessment against relevant actions of the Sawfishes and River Sharks Multispecies Recovery Plan

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
Sawfishes and River Sharks Multispecies Recovery Plan	Objective 5: Reduce and, where possible, eliminate adverse impacts of habitat degradation and modification on sawfish and river shark species.	Action 5c: Identify risks to important sawfish and river shark habitat and measures needed to reduce those risks.	Refer Section 6.6 and 6.7 **Not inconsistent assessment**: The assessment of accidental release of chemicals/hydrocarbons has considered the potential risks to sawfish and river sharks. Spill risk strategies and the response program include management measures, as identified and required.	Refer Sections 6.6 and 6.7 Detailed oil spill preparedness and response performance outcomes, standards and measurement criteria for the Petroleum Activity are presented in Appendix G
	Objective 6: Reduce and, where possible, eliminate any adverse impacts of marine debris on sawfish and river shark species, noting the linkages with the 'Threat Abatement Plan for the impact of marine debris on vertebrate marine life'.	Action 6a: Assess the impacts of marine debris including ghost nets, fishing gear and plastics on sawfish and river shark species.	Refer Section 6.7.5 **Not inconsistent assessment**: The assessment of the accidental release of solid hazardous and non-hazardous wastes has considered the potential risks to sawfish. Controls have been implemented to reduce the likelihood of accidental release of solid wastes for the duration of the Petroleum Activity.	EPO 12 PS 12.1.1 PS 12.2.1 PS 12.3.1 PS 12.4.1
Assessment summary The Sawfish and River Shark Recovery Plan has been considered when assessing impacts and risks, and the Petroleum Activity is not considered to be inconsistent with the relevant actions of this plan.

Table 6-19: Assessment against relevant actions of the Threat Abatement Plan for the impacts of marine debris on the vertebrate wildlife of Australia's coasts and oceans

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
Threat Abatement Plan for the impacts of marine debris on the vertebrate wildlife of Australia's coasts and oceans	Objective 2: Understand the scale of marine plastic and microplastic impact on key species, ecological communities and locations.	Action 2.04: Build understanding related to plastic and microplastic pollution.	Refer to Section 6.7.5 **Not inconsistent assessment**: The assessment of the accidental release of solid hazardous and non-hazardous wastes has considered the potential risks to the marine environment. Controls have been implemented to reduce the likelihood of accidental release of solid wastes for the duration of the Petroleum Activity.	EPO 12 PS 12.1.1 PS 12.2.1 PS 12.3.1 PS 12.4.1
Assessment summary The 'Threat Abatement Plan for the impacts of marine debris on the vertebrate wildlife of Australia's coasts and oceans' has been considered when assessing impacts and risks, and the Petroleum Activity is not considered to be inconsistent with the relevant actions of this plan.				

Table 6-20: Assessment against relevant actions of the National Recovery Plan for the Southern Right Whale

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
National Recovery Plan for the Southern Right Whale	A2: Address habitat degradation impacts from coastal and offshore marine infrastructure developments within the species' range.	Action 1: Coastal and offshore development actions are assessed according to principles of ecological sustainable development to ensure the risk of injury, auditory impairment and/or disturbance to southern right whales is maintained. Action 3: Current information on species' occurrence, particularly in habitat critical to the survival, BIAs, and historic high use areas, are used to inform planning, assessment and decision-making on marine infrastructure development actions.	Refer to Section 6.6.3 **Not inconsistent assessment**: This EP assesses the potential impacts of the Petroleum Activity on cetaceans. No BIAs for habitat critical to the survival of the southern right whale overlap the EMBA for any planned impacts.	N/A

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	Relevant EPO and EPS
	A3: Understand impacts of climate variability and anthropogenic climate change on the species biology and population recovery.	Action 1: Continue to meet Australia's international commitments to address causes of climate change, including greenhouse gas emissions.	Refer to Section 6.6.6 **Not inconsistent assessment:** Section 6.6.6 includes an assessment of the GHG emissions from the Petroleum Activity on marine fauna and its contribution to GHG emissions.	EPO 7 PS 7.1.1 PS 7.2.1
	A5: Assess, manage and mitigate impacts from anthropogenic underwater noise.	Action 2: Actions within and adjacent to southern right whale BIAs and habitat critical to the survival should demonstrate that it does not prevent any southern right whale from using the area or cause auditory impairment. Action 3: Actions within and adjacent to southern right whale BIAs and habitat critical to the survival should demonstrate that the risk of behavioural disturbance is minimised. Action 4: Ensure environmental assessments associated with underwater noise-generating activities include consideration of national policy (e.g. EPBC Act Policy Statement 2.1) and guidelines related to managing anthropogenic underwater noise, and implement appropriate mitigation measures to reduce risks to southern right whales to the lowest possible level. Action 5: Quantify the risks of anthropogenic underwater noise to southern right whales, including studies aimed to measure physiological effects, behavioural disturbance, and changes to acoustic communication (e.g. masking of vocalisations) to whales.	Refer to Section 6.6.3 **Not inconsistent assessment**: This EP assesses the potential impacts of the Petroleum Activity on cetaceans. No BIAs for habitat critical to the survival of the southern right whale overlap the noise EMBA.	EPO 4 PS 4.1.1
	A6: Manage, minimise and mitigate the threat of vessel strike.	Action 1: Assess risk of vessel strike to southern right whales in BIAs. Action 3: Ensure environmental impact assessments and associated plans consider and quantify the risk of vessel strike and associated potential cumulative risks in BIAs and habitat critical to their survival.	Refer to Section 6.7.6; note, vessel activity is not planned within the BIA **Not inconsistent assessment**: The assessment of a vessel collision with marine fauna has considered the potential risks to cetaceans.	EPO 13 PS 4.1.1
Assessment summary The National Recovery Plan for the Southern Right Whale has been considered when assessing impacts and risks, and the Petroleum Activity is not considered to be inconsistent with the relevant actions of this plan.

6.9 Cultural features and heritage values assessment

The identification of cultural features and heritage values of the environment as well as the social, economic and cultural features important to Indigenous people is integral to understanding the environment and any potential impacts and risks to the environment. In line with Woodside's Indigenous Communities Policy (Woodside 2025), Woodside seeks to avoid damage or disturbance to cultural heritage (including intangible heritage). If avoidance is not possible, Woodside will seek to minimise and mitigate any impacts, through consultation with Indigenous communities and Traditional Custodians.

Mitigation of intangible heritage can include any measure or control aimed at ensuring the viability of the cultural heritage and its intergenerational transmission. This can include reducing impacts and risks to environmental features that are associated with intangible cultural heritage (UNESCO, 2003; Australia ICOMOS, 2013).

Values and features of significance identified in Section 4.9.1 (Table 4-21) as being likely or possible to interact with the Operational Area or EMBA are addressed in the risk assessment below. Management of these risks ensures that Indigenous concerns and interests are adequately acknowledged and protected throughout the duration of the Petroleum Activity.

Any action in Australian waters that will or might interact with the seabed could impact UCH, as such, an adequate process of UCH assessment and management is to be undertaken ahead of, and concurrent with, any proposed actions in the near and offshore environment (DCCEEW 2024). The impact assessment below considers both Indigenous and historical UCH in order to protect its value for future generations.

Description of source of impact/risk (key aspects)
Acoustic Emissions LWIV and support vessels will generate noise in the air and underwater, due to the operation of thruster engines, propeller cavitation, plugging operations, onboard machinery and other activities. Refer to Section 6.6.3 for more details **Light Emissions** Routine light emissions include light sources that alter the ambient light conditions in an environment. The LWIV and support vessels will routinely use external lighting to navigate and conduct safe operations at night throughout the Petroleum Activity. Refer to Section 6.6.7 for more details **Seabed disturbance** Seabed disturbance associated with the Petroleum Activity can occur. The presence of subsea infrastructure and the interaction with hydrodynamic processes may result in localised scouring to the seabed and localised sedimentation of fine substrates around infrastructure. ROV operations will also be conducted which can result in seabed disturbance. Refer to Section 6.6.2 for more details **Unplanned hydrocarbon release (basis of EMBA)** The EMBA is the largest spatial extent where unplanned events could have an environmental consequence on the surrounding environment. For this EP, the EMBA is the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the highly unlikely event of the worst-case unplanned release. The EMBA therefore covers a larger area than the area that would be affected during any one single event. Refer to Section 6.7.2 for more details.
Detailed impact and risk assessment
The Petroleum Activity has the potential to impact cultural features and heritage values identified in Table 4-21 in the following ways.
Archaeological heritage and landscapes
Places that are identified in Section 4.9.1 for their value as archaeological sites are assumed to be at risk where there is potential for impact to the tangible or scientific elements of that place. This could include physical damage or disturbance to the archaeological integrity of a place. **Coastal/island archaeological sites (fish traps and petroglyphs)** No coastal areas or islands are present within the Operational area. A review of the DPLH's Aboriginal Heritage Inquiry System identified 1 Registered Heritage Places and 0 Lodged Aboriginal sites within the EMBA. These locations do exist within the EMBA boundary. However, given the EMBA is driven by an unplanned hydrocarbon release there is no anticipated impact pathway from this activity to onshore archaeological sites above highest astronomical tide (HAT). Archaeological sites may exist in intertidal landscapes within the EMBA and may be exposed to hydrocarbons from an unplanned release. However, there is no anticipated impact pathway from the presence of hydrocarbons on archaeological values, as this is not expected to impact the fabric or context of sites on an exposed shoreline site. Impacts to the heritage value of (for example) fish traps from an unplanned hydrocarbon release may occur indirectly through impacts to fish. However, it is expected that continued use of fish traps beyond their archaeological value will be preserved where fish species and distribution are maintained at a population level. With regard to fish, refer to species specific assessment below for further information, in addition to the impact and risk assessment in Sections 6.6 and 6.7 respectively. **Submerged cultural heritage (indigenous and historic)** The OA overlaps the submerged landscape, which is defined as the area from the WA coast to the Ancient Coastline at 125 m Depth Contour KEF. The submerged landscape is also considered to comprise potentially culturally significant landscapes and landscape features such as submerged hills, karst depressions/ravines and valleys between submerged ridges and submerged calcarenite ridges/paleo beach barrier systems. This area has been identified as having the potential for Indigenous archaeological heritage material to exist on the seabed. The intangible values associated with the submerged landscape are assessed below. No archaeological sites have been identified beyond terrestrial or intertidal areas, with the exception of four sites at Murujuga in Cape Bruguieres channel, Maitland River Hummock and Flying Foam Passage (Benjamin et al. 2020; Benjamin et al 2023; Benjamin et al 2026), which are outside of the EMBA. Additionally, volcanic rock which may contain petroglyphs does not occur within the Operational area. Nevertheless, cultural heritage values may exist on the seabed, these include both unidentified shipwrecks and Indigenous cultural material.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Planned activities overlapping the Ancient Landscape have potential for seabed disturbance, as outlined in Section 6.6.2. Woodside engages a consultant to undertake a desktop review based on geophysical and bathymetric data, for the potential of submerged archaeological material, in any areas subject to seabed disturbance. This approach is consistent with the Guidelines for Assessing and Managing Impacts to Underwater Cultural Heritage in Australian Waters (UCH) (DCCEEW, 2024) (see Section 5). Previous assessments undertaken which included wells, CK4 and LH3 did not identify any archaeological sites or values in Commonwealth waters that may be impacted by the Operational area. Areas including wells WA7 and WA8 will be subject to future assessment as outlined in relevant controls.

Known submerged heritage, including archaeological sites, may be protected subject to declarations under the Aboriginal and Torres Strait Islander Heritage Protection Act 1984, Underwater Cultural Heritage Act 2018 or EPBC Act 1999. Submerged archaeological sites (locations undefined) may exist on the Submerged Landscape within the broader EMBA. However, given the EMBA is driven by an unplanned hydrocarbon release, it is not expected to impact the seabed or archaeological material on or within it. Therefore, the Petroleum Activity is not expected to impact submerged archaeological sites in the broader EMBA.

Woodside understands there is no Indigenous archaeology known to exist within the OAs and no areas subject to declarations or prescriptions under these Acts are located within the OAs. No submerged sites of significance within the OAs were identified by Traditional Custodians during consultation while preparing this EP. In the event that unidentified cultural heritage is encountered it will be managed in accordance with the Unexpected Finds Procedure detailed Section 7.2.3 and applicable legislative obligations.

Intangible heritage

Intangible values that are identified in Section 4.9.1 are assumed to be at risk where there is potential for impact to the spiritual connections, features and/or places associated with the value. Impacts to intangible heritage can be individualised; the assessment below does not account for this variability but aims to assess widespread impacts to general intangible values.

Cultural obligations to care for Country/Access to Country

Potential impact pathways to the rights and obligations of Traditional Custodians to care for Sea Country may be directly associated with environmental impacts, or by excluding Traditional Custodians from Sea Country (e.g. by restricting access) or decision-making processes (e.g. by not conducting ongoing consultation). Restrictions on access may be temporary (e.g. where exclusion zones exist around activities for safety reasons) or permanent (e.g. where infrastructure obstructs access or navigation). Such impacts are limited to areas that have been traditionally accessed by Traditional Custodians and are expected to be concentrated in shoreline environments. As there is no potential for shoreline accumulation of hydrocarbons within the EMBA, an unplanned hydrocarbon release is not expected to result in the loss of heritage value, cultural practice, knowledge transmission, or cultural obligations at a broader cultural landscape scale. Ongoing consultation is also intended to facilitate access arrangements where feasibly safe to do so, and to support appropriately informed decision-making processes.

Creation/dreaming sites; ceremonial sites; sacred sites; ancestral beings

Activities that physically alter landscape features may be assumed to potentially impact values of creation/dreaming sites, sacred sites or ancestral beings. Activities that prevent the performance of ceremony at these sites will directly impact their values. This is anticipated to be focused on areas adjacent to the coast. There are no known creation or dreaming sites identified within the Operational area during consultation or through publicly available literature. Given the limited extent of the proposed activity, impacts to creation/dreaming or ceremonial sites are not expected.

Kinship systems and totemic species

Marine species may have kinship/totemic relationships to Traditional Custodians, but it is understood that these relationships do not prohibit people outside of that “skin group” from hunting or eating that same species (Juluwarlu 2004). It is therefore inferred that the management of totemic or kinship species applies at the species/population level and not to individual plants and animals. The impacts and risks associated with the Petroleum Activity are not considered to be ecologically significant at a population level. As such, cultural values associated with kinship systems and totemic species are expected to be maintained.

Resource collection

Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, marine species (as resources) will be impacted where there is an impact at the species/population level. However, the impacts and risks associated with the Petroleum Activity are not considered to be ecologically significant at a population level. As such, cultural values associated with kinship systems and totemic species are expected to be maintained.

Songlines

Songlines can become lost, fragmented, or broken when there is a loss of Country or forced removal from Country (Neale and Kelly 2020:30). Physical sites that have been identified as comprising a component of a songline are important to protect to prevent the fragmenting or breaking apart of songlines and loss of sacred cultural knowledge. Landscape features that may be associated with intangible values, including songlines, would have been exposed during the LGM and are now submerged. Submerged landscape features, including submerged hills are considered in

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

the submerged cultural heritage assessment above. No specific songlines or associated submerged landscape features have been identified within the Operational Area. It is noted that oil and gas infrastructure exists in many areas of the North West Shelf, and that songlines are still acknowledged and recognised. It is inferred that if there were to be any impacts to surviving songlines these would be significantly more likely to be described as qualitative (i.e. "weaken" a songline) rather than binary or absolute (i.e. destroy a songline).

Knowledge of Country/customary law and transfer of knowledge/ Connection to Country

Where people are displaced or disrupted (e.g., during colonisation) or where there is a loss of technical skills or environmental knowledge this may damage connection to Country (McDonald and Phillips, 2021). Direct impact to communities practicing traditional skills will inherently occur when relevant aspects of the environment disappear, are displaced or suffer a reduction in species population. Furthermore, limitations on access to sites or disruption/relocation of Indigenous communities may have implications for the preservation of Indigenous knowledge. Impacts and risks from the Petroleum Activity are not considered to be ecologically significant at a population level and hence are not expected to impact the value of marine species. It is therefore not expected that the Petroleum Activity will displace or disrupt a Traditional Custodians capacity to pass on knowledge related to marine species or knowledge related to traditional culture/ technical skills.

Traditional Custodians maintain an ongoing connection to Sea Country through living cultural traditions, including the use of resources and the practice of cultural activities such as ceremonies and Dreaming stories. Woodside invites ongoing engagement with relevant Traditional Custodian groups to understand how this connection can remain uninterrupted during the Petroleum Activity. Supported further by the environmental management controls outlined in Sections 6.6 and 6.7, no adverse impacts to intangible cultural values associated with Sea Country are expected from the Petroleum Activity.

Marine ecosystems and species

Marine ecosystems may hold both cultural and environmental value, with cultural and environmental values intrinsically linked (DCCEEW 2023; MAC 2022 as cited in Woodside 2023a). It necessarily follows that an impact to marine ecosystems has the potential to impact cultural features where the impact is detectable within Sea Country and the seascape which Traditional Custodians view, interact with or hold knowledge of.

Fresh hydrocarbons (i.e. typically in the vicinity of the release location) may have a higher potential to cause toxic effects when ingested, while weathered hydrocarbons are considered to be less likely to result in toxic effects. As such, the risk of hydrocarbon ingestion is low. The migration of culturally significant marine fauna (marine reptiles, fish and mammals) protracts through time and space (i.e. the entire population will not be within the EMBA), and as such, a spill from a wellbore release is unlikely to affect an entire population.

A worst-case hydrocarbon spill scenario has the potential to result in major long-term impacts to offshore marine fauna species, with consequence severity dependent on the actual timing, duration and extent of a spill in relation to species' migratory movements and distributions. Such an event has been assessed above as highly unlikely and relevant EPOs and its corresponding controls have been implemented to mitigate such a risk (See section 6.6 and 6.7). There is potential for temporary or localised effects on cultural features and heritage values associated with affected environmental receptors; however, these impacts are not expected to result in the loss of heritage value, cultural practice, knowledge transmission, or cultural obligations at a broader cultural landscape or population scale.

Benthic habitats (coral, seagrass)

Through consultation and existing literature, Indigenous groups identified benthic habitats as valuable for their ecological values, including corals attracting fish and seagrass providing shelters for fauna, as well as an important habitat for dugongs. Additionally, coral is valued by Murujuga Aboriginal Corporation (MAC) for its aesthetic values.

As described in Section 6.6 and 6.7, an unplanned hydrocarbon release may impact benthic habitats. Given hydrocarbon characteristics, rapid weathering, short-term exposure, as well as the response strategies planned to be deployed, an unplanned release is not expected to result in a level of exposure to coral and seagrass that would cause an adverse impact on marine ecosystem functioning or integrity. As such, cultural values and intangible cultural heritage associated with benthic habitats are expected to be maintained.

Plankton

Through consultation and review of available literature (Section 4.9) Woodside understands that marine fauna such as plankton are culturally important to Traditional Custodians and may be affected by routine and non-routine emissions, light emissions, and unplanned hydrocarbon releases. Traditional Custodians value these species both tangibly as well intangibly as they can be considered a resource or linked to Songlines and Dreaming stories. Traditional Custodians also have connection to many marine species through kinship and totemic systems; an individual may have an obligation to care for a species to which they are kin. Traditional Custodians may also have a cultural obligation to care for the environmental values of Sea Country.

As described in Sections 6.6 and 6.7, potential impacts to marine fauna are predicted to be at an individual level, which are not considered to be ecologically significant at a population level. Impacts are not expected to occur to significant proportions of the populations of the species, nor expected to result in a decrease of the quality of the habitat such that the extent of these species is likely to decline. As such, cultural values and intangible cultural heritage associated with plankton are expected to be maintained.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Fish and cephalopods

Fish and squid have been identified through consultation and existing literature as an important resource, particularly as food sources. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) are likely to be impacted where there is an impact at the species/population level.

Through consultation, fish were identified as important agents in the management of the broader ecosystem for Indigenous groups within or adjacent to the EMBA. There are Thalu ceremonies associated with increasing fish stocks. It may be assumed that inter-generational transmission of cultural knowledge relating to fish may be impacted where changes to population or behaviour results in reduced sightings (e.g. through population decline). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO 2003). Intangible cultural heritage associated with fish, including inter-generational knowledge regarding fishing techniques and migratory patterns, can be managed by reducing impacts to fish in nearshore marine environments to which this cultural knowledge is intrinsically connected.

The octopus is an important totem to Ngarla People and features in the creation story of Solitary Island. There are increase ceremonies/rituals for species of squid and octopus to enhance or maintain populations. Thalu are places where these increase ceremonies are performed. All mentions of active ceremonial sites in the reviewed literature were confined to onshore locations, though the values may extend offshore where, for example, the thalu relates to marine species populations. As thalu ceremonies are preformed to maintain and increase populations of marine species, it is inferred that management applies at the species/population level and not to individuals.

The potential impacts from the Petroleum Activity on fish and cephalopods are not considered to be ecologically significant at a population level. As such, cultural values and intangible cultural heritage associated with fish and cephalopods are expected to be maintained.

Whales, dolphins and dugongs

There are increase ceremonies/rituals for species of animals and plants important to Indigenous peoples, to enhance or maintain populations. Thalu are places where these increase ceremonies are performed. All mentions of active ceremonial sites in the reviewed literature were confined to onshore locations, though the values may extend offshore. For example, the thalu relates to marine species populations. As thalu ceremonies are performed to maintain and increase populations of marine species, it is inferred that management applies at the species/population level and not to individuals. For example, the thalu site on Murujuga which "brings in whales to beach" will continue to serve its purpose so long as whales continue to migrate through Mermaid Sound. Reviewed literature (DBCA 2020) also includes information that is marked as information that cannot be copied, reproduced or used without consent. The values described in the literature are environmental in nature, apply to marine mammal behaviours at a population level and are managed through existing environmental controls.

Related intangible cultural heritage may include the transmission of cultural knowledge about whales and whale behaviour, including birthing areas, whale communication and migratory patterns. Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn 2021). Whale symbology expressed through stories, music, and dance can reflect a group's connections with the sea, as well as marine fauna, which then comprise a group's cultural values (Ardler 2021; Bursill et al. 2007; Cressey 1998). Whales also speak to a broader connection that exists between Indigenous people and their surrounding environment. Beyond mythology and symbolism, whales can be connected with various economic and social functions associated with everyday life. Cultural knowledge of whales, whale migration, behaviour and the related marine environment may all be important in ensuring the continuation of these socio-economic functions and other related activities that remain valuable to Indigenous people (Fijn 2021). No impacts to communities' ability to perform or transmit stories, music or dance are anticipated from the Petroleum Activity. Where timing or performance is linked to sighting or engaging with these species, impacts may occur where numbers or migration behaviours are impacted at a population level.

Indigenous groups have expressed interest about whale migratory routes and studies. Inter-generational transmission of cultural knowledge (including songlines) relating to marine mammals may be impacted where changes to population or behaviour at a population level results in reduced sightings (e.g. through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO 2003).

The potential impacts of the Petroleum Activity on marine mammals are not considered ecologically significant at a population level. As such, cultural values and intangible cultural heritage associated with marine mammals are expected to be maintained.

Marine reptiles (turtles)

Turtles and their eggs have been identified through consultation and existing literature as an important resource, particularly as food sources. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) are likely to be impacted where there is an impact at the species/population level.

Through consultation and review of available literature (Section 4.9.1), Woodside understands that marine fauna such as turtles, are culturally important to Traditional Custodians, and may be affected by light emissions. Traditional Custodians value these species both tangibly as well intangibly as they can be considered a resource or linked to

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Songlines and Dreaming stories. Traditional Custodians also have connection to many marine species through kinship and totemic systems; an individual may have obligation to care for a species to which they are kin. Traditional Custodians may also have a cultural obligation to care for the environmental values of Sea Country.

Intangible cultural heritage may also include the transmission of cultural knowledge about marine reptiles, such as nesting areas, hunting areas and migratory patterns. Cultural knowledge may also be conveyed through stories, such as the turtle being trapped in the sea as a result of its greed for berries as recounted by Capewell (2020). Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn 2021). Indigenous groups have expressed an interest regarding turtle monitoring programs and migration patterns.

Activities that impact turtle populations and their marine environment may have an indirect impact on some Aboriginal communities as this can limit access to cultural sites or deplete hunting areas that would threaten local food security (Delisle et al. 2018:251). Inter-generational transmission of cultural knowledge (including songlines) relating to marine reptiles may be impacted where changes to population or behaviour results in reduced sightings (e.g. through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO 2003).

The potential impacts from the Petroleum Activity on marine reptiles are not considered to be ecologically significant at a population level. As such, cultural values and intangible cultural heritage associated with marine reptiles are expected to be maintained.

Seabirds

Seabirds have been identified through literature as a culturally significant species (Malgana Aboriginal Corporation 2021), as well as a resource (seabird eggs; Smyth 2007). Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) are likely to be impacted where there is an impact at the species/population level. Intangible cultural heritage may also include the transmission of cultural knowledge about seabirds, such as nesting areas, hunting areas and migratory patterns. Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn 2021) Inter-generational transmission of cultural knowledge relating to seabirds may be impacted where changes to population or behaviour results in reduced sightings (e.g. through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO 2003).

The potential impacts from the Petroleum Activity on seabirds are not considered to be ecologically significant at a population level. As such, cultural values and intangible cultural heritage associated with seabirds are expected to be maintained.

Shoreline habitats (mangroves)

Through consultation, Indigenous peoples identified shoreline habitats as valuable for their ecological values, including mangroves for providing shelter to marine invertebrates, which are identified as resources, and a potential nursery for turtles. Literature also notes that mangroves are also valued for the flora and fauna they are associated with and support (Commonwealth of Australia 2002) and Smyth (2007) reports that mangrove seeds are used as a resource by Ngarda-Ngarli (the collective term for the Traditional Custodians who look after Murujuga Country).

There is no overlap between the Operational area and mangrove habitat, and no planned impacts to mangroves from the Petroleum Activity. As described in Section 6.7.2, given the non-persistent nature of the hydrocarbons, no significant effects to mangrove habitat are expected to occur. As such, cultural values and intangible cultural heritage associated with shoreline habitats are expected to be maintained.

Conclusion

The potential impacts and risks from the Petroleum Activity are not considered to be ecologically significant at the population level. As such, impacts are not expected to result in the loss of heritage value, cultural practice, knowledge transmission, or cultural obligations at a broader cultural landscape or population scale. Refer to the impacts on intangible values assessment above.

The impact and risk assessment for cultural features and heritage values has therefore determined that the planned activities are unlikely to result in an impact greater than localised and result in no lasting effect (F), and unplanned activities are assessed to have a residual risk rating of moderate (or lower). Woodside will continue to consider new heritage information as it becomes available.

[56] Qualitative measure.

[57] Living heritage supports community and individual identity. Intangible cultural heritage is 'living heritage' that is inherited from ancestors and passed on to their descendants. It is comprised of many influences, including oral traditions, art, social practices, rituals and ceremonies, cultural knowledge and practices. It is transmitted from generation to generation and evolves in response to the environment. Woodside applies a 'living heritage' approach to its cultural heritage management. This includes ensuring that Traditional Custodians are given voice to identify interests, transmit information and express concerns. Woodside works with Traditional Custodians to support and follow appropriate cultural protocols, including calling to Country, conducting smoking ceremonies (in areas where this custom is appropriate) and undertaking cultural awareness. Woodside will collaborate and provide relevant information it holds to groups such as Heritage Management Committees where they are established.

maritime archaeologist to inform areas for laydown and/or installation of equipment to avoid or where not possible, minimise physical impacts to cultural heritage areas or prospective areas.	CS: Minimal costs associated with review of data and avoidance or minimisation options.	potential exclusion or avoidance areas for seabed disturbance. Implementing this process will protect and minimise any physical impacts to underwater cultural heritage. Additionally, this process is not inconsistent with the Guidelines on the application of the *Underwater Cultural Heritage Act 2018*: Assessing and Managing Impacts to Underwater Cultural Heritage in Australian Waters (DCCEEW 2024).		
Unexpected finds of potential UCH sites or features, including First Nations UCH, are managed in accordance with the Unexpected Finds Procedure set out in Section 7.2.3.	F: Yes. CS: Minimal cost associated with the reporting process.	Allows management of unexpected finds in accordance with legislative requirements, including UCH Guidance for Offshore Developments and the Guidelines to Assessing and Managing Impacts to Underwater Cultural Heritage in Australian Waters (DCCEEW, 2024a), under the *Underwater Cultural Heritage Act*, expert advice and community expectations.	Benefits outweigh cost/sacrifice.	Yes C 3.2
ALARP statement: Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating ALARP (Section 2.4.1), Woodside considers the adopted controls appropriate to manage potential impacts associated with disturbance to seabed from the activity. As no reasonably practicable additional or alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts are considered ALARP.				

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Demonstration of acceptability
Acceptability statement: The impact and risk assessment has determined that, given the adopted controls, planned activities are unlikely to result in an impact greater than temporary localised impact not significant to areas or items of cultural significance with no lasting effects (F) and unplanned activities are assessed to have a residual risk rating of moderate (or lower). The Petroleum Activity and the EMBA are not expected to have a significant impact (e.g. changes in population levels) on MNES including marine fauna with a cultural connection with, or traditional use in nearshore areas. While the activity will occur on the Ancient Landscape, Woodside facilitates a process of undertaking underwater cultural heritage desktop assessments by qualified professionals to identify known or potential underwater cultural heritage where new seabed disturbance occurs, and an unexpected finds procedure (refer to Section 7.2.3) will be implemented. Therefore, the activity is not inconsistent with Underwater Cultural Heritage Guidance for Offshore Developments and the Guidelines to assessing and managing impacts to Underwater Cultural Heritage in Australian waters under the UCH Act. In addition, Woodside has engaged with Traditional Custodians adjacent to the EMBA to understand the cultural features and heritage values that may occur and potential impacts from the activity. Woodside maintains a long-standing relationships, with relevant Traditional Custodian groups, and undertakes consultation with those whose functions, interests or activities may be affected by activities conducted under this EP. In the event of an unplanned environmental impact, such as a hydrocarbon spill, Woodside will engage with relevant Indigenous groups within or adjacent to the EMBA in line with its Oil Pollution First Strike Plan (Appendix H). Woodside will support Traditional Custodians to practice cultural obligations to care for Country by providing timely information on the incident, facilitating safe access to Sea Country where practicable, and incorporating Traditional Custodian knowledge and priorities into response, mitigation and recovery activities. For ongoing consultation post Regulation 25 consultation, Woodside supports ongoing engagement with Traditional Custodians. Woodside is committed to ongoing engagement and support to care for and manage Country, including Sea Country. The 'living heritage' management approach has been developed to enable Woodside to manage cultural values which may be identified at any time during Woodside's activities via ongoing dialogue with Traditional Custodians. Further opportunities to reduce the impact have been investigated above. Based on the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.3.4.2) and Woodside's criteria for demonstrating acceptability (Section 2.4.2), Woodside considers the adopted controls appropriate to manage the impacts to a level that is broadly acceptable, and compliance with those controls demonstrates the EPOs are met.

EPOs, EPSs and MC[58]			
EPOs	***Controls***	***Performance standards***	***Measurement criteria***
EPO 17a No adverse impacts[59] to cultural features and heritage values from the Petroleum Activity EPO 17b Woodside supports ongoing engagement and consultation with Traditional Custodians or the purpose of assessing	C 17.1 Apply a 'living heritage' management approach. Woodside seeks advice and incorporates Traditional Custodian cultural knowledge across our activities.	PS 17.1.1 Woodside will continue to give voice to Traditional Custodians to identify interests, transmit information and express concern through ongoing consultation as identified in Section 5.7	MC 17.1.1 Records demonstrate Change Management and Management of Knowledge processes have been followed where new controls or management measures identified.
		PS 17.1.2 Woodside will assess and where deemed practicable implement appropriate cultural protocols where	MC 17.1.2 Records demonstrate Woodside implemented cultural protocols as requested.

[58] As marine ecosystems may hold both cultural and environmental value (see Section 4.9.1), with cultural and environmental values intrinsically linked, in addition to the specific controls for cultural features and heritage values, the controls and performance standards in Sections 6.7 and 6.8 will reduce impacts to cultural features and heritage values including marine species and habitats.

[59] For the purposes of the Petroleum Activity, an adverse impact to cultural features or heritage values is considered to occur where there is: direct physical disturbance causing observable damage to a site or object of cultural significance; a measurable and significant decline in the population or habitat of a culturally significant species attributable to the activity; or a substantiated impact on recognised intangible cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7. IMPLEMENTATION STRATEGY

7.1 Overview

Regulation 22 of the Environment Regulations requires an EP to contain an implementation strategy for the Petroleum Activity. The implementation strategy confirms fit-for-purpose systems, practices and procedures are in place to direct, review and manage the activities so environmental risks and impacts are continually reduced to ALARP and are acceptable, and EPOs and EPSs outlined in this EP are achieved.

Woodside, as operator, is responsible for ensuring the Petroleum Activity is managed in accordance with this implementation strategy and the WMS (Section 1.6).

7.2 Systems, practices, and procedures

All operational activities are planned and performed in accordance with relevant legislation and standards, management measures identified in this EP, and internal environment standards and procedures. The systems, practices and procedures that will be implemented are listed in the controls and EPSs adopted in Section 6. Document names and reference numbers may change during the statutory duration of this EP and is managed through a Change Register and update process.

7.2.1 Environmental Consideration during Selection, Assessment and Approval of Chemicals

All chemicals that may be operationally released or discharged to the marine environment by the Petroleum Activity are evaluated using a defined framework and set of tools to ensure the potential impacts are acceptable, ALARP and meet Woodside's expectation for environmental performance which requires chemicals to be selected with the lowest practicable environmental impacts and risks, subject to technical constraints).

Chemicals proposed to be selected as part for the Petroleum Activity will be managed in accordance with the requirements set out by the Australian Government under the Industrial Chemicals Environmental Standard (IChEMS). The IChEMS is a key component of several National reforms to improve approaches to how industrial chemicals are used, produced, imported and managed. Industrial chemicals will be listed on the IChEMS Register in one of 7 schedules according to their environmental risk.

Chemicals proposed for selection in this activity will be assessed against those listed in the IChEMS register under one of the seven schedules according to their environmental risk. The selection and management of any chemical will adhere to the specific risk management measures, storage, use and handling requirements outlined in the corresponding schedule

Chemicals discharged during the Petroleum Activities are described in Section 6.6.4. AFFF may be discharged where project vessel helideck testing requirements (typically annual) fall within the on-hire period, or in an emergency (refer to Section 6.6.5).

7.2.1.1 Environmental selection criteria

The chemical assessment process follows the principles outlined in the Offshore Chemical Notification Scheme (OCNS), which manages chemical use and discharge in the United Kingdom (UK) and the Netherlands. It applies the requirements of the OSPAR Convention. The OSPAR Convention is widely accepted as best practice for managing chemicals.

All chemical substances on the OCNS ranked list of registered products have an assigned ranking based on toxicity and other relevant parameters, such as biodegradation and bioaccumulation, in accordance with one of two schemes (as shown in Figure 7-1):

- Hazard Quotient (HQ) Colour Band: Gold, Silver, White, Blue, Orange or Purple (listed in order of increasing environmental hazard).
- OCNS Grouping: E, D, C, B or A (listed in order of increasing environmental hazard). Used for inorganic substances, hydraulic fluids and pipeline chemicals only.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

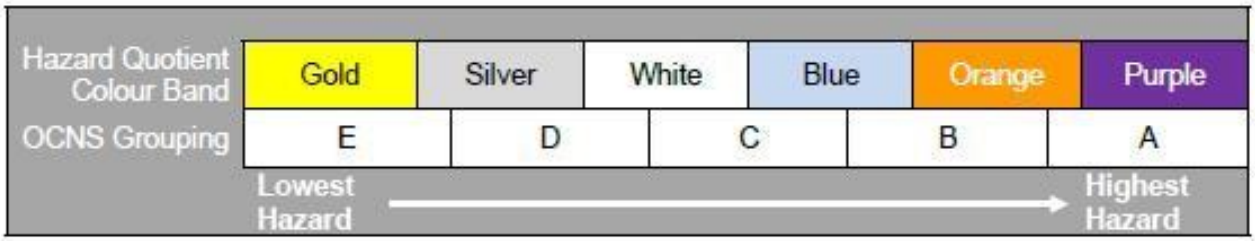

Figure 7-1: Offshore Chemical Notification Scheme ranking

Chemicals fall into the following assessment types:

- No further assessment: Chemicals with an HQ band of Gold or Silver or an OCNS ranking of E or D with no substitution or product warnings do not require further assessment. Such chemicals do not represent a significant impact on the environment under standard use scenarios and are therefore considered ALARP and acceptable.
- Further assessment/ALARP justification required: The following types of chemicals require further assessment to understand the environmental impacts of discharge into the marine environment:
  1– chemicals with no OCNS ranking
  2– chemicals with an HQ band of White, Blue, Orange or Purple or an OCNS ranking of A, B or C
  3– chemicals with an OCNS product or substitution warning.

This includes assessing the ecotoxicity, biodegradation and bioaccumulation of the chemicals in the marine environment in accordance with the Centre for Environment, Fisheries and Aquaculture Science (CEFAS) Hazard Assessment and the Department of Mines, Petroleum and Energy (DMPE) Environmental Risk Assessment of Chemicals used in WA Petroleum Activities Guideline.

7.2.1.1.1 Ecotoxicity

Chemical ecotoxicity is assessed using the criteria used by CEFAS to group chemicals based on ecotoxicity results (Table 6-1). If a chemical has an aquatic or sediment toxicity within the criteria for the OCNS grouping of D or E, this is considered acceptable in terms of ecotoxicity.

Table 7-1: Centre for Environment, Fisheries and Aquaculture Science's Offshore Chemical Notification Scheme grouping based on ecotoxicity results

Initial Grouping	A	B	C	D	E
Results of aquatic toxicity data (ppm)	<1	>1–10	>10–100	>100–1,000	>1,000
Results for sediment toxicity data (ppm)	<10	>10–100	>100–1,000	>1,000–10,000	>10,000

Note: aquatic toxicity refers to the Skeletonema costatum *EC_{50}, Acartia tonsa LC_{50} and Scophthalmus maximus (juvenile turbot) LC_{50} toxicity tests; sediment toxicity refers to the Corophium volutator LC_{50} test.*

7.2.1.1.2 Biodegradation

Chemical biodegradation is assessed using the CEFAS criteria, which align with the categorisation outlined in the DMPE Environmental Risk Assessment of Chemicals used in WA Petroleum Activities Guideline.

CEFAS categorises biodegradation into the following groups:

- readily biodegradable: results of >60% biodegradation in 28 days to an OSPAR harmonised offshore chemical notification format (HOCNF) accepted ready biodegradation protocol
- inherently biodegradable: results of >20% and <60% to an OSPAR HOCNF accepted ready biodegradation protocol or result of >20% by OSPAR accepted inherent biodegradation study
- not biodegradable: results of <20% from OSPAR HOCNF accepted biodegradation protocol or inherent biodegradation protocol, or half-life values derived from aquatic simulation test indicate persistence.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Chemicals with >60% biodegradation in 28 days to an OSPAR HOCNF accepted ready biodegradation protocol are considered acceptable in terms of biodegradation.

7.2.1.1.3 Bioaccumulation

The bioaccumulation of chemicals is assessed using the CEFAS bioaccumulation criteria, which align with the categorisation outlined in the DMPE Environmental Risk Assessment of Chemicals used in WA Petroleum Activities Guideline.

The following guidance is used by CEFAS:

- Non-bioaccumulative: Log Pow <3, or bioconcentration factor ≤100 and molecular weight is ≥700.
- Bioaccumulative: Log Pow ≥3 or bioconcentration factor >100 and molecular weight is <700.

Chemicals that meet the non-bioaccumulative criteria are considered acceptable. If a product has no specific ecotoxicity, biodegradation or bioaccumulation data available, the following options are considered:

- Environmental data for analogous products can be referred to where chemical ingredients and composition are largely identical.
- Environmental data may be referenced for each separate chemical ingredient (if known) within the product.

7.2.1.1.4 Alternatives

If no environmental data are available for a chemical or if the environmental data does not meet the acceptability criteria outlined above, potential alternatives for the chemical will be investigated, with preference for options with an HQ band of Gold or Silver, or OCNS Group E or D with no substitution or product warnings.

7.2.1.1.5 Decision

Once the further assessment/ALARP justification has been completed, the relevant environment adviser must concur that the environmental risk as a result of chemical use is ALARP and acceptable.

7.2.2 Woodside invasive marine species risk assessment process

7.2.2.1 Objective and scope

To minimise the risk of IMS as a result of the Petroleum Activity, all applicable vessels and immersible equipment will be subject to Woodside's IMS risk assessment process (unless exempt as outlined below).

The objective of the process is to identify the level of threat a contracted project vessel, or immersible equipment, poses if no additional risk reduction management measures are implemented. This allows Woodside (and its contractors) to apply management options that are commensurate to the identified level of risk.

The IMS risk assessment process does not apply to:

- vessels or immersible equipment that do not plan to enter the IMS Management Area[63]
- 'new build' vessels or immersible equipment launched less than14 days before mobilisation

[63] *The IMSMA is defined as all nearshore waters around Australia, extending from the lowest astronomical tide mark to 12 NM from land ('Territorial Seas', and including Australian territorial islands). The IMSMA also includes: (i) all waters which are shallower than the 50 m depth contour outside of the 12 NM boundary, thereby encompassing submerged reefs and atolls, and (ii) Operational Areas defined in environmental approvals. The IMSMA is based on current maritime boundary definitions, legal frameworks and requirements, IMS risk interpretations and existing management arrangements applied by Commonwealth and state/territory regulatory agencies.*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- locally sourced vessels or immersible equipment from within the Western Locally Sourced Zone[64]. Vessels, or immersible equipment are defined as locally sourced when the same supply facilities or port have been used since their last IMS inspection, full hull clean in dry dock, or application of AFC.

7.2.2.2 Risk assessment process

Woodside's IMS risk assessment process was developed by considering the national biofouling management guidelines for the petroleum production and exploration industry, and guidelines for the control and management of a ships' biofouling to minimise the transfer of invasive aquatic species (IMO, 2023).

To effectively evaluate the potential for vessels and immersible equipment to introduce IMS, a risk assessment process has been developed to score and evaluate the risk posed by each project vessel, or immersible equipment planning to undertake activities within an IMS Management Area (IMSMA) or Operational area. The risk assessment process considers a range of factors, as listed in Table 7-2 and Table 7-3.

The IMS risk assessments will be undertaken by a trained environment adviser who has completed relevant Woodside IMS training or by a qualified and experienced IMS inspector. Woodside implements a quality assurance and control process for all IMS risk assessments, where a secondary trained environment adviser verifies the assessment to minimise the risk of misapplication and errors within the process.

Table 7-2: Key factors considered as a part of the risk assessment process for vessels

Factors	Details
Vessel type	The risk of IMS infection varies depending on the type of vessel undertaking the activity. A higher risk rating is applied for more complex, slow-moving vessels (e.g. dredges) in comparison to simple vessels (e.g. crew transfer vessel).
Recent IMS inspection and cleaning history, including for internal niches	In the case of biofouling on external hull niches, different risk ratings are applied depending on whether out-of-water or in-water IMS inspections by qualified IMS inspectors and cleaning (if required) have been undertaken before the contract begins. If an IMS inspection (and clean if required) has not been undertaken in the past six months (from the time of contract start), the highest risk factor is applied. The risk factor then lessens for vessels as the time between inspection and mobilisation reduces.
Out-of-water period before mobilisation	A risk reduction factor can be applied for vessels that are hauled out then mobilised as deck cargo or by road during mobilisation, therefore becoming air dried over an extended period. The risk reduction factor increases with exposure time out of water.
Age and suitability of AFC at mobilisation date	AFC manufacturers provide a range of coatings, each designed to avoid premature coating failure if it is correctly applied and matched to the vessel's normal speeds and activity profile (i.e. proportion of time spent stationary or below three knots), and based on its main operational region (i.e. tropical, subtropical temperate). If the AFC type is deemed to be unknown, unsuited or absent, the highest risk value is applied. If the AFC type is suitable, the risk factor applied reduces with age since application.
Internal treatment systems	A risk reduction factor is applied if the vessel has an internal biological fouling control system in place at the time of assessment, or evidence of manual dosing.
Vessel origin and proposed area of operation	Risk ratings are assigned based on the climatic relationship between the vessel's origin and the climatic region of the proposed area of operation. The highest risk rating is applied to similar climatic regions.
Number of stationary/slow speed periods >7 days	A risk factor is calculated based on the number of seven-day periods the vessel has been stationary or operated at low speed (<three knots) in port or coastal waters, which is any waters <50 m deep outside 12 NM from land or any waters within 12 NM of land. The greater the number of periods, the higher the risk factor applied.
Region of stationary or slow periods	A further multiplier is applied depending on the location of the stationary/slow speed periods. The highest risk rating is applied if the stationary or slow speed periods occurred within ports or coastal waters of the same climatic region.

[64] The Western Locally Sourced Zone spans an area that includes the entire WA coastline out to the Exclusive Economic Zone limit at 200 NM, but it excludes any government-declared Quarantine Areas.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Factors	Details
Type of activity – contact with seafloor	The potential for introducing IMS varies on the planned vessel activity. Those activities that come in contact with sediments and thus have the potential to accumulate and harbour IMS in areas such as hoppers (dredges) and spud cans (drilling rigs) are considered to have a greater risk of infection.

Table 7-3: Key factors considered as a part of the risk assessment process for immersible equipment

Factors	Details
Region of deployment since last thorough clean, particularly coastal locations	Climatic region of use since last overhaul, thorough cleaning or prolonged period out of water (>28 days). The highest risk rating is applied to similar climatic regions and activities in nearshore areas (<50 m deep or within 12 NM from land).
Duration of deployments	Maximum duration of deployment (maximum time in water) since last overhaul or thorough cleaning. The longer the immersion period, the higher the risk rating applied.
Duration of time out of water since last deployment	A further risk reduction factor can be applied for immersible equipment that has been out of the water for an extended period.
Transport conditions during mobilisation	If the equipment is stored in damp conditions, a high risk factor is applied, while if equipment is stored in dry and well ventilated (low humidity) conditions, a low risk factor is applied.
Post-retrieval maintenance regime	A risk reduction factor is applied if the equipment/item of interest is routinely washed, cleaned, checked or dissembled between project sites, while a higher risk rating is applied where no routine cleaning occurs.

After implementing the risk assessment process, vessels and immersible equipment are classified as one of three risk categories:

- ‘low’ – low risk of introducing IMS of concern and hence no additional management required, or management options have been applied to reduce the risk
- ‘uncertain’ – risk of introducing IMS is not apparent and as such the precautionary approach is adopted, and additional management options may be needed
- ‘high’ – high risk of introducing IMS hence additional management options are needed before this vessel mobilises to the Operational area.

After allocating a ‘low’ risk rating for a vessel or immersible equipment, the information the vessel operator provides for the risk assessment must be confirmed before mobilisation. For vessels or equipment classified as posing an ‘uncertain’ or ‘high’ theoretical risk, a range of management options are presented to reduce this theoretical risk to acceptable levels and achieve a low risk status. These management options have been developed with the intention of reducing IMS risk to levels that are ALARP. It is a flexible approach that allows a range of management actions to be tailored for a specific vessel movement. These will be assessed on a case-by-case basis and may include:

- having a suitably qualified and experienced IMS inspector inspect (desktop, in-water or dry dock) to verify risk status; where practicable, the inspection shall occur within seven days (but not more than 14 days) before final departure to the Operational area
- applying in-water or dry dock cleaning of the hull and other niche areas, typically applied where the assessment outcome is ‘high’ risk driven by the age of the AFC on the vessel and its time spent in similar climatic region ports
- limiting the duration the vessel spends within the IMSMA to a maximum of 48 hours (cumulative entries); applicable for ‘uncertain’ risk vessels only
- rejecting the vessel.

In some circumstances, such as emergency scenarios or in the presence of serious logistic constraints or other factors outside of Woodside’s control, it may not be possible to effectively apply any of the IMS

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

management measures available and described above. In the absence of regulatory conditions, commitments or other legislative obligations that prescribe management measures for IMS, a risk-assessed alternative process is available. This must be approved by the relevant Business Vice President and the HSE Vice President.

