- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 26-Jun-2026

[Summary](#)
[Details](#)
- [Matters of NES](#)
- [Other Matters Protected by the EPBC Act](#)
- [Extra Information](#)

[Caveat](#)
[Acknowledgements](#)

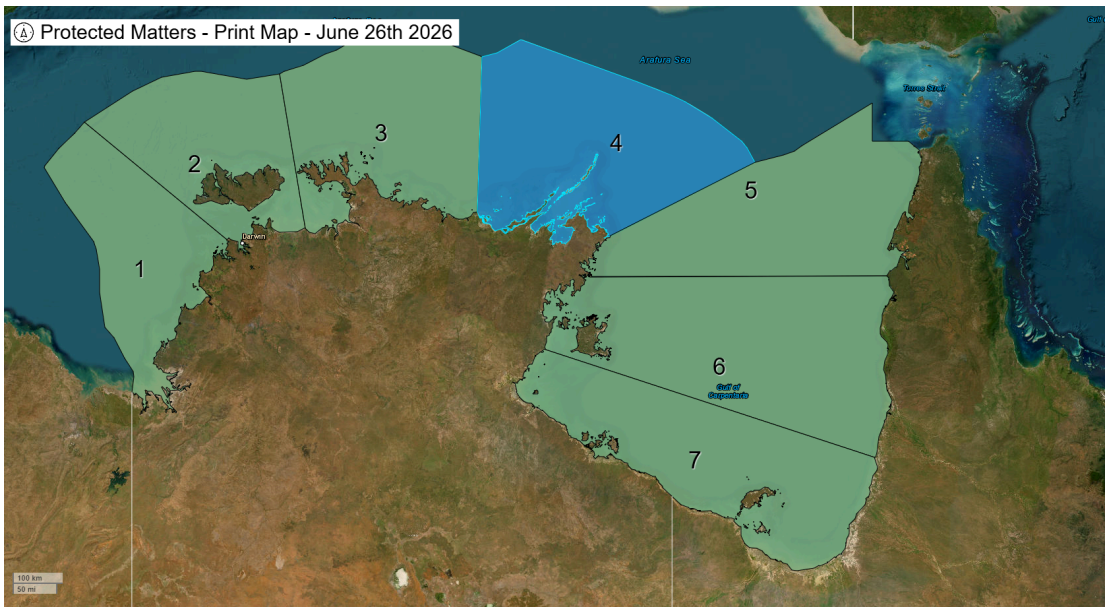

Figure 1: North Marine Region - Part 4

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	1
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	52
Listed Migratory Species:	61

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	22
Commonwealth Heritage Places:	None
Listed Marine Species:	92
Whales and Other Cetaceans:	26
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	3
Habitat Critical to the Survival of Marine Turtles:	5

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	17
Key Ecological Features (Marine):	2
Biologically Important Areas:	9
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

National Heritage Places [Resource Information]

Name	State	Legal Status
Indigenous		
Wurrwurrwuy	NT	Listed place

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)

Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris tenuirostris		
Great Knot [862]	Vulnerable	Species or species habitat likely to occur within area
Charadrius leschenaultii		
Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Chloebia gouldiae listed as Erythrura gouldiae		
Gouldian Finch [90091]	Endangered	Species or species habitat may occur within area
Erythrotriorchis radiatus		
Red Goshawk [942]	Endangered	Species or species habitat likely to occur within area
Falcunculus frontatus whitei		
Crested Shrike-tit (northern), Northern Shrike-tit [26013]	Vulnerable	Species or species habitat likely to occur within area
Geophaps smithii smithii		
Partridge Pigeon (eastern) [64441]	Vulnerable	Species or species habitat likely to occur within area
Limnodromus semipalmatus		
Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica baueri		
Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Endangered	Species or species habitat may occur within area
Limosa limosa		
Black-tailed Godwit [845]	Endangered	Species or species habitat likely to occur within area
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Rostratula australis		
Australian Painted Snipe [77037]	Endangered	Species or species habitat may occur within area
Sternula albifrons		
Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Tringa nebularia		
Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Tyto novaehollandiae kimberli		
Masked Owl (northern) [26048]	Vulnerable	Species or species habitat likely to occur within area
MAMMAL		
Antechinus bellus		
Fawn Antechinus [344]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Species or species habitat may occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
Conilurus penicillatus		
Brush-tailed Rabbit-rat, Brush-tailed Tree-rat, Pakooma [132]	Vulnerable	Species or species habitat likely to occur within area
Dasyurus hallucatus		
Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Translocated population known to occur within area
Isoodon auratus auratus		
Golden Bandicoot (mainland) [66665]	Vulnerable	Translocated population known to occur within area
Macroderma gigas		
Ghost Bat [174]	Vulnerable	Species or species habitat likely to occur within area
Mesembriomys gouldii gouldii		
Black-footed Tree-rat (Kimberley and mainland Northern Territory), Djintamoonga, Manbul [87618]	Endangered	Species or species habitat likely to occur within area
Notomys aquilo		
Northern Hopping-mouse, Woorrentinta [123]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Orcaella heinsohni		
Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area
Petrogale concinna canescens		
Nabarlek (Top End) [87606]	Endangered	Species or species habitat likely to occur within area
Phascogale pirata		
Northern Brush-tailed Phascogale [82954]	Vulnerable	Species or species habitat may occur within area
Saccolaimus saccolaimus nudicluniatus		
Bare-rumped Sheath-tailed Bat, Bare-rumped Sheathtail Bat [66889]	Vulnerable	Species or species habitat likely to occur within area
Sousa sahulensis		
Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat likely to occur within area
Trichosurus vulpecula arnhemensis		
Northern Brushtail Possum [83091]	Vulnerable	Species or species habitat likely to occur within area
Xeromys myoides		
Water Mouse, False Water Rat, Yirrkoo [66]	Vulnerable	Species or species habitat likely to occur within area
PLANT		
Erythroxylum sp. Cholmondely Creek (J.R.Clarkson 9367) (Northern Territory Population)		
[91740]	Vulnerable	Species or species habitat likely to occur within area
REPTILE		
Acanthophis hawkei		
Plains Death Adder [83821]	Vulnerable	Species or species habitat may occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Tiliqua scincoides intermedia Northern Blue-tongued Skink [89838]	Critically Endangered	Species or species habitat likely to occur within area
Varanus mertensi Mertens' Water Monitor [1568]	Endangered	Species or species habitat likely to occur within area
Varanus mitchelli Mitchell's Water Monitor [1569]	Critically Endangered	Species or species habitat may occur within area
SHARK		
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Glyphis glyphis Speartooth Shark [82453]	Critically Endangered	Species or species habitat likely to occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area