Before they enter the Operational area, project vessels and immersible equipment must be a 'low' risk of introducing IMS.

7.2.3 Unexpected finds procedure

If what appears to be UCH (defined as 'any trace of human existence that has a cultural, historical or archaeological character and is located under water') is discovered, the following Unexpected Finds Procedure will apply:

- All activities with the potential to impact the suspected UCH must cease immediately. Retain all records of the potential UCH, including any imagery, description and location.
- The person who discovers the heritage object must inform the Activity Supervisor.
- The Activity Supervisor must notify Woodside's Principal Heritage Adviser.
- Woodside will specify an appropriate buffer around the potential UCH, considering the nature and scale of the potential UCH and the activities to be managed.
- No seabed disturbance may occur within the buffer area around the potential UCH until approved by Woodside's Principal Heritage Adviser.
- Woodside's Principal Heritage Adviser must notify a qualified underwater archaeologist and provide all available documentation of the potential UCH.
- If the potential UCH appears to be Aboriginal in origin, Woodside's Principal Heritage Adviser must notify the appropriate Traditional Custodians to determine whether it is a heritage site and if so, how the site should be managed.
- If the potential UCH appears to be a shipwreck or aircraft that has been wrecked for more than 75 years, or is otherwise reportable under Section 40 of the *Underwater Cultural Heritage Act 2018* (Cth), Woodside's Principal Heritage Adviser must notify the Minister responsible for the *Underwater Cultural Heritage Act*, the DCCEEW underwater archaeology section through the Australasian Underwater Cultural Heritage Database, and the Western Australian Museum.
- If the suspected heritage object includes human remains, Woodside's Principal Heritage Adviser must also notify:
  1– the Australian Federal Police (phone: 131 444) of the location of the remains, that the remains are likely to be historic or Aboriginal in origin, and that it may be appropriate for Traditional Custodians and a maritime archaeologist to be present during any handling of the remains
  2– the Office of the Federal Environment Minister in accordance with Section 20 of the *Aboriginal and Torres Strait Islander Heritage Protection Act* (Cth).
- Work must not restart in the vicinity of the potential heritage object until Woodside's Principal Heritage Adviser provides written approval. Woodside's Principal Heritage Adviser must only provide written approval once agreed management measures are implemented consistent with approvals and legislation, or where the potential UCH is confirmed to not be UCH.

7.2.4 Offshore Seabird Management Plan

Project vessels will implement Woodside's Offshore Seabird Management Plan (Offshore SBMP), which aligns with recommendations in the National Light Pollution Guidelines for Wildlife (DCCEEW, 2023). When implemented, the Offshore SBMP addresses seabird interaction reporting and management for offshore and inshore activities within the NWMR, specifically when the Petroleum Activity is within a nocturnal seabird species' BIA.

The purpose of the Offshore SBMP is to manage interactions with seabirds offshore to ensure any impacts and risks are reduced to ALARP and an acceptable level. The plan also provides frontline workers with

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

guidance to manage seabird interactions and potential impacts resulting from these interactions identified as occurring as a result of Woodside's activities, as demonstrated in Figure 7-2.

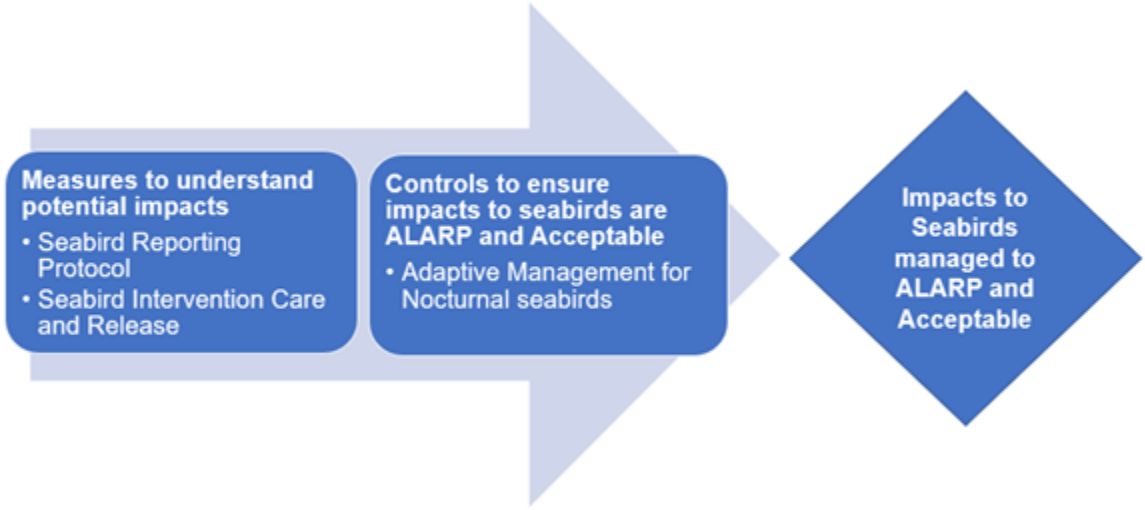

Figure 7-2: Schematic for Offshore Seabird Management Plan to manage seabird impacts to acceptable and as low as reasonably practicable levels

The Offshore SBMP adaptive management framework has been established to manage the uncertainty of the potential impacts of artificial night at light on nocturnal seabirds and is applied when a Project is within a nocturnal seabird BIA and greater than 20 km from a known rookery. Where interactions with nocturnal seabirds are identified, adaptive management controls under the Offshore SBMP may be triggered in a tiered approach.

This may include an initial assessment of:

- seabird species' important habitat proximity, life cycle seasonality, and periods of heightened sensitivity such as fledgling exodus
- overlap of seabird interactions and inclement weather; for example, post-cyclonic metocean conditions are known to increase seabird groundings.

And the possible controls and mitigation actions, for example:

- Extinguish outdoor/deck lights not necessary for but allowing safe operations and navigation at night.
- Use of block-out-blinds on portholes and windows not necessary for safety and/or navigation.

The Offshore SBMP will be available on board vessels during the Petroleum Activity. Vessel crew will be made aware of the Offshore SBMP through the campaign environment induction. This induction will include the requirement to report seabird sightings to the onshore Woodside Environment Advisor. The Offshore SBMP will be implemented by frontline personnel with support from Woodside activity focused Environmental Advisors, the Science team and a dedicated seabird subject matter expert.

7.3 Roles and responsibilities

Key roles and responsibilities for Woodside and contractor personnel relating to implementing, managing and reviewing this EP are described in Table 7-4. Roles and responsibilities for oil spill preparation and response are outlined in the Oil Pollution First Strike Plan (Appendix H) and the Woodside Incident Management Handbook.

All Woodside employees and contractors are responsible for implementing the Environment and Biodiversity Policy (Appendix A) in their areas of responsibility and to ensure the personnel are suitably trained and competent in their respective roles.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 7-4: Roles and responsibilities

Title (role)	Environmental responsibilities
All personnel	
All offshore-based personnel and onshore support personnel	• Understand the Woodside standards and procedures that apply to their area of work. • Understand the environmental risks and control measures that apply to their area of work. • Carry out assigned activities in accordance with approved procedures and the EP. • Follow instructions from the relevant supervisor with respect to environmental protection. • Cease operations that are deemed to present an unacceptable risk to the environment. • Participate in environmental assurance activities and inspections as required. • Prompt reporting of environmental hazards/incidents to their supervisor and assist in event investigation. • Attend HSE meetings, training and drills when required.
Office-based personnel	
Woodside Superintendent	• Monitor and manage the Petroleum Activity so it is performed as per the relevant standards and commitments in this EP and approval conditions. • Notify the Woodside Environment Adviser in a timely manner of any scope changes. • Liaise with regulatory authorities as required. • Review this EP as necessary and manage change requests. • Provide enough resources to implement permanent plugging-related management measures (i.e. controls, EPOs, PSs and MC) in this EP. • Ensure LWIV and support vessel personnel are given an HSE induction, as per Section 7.4.2 of this EP, at the start of the LWI activity. • Verify that contractors meet environmental-related contractual obligations. • Confirm controls and performance standards in this EP are actioned, as required, before LWI begins. • Ensure the LWIV start-up meets the requirements of the manage campaign operations process. • Confirm environmental incident reporting meets regulatory requirements (as outlined in this EP) and Woodside's HSE Reporting and Investigation Procedure. • Monitor and close out corrective actions identified during environmental monitoring or audits.
Woodside Head of Projects/ Region (Global Wells and Seismic)	• Ensure LWI operations are undertaken as per this EP and approval conditions. • Provide enough resources to implement the LWI-related management measures (i.e. controls, EPOs, EPSs and MC) in this EP. • Ensure LWIV and support vessel personnel are given an HSE induction, as per Section 7.4.2 of this EP, at the start of the LWI activity. • Confirm controls and EPSs in this EP are actioned, as required, before LWI operations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Title (role)	Environmental responsibilities
Intervention Engineering Manager	• Monitor and manage the Petroleum Activity so it is performed as per the relevant standards and commitments in this EP and approval conditions. • Notify the Woodside Environment Adviser in a timely manner of any scope changes. • Liaise with regulatory authorities as required. • Provide enough resources to implement the subsea-related management measures (i.e. controls, EPOs, EPSs and MC) in this EP. • Ensure vessel personnel are given an HSE induction, as per Section 7.4.2 of this EP, at the start of the activities. • Verify that contractors meet environment-related contractual obligations. • Confirm controls and EPSs in this EP are actioned, as required, before activities begin. • Ensure relevant vessels meet the requirements of Woodside's Marine Operations Operating Standard. • Review this EP and manage change requests for the Petroleum Activity. • Confirm site-based personnel are given an HSE induction, as per Section 7.4.2 of this EP, at the start of the activity. • Ensure all project fluids to be discharged are assessed and approved as per the requirements of the EP. • Confirm environmental incident reporting meets regulatory requirements (as outlined in this EP) and Woodside's HSE Reporting and Investigation Procedure. • Monitor and close out corrective actions identified during environmental monitoring or audits.
Woodside Drilling, Completion and Subsea Engineers	• Ensure changes to the LWI activities are communicated to the Woodside Environmental Adviser. • Ensure well intervention fluid chemical components and other fluids that may be used have been assessed and approved by the Environmental Adviser.
Woodside Environmental Adviser	• Verify relevant environmental approvals for the activities exist before starting. • Track compliance with EPOs and EPSs as per the requirements of this EP. • Prepare the environmental component of the relevant induction package. • Assist with the review, investigation and reporting of environmental incidents. • Ensure environmental monitoring and inspections/audits are performed as per the requirements of this EP. • Liaise with relevant regulatory authorities as required. • Assist in preparing required external regulatory reports, in line with environmental approval requirements and Woodside incident reporting procedures. • Monitor and close out corrective actions (Environmental Compliance and Action Register) identified during environmental monitoring or audits. • Advise relevant Woodside personnel and contractors to help them understand their environment responsibilities. • Liaise with contractors to ensure communication and understanding of environment requirements as outlined in this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Title (role)	Environmental responsibilities
Woodside Corporate Affairs Adviser	• Prepare and implement the consultation strategy for the Petroleum Activity. • Report on stakeholder consultation. • Continuously liaise and provide notification as required as outlined in the EP.
Woodside Marine Assurance Superintendent	• Conduct relevant audit and inspection to confirm support vessels comply with relevant Marine Orders and Woodside Marine Charters Instructions requirements to meet safety, navigation and emergency response requirements.
Corporate Incident Management Team (CIMT) Incident Commander	On receiving notification of an incident: • establish and take control of the Incident Management Team (IMT) and establish an appropriate command structure for the incident • assess the situation, identify risks and actions to minimise the risk • communicate impact, risk and progress to the Crisis Management Team and stakeholders • develop the Incident Action Plan, including objectives for action • approve, implement and manage the Incident Action Plan • communicate within and beyond the incident management structure • manage and review the safety of responders • address the broader public safety considerations • conclude and review activities.
LWIV based personnel	
Vessel Master (LWIV)	• Ensure personnel starting work on the vessel receive an environmental induction that meets the relevant requirements specified in this EP. • Ensure personnel are competent to perform the work they have been assigned. • Verify SOPEP drills are conducted as per the vessel's schedule. • Ensure the vessel Emergency Response Team has enough training to implement the SOPEP. • Ensure any environmental incidents or breaches of relevant EPOs or EPSs detailed in this EP are reported immediately to the Woodside Well Site Leader. • Ensure corrective actions for incidents or breaches are developed, communicated to the Well Site Leader, and tracked to closeout in a timely manner. Ensure closeout of actions is communicated to the Well Site Leader. • Ensure waste is managed on the LWIV as per the vessel’s Waste Management Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Title (role)	Environmental responsibilities
LWIV Offshore Construction Manager (OCM)	• Ensure the WIV's management system and procedures are implemented. • Ensure personnel starting work on the WIV receive an environmental induction that meets the requirements specified in this EP. • Ensure personnel are competent to perform the work they have been assigned. • Verify that emergency drills are conducted as per the WIV's schedule. • Ensure the WIV's Emergency Response Team has been given sufficient training to implement the WIV's SOPEP. • Ensure any environmental incidents or breaches of outcomes or standards are reported immediately to the Well Site Manager. • Ensure corrective actions for incidents or breaches are developed, communicated to the Well Site Manager, and tracked to close-out in a timely manner.
Woodside Well Site Leader	• Ensure the well intervention program is performed as detailed in this EP. • Ensure the management measures (i.e. controls, EPOs, PSs and MC) detailed in this EP (relevant to offshore activities) are implemented on the WIV (other controls will be implemented onshore). • Ensure environmental incidents or breaches of outcomes or standards are reported as per the Woodside Corporate Event Notification Matrix. Ensure corrective actions for incidents and breaches are developed, tracked and closed out in a timely manner. • Ensure actions related to HSE initiatives are performed. • Ensure periodic environmental inspections/reviews are completed. Ensure corrective actions from inspections are developed, tracked and closed out in a timely manner.
Woodside Offshore HSE Advisor	• Support the Well Site Leader to ensure the controls detailed in this EP relevant to offshore activities are implemented on the LWIV and help collect and record evidence of implementation (other controls are implemented and evidence collected onshore). • Support the Well Site Leader to ensure the EPOs are met and the EPSs detailed in this EP are implemented on the LWIV. • Support the Well Site Leader to ensure environmental incidents or breaches of outcomes or standards outlined in this EP, are reported, and corrective actions for incidents and breaches are developed, tracked and closed out in a timely manner. • Ensure periodic environmental inspections/reviews are completed and corrective actions from inspections are developed, tracked and closed out in a timely manner. • Review contractors' procedures, input into Toolbox talks and JSAs. • Provide day-to-day environmental support for activities in consultation with the Woodside Environment Adviser.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Title (role)	Environmental responsibilities
Support vessel-based personnel	
Vessel Master	• Ensure personnel starting work on the vessel receive an environmental induction that meets the relevant requirements specified in this EP. • Ensure personnel are competent to perform the work they have been assigned. • Verify SOPEP drills are conducted as per the vessel's schedule. • Ensure the vessel Emergency Response Team has enough training to implement the SOPEP. • Ensure any environmental incidents or breaches of relevant EPOs or EPSs detailed in this EP are reported immediately to the Woodside Well Site Leader. • Ensure corrective actions for incidents or breaches are developed, communicated to the Well Site Leader, and tracked to closeout in a timely manner. Ensure closeout of actions is communicated to the Well Site Leader.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.4 Training and competency

7.4.1 Overview

As part of its contracting process, Woodside assesses a proposed contractor's environmental management systems to determine the level of compliance with Australian/New Zealand Standard International Organization for Standards 14001. This assessment is performed for the Petroleum Activity as part of pre-mobilisation. The assessment determines whether there is a clearly defined organisational structure that sets out the roles and responsibilities for key positions. It also assesses whether there is an up-to-date training matrix that defines any corporate and site- or Petroleum Activity-specific environmental training and competency requirements.

As a minimum, environmental awareness training is required for all personnel, detailing awareness and compliance with the contractor's environmental policy and Environmental Management System.

7.4.2 Inductions

Inductions are provided to all relevant personnel (e.g. contractors and Woodside representatives) before mobilising to or on arrival at the Petroleum Activity location. The induction covers the HSE requirements and environmental information specific to the Petroleum Activity location. Attendance records will be maintained.

The induction may include:

- description of the Petroleum Activity
- ecological and socioeconomic values of the Petroleum Activity location
- regulations relevant to the Petroleum Activity
- Woodside's Environmental Management System –Environment and Biodiversity Policy
- EP importance, structure, implementation, roles and responsibilities
- main environmental aspects/hazards and potential environmental impacts and related EPOs
- oil spill preparedness and response
- monitoring and reporting on EPOs and EPSs using MC
- incident reporting.

7.4.3 Petroleum Activity-specific environmental awareness

Before starting a LWI campaign, a pre-activity meeting will be held aboard the LWIV with all relevant personnel. The pre-activity meeting provides an opportunity to reiterate environmental sensitivities or commitments associated with the Petroleum Activity. Relevant sections of the pre-activity meeting will also be communicated to the support vessel personnel. Attendance lists are recorded and retained.

During operations, regular HSE meetings will be held. During these meetings, recent environmental incidents are reviewed and awareness material is presented.

7.4.4 Management of training requirements

All personnel on the project vessels must be competent to perform their assigned positions. This may be in the form of external or 'on the job' training. The vessel Safety Training Coordinator (or equivalent) is responsible for identifying training needs, keeping records of training performed and identifying minimum training requirements.

7.5 Monitoring, auditing, and managing non-conformance and review

7.5.1 Monitoring

Regulation 22(5) of the Environment Regulations states the implementation strategy is to provide for sufficient monitoring, recording, auditing, managing non-conformance and reviewing titleholders'

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

environmental performance and the implementation strategy itself to ensure that the EPOs and EPSs in the EP are being met.

This section of the EP outlines the measures undertaken by Woodside to regularly monitor the management of environmental risks and impacts of the Petroleum Activity against the EPOs, EPSs and MC, with a view to continuously improve environmental performance. The effectiveness of the implementation strategy is also reviewed periodically as part of the monitoring and assurance process.

A key tool that is used when implementing the EP is Woodside's Environmental Compliance and Action Register. This is an internal tool that is developed at EP acceptance and is maintained until the EP is closed. The register contains all the commitments, controls, EPSs and MC from the EP and tracks compliance against each of these items. Before a project vessel is mobilised, Woodside confirms the compliance systems in place on the vessel and identifies, and records in the Environmental Compliance and Action Register, the specific records the vessel contractor shall provide during the offshore campaign. This provides Woodside with the opportunity to confirm the records provided during the Petroleum Activity are sufficient for demonstrating compliance against the EP. It also serves as a central repository for compliance information relevant to each Petroleum Activity.

7.5.2 Auditing

Environmental performance will be audited to:

- identify potential new or changes to existing environmental impacts and risk, and methods for reducing those to ALARP
- confirm mitigation measures detailed in this EP are effectively reducing environmental impacts and risk, that mitigation measures proposed are practicable and provide appropriate information to verify compliance
- confirm compliance with the controls, EPOs and EPSs detailed in this EP.
- internal auditing will be performed to cover each key project activity as summarised below.

7.5.2.1 Light well intervention vessel activities

Internal auditing is performed on an LWIV-specific schedule rather than to align with the Petroleum Activity. This enables continuous review and improvement of environmental performance over the term of the LWIV contract. The following internal audits, inspections and reviews will be performed to review the environmental performance of the activities:

- Survey environment equipment for a newly contracted LWIV (if not previously contracted to Woodside within the last two years). An environment equipment survey scope typically includes environmental discharge control (including drainage management) and loss of containment management.
- Complete an environmental inspection (conducted by offshore Woodside personnel or a delegate) during a LWI campaign, which may include verifying:
  1– bunkering/transfers between support vessels and the LWIV
  2– environment containment, including chemical storage, spill response equipment and housekeeping
  3– general LWIV environment risks, including waste management, drilling fluids oil/water separation, and inspection of subsea and moonpool areas.
- Perform an environment audit during a LWI campaign, while the LWIV is on location (by a Woodside Environment Adviser or delegate), which may include:
  1– operational compliance audits relevant to environmental risk of activities, which may include compliance with training commitments, discharge requirements, bunkering activities, verification of use of approved chemicals, and satisfactory closeout of items from previous audits
  2– inspection of selected risk areas/activities, determined by risk, previous incidents or operation-specification requirements.

The timing and frequency of LWIV activity inspections and audits will be commensurate with the LWIV campaign. For example, a short duration campaign (i.e. less than approximately 2 months) may only require

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

one environmental inspection/audit covering a combination of aspects determined by risk, previous incidents or operation specific requirements.

Audit findings relevant to continuously improving environmental performance will be tracked through the LWIV or vessel compliance action register, a contractor register between the LWIV operator or vessel contractor and Woodside.

7.5.2.2 Marine assurance

Woodside's marine assurance is managed by the Marine Assurance Team of the Logistics Function in accordance with Woodside's Offshore Vessel Assurance Standard. Woodside's process is based on industry standards and on guidelines and recommendations from recognised industry organisations such as Oil Companies International Marine Forum and International Maritime Contractors Association.

The process is mandatory for all project vessels (other than tankers and FPSOs) hired for Woodside operations, including for short-term hires (i.e. less than three months). It defines applicable marine assurance activities, ensuring all project vessel operators operate seaworthy vessels that meet the requirements for a defined scope of work and are managed with a robust safety management system.

The process is multi-faceted and encompasses the following marine assurance activities:

- offshore vessel management system assessment
- DP system verification
- vessel inspections
- Offshore Vessel Inspection Database or condition and suitability assessment
- project support for tender review, evaluation and pre- and post-contract award.

Vessel inspections are used to verify actual levels of compliance with the company's Safety Management System, the overall condition of the vessel, and the status of the planned maintenance system onboard. Woodside's Marine Assurance Specialist will conduct a risk assessment on the vessel to determine the level of assurance applied and the type of vessel inspection required.

Methods of vessel inspection may include:

- Woodside Marine Vessel Inspection
- Oil Companies International Marine Forum Offshore Vessel Inspection Database Inspection
- International Marine Contractors Association Common Marine Inspection Document Inspection
- Marine Warranty Survey.

Upon completion of the marine assurance process, to confirm identified concerns are addressed appropriately and conditions imposed are managed, the Woodside Marine Assurance Team will issue the vessel a statement of approval. Should a vessel not meet the requirements of the Woodside marine offshore vessel assurance process and be rejected, there does exist an opportunity to further scrutinise the proposed vessel.

If a vessel inspection or offshore vessel management system assessment verification review is not available, and all reasonable efforts based on time and resource availability have been made to complete this (e.g. short-term vessel hire), the Marine Assurance Specialist Offshore may approve the use of an alternative means of inspection, known as a risk assessment.

7.5.2.3 Risk assessment

Woodside conducts a risk assessment of project vessels where either an offshore vessel management system assessment verification review or a vessel inspection cannot be completed. This is not a regular occurrence and is typically used when the requirements of the assurance process are unable to be met or the processes detailed are not applicable to a proposed vessel. The marine vessel risk assessment will be conducted by a Marine Assurance Specialist, where the vessel meets the short-term hire prerequisites.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The risk assessment is a semi-quantitative method of determining what further assurance process activity, if any, is needed to assure a project vessel for a particular task or role. The process compares the level of management control a project vessel is subject to against the risk factors associated with the activity or role.

several factors are assessed as part of a vessel risk assessment, including:

- management control factors:
  1– company audit score (i.e. management system)
  2– vessel HSE incidents
  3– vessel Port State Control deficiencies
  4– instances of Port State Control vessel detainment
  5– years since previous satisfactory vessel inspection
  6– age of vessel
  7– contractors' prior experience operating for Woodside
- activity risk factors:
  1– people health and safety risks, a function of the nature of the work and the area of operation
  2– environmental risks, a function of environmental sensitivity, activity type and magnitude of potential environment damage (e.g. largest credible oil spill scenario))
  3– value risk, likely time and cost consequence to Woodside if the vessel becomes unusable
  4– reputation risk
  5– exposure to risk based on the duration of the project
  6– industrial relations risk.

The acceptability of the vessel or requirement for further vessel inspections or audits is based on the ratio of vessel score to activity risk. If the vessel management control is not deemed to appropriately manage activity risk, a satisfactory company audit and vessel inspection may be needed before awarding work.

The risk assessment is valid for the period a vessel is on hire and for the defined scope of work.

7.5.3 Management of non-conformance

Woodside classifies non-conformances with EPOs and EPSs in this EP as environmental incidents. Woodside employees and contractors are required to report all environmental incidents, and these are managed as per Woodside's HSE Event Reporting and Investigation Procedure, which includes learning requirements.

An internal computerised database called First Priority is used to record and report these incidents. Details of the event, immediate action taken to control the situation, investigation outcomes and corrective actions to prevent recurrence are all recorded. Corrective actions are monitored using First Priority and closed out in a timely manner.

Woodside uses a consequence matrix to classify environmental incidents, with the significant categories being A, B and C. Detailed investigations are completed for all categories A, B, C and high potential environmental incidents.

7.5.4 Review

7.5.4.1 Management review

Within the Environment teams, the effectiveness of the EP implementation strategy is regularly reviewed at a frequency commensurate with the Petroleum Activity duration and risk. This review may consider:

- LWI key performance indicators
- effectiveness of tools and systems to monitor environmental performance

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- lessons learned about implementation tools and throughout each campaign
- reviews of oil spill arrangements and testing are performed in accordance with this EP.

Within each Asset Team, Project Team or Business Unit, managers review environmental performance regularly, usually though incident and event reporting and monthly HSE reports. The outcome of such reviews will inform whether further action is needed to address key or recurring environmental performance matters.

7.5.4.2 Learning and knowledge sharing

Learning and knowledge sharing occurs via several methods, including:

- event investigations
- event bulletins
- after-action review conducted at the end of each well, including review of environmental incidents as relevant
- ongoing communication with vessel operators
- formal and informal industry benchmarking
- cross-asset learnings
- engineering and technical authorities discipline communications and sharing.

7.5.4.3 Review of impacts, risks and controls across the life of the Environment Plan

Where activities described in this EP do not occur continuously or sequentially, before recommencing activities after a period greater than 12 months, impacts, risks and controls will be reviewed.

The process will identify or review impacts and risks associated with the newly-recommencing activity, and will identify or review controls to ensure impacts and risks remain or are reduced to ALARP and acceptable levels. Information from previous activities conducted under this EP will be considered. Controls that have previously been excluded based on proportionality will be reconsidered. Any required changes will be managed by the MOC process outlined in Section 7.8.

7.6 Management of knowledge

Knowledge relevant to the existing environment is reviewed to identify changes relating to the understanding of the environment or legislation that supports the risk and impact assessments for EPs (in-force and in-preparation). New knowledge checks take place both routinely, primarily via quarterly and annual knowledge reviews, and ad hoc (as information is obtained), and encompasses the following topics:

- environmental science – update checks conducted via desktop reviews: scientific literature, government publications and Woodside supported publications and studies relating to existing environment topics (including species and habitats), EPBC Act Matters of National Environmental Significance (Part 3) and Part 13 statutory instruments
- socioeconomic environment and stakeholder information – update checks conducted via desktop reviews: scientific literature, government publications and Woodside consultation
- environmental legislation – monitoring of emerging regulatory changes and the subsequent management of regulatory change, as outlined in Regulatory Compliance Our Expectations .

A management of knowledge tracker is maintained to record reviews and updates. Communication of relevant new knowledge is addressed at the EP regular cross team environment meetings where changes in knowledge prompt a consideration of MOC. This is actioned and documented appropriately.

The frequency and documentation of reviews, communication of relevant new knowledge and consideration of MOC are documented in the WMS EP Guideline.

Any relevant new information about cultural values and heritage will be assessed using the EP MOC process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Under the oil spill Operational and Scientific Monitoring Program, an annual review and update to the environmental baseline studies database is completed and documented. Periodic location-focused environmental studies and baseline data gap analyses are completed and documented. Any subsequent studies scoped and executed as a result of such gap analysis are managed by the Biodiversity and Science Team and tracked via the Corporate Environment Baseline Database.

7.7 Management of Newly Identified Impacts and Risks

New sources of receptor based impacts and risks identified through monitoring and auditing systems and tools and the Woodside Environment Knowledge Management System are assessed using the Change Management Process.

7.8 Management of change and revision

7.8.1 Environment Plan management of change

Changes are managed in accordance with Woodside's Environmental Approval Requirements Australia Commonwealth Waters Guideline. Changes relevant to the scope of the Petroleum Activity described in this EP – including review of advances in technology at stages where new equipment may be selected such as vessel contracting; changes in understanding of the environment, EPBC Act listed threatened and migratory species status, Part 13 statutory instruments (recovery plans, threat abatement plans, conservation advice, wildlife conservation plans) and current requirements for AMPs; and potential new advice from external stakeholders – will be managed in accordance with section 39 of the Environment Regulations.

Risk will be assessed in accordance with the environmental risk management methodology detailed in this EP to determine the significance of any potential new environmental impacts or risks not provided for in this EP. Risk assessment outcomes are reviewed in compliance with section 39 of the Environment Regulations.

Minor changes where a review of the Petroleum Activity and the environmental risks and impacts of the Petroleum Activity do not trigger a requirement for a formal revision under section 39 of the Environment Regulations, will be considered a 'minor revision'. Minor administrative changes to this EP, where an assessment of the environmental risks and impacts is not required (e.g. document references, phone numbers), will also be considered a 'minor revision'. Minor revisions as defined above will be made to this EP using Woodside's document control process. Minor revisions will be tracked in an MOC Register to ensure visibility of cumulative risk changes, as well as enable internal EP updates/reissuing as required. This document will be made available to NOPSEMA during regulator environment inspections.

7.8.2 Oil Pollution Emergency Plan management of change

Relevant documents from the OPEP will be reviewed in the circumstances of:

- implementation of improved preparedness measures
- a change in the availability of equipment stockpiles
- a change in the availability of personnel that reduces or improves preparedness and the capacity to respond
- the introduction of a new or improved technology that may be considered in a response for this Petroleum Activity
- to incorporate, where relevant, lessons learned from exercises or events
- if national or state response frameworks and Woodside's integration with these frameworks changes.

Where changes are required to the OPEP, based on the outcomes of the reviews described above, they will be assessed against Regulation 38 and 39 of the Environment Regulations to determine if EP, including OPEP, resubmission is required. Changes with potential to influence minor or technical changes to the OPEP are tracked in MOC records and project records and incorporated during internal updates of the OPEP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.9 Record keeping

Woodside will maintain compliance records referenced in the MC contained within Sections 6.6 and 6.7 of this EP. Many of the MC refer to 'records', which in this context Woodside considers to mean any hard or soft copy of information such as data, observations, certifications or photographs that can show a point in time and can be duplicated, such that they can be stored in compliance systems and provided to internal and external auditors (i.e. NOPSEMA) on request.

Record keeping will be in accordance with regulation 22(6), which addresses maintaining records of emissions and discharges.

7.10 Ongoing consultation

Although consultation for the purpose of regulation 25 is complete, in accordance with regulation 22(15) of the Environment Regulations, the implementation strategy must provide for appropriate consultation with relevant authorities of the Commonwealth, a State or Territory and other relevant interested persons or organisations.

Woodside proposes to engage with relevant interested persons or organisation throughout the life of the EP. Recent new information identified during ongoing consultation will be assessed as appropriate.

Woodside hosts community forums at which members are regularly provided updates on Woodside activities (for example, at community reference group meetings). Representatives who are at those meetings are from community and industry and include Woodside, state government (for instance, relevant regional development commissions), local government, Indigenous groups, industry representative bodies, community and industry organisations.

Relevant persons and those who are simply interested in the Petroleum Activity, can otherwise remain up-to-date on the Petroleum Activity through subscribing to the Woodside website, or by reading the publicly available version of the EP on NOPSEMA's website, where available.

Should consultation feedback be received after EP acceptance that identifies relevant new information, or a measure or control that requires implementation or update to meet the intended outcome of consultation, Woodside will apply its EP management of knowledge process (Section 7.6) and MOC process (Section 7.8) as appropriate.

Woodside supports ongoing engagement with Traditional Custodians, which complies with Woodside policies, strategies and procedures and is directly informed by feedback from Traditional Custodians.

It provides a mechanism for ongoing dialogue so Traditional Custodians can, on an ongoing basis, provide Woodside with feedback relating to the Petroleum Activity and in relation to caring for and managing Country, including Sea Country. The approach will be tailored to each Traditional Custodian group and may include, as agreed with relevant Traditional Custodians:

- social investment to support Indigenous ranger programs
- support for Indigenous oil spill response capabilities
- support for recording Sea Country values
- support to Traditional Custodian groups to build capabilities and capacity with respect to ability to engage with Woodside and the broader oil and gas industry on activities
- development of ongoing relationships with Traditional Custodian groups
- any other initiatives proposed for protecting Country, including cultural values.

At the time of EP submission, a number of specific activities as part of ongoing consultation regarding the Petroleum Activity are planned with Traditional Custodians. Where Traditional Custodian relevant persons have requested information or further engagement considered as ongoing consultation, but have not requested a framework agreement, these requests have been captured in Table 7-5. However, a framework agreement may still be initiated by these groups at any time.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 7-5: Ongoing consultation engagements

Report/ information	Recipient	Purpose	Frequency	Content
Notification (email)	AHO	As requested by AMSA and AHO during consultation	Notify AHO no less than four weeks prior to the commencement of the first activity, and then subsequently when vessels are undertaking activities within the Operational Area for more than three weeks at a time.	PS 1.3.1 (Section 6.6.1) Date of activity start and duration
Notification (email)	AMSA	As requested during consultation	Notify AMSA's JRCC at least 24 to 48 hours, where operationally practicable, before operations commence.	PS 1.5.1 (Section 6.6.1) Date of activity start and end
Notification (email)	AFMA. ASBTIA. CFA, DAFF-Fisheries, DPIRD, Recfishwest, Tuna Australia, WAFIC	Standard practice	Notify at least 10 days prior to commencement and following completion of first activity, and then subsequently when vessels are undertaking activities within the Operational Area for more than three weeks at a time. .	PS 1.4.1 (Section 6.6.1) Date of activity start and end
Notification of significant change (email)	All relevant persons	Standard practice (when notification of significant change is needed)	As required	PS 1.4 (Section 6.6.1) Notification of significant change
Emails/ meetings	Persons or organisations who provide feedback to Woodside post EP submission	Identification, assessment and consideration of feedback, claims and/or objections	As appropriate	Assessment of claims and/or objections Relevant new information will be assessed using the EP management of knowledge (Section 7.6) and MOC (refer to Section 7.8) processes
Notification (email)	Australasian Underwater Cultural Heritage Database Any other stakeholders as required in the Unexpected Finds Procedure (Section 7.2.3)	Report any unexpected find of potential Underwater Cultural Heritage	If triggered by Unexpected Finds Procedure (7.2.3)	Refer to Unexpected Finds Procedure (Section 7.2.3 and PS 3.1.1)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Report/ information	Recipient	Purpose	Frequency	Content
Various forms of engagement including but not limited to emails, phone calls and meetings.	Relevant cultural authorities who provide information to Woodside following submission,	Identification, assessment and consideration of cultural values relevant to the Petroleum Activity.	When engaged or as appropriate.	Relevant new information on cultural values received by Woodside will be assessed using the EP Management of Knowledge (Section 7.6) and Management of Change Process (Section 7.8)

7.11 Reporting

To meet the EPOs and EPSs outlined in this EP, Woodside reports at a number of levels, as outlined in the next sections.

7.11.1 Routine reporting (internal)

7.11.1.1 Regular health, safety and environment meetings

The LWIV and support vessel will hold regular HSE meetings that cover all crews. During these meetings, environmental incidents will be reviewed, and awareness material presented. All personnel are required to attend the HSE meetings and attendance records are managed by the contractor. Daily meetings held aboard the project support vessel will also serve to reinforce environmental awareness during the Petroleum Activity.

Dedicated HSE meetings will also be held with the offshore and Perth-based management to address targeted HSE incidents and initiatives.

7.11.1.2 Performance reporting

Monthly and quarterly performance reports are developed and reviewed by the Function and Business Unit Leadership teams. These reports cover several subject matters, including:

- HSE incidents (including high potential incidents and those related to this EP) and recent activities
- corporate key performance indicator targets, which include environmental metrics
- outstanding actions as a result of audits or incident investigations
- technical highlights and lowlights.

7.11.2 Routine reporting (external)

7.11.2.1 Start and end notifications of the Petroleum Activity

In accordance with regulation 54, Woodside will notify NOPSEMA of the start of the Petroleum Activity at least 10 days before it starts and will notify NOPSEMA in writing within 10 days of completing the Petroleum Activity.

7.11.2.2 Environmental performance review and reporting

In accordance with applicable environmental legislation for the Petroleum Activity, Woodside is required to report information about environmental performance to the appropriate regulator. Regulatory reporting requirements are summarised in Table 7-6.

Table 7-6: Routine external reporting requirements

Report	Recipient	Frequency	Content
Monthly Recordable Incident Reports (Appendix D)	NOPSEMA	Monthly, by the 15th of each month	Details of recordable incidents that have occurred during the Petroleum Activity for previous month (if

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Report	Recipient	Frequency	Content
			applicable). See 7.11.4.2 for more details.
Environmental Performance Report	NOPSEMA	Annually, with the first report submitted within 12 months of the start of the Petroleum Activity covered by this EP, as per the requirements of regulation 22(7)	Compliance with EPOs and EPSs outlined in this EP, in accordance with the Environment Regulations

7.11.2.3 End of the Environment Plan

The EP will end when Woodside notifies NOPSEMA that the Petroleum Activity has ended and all the obligations identified in this EP have been completed, and NOPSEMA has accepted the notification, in accordance with regulation 46 of the Environment Regulations.

7.11.3 Incident reporting (internal)

It is the responsibility of the Woodside Project Manager to ensure reporting of environmental incidents meets Woodside and regulatory requirements, as detailed in the Woodside HSE Event Reporting and Investigation Work Instruction and this section of the EP.

7.11.4 Incident reporting (external) – Reportable and recordable

7.11.4.1 Reportable incidents

Definition

A reportable incident is defined under regulation 5 of the Environment Regulations as: ‘an incident relating to the activity that has caused, or has the potential to cause, moderate to significant environmental damage’.

A reportable incident for the Petroleum Activity is an incident that:

- has caused environmental damage with a consequence level of Moderate (C) or above (as defined under Woodside’s Risk Table, Section 2.3.6)
- has the potential to cause environmental damage with a consequence level of Moderate (C) or above (as defined under Woodside’s Risk Table, Section 2.3.6).

The environmental risk assessment for the Petroleum Activity identifies those risks with a potential consequence level of Moderate (C) or above for environment. The incidents that have the potential to cause this level of impact are:

- an accidental loss of hydrocarbons from a wellbore release (Section 6.7.2)
- an accidental loss of hydrocarbons from a vessel collision (Section 6.7.3)

Any such incidents represent potential events that would be reportable incidents. Incidents are reported with consideration of NOPSEMA’s Guidance Note (N-03300-GN2303 A1179039) (NOPSEMA, 2026), stating “if in doubt, notify NOPSEMA”, and assessed on a case-by-case basis to determine if they trigger a reportable incident as defined in this EP and by the Environment Regulations.

Notification

NOPSEMA will be notified of all reportable incidents, according to the requirements of regulations 47, 48 and 49 of the Environment Regulations. Woodside will:

- report all reportable incidents to the regulator (orally) as soon as practicable, but within two hours of the incident or of its detection by Woodside

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- provide a written record of the reported incident to NOPSEMA, the National Offshore Petroleum Titles Administrator (NOPTA) and the department of the responsible State Minister (DMPE) as soon as practicable after orally reporting the incident
- complete a written report for all reportable incidents using a format consistent with the NOPSEMA form FM0831 – Reportable Environmental Incident (Appendix D), which must be submitted to NOPSEMA as soon as possible, but within three days of the incident or of its detection by Woodside
- provide a copy of the written report to NOPTA and DMPE, within seven days of the written report being provided to NOPSEMA.

AMSA will be notified of oil spill incidents as soon as possible after their occurrence, and DCCEEW notified if MNES are to be affected by it.

7.11.4.2 Recordable incidents

Definition

A recordable incident as defined under regulation 5 of the Environment Regulations is an incident arising from the Petroleum Activity (for which there is an environment plan in force) that is a 'breach of an environmental performance outcome for the activity, or an environmental performance standard relating to the activity, that is not a reportable incident'.

Notification

NOPSEMA will be notified of all recordable incidents, according to the requirements of regulation 50(2)(b) of the Environment Regulations, no later than 15 days after the end of the calendar month using the NOPSEMA form – Recordable Environmental Incident Monthly Summary Report (Appendix D), detailing:

- all recordable incidents that occurred during the calendar month
- all material facts and circumstances concerning the recordable incidents that the titleholder knows or is able, by reasonable search or enquiry, to find out
- any action taken to avoid or mitigate adverse environment impacts of the recordable incidents
- the corrective action that has been taken, or is proposed to be taken, to stop, control or remedy the recordable incident
- the action that has been taken, or is proposed to be taken, to prevent a similar incident occurring in the future.

7.11.4.3 Other external incident reporting requirements

In addition to the notification and reporting of environmental incidents defined under the Environment Regulations and Woodside requirements, Table 7-7 describes the incident reporting requirements that also apply in the Operational area.

The pollution activities that should also be reported to AMSA's JRCC by Vessel Master are:

- any loss of plastic material
- garbage disposed of in the sea within 12 NM of land (garbage includes food, paper, bottles and such)
- any loss of hazardous materials.

For oil spill incidents, other agencies and organisations will be notified as appropriate to the nature and scale of the incident, as per procedures and contact lists in the Hydrocarbon Spill Australia Regulatory Framework[65] and the Oil Pollution First Strike Plan (Appendix H).

[65] *In accordance with section 56 of the Environment Regulations, references to the Woodside Hydrocarbon Spill Australia Regulatory Framework within this EP refer to Appendix K of the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention EP, which is available on NOPSEMA's website using the following link: https://docs.nopsema.gov.au/A1282745.*

7.12 Emergency preparedness and response

7.12.1 Overview

Under regulation 22(8) of the Environment Regulations, the implementation strategy must contain an OPEP and provide for updating it. Regulation 22(9) outlines the requirements for the OPEP, which must include adequate arrangements for responding to and monitoring oil pollution.

Table 7-8 summarises how this EP and supporting documents address the various requirements of Environment Regulations relating to oil pollution response arrangements.

Table 7-8: Oil pollution preparedness and response overview

Content	Environment Regulations reference	Document/section reference
Details (oil pollution response) control measures that will be used to reduce the impacts and risks of the activity to ALARP and an acceptable level	Regulations 21(5), (6), 22(2), 22(9)	Oil Spill Preparedness and Response Mitigation Assessment (Appendix G)
Describes the OPEP	Regulation 22(8)	Woodside's OPEP has these components: • Hydrocarbon Spill Australia Regulatory Framework [65] • Oil Pollution First Strike Plan (Appendix H) • Oil Spill Preparedness and Response Mitigation Assessment (Appendix G)
Details the arrangements for responding to and monitoring oil pollution (to inform response activities), including control measures	Regulation 22(9)	Oil Spill Preparedness and Response Mitigation Assessment (Appendix G) Oil Pollution First Strike Plan (Appendix H)
Details the arrangements for updating and testing the oil pollution response arrangements	Regulations 22(8), 22(12), 22(13), 22(14)	EP: Section 7.12.5 Oil Spill Preparedness and Response Mitigation Assessment (Appendix G)
Details provisions for monitoring impacts to the environment from oil pollution and response activities	Regulation 22(10)	Oil Spill Preparedness and Response Mitigation Assessment (Appendix G)
Demonstrates the response arrangements in the oil pollution emergency plan are consistent with the national system for oil pollution preparedness and response	Regulation 22(11)	Hydrocarbon Spill Australia Regulatory Framework [65]

7.12.2 Emergency response training

Regulation 22(4) requires that the implementation strategy includes measures to ensure employees and contractors have the appropriate competencies and training. Woodside has conducted a risk-based training needs analysis on positions required for effective oil spill response. After mapping the training to Woodside-identified competencies, training was mapped to positions based on their required competencies (Table 7-9).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 7-9: Emergency response training requirements

IMT position	Minimum competency
CIMT Incident Commander and Deputy Incident Commander	IMT Fundamentals (internal course) or equivalent Incident Command System 100/200 IMO3 or equivalent spill response specialist level with an oil spill response organisation Participation in Level 2 activation, exercise or skills maintenance
Operations, Planning, Logistics and Finance Sections, and other rostered members of the CIMT	IMT Fundamentals course or equivalent Incident Command System 100/200 Oil Spill Theory Participation in Level 2 activation, exercise or skills maintenance
Environment Unit Lead	IMT Fundamentals course Incident Command System 100/200 IMO2 or equivalent spill response specialist level with an oil spill response organisation Participation in Level 2 activation, exercise or skills maintenance
Note on competency/equivalency	
In 2023, Woodside reviewed its incident and crisis systems, processes and tools to assess whether these were fit for purpose, and rolled out a change to the crisis and emergency management training and the oil spill response training requirements for IMT roles. The revised IMT Fundamentals training program was developed in alignment with the performance requirements of PMAOMIR320 – Manage Incident Response Information and PMAOM0R418 – Coordinate Incident Response. In 2023, Woodside decided to align its global incident command arrangements to the Incident Command System. As such, all rostered members of the IMT are trained up to Incident Command System 200. In addition to incident management fundamentals training, all rostered members of the IMT undertake a level of hydrocarbon spill response training. Depending upon the role, this may take the form of IMO training or completion of Woodside's internal oil spill training course and face-to-face training. Woodside Learning Services is responsible for collating and maintaining personnel training records. The Hydrocarbon Spills Preparedness Dashboard reflects the competencies required for each IMT and operational spill response roles.	

7.12.3 Emergency response preparation

The Emergency Operations Centre, based in Woodside's head office in Perth, is the onshore coordination point for a Level 2 offshore incident, and the location for the CIMT during an incident. The Emergency Operations Centre is staffed by an appropriately skilled team available on call 24 hours a day. This team coordinates incidents that have the potential to impact people, environment, assets, company reputation and livelihood (PEARL), and liaises with external agencies where relevant. Woodside's incident command structure is included in the Oil Pollution First Strike Plan (Appendix H) and response arrangements are further detailed in the Hydrocarbon Spill Australia Regulatory Framework [65]. Roles and responsibilities for emergency response are detailed in Woodside's Incident Management Handbook.

Woodside will have Emergency Response Plan Bridging Document (ERPBD) in place for project activities which bridges between Woodside's emergency response arrangements and those of the contractor.

In a vessel-based emergency, the Vessel Master will assume overall onsite command and act as the Incident Commander. All persons aboard the vessel will be required to act under the Incident Commander's directions. The vessel will maintain communications with the onshore Project Manager and other emergency services. Emergency response support can be provided by the contractor's emergency centre or via the Woodside Communication Centre if requested by the Incident Commander.

The project vessels will have onboard equipment for responding to emergencies, including medical, firefighting and hydrocarbon spill response equipment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.12.4 Oil and other hazardous materials spill

A significant hydrocarbon spill during the Petroleum Activity is unlikely, but should such an event occur, it has the potential to cause serious environmental and reputational damage if not managed properly. The Hydrocarbon Spill Australia Regulatory Framework [65] supported by the Oil Pollution First Strike Plan (Appendix H), which provides tactical response guidance to the Petroleum Activity or area, cover spill response for this Petroleum Activity.

The Hydrocarbon Spill Preparedness Team manages Woodside's hydrocarbon spill response equipment stockpile. Woodside also maintains a suite of contracts for access to additional specialist response equipment and trained personnel, as required, via Australian and international spill response organisations and labour supply companies. In the event of a major spill, Woodside will enact first strike response actions, in liaison with the relevant control agency, as detailed in the activity-specific Oil Pollution First Strike Plan (Appendix H).

Vessels will have SOPEPs in accordance with the requirements of MARPOL 73/78 Annex I. These plans outline responsibilities, specify procedures and identify resources available in the event of a hydrocarbon or chemical spill from project vessels. The Oil Pollution First Strike Plan (Appendix H) is intended to work in conjunction with the SOPEPs if hydrocarbons are released to the marine environment from a project vessel.

Woodside has established EPOs, EPS and MC to be used for hydrocarbon spill response during the Petroleum Activity, as detailed in Appendix G

7.12.5 Emergency and spill response

Woodside categorises incidents in relation to response requirements:

- **Level 1** incidents are those that can be resolved using existing resources, equipment and personnel. A Level 1 incident is contained, controlled and resolved by site- or regionally-based teams using existing resources and functional support services.
- **Level 2** incidents are characterised by a response that requires external operational support to manage the incident. It is triggered if the capabilities of the tactical level response are exceeded. This support is provided to the Petroleum Activity by activating all or part of the responsible CIMT.
- **A Level 3** incident or crisis is identified as a critical event that seriously threatens the organisation's people, the environment, company assets, reputation or livelihood. At Woodside, the Crisis Management Team manages the strategic impacts to respond to and recover from the threat to the company (material impacts, litigation, legal and commercial, reputation, etc). The CIMT may also be activated as needed to manage the operational incident response.

7.12.6 Emergency and spill response drills and exercises

Woodside's capability to respond to incidents will be tested periodically, in accordance with the Crisis and Emergency Management Training, Drill and Exercise Standard. The scope, frequency and objective of these tests is described in Table 7-10. Emergency response testing is aligned to existing or developing risks associated with Woodside's operations and activities. Corporate hazards and risks outlined in the corporate risk register, respective safety cases or project risk registers, are reference points for developing and scheduling crisis and emergency management exercises. External participants may be invited to attend exercises; for example, government agencies, specialist service providers, oil spill response organisations, or industry members with which Woodside has mutual aid arrangements.

The overall objective of exercises is to test procedures, IMT interfaces, skills and the teamwork of the emergency response teams and IMTs in their ability to respond to major accident and major environment events. After each exercise, the team holds a debriefing session during which the exercise is reviewed. Any lessons learned or areas for improvement are identified and incorporated into revised procedures, where appropriate.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 7-10: Testing of response capability

Response category	Scope	Response testing frequency	Response testing objective
Level 1 Response	Drills are LWIV-specific	One 'First Strike' drill must be conducted within two weeks of starting a Petroleum Activity. For campaigns with an operational duration of greater than one month, this will occur within the first two weeks of starting the Petroleum Activity, then at least every six-month hire period thereafter.	Comprehensive exercises test elements of the Oil Pollution First Strike Plan (Appendix H). Emergency drills test other aspects of the Emergency Response Plan.
Level 2 Response	Exercises are LWIV-specific	Level 2 Emergency Management exercises are relevant to LWIV activities with an operational duration of one month or greater. At least one emergency management exercise per LWIV campaign must be conducted within the first month of commencing the hire period, then at every six-month hire period thereafter, where applicable based on duration..	Test both the facility LWIV IMT response and that of the CIMT following handover of incident control. Exercises may include testing of source control response strategies.
Level 3 Response	Exercises are relevant to all Woodside assets	The number of Crisis Management Team exercises conducted each year is determined by the Chief Executive Officer, in consultation with the Vice President of Security and Emergency Management.	Test Woodside's ability to respond to and manage a crisis-level incident.

7.12.7 Testing of hydrocarbon spill response arrangements

Woodside is required to test hydrocarbon spill response arrangements as per regulations 22(12), 22(13) and 22(14) of the Environment Regulations. Woodside's arrangements for spill response are common across Australian operating assets and activities to ensure controls are consistent. The overall objective of testing these arrangements is to ensure Woodside maintains an ability to respond to a hydrocarbon spill, specifically to:

- ensure relevant responders, contractors and key personnel understand and practice their assigned roles and responsibilities
- test response arrangements and actions to validate response plans
- ensure lessons learned are incorporated into Woodside processes and procedures, and improvements made where required.

If new response arrangements are introduced, or existing arrangements significantly amended, additional testing is undertaken accordingly. Additional activities or activity locations are not anticipated to occur; however, if they do, relevant response arrangements will be tested as soon as practicable.

In addition to the testing of response capability described in Table 7-10, up to eight of the response arrangements shown in Figure 7-3 are tested annually., The objective is to verify effective response to a hydrocarbon spill to the marine environment.

7.12.8 Testing of arrangements schedule

Woodside's Testing of Arrangements **Schedule (**Figure 7-3) aligns with international good practice for spill preparedness and response management; the testing is compatible with the IPIECA Good Practice Guide and the Australian Institute for Disaster Resilience Australian Emergency Management Arrangements Handbook. If a spill occurs, enacting these arrangements will underpin Woodside's ability to implement a response across its petroleum activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The hydrocarbon spill arrangements shown in the rows of the schedule are tested against Woodside's regulatory commitments. Each arrangement has a support agency or company and an area to be tested (e.g. capability, equipment and personnel). For example, an arrangement could be to test Woodside personnel's capability for conducting shorelines assessment, or the ability of Woodside's operational and scientific monitoring third party contractor to provide appropriate personnel and equipment.

The vertical columns relate to how hydrocarbon spill arrangements will be tested over the three-year rolling schedule. The subheading for the column describes the standard method of testing likely to be undertaken (e.g. discussion exercise, desktop exercise), and the green cells indicate the arrangements that could be tested for each method.

Some arrangements may be tested across multiple exercises e.g. critical arrangements, or via other additional assurance methods outside the formal Testing of Arrangements Schedule. These also constitute sufficient evidence of testing of arrangements e.g. audits, no-notice drills, internal exercises, assurance drills.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

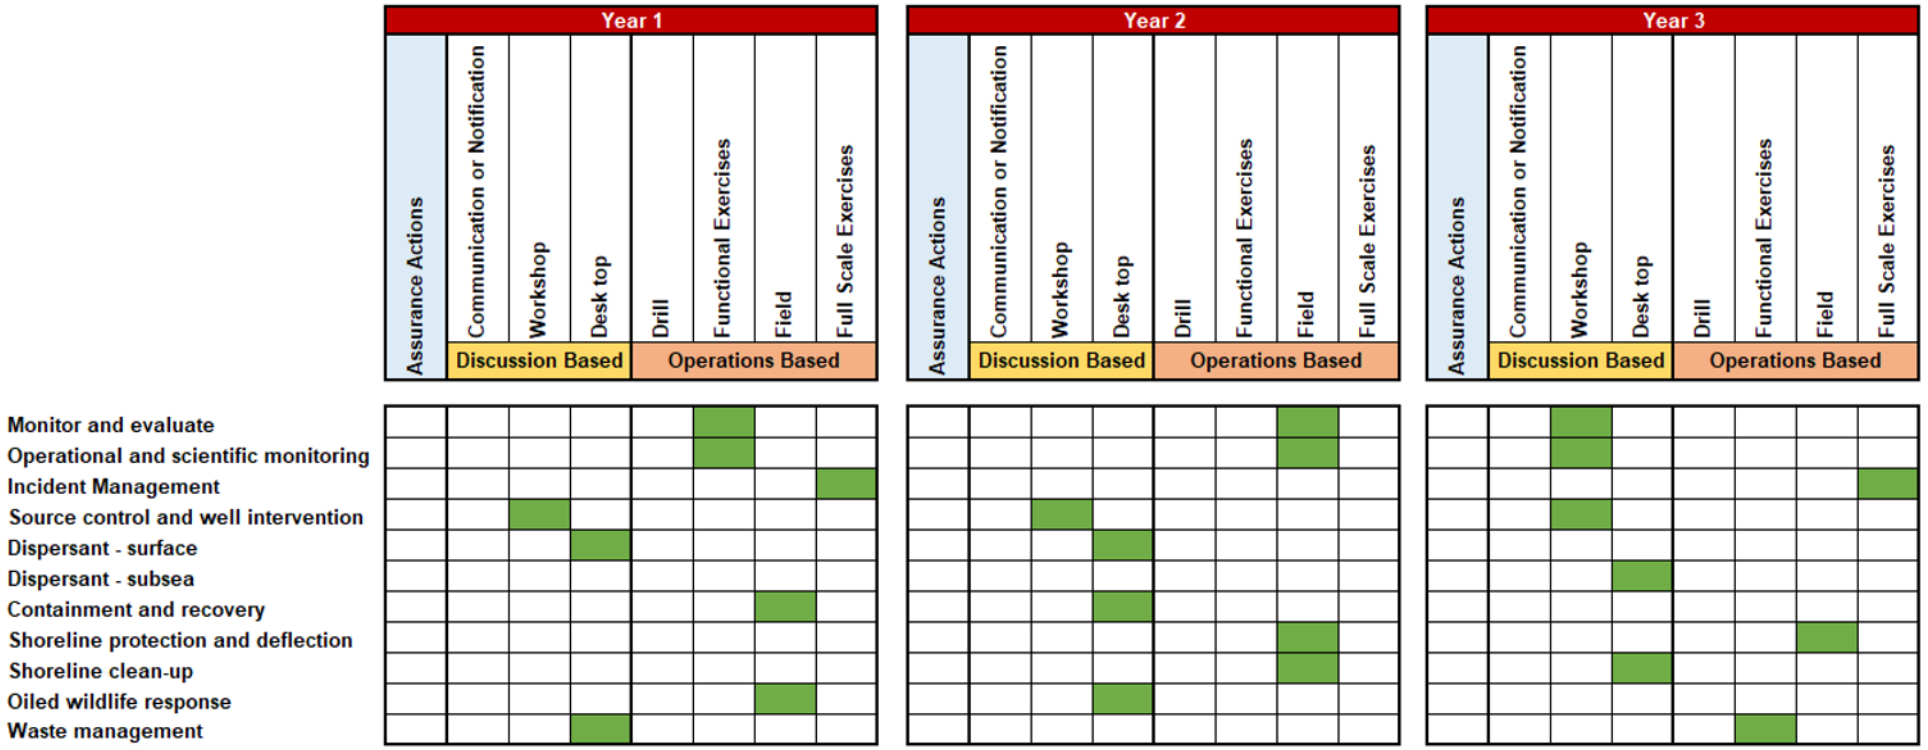

Figure 7-3: Indicative three-yearly testing of arrangements schedule

Note: Schedule is subject to change, additional detail is included in the live document.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.12.9 Cyclone and dangerous weather preparation

Tropical cyclones and other severe weather events are a potential risk to the safety and health of personnel and can potentially cause spills of hazardous materials into the environment from infrastructure or damaged vessels.

As the timing of some activities associated with the Petroleum Activity are not yet determined, it is possible drilling and subsea activities will overlap with the cyclone season (November to April, with most cyclones occurring between January and March). If drilling in cyclone season, the LWIV contractor and vessel contractors must have a Cyclone Contingency Plan (or equivalent) in place that outlines the processes and procedures that would be implemented during a cyclone event, which will be reviewed and accepted by Woodside.

Facilities and relevant support vessels on hire to Woodside receive regular forecasts from Woodside Meteorologists, who liaise closely with the Bureau of Meteorology. If a cyclone (or severe weather event) is forecast, the path and its development are plotted and monitored using the Bureau of Meteorology data. If there is the potential for the cyclone (severe weather event) to affect the Petroleum Activity, the asset Cyclone Contingency Plan and the vessel's Cyclone Contingency Plan will be actioned. If required, vessels can transit from the proposed track of the cyclone (severe weather event).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

9. LIST OF TERMS AND ACRONYMS

Table 9-1: List of terms and definitions

Term	Definition
°	degrees
°C	degrees Celsius
AFC	antifouling coating
AFFF	aqueous film forming foam
AHO	Australian Hydrographic Office
AIMS	Australian Institute of Marine Science
ALARP	as low as reasonably practicable
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
AUV	autonomous underwater vessel
BIA	Biologically Important Are
CK4	Cossack-4H well
CEFAS	Centre for Environment, Fisheries and Aquaculture Science
CIMT	Corporate Incident Management Team
CONOPS	concurrent operations
cP	centipoise
CS	cost/sacrifice
CV	company values
CWLH	Cossack, Wanaea, Lambert and Hermes
dB	decibels
DCCEEW	Commonwealth Department of Climate Change, Energy, Environment and Water
DMPE	Western Australian Department of Mines, Petroleum and Energy
DP	dynamic positioning
DPIRD	Western Australian Department of Primary Industries and Regional Development
DTMI	Western Australian Department of Transport and Major Infrastructure
EC_{50}	effective concentration at which exposure to a substance results in a response of 50%
EMBA	environment that may be affected
ENVID	environment identification
Environment Regulations	Commonwealth Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023
EP	Environment Plan
EPBC Act	Commonwealth Environment Protection and Biodiversity Conservation Act 1999
EPBC Regulations 2025	Environment Protection and Biodiversity Conservation Regulations 2025
EPO	environmental performance outcome
EPS	environmental performance standard
ESD	ecologically sustainable development

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Term	Definition
F	feasibility
F-Pil)	Flatback turtle, Pilbara stock
FPSO	floating production, storage and offloading facility
g	grams
g/m²	grams per square metre
G-NWS	Green turtle, NWS stock
GHG	greenhouse gas
GP	good industry practice
H-WA	Hawksbill turtle, WA stock
HOCNF	Harmonised Offshore Chemical Notification Format
HQ	hazard quotient
HSE	health, safety and environment
Hz	hertz
ID	identity/identification
ILUA	Indigenous Land Use Agreement
IMO	International Maritime Organization
IMS	invasive marine species
IMSMA	IMS Management Area
IMT	Incident Management Team
IPA	Indigenous Protected Area
IUCN	International Union for Conservation of Nature
JRCC	Joint Response Coordination Centre
JSA	Job Safety Analysis
kg	kilograms
kg/m³	kilograms per cubic metre
kHz	kilohertz
km	kilometres
km/h	kilometres per hour
kW	kilowatts
L	litres
L/km²	litres per square kilometre
LBL	long baseline
LC_{50}	lethal concentration at which 50% of test subjects die after exposure to a substance
LCS	legislation, codes and standards
LH3	Lambert-3 well
LH-WA	Loggerhead turtle, WA stock
LWI	light well intervention
LWIV	light well intervention vessel
m	metres

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Term	Definition
m/s	metres per second
m²	square metres
m³	cubic metres
MARPOL	The International Convention for the Prevention of Pollution From Ships, 1973 as modified by the Protocol of 1978 (also known as MARPOL 73/78)
MC	measurement criteria
MFO	marine fauna observer
mg/kg	milligrams per kilogram
MGO	marine gas oil
mL/min	millilitres per minute
mm	millimetres
MNES	matters of national environmental significance
MOC	management of change
N/A	not applicable
NIMS	non-indigenous marine species
NM	nautical miles
NMFS	National Marine Fisheries Service
NOAA	National Oceanic and Atmospheric Administration
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
NWMR	North-west Marine Region
NWS	North West Shelf
OCNS	Offshore Chemical Notification Scheme
OIW	oil in water
OPEP	Oil Pollution Emergency Plan
OPGGS Act	Commonwealth Offshore Petroleum and Greenhouse Gas Storage Act 2006
OSPAR Convention	Convention for the Protection of the Marine Environment of the North-East Atlantic
Our WMS	Woodside Management System
PCE	pressure control equipment
PFOS	perfluoroctane sulfonic acid
PJ	professional judgement
PK	peak pressure
PMST	Protected Matters Search Tool
ppb	parts per billion
ppm	parts per million
PS	performance standard
PTS	permanent threshold shift
PTW	Permit to Work
RBA	risk-based analysis
rms	root square mean

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Term	Definition
ROV	remotely operated vehicle
SBMP	Offshore Seabird Management Plan
SEL	sound exposure level
SEL_{24h}	SEL accumulated from multiple impulses over 24 hours
SIMAP	Spill Impact Mapping and Analysis Program
SMPEP	Spill Monitoring Programme Execution Plan
SOLAS	International Convention for the Safety of Life at Sea 1974
SOPEP	Shipboard Oil Pollution Emergency Plan
SPL	sound pressure level
SV	societal value
t	tonne
t/d	tonnes per day
TRSV	tubing retrievable safety valve
TSSC	Threatened Species Scientific Committee
TTS	temporary threshold shift
µg/m²	*micrograms per square metres*
µm	*micrometres*
µPa	*micropascals*
UCH	underwater cultural heritage
UK	United Kingdom
US	United States
USBL	ultra-short baseline
VOC	volatile organic compound
WA	Western Australia
WCP	well control package
WOMP	Well Operations Management Plan
Woodside	Woodside Energy Limited
XT	xmas tree

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX A WOODSIDE ENVIRONMENT AND BIODIVERSITY, CLIMATE AND RISK MANAGEMENT POLICIES

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment and Biodiversity Policy

OBJECTIVE

Woodside recognises the intrinsic value of nature and the importance of conserving biodiversity and ecosystem services to support the sustainable development of our society. We are committed to doing our part. We understand and embrace our responsibility to undertake activities in an environmentally sustainable way.

PRINCIPLES

Woodside commits to:

- Implementing a systematic approach to the management of the impacts and risks of our operating activities on an ongoing basis, including emissions and air quality, discharge and waste management, water management, biodiversity and protected areas.
- Applying the mitigation hierarchy principle (avoid, minimise, restore) and a continuous improvement approach to ensure we maintain compliance, improve resource use efficiency and reduce our environmental impacts.
- Embedding environmental and biodiversity management, and opportunities, in our business planning and decision-making processes.
- Complying with relevant laws and regulations and applying responsible standards where laws do not exist.
- Not undertaking new activities[1] within the boundaries of natural sites on the UNESCO World Heritage List.[2]
- Not undertaking new activities within IUCN Protected Areas[3] unless compatible with management plans in place for the area.
- Achieving net zero deforestation[4] for new activities.
- Developing Biodiversity Management Plans for all new major projects (CAPEX >US$2 billion).
- Supporting positive biodiversity outcomes in regions and areas in which we undertake activities.
- Setting targets and publicly reporting on our environmental and biodiversity performance.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Revised by the Woodside Energy Group Ltd Board in December 2024.

[1] Does not include non-industrial and existing activities that are compatible with maintenance of the listed outstanding universal values.

[2] New UNESCO World Heritage Listings that overlap existing activities will be assessed at the time of listing.

[3] New IUCN Protected Areas that overlap existing activities will be assessed at the time of listing.

[4] Definition of Forest: ‘native trees higher than 5 metres and a canopy cover of more than 10 percent on the land to be cleared’.

Climate Policy

BACKGROUND

The Intergovernmental Panel on Climate Change has stated that "it is unequivocal that human influence has warmed the atmosphere, ocean and land". An objective of the Paris Agreement is to hold "the increase in the global average temperature to well below 2ºC above pre-industrial levels" and to pursue "efforts to limit the temperature increase to 1.5ºC". Many countries have set targets to reduce greenhouse gas emissions, including by changing the way they produce and consume energy.

OBJECTIVE

Woodside's objective is to thrive in this energy transition as a low cost, lower carbon energy provider.

PRINCIPLES

Woodside aims to achieve the objective by:

- Setting science-based[1] near, mid, and long-term net emissions reduction targets that are consistent with Paris-aligned[2] scenarios, covering equity scope 1 and 2 emissions, both operated and non-operated.[3]
- Developing and operating oil and gas projects in a manner that is consistent with these targets. This includes the deployment of lower-emission technologies (Design Out), supporting efficient operations (Operate Out) and use of robust offsets (Offset) as methods to reduce and offset greenhouse gas emissions.
- Investing in new energy products and lower carbon services to reduce customers' emissions (part of Woodside's Scope 3 emissions), including but not limited to hydrogen, ammonia and carbon capture, utilisation and storage.
- Publishing transparent climate-related disclosures aligned to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) or other recognised global reporting standards.
- Aligning our advocacy to the principles of this Climate Policy.

[1] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "science-based" (published 2021) which states "targets are considered 'science-based' if they are in line with what the most recent climate science sets out is necessary to meet the goals of the Paris Agreement—limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius.". See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures- prototype.pdf (Appendix A).

[2] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "Paris-aligned scenarios" (published 2021) which states "scenarios consistent with limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius." See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures- prototype.pdf (Appendix A).

[3] Equity emissions means the share of the total emissions arising from an activity that are attributable to Woodside in proportion to Woodside's ownership interest in the activity, irrespective of whether Woodside operates the activity. Operated emissions are the total emissions arising from an activity that Woodside operates, irrespective of Woodside's ownership interest.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venture participants engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2024.

Risk Management Policy

OBJECTIVES

Woodside recognises that risk is inherent in our business and the effective management of risk is vital to deliver our strategic objectives, continued growth and success. We are committed to managing risks in a proactive and effective manner as a source of competitive advantage.

Our approach protects us against potential negative impacts, enables us to take risk for reward and improves our resilience against emerging risks. The objective of our risk management framework is to provide a single consolidated view of risks across the company to understand our full risk exposure and prioritise risk management and governance.

The success of our approach lies in the responsibility placed on everyone at all levels to proactively identify, assess and treat risks relating to the objectives they are accountable for delivering.

PRINCIPLES

Woodside achieves these objectives by:

- Applying a structured and comprehensive framework for the identification, assessment and treatment of current risks and response to emerging risks;
- Ensuring line of sight of financial and non-financial risks at appropriate levels of the organisation;
- Demonstrating leadership and commitment to integrating risk management into our business activities and governance practices;
- Recognising the value of stakeholder engagement, best available information and proactive identification of potential changes in external and internal context;
- Embedding risk management into our critical business processes and control framework;
- Understanding our exposure to risk and tolerance for uncertainty to inform our decision making and assure that Woodside is operating with due regard to the risk appetite endorsed by the Board; and
- Evaluating and improving the effectiveness and efficiency our approach.

APPLICABILITY

The Managing Director of Woodside is accountable to the Board of Directors for ensuring this Policy is effectively implemented.

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2024.

APPENDIX B RELEVANT REQUIREMENTS

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Commonwealth legislation	Summary	Relevance to the activity
Aboriginal and Torres Strait Islander Heritage Protection Act 1984 (ATSIHP Act)	This Act seeks "to preserve and protect places, areas and objects of particular significance" to Aboriginal people. Under the Section 9 and 10 provisions of the Act, the Minister for the Environment may declare significant Aboriginal areas temporarily or permanently protected if they are considered under threat. Similar declarations regarding Aboriginal objects can be made under Section 12. Under Section 22 of the Act, the contravention of any of these declarations is an offence. Additionally, the discovery of any Aboriginal remains must be reported to the Minister under Section 20.	There are no known sites of Aboriginal Heritage Significance within the Operational Area or EMBA.
Australian Maritime Safety Authority Act 1990	This Act establishes a legal framework for AMSA, which represents the Australian Government and international forums in the development, implementation and enforcement of international standards, including those governing ship safety and marine environment protection. AMSA is responsible for administering the Marine Orders in Commonwealth waters. AMSA is the lead agency for responding to oil spills in the marine environment and is responsible for the Australian National Plan for Maritime Environmental Emergencies.	The Act applies to maritime safety and vessel activities associated with the Petroleum Activity. It is relevant to promote maritime safety and the protection of the marine environment from vessel pollution. AMSA Response Centre will be notified of activities and movements 24 to 48 hours before the scheduled activity start date and in the event of incidents during the Petroleum Activity (including oil pollution incidents in Commonwealth waters).

Commonwealth legislation	Summary	Relevance to the activity
Biosecurity Act 2015 Australian Ballast Water Management Requirements Australian Biofouling Management Requirements – Version 4 2023	This Act provides the Commonwealth with powers to take quarantine measures, and implement necessary related programs, to prevent introducing any plant, animal, organism or matter that could contain anything that could threaten Australia's native flora and fauna or natural environment. The Commonwealth's powers include entry, seizure, detention and disposal. This Act includes mandatory controls on using seawater as ballast in ships and declaring sea vessels voyaging out of and into Commonwealth waters. The Regulations stipulate that all information regarding the voyage of the vessel and the ballast water is declared correctly to the quarantine officers. The Ballast Water Management Requirements outline the mandatory ballast water management requirements to reduce the risk of introducing harmful aquatic organisms into Australia's marine environment through ballast water from international vessels. These requirements are enforceable under the *Biosecurity Act 2015.* The *Australian biofouling management requirements, Version 2* set out vessel obligations and best practice for the management of biofouling when operating vessels under biosecurity control within Australian territorial seas.	The Act and associated Regulations and Requirements apply to the use of all internationally sourced Petroleum Activity vessels operating in Australian Waters. Controls must be applied to manage the potential for introduction of IMS.
Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) Environment Protection and Biodiversity Conservation Regulations 2025	This Act includes the objective to protect and manage nationally and internationally important flora, fauna, ecological communities and heritage places in Australia. These are defined under Part 3 of the Act as 'matters of national environmental significance' (MNES). The Act sets a regime that aims to ensure actions taken on (or impacting upon) Commonwealth land or waters are consistent with the principles of ESD (ecologically sustainable development). The Act aims to protect MNES by setting out a regime for environmental assessment and approvals processes for proposed actions, through which the Commonwealth seeks to protect Australian biodiversity and integrates management of important natural and culturally significant places. Where activities have existing approvals under the Act, these will continue to apply.	This Act applies to all aspects of the Petroleum Activity that have the potential to impact MNES. Where there is the potential for MNES to be impacted, an assessment of impacts must be presented in the EP. Authorisation to undertake the Petroleum Activity will be met through NOPSEMA's decision making processes which includes an assessment of the Petroleum Activities compliance with the relevant regulations and plans under the Act, which are presented throughout this EP.

Commonwealth legislation	Summary	Relevance to the activity
Environment Protection (Sea Dumping) Act 1981 Environment Protection (Sea Dumping) Regulations 1983	This Act provides for protecting the environment by regulating dumping of matter into the sea, incineration of waste at sea, and placement of artificial reefs.	The Petroleum Activity does not include sea dumping activities.
Industrial Chemicals Environmental Management (Register) Act 2021 Industrial Chemicals Environmental Management (Register) Instrument 2022	The Act is the legislative framework for the Industrial Chemicals Environmental Management Standard (IChEMS), a scheme to implement a nationally consistent approach to the management of risks to the environment resulting from the use of industrial chemicals, including those by the oil and gas industry, but on its own does not impose enforceable bans on specific chemicals or obligations for proponents. The Instrument supports the Act to create consistent, national, and enforceable standards for environmental risk management of industrial chemicals. Importantly, the Act anticipates that States and Territories (or other Commonwealth laws) must adopt and enforce these standards. Until such additional legislation is passed in relevant jurisdictions, the Instrument's listings (e.g. AFFF bans) have no direct legal effect. Note, Section 4 of the Act states: "Another law of the Commonwealth, or a law of a State, may apply or adopt the [Instrument] (with or without modification) and may make provision for, or in relation to, the implementation and enforcement of the [Instrument], as so applied or adopted."	Whilst no chemical discharges are planned as part of this Petroleum Activity. AFFF may be discharged in the event of an emergency. Woodside's Environment Chemical Selection and Assessment Guideline has regard for the intent of and the proposed requirements set out in the Act, Instrument and IChEMS.
Native Title Act 1993 Native Title (Indigenous Land Use Agreements) Regulations 2024	This Act recognises and protects the traditional rights and interests of First Nation groups in land and waters through native title. Prescribed Bodies Corporate (PBC) manage and protect their native title rights and interests by establishing ways in which future dealings affecting native title may proceed and to set standards for those dealings. Indigenous Land Use Agreements (ILUAs) are voluntary, legally binding agreements established under the Act between native title parties and others regarding land/water use.	Yes – Whilst no planned activities occur within a native title claim or determination, Woodside considers native title claims, determinations and ILUAs coastally adjacent to the EMBA to be an instructive means of identifying potentially relevant First Nations groups to consult. There is one native title claim or determination overlapping the EMBA. There are fourteen that are coastally adjacent to the EMBA. There are no Indigenous Land Use Agreements (ILUAs) overlapping the Operational Area or EMBA and twenty six that are coastally adjacent to the EMBA.

Commonwealth legislation	Summary	Relevance to the activity
National Greenhouse and Energy Reporting Act 2007	This Act establishes the legislative framework for the National Greenhouse and Energy Reporting Scheme for reporting GHG emissions and energy consumption and production by corporations in Australia.	The vessel contractor is required to report GHG emissions under this Act.
Navigation Act 2012 *Protection of the Sea (Prevention of Pollution from Ships) Act 1983* Marine Order 12: Construction – subdivision and stability, machinery and electrical installations Marine Order 15: Construction—fire protection, fire detection and fire extinction Marine Order 21: Safety and emergency arrangements Marine Order 27: Safety of navigation and radio equipment Marine Order 30: Prevention of collisions Marine Order 47: Offshore Industry units Marine Order 57: Helicopter operations Marine Order 91: Marine pollution prevention – oil Marine Order 93: Marine pollution prevention – noxious liquid substances Marine Order 94: Marine pollution prevention – packaged harmful substances Marine Order 95: Marine pollution prevention – garbage Marine Order 96: Marine pollution prevention – sewage Marine Order 97: Marine pollution prevention – air pollution	This Act regulates navigation and shipping, including SOLAS. This Act is the primary legislation that regulates ship and seafarer safety and shipboard aspects of marine environment protection and pollution prevention. Marine Orders are subordinate rules made pursuant to the Navigation Act 2012 and Protection of the Sea (Prevention of Pollution from Ships) Act 1983 affecting the maritime industry. They are a means of implementing Australia's international maritime obligations by giving effect to international conventions in Australian law. Marine Orders apply to vessel movements, safety, discharges and emissions.	The Act and Marine Orders apply to vessel activities associated with the Petroleum Activity.

Commonwealth legislation	Summary	Relevance to the activity
Offshore Petroleum and Greenhouse Gas Storage Act 2006 (OPGGS Act) Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 Offshore Petroleum and Greenhouse Gas Storage (Resource Management and Administration) Regulations 2025 Offshore Petroleum and Greenhouse Gas Storage (Safety) Regulations 2024	This Act is the principal Act governing offshore petroleum exploration and production in Commonwealth waters. Specific environmental, resource management and safety obligations are set out in the listed Regulations.	The Petroleum Activity must be undertaken in accordance with the requirements of this Act. This EP has been prepared in accordance with the relevant requirements of the OPGGS Act and the Environment Regulations.
Ozone Protection and Synthetic Greenhouse Gas Management Act 1989 Ozone Protection and Synthetic Greenhouse Gas Management Regulations 1995	This Act provides for protecting ozone in the atmosphere by controlling and ultimately reducing the manufacture, import and export of ozone-depleting substances and synthetic GHGs, and replacing them with suitable alternatives. The Act will only apply to Woodside if it manufactures, imports or exports ozone-depleting substances.	This Act applies where ozone-depleting substances is found on vessel refrigeration systems, however, this is a rare occurrence and not anticipated. The Petroleum Activity does not include import, export or manufacture activities of ozone-depleting substances.
Protection of the Sea (Powers of Intervention) Act 1981 Protection of the Sea (Powers of Intervention) Regulations 1983	This Act authorises the Commonwealth to take measures to protect the sea from pollution by oil and other noxious substances discharged from ships. It provides legal immunity for persons acting under an AMSA direction.	The Act may apply in the event of an unplanned hydrocarbon release from a vessel collision.
Protection of the Sea (Prevention of Pollution from Ships) Act 1983 Protection of the Sea (Prevention of Pollution from Ships) (Orders) Regulations 1994 Marine Order 91: Marine pollution prevention – oil Marine Order 93: Marine pollution prevention – noxious liquid substances Marine Order 94: Marine pollution prevention – packaged harmful substances Marine Order 95: Marine pollution prevention – garbage Marine Order 96: Marine pollution prevention – sewage Maritime Legislation Amendment (Prevention of Air Pollution from Ships) Act 2007 International Convention for the Prevention of Pollution from Ships (MARPOL Convention)	This Act relates to protecting the sea from pollution by oil and other harmful substances discharged from ships. Under this Act, discharge of oil or other harmful substances from ships into the sea is an offence. There is also a requirement to keep records of the ships dealing with such substances. The Act applies to all Australian ships, regardless of their location. It applies to foreign ships operating between 3 NM off the coast out to the end of the Australian Exclusive Economic Zone (200 NM). It also applies within the 3 NM of the coast where the State/Northern Territory does not have complementary legislation. All the Marine Orders listed, except for Marine Order 95, are enacted under both the *Navigation Act* and the *Protection of the Sea (Prevention of Pollution from Ships) Act*. The *Maritime Legislation Amendment (Prevention of Air Pollution from Ships) Act 2007* is an amendment to the *Protection of the Sea (Prevention of Pollution from Ships) Act 1983*. This amended Act provides for protecting the sea from pollution by oil and other harmful substances discharged from ships.	The Act and Marine Orders apply to vessel activities associated with the Petroleum Activity.

Commonwealth legislation	Summary	Relevance to the activity
Protection of the Sea (Harmful Antifouling Systems) Act 2006 Marine Order 98: Marine pollution – anti-fouling systems	This Act relates to Australia's obligations under the international Antifouling System Convention, prohibiting harmful organotin compounds (like TBT) on ship hulls to protect the marine environment. It prohibits the application of such systems on Australian ships and restricts non-complying ships from entering Australian ports.	The Act applies to vessels operating in Australian waters, including for the Petroleum Activity.
Underwater Cultural Heritage Act 2018 (UCH Act) Underwater Cultural Heritage Guidance for Offshore Developments Guidelines on the application of the *Underwater Cultural Heritage Act 2018*	The Act prescribes penalties for damaging protected Underwater Cultural Heritage without a permit under Section 30 or in contravention of a permit under Section 28. Protected Underwater Cultural Heritage is prescribed in Section 16 to automatically include the remains and associated artefacts of any vessel or aircraft that has been in Australian waters for 75 years, whether known or unknown. This protection is also extended to Underwater Cultural Heritage in Commonwealth waters specified by the Environment Minister under Section 17. Without a declaration under this section, Aboriginal Underwater Cultural Heritage is not protected under the *Underwater Cultural Heritage Act*.	Underwater heritage sites within closest proximity to the Operational Areas and EMBA are listed in the EP.

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 06-Jul-2026

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	1
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	23
Listed Migratory Species:	39

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	62
Whales and Other Cetaceans:	24
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	1

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	23
Key Ecological Features (Marine):	2
Biologically Important Areas:	4
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat likely to occur within area

[Balaenoptera musculus](#) Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
[Balaenoptera physalus](#) Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
[Carcharhinus longimanus](#) Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
[Carcharias taurus](#) Grey Nurse Shark [64469]		Species or species habitat likely to occur within area
[Carcharodon carcharias](#) White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Species or species habitat likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text

Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Pandion haliaetus Osprey [952]		Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Fish		
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Yellow-banded Pipefish [66200]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophora as Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Pipefish, Ribboned Seadragon [94706]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Reptile		

Scientific Name	Threatened Category	Presence Text
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Species or species habitat likely to occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Glomar Shoals	North-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Marine Turtles		
Natator depressus		
Flatback Turtle [59257]	Reproduction	Known to occur
Seabirds		
Ardenna pacifica		
Wedge-tailed Shearwater [84292]	Reproduction	Known to occur
Sharks		
Rhincodon typus		
Whale Shark [66680]	Foraging	Known to occur
Whales		
Megaptera novaeangliae		
Humpback Whale [38]	Migration	Known to occur

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales
-Department of Environment and Primary Industries, Victoria
-Department of Primary Industries, Parks, Water and Environment, Tasmania
-Department of Environment, Water and Natural Resources, South Australia
-Department of Land and Resource Management, Northern Territory

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 24-Mar-2026

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	1
National Heritage Places:	1
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	4
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	44
Listed Migratory Species:	64

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	6
Commonwealth Heritage Places:	2
Listed Marine Species:	108
Whales and Other Cetaceans:	33
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	10
Habitat Critical to the Survival of Marine Turtles:	4

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	16
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	191
Key Ecological Features (Marine):	7
Biologically Important Areas:	30
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

The Ningaloo Coast	WA	Listed place

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat may occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Pezoporus occidentalis Night Parrot [59350]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Breeding known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding known to occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
FISH		
Milyeringa veritas Cape Range Cave Gudgeon, Blind Gudgeon [66676]	Vulnerable	Species or species habitat known to occur within area
Ophisternon candidum Blind Cave Eel [66678]	Vulnerable	Species or species habitat known to occur within area
MAMMAL		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Eubalaena australis		
Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Orcaella heinsohni		
Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat known to occur within area
Petrogale lateralis lateralis		
Black-flanked Rock-wallaby, Moororong, Black-footed Rock Wallaby [66647]	Endangered	Species or species habitat known to occur within area
Rhinonicteris aurantia (Pilbara form)		
Pilbara Leaf-nosed Bat [82790]	Vulnerable	Species or species habitat may occur within area
Sousa sahulensis		
Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat known to occur within area
REPTILE		
Aipysurus apraefrontalis		
Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus foliosquama		
Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
SHARK		

Scientific Name	Threatened Category	Presence Text
Carcharias taurus (west coast population)		
Grey Nurse Shark (west coast population) [68752]	Vulnerable	Congregation or aggregation known to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Pristis clavata		
Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis		
Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sphyrna lewini		
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat known to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai		
Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Breeding known to occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Breeding known to occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche impavida		
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Anoxypristis cuspidata		
Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat known to occur within area
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus		
Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharias taurus		
Grey Nurse Shark [64469]		Congregation or aggregation known to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Dugong dugon Dugong [28]		Breeding known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahulensis as Sousa chinensis Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Migratory Terrestrial Species		
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pandion haliaetus		
Osprey [952]		Breeding known to occur within area
Thalasseus bergii		
Greater Crested Tern [83000]		Breeding known to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State
Department of Climate Change, Energy, the Environment and Water	
Mermaid Reef - Rowley Shoals [CHL_105255]	WA
Ningaloo Marine Area - Commonwealth Waters [CHL_105548]	WA
Department of Defence	
Exmouth Area A VLF Transmitter Station [DD_0083]	WA
Exmouth RAAF Radar Site - Vlaming Head [DD_0974]	WA
Learmonth RAAF base [AGPR4418]	WA
Learmonth RAAF base [AGPR4466]	WA

Pandion haliaetus Osprey [952]		Breeding known to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Breeding known to occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]	Vulnerable	Breeding known to occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalasseus bengalensis as Sterna bengalensis Lesser Crested Tern [66546]		Breeding known to occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding known to occur within area
Fish		
Acentronura larsonae Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bhanotia fasciolata Corrugated Pipefish, Barbed Pipefish [66188]		Species or species habitat may occur within area
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys amplexus Fijian Banded Pipefish, Brown-banded Pipefish [66199]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Corythoichthys intestinalis Australian Messmate Pipefish, Banded Pipefish [66202]		Species or species habitat may occur within area
Corythoichthys schultzi Schultz's Pipefish [66205]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus dunckeri Red-hair Pipefish, Duncker's Pipefish [66220]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
Dugong dugon Dugong [28]		Breeding known to occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area

Whales and Other Cetaceans [Resource Information]

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
[Balaenoptera musculus](#) Blue Whale [36]	Endangered	Migration route known to occur within area
[Balaenoptera omurai](#) Omura's Whale [87136]		Species or species habitat likely to occur within area
[Balaenoptera physalus](#) Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Delphinus delphis](#) Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
[Eubalaena australis](#) Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
[Feresa attenuata](#) Pygmy Killer Whale [61]		Species or species habitat may occur within area
[Globicephala macrorhynchus](#) Short-finned Pilot Whale [62]		Species or species habitat may occur within area
[Grampus griseus](#) Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
[Indopacetus pacificus](#) Longman's Beaked Whale [72]		Species or species habitat may occur within area
[Kogia breviceps](#) Pygmy Sperm Whale [57]		Species or species habitat may occur within area
[Kogia sima](#) Dwarf Sperm Whale [85043]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat known to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Australian Marine Parks	[Resource Information]
Park Name	Zone & IUCN Categories
Carnarvon Canyon	Habitat Protection Zone (IUCN IV)
Gascoyne	Habitat Protection Zone (IUCN IV)
Argo-Rowley Terrace	Multiple Use Zone (IUCN VI)
Argo-Rowley Terrace	Multiple Use Zone (IUCN VI)
Gascoyne	Multiple Use Zone (IUCN VI)
Montebello	Multiple Use Zone (IUCN VI)
Gascoyne	National Park Zone (IUCN II)

Park Name	Zone & IUCN Categories
Mermaid Reef	National Park Zone (IUCN II)
Ningaloo	Recreational Use Zone (IUCN IV)
Argo-Rowley Terrace	Special Purpose Zone (Trawl) (IUCN VI)

Habitat Critical to the Survival of Marine Turtles [Resource Information]

Scientific Name	Behaviour	Presence
All year (Jun - Aug)		
Natator depressus		
Flatback Turtle [59257]	Nesting	Known to occur
Nov-Feb		
Caretta caretta		
Loggerhead Turtle [1763]	Nesting	Known to occur
Oct - Feb		
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Nesting	Known to occur
Oct - Mar		
Chelonia mydas		
Green Turtle [1765]	Nesting	Known to occur

Title of referral	Reference	Referral Outcome	Assessment Status
3D Seismic Survey in the Carnarvon Bsin on the North West Shelf	2002/778		Completed
Babylon 3D Marine Seismic Survey, Commonwealth Waters, nr Exmouth WA	2013/7081		Completed
Browse to North West Shelf Development, Indian Ocean, WA	2018/8319		Approval
DAVROS MC 3D marine seismic survey northwaet of Dampier, WA	2013/7092		Completed
Deep Water Northwest Shelf 2D Seismic Survey	2007/3260		Completed
Development of Mutineer and Exeter petroleum fields for oil production, Permit	2003/1033		Completed
Gorgon Gas Development	2003/1294		Post-Approval
Ningaloo Lighthouse Development, 17km north west Exmouth, Western Australia	2020/8693		Post-Approval
Project Highclere Cable Lay and Operation	2022/09203		Completed
Action clearly unacceptable			
Highlands 3D Marine Seismic Survey	2012/6680	Action Clearly Unacceptable	Completed
Controlled action			

Title of referral	Reference	Referral Outcome	Assessment Status
Controlled action			
'Van Gogh' Petroleum Field Development	2007/3213	Controlled Action	Post-Approval
Construct and operate LNG & domestic gas plant including onshore and offshore facilities - Wheatston	2008/4469	Controlled Action	Post-Approval
Construction and operation of a Solar Salt Project, SW Onslow, WA	2016/7793	Controlled Action	Assessment Approach
Develop Jansz-Io deepwater gas field in Permit Areas WA-18-R, WA-25-R and WA-26-	2005/2184	Controlled Action	Post-Approval
Development of Angel gas and condensate field, North West Shelf	2004/1805	Controlled Action	Post-Approval
Development of Browse Basin Gas Fields (Upstream)	2008/4111	Controlled Action	Completed
Development of Coniston/Novara fields within the Exmouth Sub-basin	2011/5995	Controlled Action	Post-Approval
Development of Stybarrow petroleum field incl drilling and facility installation	2004/1469	Controlled Action	Post-Approval
Echo-Yodel Production Wells	2000/11	Controlled Action	Post-Approval
Enfield full field development	2001/257	Controlled Action	Post-Approval
Equus Gas Fields Development Project, Carnarvon Basin	2012/6301	Controlled Action	Completed
Gorgon Gas Development 4th Train Proposal	2011/5942	Controlled Action	Post-Approval
Greater Enfield (Vincent) Development	2005/2110	Controlled Action	Post-Approval
Greater Gorgon Development - Optical Fibre Cable, Mainland to Barrow Island	2005/2141	Controlled Action	Completed
Light Crude Oil Production	2001/365	Controlled Action	Post-Approval
Pluto Gas Project	2005/2258	Controlled Action	Completed
Pluto Gas Project Including Site B	2006/2968	Controlled Action	Post-Approval

Title of referral	Reference	Referral Outcome	Assessment Status

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	North-west
Commonwealth waters adjacent to Ningaloo Reef	North-west
Continental Slope Demersal Fish Communities	North-west
Exmouth Plateau	North-west
Glomar Shoals	North-west
Mermaid Reef and Commonwealth waters surrounding Rowley Shoals	North-west

Name	Region	
Biologically Important Areas		[Resource Information]
Scientific Name	Behaviour	Presence
Dugong		
Dugong dugon Dugong [28]	Breeding	Known to occur
Dugong dugon Dugong [28]	Calving	Known to occur
Dugong dugon Dugong [28]	Foraging (high density seagrass beds)	Known to occur
Dugong dugon Dugong [28]	Nursing	Known to occur
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Internesting buffer	Known to occur
Caretta caretta Loggerhead Turtle [1763]	Nesting	Known to occur
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting buffer	Known to occur
Chelonia mydas Green Turtle [1765]	Mating	Known to occur
Chelonia mydas Green Turtle [1765]	Nesting	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Known to occur

Scientific Name	Behaviour	Presence
Eretmochelys imbricata Hawksbill Turtle [1766]	Nesting	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting buffer	Known to occur
Natator depressus Flatback Turtle [59257]	Nesting	Known to occur
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Fregata ariel Lesser Frigatebird [1012]	Breeding	Known to occur
Phaethon lepturus White-tailed Tropicbird [1014]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula albifrons sinensis Little Tern [82850]	Resting	Known to occur
Sternula nereis Fairy Tern [82949]	Breeding	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Rhincodon typus Whale Shark [66680]	Foraging (high density prey)	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Eubalaena australis Southern Right Whale [40]	Migration	
Eubalaena australis Southern Right Whale [40]	Reproduction	
Megaptera novaeangliae Humpback Whale [38]	Migration (north and south)	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Resting	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

FORM

Report of an Accident Dangerous Occurrence Well Integrity or Environmental Incident

Document No: N-03300-FM0831 A159980
Date: 2/12/2025

Accidents, dangerous occurrences, well and environmental reportable incidents can all be reported using this form.

Where an incident occurs, and the titleholder and operator are not the same organisation and have different reporting requirements under the OPGGS Act and regulations, each organisation must submit a separate report.

This form should be used in conjunction with NOPSEMA Guidance Note N-03300-GN2303 - Notification Reporting and Reporting Requirements for Incidents available on the NOPSEMA website.

Part 1 is required within 3 days of a notified incident.

Part 2 is required within 30 days of a notified accident or dangerous occurrence incident.

This form and any attachments are to be submitted by either:

Email: **submissions@nopsema.gov.au** for documents less than 10 MB; or

Secure file transfer: https://securefile.nopsema.gov.au/filedrop/submissions.

NOPSEMA considers that a full report will contain copies of documentary material referenced and/or relied on in the course of completing this form, which may include (but not be limited to) as appropriate: witness statements, management system documents, drawings, diagrams and photographs, third party reports (audit, inspection, material analysis etc.), internal records and correspondence.

Date and time of the initial verbal incident notification to NOPSEMA			
Date		**Time**	

Was NOPSEMA notified through the dedicated notification phone line?			
Yes/No		**If no, who was contacted at NOPSEMA**	

Notification Number provided by NOPSEMA for this incident	
Reference	

Date and time of this written incident report			
Date		**Time**	

Is this the initial incident report?	
Yes/No	

What type of incident is being reported?		***Tick all appropriate incident types***
Accident or dangerous occurrence		Complete parts 1A, 1B, 1E, 1F & 2
Well incident		Complete parts 1A, 1C, 1E, 1F
Environmental incident		Complete parts 1A, 1D, 1E, 1F

What category of incident is being reported?		***Tick all appropriate category types***
To use electronically: MS Word 2007-10 – click in check box		
Accidents	Death Serious Injury Lost time injury ≥3 days	☐ ☐ ☐
Dangerous occurrences	Could have caused death, serious injury or Lost time injury ≥3 days Fire or explosion Collision marine vessel and facility Uncontrolled hydrocarbon release >1 kg or ≥80 L (gas or liquid) Well kick >8 m^3 or 50 barrels Damage, loss or removal of a technical or other control measure critical to safety Pipeline incident Unplanned event – implement ERP Other _____	☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐
Wells	Loss of integrity release >1 kg (gas) Loss of integrity >80 L (liquid) A build-up of pressure or a positive flow check and operation of the BOP Flow from a well has been diverted Failure of well-related equipment Damage to well-related equipment Other unplanned occurrence requiring measures to regain control of the well	☐ ☐ ☐ ☐ ☐ ☐ ☐
Environmental	Hydrocarbon release Chemical release Drilling fluid/mud release Other substance release Loss of waste/materials/equipment EPBC list species death or injury/near miss Detection of marine pest/invasive marine species Displacement of other marine user Underwater cultural heritage, including First Nations underwater cultural heritage Other _____	☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐

Part 1A – Information Required within 3 Days of a Reportable Incident

1. Where did the incident occur? *Fill in all information applicable to the incident location. Multiple facilities/wells may be included if appropriate.*	
Did the incident occur on a facility or Associated Offshore Place (AOP)?	
If yes what type of facility?	Facility or AOP name:
FPSO ☐	
MODU ☐	
Platform – manned ☐	
Platform – not normally manned ☐	
Vessel ☐	
Did the incident occur on a pipeline?	If yes pipeline name:
Did the incident involve a well or wells?	If yes well(s) name and title(s):
Incident location (Provide datum used i.e. GDA2020)	Latitude: Longitude:
Name of petroleum activity being undertaken?	
2. Who is the registered operator/titleholder or person that controls the works site or activity?	
Name	
Position	
Business address	
Business phone no.	
3. When did the incident occur?	
Date	
Time and time zone	
4. Details of person submitting this form.	
Name	
Position	
Email	
Telephone no.	