Key Ecological Features

[Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Gulf of Carpentaria basin	North
Tributary Canyons of the Arafura Depression	North

Biologically Important Areas

[Resource Information]

Scientific Name	Behaviour	Presence
Marine Turtles		
Chelonia mydas		
Green Turtle [1765]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Chelonia mydas Green Turtle [1765]	Reproduction	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Reproduction	Known to occur
Lepidochelys olivacea Olive Ridley Turtle [1767]	Reproduction	Likely to occur
Natator depressus Flatback Turtle [59257]	Reproduction	Known to occur
Seabirds		
Anous stolidus Common Noddy [825]	Reproduction	Known to occur
Onychoprion anaethetus Bridled Tern [82845]	Reproduction	Known to occur
Sterna dougallii Roseate Tern [817]	Reproduction	Known to occur
Thalasseus bergii Crested Tern [83000]	Reproduction	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 26-Jun-2026

Summary

Details

- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	61
Listed Migratory Species:	59

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	7
Commonwealth Heritage Places:	None
Listed Marine Species:	115
Whales and Other Cetaceans:	14
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	5
Habitat Critical to the Survival of Marine Turtles:	5

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	2
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	18
Key Ecological Features (Marine):	2
Biologically Important Areas:	11
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Chloebia gouldiae listed as Erythrura gouldiae Gouldian Finch [90091]	Endangered	Species or species habitat may occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Falcunculus frontatus whitei Crested Shrike-tit (northern), Northern Shrike-tit [26013]	Vulnerable	Species or species habitat likely to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat likely to occur within area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Species or species habitat likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Probosciger aterrimus macgillivrayi Palm Cockatoo (Australian) [67033]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tyto novaehollandiae kimberli Masked Owl (northern) [26048]	Vulnerable	Species or species habitat likely to occur within area
MAMMAL		

Scientific Name	Threatened Category	Presence Text
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat may occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat may occur within area
Conilurus penicillatus Brush-tailed Rabbit-rat, Brush-tailed Tree-rat, Pakooma [132]	Vulnerable	Species or species habitat may occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat likely to occur within area
Hipposideros semoni Semon's Leaf-nosed Bat, Greater Wart-nosed Horseshoe-bat [180]	Vulnerable	Species or species habitat may occur within area
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat likely to occur within area
Mesembriomys gouldii gouldii Black-footed Tree-rat (Kimberley and mainland Northern Territory), Djintamoonga, Manbul [87618]	Endangered	Species or species habitat likely to occur within area
Mesembriomys gouldii rattoides Black-footed Tree-rat (north Queensland), Shaggy Rabbit-rat [87620]	Vulnerable	Species or species habitat likely to occur within area
Notomys aquilo Northern Hopping-mouse, Woorrentinta [123]	Endangered	Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Petrogale concinna canescens Nabarlek (Top End) [87606]	Endangered	Species or species habitat may occur within area
Phascogale pirata Northern Brush-tailed Phascogale [82954]	Vulnerable	Species or species habitat may occur within area
Rhinolophus robertsi Large-eared Horseshoe Bat, Greater Large-eared Horseshoe Bat, Lesser Large-eared Horseshoe Bat [87639]	Vulnerable	Species or species habitat may occur within area
Saccolaimus saccolaimus nudicluniatus Bare-rumped Sheath-tailed Bat, Bare-rumped Sheathtail Bat [66889]	Vulnerable	Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Trichosurus vulpecula arnhemensis Northern Brushtail Possum [83091]	Vulnerable	Species or species habitat likely to occur within area
Xeromys myoides Water Mouse, False Water Rat, Yirrkoo [66]	Vulnerable	Species or species habitat likely to occur within area
PLANT		
Bruguiera x hainesii Haines's Orange Mangrove [91351]	Critically Endangered	Species or species habitat may occur within area
Calophyllum bicolor [11371]	Vulnerable	Species or species habitat likely to occur within area
Dendrobium bigibbum Cooktown Orchid [10306]	Vulnerable	Species or species habitat likely to occur within area
Dendrobium carronii listed as Cepobaculum carronii an orchid [10822]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Dendrobium johannis		
Chocolate Tea Tree Orchid [13585]	Vulnerable	Species or species habitat likely to occur within area
Erythroxylum sp. Cholmondely Creek (J.R.Clarkson 9367) (Northern Territory Population)		
[91740]	Vulnerable	Species or species habitat may occur within area
Solanum dunalianum		
[13819]	Vulnerable	Species or species habitat likely to occur within area
Vappodes phalaenopsis		
Cooktown Orchid [78894]	Vulnerable	Species or species habitat may occur within area
Xylopia monosperma		
a shrub [82030]	Endangered	Species or species habitat likely to occur within area
REPTILE		
Acanthophis hawkei		
Plains Death Adder [83821]	Vulnerable	Species or species habitat may occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Egernia rugosa		
Yakka Skink [1420]	Vulnerable	Species or species habitat may occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Lepidochelys olivacea		
Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Tiliqua scincoides intermedia Northern Blue-tongued Skink [89838]	Critically Endangered	Species or species habitat likely to occur within area
Varanus mertensi Mertens' Water Monitor [1568]	Endangered	Species or species habitat likely to occur within area
SHARK		
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Glyphis glyphis Speartooth Shark [82453]	Critically Endangered	Species or species habitat likely to occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		