5. Details of any witnesses. *If more witnesses, copy and insert this section.*	
Full name	
Phone no. (Business hours)	
Phone no. (Home) (Mobile)	
Email (Business) (Private)	
Postal address	

6. Brief description of incident.

7. Work or activity being undertaken at time of incident.

8. What are the internal investigation arrangements?

9. Was there any loss of containment?		
Yes or No *If yes, provide details below*		
Type of loss	Hydrocarbon fluid Hydrocarbon gas Hydrocarbon gas and fluid Non-hydrocarbon gas Chemical Drilling fluid/mud Formation/Produced formation water Hydraulic oil Diesel/Fuel oil Waste Other	☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐
Estimated quantity *Liquid (L), Gas (kg)*		
Estimation Type *Calculation or measurement*		

Composition *Percentage and description*				
Known toxicity to people and/or environment	Yes ☐ No ☐ If yes, provide Safety Data Sheet and ecotox, bioaccumulation and persistence data (if available).			
What equipment was involved in the release?				
Is the equipment critical to safety?				
How was the leak/spill detected?	Fire & gas detection CCTV Visual	☐ ☐ ☐	Other	☐
Did ignition occur?	No Yes	☐ ☐	Immediate Delayed	☐ ☐
If yes, what was the likely ignition source?	Hotwork Spark electrical source Spark metallic contact Hot surface	☐ ☐ ☐ ☐	Other	☐

10. Hydrocarbon release details.

System of hydrocarbon release	Process Drilling Subsea / Pipeline	☐ ☐ ☐	Utilities Well related Marine	☐ ☐ ☐
Estimated inventory in the isolatable system *Liquid (L), Gas (kg)*				
System pressure and size of piping or vessel	Pressure *(MPag)*			
	Size *Piping diameter (mm)* *Piping length (mm)* *or Vessel volume (L)*			
Estimated equivalent hole diameter *(mm)*				

11. Has the release been stopped and/or contained?

Yes or No	
Duration of the release *hh:mm:ss*	
Estimated rate of release *Liquid (L), Gas (kg) per hour*	

Part 1B - Complete for accidents or dangerous occurrences

12. Action taken to make the work-site safe.					
Was permission given by a NOPSEMA inspector to interfere with the site? OPGGS(S)R 2.49. Yes ☐ No ☐					
Action taken					
Details of any disturbance of the work site					
13. Was an emergency response initiated? Yes ☐ No ☐					
Type of response	Manual Automatic alarm	☐ ☐	Muster Evacuation	☐ ☐	
How effective was the emergency response?					
14. Was anyone killed or injured? *Provide details below* Yes ☐ No ☐					
Injured person (IP)					
If different from Part 1A. Employer name		Employer address			
Employer phone no.		Employer email			
IP full name					
IP date of birth		Gender	Male ☐	Female ☐	
			Indeterminate/Intersex/Unspecified ☐		
IP residential address					
IP phone no. (Work)		IP phone no. (Home) (Mobile)			
IP occupation/job title		Core employee or contractor			
Circumstances of injury					

Based on TOOCS (refer to References) Nature of injury	a. Intracranial injury	☐	g. Other injuries	☒

	G5 - 51 Contact with hot objects	☐	G9 - 99 Unspecified mechanisms of incident	☐
	G5 - 52 Contact with cold objects	☐	Not provided'	
Agency of injury	1. Machinery and (mainly) fixed plant	☐	6. Chemicals and chemical products	☐
	2. Mobile plant or transport	☐	7. Material and substances	☐
	3. Powered equipment, tools and appliances	☐	8. Environmental agencies	☐
	4. Non-power hand tools, appliances and equipment	☐	9. Animal, human and biological agencies	☐
	5. Chemicals and chemical products	☐	10. Other and unspecified agencies	☐
			Not provided _____	☐

Details of job being undertaken				
Day and hour of shift	Day *e.g. 5th day of 7 (5 / 7)*		Hour *e.g. 3rd hour of 12 (3 / 12)*	

NB: Copy/paste this section *for each additional injured person and insert here*

15. Was anyone incapacitated from performing work for three or more days (>3 day Loss Time Injury)
Yes ☐ No ☐

Has the worker been cleared to return to full duties?	Yes ☐ No ☐
If not yet returned to work when is the worker expected to be cleared to return to full time duties?	
Total number of workdays lost at time of this report being submitted?	
At the time of this report being submitted is the injury still classified as a LTI >3Days, and if not, what is the new injury classification?	

NB: The injury and workdays lost should be reported to NOPSEMA in the Monthly Operational Activities Report

16. Was there any serious damage? *Provide details below.* Yes ☐ No ☐

Item 1	
Equipment damaged	
Extent of damage	
Will the equipment be shut down?	Yes ☐ No ☐
If yes, for how long?	

NB: Copy/paste this section for each additional item and insert here

17. Will the facility be shut down? *Provide details below.* Yes ☐ No ☐

Facility shutdown	Date		dd/mm/yyyy
	Time		24-hour clock
	Duration		days / hours / minutes

18. What were the immediate causes of the incident?

Part 1C – Complete for Well Incidents

19. What is the WOMP relating to the well?	
WOMP Name Document number Version	
20. Well Phase or Activity	
Drilling Completions Interventions Production Other (please describe)	☐ ☐ ☐ ☐ ☐
21. Brief description of current well status and condition (e.g. Shut-in, Producing, Barrier status etc, Stabilised pressures etc)	
22. Details of all material facts and circumstances concerning the reportable incident that the titleholder knows or is able, by reasonable search or enquiry, to find out.	

23. What were the causes of the incident? *This section should include a detailed analysis of the failure mode, including demonstration that an appropriate internal investigation has been completed in line with the titleholder's management systems, and provide evidence of the internal assurance of the outcomes of the investigation.* *This section should also cover the risk of the same incident occurring in other wells operated by the titleholder (e.g. rule out a systemic issue)* *If this information is not available within the 3 days requirement contact NOPSEMA.*

Part 1D – Complete for environmental incidents

24. What is the accepted environment plan for this incident?		
Environment plan name Document number Version		
25. Has the incident resulted in an impact to the environment? *Provide details below.* Yes ☐ No ☐		
Incident details *e.g. estimated area of impact, nature/significance of impact*		
Environmental Receptors	Open ocean ☐ Shoreline ☐ Population centre ☐ Stakeholders ☐ Other sensitivity ☐ *e.g. conservation area, nesting beach*	Macroalgae ☐ Coral Reef ☐ Benthic invertebrates ☐ Seagrass ☐ Mangrove ☐

Environment Receptor	
Environmental receptor	
Location of environment receptor	
Latitude (Provide datum used i.e. GDA2020)	
Longitude (Provide datum used i.e. GDA2020)	
Date and time of impact	
Action taken to minimise exposure	
Specify each matter protected under Part 3 of the EPBC Act impacted	
NB: Copy/paste this section for each additional environmental receptor and insert here	

26. Are any environments at risk of impact, including as a result of spill response measures? *Provide details below.* **Yes ☐ No ☐**		
Details *e.g. zone of potential impact*		
Environmental Receptors	Open ocean ☐ Shoreline ☐ Population centre ☐ Stakeholders ☐ Other sensitivity ☐ *e.g. conservation area, nesting beach*	Macroalgae ☐ Coral Reef ☐ Benthic invertebrates ☐ Seagrass ☐ Mangrove ☐

Environment Receptor	
Estimated location of 'at-risk' environments	
Estimated impact date & time	
Action required to minimise exposure	

Specify each matter protected under Part 3 of the EPBC Act at risk	
NB: Copy/paste this section for each additional environmental receptor and insert here	
27. Was an oil pollution emergency plan activated? *Provide details below.* **Yes ☐ No ☐**	
If yes, what action has been implemented /planned?	
If yes, how effective is/was the spill response?	
28. Was an environmental monitoring program initiated? *Provide details below.* **Yes ☐ No ☐**	
If yes, what actions have been implemented and/or planned?	
29. Did the incident result in the death or injury of any fauna? *Provide details below.* **Yes ☐ No ☐**	

Injured fauna	**Species 1**	**Species 2**	**Species 3**
Species name (common or scientific name)			
Number of individuals killed or injured	Killed: Injured:	Killed: Injured:	Killed: Injured:
NB: Copy/paste this section for each additional species and insert here			

Part 1E – Complete for actions

30. Actions taken to avoid or mitigate any adverse environmental impacts of the incident.		
Action	**Responsible party**	**Completion date** *Actual or intended*
NB: Copy/paste this section for each additional actions and insert here		
31. Corrective actions taken, or proposed, to stop, control or remedy the incident.		
Action	**Responsible party**	**Completion date** *Actual or intended*
NB: Copy/paste this section for each additional actions and insert here		
32. Actions taken, or proposed, to prevent a similar incident occurring in the future.		
Action	**Responsible party**	**Completion date** *Actual or intended*
NB: Copy/paste this section for each additional actions and insert here		

Part 1F – Complete for attachments

33. Are you attaching any documents? *Provide details below.* **Yes ☐ No ☐**

No.	ID	Revision	Date	Title/description

NB: Copy/paste this section for each document and insert here

Part 2 – Information required within 30 days of accident or dangerous occurrence

NOPSEMA acknowledges that in many circumstances an operator may not have completed an investigation within 3 days of an accident or first detection of a dangerous occurrence and agrees that these items must be provided within 30 days unless otherwise agreed, in writing with NOPSEMA.

In circumstances where an investigation has been completed within 3 days, and these items are available (supplemented, as required by any attachments) this part should also be completed at that time.

34. Is there any change to the LTI information provided at section 15 *Provide details below.* **Yes ☐ No ☐**	
Details	
35. Has the investigation been completed? *Provide details below.* **Yes ☐ No ☐**	
Root cause 1	
Root cause 2	
Root cause 3	
Other root causes	
36. Full report. *Describe investigation in detail, including who conducted the investigation and in accordance with what standard/procedure with reference to attachments listed in the 'attachments table' as applicable*	

37. Actions to prevent recurrence of same or similar incident.		
Action	**Responsible party**	**Completion date** *Actual or intended*

NB: Copy/paste this section for each additional actions and insert here

38. Are you attaching any documents? **Yes ☐ No ☐**

If yes, add to Section 1F Complete for Attachments.

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the *Aboriginal Heritage Act 1972*.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form and we will make every effort to rectify it as soon as possible.

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- **Boundary Reliable (Yes/No):** Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- **Boundary Restricted = No:** Represents the actual location of the ACH as understood by the Department..
- **Boundary Restricted = Yes:** To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- **Culturally Sensitive = No:** Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- **Culturally Sensitive = Yes:** Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.
- **Culturally Sensitive Nature:**
  - **No Gender / Initiation Restrictions:** *Anyone* can view the information.
  - **Men only:** Only *males* can view restricted information.
  - **Women only:** Only *females* can view restricted information.

Status:

- **Register:** Aboriginal cultural heritage places that are assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972*.
- **Lodged:** Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the *Aboriginal Heritage Act 1972.*
- **Historic:** Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the *Aboriginal Heritage Act 1972*. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

1. CONSULTATION APPROACH

Consultation under regulation 25 of the OPGGS(E) Regulations provides that, in the course of preparing an environment plan, a titleholder must consult each relevant person (regulation 25(1)), must give each relevant person sufficient information to allow the relevant person to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of the relevant person (regulation 25(2)), and must allow a relevant person a reasonable period for consultation (regulation 25(3)).

A titleholder must also give a relevant person a reasonable opportunity to consult – this means that a titleholder will need to demonstrate that what it did constituted consultation appropriate and adapted to the nature of the interests of the relevant person (see Tipakalippa Full Court paragraph 104). The EP must contain a report on all consultations that contains an assessment of the merits of any objection or claim about the adverse impact of each activity to which the EP relates, and a statement of the titleholder's response, or proposed response, if any, to each objection or claim (regulation 24(b)).

The criteria for acceptance of an EP includes that the EP demonstrates that the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate (regulation 34(g)).

The Okha Light Well Intervention Environment Plan (Okha LWI EP) was originally consulted on in April 2026 as the CK4 and LH3 Well Intervention EP. In July 2026, the scope was expanded to include two additional wells, prompting an Activity Update and a further consultation period. Woodside has taken a broad and proactive consultation approach over a period of 6 months, including by:

- allowing a 30-day period for consultation and an additional 30-day period for the consultation update.
- providing sufficient information adapted to the nature of each relevant person
- engaging in proactive activities to raise awareness of the consultation process and opportunity for relevant persons to provide feedback
- actively inviting participation in the consultation process. This approach was aimed at raising public awareness of the consultation opportunity and to enable self-identification. It included:
  - a social media campaign
  - advertising in national, state, regional and Indigenous newspapers
  - attendance at community events.

The consultation approach is consistent with regulation 25 of the OPGGS(E) Regulations. The approach is proactive, has enabled self-identification and has raised broad awareness of Woodside's activities to be carried out under this EP.

1.1 Woodside's approach to consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside's consultation approach consistent with regulation 25 includes:

- Assessment and identification of relevant persons,
- Opportunities for relevant person self-identification through national, state, regional and Indigenous print advertising and regional social media campaign
- Two-way communication through emails, in-person meetings and phone calls
- Follow-up if Woodside considers it is required prior to consultation close
- Sufficient information and a reasonable period of time for consultation (see Section 5 of the EP).

Proactive activities to raise consultation awareness includes:

- Community events and engagement
- Local print advertising
- Website and social media
- Community newsletters
- Community bulletin board posting
- Additional supporting campaigns as needed
  -

1.2 Traditional Custodian consultation approach

Woodside has meaningful long-term relationships with relevant Traditional Custodians specifically tailored to provide for effective engagement which is continuous and is not confined to individual EPs, instead covering all EPs and other issues that are relevant at the time of engagement.

To this end, consultation on any particular EP, including the Okha LWI EP, happens before, during and after the designated consultation period in a more holistic manner allowing for an understanding of the bigger picture and accommodating cultural requirements. Ongoing consultation remains an important part of consulting with Traditional Custodians based on availability, cultural protocols and the preferred method of consultation for each relevant person.

1.3 NGO consultation approach

Woodside has an established history of consulting with environmental non-government organisations (NGOs) as part of its EP consultation process. In its methodology (Section 5.3.4, Table 5-2 of the EP), NGOs are considered "Other non-government groups or organisations" and "Research institutes and local conservation groups or organisations". Relevant person identification for these categories is based on registered non-government groups or organisations with current targeted public website material specific to the proposed activity at the time of developing the EP and who have demonstrated functions, interests or activities relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation.

So that NGOs were given sufficient information and a reasonable period of time to consult, Woodside:

- advertised the consultation period (social and traditional media)
- directly consulted NGOs
- participated in regional community events (which were advertised) in the Pilbara which could be attended by any NGOs including local groups. If NGOs attended these sessions, they did not identify themselves.

1.4 NGO response

During consultation for the Okha LWI EP, no responses from NGOs were received.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2. RELEVANCY ASSESSMENT

2.1 Assessment of relevant persons for the proposed activity

The result of Woodside's assessment of relevant persons in accordance with regulation 25(1) of the Environment Regulations is outlined below at Table 1 and Table 2.

Persons or organisations that Woodside assessed as not relevant but nonetheless chose to contact at its discretion in accordance with Section 5.3.7 of the EP or self-identified and Woodside assessed as not relevant are summarised below at Table 1 and Table 3.

As per Woodside's methodology (Section 5 of the EP), assessment of relevant persons is informed by the EMBA, shown in Figure 2-1.

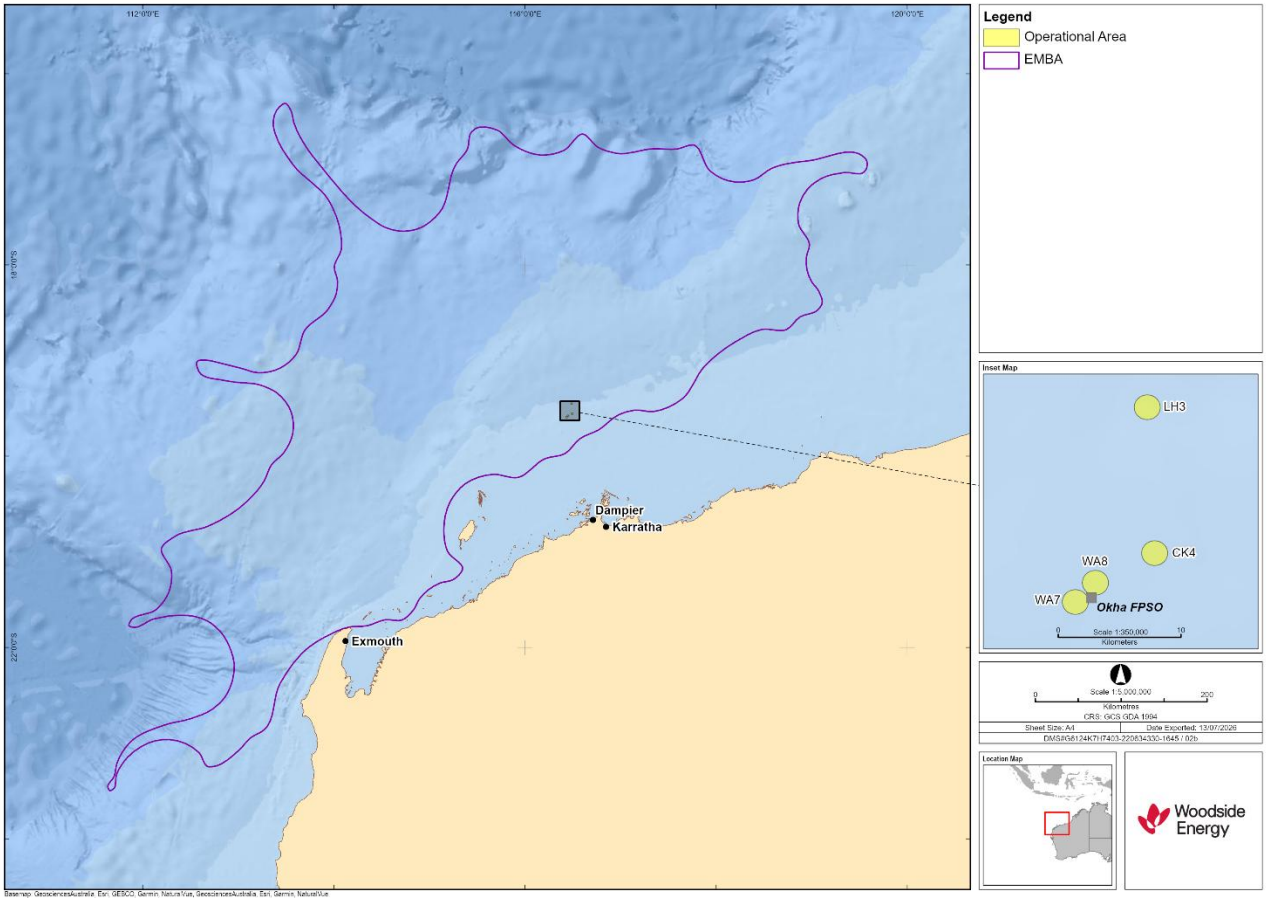

Figure 2-1: Operational Area and EMBA for Okha Light Well Intervention EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2.2 Table 1: Assessment of relevance

2.2.1 Government, fisheries, community, titleholders, NGOs, research institutes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Commonwealth and WA State Government Departments or Agencies – Marine			
Australian Border Force (ABF)	Responsible for coordinating maritime security.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ABF's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Communications and Media Authority (ACMA)	Regulator for communications and media.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ACMA's responsibilities may be relevant to the activity as there may be telecommunications lines that intersect the Operational Area or are in proximity to it..	Yes
Australian Fisheries Management Authority (AFMA)	Responsible for managing Commonwealth fisheries.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. Southern Bluefin Tuna Fishery, Western Skipjack Fishery and Western Tuna and Billfish Fishery have overlap with the Operational Area, but are not active. Southern Bluefin Tuna Fishery, Western Skipjack Fishery, Western Tuna and Billfish Fishery, Western Deepwater Trawl Fishery and Northwest Slope Trawl Fishery overlap the EMBA and Northwest Slope Trawl Fishery, Western Deepwater Trawl Fishery and Western Tuna and Billfish Fishery are active in the EMBA. AFMA's responsibilities may be relevant to the activity given the fisheries' overlap with the EMBA.	Yes
Australian Hydrographic Office (AHO)	Responsible for maritime safety and Notices to Mariners.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AHO's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Australian Maritime Safety Authority (AMSA) – Marine Pollution	Legislated responsibility for oil pollution response in Commonwealth waters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Pollution's responsibilities may be relevant to the activity as the proposed activity has a hydrocarbon spill risk which may require AMSA response in Commonwealth waters.	Yes
Australian Maritime Safety Authority (AMSA) – Navigation Safety	Statutory agency for vessel safety and navigation.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Navigation Safety's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries	Responsible for implementing Commonwealth policies and programs to support agriculture, fishery, food and forestry industries.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. No Commonwealth fisheries are active in the Operational Area. The North West Slope Trawl Fishery is active in the EMBA. DAFF – Fisheries responsibilities may be relevant to the activity as the North West Slope Trawl Fishery is active in the EMBA.	Yes
Department of Defence (DoD)	Responsible for defending Australia and its national interests.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. DoD's responsibilities may be relevant to the activity as defence training areas lie within the EMBA.	Yes
Department of Planning, Lands and Heritage (DPLH)	Responsible for state level land use planning and management, and oversight of Aboriginal cultural heritage and built heritage matters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. DPLH's responsibilities may be relevant to the activity as there is known Maritime Cultural Heritage overlapping the EMBA.	Yes
Department of Primary Industries and Regional Development (DPIRD)	Responsible for managing State fisheries.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The state Mackerel Managed Fishery (Area 2), Pilbara Trawl Managed Fishery, Pilbara Trap Managed Fishery and Pilbara Line Managed Fishery are active in the Operational Area.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		The Exmouth Gulf Prawn Managed Fishery, Gascoyne Demersal Scalefish Managed Fishery, Mackerel Managed Fishery (Area 2), Marine Aquarium Managed Fishery, Nickol Bay Prawn Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Line Managed Fishery, Pilbara Trap Managed Fishery, Pilbara Trawl Managed Fishery, Specimen Shell Managed Fishery and West Coast Deep Sea Crustacean Managed Fishery have been active in the EMBA within the past 5 years. DPIRD's responsibilities may be relevant to the activity as the government department responsible for State fisheries.	
Department of Transport and Major Infrastructure (DTMI)	Legislated responsibility for oil pollution response in State waters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has a hydrocarbon spill risk, which may require DTMI response in State waters.	Yes
Pilbara Ports	Encompasses the Ports of Ashburton, Dampier, Port Hedland and Varanus Island. Oversees the operation of the greenfield ports of Anketell, Balla Balla, Cape Preston East, Cape Preston West and Urala. Oversees the Shipping and Pilotage Act 1967 (SPA) ports of Barrow Island, Cape Preston, Onslow and Port Walcott.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has the potential to impact Pilbara Ports' responsibilities as the EMBA overlaps the Pilbara Ports' area of responsibility (Port of Ashburton).	Yes
Western Australian Museum (WAM)	Manages 200 shipwreck sites of the 1,500 known to be located off the Western Australian coast.	Woodside has applied its methodology for 'Historical cultural heritage groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There are known shipwrecks overlapping the EMBA for which the Western Australian Museum may be responsible.	Yes
Commonwealth and WA State Government Departments or Agencies – Environment			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Clean Energy Regulator (CER)	The Clean Energy Regulator administers schemes legislated by the Australian Government for measuring, managing, reducing or offsetting Australia's carbon emissions.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. CER's responsibilities are not relevant to non-operational EPs.	No
Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)	DAFF administers, implements and enforces the Biosecurity Act 2015. DAFF requests to be consulted where an activity has the potential to transfer marine pests. DAFF also has inspection and reporting requirements to ensure that all conveyances (vessels, installations and aircraft) arriving in Australian territory comply with international health regulations and that any biosecurity risk is managed. DAFF requests to be consulted where an activity involves the movement of aircraft or vessels between Australia and offshore petroleum activities either inside or outside Australian territory.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DAFF – Biosecurity's responsibilities may be relevant to the proposed activities in the EMBA in the prevention of introduced marine species.	Yes
Department of Biodiversity, Conservation and Attractions (DBCA)	Responsible for managing WA's parks, forests and reserves to achieve wildlife conservation and provide sustainable recreation and tourism opportunities.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(b) of the Environment Regulations. The DBCA's responsibilities may be relevant to the activity as the EMBA overlaps WA parks, forests or reserves. Activities have the potential to impact marine tourism in the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Department of Climate Change, Energy, the Environment and Water (DCCEEW)	Responsible for implementing Commonwealth policies and programs to support climate change, sustainable energy use, water resources, the environment and our heritage. Administers the Underwater Cultural Heritage Act 2018 in collaboration with the States, Northern Territory and Norfolk Island, which is responsible for the protection of shipwrecks, sunken aircraft and other types of underwater heritage and their associated artefacts in Commonwealth waters.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DCCEEW's responsibilities may be relevant to the proposed activities in the EMBA as there are potential environmental impacts from the proposed activity. There is known Maritime Cultural Heritage overlapping the EMBA.	Yes
Department of Water Environment Regulation (DWER)	Responsible for management and regulation of WA's environment and water resources.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(b) of the Environment Regulations. DWER has not been assessed as relevant for this activity as EPs are regulated under separate petroleum-specific approval frameworks administered by DMPE or NOPSEMA. DWER may be relevant where an activity requires, or has a clear link to, a DWER or EPA-administered approval or statutory function, however no such approval pathway or statutory function is engaged for this activity. Woodside chose to contact DWER at its discretion in line with Section 5.3.7 of the EP during the initial consultation.	No
Director of National Parks (DNP)	Responsible for the management of Commonwealth parks and conservation zones.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DNP's responsibilities may be relevant to the activity as DNP requires an awareness of activities that occur within Australian Marine Parks (AMPs), and an understanding of potential impacts and risks to the values of parks (NOPSEMA guidance note: N-04750-GN1785 A620236, June 2020). Titleholders are required to consult DNP on offshore petroleum if they occur in, or may impact on, the values of marine parks, including where potential spill response activities may occur in the event of a spill (i.e. scientific monitoring).	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Ningaloo Coast World Heritage Advisory Committee (NCWHAC)	Supports the DBCA to manage the Ningaloo Coast World Heritage Area.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. The NCWHAC's responsibilities may be relevant to the activity as the EMBA overlaps the Ningaloo Marine Park.	Yes
Commonwealth and State Government Departments or Agencies – Industry			
Department of Mines, Petroleum and Exploration (DMPE)	Department of relevant State Minister.	Required to be consulted under regulation 25(1)(c) of the Environment Regulations.	Yes
Department of Industry, Science and Resources (DISR)	Department of relevant Commonwealth Minister.	Required to be consulted under regulation 25(1)(a) of the Environment Regulations.	Yes
Commonwealth commercial fisheries and peak representative bodies			
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	Represents the interests of the Southern Bluefin Tuna Fishery and Western Skipjack Fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Southern Bluefin Tuna Fishery overlaps the Operational Area and EMBA but has not been active in the Operational Area or EMBA within the past five years. ASBTIA's functions, interests or activities may be relevant to the activity as the Southern Bluefin Tuna Fishery overlaps the EMBA.	Yes
Commonwealth Fisheries Association (CFA)	Represents the interests of commercial fishers with licences in Commonwealth waters.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Southern Bluefin Tuna Fishery, Western Skipjack Fishery and Western Tuna and Billfish Fishery have overlap with the Operational Area, but have not been active within past 5 years. Southern Bluefin Tuna Fishery, Western Skipjack Fishery, Western Tuna and Billfish Fishery, Western Deepwater Trawl Fishery and Northwest Slope Trawl Fishery overlap the EMBA and Northwest Slope Trawl Fishery, Western Deepwater Trawl Fishery and Western Tuna and Billfish Fishery have been active in the EMBA within the past 5 years. CFA's functions may be relevant to the activity as given the fisheries' overlap with the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

North West Slope Trawl Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area, it has not been active in the Operational Area within the past 5 years. The fishery overlaps the EMBA and has been active in the EMBA within the past 5 years.	Yes
Southern Bluefin Tuna Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the past 5 years. Woodside does not consider that the proposed activity will present a risk to licence holders, given since 1992, the majority of Australian catch has concentrated in south-eastern Australia. (Patterson et al., 2022). In addition, given fishing methods by licence holders for species fished in this fishery (Australia has a 35% share of total global allowable catch of Southern Bluefin Tuna, which is value-added through tuna ranching near Port Lincoln (South Australia), or fishing effort in New South Wales (Australian Southern Bluefin Tuna Industry Association). Woodside chose to contact Southern Bluefin Tuna at its discretion in line with Section 5.3.7 of the EP.	No
Tuna Australia	Represents the interests of the Western Tuna and Billfish Fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Western Skipjack Tuna Fishery and Western Tuna and Billfish Fishery have overlap with the EMBA and Western Tuna and Billfish Fishery is active within the EMBA. Tuna Australia's functions, interests or activities may be relevant to the activity as both fisheries have overlap with the EMBA.	Yes
Western Deepwater Trawl Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. While the fishery does not overlap the Operational Area, it overlaps the EMBA and has been active in the past 5 years.	Yes

Other non-government groups or organisations (NGOs) or individuals			
Australian Marine Conservation Society (AMCS)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine AMCS' relevance for the proposed activity. Woodside has assessed that AMCS has publicly available statements, campaigns or initiatives relating to broader environmental and energy policy matters. Woodside chose to contact AMCS at its discretion in line with Section 5.3.7 of the EP to provide an opportunity to engage with AMCS to assist to identify whether its functions, interests or activities may be affected by the planned activities.	No
Conservation Council of Western Australia (CCWA)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine CCWA's relevance for the proposed activity. Woodside has assessed that CCWA has publicly available statements, campaigns or initiatives relating to broader environmental and energy policy matters. Woodside chose to contact CCWA at its discretion in line with Section 5.3.7 of the EP to provide an opportunity to engage with CCWA to assist to identify whether its functions, interests or activities may be affected by the planned activities.	No
Greenpeace Australia Pacific (GPAP)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine GPAP's relevance for the proposed activity. Woodside has assessed that GPAP has publicly available statements, campaigns or initiatives relating to broader environmental and energy policy matters. Woodside chose to contact GPAP at its discretion in line with Section 5.3.7 of the EP to provide an opportunity to engage with GPAP to assist to identify whether its functions, interests or activities may be affected by the planned activities.	No
Telstra	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations to determine Telstra's relevance for the proposed activity. There are communication cables that intersect the Operational Area.	Yes
Vocus	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations to determine Vocus' relevance for the proposed activity. There are communication cables that intersect the Operational Area.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Research institutes and local conservation groups or organisations			
Australian Institute of Marine Science (AIMS)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by AIMS that intersects within the EMBA. Woodside chose to contact AIMS at its discretion in line with Section 5.3.7 of the EP.	No
Commonwealth Scientific and Industrial Research Organisation (CSIRO)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by CSIRO that intersects within the EMBA. Woodside chose to contact CSIRO at its discretion in line with Section 5.3.7 of the EP.	No
Western Australian Marine Science Institution (WAMSI)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by WAMSI that intersects within the EMBA. Woodside chose to contact WAMSI at its discretion in line with Section 5.3.7 of the EP.	No
Curtin University	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by Curtin University that intersects within the EMBA. Woodside chose to contact Curtin University at its discretion in line with Section 5.3.7 of the EP.	No
Edith Cowan University (ECU)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There is no known research being undertaken by the ECU that intersects within the EMBA.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside chose to contact ECU at its discretion in line with Section 5.3.7 of the EP.	
Murdoch University	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There is no known research being undertaken by the Murdoch University that intersects within the EMBA. Woodside chose to contact Murdoch University at its discretion in line with in line with Section 5.3.7 of the EP.	No
University of Western Australia (UWA)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by UWA that intersects within the EMBA. Woodside chose to contact UWA at its discretion in line with in line with Section 5.3.7 of the EP.	No
Cape Conservation Group (CCG)	Local conservation group focused on protecting the terrestrial and marine environment of the North West Cape.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. CCG's conservation activities have the potential to intersect with the EMBA as the EMBA overlaps North West Cape.	Yes
Protect Ningaloo	Local conservation group focused on protecting the Exmouth Gulf and Ningaloo Reef and Cape Range.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Protect Ningaloo's conservation activities have the potential to intersect with the EMBA as the EMBA overlaps North West Cape and Ningaloo Reef.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2.2.2 Traditional custodians and nominated representative corporations

Traditional Custodians and nominated representative corporations			
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Thalanyji native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which BTAC is the Registered Native Title Body Corporate. BTAC is also party to the Macedon Indigenous Land Use Agreement (ILUA), Onslow Iron Protect Haulage Road ILUA and the Thalanyji and Minderoo Pastoral ILUA which is coastally adjacent to the EMBA.	Yes
Karajarri Traditional Lands Association (Aboriginal Corporation) (KTLA)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Karajarri People (Area A) / Karajarri People (Area B) native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which the Karajarri Traditional Lands Association (Aboriginal Corporation) is the Registered Native Title Body Corporate. The Karajarri Traditional Lands Association (Aboriginal Corporation) is also party to the Gingerah Energy Protect ILUA, Great Sandy Desert Protect ILUA and the Karajarri Traditional Lands Association KSCS Eighty-Mile Beach ILUA which is coastally adjacent to the EMBA.	Yes
Kariyarra Aboriginal Corporation (KAC))	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Kariyarra native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which the KAC is the Registered Native Title Body Corporate. KAC is also party to the Kariyarra and State ILUA which is coastally adjacent to the EMBA.	Yes
Murujuga Aboriginal Corporation (MAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		MAC is the Nominated Representative Corporation under the Burrup and Maitland Industrial Estates Agreement (BMIEA). The EMBA does not overlap the Murujuga National Park. MAC was established to represent the members of competing Native Title claims over Murujuga, collectively known as the Ngarda Ngarli and comprising Mardudhunera, Ngarluma, Yaburara, Yindjibarndi and Wong-Goo-Tt-Oo people. The determination of the competing Native Title claims resulted in no native title being found over the lands subject to the BMIEA or below the low water mark. MAC also owns and co-manages the Murujuga National Park, is responsible for the Dampier Archipelago National Heritage Place and the World Heritage Listed Murujuga Cultural Landscape.	
Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claim, which the Baiyungu, Thalanyji and Yinggarda people are party to, overlaps the EMBA. The NTGAC and Yinggarda Aboriginal Corporation are the Registered Native Title Body Corporates holding native title on behalf of the Baiyungu, Thalanyji and Yinggarda people. The NTGAC is also party, with the WA State Government, to the Ningaloo Conservation Estate ILUA, which is coastally adjacent to the EMBA. The NTGAC is responsible for the joint management of the inner Ningaloo Marine Park (State Waters), the Cape Range National Park and new conservation areas extending along the Ningaloo Coast, which runs in parallel to the outer Ningaloo Marine Park in Commonwealth waters. The NTGAC is also party to the Nganhurra Thanardi Garrbu Aboriginal Corporation Conservation Estate ILUA, which is coastally adjacent to the EMBA. The NTGAC's nominated representative is the Yamatji Marlpa Aboriginal Corporation (YMAC) and the NTGAC executive officer and contact officer pursuant to the Corporations (Aboriginal and Torres Strait Islander) Act 2006 is employed by YMAC. Woodside has therefore consulted the NTGAC, via YMAC.	Yes
Ngarluma Aboriginal Corporation (NAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		The Ngarluma People native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which NAC is the Registered Native Title Body Corporate. The Ngarluma/Yindjibarndi People native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Body Corporates. NAC is also party to the Anketell Port, Infrastructure Corridor and Industrial Estate Agreement ILUA and the RTIO Ngarluma ILUA (Body Corporate Agreement) which is coastally adjacent to the EMBA.	
Nhuwala Claim Group (Nhuwala)	Native Title Group	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Nhuwala Claim Group is a registered native title claim but does not yet have a determination. It is adjacent to the EMBA. All communications with Nhuwala are via YMAC.	Yes
Nhuwala / Thalanyji People	Native Title Group	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Nhuwala / Thalanyji People is a registered native title claim but does not yet have a determination. It is adjacent to the EMBA. All communications with Nhuwala / Thalanyji People are via BTAC.	Yes
Nyangumarta Karajarri Aboriginal Corporation (NKAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Nyangumarta-Karajarri Overlap Proceeding (Yawinya) native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which the NKAC is the Registered Native Title Body Corporate. The NKAC is also party to the NKAC KSCS Eighty-Mile Beach ILUA, Nyangumarta Karajarri and Anna Plains Station ILUA, and the Nyangumarta Karajarri and Mandora Station ILUA which is coastally adjacent to the EMBA.	Yes
Nyangumarta Warrarn Aboriginal Corporation (NWAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		The Nyangumarta People (Part A) native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which the Nyangumarta Warrarn Aboriginal Corporation is the Registered Native Title Body Corporate. The Nyangumarta Warrarn Aboriginal Corporation is also party to the Nyangumarta PBC KSCS Indigenous ILUA, Nyangumarta Warrarn Aboriginal Corporation and Mandora Pastoral Lease ILUA and Nyangumarta Warrarn Aboriginal Corporation and Wallal Downs Pastoral Lease ILUA, which is coastally adjacent to the EMBA.	
Robe River Kuruma Aboriginal Corporation (RRKAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. RRKAC is party to the RTIO Kuruma Marthudunera People ILUA, and the KM & YM ILUA 2018, which is coastally adjacent to the EMBA.	Yes
Wanparta Aboriginal Corporation (Wanparta)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarla and Ngarla #2 (Determination Area A), Ngarla Overlap Proceeding and the Ngarla People (Mount Goldsworthy Lease Proceeding) native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which Wanparta Aboriginal Corporation is the Registered Native Title Body Corporate. The Wanparta Aboriginal Corporation is party to the Ngarla Pastoral ILUA and the Ngarla PBC KSCS ILUA which is coastally adjacent to the EMBA.	Yes
Wirrawandi Aboriginal Corporation (WAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Yaburara & Mardudhunera People native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which WAC is the Registered Native Title Body Corporate. WAC is party to the Cape Preston Protect Deed YM Mardie ILUA Agreement, KM & YM ILUA and the Cape Preston West Export Facility ILUA, which is coastally adjacent to the EMBA.	Yes
Wong-Goo-Tt-Oo	Traditional Owner of Murujuga	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Wong-Goo-Tt-Oo is part of the Ngarda Ngarli which is represented by MAC. Wong-Goo-Tt-Oo has self-identified for all EPs relevant to Murujuga and requested to be consulted directly	
Yindjibarndi Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma/ Yindjibarndi People native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Body Corporates.	Yes
Yinggarda Aboriginal Corporation (YAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d). The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claim, which the Baiyungu, Thalanyji and Yinggarda people are party to, overlaps the EMBA. The NTGAC and YAC are the Registered Native Title Body Corporates holding native title on behalf of the Baiyungu, Thalanyji and Yinggarda people. YAC is party to the Estate ILUA, and the Ningaloo Conservation Estate ILUA, which overlaps the EMBA.	Yes
Native Title Representative Bodies			
Kimberley Land Council (KLC)	Native Title Representative Body	Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations. KLC is the Native Title Representative Body for the Kimberley region of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders. KLC's functions may be relevant to the proposed activity in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation.	Yes
Yamatji Marlpa Aboriginal Corporation (YMAC)	Native Title Representative Body	Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations. YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders. The NTGAC's nominated representative is YMAC. Woodside has therefore consulted the NTGAC via YMAC.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		The Nhuwala Claim Group is a registered native title claim but does not yet have a determination. It is adjacent to the EMBA. All communications with Nhuwala are via YMAC. Woodside contacted YMAC to seek guidance with respect to the appropriate Traditional Custodian group(s) to engage with respect to the proposed activity where this was not clear. YMAC is party to the KM & YM ILUA 2018 and the Kariyarra and State ILUA, which is adjacent to the EMBA. YMAC is also party to the following marine parks – Abrolhos, Dampier, Montebello, Ningaloo, Gascoyne, Shark Bay, Cape Range National Park, which overlap the EMBA.	
Self-identified Indigenous Groups			
Ngarluma Yindjibarndi Foundation Ltd (NYFL)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma and Yindjibarndi People, the NWS JVs and Woodside entered into an agreement on 22 December 1998 (Agreement). NYFL was subsequently incorporated under the terms of the Agreement to act as trustee for the trust established to benefit the Ngarluma and Yindjibarndi People and the Roebourne Aboriginal Community. Subsequent to that, the Ngarluma people settled their native title claim and established their nominated representative corporation, the Ngarluma Aboriginal Corporation (PBC); and the Yindjibarndi people settled their native title claim and established their nominated representative corporation, the Yindjibarndi Aboriginal Corporation (PBC). The Ngarluma Aboriginal Corporation and the Yindjibarndi Aboriginal Corporation are the appropriate representative bodies for consultation in relation to cultural interests. NYFL's functions may be relevant to the proposed activity in relation to its functions under the Agreement.	Yes
Other Indigenous Groups			
Save Our Songlines (SOS) and/ or [Individual 2]	Representatives of Non-Government Organisation Save Our Songlines and/ or [Individual 2]	Woodside has applied its methodology for 'Traditional Custodians and nominated representative corporations' and 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations to determine Save Our Songlines (SOS) and/ or [Individual 2] relevance for the proposed activity.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Save Our Songlines and/ or [Individual 2] stated interest is to stop or pause Scarborough gas and to stop new industry on the Burrup; and oppose planned expansion of the Burrup Hub industry by Woodside, Perdaman and Yara. In addition, their stated interests also include the protection of Murujuga rock art. This scope of the activity under this EP does not fall within their stated interests (see Section 6.6 of the EP). Save Our Songlines and/ or [Individual 2] have not identified for this activity despite opportunity to do so.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3. CONSULTATION ACTIVITIES

3.1 Okha LWI EP consultation activities

Woodside has consulted with relevant persons and other parties for this EP since April 2026 (originally named CK4 and LH3 Well Intervention EP) when consultation commenced as part of a planned, integrated and consistent approach to consultation for Woodside's proposed activities. An activity update was issued in July 2026 for the Okha LWI EP

A broad consultation process has been undertaken with relevant persons for the Okha LWI EP. Consultation aims to be inclusive, transparent, voluntary, respectful and two-way. Consultation was undertaken by email, letter, phone call and/or meetings and through advertising.

3.2 Discharging Regulation 25 of the Environment Regulations

Consultation for the EP began in April 2026 with public notification via newspaper and social media advertising and direct engagement with identified relevant persons and other persons and organisations Woodside chose to contact.

This approach has a number of aims, including, where relevant to be inclusive, transparent, voluntary, respectful and two-way. Consultation was undertaken, where relevant, by email, letter, phone call and/or meetings and through advertising. Further details on these activities are provided in the following sections.

3.2.1 Newspaper advertising

Woodside advertised the EP consultation with an overview of planned activities in national, state regional and Indigenous newspapers as per the table below (also see Record of Consultation, reference 6.4) to reach relevant communities within or adjacent to the EMBA.

No direct comments or feedback were received from the advertisements.

Newspaper	Coverage	Readership	Publication dates
The Australian	National	Weekly – 453,000	16 April 2026
The West Australian	State (WA)	Daily – 364,000	16 April 2026
Pilbara News	Regional (WA)	Weekly – 17,611	15 April 2026
Broome Advertiser	Regional (WA)	Weekly - 12,000	16 April 2026
Kimberley Echo	Regional (WA)	Weekly 12,000	16 April 2026
Midwest Times	Regional (WA)	Weekly - 25,000	15 April 2026
Koori Mail	Indigenous	Monthly – 80,000	22 April 2026
National Indigenous Times	Indigenous	Monthly – 1,484,340	28 April 2026

3.2.2 Direct consultation

Woodside provided a Consultation Information Sheet to relevant persons and to other persons and organisations it chose to contact, during the initial consultation period. See Section 5.3.4 and Section 5.3.7 of the EP.

The Consultation Information Sheet included an overview of the activity, maps, a summary of key risks and/or impacts and associated management measures (Record of Consultation, references 6.1.1, 6.3.1). It also outlined the timeframe for providing feedback and included Woodside's toll-free phone number (1800 442 977) and the consultation email address feedback@woodside.com to support consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

As part of the EP's initial consultation and the activity update, Woodside provided additional targeted information to specific relevant persons, as necessary. This information included:

- defence zone map (Record of Consultation, reference 6.1.3, 6.3.3)
- GIS shape files
- shipwreck information (Record of Consultation, reference 6.1.5, 6.3.5)
- submarine communication cable map (Record of Consultation, reference 6.1.6, 6.3.8)
- vessel density map (Record of Consultation, reference 6.1.4, 6.3.4)
- ports map (Record of Consultation, reference 6.3.9)

Where appropriate, Woodside conducted phone calls and meetings with relevant persons.

Where appropriate, follow-up emails or letters were sent to relevant persons who had not responded prior to the close of the advertised feedback period.

Woodside considered relevant person responses and assessed the merits and relevance of objections and claims about the potential adverse impact of the proposed activity set out in the EP, in accordance with the intended outcome of consultation (see Section 5.2 of the EP).

Consultation activities undertaken with relevant persons are summarised at Appendix F, Table 2.

Engagement with persons or organisations Woodside assessed as not relevant but chose to contact (see Section 5.3.7 of the EP) or self-identified and Woodside assessed as not relevant are summarised at Appendix F, Table 3.

3.2.3 Website and social media

Since the commencement of the initial consultation period (April 2026), the Consultation Information Sheet has been available on Woodside's website. The website also includes alternative methods for relevant persons to provide feedback to Woodside and information on other Woodside activities. From April 2026, Woodside ran a geotargeted paid social media campaign (Record of Consultation, reference 6.5) covering various local government authorities within, or coastally adjacent to, the EMBA for the proposed activities. The campaign focused on persons whose functions, interests or activities might be affected by the EP's activities and directed them to Woodside's Consultation Activities page so that, if they wanted further information, they could learn more about the EP and proposed activities.

Below is a summary of the reach and impact of the social campaign.

Platforms	Geotargeted reach	Post dates	Impact
Meta – Facebook and Instagram	Denham, Carnarvon, Coral Bay, Exmouth, Onslow, Dampier, Karratha, Roebourne, Port Hedland	17/04/2026 30/04/2026 13/05/2026	Reach: 86,255 Impressions: 132,709 Link Clicks: 400 Click Through Rate: 0.3%

Below is a summary of comments and reactions to the social media campaign. Please note comments and reactions are not available for Instagram.

Platform	Number of reactions	Number of comments	Comments relevant to EP
Facebook	61 👍 2 ❤️‍🩹	9	0

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3.3 Proactive consultation

3.3.1 Community engagement

The community events that Woodside has conducted or attended are outlined below (and captured in more detail in Record of Consultation, reference 6.6). To support attendance, Woodside may publish advertisements ahead of these sessions and events in relevant local newspapers and on social media.

Date	Location	Event (if applicable)
15 May 2026	Karratha	KDCCI REAF Festival
7 June 2026	Dampier	Dampier Beachside Markets
1-2 August 2026	Karratha	FeNaCING Festival
8 August 2026	Onslow	Passion of the Pilbara

3.3.2 Community Liaison Group engagement

The Exmouth and Karratha Community Liaison Groups (CLGs) represent the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Exmouth and Karratha regions. Woodside regularly meets with the two CLGs to discuss a range of issues including consultation of specific EPs. For this EP, see reference 4.8.5 for consultation summary with Exmouth CLG and reference 4.8.7 for Karratha CLG.

3.3.3 Newsletter

Woodside's EP focussed newsletter *Let's Talk* is designed to reach existing and potential relevant persons, supports self-identification and provides information about Woodside's EP-related activities. The newsletter provides regular updates about EP consultation activities, case studies on effective consultation with relevant persons and other EP related information such as upcoming events where the Woodside team will consult with the local community. *Let's Talk* is distributed in a variety of locations including Karratha, Roebourne, Exmouth and Perth. as well as across digital platforms including Woodside's website and social media channels. People can also subscribe to receive *Let's Talk* on Woodside's website. (Record of Consultation, reference 6.7.1).

3.4 Consultation activity update (July/August 2026)

Following the initial consultation on the EP, two additional wells, WA7 and WA8, were added to the EP's planned light well intervention activities and it was renamed to the Okha Light Well Intervention EP. No changes to the EMBA occurred. With this update, sent on 23 July 2026, Woodside provided a second 30-day consultation period for relevant persons and persons or organisations who were previously consulted at Woodside's discretion to provide feedback. Following the initial consultation in April 2026 and a follow-up reminder sent in May 2026 (for those who did not respond), the activity update for the Okha LWI EP marked the third opportunity to provide feedback on the EP. While feedback was received on the activity update, there were no objections or claims about the adverse impacts of the proposed activity. Woodside consulted these persons and organisations in accordance with regulation 25 of the Environment Regulations and the summary of that consultation is set out in **Appendix F, Table 2** and **Table 3.**

3.5 Traditional Custodian specific consultation

In addition to the approaches outlined above including community information sessions, additional activities were undertaken with relevant Traditional Custodians, which were specifically designed to

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

provide for effective engagement with Traditional Custodians and so that information was provided in a form that was readily accessible and appropriate (see Section 5.5.4 of the EP).

Consultation undertaken specifically with Traditional Custodians for this EP includes direct engagement with nominated representative bodies via the contact listed on the Office of the Registrar of Indigenous Corporations (ORIC) website, requesting advice on how they would like to be engaged and asking whether other members and/or individuals should be consulted. This has resulted in:

- the EP's Summary Information Sheet, being provided to relevant Traditional Custodian groups (Record of Consultation, reference 6.1.2). The resource is developed and reviewed by subject matter experts with knowledge and experience in Indigenous affairs, in collaboration with technical experts to ensure content is appropriate to the intended recipients
- meetings with directors, Elders and any nominated representatives, at a time and location nominated by them
- the exchange of written feedback and correspondence
- telephoning relevant persons to provide context, if requested and/or required
- invitations to and/or attendance at community monthly luncheons for Traditional Custodians.

Ongoing efforts were made to engage and develop relationships with these bodies via a variety of means such as email, phone calls, alternative contacts, texts, social media and, in some cases, physical visits.

Consultation meetings with attendees decided by Traditional Custodian groups and supported by senior Woodside representatives, subject matter experts and Indigenous Affairs advisers with skills and experience in community engagement. Meetings are developed through a two-way consultation process to help enable effective information sharing via:

- mutually agreed agenda avoiding time pressure
- encouraging Traditional Custodian attendees to control the pace of the meeting and pause at any time to ask questions, seek clarification or provide feedback
- visual aids such as posters, presentations, maps, simplified technical videos and real-world pictures and footage
- emphasis on potential planned and unplanned risks and impacts of the activity
- ample opportunity for questions and feedback
- discussion about ongoing relationship development and opportunities
- distribution of hard-copy Consultation Information Sheets (Record of Consultation, 6.1.1 and 6.3.1) and Summary Consultation Information Sheets (Record of Consultation, reference 6.1.2) are available face-to-face consultation
- meeting costs which could include sitting fees, travel, legal support and executive support and other support required
- advertising in Indigenous publications such as the National Indigenous Times (28 April 2026) and Koori Mail (22 April 2026) (Record of Consultation, reference 6.6.7 and reference 6.6.8)

Newspaper	Coverage	Publication dates
Koori Mail	Indigenous	22 April 2026
National Indigenous Times	Indigenous	28 April 2026

Woodside also ran a geotargeted sponsored social media campaign (Record of Consultation, reference 6.7.1) to various communities that are coastally adjacent to the EMBA for the proposed activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Social media is a highly effective means to engage Indigenous audiences as outlined in Indigenous Digital Life: The Practice and Politics of Being Indigenous on Social Media (Bronwyn Carlson and Ryan Frazer, 2021).

The campaign brought the proposed activity to the attention of persons who may be interested and advised persons or organisations how they can learn more about Woodside's proposed activities by visiting Woodside's website. The advertisements linked to Woodside's website, which details the intent of consultation with relevant persons under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth).

Woodside uses a diverse range of techniques to reach relevant persons and build awareness of the proposed activity and how it may affect their functions, activities or interests, and to understand how to provide feedback. The combination of Prescribed Bodies Corporate (PBC) engagement meetings, traditional print media, social media and face-to face community interaction provides a wide-ranging opportunity to consult.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4. TABLE 2: CONSULTATION REPORT WITH RELEVANT PERSONS OR ORGANISATIONS

The black numbering **(N)** in the 'Summary of information provided and record of consultation for this EP' in Table 2 denotes an item raised by a stakeholder. The green numbering **(N)** in this section denotes Woodside's response to that issue.

4.1 Commonwealth and WA State Government departments or agencies – marine

4.1.1 Australian Border Force (ABF)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the Australian Border Force (ABF) advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to ABF based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.10). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ABF for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given ABF sufficient information to allow ABF to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to ABF on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to ABF. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed ABF a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to ABF advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this Woodside allowed ABF a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ABF is appropriate and adapted to the nature of interests of ABF:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding ABF of the opportunity to provide feedback. That was followed by the activity update on 23 July 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- No additional measures were considered as a result of consultation as ABF did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ABF's functions, interests or activities.

4.1.2 Australian Communications and Media Authority (ACMA)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the ACMA advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, Submarine Communication Cables Map (Record of Consultation, reference 6.3.8) and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 16 April 2026, ACMA emailed Woodside, thanked it for the information (SI Report A, reference 1.1) and noted items **(1)**–**(2)**.
- On 16 April 2026, Woodside responded to ACMA, thanked it for its response (SI Report A, reference 1.2) and responded to items **(1)-(2)**.
- On 23 July 2026, Woodside sent an Activity Update to ACMA based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.12). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP and a submarine communication cables map were provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) ACMA recommended Woodside engage owners of submarine cable infrastructure in EMBA, including Vocus and Telstra, otherwise no comments on activity.	**(1)** Woodside recognises Vocus and Telstra as relevant for the activities and understands that is the extent of ACMA's feedback.	**(1)** Woodside confirmed Telstra and Vocus were consulted for the EP and that ACMA has no additional comments on the proposed activity.	**(1)** No changes or additional measures are required. Submarine cable infrastructure is set out in Section 4.9.7 of the EP.
(2) Noted it did not require ongoing consultation on activities.	**(2)** Woodside understands that ACMA does not require additional consultation on this EP.	**(2)** Woodside confirmed ACMA's request that it needed no additional consultation on activities.	**(2)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the EP relates, as required under Regulation 24.	may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ACMA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ACMA sufficient information to allow ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to ACMA on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to ACMA. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.
- On 16 April 2026, ACMA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed ACMA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to ACMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed ACMA a reasonable period for consultation in preparation of the EP as evidenced by ACMA's response on 16 April 2026.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ACMA is appropriate and adapted to the nature of interests of ACMA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- ACMA provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from ACMA.
  - Made no changes or inclusions to the EP as a result of consultation with ACMA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.3 Australian Fisheries Management Authority (AFMA)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed AFMA advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 23 April 2026, AFMA emailed Woodside, thanked it for the information (SI Report A, reference 2.1) and noted points **(1)** to **(3):**
- On 24 April 2026, Woodside thanked AFMA for the response and responded to points **(1)** to **(3)**:
- On 23 July 2026, Woodside sent an Activity Update to AFMA based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.14). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.
- On 24 July 2026, AFMA thanked Woodside for the email (SI Report A, reference 2.3) and reiterated **(1)** to **(3)**.
- On 27 July 2026, Woodside thanked AFMA for its review of the update (SI Report A, reference 2.4) and confirmed **(1)** to **(3)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(1) AFMA confirmed it had no direct comments on the EP.	**(1)** Woodside accepts that AFMA had no comments for the EP.	**(1)** Woodside confirmed that AFMA had no comments for the EP.	**(1)** No changes or additional measures are required
(2) Requested to be included in future consultation on the activities.	**(2)** Woodside understands that AFMA wants to receive ongoing information about the activities. Woodside sends notifications to AFMA as a standard practice.	**(2)** Woodside confirmed AFMA would receive activity notifications and any consultation updates.	**(2)** As per Woodside's standard notifications, AFMA will be notified as referenced as C 1.4 and set out in Section 7.10 of the EP. No changes or additional measures are required.
(3) Encouraged Woodside to talk with Commonwealth fishing operators as Relevant Persons and noted: • Access to industry contacts on its website. • CFA, Tuna Australia and Australian Southern Bluefin Tuna Industry Association as relevant to the proposal. • Contact information for the associations	**(3)** Woodside provides information to Commonwealth fishery representative bodies based on management area overlap, in acknowledgement of advice from AFMA	**(3)** Woodside confirmed the Commonwealth fisheries and representative bodies contacted during consultation.	**(3)** Woodside's relevancy assessment for Commonwealth fishery representative bodies is set out in Appendix F, Table 1. No changes or additional measures are required
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.9.2 of the EP. No changes or additional measures are required
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AFMA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AFMA sufficient information to allow AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AFMA on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to AFMA. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.
- On 23 April 2026 and 24 July 2026, AFMA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed AFMA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to AFMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed AFMA a reasonable period for consultation in preparation of the EP as evidenced by AFMA's response on 23 April 2026 and again on 24 July 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AFMA is appropriate and adapted to the nature of interests of AFMA.

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran a targeted social media campaign. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AFMA provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - · Responded to feedback from AFMA.
  - Made no changes or inclusions to the EP as a result of consultation with AFMA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.4 Australian Hydrographic Office (AHO)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed AHO advising of the proposed activity (Record of Consultation, reference 6.1.10), provided a Consultation Information Sheet, Shape Files, Vessel Density Map and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 16 April 2026, AHO emailed Woodside, thanked it for the information (SI Report A , reference 3.1) and noted items **(1)** to **(2)**:
- On 16 April 2026, Woodside thanked AHO for its response (SI Report A, reference 3.2) and responded to items **(1)** to **(2).**
- On 14 July 2026, Woodside (outside of this EP) emailed AHO and sought to clarify notification approach for AHO and DoD. (SI Report A, reference 3.3)
- On 15 July 2026, AHO confirmed it had no issue with the proposal for Notice to Mariners notification. (SI Report A, reference 3.4)
- On 23 July 2026, Woodside sent an Activity Update to AHO based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.13). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP, vessel density map and GIS shape files were also provided.
- On 23 July 2026, AHO acknowledged receipt of the activity update (SI Report A, reference 3.5).
- On 17 August 2026, Woodside emailed AHO to confirm the updated notification approach for Okha LWI EP to align to what was agreed overall for EPs with AHO on 15 July 2026. (SI Report A, reference 3.6) **(3)**
- On 18 August 2026, AHO responded (SI Report, reference 3.7) to item **(3).**

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(1) AHO confirmed it had no concerns with proposed activities.	**(1)** Woodside understands AHO has no concerns with the proposed activities.	**(1)** Woodside noted that AHO that had no concerns with the proposed activities.	**(1)** No changes or additional measures are required.
(2) Requested updates once activity that may impact mariners is due to start and provided fact sheet with guidance if needed.	**(2)** Woodside provides notifications as a standard to AHO at least 4 weeks prior to the commencement of activities as a standard which reflect guidance contained in the AHO fact sheet.	**(2)** Woodside confirmed it would provide AHO with start of activity notifications to inform Australian Notices to Mariners.	**(2)** No changes or additional measures are required as point **(3)** addresses updated approach.
(3) Confirmed revised notification approach.	**(3)** Woodside notes that AHO agree that the revised notification approach applies to this EP as follows: AHO will be notified no less than four weeks prior to the commencement of the first activity under the EP, and then subsequently when vessels are undertaking activities within the Operational Area for more than three weeks at a time	**(3)** Not required as Woodside had previously sought AHO's review and approval of the proposed notification approach.	**(3)** Woodside will notify AHO as referenced as PS 1.3.1 and set out in Section 7.10 of the EP. Woodside considers the measures and controls in the EP are appropriate.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No additional changes or additional measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AHO for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information**			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given AHO sufficient information to allow AHO to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AHO on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to AHO. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed AHO a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to AHO advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed AHO a reasonable period for consultation in preparation of the EP as evidenced by AHO's response on 16 April 2026 and again on 23 August 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AHO is appropriate and adapted to the nature of interests of AHO:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AHO provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Responded to feedback from AHO.
- Made change to AHO notification schedule in EP based on Woodside proposal for all EPs with AHO's review and acceptance.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.5 Australian Maritime Safety Authority (AMSA) – Marine Pollution

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the AMSA – Marine Pollution advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to AMSA based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.10). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	Woodside has addressed Oil Pollution First Strike Plan at Appendix H. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA – Marine Pollution for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA – Marine Pollution sufficient information to allow AMSA – Marine Pollution to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AMSA – Marine Pollution on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to AMSA- Marine Pollution. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to AMSA – Marine Pollution advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA – Marine Pollution 60 days for consultation.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA – Marine Pollution is appropriate and adapted to the nature of interests of AMSA – Marine Pollution:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding AMSA – Marine Pollution of the opportunity to provide feedback. In addition, AMSA was consulted for the activity update on 23 August 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AMSA – Marine Pollution did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AMSA – Marine Pollution 's functions, interests or activities.

4.1.6 Australian Maritime Safety Authority (AMSA) – Navigation Safety

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed AMSA – Navigation Safety advising of the proposed activity (Record of Consultation, reference 6.1.10, provided a Consultation Information Sheet, Vessel Density Map, Shape Files and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 15 May 2026, AMSA – Navigation Safety emailed Woodside (SI Report A, reference 4.1) and referenced point **(1)**.
- On 15 May 2026, Woodside thanked AMSA – Navigation Safety (SI Report A, reference 4.2) and responded to point **(1)**.
- On 25 May 2026, AMSA – Navigation Safety thanked Woodside for consulting it, provided vessel traffic chartlets (SI Report A, reference 4.3) and provided points **(2)** to **(7)**.
- Between 16 June 2026 and 27 July 2026, Woodside and AMSA – Navigation Safety exchanged emails to set up a meeting and discuss AMSA's new framework for notifications for all EPs (not specific to, but including, Okha LWI). (SI Report A, references 4.4 – 4.10, 4.12)
- On 23 July 2026, Woodside sent an Activity Update to AMSA - Navigation Safety based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.13). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP, vessel density map and GIS shape files were provided.
- On 27 July 2026, AMSA-Navigation Safety thanked Woodside for the activity update, noting no additional navigational safety comments (SI Report A, 4.11) and referred back to previously provided advice, points **(1)** to **(7).**
- On 31 July 2026, Woodside and AMSA Navigation Safety held an online meeting to discuss the notification framework (SI Report A, reference 4.13). AMSA provided further information on item **(6).**
- On 1 September 2026, Woodside thanked AMSA for feedback from 25 May and 27 July 2026 (SI Report A, reference 4.14) and responded to points **(2)** to **(7)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) AMSA -Navigation Safety requested an extension of the feedback deadline.	**(1)** Woodside understands AMSA-Navigation Safety's request for additional time to review consultation materials.	**(1)** Woodside confirmed the requested extension to 25 May 2026.	**(1)** No changes or additional measures are required.
(2)	**(2)**	**(2)**	**(2)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Provided marine traffic overview based on AIS data noting that in titled areas, it's generally restricted to vessels engaged in offshore operations which include: • Tug operations in WA-3-L • Operations over LH3 well • Okha FPSO offtake operation • Added that there's a small frequency of cargo vessels transiting to north of WA-16-L and eastern side of WA-3-L. And that cargo vessels will remain within designated shipping route and clear from W-16-L and WA-9-L.	Woodside notes the advice on vessel traffic based on AIS data.	Woodside confirmed the advice based on AIS data that marine traffic in titled areas is generally restricted to vessels engaged in offshore operations.	As referenced as C 1.1 of the EP, vessels will comply with Marine Orders for safe vessel operations, specifically Marine Orders 21, 27 and 30. A 500 m temporary exclusion zone will be established around the light well intervention vehicle, as referenced as C 1.2 of the EP. A description of commercial shipping relevant to this activity is set out in Section 4.9.5 of the EP. No changes or additional measures are required.
(3) Provided advice on control measures noting in some cases, Woodside had provided information. This includes: Evaluating and implementing adequate anti-collision measures which may include: • Additional warnings and/or lights to attract attention • Installation of Automatic Identification Systems (AIS) units • Offshore guard vessels that can monitor traffic and alert vessels about activities in Operational Area	**(3)** Woodside acknowledges AMSA's advice and complies with International Rules for Preventing Collisions at Sea. As this EP relates to ongoing operations, Woodside does not propose to implement further anti-collision measures at this time.	**(3)** Woodside confirmed AIS system use and AMSA's advice. Woodside did not propose to implement further anti-collision measures but added it evaluated risk reduction and mitigation measures as part of routine EP development process, including vessel collision.	**(3)** Controls relating to anti-collision measures are set out in Section 6.6.1 of the EP. No changes or additional measures are required.
(4) Recommended AMSA's spatial data gateway and Spatial@AMSA portal for downloads of digital data sets and maps.	**(4)** Woodside notes the information available from AMSA's spatial data gateway and portal.	**(4)** Woodside noted that additional data was available from AMSA's spatial data gateway and portal.	**(4)** No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(5) Asked that AHO be notified no less than four weeks before operations commence so AHO can distribute Notices to Mariners.	**(5)** Woodside understands request to notify AHO and has aligned with AHO on timing considerations.	**(5)** Woodside confirmed it has aligned with AHO on timing no less than four weeks prior to the first activity under the EP, and then subsequently when vessels are undertaking activities within the Operational Area for more than three weeks at a time.	**(5)** No changes or additional measures are required. Notification to AHO has been included in the EP as standard, as referenced as P.S. 1.3.1 and set out in Section 7.10.
(6) Requested that AMSA JRCC be notified 72-96 hours before operations commence for radio navigation warnings and provided information and vessel details to include. In a meeting on 31 July 2026, AMSA provided more information on its notification framework advised its framework was risk-based and considered on a case-by-case basis. It noted that that longer lead times for certain activities, including those with a higher risk of interaction, assisted with the promulgation of AUSCOAST warnings to mariners, which sometimes took time to disseminate amongst vessels . AMSA noted if Woodside could justify shorter lead times due to the nature of the activity, that was potentially acceptable (as AMSA assessment and response are based on the additional context).	**(6)** Woodside has reviewed vessels activities associated with the proposed activities and considers a 24-48 hour notification, when operationally practicable, is sufficient given the distance from marine fairways, the frequency of traffic, and the short duration of activities.	**(6)** Woodside proposed consideration of an at least 24-48 hour notification, where operationally practicable, to AMSA's JRCC based on the following: • None of AMSA's marine fairways intersect with the Operational Area and nearest fairway is 34 km away. • Low frequency of traffic overall outside boundaries of the titles • Short duration at each well location, (estimated as 14 to 35 days), well locations are low traffic areas, and we'll have notified AHO as previously stated.	**(6)** Notification to the JRCC before activities commence has been included in the EP as standard, as referenced as P.S. 1.5.1 and set out in Section 7.10. No changes or additional measures are required.
(7) Noted that during operations, vessels should exhibit appropriate lights and shapes to reflect nature of operations and comply with COLREGs and ensure vessel navigation is set correctly in	**(7)** Woodside understands AMSA's advice regarding the International Rules for Preventing Collisions at Sea	**(7)** Woodside confirmed Woodside chartered vessels are in compliance with COLREGS as well as with the Navigation Act 2012, including	**(7)** As referenced as C 1.1 of the EP, vessels will comply with Marine Orders for safe vessel operations, specifically Marine Orders 21, 27 and 30.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

ship's AIS unit. AMSA referenced Offshore oil and gas exploration | Australian Maritime Safety Authority	(COLREGs) and that its chartered vessels are compliant.	navigation status is set within vessel AIS system.	No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA – Navigation Safety for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA – Navigation Safety sufficient information to allow AMSA – Navigation Safety to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AMSA – Navigation Safety on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to AMSA-Navigation Safety. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.
- On 25 May 2026 and 27 July 2026, AMSA-Navigation Safety shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable 25 May 2026 and 27 July 2026, to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside allowed AMSA – Navigation Safety a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to AMSA – Navigation Safety advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA – Navigation Safety >37 days for consultation as it requested a one week extension and an additional 30 days for the Activity Update.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed AMSA – Navigation Safety a reasonable period for consultation in preparation of the EP as evidenced by AMSA – Navigation Safety's response on 15 for an extension which was given and on 25 May 2026 and its responses on 25 May and 27 July 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA – Navigation Safety is appropriate and adapted to the nature of interests of AMSA – Navigation Safety:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding AMSA – Navigation Safety of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AMSA – Navigation Safety provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - · Responded to feedback from AMSA – Navigation Safety.
  - Made no changes or inclusions to the EP as a result of consultation with AMSA – Navigation Safety because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.7 Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed DAFF – Fisheries advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to DAFF - Fisheries based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.14). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	As a standard practice, Woodside will provide start and end of activity notifications referenced as C 1.4 and set out in Section 7.10 of the EP. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.9.2 of the EP. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF - Fisheries for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF - Fisheries sufficient information to allow DAFF - Fisheries to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DAFF - Fisheries on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DAFF - Fisheries. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed DAFF - Fisheries a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DAFF - Fisheries advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DAFF - Fisheries a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF - Fisheries is appropriate and adapted to the nature of interests of DAFF - Fisheries:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DAFF - Fisheries of the opportunity to provide feedback. In addition, DAFF - Fisheries received the activity update on 23 July 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF - Fisheries did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF - Fisheries' functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.8 Department of Defence (DoD)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed DoD advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, Defence Zones Map (Record of Consultation, reference 6.1.3) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to DoD based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP and Defence Zones maps (Record of Consultation, reference 6.3.3) were provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	Woodside has recorded the defence areas overlapping the EMBA in Section 4.9.8 of the EP. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DoD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DoD sufficient information to allow DoD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DoD on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

- In addition to the Consultation Information Sheet, Woodside provided DoD with information tailored to DoD by including a map of Defence zones in relation to the activity.
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DoD. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed DoD a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DoD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DoD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DoD is appropriate and adapted to the nature of interests of DoD:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DoD of the opportunity to provide feedback. In addition, DoD received the activity update on 23 July 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DoD did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DoD's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.9 Department of Planning, Lands and Heritage (DPLH)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the DPLH advising of the proposed activity (Record of Consultation, reference 6.1.20), provided a Consultation Information Sheet, Shipwrecks map and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to DPLH based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.23). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP and Shipwrecks map were provided.
- On 7 August 2026, DPLH thanked Woodside for the opportunity to provide updated comments (SI Report A, reference 29.1) and noted items **(1)** and **(2)**.
- On 11 August 2026, Woodside thanked DPLH for its response (SI Report A, reference 29.2) and responded to items **(1)** and **(2)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Given proposed program is in Commonwealth waters and petroleum title areas, DPLH had no comments from a Crown land assembly or tenure perspective.	**(1)** Woodside accepts that DPLH has no comments given location of activities.	**(1)** Woodside confirmed that DPLH had no comments given proposed activities are in Commonwealth waters and petroleum title areas.	**(1)** No changes or additional measures are required.
(2) Encouraged consultation with DWER as appropriate.	**(2)** Woodside considered DPLH's recommendation and consulted DWER during initial consultation. Based on feedback received from DWER regarding its functions and interests, further consultation with DWER was not considered necessary.	**(2)** Woodside noted that it had consulted DWER during the April consultation but DWER had responded that outside of events or activities which require an application, EPA services would not provide comments.	**(2)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where	The EP demonstrates that there are no known underwater heritage sites or shipwrecks within the Operational Area and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	planned activities (Sections 4.9.1 and 6.9 of the EP). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.9 of the EP. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPLH for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPLH sufficient information to allow DPLH to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DPLH on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DPLH. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed DPLH a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DPLH advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DPLH a reasonable period for consultation in preparation of the EP as DPLH provided feedback on 7 August 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPLH is appropriate and adapted to the nature of interests of DPLH:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DPLH of the opportunity to provide feedback. DPLH provided feedback on 7 August, following the July activity update.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DPLH did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DPLH's functions, interests or activities.

4.1.10 Department of Primary Industries and Regional Development (DPIRD)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed DPIRD advising of the proposed activity (Record of Consultation, reference 6.1.15), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to DPIRD based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.15). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	As a standard practice, Woodside will provide start and end of activity notifications referenced in Table 7-5, Section 7.10 of the EP. Woodside has assessed the potential for interaction with State managed fisheries issues in Section 4.9.2 of the EP. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPIRD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPIRD sufficient information to allow DPIRD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DPIRD on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DPIRD. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed DPIRD a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DPIRD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period. .

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DPIRD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPIRD is appropriate and adapted to the nature of interests of DPIRD:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DPIRD of the opportunity to provide feedback. In addition, DPIRD received the activity update on 23 July 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DPIRD did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DPIRD's functions, interests or activities.

4.1.11 Department of Transport and Major Infrastructure (DTMI)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed DTMI advising of the proposed activity (Record of Consultation, reference 6.1.7, provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 15 May 2026, DMTI thanked Woodside (SI Report A, reference 5.1) and confirmed point **(1)**.
- On 15 May 2026 Woodside thanked DTMI for response (SI Report A, references 5.2-5.3) and noted point **(1)**.
- On 23 July 2026, Woodside sent an Activity Update to DTMI based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.
- On 5 August 2026, DTMI thanked Woodside for keeping it informed and provided no feedback (SI Report A, reference 5.4) **(1).**
- On 6 August 2026, Woodside thanked DTMI for its review (SI Report A, reference 5.5) and confirmed **(1).**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 4 September 2026, Woodside sent DTMI the Okha Light Well Intervention Oil Pollution First Strike Plan to review and/or provide comment along with the Consultation Information Sheet and a table related to recent engagement activities between DTMI and Woodside as requested in the *Offshore Petroleum Industry Guidance Note* (July 2020))(SI Report A, reference 5.6)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) DTMI confirmed it had no feedback at this time.	**(1)** Woodside accepts that DTMI has no feedback for the EP at this time.	**(1)** Woodside confirmed DTMI had no feedback at this time.	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	Woodside will consult DTMI if there is a spill impacting State waters from the proposed activity, as referenced in the Oil Pollution First Strike Plan (Appendix H). No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DTMI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DTMI sufficient information to allow DTMI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DTMI on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DTMI. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed DTMI a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DTMI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DTMI a reasonable period for consultation in preparation of the EP as evidenced by DTMI's response on 15 May 2026 and on 5 August 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DTMI is appropriate and adapted to the nature of interests of DTMI:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DTMI of the opportunity to provide feedback to which DTMI responded on 15 May 2026. DTMI also responded to the 23 July 2026 activity update on 5 August 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DTMI provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from DTMI.
  - Made no changes or inclusions to the EP as a result of consultation with DTMI because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.12 Pilbara Ports

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Pilbara Ports advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Pilbara Ports based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.31). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP and Ports map were provided.
- On 27 July 2026, Pilbara Ports noted it had completed its consultation (SI Report A, reference 28.1) and provided item **(1).**
- On 27 July 2026, Woodside thanked Pilbara Ports for its review of the Okha LWI EP update (SI Report A, reference 28.2) and confirmed item **(1).**
- On 3 August 2026, Woodside sent a second response and thanked Pilbara Ports for its review of the Okha LWI EP update (SI Report A, reference 28.3) and responded to **(1).**

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Pilbara Ports noted it had no comment on the Protect.	**(1)** Woodside understands Pilbara Ports has reviewed the consultation materials and has no comments.	**(1)** Woodside confirmed it understood Pilbara Ports had no comments for the EP's activity update.	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Pilbara Ports for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Pilbara Ports sufficient information to allow Pilbara Ports to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Pilbara Ports on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Pilbara Ports along with a ports map. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Pilbara Ports a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Pilbara Ports advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Pilbara Ports a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Ports is appropriate and adapted to the nature of interests of Pilbara Ports:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside participated in the REAF festival and shared EP information with community on 15 May 2026.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding Pilbara Ports of the opportunity to provide feedback. In addition, Pilbara Ports received the activity update on 23 July 2026 which it responded to on 27 July 2026.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara Ports did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara Ports's functions, interests or activities.

4.1.13 Western Australian Museum (WAM)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed WAM advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, Shipwrecks data (Record of Consultation, reference 6.1.5 and 6.3.5) and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to WAM based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.23). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP and Shipwrecks map were provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	The EP demonstrates that there are no known underwater heritage sites or shipwrecks within the Operational Area and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Sections 4.9.1 and 6.9 of the EP). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

			respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.9 of the EP. As part of ongoing consultation engagements as set out in Section 7.10 of the EP, Woodside will notify WAM of any unexpected finds of potential Underwater Cultural Heritage under the Unexpected Finds Procedure (as described in Section 7.2.3 of the EP). No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WAM for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WAM sufficient information to allow WAM to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WAM on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided WAM with information tailored to WAM by including shipwrecks data in relation to the activity.
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to WAM. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed WAM a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence and in the Activity Update to WAM advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed WAM a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAM is appropriate and adapted to the nature of interests of WAM:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding WAM of the opportunity to provide feedback. In additional WAM received the activity update on 23 July 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WAM did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WAM's functions, interests or activities.

4.2 Commonwealth and WA State Government departments or agencies – environment

4.2.1 Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the DAFF - Biosecurity advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to DAFF - Biosecurity based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.17). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.7.7 of the EP). No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF - Biosecurity for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF - Biosecurity sufficient information to allow DAFF - Biosecurity to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DAFF - Biosecurity on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DAFF-Biosecurity. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed DAFF - Biosecurity a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DAFF - Biosecurity advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DAFF - Biosecurity a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF - Biosecurity is appropriate and adapted to the nature of interests of DAFF-Biosecurity

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DAFF - Biosecurity of the opportunity to provide feedback. In addition, DAFF - Biosecurity received the activity update on 23 July 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF - Biosecurity did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF-Biosecurity's functions, interests or activities.

4.2.2 Department of Biodiversity, Conservation and Attractions (DBCA)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed DBCA advising of the proposed activity (Record of Consultation, reference 6.1.25), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 14 May 2026, DBCA emailed Woodside (SI Report A, reference 6.1) and referred to points **(1)** to **(9)**
- On 8 June 2026, Woodside responded to DBCA (SI Report A, reference 6.2) and responded to points **(1)** to **(9).**
- On 23 July 2026, Woodside sent an Activity Update to DBCA based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.29). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.
- On 14 August, DBCA responded to Woodside it had reviewed documentation provided, previously provided comment on 14 May 2026 and Woodside responded (SI Report A, reference, 6.3) and reiterated points **(1)** to **(2)** and noted points **(10)** to **(12)**.
- On 1 September, Woodside thanked DBCA (SI Report A, reference 6.4) and responded to points **(1)** and **(2)** and **(10)** to **(12)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Noted there are a number of Biologically Important Areas (BIAs) for species, marine parks/management areas and island conservation reserves in the EMBA. Publicly available information should be considered when identifying potential impacts including DCCEEW's website, Dandjoo platform and DBCA's data set.	**(1)** Woodside acknowledges there are BIAs within the EMBA and that it considers DCCEEW's website and DBCA's land and waters data set as sources of information for the EP. The Dandjoo is not referenced in EP but any species identified in the PMST has their threatened status checked against the *WA Biodiversity Conservation Act 2016* which the Dandjoo platform also uses to maintain the threatened status of terrestrial species.	**(1)** Woodside confirmed it considers publicly available sources for identifying potential impacts including the DCCEEW's website and DBCA's land and waters data set. Woodside also confirmed it verifies the threatened status of species identified in the PMST against listings under the WA Biodiversity Conservation Act 2016, which is also used to inform the Dandjoo platform. A comprehensive list of BIAs, marine parks and conservation reserves within the EMBA and their proximity to the Operational Area will be included within the EP.	**(1)** A comprehensive list of BIAs within the EMBA and their proximity to the Operational Area are found in Section 4.6 of the EP. A comprehensive list of the marine parks and conservation reserves within the EMBA and their proximity to the Operational Area are found in Section 4.8 of the EP. No changes or additional measures are required.
(2) Given importance of areas potentially affected by a hydrocarbon release from proposed activities, DBCA considered it essential for baseline values and state of environment to be understood and documented prior to any activities commencing.	**(2)** Woodside understands importance of establishing baseline values and recognises its current approach to include baseline data sources, risk-based collection approach and assessment of information gaps.	**(2)** Woodside confirmed the EP included description of baseline environmental values of the Operational Area and EMBA. Woodside has established a Management of Knowledge process to ensure baseline environmental values and connections are reviewed and updated as needed. The EP also	**(2)** The description of the baseline environmental values of the Operational Area and EMBA are in Section 6.6 of the EP. While impacts to BIAs are possible in the event of a hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

DBCA would like Woodside to have appropriate baseline survey data on current states areas within EMBA that support important ecological values and may identify any current contamination present. This includes collection of appropriate baseline abundance and distribution data for benthic habitat and marine fauna species in the EMBA, with information on key habitats used by threatened and protected species. If baseline information is not available, Woodside should assess and identify suitable sources or methods to attain that information.		included a detail risk assessment of hydrocarbon spill scenarios to inform spill response scenarios.	respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.7 of the EP. No changes or additional measures are required.
(3) Suggested inclusion of potential impacts to values and BIAs to be highlighted within the consultation information sheet.	**(3)** Woodside acknowledges DBCA's interest in additional information on BIAs and will consider how this information is included in future consultation materials.	**(3)** Woodside noted that it is available to meet with DBCA to discuss the EP further, including how relevant BIAs and conservation values have been considered within the environmental impact and risk assessment process.	**(3)** No changes or additional measures are required.
(4) While DBCA monitors in marine parks and reserves and makes data available, it is not suitable to provide all baseline information required for oil spill risk assessment and management planning	**(4)** Woodside understands the scope and intent of DBCA's monitoring and reporting and understands need to acquire or generate fit-for-purpose baseline information to support its environmental management responsibilities.	**(4)** Woodside acknowledged the scope and intent of DBCA's monitoring efforts and noted that it remained committed to acquiring or generating fit-for-purpose baseline information to support its environmental management responsibilities.	**(4)** No changes or additional measures are required.
(5) DBCA encouraged Woodside to implement a before-after, control impact	**(5)** Woodside understands DBCA's guidance on importance of having	**(4)** Woodside confirmed that its OSM-BIP outlines the application of the BACI	**(5)** A description of existing environment that may be affected is provided in

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(BACI) framework for planning and evaluation.	information to implement a BACI framework	framework noting the availability of baseline data or ability to timely collect it and how approach supports longer-term monitoring to track recovery and evaluate effectiveness of restoration.	Section 4 of the EP. Section 4.5 (habitats and biological communities) references baseline data collected within the Operational Area. Appendix C provides further details on the environmental baseline within the EMBA. Review of knowledge relevant to the existing environment is undertaken as described in Section 7.6 of the EP. No changes or additional measures are required.
(6) DBCA recommended the Commonwealth Department of Climate Change, Energy, the Environment and Water's *National Light Pollution Guidelines for Wildlife* as a best-practice industry standard for managing potential impacts of light pollution on marine fauna	**(6)** Woodside refers to the DCCEEW's *National Light Pollution Guidelines for Wildlife* when developing EPs.	**(6)** Woodside confirmed it refers to DCCEEW's *National Light Pollution Guidelines for Wildlife* during development of the EP.	**(6)** DCCEEW's *National Light Pollution Guidelines for Wildlife* is referenced in EP (see Sections 6.7.7 and 7.2.4) No changes or additional measures are required.
(7) Provided contact information in the event of a hydrocarbon release.	**(7)** Woodside understands DBCA's 'Incidents and Emergency Response' process and the inclusion of DBCA's Pilbara's contact information in Oil Pollution First Strike Plan	**(7)** Woodside confirmed the DBCA Pilbara phone number had been incorporated as part of the Oil Pollution First Strike Plan.	**(7)** DBCA's Pilbara phone number is incorporated into the Oil Pollution First Strike Plan for this EP (see Appendix H). No changes or additional measures are required.
(8) Noted DBCA will not implement an oiled wildlife management response on behalf of a petroleum operator and said Woodside should commit to monitoring	**(8)** Woodside accepts that DBCA would not implement an oiled wildlife management response unless mandated and notes that its response is covered in its Oil	**(8)** Woodside confirmed that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator and confirmed the EP will have its own strategies related to	**(8)** Woodside's Oiled Wildlife Response is included in the Oil Spill Preparedness and Response Mitigation Assessment for this EP (see Appendix G).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

and clean-up of any DBCA interests, in consultation with DBCA.	Spill Preparedness and Response Mitigation Assessment.	wildlife response, shoreline clean-up and operational and scientific monitoring within in the Oil Spill Preparedness and Response Mitigation Assessment.	No changes or additional measures are required.
(9) Referred Woodside to Department of Transport's web content on marine pollution and the Offshore Petroleum Industry Guidance Note of July 2020 titled *Marine Oil Pollution: Response and Consultation Arrangements*..	**(9)** Woodside refers to DMTI's marine pollution content in development of its response plans.	**(9)** Woodside noted DBCA's reference to DTMI's marine oil pollution content and confirmed use of the DTMI's Industry Guidance Note to inform the Oil Pollution First Strike Plan.	**(9)** Woodside refers to the specified marine oil pollution content and guidance note in its Oil Pollution First Strike Plan for this activity (see Appendix H).. No changes or additional measures are required.
(10) DBCA requested, where possible, that additional consideration be given to planning activities to avoid peak migration periods for conservation significant species.	**(10)** Woodside considered the variation of timing of the activity to avoid migration and foraging periods but will not include control given location, duration and nature of activity, along with other controls in place for risk reduction.	**(10)** Woodside confirmed that beyond the requirements of EPBC Regulations 25 Part 9 Division 8.1, it had adopted controls for risk reduction of interaction with marine fauna: • Vessels will not deliberately approach greater than 8 knots within 250 m of a whale shark and not allow the vessel to approach closer than 30 m of a whale shark. • Vessels will not travel faster than 6 knots within 300 m of a cetacean (caution zone) and not approach closer than 100 m from a whale. • Vessels will not approach closer than 50 m for a dolphin or 100 m for a whale (except animals bow riding). • If the cetacean shows signs of being disturbed, support vessels will immediately withdraw from the caution zone at a constant speed of less than 6 knots.	**(10)** Woodside refers to controls to reduce risk of interaction with marine fauna found in Section 6.7.6. Controls C.4.1-C.4.3. No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside also noted it considered the variation of timing to avoid migration and foraging periods but will not include the control given other controls are in place.	
(11) Requested additional information related to monitoring or oil spill response preparedness, if available.	**(11)** Woodside considers it previously provided information related to monitoring and spill response preparedness.	**(11)** Woodside referred back to information provided on 8 June 2026 and asked DBCA to please provide any specific questions or feedback as needed.	**(11)** No changes or additional measures are required.
(12) Noted that access to reserves managed by DBCA under CALM Act or requiring the taking / disturbance of threatened fauna listed under the BC Act in State waters may require additional approvals.	**(12)** Woodside acknowledges DBCA's advice and notes that it is not applicable to this activity, which does not require access to marine parks or involve the taking or disturbance of threatened fauna.	**(12)** Woodside confirmed it understood that activities requiring access to reserve managed by DBCA or requiring taking/disturbance of threatened fauna may require additional approvals.	**(12)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DBCA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DBCA sufficient information to allow DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DBCA on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

- On 14 May 2026 and 14 August 2026, DBCA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DBCA. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed DBCA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DBCA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DBCA a reasonable period for consultation in preparation of the EP as evidenced by DBCA's response on 14 May 2026 and 14 August 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DBCA is appropriate and adapted to the nature of interests of DBCA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DBCA of the opportunity to provide feedback which DBCA provided on 14 May 2026.In addition, DBCA received the activity update on 23 July 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DBCA provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from DBCA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Made no changes or inclusions to the EP as a result of consultation with DBCA because appropriate measures are already included in the EP.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2.3 Department of Climate Change, Energy, the Environment and Water (DCCEEW)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the DCCEEW advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, Shipwrecks data (Record of Consultation, reference 6.1.5 and 6.3.5) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to DCCEEW based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.23). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP and Shipwrecks map were provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	The Environment Plan demonstrates that there are no known underwater heritage sites or shipwrecks within the Operational Area and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Sections 4.9.1 and 6.9 of the EP). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.7 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

			No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DCCEEW for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DCCEEW sufficient information to allow DCCEEW to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DCCEEW on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DCCEEW with information tailored to DCCEEW by including Shipwrecks data in relation to the activity.
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DCCEEW. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed DCCEEW a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DCCEEW advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DCCEEW a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DCCEEW is appropriate and adapted to the nature of interests of DCCEEW:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DCCEEW of the opportunity to provide feedback. In addition, DCCEEW received the activity update on 23 July 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DCCEEW did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DCCEEW's functions, interests or activities.

4.2.4 Director of National Parks (DNP)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed DNP advising of the proposed activity (Record of Consultation, reference 6.1.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 11 May 2026 DNP thanked Woodside for the opportunity to comment (SI Report A, reference 7.1) and noted points **(1)** to **(3).**
  - Provided contact email for further questions.
- On 12 May 2026, Woodside thanked DNP for its feedback (SI Report A, reference 7.2) and responded to points **(1)** to **(3).**
  - Confirmed contact email for DNP.
- On 23 July 2026, Woodside sent an Activity Update to DNP based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.18). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP and GIS shape files were provided.
- On 3 August 2026, DNP thanked Woodside for the update on activities (SI Report A, reference 7.3) and confirmed **(1), (3)**.
- On 6 August 2026, Woodside thanks DNP for its review of the activity update (SI Report A, reference 7.4) and noted **(1), (3)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(1) DNP confirmed there are no authorisation requirements given planned activities do not overlap any Australian Marine Parks.	**(1)** Woodside had not identified any overlap with AMPs prior to consultation and accepts DNP's confirmation.	**(1)** Woodside confirmed DNP's confirmation that given there is no activity overlap with AMPs, that no authorisation requirements are needed.	**(1)** No changes or additional measures are required.
(2) Noted *North-west Marine Parks Network Management Plan 2018* for information on parks and spatial information on marine parks' values is located on Australian Marine Spatial Information System.	**(2)** Woodside acknowledges DNP's advice and has considered the information provided in relation to marine park values during development of the EP.	**(2)** Woodside confirmed it had referred to the management plan during the development of the EP and noted the availability of spatial information.	**(2)** Woodside will ensure DNP is made aware of any incidences within a marine park for the activity, as per the commitment in the Oil Pollution First Strike Plan (Appendix H). No changes or additional measures are required.
(3) Confirmed no further notification is needed unless an activity change results in a new impact to a marine park or for emergency response.	**(3)** Woodside understands DNP does not require further notification unless in the event of new impact to marine park or for an emergency response.	**(3)** Woodside confirmed DNP does not require progress notifications but it will notify DNP in the event of a new impact to marine park or emergency response.	**(3)** Woodside will provide notification of significant change, as appropriate, to relevant persons as referenced in Table 7-5 of the EP. Woodside will ensure DNP is made aware of any incidences within a marine park for the activity, as per the commitment in the Oil Pollution First Strike Plan (Appendix H). No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	The EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values (including ecosystem values) to an ALARP and acceptable level and that the activity is not inconsistent with the management plan (see Section 6.6 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

			No changes or additional measures are required.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DNP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DNP sufficient information to allow DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DNP on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DNP. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.
- On 11 May 2026 and 3 August 2026, DNP shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed DNP a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DNP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DNP a reasonable period for consultation in preparation of the EP as evidenced by DNP's response on 11 May 2026 and 3 August 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DNP is appropriate and adapted to the nature of interests of DNP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DNP of the opportunity to provide feedback which DNP provided on 11 May 2026. DNP also provided feedback on 3 August 2026, following the 23 July activity update.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DNP provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from DNP.
  - Made no changes or inclusions to the EP as a result of consultation with DNP because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2.5 Ningaloo Coast World Heritage Advisory Committee (NCWHAC)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the NCWHAC advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to NCWHAC based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of	No changes or additional measures are required.

		Change and Revision process (see Section 7.8.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with NCWHAC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given NCWHAC sufficient information to allow NCWHAC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to NCWHAC on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to NCWHAC. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed NCWHAC a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to NCWHAC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed NCWHAC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with NCWHAC is appropriate and adapted to the nature of interests of NCWHAC:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding NCWHAC of the opportunity to provide feedback. In addition, NCWHAC received the activity update on 23 July 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as NCWHAC did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on NCWHAC's functions, interests or activities.

4.3 Commonwealth and WA State Government departments or agencies – industry

4.3.1 Department of Mines, Petroleum and Exploration (DMPE)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the DMPE advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to DMPE based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DMPE for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given DMPE sufficient information to allow DMPE to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DMPE on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: - The purpose of consultation and set out what was being sought through consultation. - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. - A timeframe for consultation and the provision of feedback. - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'. - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). • A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DMPE. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time. **Reasonable Period** Woodside allowed DMPE a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence and in the Activity Update to DMPE advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period. • Consultation for this EP commenced 6 months ago. • In this context, Woodside allowed DMPE a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DMPE is appropriate and adapted to the nature of interests of DMPE: • Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DMPE of the opportunity to provide feedback. In addition, DMPE received the activity update on 23 July 2026 for another opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DMPE did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DMPE's functions, interests or activities.

4.3.2 Department of Industry, Science and Resources (DISR)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the DISR advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to DISR based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DISR for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DISR sufficient information to allow DISR to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DISR on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to DISR. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed DISR a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to DISR advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed DISR a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DISR is appropriate and adapted to the nature of interests of DISR:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding DISR of the opportunity to provide feedback. In addition, DISR received the 23 July 2026 activity update for another opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DISR did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DISR's functions, interests or activities.

4.4 Commonwealth commercial fisheries and peak representative bodies

4.4.1 Commonwealth Fishery Association (CFA)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the CFA advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to CFA based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.15). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	As a standard practice, Woodside will provide start and end of activity notifications referenced as C 1.4 and set out in Section 7.10 of the EP. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.9.2 of the EP. No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CFA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given CFA sufficient information to allow CFA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to CFA on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: - The purpose of consultation and set out what was being sought through consultation. - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. - A timeframe for consultation and the provision of feedback. - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'. - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). • A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to CFA. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time. **Reasonable Period** Woodside allowed CFA a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence and in the Activity Update to CFA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period. • Consultation for this EP commenced 6 months ago. • In this context, Woodside allowed CFA a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CFA is appropriate and adapted to the nature of interests of CFA: • Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding CFA of the opportunity to provide feedback. In addition, CFA received the 23 July 2026 activity update for another opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CFA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CFA's functions, interests or activities.