Scientific Name	Threatened Category	Presence Text
Anous stolidus Common Noddy [825]		Breeding likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat may occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat may occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat may occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Dugong dugon Dugong [28]		Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Mobula alfredi as Manta alfredi		
Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris		
Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcaella heinsohni		
Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area
Orcinus orca		
Killer Whale, Orca [46]		Species or species habitat may occur within area
Pristis clavata		
Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis		
Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sousa sahulensis as Sousa chinensis		
Australian Humpback Dolphin [87942]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Migratory Terrestrial Species		
Cecropis daurica		
Red-rumped Swallow [80610]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Cuculus optatus Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat likely to occur within area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Species or species habitat likely to occur within area
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area
Migratory Wetlands Species		
Acrocephalus orientalis Oriental Reed-Warbler [59570]		Species or species habitat may occur within area
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State
Bureau of Meteorology	
Lot 1 on MPH35644 [AGPR2812]	QLD
Department of Defence	
Weipa Training Depot - Kerr Point Drive [DD_3131]	QLD
Department of Home Affairs	
Lot 42 on MP37500 [AGPR2804]	QLD
Lot 44 on MP37500 [AGPR2806]	QLD
Lot 50 on MP37500 [AGPR2807]	QLD
Lot 51 on MP37500 [AGPR2805]	QLD
Services Australia	
Lot 217 on MPH41093 [AGPR2813]	QLD

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Acrocephalus orientalis Oriental Reed-Warbler [59570]		Species or species habitat may occur within area overfly marine area
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Anous stolidus Common Noddy [825]		Breeding likely to occur within area
Anseranas semipalmata Magpie Goose [978]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Cecropis daurica as Hirundo daurica Red-rumped Swallow [80610]		Species or species habitat may occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat may occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area overfly marine area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat likely to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting likely to occur within area overfly marine area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area overfly marine area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Monarcha melanopsis Black-faced Monarch [609]		Species or species habitat may occur within area overfly marine area
Myiagra cyanoleuca Satin Flycatcher [612]		Species or species habitat likely to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Rhipidura rufifrons Rufous Fantail [592]		Species or species habitat likely to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Symposiachrus trivirgatus as Monarcha trivirgatus Spectacled Monarch [83946]		Species or species habitat likely to occur within area overfly marine area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area overfly marine area
Fish		
Acentronura tentaculata Shortpouch Pygmy Pipehorse [66187]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys amplexus Fijian Banded Pipefish, Brown-banded Pipefish [66199]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Yellow-banded Pipefish [66200]		Species or species habitat may occur within area
Corythoichthys intestinalis Australian Messmate Pipefish, Banded Pipefish [66202]		Species or species habitat may occur within area
Corythoichthys ocellatus Orange-spotted Pipefish, Ocellated Pipefish [66203]		Species or species habitat may occur within area
Corythoichthys schultzi Schultz's Pipefish [66205]		Species or species habitat may occur within area
Cosmocampus maxweberi Maxweber's Pipefish [66209]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Festucalex cinctus Girdled Pipefish [66214]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus dunckeri Red-hair Pipefish, Duncker's Pipefish [66220]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus macrorhynchus Whiskered Pipefish, Ornate Pipefish [66222]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophora as Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Pipefish, Ribboned Seadragon [94706]		Species or species habitat may occur within area
Hippichthys cyanospilos Blue-speckled Pipefish, Blue-spotted Pipefish [66228]		Species or species habitat may occur within area
Hippichthys heptagonus Madura Pipefish, Reticulated Freshwater Pipefish [66229]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippichthys spicifer Belly-barred Pipefish, Banded Freshwater Pipefish [66232]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Hippocampus zebra Zebra Seahorse [66241]		Species or species habitat may occur within area
Micrognathus brevirostris thorntail Pipefish, Thorn-tailed Pipefish [66254]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Microphis brachyurus Short-tail Pipefish, Short-tailed River Pipefish [66257]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Solenostomus cyanopterus](#) Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
[Syngnathoides biaculeatus](#) Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
[Trachyrhamphus bicoarctatus](#) Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
[Trachyrhamphus longirostris](#) Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
[Dugong dugon](#) Dugong [28]		Species or species habitat likely to occur within area
Reptile		
[Aipysurus duboisii](#) Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
[Aipysurus laevis](#) Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
[Aipysurus mosaicus as Aipysurus eydouxii](#) Mosaic Sea Snake [87261]		Species or species habitat may occur within area
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
[Crocodylus johnstoni](#) Freshwater Crocodile, Johnston's Crocodile, Johnstone's Crocodile [1773]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis atriceps Black-headed Sea Snake, Banded Sea Snake [1101]		Species or species habitat may occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis hardwickii as Lapemis hardwickii Spine-bellied Sea Snake [93516]		Species or species habitat may occur within area
Hydrophis inornatus Plain Sea Snake [1107]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis melanosoma Black-banded Robust Sea Snake [1109]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis pacificus Pacific Sea Snake, Large-headed Sea Snake [1112]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Hydrophis vorisi Estuarine Sea Snake [25927]		Species or species habitat may occur within area
Hydrophis zweifeli as Enhydrina schistosa Australian Beaked Sea Snake [93514]		Species or species habitat may occur within area
Laticauda colubrina Yellow-lipped Sea Krait [1092]		Species or species habitat may occur within area
Laticauda laticaudata a sea krait [1093]		Species or species habitat may occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Microcephalophis gracilis as Hydrophis gracilis		
Graceful Small-headed Sea Snake, Slender Sea Snake [87375]		Species or species habitat may occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Parahydrophis mertoni		
Arafura Smooth Sea Snake, Northern Mangrove Sea Snake [1090]		Species or species habitat may occur within area

Whales and Other Cetaceans [Resource Information]

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Species or species habitat may occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Species or species habitat may occur within area
Balaenoptera omurai		
Omura's Whale [87136]		Species or species habitat likely to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Species or species habitat may occur within area
Delphinus delphis		
Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Grampus griseus		
Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Orcaella heinsohni		
Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area

Australian Marine Parks	[Resource Information]

Title of referral	Reference	Referral Outcome	Assessment Status
Arnhem Space Centre Operations (Down Range Recovery)	2023/09657		Completed
Aurukun Bauxite Project	2020/8624		Assessment
Controlled action			
Bauxite Hill Mining and Barging Project	2015/7538	Controlled Action	Post-Approval
Bauxite Hills Mine and Port Project	2012/6246	Controlled Action	Completed
Hey Point bauxite mining project, approx 10kms south Weipa, Qld	2014/7382	Controlled Action	Post-Approval
Pisolite Hills bauxite mine and associated infrast	2008/4046	Controlled Action	Completed
PNG-Qld Gas Pipeline - Gove Lateral	2006/2615	Controlled Action	Completed