4.4.2 Tuna Australia

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Tuna Australia advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 20 April 2026, Tuna Australia emailed Woodside, (SI Report A, reference 8.1) Tuna Australia noted points **(1)** and **(2)**:
- Between 11 and 13 May 2026, Woodside and Tuna Australia exchanged emails regarding a potential services agreement. Emails were not specific to this EP but noting for reference. (SI Report A, references 8.2-8.3).
- On 18 May 2026, Woodside thanked Tuna Australia for its feedback (SI Report A, reference 8.4) and responded to points **(1)** and **(2).**
- On 23 July 2026, Woodside sent an Activity Update to Tuna Australia based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.15). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Tuna Australia said it could reach out to relevant stakeholders with Statutory Fishing Rights (SFR) in WA's Commonwealth water and: • Provided its services agreement and industry position statement.	**(1)** Woodside has directly consulted individual Commonwealth fishery licence holders it has assessed as relevant for this EP.	**(1)** Woodside referenced correspondence from 11-13 May 2026 to address this point raised, noting contractual services are outside of the EP.	**(1)** No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Confirmed its contractual services are always available.			
(2) Suggested in lieu of working with Tuna Australia, Woodside should contact all SFR holders in Eastern/Western Tuna Billfish Fishery.	**(2)** Woodside consults Commonwealth fisheries assessed as having potential for interaction with the proposed activity in the Operational Area or EMBA. Consistent with this approach, Woodside has directly consulted Western Tuna and Billfish Fishery for this EP.	**(2)** Woodside confirmed it had consulted with Western Tuna and Billfish Fishery.	**(2)** No changes or additional measures are required. Woodside's assessment of relevant Commercial fisheries is set out in Appendix F, Table 1. Consultation records available in Appendix F references: 4.4.1, 6.1.12 and 6.2.1.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	As a standard practice, Woodside will provide start and end of activity notifications referenced as C 1.4 and set out in Section 7.10 of the EP. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.9.2 of the EP. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Tuna Australia for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Tuna Australia sufficient information to allow Tuna Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Tuna Australia on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Tuna Australia. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Tuna Australia a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Tuna Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Tuna Australia a reasonable period for consultation in preparation of the EP as evidenced by Tuna Australia's response on 20 April 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Tuna Australia is appropriate and adapted to the nature of interests of Tuna Australia:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Tuna Australia provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - · Responded to feedback from Tuna Australia.
  - Made no changes or inclusions to the EP as a result of consultation with Tuna Australia because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.4.3 North West Slope Trawl Fishery and Western Deepwater Trawl Fishery

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed North West Slope Trawl Fishery and Western Deepwater Trawl Fishery licence holders (licence holders) advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to North West Slope Trawl Fishery and Western Deepwater Trawl Fishery licence holders based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.16). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	As a standard practice, Woodside will provide start and end of activity notifications referenced as C 1.4 and set out in Section 7.10 of the EP. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.9.2 of the EP. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given licence holders sufficient information to allow licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to licence holders on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to licence holders The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed licence holders a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with licence holders is appropriate and adapted to the nature of interests of licence holders:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding licence holders of the opportunity to provide feedback. In addition, licence holders received the 23 July 2026 activity update for another opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on licence holders' functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.4.4 Western Tuna And Billfish Fishery

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Western Tuna and Billfish Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 16 April 2026, an individual licence holder responded to consultation (SI Report A, reference 11.1) and raised point **(1)**.
- On 16 April 2026, Woodside thanked the licence holder for their response (SI Report 11.2) and responded to point **(1).**
- On 7 May 2026, Woodside proactively sent a follow-up email to licence holders from whom no response had been received (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Western Tuna and Billfish Fishery licence holders based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.16). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Individual licence holder requested to be removed from Woodside's mailing list.	**(1)** Woodside accepts that participation in the consultation process is voluntary.	**(1)** Woodside confirmed it had removed the licence holder from its mailing list.	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	As a standard practice, Woodside will provide start and end of activity notifications referenced as C 1.4 and set out in Section 7.10 of the EP. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.9.2 of the EP. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Western Tuna and Billfish Fishery licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Western Tuna and Billfish Fishery licence holders sufficient information to allow Western Tuna and Billfish Fishery licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Western Tuna and Billfish Fishery licence holders on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Western Tuna and Billfish Fishery licence holders. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Western Tuna and Billfish Fishery licence holders a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Western Tuna and Billfish Fishery licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Western Tuna and Billfish Fishery licence holders a reasonable period for consultation in preparation of the EP as evidenced by one licence holder's response on 16 April 2026.In addition, all licence holders received the 23 July 2026 activity update for another opportunity to provide feedback.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Tuna and Billfish Fishery licence holders is appropriate and adapted to the nature of interests of Western Tuna and Billfish Fishery licence holders :

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback from other licence holders, Woodside sent a follow-up consultation email on 7 May 2026, reminding Western Tuna and Billfish Fishery licence holders of the opportunity to provide feedback.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- An individual Western Tuna and Billfish Fishery licence holder provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - · Responded to feedback from the individual Western Tuna and Billfish Fishery licence holder .
  - Made no changes or inclusions to the EP as a result of consultation with Western Tuna and Billfish Fishery licence holders because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.4.5 Australian Southern Bluefin Tuna Industry Assocation (ASBTIA)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the ASBTIA advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to ASBTIA based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.16). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	As a standard practice, Woodside will provide start and end of activity notifications referenced as C 1.4 and set out in Section 7.10 of the EP. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.9.2 of the EP. No changes or additional measures are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ASBTIA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ASBTIA sufficient information to allow ASBTIA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to ASBTIA on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to ASBTIA. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed ASBTIA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to ASBTIA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed ASBTIA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ASBTIA is appropriate and adapted to the nature of interests of ASBTIA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding ASBTIA of the opportunity to provide feedback. In addition, ASBTIA received the 23 July 2026 activity update for another opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ASBTIA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ASBTIA's functions, interests or activities.

4.5 State commercial fisheries and peak representative bodies

4.5.1 Aquaculture Council of Western Australia (ACWA)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed ACWA advising of the proposed activity (Record of Consultation, reference 6.1.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to ACWA based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.30). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	Woodside has assessed the potential for interaction with State managed commercial fisheries in Section 4.9.2 of the EP. No changes or additional measures are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ACWA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ACWA sufficient information to allow ACWA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to ACWA on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to ACWA. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed ACWA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to ACWA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed ACWA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ACWA is appropriate and adapted to the nature of interests of ACWA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding ACWA of the opportunity to provide feedback. ACWA also received the activity update on 23 July 2026, which provided an addition opportunity to share feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ACWA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ACWA's functions, interests or activities.

4.5.2 Western Australian Fishing Industry Council (WAFIC)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed WAFIC advising of the proposed activity and asked WAFIC to send to Mackerel Managed Fishery (Area 2), Pilbara Trawl Managed Fishery, Pilbara Trap Managed Fishery and Pilbara Line Fishery on behalf of Woodside (SI Report A, reference 10.1). A Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*' was provided.
- On 22 April 2026, WAFIC emailed Woodside to confirm it sent the CK4 and LH3 EP consultation material to the fishery licence holders. (SI Report A, reference 10.2)
- On 3 June 2026, Woodside emailed WAFIC to follow-up on feedback from it or state fishery licence holders. (SI Report A, reference 10.3)
- On 4 June 2026, WAFIC emailed Woodside (SI Report A, reference 10.4) and confirmed point **(1).**
- On 5 June 2026, Woodside thanked WAFIC for its response (SI Report A, reference, 10.5) and confirmed point **(1)**.
- On 23 July 2026, Woodside sent an Activity Update to WAFIC based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (SI Report A, reference 10.6). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.
- On 7 August 2026, Woodside sought confirmation from WAFIC that the fishery licence holders had received the activity update and offered an extension to consultation period if needed. (SI Report A, reference 10.7)
- On 11 August 2026, WAFIC confirmed the information had been sent to fishery licence holders (SI Report A, reference 10.8) and provided copy of email. (Record of Consultation, reference 6.3.27)
- On 12 August 2026, Woodside thanked WAFIC for the confirmation and email (SI Report A, reference 10.9).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1)	**(1)**	**(1)**	**(1)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

WAFIC confirmed no comments or industry feedback were received for the activity.	Woodside understands there is no feedback or comments for the EP.	Woodside thanked WAFIC for confirming there were no comments or feedback from the industry.	No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.9.2 of the EP. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WAFIC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WAFIC sufficient information to allow WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WAFIC on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to WAFIC. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.
- On 4 June 2026 and 11 August 2026, WAFIC shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable WAFIC and relevant state fisheries to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside allowed WAFIC a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to WAFIC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed WAFIC a reasonable period for consultation in preparation of the EP as evidenced by WAFIC's response on 4 June 2026 and 11 August 2026..

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAFIC is appropriate and adapted to the nature of interests of WAFIC:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- WAFIC provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from WAFIC.
  - Made no changes or inclusions to the EP as a result of consultation with WAFIC because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.5.3 Mackerel Managed Fishery, Pilbara Line Fishery, Pilbara Trap Fishery and Pilbara Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 17 April 2026, WAFIC, on behalf of Woodside, emailed the Mackerel Managed Fishery, Pilbara Line Fishery, Pilbara Trap Fishery and Pilbara Trawl Fishery (State Fishery licence holders) advising of the proposed activity (Record of Consultation, reference 6.1.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the com*munity'*.
- On 3 June 2026, Woodside emailed WAFIC to follow-up on feedback from state fishery licence holders. (SI Report A, reference 10.3)
- On 4 June 2026, WAFIC confirmed no comments or feedback were received regarding the CK4 and LH3 EP. (SI Report A, reference 10.4)
- On 5 June 2026, Woodside thanked WAFIC for its response and confirmed no comments or industry feedback were received for the EP. (SI Report A, reference, 10.5)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 23 July 2026, WAFIC, on behalf of Woodside, sent an Activity Update to State Fishery licence holders based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.28). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	Woodside has assessed the potential for interaction with State managed commercial fisheries in Section 4.9.2 of the EP. No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with State Fishery licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given State Fishery licence holders sufficient information to allow State Fishery licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. WAFIC, on behalf of Woodside gave this information to State Fishery licence holders on 17 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and WAFIC on behalf of Woodside sent the information to State Fishery licence holders. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed State Fishery licence holders a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to State Fishery licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed State Fishery licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with State Fishery licence holders is appropriate and adapted to the nature of interests of State Fishery licence holders:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside participated in community events and shared EP information with Karratha community.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as State Fishery licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on State Fishery licence holders' functions, interests or activities.

4.6 Recreational marine users and peak representative bodies

4.6.1 Gascoyne Recreational Marine Users and Pilbara/Kimberley Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed or mailed the Gascoyne Recreational Marine Users and Pilbara/Kimberley Recreational Marine Users (Recreational Marine Users) advising of the proposed activity (Record of Consultation, references 6.1.16 and 6.1.17), provided a Consultation Information Sheet, and a link or QR code to access NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, reference 6.2.1 and 6.3.4).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 23 July 2026, Woodside sent an Activity Update via email or letter to Recreational Marine Users based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, references 6.3.20 and 6.3.21). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Recreational Marine Users for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Recreational Marine Users sufficient information to allow Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside emailed or mailed this information to Recreational Marine Users on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link or QR code to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Recreational Marine Users. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed Recreational Marine Users a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Recreational Marine Users is appropriate and adapted to the nature of interests of Recreational Marine Users:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email or letter on 7 May 2026, reminding Recreational Marine Users of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Recreational Marine Users' functions, interests or activities.

4.6.2 Marine Tourism WA

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Marine Tourism WA advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Marine Tourism WA based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Marine Tourism WA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Marine Tourism WA sufficient information to allow Marine Tourism WA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Marine Tourism WA on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Marine Tourism WA. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Marine Tourism WA a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence and in the Activity Update to Marine Tourism WA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Marine Tourism WA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Marine Tourism WA is appropriate and adapted to the nature of interests of Marine Tourism WA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding Marine Tourism WA of the opportunity to provide feedback. In addition, Marine Tourism WA received the 23 July activity update which provided another opportunity to share feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Marine Tourism WA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Marine Tourism WA's functions, interests or activities.

4.6.3 Recfishwest

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Recfishwest advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 19 May 2026, Recfishwest thanked Woodside, recapped key points of the planned activities (SI Report A, reference 27.1) and referenced points **(1)** and **(2).**
- On 20 May 2026, Woodside thanked Recfishwest, (SI Report A, reference 27.2) and confirmed points **(1)** and **(2)**.
- On 23 July 2026, Woodside sent an Activity Update to Recfishwest based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 August 2026, Recfishwest thanked Woodside for the update (SI Report A, reference 18.3) and confirmed no additional comments beyond those provided on 19 May 2026 which referred to points **(1)** and **(2).**
- On 31 August 2026, Woodside thanked Recfishwest for its review (SI Report A, reference 18.4) and confirmed A**ppendix F inclusion of** points **(1)** and **(2)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Recfishwest noted no concerns with the activities.	**(1)** Woodside understands Recfishwest has no concerns with the planned activities.	**(1)** Woodside noted Recfishwest had no concerns.	**(1)** No changes or additional measures are required.
(2) Given area is accessed by charter industry and recreational fishers, Recfishwest requests to be kept informed as Protect progresses/	**(2)** Woodside recognises the area is accessed by charter industry and recreational fishers and has consulted with associated groups as well, and will include Recfishwest in relevant activity notifications associated with this EP.	**(2)** Woodside confirmed understanding that area is accessed by charter industry and recreational fishers and that Woodside will provide activity notifications to Recfishwest.	**(2)** Woodside will provide notifications to Recfishwest as referenced as C 1.4 and set out in Section 7.10 of the EP. No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Recfishwest for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given Recfishwest sufficient information to allow Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Recfishwest on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Recfishwest. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Recfishwest a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Recfishwest advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Recfishwest a reasonable period for consultation in preparation of the EP as evidenced by Recfishwest's response on 19 May 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Recfishwest is appropriate and adapted to the nature of interests of Recfishwest:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding Recfishwest of the opportunity to provide feedback, which it delivered on 19 May 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Recfishwest provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - · Responded to feedback from Recfishwest.
  - Made no changes or inclusions to the EP as a result of consultation with Recfishwest because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.6.4 WA Game Fishing Association

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the WA Game Fishing Association advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to WA Game Fishing Association based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WA Game Fishing Association for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given WA Game Fishing Association sufficient information to allow WA Game Fishing Association to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WA Game Fishing Association on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to WA Game Fishing Association The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed WA Game Fishing Association a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to WA Game Fishing Association advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed WA Game Fishing Association a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WA Game Fishing Association is appropriate and adapted to the nature of interests of WA Game Fishing Association:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding WA Game Fishing Association of the opportunity to provide feedback. In addition, WA Game Fishing Association received the 23 July 2026 activity update for another opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WA Game Fishing Association did not provide feedback for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WA Game Fishing Association's functions, interests or activities.

4.7 Titleholders and operators

4.7.1 Beagle No. 1, Carbon CQ, Carnarvon Energy Ltd, Exxon Mobil, Finder Energy, INPEX, JX Nippon, KATO Energy (WA), Kuwait Foreign Petroleum Exploration Company (KUFPEC), Kyushu Electric Wheatstone, Longreach Capital Investments, OMV Australia, OPIC Australia Pty Limited, PE Wheatstone, Pelsart Resources N.L., Shell, SK Earthon, Skye Resources Pty Ltd, Tanami Energy, Western Gas

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Beagle No. 1, Carbon CQ, Carnarvon Energy Ltd, Exxon Mobil, Finder Energy, INPEX, JX Nippon, KATO Energy (WA), Kuwait Foreign Petroleum Exploration Company (KUFPEC), Kyushu Electric Wheatstone, Longreach Capital Investments, OMV Australia, OPIC Australia Pty Limited, PE Wheatstone, Pelsart Resources N.L., Shell, SK Earthon, Skye Resources Pty Ltd, Tanami Energy, Western Gas (titleholders and operators) advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to titleholders and operators based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with titleholders and operators for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given titleholders and operators sufficient information to allow titleholders and operators to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to titleholders and operators on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to titleholders and operators. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed titleholders and operators a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to titleholders and operators advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed titleholders and operators a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with titleholders and operators is appropriate and adapted to the nature of interests of titleholders and operators:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding titleholders and operators of the opportunity to provide feedback. In addition, titleholders and operators received the 23 July 2026 activity update which provided another opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as titleholders and operators did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on titleholders and operators' functions, interests or activities.

4.7.2 BP Australia

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed BP Australia advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 29 April 2026, BP Australia thanked Woodside for information (SI Report A, reference 11.1) and noted point **(1).**
- On 30 April 2026, Woodside thanked BP Australia (SI Report A – reference 11.2) and responded to point **(1).**
- On 23 July 2026, Woodside sent an Activity Update to BP Australia based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) BP Australia confirmed no objections or feedback as it considered that Woodside-identified impacts and risks would be managed under proposed measures.	**(1)** Woodside has identified impacts and risks of the activity will manage these under proposed management measures, and understands BP Australia has no objections or feedback because of this.	**(1)** Woodside confirmed that BP Australia had no objections or feedback on the EP.	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the EP relates, as required under Regulation 24.	consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with BP Australia for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given BP Australia sufficient information to allow BP Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to BP Australia on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to BP Australia. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed BP Australia a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to BP Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed BP Australia a reasonable period for consultation in preparation of the EP as evidenced by BP Australia's response on 29 April 2026.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with BP Australia is appropriate and adapted to the nature of interests of BP Australia:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- BP Australia provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from BP Australia.
  - Made no changes or inclusions to the EP as a result of consultation with BP Australia because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.3 Chevron Australia

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Chevron Australia advising of the proposed activity (Record of Consultation, reference 6.1.22), provided a Consultation Information Sheet, GIS shapefiles and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1)
- On 15 May 2026, Chevron Australia thanked Woodside for information (SI Report A, reference 25.1) and noted point **(1)**.
- On 15 May 2026, Woodside thanked Chevron Australia (SI Report A – reference 25.2) and responded to point **(1)**.
- On 23 July 2026, Woodside sent an Activity Update to Chevron Australia based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.26). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.
- On 13 August 2026, Chevron thanked Woodside for its consideration (SI Report A, reference 25.3) and confirmed point **(1)**
- On 14 August 2026, Woodside thanked Chevron for its response (SI Report A, reference 25.4) and noted point **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(1) Chevron Australia confirmed no concerns or feedback on proposed activities.	**(1)** Woodside understands Chevron Australia has no concerns or feedback.	**(1)** Woodside confirmed that Chevron Australia does not have concerns or feedback on the proposed activities.	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Chevron Australia for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Chevron Australia sufficient information to allow Chevron Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Chevron Australia on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- Chevron also received GIS shapefiles in addition to the Consultation Information Sheet.
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Chevron. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside allowed Chevron Australia a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Chevron Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Chevron Australia a reasonable period for consultation in preparation of the EP as evidenced by Chevron Australia's response on 15 May 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Chevron Australia is appropriate and adapted to the nature of interests of Chevron Australia:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Chevron Australia provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from Chevron Australia.
  - Made no changes or inclusions to the EP as a result of consultation with Chevron Australia because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.4 InCapture

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed InCapture advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 16 April 2026, InCapture emailed Woodside and thanked Woodside for consultation information (SI Report A, reference 12.1) and noted point **(1)**.
- On 17 April 2026, Woodside responded to InCapture, thanked it for review of materials (SI Report A, reference 12.2) and responded to point **(1).**
- On 23 July 2026, Woodside sent an Activity Update to InCapture based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 23 July 2026, InCapture thanked Woodside for the activity update (SI Report A, reference 12.3) and noted point (1).
- On 24 July, 2026, Woodside thanked InCapture for review of the activity update (SI Report A, reference 12.4) and confirmed point (1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) InCapture confirmed it had no objections to the activities.	**(1)** Woodside understands that InCapture has no objections to the planned activities.	**(1)** Woodside confirmed that InCapture had no objections to the planned activities.	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with InCapture for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given InCapture sufficient information to allow InCapture to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to InCapture on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to InCapture. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.
- On 16 April 2026 and 23 July 2026, InCapture shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable InCapture to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed InCapture a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to InCapture advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed InCapture a reasonable period for consultation in preparation of the EP as evidenced by InCapture's response on 16 April 2026 and on 23 July 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with InCapture is appropriate and adapted to the nature of interests of InCapture:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- InCapture provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from InCapture.
  - Made no changes or inclusions to the EP as a result of consultation with InCapture because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.7.5 KUFPEC

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed KUFPEC advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 8 May 2026, KUFPEC emailed Woodside (SI Report A, reference 19.1) and stated point **(1)**.
- On 8 May 2026, Woodside responded to KUFPEC (SI Report A, reference 19.2) and responded to point **(1).**
- On 23 July 2026, Woodside sent an Activity Update to KUFPEC based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) KUFPEC confirmed it had no objections to the proposed activities.	**(1)** Woodside understands KUFPEC has no feedback for the proposed activities.	**(1)** Woodside confirmed that KUFPEC had no objections to the planned activities.	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with KUFPEC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information**			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given KUFPEC sufficient information to allow KUFPEC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to KUFPEC on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to KUFPEC. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.
- On 8 May 2026, KUFPEC shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable KUFPEC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed KUFPEC a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to KUFPEC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed KUFPEC a reasonable period for consultation in preparation of the EP as evidenced by KUFPEC's response on 8 May 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with KUFPEC is appropriate and adapted to the nature of interests of KUFPEC:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding KUFPEC of the opportunity to provide feedback, which it provided on 8 May 2026.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- KUFPEC provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from KUFPEC.
  - Made no changes or inclusions to the EP as a result of consultation with KUFPEC because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.6 Santos

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Santos advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 20 April 2026 Woodside emailed Santos to check on contact information of the JV Titleholder (SI Report A, reference 14.1).
- On1 May 2026, Santos emailed Woodside (SI Report A, reference 14.2) and confirmed point **(1).**
- On 4 May 2026 Woodside responded to Santos (SI Report A, reference 14.3) and noted point **(1).**
- On 23 July 2026, Woodside sent an Activity Update to Santos based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided. (Record of Consultation, reference 6.3.11.
- On 10 August 2026, Santos thanked Woodside for the update (SI Report A, reference 14.4) and confirmed **(1).**
- On 11 August 2026, Woodside thanked Santos for its response (SI Report A, reference 14.5) and noted **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Confirmed it had no objections or claims on the planned activities.	**(1)** Woodside understands Santos has no objections or claims on the EP's planned activities.	**(1)** Woodside thanked Santos for confirming it had no objections or claims on the planned activities.	**(1)** No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Santos for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Santos sufficient information to allow Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Santos on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Santos. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.
- On 1 May 2026and 10 August 2026, Santos shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
-

Reasonable Period

Woodside allowed Santos a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence and in the Activity Update to Santos advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Santos a reasonable period for consultation in preparation of the EP as evidenced by Santos' responses on 1 May 2026 and 10 August 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Santos is appropriate and adapted to the nature of interests of Santos.

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Santos provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from Santos.
  - Made no changes or inclusions to the EP as a result of consultation with Santos because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.8 Peak industry representative bodies

4.8.1 Australian Energy Producers (AEP)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed AEP advising of the proposed activity (Record of Consultation, reference 6.1.7, provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to AEP based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AEP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AEP sufficient information to allow AEP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AEP on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to AEP. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed AEP a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence and in the Activity Update to AEP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed AEP a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AEP is appropriate and adapted to the nature of interests of AEP:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding AEP of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AEP did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AEP's functions, interests or activities.

4.9 Local government and elected parliamentary representatives, community groups or organisations

4.9.1 Broome Chamber of Commerce and Industry (Broome CCI)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the Broome CCI advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Broome CCI based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Broome CCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Broome CCI sufficient information to allow Broome CCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Broome CCI on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Broome CCI. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Broome CCI a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence and in the Activity Update to Broome CCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Broome CCI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Broome CCI is appropriate and adapted to the nature of interests of Broome CCI:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding Broome CCI of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Broome CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Broome CCI's functions, interests or activities.

4.9.2 Shire of Broome

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the Shire of Broome advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Shire of Broome based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

	about the adverse impact of the activity		
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Broome for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shire of Broome sufficient information to allow Shire of Broome to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Shire of Broome on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Shire of Broom. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Shire of Broome a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Shire of Broome advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.

		Change and Revision process (see Section 7.8.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Exmouth for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shire of Exmouth sufficient information to allow Shire of Exmouth to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Shire of Exmouth on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Shire of Exmouth. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Shire of Exmouth a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Shire of Exmouth advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Shire of Exmouth a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Exmouth is appropriate and adapted to the nature of interests of Shire of Exmouth:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding Shire of Exmouth of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Exmouth did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Exmouth's functions, interests or activities.

4.9.5 Exmouth Community Liaison Group (Exmouth CLG)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the Exmouth CLG advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 7 May 2026, Woodside presented to the Exmouth CLG on EP consultation requirements and Woodside activities, including activities for this EP (SI Report A, reference 20.1)
- Woodside presented slides on how it consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs and an overview of the CK4 and LH3 EP.
- The slides included a QR code and a URL for the Consultation Activities page of the Woodside website.
- 6 CLG members attended the meeting representing:
    - Shire of Exmouth
    - Gascoyne Development Commission
    - Exmouth Chamber of Commerce and Industry
    - Exmouth Volunteer Marine and Rescue
    - Exmouth Freight and Logistics
    - Terrafirma Offshore
- No feedback was provided for this EP.
- On 10 July 2026, Woodside's presentation was emailed to the CLG members, regardless of their attendance at the meeting.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 23 July 2026, Woodside sent an Activity Update to Exmouth CLG based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Exmouth CLG members for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exmouth CLG members sufficient information to allow Exmouth CLG members to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Exmouth CLG members on 9 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Exmouth CLG. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Exmouth CLG members a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence and in the Activity Update to Exmouth CLG members advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Exmouth CLG members a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exmouth CLG members is appropriate and adapted to the nature of interests of Exmouth CLG members:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
  - On 7 May 2026, Woodside hosted the Exmouth CLG Meeting.
  - In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding Exmouth CLG members of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Exmouth CLG members did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exmouth CLG's functions, interests or activities.

4.9.6 Karratha & Districts Chamber of Commerce and Industry (CCI)

4.9.7 Karratha Community Liaison Group (Karratha CLG)

Summary of information provided and record of consultation for this EP:

- On 1 April 2026, Woodside presented to the Karratha CLG on EP consultation requirements and Woodside activities, including activities for this EP (SI Report A, reference 20.1).
  - Woodside presented slides on how it consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs and an overview of the CK4 and LH3 EP.
    - The slides included a QR code and a URL for the Consultation Activities page of the Woodside website.
    - 5 CLG members attended the meeting representing:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Department of Education
- Dampier Community Association
- Karratha Central Healthcare
- Karratha & Districts Chamber of Commerce and Industry
- Bechtel

- No feedback was provided for this EP.

- On 16 April 2026, Woodside emailed Karratha CLG advising of the proposed activity (Record of Consultation, reference 6.1.20), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 21 May 2026, Woodside's April presentation summary pack to the CLG was emailed to the CLG members regardless of their attendance at the meeting.
- On 23 July 2026, Woodside sent an Activity Update to Karratha CLG based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Karratha CLG members for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Karratha CLG members sufficient information to allow Karratha CLG members to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Karratha CLG members on 9 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'.*
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Karratha CLG. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Karratha CLG members a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Karratha CLG members advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Karratha CLG members a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Karratha CLG members is appropriate and adapted to the nature of interests of Karratha CLG:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- On 1 April 2026, Woodside hosted the Karratha CLG meeting which included an overview of this EP and participated in Karratha-based community events.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May, reminding Karratha CLG members of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Karratha CLG members did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Karratha CLG members' functions, interests or activities.

4.9.8 City of Karratha

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed City of Karratha advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 13 May 2026, City of Karratha emailed Woodside (SI Report A, reference 23.1) and stated point **(1)**
- On13 May 2026, Woodside responded to City of Karratha (SI Report A, reference 23.2) and responded to point **(1)**.
- On 23 July 2026, Woodside sent an Activity Update to City of Karratha based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) City of Karratha confirmed no concerns or comments.	**(1)** Woodside accepts that the City of Karratha has no concerns or comments.	**(1)** Woodside confirmed that the City of Karratha had no concerns or comments.	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with City of Karratha for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given City of Karratha sufficient information to allow City of Karratha to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to City of Karratha on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to City of Karratha. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed City of Karratha a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to City of Karratha advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed City of Karratha a reasonable period for consultation in preparation of the EP as evidenced by City of Karratha's response on (dates)..

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with City of Karratha is appropriate and adapted to the nature of interests of City of Karratha:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- On 1 April 2026, Woodside hosted the Karratha CLG meeting which included an overview of this EP and participated in Karratha-based community events.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding City of Karratha of the opportunity to provide feedback which it provided on the 13 May 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- City of Karratha provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from City of Karratha.
  - Made no changes or inclusions to the EP as a result of consultation with City of Karratha because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.9.9 Shire of Ashburton

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the Shire of Ashburton advising of the proposed activity (Record of Consultation, reference 6.1.21), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Shire of Ashburton based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.25). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Ashburton for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given Shire of Ashburton sufficient information to allow Shire of Ashburton to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Shire of Ashburton on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Shire of Ashburton. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Shire of Ashburton a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Shire of Ashburton advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Shire of Ashburton a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Ashburton is appropriate and adapted to the nature of interests of Shire of Ashburton:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding Shire of Ashburton of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Ashburton did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Ashburton's functions, interests or activities.

4.10 Other non-government groups or organisations (NGOs) or individuals

4.10.1 Telstra

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the Telstra advising of the proposed activity (Record of Consultation, reference 6.1.9, provided a Consultation Information Sheet, Submarine Communication Cables Map, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Telstra based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.13). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Telstra for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Telstra sufficient information to allow Telstra to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Telstra on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Telstra. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Telstra a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Telstra advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Telstra is appropriate and adapted to the nature of interests of Telstra:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Telstra did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Telstra's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.10.2 Vocus

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Vocus advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, Submarine Communication Cables Map, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 16 April 2026, Vocus emailed Woodside, noted nearest point of Highclere Cable System (SI Report A, reference 17.1) and affirmed point **(1).**
- On 16 April 2026, Woodside responded to Vocus emailed Woodside (SI Report A, reference 17.2):and confirmed point **(1)**.
- On 23 July 2026, Woodside sent an Activity Update to Vocus based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.13). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.
- On 23 July 2026, Vocus thanked Woodside for the activity update (SI Report A, reference 17.3) and noted point related to point **(1).**
- On 24 July 2026, Woodside thanked Vocus for review of the activity update (SI Report A, reference 17.4) and confirmed point **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Confirmed Vocus had no feedback for the EP or associated conditions given >20 km distance of the cable system to the proposed activity area.	**(1)** Woodside understands the proposed activity area is not in the vicinity of Vocus cables and that Vocus has no feedback for the EP or associated conditions.	**(1)** Woodside confirmed with Vocus that it had no feedback for the EP or associated conditions.	**(1)** No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No additional controls or measures are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Vocus for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Vocus sufficient information to allow Vocus to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Vocus on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Vocus. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.
- On 16 April 2026 and 23 July 2026, Vocus shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Vocus to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Vocus a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Vocus advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced 6 months ago.
- In this context, Woodside allowed Vocus a reasonable period for consultation in preparation of the EP as evidenced by Vocus's response on 16 April 2026 and 23 July 2026.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Vocus is appropriate and adapted to the nature of interests of Vocus:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Vocus provided feedback but no objections or claims in line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g). Woodside has:
  - Responded to feedback from Vocus.
  - Made no changes or inclusions to the EP as a result of consultation with Vocus because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.10.3 Research institutes and local conservation groups or organisations

4.10.4 Cape Conservation Group (CCG)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the CCG advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to CCG based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.10). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CCG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given CCG sufficient information to allow CCG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to CCG on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: - The purpose of consultation and set out what was being sought through consultation. - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. - A timeframe for consultation and the provision of feedback. - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'. - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). • A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to CCG. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time. **Reasonable Period** Woodside allowed CCG a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence and in the Activity Update to CCG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period. • Consultation for this EP commenced 6 months ago. • In this context, Woodside allowed CCG a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CCG is appropriate and adapted to the nature of interests of CCG: • Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation. • In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding CCG of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CCG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CCG's functions, interests or activities.

4.10.5 Protect Ningaloo

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the Protect Ningaloo advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Protect Ningaloo based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Protect Ningaloo for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Protect Ningaloo sufficient information to allow Protect Ningaloo to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Protect Ningaloo on 16 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- A second consultation period was initiated on 23 July 2026 to provide an Activity Update on the EP and Woodside sent the information to Protect Ningaloo. The updated Consultation Information Sheet for the Okha LWI EP has been publicly available on the Woodside website since that time.

Reasonable Period

Woodside allowed Protect Ningaloo a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence and in the Activity Update to Protect Ningaloo advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period. Woodside allowed 30 days for consultation and also provided an additional 30-day period.
- Consultation for this EP commenced Protect Ningaloo months ago.
- In this context, Woodside allowed Protect Ningaloo a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Protect Ningaloo is appropriate and adapted to the nature of interests of Protect Ningaloo:

- Woodside published advertisements in 8 national, state, and relevant local newspapers. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 7 May 2026, reminding Protect Ningaloo of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Protect Ningaloo did not provide feedback for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Protect Ningaloo's functions, interests or activities.

4.11 Traditional custodians and nominated representative corporations

4.11.1 Buurabalayji Thalanyji Aboriginal Corporation (BTAC)

BTAC is established under the *Native Title Act 1993* (Cth) by the Thalanyji people to represent the Thalanyji people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Through conversations with BTAC outside of EP consultation, Woodside was advised of additional contacts within BTAC to forward EP information. Woodside forwarded this information to these contacts. This context and process demonstrates that Woodside's consultation approach with BTAC is appropriate and adapted to the nature and interests of BTAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed BTAC (via legal representative) advising of the proposed activity (Record of Consultation, reference 6.1.27). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - **(1)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 14 April 2026, Woodside forwarded BTAC (via legal representative) the original consultation email to further contacts within BTAC. Woodside also shared an overview of upcoming EPs (SI Report B, reference 1.1.1).
- On 30 April 2026, Woodside emailed BTAC (via legal representative) a reminder about the proposed activity (SI Report B, reference 1.1.2). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 July 2026, Woodside emailed BTAC (via legal representative) an activity update about the proposed activity (SI Report B, reference 1.1.3). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - **(1)** Information on the cultural values that Woodside consider relevant to the activity.
  - **(1)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse Impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value Sea Country – connection to, access to and transfer of knowledge: • Enduring deep connection north of Onslow, extending out to Islands off the Pilbara coast including the Montebello, Barrow and Mackerel Islands.	**(1)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.27). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Cultural obligation to care for environment and values of Sea Country. • Resources including fish, shellfish, crabs, crustaceans, sea urchins, eggs, turtles, dugongs, flora and fauna associated with mangrove communities. • Artefacts and burials in coastal sand dunes. • Archaeological sites on Barrow and Montebello Islands. • Archaeological evidence of use of resources including fish, turtles, marine mammals, crocodiles, crabs and sea urchins. • Ceremonial sites (Thalu) for the increase of turtle, shark, ray, fish, squid, octopus, hill kangaroo and emu.			
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and publicly available literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because: • On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
  - Woodside provided contact information for Woodside and NOPSEMA.
  - Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026, for the purpose of preparation for this EP.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

- The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:
- No feedback or information was provided during consultation for this EP.
- During the past six months no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.2 Karajarri Traditional Lands Association (KTLA) (Aboriginal Corporation)

KTLA is established under the *Native Title Act 1993 (Cth)* by the Karajarri people to represent the Karajarri people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed KTLA advising of the proposed activity (Record of Consultation, reference 6.1.28) The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed KTLA a reminder about the proposed activity (SI Report B, reference 1.2.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

- On 28 July 2026, Woodside emailed KTLA an activity update about the proposed activity (SI Report B, reference 1.2.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measure or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A request for the consultation information to be distributed to members and individuals as required.
- An offer to provide more specific information, maps and images if required.

- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

- The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:
- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.3 Kariyarra Aboriginal Corporation (KAC)

Kariyarra is established under the *Native Title Act 1993* (Cth) by Kariyarra people to represent the Kariyarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

At the start of consultation, Woodside provided KAC a table of cultural values previously identified through consultation and reviews of publicly available literature. Woodside invited KAC to make changes or provide additional information about these cultural values. During a consultation meeting for this EP, KAC clarified the wording of a cultural value. Woodside has updated its records to reflect this. This context and engagement in this process demonstrates that Woodside's consultation approach with KAC is appropriate and adapted to the nature and interests of KAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed KAC advising of the proposed activity (Record of Consultation, reference 6.1.29). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - **(1-9)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1-9)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 13 April 2026, KAC emailed Woodside confirming dates to consult for the EP (SI Report B, reference 1.3.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 14 April 2026, Woodside replied to KAC noting the consultation dates for this and another EP. Woodside also welcomed the opportunity to meet to consult (SI Report B, reference 1.3.2).
- Between 14 April 2026 and 7 May 2026, KAC and Woodside emailed to organise a consultation meeting, discuss meeting details, costs and KAC's Meeting Policy for the upcoming consultation meeting for this and another EP (SI Report B, reference 1.3.3- 1.3.22).
- On 8 May 2026, Woodside met with KAC to discuss this and another EP (SI Report B, reference 1.3.23). Relevant matters include:
  - Overview of the EP consultation process.
  - An activity overview of this and another EP including details of planned and unplanned activities.
  - **(10-13)** Feedback raised by the group for consideration within the EP.
  - **(10-13)** Response from Woodside to address feedback.
- On 28 July 2026, Woodside emailed KAC an activity update about the proposed activity (SI Report B, reference 1.3.24). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - **(1-9)** Information on the cultural values that Woodside consider relevant to the activity.
  - **(1-9)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value Marine Animals: • Management of sea turtle nesting. • Impacts to whale migration (whales are connected to Songlines). • Shellfish • Cockles • Oysters • Clam shells • Concha Shells (Nanku) • Mullets (fish)	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). During consultation for this EP, KAC clarified the wording for Concha Shells (Nanku) during the consultation meeting. Woodside updated its records to reflect this.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Sea cow (dugong).			
(2) Cultural Value Sea Country: • Cultural obligations to care for Country. • Secret habitat totems. • Access required for fishing, trapping, crabbing, catching turtle, hunting dugong, using stingray barbs for spears, collecting shellfish and visiting offshore islands at low tide.	**(2)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(3) Cultural Value • Yinta: • Significant cultural/spiritual sites often a water source but possibly other features such as hills. • Cultural rights to land to determine who can use or speak for an area.	**(3)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(4) Cultural Value Marine species as resources: • Marine mammals • Fish • Molluscs including bivalves, gastropods and cephalopods. • Shellfish, cockles, oysters, clam shells, concha shells (Nanku). •	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(5) Cultural Value • Potential impacts on coastal landforms and vegetation.	**(5)** This value has been identified through Woodside's data collection processes (consultation).	**(5)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(6) Cultural Value Heritage sites associated with the coast and ocean including the presence of mythical snakes: • Traditional knowledge recalls that a saltwater serpent lives in the sea and brings fish to shore.	**(6)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(6)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(6)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(7) Cultural Value Transfer of knowledge to future generations: • Impacts of species reduction. • Temporary exclusion to areas in the case of an oil spill etc.	**(7)** This value has been identified through Woodside's data collection processes (consultation).	**(7)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(7)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9. Refer to section 7.11 of the EP relating to notification following relevant environmental incidents in line with Appendix G – Oil Pollution First Strike Plan.
(8) Cultural value • Islands off the coast of Port Hedland are extremely important to KAC	**(8)** This value has been identified through Woodside's data collection processes (consultation).	**(8)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide	**(8)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(Little Turtle, North Turtle and Bedout).		additional information (See Record of Consultation, 6.1.29). No changes were requested.	included controls in Sections 6.6, 6.7 and 6.9.
(9) Cultural Value • Importance of river systems as food chains	**(9)** This value has been identified through Woodside's data collection processes (consultation).	**(9)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.29). No changes were requested.	**(9)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(10) KAC noted that engagement on EPs should not be limited to meeting with the CEO; Directors should also be engaged.	**(10)** Woodside acknowledges KAC's preference for consultation to involve Directors.	**(10)** Woodside considers that its consultation approach provides an opportunity for consultation information to be shared with KAC Directors, the Board, Elders, office holders and other interested parties as outlined in the Record of Consultation.	**(10)** No action required.
(11) KAC asked how common small, unplanned spills are and what is the threshold for action.	**(11)** Woodside takes a robust and systematic approach to environmental management of petroleum activities.	**(11)** Woodside explained that small, unplanned spills are more likely to occur compared with larger well blowouts or vessel collisions. These spills of chemicals and hydrocarbons are typically small volumes and are required to be submitted to NOPSEMA through monthly incident reporting regardless of volume	**(11)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9. Refer to section 7.11 of the EP relating to notification following relevant environmental incidents in line with Appendix G – Oil Pollution First Strike Plan
(12)	**(12)** Woodside has controls in place to manage planned discharges in	**(12)** Woodside explained that discharge levels vary due to personnel numbers	**(12)** Planned discharges are described and assessed in Section 6.7 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

KAC asked what a planned discharge look like (e.g., sewage) and what are the actual levels?	accordance with its regulatory obligations.	onboard and operational activity and are managed to be as low as reasonably practicable (ALARP).	
(13) KAC asked if vessels/platforms have weather tracking systems.	**(13)** Weather conditions can influence offshore operations and emergency response activities. Woodside considers that the use of weather forecasting and monitoring information forms part of standard operational and risk management processes for offshore activities.	**(13)** Woodside noted that vessels/platforms typically have oil spill tracker buoys onboard that can be activated/deployed to move with waves and provide raw swell movement data.	**(13)** No action required
While feedback has been received, there were no objections or claims.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and publicly available literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Based on the engagement to date, no additional measures or controls required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An offer to provide more specific information, maps and images if required.

- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions and met with KAC on 8 May 2026 to consult on this EP.
- Throughout the consultation period, Woodside has had direct contact lines during the consultation period. This included multiple emails and phone calls.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Feedback was provided during consultation for this EP relating to cultural values, in addition to cultural values obtained throughout consultation for other activities. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past six months, the group provided feedback but no objections or claims about the adverse impact of the activity to which this EP relates.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.4 Murujuga Aboriginal Corporation (MAC)

MAC is established under the Burrup and Maitland Industrial Estates Agreement and is the representative body for the Traditional Custodians for Murujuga being the Ngarluma, the Mardudhunera, the Yaburara, the Yindjibarndi, and the Wong-Goo-Tt-Oo peoples (collectively Ngarda-Ngarli). MAC is the cultural authority for Murujuga and is responsible for the management and protection of its cultural values. At the start of consultation, Woodside provided MAC a table of cultural values previously identified for MAC through consultation and reviews of publicly available literature. Woodside invited MAC to make changes or provide additional information about these cultural values. During consultation for this EP, MAC wrote to Woodside to provide feedback on this EP and provide additional context on the cultural values shared by Woodside. Woodside has updated the EP to reflect this, and if relevant, potential impacts assessed and controls applied. This context and process demonstrates that Woodside's consultation approach with MAC is appropriate and adapted to the nature and interests of MAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed MAC advising of the proposed activity (Record of Consultation, reference 6.1.30). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - **(1-8)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1-8)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed MAC a reminder about the proposed activity (SI Report B, reference 1.4.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A reminder that consultation for the preparation of the EP closes on 12 May 2026.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

- On 12 May 2026, MAC emailed Woodside a letter relating to this and another EP (SI Report B, reference 1.4.2). Relevant items include:
  - **(9-13)** Feedback for consideration within the EP.
- On 15 June 2026, Woodside emailed MAC to address feedback from the letter dated 12 May 2026 (SI Report B, reference 1.4.3). Relevant items include:
  - **(9-13)** Woodside responded to and addressed feedback from the group.
- On 28 July 2026, Woodside emailed MAC an activity update about the proposed activity (Record of Consultation, reference 1.4.4). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - **(1-8)** Information on the cultural values that Woodside consider relevant to the activity.
  - **(1-8)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation of this EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value • The ecosystem and health of Mermaid Sound.	**(1)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(2) Cultural value Marine species: • Whales – totemic importance	**(2)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Dolphins – cultural ceremonies • Dugongs – food source • Fish – cultural ceremonies • Sea snakes – culturally important • Turtles – Songlines • Coral – attract fish and other species • Seagrass – provide protection for animals. Locations include Conzinc Island and between Angel and Gidley Islands. • Stingrays • Sharks • Crustaceans • Octopus • Sea stars • Sea urchins • Sponges • Molluscs		invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	included controls in Sections 6.6, 6.7 and 6.9.
(3) Cultural value Marine eco-systems: • Mangroves: would have provided shelter, crabbing, digging for shellfish and could be turtle nurseries. Locations include Conzinc Bay north end, Flying Foam Passage, Searipple Passage, North-East Bay of West Lewis Island. • Macroalgal (seaweed) communities: important habitats and food sources.	**(3)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Subtidal soft bottom communities (ocean bottom): support invertebrate diversity. • Intertidal sand and mudflat communities: support invertebrate diversity and provide food for shorebirds. • Rocky shores: habitats for plants/animals and provide food for shorebirds.			
(4) Cultural value • Fish traps in Conzinc Bay and Angel and Gidley Islands.	**(4)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30) No changes were requested.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(5) Cultural value • Harvesting squid around Conzinc Bay.	**(5)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(5)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(6) Cultural value MAC is the appropriate cultural authority for Murujuga.	**(6)** This value has been identified through Woodside's data collection processes (consultation).	**(6)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide	**(6)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		additional information (See Record of Consultation, 6.1.30). No changes were requested.	included controls in Sections 6.6, 6.7 and 6.9.
(7) Cultural value Submerged landscape: • Potential impact on Jinna (Songlines). • Potential impact to Aboriginal heritage due to the submerged coastline at initial occupation of the region, landscape features that would have defined the first travel routes used to move through Country.	**(7)** This value has been identified through Woodside's data collection processes (consultation).	**(7)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	**(7)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(8) Cultural value Murujuga seasonal calendar: • Any change to the feeding, breeding or migratory behaviour of culturally significant species would impact significantly on subsistence, cultural and ceremonial activities.	**(8)** This value has been identified through Woodside's data collection processes (consultation).	**(8)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.30). No changes were requested.	**(8)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(9) MAC advised that the cultural values attachment does not appear to be a comprehensive assessment of values and the attachment remains limited. MAC requested that Woodside clearly identify within the EPs what efforts have gone into identify cultural values that may be impacted by their proposed works and how these have been	**(9)** Woodside notes that the cultural values attachment is not intended to be a comprehensive assessment of cultural values and welcomes groups to provide additional information. Cultural information provided through consultation, together with desktop studies, is considered in the assessment of impacts and development of	**(9)** Woodside responded to MAC and noted that Attachment A reflects information previously shared by MAC, as well as information stated as explicitly relevant to MAC sourced through reviews of publicly available literature. The attachment is not intended to represent a comprehensive or final assessment of cultural values. Woodside advised the purpose of EP consultation is to	**(9)** Cultural values identified through consultation and desktop studies, and the assessment of potential impacts and controls, are described in Sections 4.9 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

incorporated into specific management actions.	management measures, where relevant to the activity. The potential risks and impacts associated with the proposed activities are described in the Consultation Information Sheet. A link to this document was provided to MAC via Woodside's initial consultation email for the EPs dated 13 April 2026.	understand how the proposed activities in the EPs could potentially impact cultural values, functions, interests, and activities. This allows Woodside, in the course of developing the EPs, to assess feedback, and where relevant to the activity, consider appropriate control measures to include in the EPs.	
(10) MAC advised that any development that could potentially affect the natural movement, migration and/or other behaviour of marine species may have an impact on the cultural interpretation of the seasonal landscape and seascape and associated cultural behaviours. MAC also advised that any impact to the ocean floor should be considered in terms of its potential impact to submerged landscapes and the preservation of earliest human occupation of the region.	**(10)** This value has already been identified through Woodside's data collection processes (consultation). However, the added contextual information provided by MAC will be considered alongside the current assessment of information where relevant.	**(10)** Woodside advised that this information is already recorded Attachment A. Woodside noted that updated contextual information will be included so it is considered alongside the current assessment of information where relevant. Woodside invite MAC to continue to identify the potential impacts to cultural heritage and cultural values by the proposed activities under consideration in EPs through ongoing consultation and engagement with Woodside. Woodside will continue to provide the cultural values document in future EP consultation with MAC to support ongoing review and accuracy.	**(10)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(11) MAC advised that whilst the protection of environmental values is a significant aspect of protecting cultural values, the nature and threshold of impact must be assessed separately.	**(11)** Woodside undertakes assessments for both environmental and cultural values. These are considered individually and collaboratively.	**(11)** Woodside advised potential impacts to cultural heritage and cultural values are considered through Woodside's established cultural heritage management and consultation processes, which recognise that cultural values are not always fully captured through environmental or scientific assessment alone. Consultation seeks to understand the cultural, social and	**(11)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		spiritual significance of places, species and seasonal indicators, and how changes to environmental conditions may have associated potential cultural impacts. Information provided through consultation informs the identification of potential cultural heritage impacts and if relevant, supports the consideration and where appropriate the adoption of management and mitigation measures, in addition to broader environmental controls. Where group-specific cultural information is shared, this is considered alongside environmental risk assessment to support culturally informed decision-making and ongoing management.	
(12) MAC requested that Woodside notify MAC in advance of any extended or non-routine offshore operations in the vicinity of the Dampier Archipelago, including unplanned extensions to activities in this area.	**(12)** Woodside acknowledges MAC's request regarding notification of extended or non-routine offshore operational activities in the vicinity of the Dampier Archipelago relevant to MAC's air quality monitoring programs. Woodside is supportive of the Murujuga Rock Art Monitoring Program (MRAMP) where the main focus is on sources in and around the Murujuga airshed, which in terms of Woodside activities include the Karratha Gas Plant (KGP) and Pluto LNG Plant. Activities covered by this EP are not anticipated to influence MAC's monitoring programs and relevant notification arrangements are managed through separate approval processes where applicable.	**(12)** Woodside advised MAC that offshore operational activities undertaken in Commonwealth Waters are relevant to direct emissions which occur from the facility or associated vessels. Direct emissions from the proposed activities identified in the EP, even in the event of extended or non-routine activities, are not anticipated to influence monitoring results, data interpretation, and reporting for MRAMP. The associated onshore emissions which are relevant to the scope of MRAMP occur at KGP, as a result of processing gas produced and transported onshore from Goodwyn Alpha Facility (and other offshore facilities). Woodside confirmed notifications to MAC in the context of onshore activities and associated emissions are more appropriately	**(12)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		managed by the primary and secondary approvals for KGP, including but not limited to various onshore management plans (such as the Air Quality of Cultural Heritage Management Plan) required under Ministerial Statement 1233 for ongoing operations at KGP.	
(13) MAC advised that in the event of an environmental incident whereby Murujuga falls within the possible impact zone, MAC must be contacted for comment and a review of management actions.	**(13)** Woodside has incident response and notification procedures in place, consistent with regulatory requirements, that include notification of relevant cultural authorities in the event of an environmental incident. Should an incident occur over Murujuga Sea Country, MAC would be contacted as part of this process.	**(13)** Woodside advised that should an incident occur over Murujuga Sea Country, MAC would be contacted.	**(13)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9. Refer to section 7.11 of the EP relating to notification following relevant environmental incidents in line with Appendix G – Oil Pollution First Strike Plan
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Based on the engagement to date, no additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because: • On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website. • Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
- Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
- Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
- A request for the consultation and information sheets to be distributed to members and individuals as required.
- An offer to provide more specific information, maps and images if required.

- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Additional contextual information was provided during consultation for this EP relating to cultural values, in addition to cultural values obtained throughout consultation for other activities and publicly available literature. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past 6 months, the group provided feedback but no objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.5 Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)

NTGAC is established under the Native Title Act 1993 (Cth) by the Baiyungu people to represent the Baiyungu people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. NTGAC is represented by YMAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NTGAC (via YMAC) advising of the proposed activity (Record of Consultation, reference 6.1.31). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.

		Change and Revision process (see Section 7.8 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP.
- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.6 Ngarluma Aboriginal Corporation (NAC)

NAC is established under the Native Title Act 1993 (Cth) by the Ngarluma people to represent the Ngarluma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NAC advising of the proposed activity (Record of Consultation, reference 6.1.32). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - **(1,2,3)** Information on the cultural values related to the group that Woodside considers relevant to the activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1,2,3)** A request from Woodside that NAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

- On 30 April 2026, Woodside emailed NAC a reminder about the proposed activity (SI Report B, reference 1.6.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 3 June 2026, NAC, WAC and Wong-Goo-Tt-Oo attended a Quarterly Heritage Meeting in Karratha (SI Report B, reference 5.1). Matters discussed included:
  - A video explaining environmental impact assessments.
  - Upcoming EP dates.
- On 28 July 2026, Woodside emailed NAC an activity update about the proposed activity (Record of Consultation, reference 1.6.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - **(1,2,3)** Information on the cultural values that Woodside consider relevant to the activity.
  - **(1,2,3)** A request from Woodside that NAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation of this EP.
- On 2 September 2026, NAC and WAC attended a Quarterly Heritage Meeting in Karratha (SI Report B, reference 5.2). During the meeting Woodside reminded attendees that feedback can be provided during the life of an EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over 6 months, demonstrating a "reasonable period" of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over 6 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.
- Woodside hosts Community Heritage Meetings.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP.
- During the past 6 months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.7 Nhuwala Claim Group (Nhuwala)

The Nhuwala Claim Group Native Title claim is in Western Australia's Pilbara region within the Shire of Ashburton. The application area covers around 3,475 square kilometres near the town of Onslow. Nhuwala is represented by YMAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Nhuwala (via YMAC) advising of the proposed activity (Record of Consultation, reference 6.1.33). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.

- On 30 April 2026, Woodside emailed Nhuwala (via YMAC) a reminder about the proposed activity (SI Report B, reference 1.7.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 July 2026, Woodside emailed Nhuwala (via YMAC) an activity update about the proposed activity (Record of Consultation, reference 1.7.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because: • On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website. • Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided: - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback. - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details. - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests. - A request for the consultation information to be distributed to members and individuals as required. - An offer to provide more specific information, maps and images if required. • Woodside provided contact information for Woodside and NOPSEMA. • Woodside provided updated information which included: - A reference to the original consultation email for this EP sent on 13 April 2026. - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made. - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP. **Reasonable Period** A reasonable period for consultation in the preparation of the EP has been provided because: • Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation. • Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026. • Woodside has provided an opportunity to address and respond to feedback for over 6 months, demonstrating a "reasonable period" of consultation. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because: • Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has made information on this EP publicly available for over 6 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.8 Nhuwala / Thalanyji People (Nhuwala / Thalanyji)

The Thalanyji / Nhuwala People Native Title claim is in Western Australia's Pilbara region within the Shire of Ashburton. The application area consists of multiple parts with a total combined area of around 2,058 square kilometres in an area surrounding Onslow. The Thalanyji / Nhuwala People have legal representation and are associated with BTAC. Woodside has consulted with the Thalanyji / Nhuwala People via BTAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Nhuwala / Thalanyji (via BTAC) advising of the proposed activity (Record of Consultation, reference 6.1.34). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A request for the group to provide information about the proposed activity to other individuals as required.

- On 30 April 2026, Woodside emailed Nhuwala / Thalanyji (via BTAC) a reminder about the proposed activity (SI Report B, reference 1.8.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 July 2026, Woodside emailed Nhuwala / Thalanyji (via BTAC) an activity update about the proposed activity (Record of Consultation, reference 1.8.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
- Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
- Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
- A request for the consultation information to be distributed to members and individuals as required.
- An offer to provide more specific information, maps and images if required.

- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over 6 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over 6 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how Nhuwala / Thalanyji would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.9 Nyangumarta Karajarri Aboriginal Corporation (NKAC)

NKAC is established under the Native Title Act 1993 by the Nyangumarta and Karajarri people to represent the Nyangumarta and Karajarri people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. KLC is the Native Title Representative Body for NKAC.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NKAC (via KLC) advising of the proposed activity (Record of Consultation, reference 6.1.35). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed NKAC (via KLC) a reminder about the proposed activity (SI Report B, reference 1.9.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

- On 28 July 2026, Woodside emailed NKAC (via KLC) an activity update about the proposed activity (SI Report B, reference 1.9.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
- On 3 September 2026, NKAC (via KLC) emailed Woodside advising that the activity update had been received and forwarded to their lawyer (SI Report B, reference 1.9.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An offer to provide more specific information, maps and images if required.

- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP.
- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.10 Nyangumarta Warrarn Aboriginal Corporation (NWAC)

NWAC is established under the Native Title Act 1993 (Cth) by the Nyangumarta people to represent the Nyangumarta people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NWAC advising of the proposed activity (Record of Consultation, reference 6.1.36). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - **(1,2)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1,2)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed NWAC a reminder about the proposed activity (SI Report B, reference 1.10.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 July 2026, Woodside emailed NWAC an activity update about the proposed activity (SI Report B, reference 1.10.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - **(1,2)** Information on the cultural values that Woodside consider relevant to the activity.
  - **(1,2)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value • Eighty Mile Beach has cultural and ecological value to the Nyangumarta Custodians	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.36). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(2) Cultural value Resource Collection: • Impacts to migrating birds, whales, turtles and vegetation.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.36). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of	No additional measures or controls are required.

		Change and Revision process (see Section 7.8 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP.
- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.11 Robe River Kuruma Aboriginal Corporation (RRKAC)

RRKAC is established under the Native Title Act 1993 (Cth) by the Rober River Kuruma people to represent the Robe River Kuruma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed RRKAC advising of the proposed activity (Record of Consultation, reference 6.1.37). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - **(1,2)** Information on the cultural values related to the group that Woodside considers relevant to the activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1,2)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.

- On 30 April 2026, Woodside emailed RRKAC a reminder about the proposed activity (SI Report B, reference 1.11.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 July 2026, Woodside emailed RRKAC an activity update about the proposed activity (Record of Consultation, reference 1.11.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - **(1,2)** Information on the cultural values that Woodside consider relevant to the activity.
  - **(1,2)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation of this EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value • Concerns about underwater heritage – impacts at shoreline.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		invited it to make changes or provide additional information (See Record of Consultation, 6.1.37). No changes were requested.	included controls in Sections 6.6, 6.7 and 6.9.
(2) Cultural value • Coastline	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.37). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A request for the consultation information to be distributed to members and individuals as required.
- An offer to provide more specific information, maps and images if required.

- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP.
- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.12 Wanparta Aboriginal Corporation (Wanparta)

Wanparta is established under the Native Title Act 1993 (Cth) by the Ngarla people to represent the Ngarla people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. Wanparta are represented by a law firm, therefore Woodside consult Wanparta through a legal representative.

At the start of consultation, Woodside provided Wanparta a table of cultural values previously identified through consultation and reviews of publicly available literature. Woodside invited the group to make changes or provide additional information about these cultural values. During consultation for this EP, Wanparta requested a consultation meeting. During this meeting Wanparta shared additional information with Woodside. We understand this new information to also be relevant to the activities described within this EP and have updated the EP to reflect this, with potential impacts assessed and relevant controls applied. This context and process demonstrates that Woodside's consultation approach with Wanparta is appropriate and adapted to the nature and interests of Wanparta.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Wanparta (via legal representative) advising of the proposed activity (Record of Consultation, reference 6.1.38). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - **(1- 4)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1-4)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 30 April 2026, Woodside emailed Wanparta (via legal representative) a reminder about the proposed activity (SI Report B, reference 1.12.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 8 May 2026, Wanparta (via legal representative) emailed Woodside, requesting a date to meet and consult on this EP (SI Report B, reference 1.12.2).
- On 11 May 2026, Woodside emailed Wanparta (via legal representative) to confirm the consultation meeting date (SI Report B, reference 1.12.3).
- Between 11 May 2026 and 8 June 2026, Woodside and Wanparta (via legal representative) emailed to discuss meeting details, the agenda and the consultation cost (SI Report B, reference 1.12.4 – 1.12.9).
- On 3 June 2026, NAC, WAC and Wong-Goo-Tt-Oo attended a Quarterly Heritage Meeting in Karratha (SI Report B, reference 5.1). Matters discussed included:
  - A video explaining environmental impact assessments.
  - Upcoming EP dates.
- On 9 June 2026, Wanparta (via legal representative) emailed Woodside advising that several directors would not be able to attend the upcoming consultation meeting in person (SI Report B, reference 1.12.10)
- On 9 June 2026, Woodside met with Wanparta to discuss this and another EP (SI Report B, reference 1.12.11). Relevant matters include:
  - Overview of the EP consultation process.
  - An activity overview of this and another EP including details of planned and unplanned activities.
  - **(1-17)** Feedback for consideration within the EP from Wanparta.
  - **(1-17)** Woodside response to feedback.
- **(14)** On 10 June 2026, Woodside emailed Wanparta (via legal representative) thanking them for the consultation meeting and provided information pertaining to the National Energy Training Scheme (NETTS) (SI Report B, reference 1.12.12).
- On 15 June 2026, Wanparta (via legal representative) emailed Woodside to thank them for the NETTS information (SI Report B, reference 1.12.13).
- On 1 July 2026, Woodside emailed Wanparta (via legal representative) to confirm if an invoice for the meeting had been sent (SI Report B, reference 1.12.14).
- On 2 July 2026, Wanparta emailed Woodside a letter relating to this EP (SI Report B, reference 1.12.15). Relevant items include:
  - **(1,8,10,17** Feedback for consideration within the EP.
- On 3 July 2026, Wanparta emailed Woodside advising they had not yet submitted an invoice for the consultation meeting (SI Report B, reference 1.12.16)
- On 3 July 2026, Woodside responded acknowledging the email (SI Report B, reference 1.12.17)
- On 6 July 2026, Wanparta (via legal representative) emailed Woodside to confirm if its 2 July 2026 letter had been received (SI Report B, reference 1.12.18).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 7 July 2026, Woodside emailed Wanparta (via legal representative) to confirm it had received the letter (SI Report B, reference 1.12.19).
- On 28 July 2026, Woodside emailed Wanparta (via legal representative) a letter relating to this EP (SI Report B, reference 1.12.20).
  - **(1,8,10,17)** Woodside responded to and addressed feedback from the group.
- On 28 July 2026, Woodside emailed Wanparta (via legal representative) an activity update about the proposed activity (SI Report B, reference 1.12.21). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - **(1-4)** Information on the cultural values that Woodside consider relevant to the activity.
  - **(1-4)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value Sea Country: • Spiritual connection. • Cultural obligation to look after Sea Country. • A healthy Sea Country leads to healthy marine life and healthy Ngarla People. • Importance of fish stocks. • During consultation for this EP, Wanparta raised further cultural values relating to Sea Country: • Best way to protect Sea Country is through engagement with Ngarla rangers.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.38). On 9 June 2026 and within a follow up letter dated 2 July 2026, Wanparta raised further cultural records relating to Sea Country. Woodside has updated its records.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Coastline – spiritually and as a way of living. • Ngarla are responsible for caring for now and into the future. • By caring for Ngarla Country, the spirits look after Ngarla people.			
(2) Cultural value Dreamtime stories connected to nearshore islands particularly Solitary Island / Jarrkunpungu: • Dreaming stories through the interconnecting islands. • Dreamtime stories through the nearshore islands. • There is ethnohistorical evidence of Ngarla occupation on these islands.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.38). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(3) • Cultural Value: Sea (fresh and salt water): • Dreaming stories. • A responsibility to look after the ocean (law and culture).	**(3)** This value has been identified through Woodside's data collection processes (consultation	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.38). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(4) Cultural value Totemic species: • Kestrel. • Octopus. • Spiny brim. • Sting ray.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.38). No changes were requested.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(5) Wanparta asked where grey water goes when on a facility.	**(5)** Grey water is treated onboard the facility and support vessels through approved Sewage Treatment Plants and discharged offshore in accordance with regulatory requirements.	**(5)** Woodside advised during the consultation meeting on 9 June 2026 that grey water is treated onboard the facility and support vessels through approved Sewage Treatment Plants and discharged offshore in accordance with regulatory requirements.	**(5)** Planned discharges are described and assessed in Section 6.7 of the EP.
(6) Wanparta asked what colour the oil is collected by Woodside.	**(6)** Hydrocarbon appearance varies depending on the product type, with condensate generally lighter in colour and heavier crude oils darker in colour.	**(6)** Woodside advised during the consultation meeting on 9 June 2026 that hydrocarbon appearance varies depending on the product type, with condensate generally lighter in colour and heavier crude oils darker in colour.	**(6)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(7) Wanparta asked if there is an incident at CK4, how is the oil removed?	**(7)** Refer to Section 7.11 of the EP relating to notification following relevant environmental incidents in line with Appendix G – Oil Pollution First Stike Plan.	**(7)** Woodside advised during the consultation meeting on 9 June 2026 that in the highly unlikely event of an oil spill, waste would be managed in accordance with Woodside's Oil Spill Response Waste Management Plan and disposed of at appropriately licensed facilities in accordance with regulatory requirements.	**(7)** No action required.
(8) Wanparta asked if there was a hydrocarbon release, how is the oil removed and how is disposal of recovered oil on land managed.	**(8)** In the highly unlikely event of an unplanned hydrocarbon release, waste management procedures are identified in Appendix G - Oil Pollution First Stike Plan.	**(8)** Woodside explained during the consultation meeting on 9 June 2026 that in the highly unlikely event of an oil spill, waste would be managed in accordance with Woodside's Oil Spill Response Waste Management Plan and disposed of at appropriately licensed facilities in accordance with regulatory requirements.	**(8)** The EP includes an Oil Spill Response Management Plan Assessment which outlines response strategies and management measures for hydrocarbon releases in Appendix G.
(9) Wanparta asked how rock art and submerged cultural heritage influences how Woodside carries out its activities.	**(9)** Indirect impacts are considered and assessed and managed to acceptable levels which is outlined in the EP. Submerged cultural heritage assessments are also undertaken to understand the location of underwater features, which informs mitigation strategies where relevant.	**(9)** Woodside advised that indirect impacts (such as emissions) are considered and assessed and managed to acceptable levels. Woodside also supports and participates in ongoing research and maintains regular engagement with Murujuga Aboriginal Corporation to better understand potential impacts and inform management approaches. Submerged cultural heritage assessments are undertaken to understand the location of underwater features, which informs mitigation strategies where relevant.	**(9)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(10) Wanparta asked how many incidents Woodside has responded to since the last meeting.	**(10)** Unplanned environmental events are investigated in accordance with Woodside's Health, Safety and Environment management system and reported to NOPSEMA in accordance with the EP.	**(10)** Woodside provided information regarding unplanned environmental events that occurred since the previous consultation meeting and advised that environmental incidents are investigated and reported in accordance with Woodside's Health, Safety and Environment management system and regulatory requirements.	**(10)** No action required.
(11) Wanparta asked if Woodside burns off extra gas	**(11)** Woodside assesses environmental impacts associated with atmospheric emissions, including flaring, and implements appropriate management measures where required.	**(11)** Woodside advised that flaring is used as a safety mechanism to release pressure and prevent gas build-up and may occur during offshore and onshore operations.	**(11)** No action required.
(12) Wanparta asked what maintenance activities are planned for CK4 and LH3?	**(12)** Woodside engages in ongoing consultation throughout the life of an EP	**(12)** Woodside advised activities include Christmas tree replacement and subsea valve remediation.	**(12)** No action required.
(13) Wanparta asked how the Christmas tree is removed during the well intervention?	**(13)** Woodside notes Wanparta's request for information on Christmas tree removal during well intervention	**(13)** Woodside advised during the meeting on 9 June 2026 that would take the question on notice. On 28 July 2026, Woodside responded via letter to Wanparta and explained that a subsea Christmas tree is equipment that sits on top of a subsea well and controls the flow of hydrocarbons from the well to the production flowline. Prior to Christmas tree removal, a specialist vessel (Light Well Intervention Vessel) suspends the well with temporary plugs which are tested to confirm the well is isolated, making it safe to conduct Christmas tree changeout. Lifting	**(13)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		equipment and remotely operated vehicles (ROVs) are used to disconnect and recover the Christmas tree before installing and testing the replacement unit.	
(14) Wanparta asked if their employment or traineeship opportunities available?	**(14)** Woodside notes Wanparta's request for information on training and employment opportunities.	**(14)** On 10 June 2026, Woodside emailed Wanparta to provide information on the NETTS.	**(14)** No action required.
(15) Wanparta asked if rangers are involved in oil spill response and planning.	**(15)** In the highly unlikely event of a spill, Woodside would enact its First Strike Plan, which includes contacting the regulator, NOPSEMA and any relevant cultural authorities that may be affected	**(15)** Woodside advised that it recognises the value of ranger participation in shoreline assessment and oil spill response activities and that opportunities for involvement continue to be explored. Woodside also advised that rangers have previously participated in cross-industry oil spill response exercises.	**(15)** No action required.
(16) Wanparta asked if there is potentially an oil spill on Wanparta Country, is Woodside open to completing Cultural Awareness Training before coming on Country.	**(16)** Cultural awareness is incorporated into onboarding and workforce training.	**(16)** During the consultation meeting on 9 June 2026, Woodside explained that cultural awareness is incorporated into onboarding and workforce training. This includes information relevant to working respectfully on Country and recognising Aboriginal cultural values.	**(16)** No action required.
(17) Wanparta requested that Woodside attends at least one Board meeting per calendar year.	**(17)** Woodside appreciates Wanparta's invitation to attend at least one annual Board meeting.	**(17)** Woodside advised that it appreciates Wanparta's invitation to attend at least one annual Board meeting per calendar year and remains open to additional engagement opportunities in the future	**(17)** No action required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which	Woodside engages in ongoing consultation throughout the life of an EP. Should further feedback be received, it	Based on the engagement to date, no additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the EP relates, as required under Regulation 24.	will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for more than six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions and met on 9 June 2026 to discuss the proposed activity.
- Throughout the consultation period, Woodside has had direct contact lines during the consultation period. This included multiple emails, meetings and letters.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Feedback was provided during consultation for this EP relating to cultural values, in addition to cultural values obtained throughout consultation for other activities. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past six months, the group provided feedback but no objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.13 Wirrawandi Aboriginal Corporation (WAC)

WAC is established under the Native Title Act 1993 (Cth) by the Mardudhunera and Yaburara people to represent the Mardudhunera and Yaburara people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed WAC advising of the proposed activity (Record of Consultation, reference 6.1.39). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the proposed activity.
- Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
- **(1-4)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
- (1-4) A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation of this EP.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.

- On 30 April 2026, Woodside emailed WAC a reminder about the proposed activity (SI Report B, reference 1.13.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 3 June 2026, NAC, WAC and Wong-Goo-Tt-Oo attended a Quarterly Heritage Meeting in Karratha (SI Report B, reference 5.1). Matters discussed included:
  - A video explaining environmental impact assessments.
  - Upcoming EP dates.
- On 28 July 2026, Woodside emailed WAC an activity update about the proposed activity (SI Report B, reference 1.13.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - **(1- 4)** Information on the cultural values that Woodside consider relevant to the activity.
  - (1-4) A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP
- On 2 September 2026, NAC and WAC attended a Quarterly Heritage Meeting in Karratha (SI Report B, reference 5.2). During the meeting Woodside reminded attendees that feedback can be provided during the life of an EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value Marine species: • Whales – migration and potential impact of noise on whale communication. • Turtles – general interest around management and monitoring.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.39). No changes were requested.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(2) Cultural value Rock art: • Potential impact of emissions from activities.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.39). No changes were requested.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(3) Cultural value Underwater heritage: • Impacts particularly given recent finding of artefacts.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.39). No changes were requested.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(4) Cultural value Onshore heritage: • Management of sites.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See Record of Consultation, 6.1.39). No changes were requested.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how WAC would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.
- Woodside hosts Heritage Meetings.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP.
- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.14 Wong-Goo-Tt-Oo

Wong-Goo-Tt-Oo is part of the Ngarda Ngarli, the collective term for the five Traditional Owner groups of Murujuga. These groups are represented by the Murujuga Aboriginal Corporation (MAC). Wong-Goo-Tt-Oo has self-identified for all EPs relevant to Murujuga and requested to be consulted directly.

Summary of information provided and record of consultation for this EP:

- On 24 April 2026, Woodside emailed Wong-Goo-Tt-Oo advising of the proposed activity (Record of Consultation, reference 6.1.40). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 25 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 6 May 2026, Woodside emailed Wong-Goo-Tt-Oo a reminder about the proposed activity (SI Report B, reference 1.14.1). The email included:
  - A reference to the original consultation email for this EP sent on 24 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 25 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - On 3 June 2026, NAC, WAC and Wong-Goo-Tt-Oo attended a Quarterly Heritage Meeting in Karratha (SI Report B, reference 5.1). Matters discussed included:
  - A video explaining environmental impact assessments.
  - Upcoming EP dates.
- On 28 July 2026, Woodside emailed Wong-Goo-Tt-Oo an activity update about the proposed activity (Record of Consultation, reference 1.14.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 24 April 2026.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A Summary Information Sheet and a link to the Consultation Information Sheet.
- A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 24 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 24 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for more than six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 24 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.15 Yindjibarndi Aboriginal Corporation (Yindjibarndi)

Yindjibarndi is established under the Native Title Act 1993 (Cth) by the Yindjibarndi people to represent the Yindjibarndi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. Yindjibarndi has formally notified Woodside that all oil and gas matters relating to Yindjibarndi are to be directed to NYFL, which is Yindjibarndi's Native Title Representative Body.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed Yindjibarndi (Via NYFL) advising of the proposed activity (Record of Consultation, reference 6.1.41). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 30 April 2026, Woodside emailed Yindjibarndi (Via NYFL) a reminder about the proposed activity (SI Report B, reference 1.15.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 July 2026, Woodside emailed Yindjibarndi (Via NYFL) an activity update about the proposed activity (SI Report B, reference 1.15.2). The email included:
  - A reference to the original consultation email for this EP sent to the Group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.16 Yinggarda Aboriginal Corporation (YAC)

YAC is established under the *Native Title Act 1993* (Cth) by the Yinggarda people to represent the Yinggarda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed YAC advising of the proposed activity (Record of Consultation, reference 6.1.42). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - **(1-4)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
  - **(1-4)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed YAC a reminder about the proposed activity (SI Report B, reference 1.16.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 July 2026, Woodside emailed YAC an activity update about the proposed activity (SI Report B, reference 1.16.2). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - **(1-4)** Information on the cultural values that Woodside consider relevant to the activity.
  - **(1-4)** A request from Woodside that the group confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation of this EP.

No changes were requested.	values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP.
- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12 Native Title representative bodies

4.12.1 Kimberley Land Council (KLC)

Kimberley Land Council is the Native Title Representative Body for the Kimberley region of Western Australia. As such, it is not a Prescribed Body Corporate or Registered Native Title Body Corporate but exists to assist Native Title claimants and holders. During consultation for this EP, KLC advised that there has been staffing changes. Woodside updated its records to reflect this.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed KLC advising of the proposed activity (Record of Consultation, reference 6.1.43). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 30 April 2026, Woodside emailed KLC a reminder about the proposed activity (SI Report B, reference 2.1.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 5 May 2025, KLC emailed Woodside to advise of staffing changes (SI Report B, reference 2.1.2).
- On 28 July 2026, Woodside emailed KLC an activity update about the proposed activity (SI Report B, reference 2.1.3). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.

- **(1)** On 14 September 2026, KLC emailed Woodside declining the request to be consulted (SI Report B, reference 2.1.4)
- **(1)** On 22 September 2026, Woodside emailed KLC in response to its 14 September email. Woodside welcomed the opportunity to meet with the KLC, provide additional information, and consider any feedback should the KLC wish to engage at any stage (SI Report B, reference 2.1.5)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
(1) KLC declined the request to be consulted on the impacts of the proposed activities in circumstances where the affected native title holders were not provided with an opportunity to be informed about, and provided their free prior consent to, the grant of the titles.	**(1)** Woodside has an obligation to consult relevant persons in the course of preparing an EP and engages in ongoing consultation throughout the life of an EP.	**(1)** Woodside advised that it has obligations under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 to consult with relevant persons while preparing an EP. Woodside acknowledged KLC's position that it declined to participate in consultation on this EP. Woodside reiterated the purpose of consultation was to answer questions, seek feedback and hear from KLC about potential impacts of the activity to KLC's functions, interests and activities, so that they could be considered in the preparation of the EP. Woodside advised it remains willing to meet with KLC, provide additional information, and consider any feedback should KLC wish to engage at any stage.	**(1)** No action required
While feedback has been received, there were no objections or claims.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and publicly available literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of	Based on the engagement to date, no additional measures or controls required.

		Change and Revision process (see Section 7.8 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for over six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for over six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Feedback was provided during consultation for this EP relating to cultural values, in addition to cultural values obtained throughout consultation for other activities. Woodside has incorporated the groups interests and cultural values in Section 4.9.
- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.2 Yamatji Marlpa Aboriginal Corporation (YMAC)

YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community but exist to assist native title claimants and holders.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed YMAC advising of the proposed activity (Record of Consultation, reference 6.1.44). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.

- On 30 April 2026, Woodside emailed YMAC a reminder about the proposed activity (SI Report B, reference 2.2.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 July 2026, Woodside emailed YMAC an activity update about the proposed activity (SI Report B, reference 2.2.3). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
  - Information on the cultural values that Woodside consider relevant to the activity.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for more than six months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than six months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Offered for Woodside to speak with members as well as the Board.
- Asked to advise how the group would like Woodside to engage and whether further information is required.

- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.13 Self-identified Indigenous Groups

4.13.1 Ngarluma Yindjibarndi Foundation Ltd (NYFL)

NYFL was created to act as Trustee for the Trust under the Northwest Shelf Agreement 1998 struck between the Ngarluma and Yindjibarndi registered native title claimants, the NWS JVs and Woodside, prior to the resolution of the Ngarluma and Yindjibarndi native title claim. Its purpose is to carry on the business of enterprise development, investment and social welfare.

In 1999 the Ngarluma and Yindjibarndi native title claim was settled with the Federal Court appointing, at the request of the common law native title holders, the Ngarluma Aboriginal Corporation (NAC) as PBC to represent the communal interests of the Ngarluma people and the Yindjibarndi Aboriginal Corporation as PBC to represent the communal interests of the Yindjibarndi people. Woodside consulted both NAC and Yindjibarndi as relevant persons in the course of preparing this EP. NYFL self-identified and has advised it is relevant for this EP.

Since March 2024, Woodside and NYFL have been in communication about a draft consultation agreement. Woodside and NYFL have exchanged the draft consultation agreement a number of times during this period. Woodside has also travelled to Roebourne to meet with NYFL to progress negotiations and provided funding to NYFL for legal advice to finalise the agreement. During consultation for other EPs, NYFL has claimed that formal consultation had not taken place due to the absence of a finalised consultation agreement. Woodside has reiterated to NYFL on a number of occasions, including during consultation for this EP, that a consultation agreement is not a pre-requisite for consultation and that negotiations relating to a consultation agreement have and continue to occur in parallel to EP consultation. Discussions between Woodside and NYFL in relation to finalising this agreement remain ongoing.

Woodside has continually informed NYFL that it is open to receiving or being notified of feedback, claims or objections on EPs.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed NYFL advising of the proposed activity (Record of Consultation, reference 6.1.45). The email included:
  - A Summary Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to a consultation framework agreement with Woodside has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 30 April 2026, Woodside emailed NYFL a reminder about the proposed activity (SI Report B, reference 3.1.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Between 1 and 18 May 2026, NYFL and Woodside exchanged emails relating a Consultation Agreement as well as a meeting (SI Report B, reference 3.1.2 – 3.1.5). Additionally:
  - **(1)** The group raised feedback for consideration within the EP.
  - **(1)** Woodside responded to and addressed feedback from the group.
- On 28 July 2026, Woodside emailed NYFL an activity update about the proposed activity (SI Report B, reference 3.1.6). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.
- On 3 September 2026, NYFL emailed Woodside regarding an unrelated EP advising that a priority matter for NYFL is the outstanding consultation agreement for EPs (SI Report B, reference 3.1.7).
- On 3 September 2026, Woodside responded to NYFL, the email included:
  - Advice that a consultation framework agreement is not a pre-requisite for EP consultation and that Woodside is happy to meet to discuss a framework separately from EP consultation. (SI Report B, reference 3.1.8).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
(1) NYFL requested to continue discussions on the Consultation Agreement and provided an opportunity to meet and discuss.	**(1)** A consultation framework agreement is not a prerequisite for EP consultation. Consultation for this EP and others has occurred in parallel to any discussion about a framework agreement.	**(1)** Woodside has reminded NYFL that a consultation framework agreement is not a prerequisite for EP consultation.	**(1)** No action required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation information to be distributed to members and individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An offer to provide more specific information, maps and images if required.

- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked to advise how the group would like Woodside to engage and whether further information is required.
- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past six months, while feedback was received, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.14 Other Indigenous Groups

4.14.1 Save Our Songlines (SOS)

SOS and/or [Individual 2] do not squarely fall within the consultation categories in the current Woodside methodology and are therefore considered in their own category. SOS is an organisation formed by [Individual 2], who we currently understand is the group's primary spokesperson. [Individual 2] and/or SOS are together represented by lawyers from Johnson Legal. During consultation for this EP, Johnson Legal advised that there has been staffing changes. Woodside updated its records to reflect this.

Woodside understands that the views expressed by SOS align with the views of [Individual 2]. Woodside therefore approaches communication with SOS and/or [Individual 2] as communication with SOS and has consulted them concurrently. The stated interests of [Individual 2] and/or SOS include the conservation of Murujuga rock art, and opposition to expansion of Protects on the Burrup Peninsula. On the information available to us, we understand that SOS and/or [Individual 2] have also been members of Aboriginal corporations who have been separately consulted as relevant persons by Woodside. This is relevant because it confirms that cultural values or interests of those groups have been consulted on and assessed in preparing this EP. This context and process demonstrates that Woodside's consultation approach with SOS is appropriate and adapted to the nature and interests of SOS.

Historical Information

During previous consultation for other activities, SOS and/or [Individual 2] has provided information relating to its cultural values which Woodside deem relevant to this EP.

- **(1-4)** Information on the cultural values related to the group that Woodside considers relevant to the activity.
- **(1-4)** Woodside has noted the cultural values and if relevant assessed risks in the EP.

Summary of information provided and record of consultation for this EP:

- On 13 April 2026, Woodside emailed SOS and/or [Individual 2] advising of the proposed activity (Record of Consultation, reference 6.1.46). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 12 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 30 April 2026, Woodside emailed SOS and/or [Individual 2] a reminder about the proposed activity (SI Report B, reference 4.1.1). The email included:
  - A reference to the original consultation email for this EP sent on 13 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 12 May 2026.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face to face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 30 April 2026, SOS and/or [Individual 2] emailed Woodside requesting to update the contact details of the legal representation (SI Report B, reference 4.1.2).
- On 28 July 2026, Woodside emailed SOS and/or [Individual 2] an activity update about the proposed activity (SI Report B, reference 4.1.3). The email included:
  - A reference to the original consultation email for this EP sent to the group on 13 April 2026.
  - A Summary Information Sheet and a link to the Consultation Information Sheet.
  - A request to provide any additional feedback by 26 August 2026 so that it can be considered in the preparation of the EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the Adverse Impact of the Activity	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value Marine Species: • Whales: migratory patterns, behavioural impacts, sonar communication. • Turtles: migratory patterns. • Dugongs. • Plankton. • Seagrass. • Pygmy blue whales. • Pelagic fish. • Sharks.	**(1)** This value has been identified through Woodside's data collection processes (consultation and Affidavit).	**(1)** Woodside acknowledges these interests and cultural values and assessed the potential impacts on there and where appropriate included controls	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Seabirds.			
(2) Cultural value Totemic Species: • Bungarra. • Eagle. • Kangaroo.	**(2)** This value has been identified through Woodside's data collection processes (Affidavit).	**(2)** Woodside acknowledges these interests and cultural values and assessed the potential impacts on there and where appropriate included controls.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(3) Cultural value Caring for Country: • Sea Country. • Rock Art. • Water Quality. • Murujuga.	**(3)** This value has been identified through Woodside's data collection processes (Affidavit).	**(3)** Woodside acknowledges these interests and cultural values and assessed the potential impacts on there and where appropriate included controls.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
(4) Cultural value Songlines, dreaming and energy lines, including where saltwater and freshwater meet.	**(4)** This value has been identified through Woodside's data collection processes (Affidavit).	**(4)** Woodside acknowledges these interests and cultural values and assessed the potential impacts on there and where appropriate included controls.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.6, 6.7 and 6.9.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Sufficient information has been provided because:

- On 13 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 13 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of their interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.
- Woodside provided updated information which included:
  - A reference to the original consultation email for this EP sent on 13 April 2026.
  - An updated Summary Information Sheet and link to the updated Consultation Information Sheet noting the EP changes made.
  - An invitation to provide further feedback by 26 August 2026 for the purpose of preparation for this EP

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 13 April 2026 and requested feedback by 12 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside provided an activity update on this EP 28 July 2026 and requested feedback by 26 August 2026.
- Woodside has provided an opportunity to address and respond to feedback for more than three months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for more than three months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (22 April 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 13 April 2026:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
- Offered for Woodside to speak with members as well as the Board.
- Asked to advise how the group would like Woodside to engage and whether further information is required.

- Woodside offered to meet on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information was provided during consultation for this EP relating to cultural values, but SOS however SOS has done so in consultation for other activities as from an Affidavit Woodside has incorporated the groups interest and cultural values in section 4.9.
- During the past six months, no objections or claims about the adverse impact of the activity to which this EP relates have been raised.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5. TABLE 3: ENGAGEMENT REPORT WITH PERSONS OR ORGANISATIONS ASSESSED AS NOT RELEVANT

The black numbering **(N)** in the 'Summary of information provided and record of consultation for this EP' in Table 3 denotes an item raised by a stakeholder. The green numbering **(N)** in this section denotes Woodside's response to that issue.

5.1 Other non-government groups or organisations (NGOs) or individuals

5.1.1 Australian Marine Conservation Society (AMCS)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed AMCS advising of the proposed activity (Record of Consultation, reference 6.1.7, provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 18 May 2026, AMCS replied to follow-up email (SI Report A, reference 26.1) and requested point **(1)**.
- On 18 May 2026, Woodside thanked AMCS for its query (SI Report A, reference 26.2) and confirmed point **(1)**.
- On 23 July 2026, Woodside sent an Activity Update to AMCS based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) AMCS requested a five-day consultation extension.	**(1)** Woodside considered AMCS' request for an extension and agreed to provide the additional five days.	**(1)** Woodside confirmed AMCS' request for an extension.	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	
Outcomes of Consultation			
While AMCS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AMCS to provide feedback during the consultation process.			

5.1.2 Conservation Council of Western Australia (CCWA)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed CCWA advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to CCWA based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.
Outcomes of Consultation			
• While CCWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CCWA to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.1.3 Greenpeace Australia Pacific (GPAP)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the GPAP advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 16 April, 2026, Woodside received an auto response email from the previous GPAP contact so exchanged emails with GPAP to identify and reach new contact for future consultation (SI Report A, references 15.1 – 15.3).
- On 7 May 2026, as no response with EP feedback had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to GPAP based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.11). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Outcomes of Consultation

- While GPAP is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for GPAP to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.2 Research institutes and local conservation groups or organisations

5.2.1 Australian Institute of Marine Science (AIMS), Commonwealth Scientific and Industrial Research Organisation (CSIRO), Western Australian Marine Science Institution (WAMSI), University of Western Australia (UWA), Curtin University, Edith Cowan University, Murdoch University

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed the Australian Institute of Marine Science (AIMS), Commonwealth Scientific and Industrial Research Organisation (CSIRO), Western Australian Marine Science Institution (WAMSI), University of Western Australia (UWA), Curtin University, Edith Cowan University and Murdoch University (referred to as Research Institutes and Universities) advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Research Institutes and Universities based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.22). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

- While the Research Institutes and Universities are not a relevant persons under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Research Institutes and Universities to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.3 Commonwealth commercial fisheries and peak representative bodies

5.3.1 Southern Bluefin Tuna Fishery Licence Holders, Western Skipjack Fishery Licence Holders

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed Southern Bluefin Tuna Fishery and Western Skipjack Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 23 July 2026, Woodside sent an Activity Update to Southern Bluefin Tuna Fishery and Western Skipjack Fishery licence holders based on the addition of the WA-7 and WA-8 wells to the EP's light well intervention activities. (Record of Consultation, reference 6.3.16). An updated Consultation Information Sheet for the renamed Okha Light Well Intervention EP was provided.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

- While Southern Bluefin Tuna Fishery and Western Skipjack Fishery licence holders are not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Southern Bluefin Tuna Fishery and Western Skipjack Fishery licence holders to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.4 Commonwealth and WA State Government departments or agencies – environment

5.4.1 Department of Water and Environment Regulations (DWER)

Summary of information provided and record of consultation for this EP:

- On 16 April 2026, Woodside emailed DWER advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*'.
- On 7 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 7 May 2026, DWER thanked Woodside, provided background on circumstances where applications should be submitted to the EPA (SI Report A, reference 24.1) and provided point **(1).**
- On 15 May 2026, Woodside thanked emailed DWER (SI Report A, reference 24.2) and responded to point **(1).**
- On 23 July 2026, Woodside did not send DWER an Activity Update as DWER confirmed it was not commenting on EPs as demonstrated in their correspondence on 7 May 2026 point **(1)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) DWER's EP Services team confirmed it only provides comments on events or activities which require an application.	**(1)** Woodside understands that this activity does not require any applications to be submitted to EPA, and that EP Services will not provide comments on the EP.	**(1)** Woodside confirmed that it understood EPA Services would not provide comments and that it was aware of application requirements.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.
Outcomes of Consultation			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- While DWER is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for DWER to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6. RECORD OF CONSULTATION

6.1 Initial consultation

6.1.1 Consultation Information Sheet

Woodside Energy

Consultation Information Sheet
April 2026

CK4 and LH3 Well Intervention Environment Plan

Carnarvon Basin, North-West Australia

Activity overview

CK4 and LH3 Well Intervention Environment Plan (EP) covers:

- Light well intervention activities on the CK4 (Cossack-4H) and LH3 (Lambert-3) wells using a light well intervention vessel (LWIV).
- Support vessel and helicopter operations.

Context

The CK4 and LH3 wells operate under the accepted Okha Floating, Production, Storage and Offloading (FPSO) Facility Operations EP and are located in the Wanaea and Lambert fields, respectively on the North West Shelf (NWS).

- Wells tie back to manifolds, producing oil and gas through the Okha FPSO facility since 2011.
- Light well intervention activity on the CK4 and LH3 wells requires a new standalone EP, and on completion of the activity, the wells will continue to operate under the accepted Okha FPSO Facility Operations EP.

Location

- In Commonwealth waters, ~ 135 km north-west of Dampier **(Figure 2).**

Water depth

- ~ 81 m (CK4 well) and ~ 128 m (LH3 well) deep.

Timing and duration

- Light well intervention may occur between Q4 2026 and 2030, in a single campaign or over multiple campaigns.
- Activities are expected to take between 14 to 35 days at the CK-4 well and between 14 to 21 days at the LH-3 well.
- When activities occur, they will run 24 hours a day, 7 days a week.
- Timing and duration are subject to change due to factors including approvals, weather, project vessel availability and other unforeseen circumstances.

Joint Venture

- Operator – Woodside Burrup Pty Ltd.
- Joint Venture – Chevron Australia Pty Ltd, Woodside Energy (North West Shelf) Pty Ltd, Jadestone Energy (CWLH) Pty Ltd.

We would like to hear from you

We would like relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to provide feedback on our proposed activity, in accordance with the intended outcome of consultation.

Woodside must consult relevant persons when developing an Environment Plan (EP) to confirm current measures or identify additional measures, which could lessen or avoid potential adverse effects of the proposed activity on the environment.

Woodside aims to ensure the proposed activity is consistent with the principles of ecologically sustainable development, by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level.

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by the activities under this EP, we would like to hear from you by **18 May 2026.**

Feedback@woodside.com
Toll free: 1800 442 977
woodside.com

A summary of the activity and location is found in **Table 1** and **2**.

Figure 1: Example of a Light Well Intervention Vessel (LWIV) with equipment on deck for well intervention activities. Photo credit: Sapura Energy.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to Indigenous Peoples and communities around the world.

Activity Location

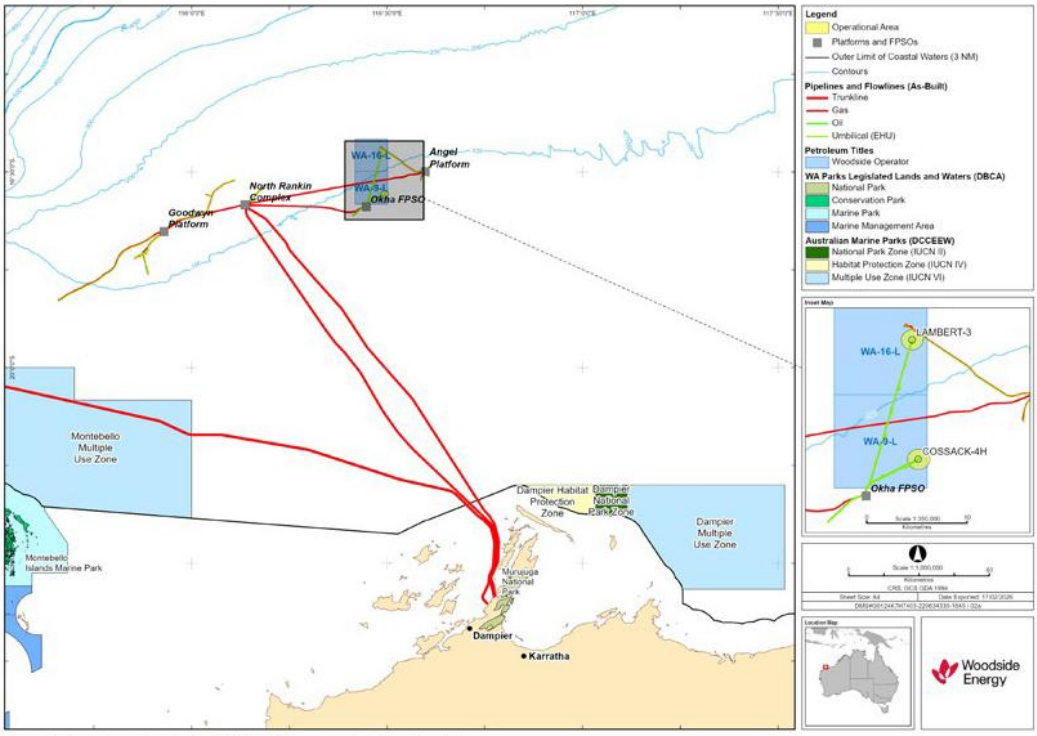

Figure 2. Location of the CK4 and LH3 Well Intervention Operational Area

Table 1 – Activity and location summary

CK-4 and LH-3 Well Intervention Environment Plan	
Activity details	• Light well intervention activities on the CK4 and LH3 wells. Both CK4 and LH3 wells may require temporary well suspension, Xmas tree (XT) changeout and re-commissioning. The wells may also require Tubing Retrievable Safety Valve (TRSV) remediation. • Preparation and support activities (e.g. inspections, cleaning). • Well start-up and production following intervention activities will be managed under the accepted Okha FPSO Facility Operations EP.
Titles	• WA-9-L (CK4). • WA-16-L (LH3).
Infrastructure	• CK4 subsea production well and associated manifold. • LH3 subsea production well and associated manifold.
Vessels	• Light well intervention vessel (LWIV). • Additional support vessels. • Helicopter to transport personnel and/or freight.
Operational Area and exclusion zones	• Operational Area: 1 km around each well. • Temporary exclusion zone: 500 m around the LWIV during light well intervention.
Communication with mariners	• Marine notices will be issued prior to the commencement of activities within the Operational Area. • Other marine users are permitted to use the Operational Area. • A 500 m temporary exclusion zone will be in place around the LWIV.
Distance to nearest marine park/nature reserve	• Montebello Marine Park – Multiple Use Zone (Cth) is 96 km south-west of the Operational Area. • Dampier Marine Park – Habitat Protection Zone (Cth) is 90 km south of the Operational Area.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 2 – Approximate locations of key infrastructure within the scope of the CK4 and LH3 Well Intervention EP

Production well and centre locations	Water Depth (m)	Latitude (WGS84)	Longitude (WGS84)	Title
Cossack-4H (CK4)	– 81	19°33 22.909 S	116°29 35.754 E	WA-9-L
Lambert-3 (LH3)	– 128	19°26 58.469 S	116°29 16.227 E	WA-16-L

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA was developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are a loss of well containment and a vessel collision. The EMBA is depicted in **Figure 3.**

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release. To learn more about an EMBA, please see the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) video on oil spill modelling at **www.nopsema.gov.au**.