Title of referral	Reference	Referral Outcome	Assessment Status
Controlled action			
Skardon River Bauxite Mining Project, Weipa, QLD	2014/7305	Controlled Action	Post-Approval
South of the Embley Bauxite Mine Extension, including Construction of Port and Infrastructure	2008/4435	Controlled Action	Completed
South of the Embley Bauxite Mining Project	2010/5642	Controlled Action	Post-Approval
Urquhart Bauxite Project, North Qld	2016/7706	Controlled Action	Post-Approval
Urquhart Point mineral sands project	2010/5707	Controlled Action	Post-Approval
Not controlled action			
Dredging of Weipa South Channel	2003/1311	Not Controlled Action	Completed
Extension of Lorim Point Wharf	2004/1749	Not Controlled Action	Completed
Not controlled action (particular manner)			
2D Seismic Survey, Permit Area Q23P	2009/4925	Not Controlled Action (Particular Manner)	Post-Approval
Kingtree & Ironstone-1 Exploration Wells	2011/5935	Not Controlled Action (Particular Manner)	Post-Approval
Two dimensional (2d) seismic survey in Gulf of Carpentaria	2013/6991	Not Controlled Action (Particular Manner)	Post-Approval
Referral decision			
Capital Dredging Weipa South Channel	2003/1302	Referral Decision	Completed

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Gulf of Carpentaria basin	North
Gulf of Carpentaria coastal zone	North

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Dolphins		
Sousa sahulensis Australian Humpback Dolphin [87942]	Foraging	Likely to occur
Tursiops aduncus Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Reproduction	Known to occur
Marine Turtles		
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Reproduction	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Reproduction	Known to occur
Lepidochelys olivacea Olive Ridley Turtle [1767]	Reproduction	Likely to occur
Natator depressus Flatback Turtle [59257]	Reproduction	Known to occur
Seabirds		
Anous stolidus Common Noddy [825]	Reproduction	Known to occur
Fregata ariel Lesser Frigatebird [1012]	Foraging	Likely to occur
Onychoprion anaethetus Bridled Tern [82845]	Reproduction	Known to occur
Sterna dougallii Roseate Tern [817]	Reproduction	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 26-Jun-2026

[Summary](#)
[Details](#)
- [Matters of NES](#)
- [Other Matters Protected by the EPBC Act](#)
- [Extra Information](#)

[Caveat](#)
[Acknowledgements](#)

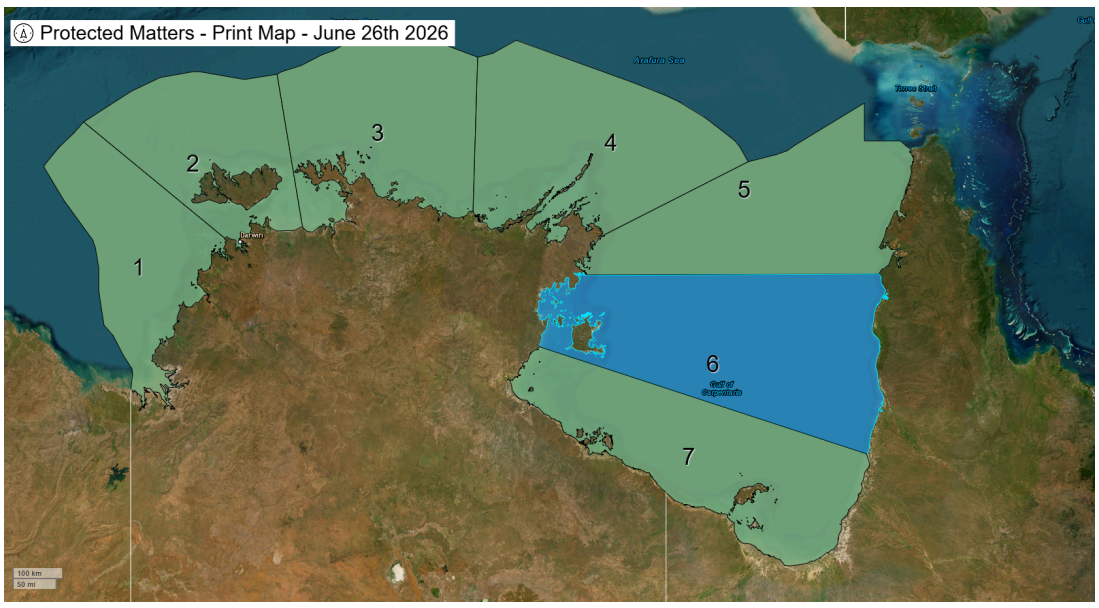

Figure 1: North Marine Region - Part 6

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	61
Listed Migratory Species:	72

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	4
Commonwealth Heritage Places:	None
Listed Marine Species:	119
Whales and Other Cetaceans:	14
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	2
Habitat Critical to the Survival of Marine Turtles:	4

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	2
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	13
Key Ecological Features (Marine):	3
Biologically Important Areas:	10
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Chloebia gouldiae listed as Erythrura gouldiae Gouldian Finch [90091]	Endangered	Species or species habitat may occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat may occur within area
Falcunculus frontatus whitei Crested Shrike-tit (northern), Northern Shrike-tit [26013]	Vulnerable	Species or species habitat likely to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat may occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Endangered	Species or species habitat may occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area
Probosciger aterrimus macgillivrayi Palm Cockatoo (Australian) [67033]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tyto novaehollandiae kimberli Masked Owl (northern) [26048]	Vulnerable	Species or species habitat likely to occur within area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area
MAMMAL		
Antechinus bellus Fawn Antechinus [344]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat may occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat may occur within area
Conilurus penicillatus Brush-tailed Rabbit-rat, Brush-tailed Tree-rat, Pakooma [132]	Vulnerable	Species or species habitat likely to occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat likely to occur within area
Mesembriomys gouldii rattoides Black-footed Tree-rat (north Queensland), Shaggy Rabbit-rat [87620]	Vulnerable	Species or species habitat may occur within area
Notomys aquilo Northern Hopping-mouse, Woorrentinta [123]	Endangered	Species or species habitat likely to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area
Petrogale concinna canescens Nabarlek (Top End) [87606]	Endangered	Species or species habitat likely to occur within area
Phascogale pirata Northern Brush-tailed Phascogale [82954]	Vulnerable	Species or species habitat may occur within area
Rhinolophus robertsi Large-eared Horseshoe Bat, Greater Large-eared Horseshoe Bat, Lesser Large-eared Horseshoe Bat [87639]	Vulnerable	Species or species habitat may occur within area
Saccolaimus saccolaimus nudicluniatus Bare-rumped Sheath-tailed Bat, Bare-rumped Sheathtail Bat [66889]	Vulnerable	Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat likely to occur within area
Trichosurus vulpecula arnhemensis Northern Brushtail Possum [83091]	Vulnerable	Species or species habitat likely to occur within area
Xeromys myoides Water Mouse, False Water Rat, Yirrkoo [66]	Vulnerable	Species or species habitat likely to occur within area
PLANT		