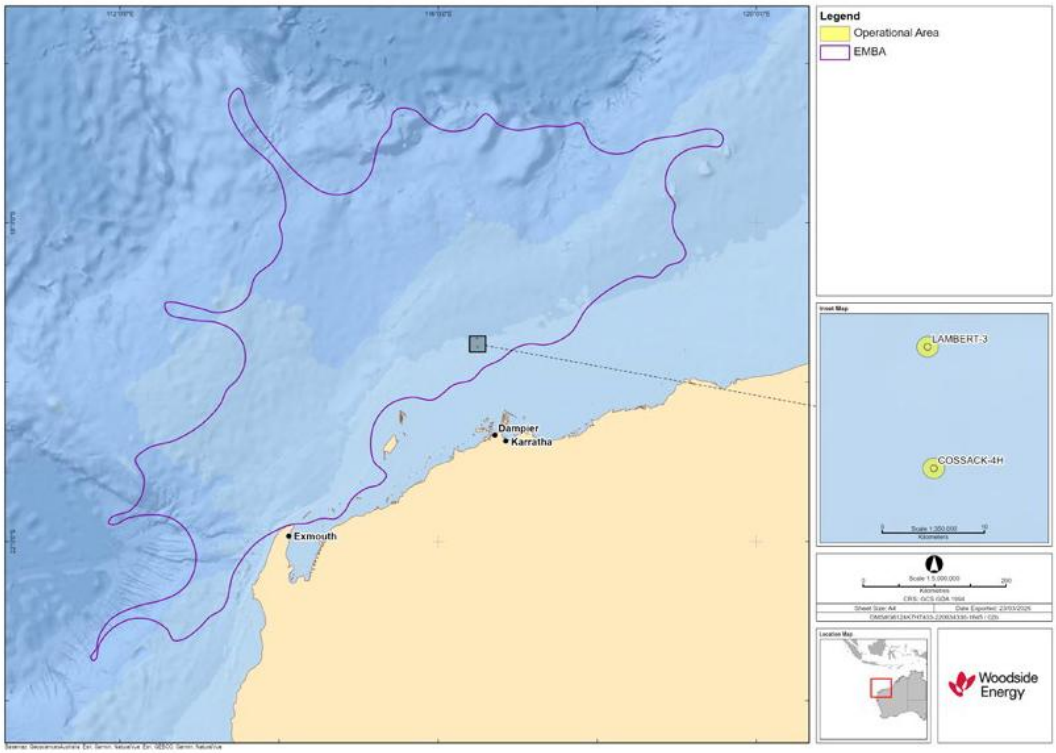

Figure 3. Location of the CK4 and LH3 Well Intervention EP EMBA

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impacts/Risks, and Mitigation and/or Management Measures

Woodside assessed the impacts and risks to the environment arising from the planned activities and unplanned events. This assessment considers the timing, duration and location of the activities. Proposed mitigation and management measures will be implemented and are summarised in **Table 3.** Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental, social and cultural impacts and risks associated with the proposed activities, and Woodside seeks your feedback to inform our decision-making.

Table 3 – Summary of key impacts and risks and proposed management measures

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Planned activities (routine and non-routine)			
Physical presence: ***interaction with other marine users***	• Physical presence of the LWIV and support vessels within the Operational Area.	• Potential temporary displacement of other marine users. - Due to the offshore location and the localised nature of the activity, if there is an interaction, it is expected to be localised with no lasting effect.	• Vessels adhere to regulatory requirements for navigational safety. • Establish a temporary 500 m exclusion zone around the LWIV which other marine users are notified of. - Notify relevant stakeholders of activity commencement. - Notify the Australian Hydrographic Office prior to commencement of the activity so that marine users are aware of the activity. - Consult with relevant persons so they are informed of the proposed activities.
Physical presence: ***disturbance to seabed***	• Seabed disturbance may result from the following activities: - Wellhead cleaning and removal will cause localised seabed disturbance around the wellhead. - Use of a remotely operated vehicle near the seabed and temporary placement of equipment on the seabed will disturb small areas of seabed habitat.	• Localised impact with no lasting effect to seabed and associated benthic communities, arising from: - Localised modification of seabed habitat within the Operational Area. - Localised change in habitat, water quality, and sediment quality, which may affect marine fauna.	• Equipment temporarily placed on the seabed will be tracked and removed. • Comply with requirements of Underwater Cultural Heritage Act 2018 (Cth). • Manage unexpected finds of potential underwater cultural heritage sites/features, including Indigenous Peoples underwater cultural heritage in accordance with Woodside's Unexpected Finds Procedure.
Routine and non-routine acoustic emissions	• Noise generated within the Operational Area from LWIV, support vessels, and helicopters.	• Localised behavioural impacts to marine fauna around vessels, with no lasting impact.	• Comply with regulatory requirements for interactions with marine fauna. • Environmental induction of all relevant marine crew.
Routine and non-routine discharges: ***subsea fluids***	• Light well intervention will result in subsea chemical and fluid discharge.	• Localised decrease in water quality at the well location with no lasting impact.	• Assessment of all chemicals used following Woodside's Environment Chemical Selection and Assessment Procedure – Australia. • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process.
Routine and non-routine discharges: ***vessel utility systems (bilge water, greywater, sewage, putrescible wastes and deck drainage water)***	• Discharges from vessel utility systems including: - Sewage, greywater and organic solid waste. - Deck water, drainage systems and bilge water. - Brine and cooling water.	• Localised impact with no lasting effect arising from: - Change in marine water quality, which may affect marine fauna.	• LWIV and support vessels will comply with relevant Marine Orders.
Routine and non-routine atmospheric and Greenhouse Gas (GHG) emissions	• Atmospheric and GHG emissions associated with: - Use of internal combustion engines and incinerators on the LWIV and support vessels.	• Emissions associated with vessels could result in temporary, localised reductions in air quality in the immediate vicinity.	• Comply with regulatory requirements relating to GHG emissions and reporting. • Vessels comply with relevant Marine Orders regarding pollution prevention to air.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Routine and non-routine light emissions: ***light emissions from vessel operations***	• Light emissions from the LWIV and support vessels.	• Slight and low level impact arising from: - Change in ambient light resulting in change in fauna behaviour.	• Lighting is limited to the minimum required for navigational and safety requirements except for emergency events. • Implementation of Woodside's Seabird Management Plan.
Unplanned events (accidents / incidents / emergency situations)			
Unplanned hydrocarbon release: ***loss of well containment***	• Loss of well containment resulting in release of hydrocarbons to the environment.	• In the highly unlikely event of a loss of well containment causing a release of crude oil, impacts to water quality and marine ecosystems could occur. • Modelling of a subsea release of crude oil was used to understand potential impacts. • Potential to result in a reduction in water quality. • Potential disruption to marine fauna, including protected species. • Potential interference with or displacement of other marine users including fisheries, tourism and recreation.	**Preventing loss of well containment** • Wells in compliance with accepted well operation management plan (WOMP) including implementation of barriers to prevent a loss of well containment. • Checks completed to establish minimum acceptable standard of well integrity. **Spill response arrangements** • In the event of a spill emergency response activities implemented in accordance with the Oil Pollution Emergency Plan (OPEP). • First Strike Plan. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented as planned.
Unplanned hydrocarbon release: ***loss of control of suspended load from lifting operations***	• Loss of control of suspended load from lifting operations resulting in release of hydrocarbons to the environment.	• In the highly unlikely event of a loss of control of a suspended load impacting subsea infrastructure causing a release of crude oil, impacts to water quality and marine ecosystems could occur. • Modelling of a subsea release of crude oil was used to understand potential impacts. • Potential to result in a reduction in water quality. • Potential disruption to marine fauna, including protected species. • Potential interference with or displacement of other marine users including fisheries, tourism and recreation.	**Preventing subsea equipment loss of well containment** • Lifting procedures applied to minimise risk of dropped objects. • Simultaneous operations management plan implemented. **Spill response arrangements** • In the event of a spill emergency response, activities implemented in accordance with the Oil Pollution Emergency Plan (OPEP). • First Strike Plan. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented as planned.
Unplanned hydrocarbon release: ***vessel collision***	• Vessel collision resulting in release of hydrocarbons to the environment.	• In the highly unlikely event of a vessel collision causing a release of marine diesel, impacts to water quality and marine ecosystems could occur. • Modelling of a surface release of marine diesel was used to understand potential impacts. • Marine diesel is a relatively volatile, non-persistent nature hydrocarbon with up to 26% evaporating within the first 24 hours. • Potential to result in a reduction in water quality. • Potential disruption to marine fauna, including protected species. • Potential interference with or displacement of other marine users including fisheries, tourism and recreation.	**Preventing marine vessel collisions** • Vessels adhere to regulatory requirements for navigational safety and the prevention of vessel collisions. • Notify relevant stakeholders of activity commencement. • Notify the Australian Hydrographic Office prior to commencement of the activity so that marine users are notified of the activity. • Consult with relevant persons so they are informed of the proposed activities. • Establish a temporary 500 m exclusion zone around the LWIV which is communicated to marine users. **Spill response arrangements** • In the event of a spill emergency response activities implemented in accordance with the OPEP. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented as planned.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Unplanned release: ***hydrocarbon and chemical spills from vessel and subsea activities***	• Loss of hydrocarbons and chemicals to the environment during: - Refuelling and chemical transfer. - Chemical storage and use. - Deck activities and equipment. - Subsea equipment and ROV leaks.	• Potential to result in a reduction to water quality; - Potential disruption to marine fauna, including protected species. - Potential interference with or displacement of other marine users including fisheries, tourism and recreation.	• Comply with Marine Orders to prevent pollution events. • Implement bunkering and transfer procedures. • Assessment of all chemicals used following Woodside's Environment Chemical Selection and Assessment Procedure – Australia. • Safe storage of diesel and chemicals. • Spill kits positioned in high-risk locations around the vessel. • In the event of a spill emergency response activities implemented in accordance with the OPEP. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented as planned.
Unplanned release: ***hazardous and non-hazardous solid waste management***	• Accidental loss of solid wastes generated by vessels including packaging, domestic wastes and hazardous wastes such as oil rags, batteries and waste oil.	• The potential impacts of hazardous or non hazardous solid wastes and equipment accidentally released to the marine environment include contamination of the environment as well as secondary impacts relating to potential contact of marine fauna with wastes. • The temporary or permanent loss of waste materials/equipment into the marine environment is not likely to have a significant environmental impact based on the types, size and low likelihood of waste loss that could occur.	• Comply with the relevant Marine Orders to prevent pollution events. • If safe and practicable to do so, solid waste is to be recovered. • Implementation of vessel waste management plans.
Physical presence: ***interactions with marine fauna***	• Accidental collision between vessels and marine fauna.	• Vessel movements have the potential to result in accidental collisions between the vessel (hull and propellers) and marine fauna. • Given the short duration of activities and the slow speeds at which vessels operate in the Operational Area, collisions with cetaceans are considered unlikely.	• Comply with regulatory requirements for interactions with marine fauna to reduce the likelihood of a collision occurring.
Physical presence: ***introduction of invasive marine species (IMS)***	• Vessels and immersible equipment have the potential to introduce IMS to the Operational Area through marine biofouling (containing IMS), as well as within high-risk ballast water exchange.	• In the highly unlikely event of IMS being introduced and establishing viable populations within the Operational Area or immediate surrounds, this may result in changes to the ecology of the Operational Area and competition with existing biota.	• Ballast water and biofouling will be managed according to the Australian Ballast Water Management Requirements and the Australian Biofouling Management Requirements, as applicable. • Woodside's IMS risk assessment process will be applied to vessels and immersible equipment entering the Operational Area.

** These mitigation and management measures are subject to change through the consultation and subsequent assessment process and may not represent content in the publicly available EP or in the final plan once accepted.*

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please provide feedback to Woodside by **18 May 2026** via:

Feedback@woodside.com
Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:
woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to the NOPSEMA as required under legislation. Woodside will communicate any material changes to the proposed activity to affected relevant persons as relevant and appropriate.

Your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit:
woodside.com/what-we-do/consultation-activities

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6.1.2 Summary Information Sheet

Woodside Energy

Consultation Summary Information Sheet
April 2026

CK4 and LH3 Well Intervention Environment Plan

Carnarvon Basin, North-West Australia
(Commonwealth Waters)

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to First Nations peoples and communities around the world.

Have Your Say

We want to talk, share ideas, and yarn with local community who have a deep connection to the land and sea. Your knowledge helps us do our work better!

We want to understand the environments we want to work in. We want to work in a way which manages the environmental impacts and risks of the activities appropriately. By working together, we want to help protect cultural heritage and keep the Land and Sea Country healthy.

We welcome feedback from Indigenous communities and stakeholders whose functions, interests and activities may be affected by our activities under this Environment Plan (EP). If you'd like to share your views, please contact us before 12 May 2026.

Email: IndigenousAffairs@woodside.com
Call: 1800 442 977 (toll-free)
Visit: woodside.com/what-we-do/consultation-activities

Your feedback will be included in our EP submissions to NOPSEMA (National Offshore Petroleum Safety and Environmental Management Authority) and will help guide responsible environmental decision-making.

Figure 1: Example of a Light Well Intervention Vessel (LWIV) with equipment on deck for well intervention activities. Photo credit: Sapura Energy.

Activity Overview

The CK4 (Cossack-4H) and LH3 (Lambert-3) wells operate under the accepted Okha Floating, Production, Storage and Offloading (FPSO) Facility Operations EP and are located in the Wanaea and Lambert fields, respectively on the North West Shelf (NWS). This plan covers:

- Light well intervention activities on the CK4 and LH3 wells using a light well intervention vessel (LWIV), see Figure 1.
- Support vessel and helicopter operations

Location

- In Commonwealth waters, ~ 135 km North-West of Dampier

Water Depth

- ~ 81 m (CK4 well) and ~ 128 m (LH3 well) deep.

Timing and Duration

- Light well intervention may occur between Q4 2026 and 2030, in a single campaign or over multiple campaigns.
- Activities are expected to take between 14 - 35 days at the CK-4 well and between 14 to 21 days at the LH-3 well.
- When activities occur, they will run 24 hours a day, 7 days a week.
- Timing and duration are subject to change due to factors including approvals, weather, project vessel availability and other unforeseen circumstances.

Joint Venture

- Operator – Woodside Burrup Pty Ltd.
- Joint Venture – Chevron Australia Pty Ltd, Woodside Energy (North West Shelf) Pty Ltd, Jadestone Energy (CWLH) Pty Ltd.

CK4 and LH3 Well Intervention Environment Plan | April 2026

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Activity Location

The EP explains how Woodside will manage environmental risks and impacts while carrying out our activities. These plans help us conduct operations safely and responsibly, with respect for the environment and cultural heritage. The location where the work will be done is known as the Operational Area (Figure 2).

Woodside must consult with relevant persons, including Traditional Custodian groups whose functions, interests or activities may be affected by the activities to be carried out under the EP or that are considered relevant, to listen to concerns and, where required, incorporate feedback into the EP.

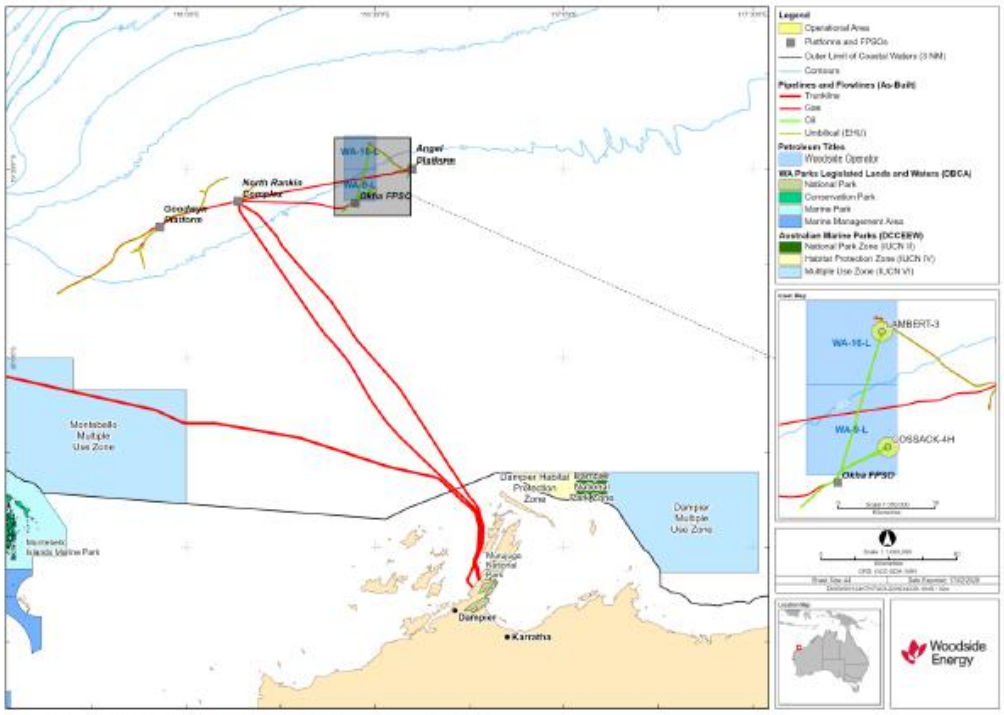

Figure 2: Location of the activity, including Operational Area and associated infrastructure

Planned Activities and Unplanned Events

We assess both planned activities and unplanned events which may result in environmental risks and impacts.

Planned activities are activities that Woodside knows will happen as part of the work under the EP. This could include generating underwater noise, light emissions, associated atmospheric emissions or routine discharges (such as sewage, waste, and deck drainage). We take steps so that planned activities comply with legislative and regulatory requirements.

Unplanned events are very unlikely. They may be the result of an accident, incident or emergency, such as a spill of fuel or oil from a ship (vessel) collision, a spill on the deck of a vessel (like during refuelling), unplanned seabed and/or marine life disturbance, or accidental introduction of invasive species from outside the region.

Planned and unplanned activities, potential impacts, and management measures are included in the Consultation Information Sheet for this activity, available at www.woodside.com/what-we-do/consultation-activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

The EMBA map (Figure 3) is a model of the largest spatial area where the activity could have a potential environmental impact. It combines multiple modelling outputs for both planned and unplanned activities in the highly unlikely event of an oil and natural gas (hydrocarbon) release to the environment. The modelling scenarios that inform the EMBA are loss of well containment and vessel collision.

The EMBA does not show the predicted impact of a single event - it is the merged area of many possible scenarios that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time. This means that if a hydrocarbon release was to occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of a release.

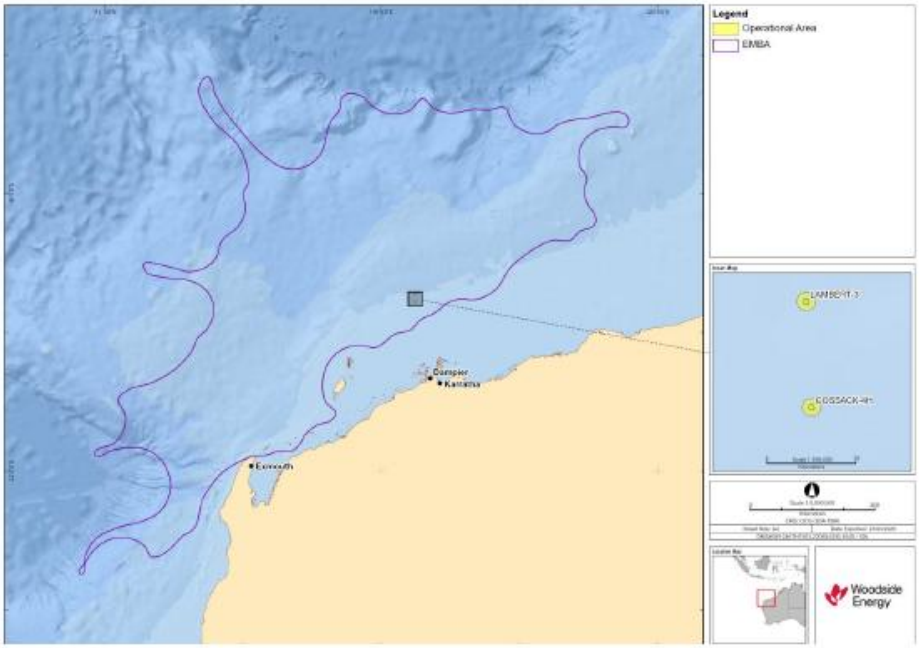

Figure 3: Environment that May Be Affected (EMBA) map

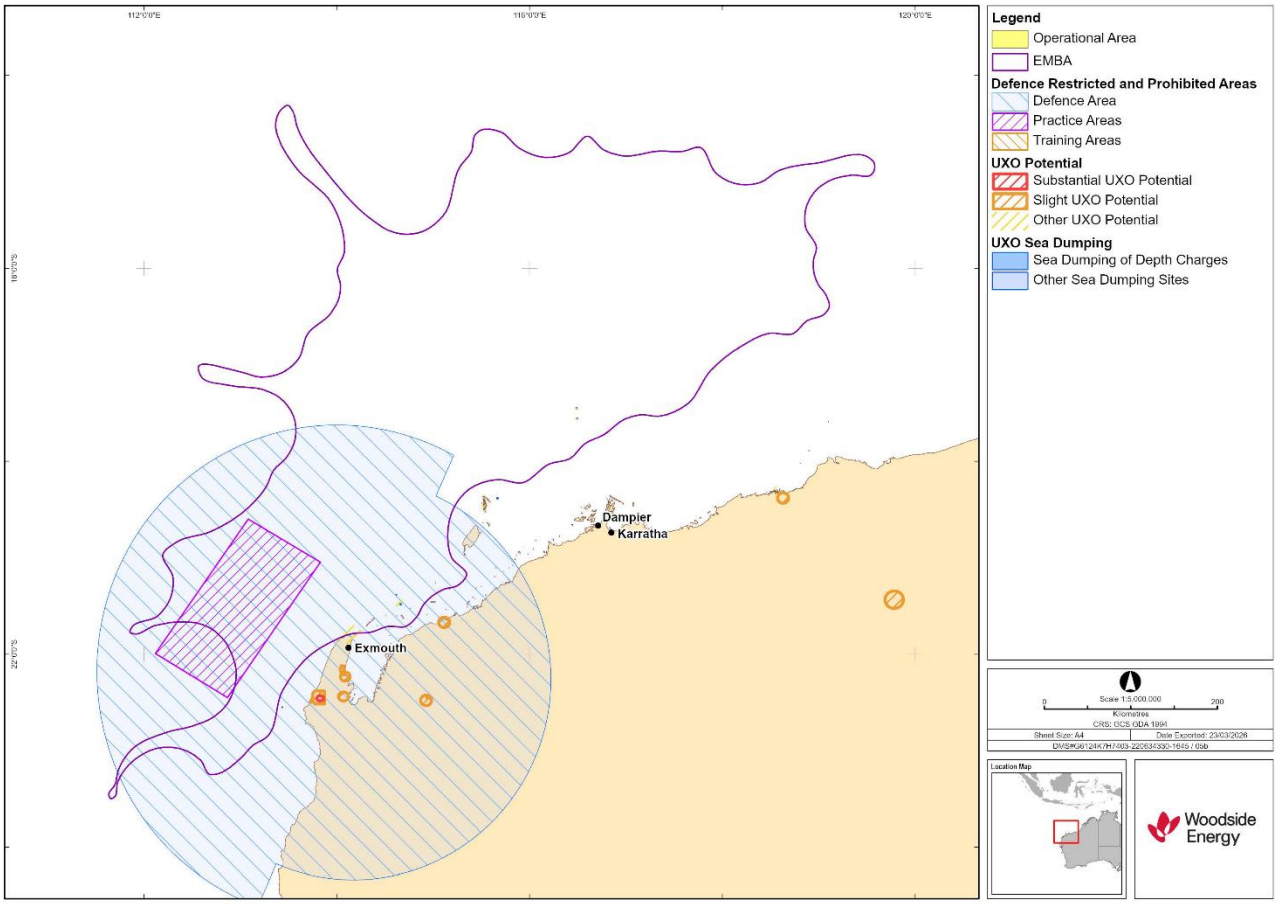
Your Feedback is Important

Woodside consults with relevant persons during the preparation of EPs to notify them about the activity and hear their feedback. By working together, we aim to protect biodiversity and maintain the health of ecosystems while carrying out our projects.

Your feedback helps shape the EP by:



- Identifying additional possible measures to reduce environmental impacts.
- Helping us consider cultural heritage and environmental values.
- Providing information that may help improve Woodside's environmental practices.

If there is particular information that you provide during consultation that you'd prefer not to be published, please let us know. We'll make your request known to NOPSEMA.

We'll manage any personal information collected during our consultation with you in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand more, please visit www.woodside.com/what-we-do/consultation-activities.

6.1.7 Email sent to Australian Border Force (ABF), Australian Energy Producers (AEP), Australian Marine Conservation Society (AMCS), Australian Maritime Safety Authority (AMSA)–Marine Pollution, BP, Beagle No. 1, Broome Chamber of Commerce and Industry (BCCI), Cape Conservation Group (CCG), Carbon CQ, Carnarvon Energy Ltd, City of Karratha, Conservation Council of WA (CCWA), Department of Industry, Science and Resources (DISR), Department of Mines, Petroleum and Exploration (DMPE), Department of Transport and Major Infrastructure (DTMI), Department of Water and Environmental Regulation (DWER), Exmouth Chamber of Commerce and Industry (Exmouth CCI), Exmouth Community Liaison Group (Exmouth CLG), Finder Energy, Greenpeace Australia Pacific (GPAP), INPEX (EP), InCapture, JX Nippon, KATO Energy (WA), Karratha & Districts Chamber of Commerce and Industry (KDCCI), Karratha Community Liaison Group (Karratha CLG), Kuwait Foreign Petroleum Exploration Company (KUFPEC), Kyushu Electric Wheatstone, Longreach Capital Investments, Marine Tourism WA, Ningaloo Coast World Heritage Advisory Committee (NCWHAC), OMV Australia, OPIC Australia Pty Limited, PE Wheatstone, Pelsart Resources N.L., Pilbara Ports, Protect Ningaloo, Recfishwest, SK Earthon, Santos, Shire of Broome, Shire of Exmouth, Skye Resources Pty Ltd, Tanami Energy, WA Game Fishing Association, Western Gas – 16 April 2026

Woodside is planning to submit the CK4 and LH3 Well Intervention Environment Plan (EP). The Cossack-4H (CK4) and Lambert-3 (LH3) well intervention is within the Woodside Burrup Pty Ltd Petroleum Licence Area WA-9-L and WA-16-L, located within Commonwealth waters ~135 km north-west of Dampier.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity in accordance with the intended outcome of consultation.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **18 May 2026** using the details below.

Overview

CK4 and LH3 Well Intervention EP covers:

- Light well intervention activities on the CK4 and LH3 wells using a light well intervention vessel (LWIV). The two wells produce oil and gas through the Okha FPSO facility which commenced production from the fields in 2011.
- Support vessel and helicopter operations.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

CK4 and LH3 Well Intervention Environment Plan	
Activity details	Activities include: • Light well intervention activities on the CK4 and LH-3 wells. Both CK4 and LH3 wells may require temporary well suspension, Xmas tree (XT) changeout and re-commissioning. The wells may also require Tubing Retrievable Safety Valve (TRSV) remediation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Preparation and support activities (e.g. inspections, cleaning). • Well start-up and production following intervention activities will be managed under the Okha FPSO Facility Operations EP.
Titles	• WA-9-L (CK4 well). • WA-16-L (LH3 well).
Location	• In Commonwealth waters, ~135 km north-west of Dampier.
Water depth	• ~81 m (CK4 well) and ~128 m (LH3 well).
Timing	• Between Q4 2026 and 2030.
Duration	• Between 14 to 35 days at the CK4 well • Between 14 to 21 days at the LH3 well. • Activities will take place 24 hours, 7 days a week. • Timing and duration are subject to change due to factors including approvals, weather, Protect vessel availability and other unforeseen circumstances.
Vessels	Key vessels include, but are not limited to: • LWIV • Additional support vessels • Helicopter to transport personnel and/or freight.
Operational Area and exclusion zones	• Operational Area is 1 km around each well. • A temporary 500 m exclusion zone will be in place around the LWIV.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are a loss of well control and a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **18 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

Woodside Energy Consultation

6.1.8 Email sent to Department of Defence (DoD) – 16 April 2026

Woodside is planning to submit the CK4 and LH3 Well Intervention Environment Plan (EP). The Cossack-4H (CK4) and Lambert-3 (LH3) well intervention is within the Woodside Burrup Pty Ltd Petroleum Licence Area WA-9-L and WA-16-L, located within Commonwealth waters ~135 km north-west of Dampier.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity in accordance with the intended outcome of consultation.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **18 May 2026** using the details below.

Overview

Water depth	• ~81 m (CK4 well) and ~128 m (LH3 well).
Timing	• Between Q4 2026 and 2030.
Duration	• Between 14 to 35 days at the CK4 well • Between 14 to 21 days at the LH3 well. • Activities will take place 24 hours, 7 days a week. • Timing and duration are subject to change due to factors including approvals, weather, Protect vessel availability and other unforeseen circumstances.
Vessels	• Key vessels include, but are not limited to: • LWIV • Additional support vessels • Helicopter to transport personnel and/or freight.
Operational Area and exclusion zones	• Operational Area is 1 km around each well. • A temporary 500 m exclusion zone will be in place around the LWIV.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are a loss of well control and a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **18 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards.

Woodside Energy Consultation

6.1.10 Email sent to Australian Hydrographic Office (AHO), Australian Maritime Safety Authority (AMSA)–Navigation Safety – 16 April 2026

Woodside is planning to submit the CK4 and LH3 Well Intervention Environment Plan (EP). The Cossack-4H (CK4) and Lambert-3 (LH3) well intervention is within the Woodside Burrup Pty Ltd Petroleum Licence Area WA-9-L and WA-16-L, located within Commonwealth waters ~135 km north-west of Dampier.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity in accordance with the intended outcome of consultation.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **18 May 2026** using the details below.

Overview

CK4 and LH3 Well Intervention EP covers:

- Light well intervention activities on the CK4 and LH3 wells using a light well intervention vessel (LWIV). The two wells produce oil and gas through the Okha FPSO facility which commenced production from the fields in 2011.
- Support vessel and helicopter operations.

Consultation information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of key impacts and risks and associated management measures. This is also available on our website.

Please also find attached vessel density maps and GIS shape files.

Activity and location summary

CK4 and LH3 Well Intervention Environment Plan	
Activity details	• Activities include: • Light well intervention activities on the CK4 and LH-3 wells. Both CK4 and LH3 wells may require temporary well suspension, Xmas tree (XT) changeout and re-commissioning. The wells may also require Tubing Retrievable Safety Valve (TRSV) remediation. • Preparation and support activities (e.g. inspections, cleaning). • Well start-up and production following intervention activities will be managed under the Okha FPSO Facility Operations EP.
Titles	• WA-9-L (CK4 well). • WA-16-L (LH3 well).
Location	• In Commonwealth waters, ~135 km north-west of Dampier.
Water depth	• ~81 m (CK4 well) and ~128 m (LH3 well).
Timing	• Between Q4 2026 and 2030.
Duration	• Between 14 to 35 days at the CK4 well • Between 14 to 21 days at the LH3 well. • Activities will take place 24 hours, 7 days a week. • Timing and duration are subject to change due to factors including approvals, weather, Protect vessel availability and other unforeseen circumstances.
Vessels	• Key vessels include, but are not limited to: • LWIV • Additional support vessels • Helicopter to transport personnel and/or freight.
Operational Area and exclusion zones	• Operational Area is 1 km around each well. • A temporary 500 m exclusion zone will be in place around the LWIV.

This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Please note that Woodside will:

- Notify the AHO no less than 4 weeks before operations commence
- Notify AMSA's Response Centre (ARC) at least 24-48 hours before operations commence [
- Provide updates to both the AHO and AMSA on any material changes to planned activities
- Ensure vessels exhibit appropriate lights and shapes to reflect the nature of operations and the obligation to comply with the International Rules for Preventing Collisions at Sea (COLREGS)
- Evaluate and implement adequate anti-collision measures including but not limited to additional warnings and/or lights to attract attention and installation of Automatic Identification System (AIS) units.

Biosecurity

With respect to the biosecurity matters, please note the following information below:

Environment description	
The proposed activity is within Woodside Burrup Pty Ltd Petroleum Licence Areas WA-9-L and WA-16-L, located within Commonwealth waters ~135 km north-west of Dampier. Water depths are ~81 m (CK4 well) and ~128 m (LH3 well)	
Potential IMS risk	IMS mitigation management
Vessels are potential vectors for introducing invasive marine species (IMS) during the proposed activity. IMS introduction is highly unlikely, however may be introduced to the Operational Areas through transfer of IMS.	Ballast water and biofouling will be managed according to the Australian Ballast Water Management Requirements and the Australian Biofouling Management Requirements, as applicable. Woodside's IMS risk assessment process will be applied to vessels and immersible equipment entering the Operational Areas. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspection or cleaning) will be implemented to minimise the likelihood of introducing IMS.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **18 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.14 Email sent to Director of National Parks (DNP) – 16 April 2026

Woodside is planning to submit the CK4 and LH3 Well Intervention Environment Plan (EP). The Cossack-4H (CK4) and Lambert-3 (LH3) well intervention is within the Woodside Burrup Pty Ltd Petroleum Licence Area WA-9-L and WA-16-L, located within Commonwealth waters ~135 km north-west of Dampier.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity in accordance with the intended outcome of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **18 May 2026** using the details below.

Overview

CK4 and LH3 Well Intervention EP covers:

- Light well intervention activities on the CK4 and LH3 wells using a light well intervention vessel (LWIV). The two wells produce oil and gas through the Okha FPSO facility which commenced production from the fields in 2011.
- Support vessel and helicopter operations.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Timing	• Between Q4 2026 and 2030.
Duration	• Between 14 to 35 days at the CK4 well • Between 14 to 21 days at the LH3 well. • Activities will take place 24 hours, 7 days a week. • Timing and duration are subject to change due to factors including approvals, weather, Protect vessel availability and other unforeseen circumstances.
Vessels	Key vessels include, but are not limited to: • LWIV

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Additional support vessels • Helicopter to transport personnel and/or freight.
Operational Area and exclusion zones	• Operational Area is 1 km around each well. • A temporary 500 m exclusion zone will be in place around the LWIV.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are a loss of well control and a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Australian Marine Parks (AMPs)

We note Australian Government Guidance on consultation activities and confirm that:

- The Operational Area does not overlap any AMPs.
- The worst-case credible spill scenarios assessed in this EP are a loss of well containment and vessel collision. Through a review of hydrocarbon spill modelling, and with consideration of a 10 ppb dissolved and 1000 ppb entrained hydrocarbon threshold, the following AMPs may be contacted in the event of a spill:
    - Montebello AMP
    - Gascoyne AMP
    - Ningaloo AMP
    - Argo-Rowley Terrace AMP
    - Mermaid Reef AMP
- A Commonwealth Government-approved oil spill response plan will be in place for the duration of the activities, which will include notification to relevant agencies and organisations as to the nature and scale of the event, as soon as practicable following an occurrence. The Director of National Parks will be advised if an environmental incident occurs that may impact the values of any AMP.

Woodside is aware of and will consider the *'Petroleum Activities and Australian Marine Parks'* guidance note developed and published jointly by DNP and NOPSEMA, while preparing this EP to ensure that the EP:

- Identifies and manages all impacts and risks on AMP values (including ecosystem values) to an acceptable level and has considered all options to avoid or reduce them to as low as reasonably practicable (ALARP).
- Clearly demonstrates that the activities will not be inconsistent with the North-west Marine Parks Network Management Plan 2018.

If there is a change in activities which results in an overlap or new impact to a marine park, Woodside will notify DNP.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on

our website by **18 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.15 Email sent to Department of Primary Industries and Regional Development (DPIRD) – 16 April 2026

Woodside is planning to submit the CK4 and LH3 Well Intervention Environment Plan (EP). The Cossack-4H (CK4) and Lambert-3 (LH3) well intervention is within the Woodside Burrup Pty Ltd Petroleum Licence Area WA-9-L and WA-16-L, located within Commonwealth waters ~135 km north-west of Dampier.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity in accordance with the intended outcome of consultation.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **18 May 2026** using the details below.

Overview

CK4 and LH3 Well Intervention EP covers:

- Light well intervention activities on the CK4 and LH3 wells using a light well intervention vessel (LWIV). The two wells produce oil and gas through the Okha FPSO facility which commenced production from the fields in 2011.
- Support vessel and helicopter operations.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

CK4 and LH3 Well Intervention Environment Plan	
Activity details	Activities include: • Light well intervention activities on the CK4 and LH-3 wells. Both CK4 and LH3 wells may require temporary

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	well suspension, Xmas tree (XT) changeout and re-commissioning. The wells may also require Tubing Retrievable Safety Valve (TRSV) remediation. • Preparation and support activities (e.g. inspections, cleaning). • Well start-up and production following intervention activities will be managed under the Okha FPSO Facility Operations EP.
Titles	• WA-9-L (CK4 well). • WA-16-L (LH3 well).
Location	• In Commonwealth waters, ~135 km north-west of Dampier.
Water depth	• ~81 m (CK4 well) and ~128 m (LH3 well).
Timing	• Between Q4 2026 and 2030.
Duration	• Between 14 to 35 days at the CK4 well • Between 14 to 21 days at the LH3 well. • Activities will take place 24 hours, 7 days a week. • Timing and duration are subject to change due to factors including approvals, weather, Protect vessel availability and other unforeseen circumstances.
Vessels	Key vessels include, but are not limited to: • LWIV • Additional support vessels • Helicopter to transport personnel and/or freight.
Operational Area and exclusion zones	• Operational Area is 1 km around each well. • A temporary 500 m exclusion zone will be in place around the LWIV.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are a loss of well control and a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

State fisheries

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

State fisheries active in the Operational Area:

- Mackerel Managed Fishery (Area 2)
- Pilbara Trawl Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery

State fisheries & aquaculture active in the EMBA:

- Exmouth Gulf Prawn Managed Fishery
- Gascoyne Demersal Scalefish Managed Fishery
- Mackerel Managed Fishery (Area 2)
- Marine Aquarium Fish Managed Fishery
- Nickol Bay Prawn Managed Fishery
- Onslow Prawn Managed Fishery
- Pilbara Crab Managed Fishery
- Pilbara Fish Trawl Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery
- West Australian Sea Cucumber Fishery
- Specimen Shell Managed Fishery
- West Coast Deep Sea Crustacean Managed Fishery
- Licensed aquaculture site, Mackerel Islands
- Approved pearl holding site, Dailey Shoal

Please note that Woodside has provided consultation information to the Western Australian Fishing Industry Council (WAFIC), Aquaculture Council of Western Australia (ACWA) and Recfishwest. Information provided to these bodies includes the planned timing and duration of the activities, and the spatial extent of the proposed activities (including any exclusion zones).

Woodside consults individual fishing license holders based on WAFIC's guidance and advice, whereby WAFIC:

- directly consults fishery licence holders that are assessed as having a potential for interaction in the Operational Area
- consults fisheries that are assessed as having a potential for interaction in the EMBA only in the event of an unplanned emergency scenario.

Woodside also consults with relevant Traditional Owners in the preparation of this EP.

Spill Contingency Plans

Within Woodside's Oil Pollution First Strike Plan (FSP), Woodside commits to notifying Department of Transport and Major Infrastructure (DTMI) within 2 hours of becoming aware of a marine pollution incident that occurs in or may impact State waters. Woodside also consults DTMI in the development of the FSP.

Woodside commits to notify DPIRD within 24 hours of our reporting the incident to the appropriate authority. We have noted this contact as environment@dpird.wa.gov.au and placed this in the Notification section of the FSP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

In addition, within the FSP, Woodside commits to identify and notify additional relevant persons and organisations such as, but not limited to, commercial fishers or tourism operators that may be affected during a spill event. Woodside would, at the relevant time, engage with these parties as appropriate and will re-assess relevant persons and organisations throughout the response period.

Woodside mitigates the risk of spill events through the adoption of a range of preventative controls (including engineering design) that all contribute to reducing the likelihood of a spill event to an unlikely level. The potential for hydrocarbons to reach coastal regions would be further minimised in the event of a spill by offshore response actions. Such responses would be aimed at reducing hydrocarbon contact with sensitive coastal areas, including commercially important fish species' spawning and aggregation areas.

Woodside's oil spill Operational and Scientific Monitoring (OSM) Program is executed under the Joint Industry OSM Framework (AEP, 2021). In the event of a spill, the OSM Framework will guide the situational awareness and response as well as undertake a suite of comprehensive science-based monitoring programs to evaluate environmental impacts. One such program is dedicated to the impacts on fisheries. The fisheries impact assessment has two objectives – to assess any physiological impacts to important fish and shellfish species and to assess targeted fish and shellfish species for hydrocarbon contamination.

Biosecurity

Woodside contracts support and light well intervention vessel services for the petroleum activity described in the EP. Woodside works closely with contractors to ensure compliance with all requirements previously requested by DPIRD including DPIRD's policy that marine pests or disease are reported within 24 hours. A 24-hour notification will be formally captured as a notification within the EP and communicated to vessel operators.

All vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing invasive marine species (IMS). Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan. Woodside's Invasive Marine Species Management Plan includes a risk assessment process that is applied to vessels undertaking activities. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **18 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.16 Email sent to Gascoyne Recreational Marine Users, Pilbara/Kimberley Recreational Marine Users– 16 April 2026

Woodside is planning to submit the CK4 and LH3 Well Intervention Environment Plan (EP). The Cossack-4H (CK4) and Lambert-3 (LH3) well intervention is within the Woodside Burrup Pty Ltd Petroleum Licence Area WA-9-L and WA-16-L, located within Commonwealth waters ~135 km north-west of Dampier.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity in accordance with the intended outcome of consultation.
If you would like to comment on the proposed activity, please provide feedback to Woodside by **18 May 2026** using the details below.

Overview
CK4 and LH3 Well Intervention EP covers:

- Light well intervention activities on the CK4 and LH3 wells using a light well intervention vessel (LWIV). The two wells produce oil and gas through the Okha FPSO facility which commenced production from the fields in 2011.
- Support vessel and helicopter operations.

Consultation information
A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

CK4 and LH3 Well Intervention Environment Plan	
Activity details	Activities include: • Light well intervention activities on the CK4 and LH-3 wells. Both CK4 and LH3 wells may require temporary well suspension, Xmas tree (XT) changeout and re-commissioning. The wells may also require Tubing Retrievable Safety Valve (TRSV) remediation. • Preparation and support activities (e.g. inspections, cleaning). • Well start-up and production following intervention activities will be managed under the Okha FPSO Facility Operations EP.
Titles	• WA-9-L (CK4 well). • WA-16-L (LH3 well).
Location	• In Commonwealth waters, ~135 km north-west of Dampier.
Water depth	• ~81 m (CK4 well) and ~128 m (LH3 well).
Timing	• Between Q4 2026 and 2030.
Duration	• Between 14 to 35 days at the CK4 well • Between 14 to 21 days at the LH3 well. • Activities will take place 24 hours, 7 days a week.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Timing and duration are subject to change due to factors including approvals, weather, Protect vessel availability and other unforeseen circumstances.
Vessels	Key vessels include, but are not limited to: • LWIV • Additional support vessels • Helicopter to transport personnel and/or freight.
Operational Area and exclusion zones	• Operational Area is 1 km around each well. • A temporary 500 m exclusion zone will be in place around the LWIV.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are a loss of well control and a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

6.1.20 Email sent to Department of Planning, Lands and Heritage (DPLH) – 16 April 2026

Woodside is planning to submit the CK4 and LH3 Well Intervention Environment Plan (EP). The Cossack-4H (CK4) and Lambert-3 (LH3) well intervention is within the Woodside Burrup Pty Ltd Petroleum Licence Area WA-9-L and WA-16-L, located within Commonwealth waters ~135 km north-west of Dampier.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity in accordance with the intended outcome of consultation.
If you would like to comment on the proposed activity, please provide feedback to Woodside by **18 May 2026** using the details below.

Overview
CK4 and LH3 Well Intervention EP covers:

- Light well intervention activities on the CK4 and LH3 wells using a light well intervention vessel (LWIV). The two wells produce oil and gas through the Okha FPSO facility which commenced production from the fields in 2011.
- Support vessel and helicopter operations.

Consultation information
A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of key impacts and risks and associated management measures. This is also available on our website.

Please also find attached the details of WA shipwrecks that are relevant for this EP.
Given the proximity of the proposed activities to Marine Parks, Woodside is consulting with the Department of Biodiversity, Conservation and Attractions (DBCA) for this EP. Woodside is also consulting with the Western Australian Museum and provided it with relevant shipwreck information for this EP.

Activity and location summary

CK4 and LH3 Well Intervention Environment Plan	
Activity details	Activities include: • Light well intervention activities on the CK4 and LH-3 wells. Both CK4 and LH3 wells may require temporary well suspension, Xmas tree (XT) changeout and re-commissioning. The wells may also require Tubing Retrievable Safety Valve (TRSV) remediation. • ·Preparation and support activities (e.g. inspections, cleaning). • ·Well start-up and production following intervention activities will be managed under the Okha FPSO Facility Operations EP.
Titles	• ·WA-9-L (CK4 well). • A-16-L (LH3 well).
Location	• ·n Commonwealth waters, ~135 km north-west of Dampier.
Water depth	• ~81 m (CK4 well) and ~128 m (LH3 well).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Timing	• Between Q4 2026 and 2030.
Duration	• Between 14 to 35 days at the CK4 well • Between 14 to 21 days at the LH3 well. • Activities will take place 24 hours, 7 days a week. • ·Timing and duration are subject to change due to factors including approvals, weather, Protect vessel availability and other unforeseen circumstances.
Vessels	Key vessels include, but are not limited to: • LWIV • Additional support vessels • Helicopter to transport personnel and/or freight.
Operational Area and exclusion zones	• ·Operational Area is 1 km around each well. • A temporary 500 m exclusion zone will be in place around the LWIV.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are a loss of well control and a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **18 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are a loss of well control and a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Woodside is required to manage environmental impacts and risks to the EMBA by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations), through the implementation of the EP. Woodside will submit the proposed EP to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Preparedness and Response

In the course of developing the EP, Woodside will develop the oil spill preparedness and response position tailored to this activity including the drafting of the Oil Pollution First Strike Plan which details the potential impacts, notifications and response mitigations that may be executed to manage an emergency event. Woodside consults with the relevant jurisdictional authorities and controlling agencies, including the Western Australian Department of Transport and Major Infrastructure (DTMI), the Australian Maritime Safety Agency (AMSA) and, in some circumstances, relevant port authorities, during the plan drafting process to inform mitigation management measures in place for the proposed activities. Woodside may also consult with other relevant external emergency management agencies, including LEMC, to ensure emergency management plans are aligned with effective outcomes.

In addition to the jurisdictional authorities and controlling agencies, the plan includes standard emergency notifications to agencies including NOPSEMA, the Department of Climate Change, Energy, the Environment and Water (DCCEEW), the Director of National Parks (DNP), and the WA Department of Biodiversity, Conservation and Attractions (DBCA). Where applicable, notification information for relevant Shires is also included in the Oil Pollution First Strike Plan.

Cultural heritage

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside routinely utilises the Department of Planning, Land and Heritage Aboriginal Cultural Heritage Inquiry System as part of the EP development process and includes the results of these inquiry system searches as an appendix to each EP.