Scientific Name	Threatened Category	Presence Text
[Dendrobium bigibbum](#) Cooktown Orchid [10306]	Vulnerable	Species or species habitat likely to occur within area
[Dendrobium johannis](#) Chocolate Tea Tree Orchid [13585]	Vulnerable	Species or species habitat likely to occur within area

[Natator depressus](#) Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
[Tiliqua scincoides intermedia](#) Northern Blue-tongued Skink [89838]	Critically Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Varanus mertensi		
Mertens' Water Monitor [1568]	Endangered	Species or species habitat likely to occur within area
Varanus mitchelli		
Mitchell's Water Monitor [1569]	Critically Endangered	Species or species habitat may occur within area
SHARK		
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Glyphis glyphis		
Speartooth Shark [82453]	Critically Endangered	Species or species habitat may occur within area
Pristis clavata		
Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis		
Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sphyrna lewini		
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai		
Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		

Scientific Name	Threatened Category	Presence Text
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat may occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat may occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Dugong dugon Dugong [28]		Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sousa sahulensis as Sousa chinensis Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat likely to occur within area
Migratory Terrestrial Species		
Cecropis daurica Red-rumped Swallow [80610]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Cuculus optatus](#) Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat may occur within area
[Hirundo rustica](#) Barn Swallow [662]		Species or species habitat may occur within area
[Motacilla cinerea](#) Grey Wagtail [642]		Species or species habitat may occur within area
[Motacilla flava](#) Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
[Acrocephalus orientalis](#) Oriental Reed-Warbler [59570]		Species or species habitat may occur within area
[Actitis hypoleucos](#) Common Sandpiper [59309]		Species or species habitat likely to occur within area
[Arenaria interpres](#) Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area

[Calidris alba](#) Sanderling [875]		Roosting likely to occur within area
[Calidris canutus](#) Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
[Calidris falcinellus as Limicola falcinellus](#) Broad-billed Sandpiper [91731]		Roosting likely to occur within area
[Calidris ferruginea](#) Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat may occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area
Glareola maldivarum Oriental Pratincole [840]		Roosting may occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Roosting likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State
Department of Defence	
Aurukun Training Depot [DD_3134]	QLD
Groote Eylandt Training Depot [DD_0833]	NT
JORN Radar Site - Groote Eylandt [DD_3212]	NT
Pormpuraaw Training Depot [DD_3133]	QLD

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Acrocephalus orientalis Oriental Reed-Warbler [59570]		Species or species habitat may occur within area overfly marine area
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Anseranas semipalmata Magpie Goose [978]		Species or species habitat may occur within area overfly marine area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Roosting likely to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area overfly marine area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Cecropis daurica as Hirundo daurica Red-rumped Swallow [80610]		Species or species habitat may occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat may occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Species or species habitat likely to occur within area overfly marine area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area overfly marine area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat likely to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat may occur within area overfly marine area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area
Glareola maldivarum Oriental Pratincole [840]		Roosting may occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting likely to occur within area overfly marine area
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area overfly marine area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area overfly marine area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area overfly marine area
Myiagra cyanoleuca Satin Flycatcher [612]		Species or species habitat may occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area overfly marine area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Gulf of Carpentaria basin	North
Gulf of Carpentaria coastal zone	North
Submerged coral reefs of the Gulf of Carpentaria	North

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Marine Turtles		
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Reproduction	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Reproduction	Known to occur
Lepidochelys olivacea Olive Ridley Turtle [1767]	Reproduction	Likely to occur

Scientific Name	Behaviour	Presence
Natator depressus Flatback Turtle [59257]	Reproduction	Known to occur
Seabirds		
Fregata ariel Lesser Frigatebird [1012]	Foraging	Likely to occur
Fregata ariel Lesser Frigatebird [1012]	Reproduction	Known to occur
Onychoprion anaethetus Bridled Tern [82845]	Reproduction	Known to occur
Sterna dougallii Roseate Tern [817]	Reproduction	Known to occur
Thalasseus bergii Crested Tern [83000]	Reproduction	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	53
Listed Migratory Species:	75

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	1
Commonwealth Heritage Places:	None
Listed Marine Species:	113
Whales and Other Cetaceans:	14
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	4
Habitat Critical to the Survival of Marine Turtles:	3

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	9
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	9
Key Ecological Features (Marine):	4
Biologically Important Areas:	11
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area

Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat may occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Breeding likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Foraging, feeding or related behaviour likely to occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sterna sumatrana Black-naped Tern [800]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Sula leucogaster Brown Booby [1022]		Breeding likely to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat may occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat may occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat may occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Dugong dugon Dugong [28]		Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sousa sahulensis as Sousa chinensis		
Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat likely to occur within area
Migratory Terrestrial Species		
Cecropis daurica		
Red-rumped Swallow [80610]		Species or species habitat likely to occur within area
Cuculus optatus		
Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat may occur within area
Hirundo rustica		
Barn Swallow [662]		Species or species habitat likely to occur within area
Motacilla cinerea		
Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava		
Yellow Wagtail [644]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Acrocephalus orientalis		
Oriental Reed-Warbler [59570]		Species or species habitat may occur within area
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat likely to occur within area
Arenaria interpres		
Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Roosting likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Roosting likely to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area
Glareola maldivarum Oriental Pratincole [840]		Roosting may occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Tringa nebularia		
Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tringa stagnatilis		
Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area
Xenus cinereus		
Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area

Commonwealth Lands	[Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Acrocephalus orientalis		
Oriental Reed-Warbler [59570]		Species or species habitat may occur within area overfly marine area
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat likely to occur within area
Anous stolidus		
Common Noddy [825]		Species or species habitat may occur within area
Anseranas semipalmata		
Magpie Goose [978]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Roosting likely to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area overfly marine area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Cecropis daurica as Hirundo daurica Red-rumped Swallow [80610]		Species or species habitat likely to occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat likely to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Roosting likely to occur within area overfly marine area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Roosting likely to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Breeding likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Foraging, feeding or related behaviour likely to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area
Glareola maldivarum Oriental Pratincole [840]		Roosting may occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting likely to occur within area overfly marine area
Hirundo rustica Barn Swallow [662]		Species or species habitat likely to occur within area overfly marine area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area overfly marine area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area
Motacilla flava Yellow Wagtail [644]		Species or species habitat likely to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat may occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting likely to occur within area overfly marine area
Rhipidura rufifrons Rufous Fantail [592]		Species or species habitat likely to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sterna sumatrana Black-naped Tern [800]		Breeding likely to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Stiltia isabella Australian Pratincole [818]		Roosting likely to occur within area overfly marine area
Sula leucogaster Brown Booby [1022]		Breeding likely to occur within area
Thalasseus bengalensis as Sterna bengalensis Lesser Crested Tern [66546]		Breeding likely to occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes as Heteroscelus brevipes Grey-tailed Tattler [851]		Roosting likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
[Tringa stagnatilis](#) Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area overfly marine area
[Xenus cinereus](#) Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area overfly marine area
Fish		
[Campichthys tricarinatus](#) Three-keel Pipefish [66192]		Species or species habitat may occur within area
[Choeroichthys brachysoma](#) Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
[Choeroichthys suillus](#) Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
[Corythoichthys amplexus](#) Fijian Banded Pipefish, Brown-banded Pipefish [66199]		Species or species habitat may occur within area
[Corythoichthys flavofasciatus](#) Yellow-banded Pipefish [66200]		Species or species habitat may occur within area
[Doryrhamphus excisus](#) Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
[Doryrhamphus janssi](#) Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
[Festucalex cinctus](#) Girdled Pipefish [66214]		Species or species habitat may occur within area
[Halicampus brocki](#) Brock's Pipefish [66219]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophora as Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Pipefish, Ribboned Seadragon [94706]		Species or species habitat may occur within area
Hippichthys cyanospilos Blue-speckled Pipefish, Blue-spotted Pipefish [66228]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Micrognathus micronotopterus](#) Tidepool Pipefish [66255]		Species or species habitat may occur within area
[Solegnathus hardwickii](#) Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
[Trachyrhamphus bicoarctatus](#) Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
[Trachyrhamphus longirostris](#) Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
[Dugong dugon](#) Dugong [28]		Species or species habitat likely to occur within area
Reptile		
[Aipysurus duboisii](#) Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
[Aipysurus laevis](#) Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
[Aipysurus mosaicus as Aipysurus eydouxii](#) Mosaic Sea Snake [87261]		Species or species habitat may occur within area
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
[Crocodylus johnstoni](#) Freshwater Crocodile, Johnston's Crocodile, Johnstone's Crocodile [1773]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis atriceps Black-headed Sea Snake, Banded Sea Snake [1101]		Species or species habitat may occur within area
Hydrophis caerulescens Dwarf Sea Snake [1103]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis hardwickii as Lapemis hardwickii Spine-bellied Sea Snake [93516]		Species or species habitat may occur within area
Hydrophis inornatus Plain Sea Snake [1107]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis pacificus Pacific Sea Snake, Large-headed Sea Snake [1112]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Hydrophis zweifeli as Enhydrina schistosa Australian Beaked Sea Snake [93514]		Species or species habitat may occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Parahydrophis mertoni Arafura Smooth Sea Snake, Northern Mangrove Sea Snake [1090]		Species or species habitat may occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat may occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat may occur within area
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat may occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat likely to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area

Australian Marine Parks [Resource Information]

Park Name	Zone & IUCN Categories
Limmen	Habitat Protection Zone (IUCN IV)
Gulf of Carpentaria	National Park Zone (IUCN II)
Gulf of Carpentaria	Special Purpose Zone (Trawl) (IUCN VI)
Gulf of Carpentaria	Special Purpose Zone (Trawl) (IUCN VI)

Habitat Critical to the Survival of Marine Turtles [Resource Information]

Scientific Name	Behaviour	Presence
All year (Jun - Aug)		
Natator depressus Flatback Turtle [59257]	Nesting	Known to occur
Oct - Feb		
Eretmochelys imbricata Hawksbill Turtle [1766]	Nesting	Known to occur
Oct - Mar		
Chelonia mydas Green Turtle [1765]	Nesting	Known to occur

Extra Information

State and Territory Reserves [Resource Information]

Protected Area Name	Reserve Type	State

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Gulf of Carpentaria basin	North
Gulf of Carpentaria coastal zone	North

Name	Region
Plateaux and saddle north-west of the Wellesley Islands	North
Submerged coral reefs of the Gulf of Carpentaria	North

Biologically Important Areas		[Resource Information]
Scientific Name	Behaviour	Presence
Marine Turtles		
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Reproduction	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Reproduction	Known to occur
Lepidochelys olivacea Olive Ridley Turtle [1767]	Reproduction	Likely to occur
Natator depressus Flatback Turtle [59257]	Reproduction	Known to occur
Seabirds		
Fregata ariel Lesser Frigatebird [1012]	Reproduction	Known to occur
Onychoprion anaethetus Bridled Tern [82845]	Reproduction	Known to occur
Sterna dougallii Roseate Tern [817]	Reproduction	Known to occur
Sula leucogaster Brown Booby [1022]	Reproduction	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Reproduction	Known to occur
Thalasseus bergii Crested Tern [83000]	Reproduction	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 25-Jun-2026

Summary
Details
Matters of NES
Other Matters Protected by the EPBC Act

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	1
Wetlands of International Importance (Ramsar	2
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	8
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	59
Listed Migratory Species:	69

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	1
Commonwealth Heritage Places:	1
Listed Marine Species:	115
Whales and Other Cetaceans:	28
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	8
Habitat Critical to the Survival of Marine Turtles:	3

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	15
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	116
Key Ecological Features (Marine):	7
Biologically Important Areas:	33
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

National Heritage Places		[Resource Information]
Name	State	Legal Status
Natural		
The West Kimberley	WA	Listed place

Wetlands of International Importance (Ramsar Wetlands)	[Resource Information]
Ramsar Site Name	Proximity
Ashmore reef national nature reserve	Within Ramsar site
Ord river floodplain	Within Ramsar site

Commonwealth Marine Area	[Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Listed Threatened Species		[Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Anous tenuirostris melanops		
Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Chloebia gouldiae listed as Erythrura gouldiae Gouldian Finch [90091]	Endangered	Species or species habitat likely to occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Falcunculus frontatus whitei Crested Shrike-tit (northern), Northern Shrike-tit [26013]	Vulnerable	Species or species habitat likely to occur within area
Geophaps smithii blaauwi Partridge Pigeon (western) [66501]	Vulnerable	Species or species habitat likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Pezoporus occidentalis Night Parrot [59350]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Breeding likely to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tyto novaehollandiae kimberli Masked Owl (northern) [26048]	Vulnerable	Species or species habitat likely to occur within area
MAMMAL		

Scientific Name	Threatened Category	Presence Text
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Conilurus penicillatus Brush-tailed Rabbit-rat, Brush-tailed Tree-rat, Pakooma [132]	Vulnerable	Species or species habitat likely to occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat likely to occur within area
Isoodon auratus auratus Golden Bandicoot (mainland) [66665]	Vulnerable	Species or species habitat likely to occur within area
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat likely to occur within area
Mesembriomys gouldii gouldii Black-footed Tree-rat (Kimberley and mainland Northern Territory), Djintamoonga, Manbul [87618]	Endangered	Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Breeding likely to occur within area
Petrogale concinna monastria Nabarlek (Kimberley) [87607]	Endangered	Species or species habitat likely to occur within area
Phascogale tapoatafa kimberleyensis Kimberley brush-tailed phascogale, Brush-tailed Phascogale (Kimberley) [88453]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Saccolaimus saccolaimus nudicluniatus		
Bare-rumped Sheath-tailed Bat, Bare-rumped Sheathtail Bat [66889]	Vulnerable	Species or species habitat likely to occur within area
Sousa sahulensis		
Australian Humpback Dolphin [87942]	Vulnerable	Breeding likely to occur within area
Trichosurus vulpecula arnhemensis		
Northern Brushtail Possum [83091]	Vulnerable	Species or species habitat likely to occur within area
Xeromys myoides		
Water Mouse, False Water Rat, Yirrkoo [66]	Vulnerable	Species or species habitat likely to occur within area
REPTILE		
Acanthophis hawkei		
Plains Death Adder [83821]	Vulnerable	Species or species habitat may occur within area
Aipysurus apraefrontalis		
Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus foliosquama		
Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat may occur within area
Aipysurus fuscus		
Dusky Sea Snake [1119]	Endangered	Species or species habitat likely to occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Tiliqua scincoides intermedia Northern Blue-tongued Skink [89838]	Critically Endangered	Species or species habitat likely to occur within area
Varanus mertensi Mertens' Water Monitor [1568]	Endangered	Species or species habitat likely to occur within area
Varanus mitchelli Mitchell's Water Monitor [1569]	Critically Endangered	Species or species habitat likely to occur within area
SHARK		
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Glyphis garricki Northern River Shark, New Guinea River Shark [82454]	Endangered	Species or species habitat likely to occur within area
Glyphis glyphis Speartooth Shark [82453]	Critically Endangered	Species or species habitat likely to occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area

Listed Migratory Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Breeding likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding likely to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Breeding likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Foraging, feeding or related behaviour likely to occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding likely to occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Sula dactylatra Masked Booby [1021]		Breeding likely to occur within area
Sula leucogaster Brown Booby [1022]		Breeding likely to occur within area
Sula sula Red-footed Booby [1023]		Breeding likely to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Dugong dugon Dugong [28]		Breeding likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Breeding likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Sousa sahulensis as Sousa chinensis Australian Humpback Dolphin [87942]	Vulnerable	Breeding likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Migratory Terrestrial Species		
Cecropis daurica Red-rumped Swallow [80610]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Cuculus optatus](#) Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat likely to occur within area
[Hirundo rustica](#) Barn Swallow [662]		Species or species habitat likely to occur within area
[Motacilla cinerea](#) Grey Wagtail [642]		Species or species habitat likely to occur within area
[Motacilla flava](#) Yellow Wagtail [644]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
[Acrocephalus orientalis](#) Oriental Reed-Warbler [59570]		Species or species habitat likely to occur within area
[Actitis hypoleucos](#) Common Sandpiper [59309]		Species or species habitat likely to occur within area
[Calidris acuminata](#) Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
[Calidris canutus](#) Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
[Calidris ferruginea](#) Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
[Calidris melanotos](#) Pectoral Sandpiper [858]		Species or species habitat may occur within area
[Calidris ruficollis](#) Red-necked Stint [860]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Species or species habitat likely to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State

Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Species or species habitat likely to occur within area overfly marine area
Fish		
Bhanotia fasciolata Corrugated Pipefish, Barbed Pipefish [66188]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys amplexus Fijian Banded Pipefish, Brown-banded Pipefish [66199]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Corythoichthys flavofasciatus Yellow-banded Pipefish [66200]		Species or species habitat may occur within area
Corythoichthys intestinalis Australian Messmate Pipefish, Banded Pipefish [66202]		Species or species habitat may occur within area
Corythoichthys schultzi Schultz's Pipefish [66205]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus dunckeri Red-hair Pipefish, Duncker's Pipefish [66220]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophora as Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Pipefish, Ribboned Seadragon [94706]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
Dugong dugon Dugong [28]		Breeding likely to occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat may occur within area
Aipysurus fuscus Dusky Sea Snake [1119]	Endangered	Species or species habitat likely to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Crocodylus johnstoni Freshwater Crocodile, Johnston's Crocodile, Johnstone's Crocodile [1773]		Species or species habitat may occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis atriceps Black-headed Sea Snake, Banded Sea Snake [1101]		Species or species habitat may occur within area
Hydrophis coggeri Cogger's Sea Snake, Black-headed Sea Snake [25925]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis hardwickii as Lapemis hardwickii Spine-bellied Sea Snake [93516]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis inornatus Plain Sea Snake [1107]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis pacificus Pacific Sea Snake, Large-headed Sea Snake [1112]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Hydrophis zweifeli as Enhydrina schistosa Australian Beaked Sea Snake [93514]		Species or species habitat may occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
[Balaenoptera borealis](#) Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Balaenoptera edeni](#) Bryde's Whale [35]		Species or species habitat likely to occur within area
[Balaenoptera musculus](#) Blue Whale [36]	Endangered	Migration route known to occur within area
[Balaenoptera omurai](#) Omura's Whale [87136]		Species or species habitat likely to occur within area
[Balaenoptera physalus](#) Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Delphinus delphis](#) Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
[Feresa attenuata](#) Pygmy Killer Whale [61]		Species or species habitat may occur within area
[Globicephala macrorhynchus](#) Short-finned Pilot Whale [62]		Species or species habitat may occur within area
[Grampus griseus](#) Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
[Kogia breviceps](#) Pygmy Sperm Whale [57]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
[Kogia sima](#) Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
[Lagenodelphis hosei](#) Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
[Megaptera novaeangliae](#) Humpback Whale [38]		Breeding known to occur within area
[Mesoplodon densirostris](#) Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
[Orcaella heinsohni](#) Australian Snubfin Dolphin [81322]	Vulnerable	Breeding likely to occur within area
[Orcinus orca](#) Killer Whale, Orca [46]		Species or species habitat may occur within area
[Peponocephala electra](#) Melon-headed Whale [47]		Species or species habitat may occur within area
[Physeter macrocephalus](#) Sperm Whale [59]		Species or species habitat may occur within area
[Pseudorca crassidens](#) False Killer Whale [48]		Species or species habitat likely to occur within area
[Sousa sahulensis](#) Australian Humpback Dolphin [87942]	Vulnerable	Breeding likely to occur within area
[Stenella attenuata](#) Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
[Stenella coeruleoalba](#) Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Australian Marine Parks	[Resource Information]
Park Name	Zone & IUCN Categories
Joseph Bonaparte Gulf	Multiple Use Zone (IUCN VI)
Kimberley	Multiple Use Zone (IUCN VI)
Oceanic Shoals	Multiple Use Zone (IUCN VI)
Ashmore Reef	Recreational Use Zone (IUCN IV)
Ashmore Reef	Sanctuary Zone (IUCN Ia)
Cartier Island	Sanctuary Zone (IUCN Ia)
Joseph Bonaparte Gulf	Special Purpose Zone (IUCN VI)
Oceanic Shoals	Special Purpose Zone (Trawl) (IUCN VI)

Habitat Critical to the Survival of Marine Turtles		[Resource Information]
Scientific Name	Behaviour	Presence

Scientific Name	Behaviour	Presence
All year (Jun - Aug)		
Natator depressus		
Flatback Turtle [59257]	Nesting	Known to occur
May - Jul		
Lepidochelys olivacea		
Olive Ridley Turtle [1767]	Nesting	Known to occur
Oct - Mar		
Chelonia mydas		
Green Turtle [1765]	Nesting	Known to occur

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Ashmore Reef and Cartier Island and surrounding Commonwealth waters	North-west
Carbonate bank and terrace system of the Sahul Shelf	North-west
Continental Slope Demersal Fish Communities	North-west
Pinnacles of the Bonaparte Basin	North-west
Pinnacles of the Bonaparte Basin	North
Seringapatam Reef and Commonwealth waters in the Scott Reef Complex	North-west

Biologically Important Areas		[Resource Information]
Scientific Name	Behaviour	Presence
Dolphins		
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Foraging	Known to occur
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Reproduction	Known to occur
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Resting	Known to occur
Sousa sahulensis Australian Humpback Dolphin [87942]	Foraging	Likely to occur
Sousa sahulensis Australian Humpback Dolphin [87942]	Reproduction	Likely to occur
Tursiops aduncus Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Foraging	Known to occur
Tursiops aduncus Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Reproduction	Known to occur
Dugong		
Dugong dugon Dugong [28]	Foraging	Known to occur
Dugong dugon Dugong [28]	Reproduction	Known to occur
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Reproduction	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Foraging	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Reproduction	Known to occur

Scientific Name	Behaviour	Presence
Lepidochelys olivacea Olive Ridley Turtle [1767]	Foraging	Known to occur
Natator depressus Flatback Turtle [59257]	Foraging	Known to occur
Natator depressus Flatback Turtle [59257]	Reproduction	Known to occur
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Reproduction	Known to occur
Fregata ariel Lesser Frigatebird [1012]	Reproduction	Known to occur
Fregata minor Greater Frigatebird [1013]	Reproduction	Known to occur
Phaethon lepturus White-tailed Tropicbird [1014]	Reproduction	Known to occur
Sterna dougallii Roseate Tern [817]	Reproduction	Known to occur
Sternula albifrons sinensis Little Tern [82850]	Reproduction	Known to occur
Sternula albifrons sinensis Little Tern [82850]	Resting	Known to occur
Sula leucogaster Brown Booby [1022]	Reproduction	Known to occur
Sula sula Red-footed Booby [1023]	Reproduction	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Reproduction	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Reproduction	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Resting	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales
-Department of Environment and Primary Industries, Victoria
-Department of Primary Industries, Parks, Water and Environment, Tasmania
-Department of Environment, Water and Natural Resources, South Australia
-Department of Land and Resource Management, Northern Territory

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 25-Jun-2026

Summary

Details

- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Caveat

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	1
Wetlands of International Importance (Ramsar	2
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	9
Listed Threatened Ecological Communities:	1
Listed Threatened Species:	63
Listed Migratory Species:	85

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	47
Commonwealth Heritage Places:	3
Listed Marine Species:	134
Whales and Other Cetaceans:	30
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	11
Habitat Critical to the Survival of Marine Turtles:	3

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	29
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	90
Key Ecological Features (Marine):	5
Biologically Important Areas:	38
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

National Heritage Places		[Resource Information]
Name	State	Legal Status
Natural		
The West Kimberley	WA	Listed place

Wetlands of International Importance (Ramsar Wetlands)	[Resource Information]
Ramsar Site Name	Proximity
Eighty-mile beach	Within Ramsar site
Roebuck bay	Within Ramsar site

Commonwealth Marine Area	[Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Listed Threatened Ecological Communities	[Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Monsoon vine thickets on the coastal sand dunes of Dampier Peninsula	Endangered	Community likely to occur within area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Chloebia gouldiae listed as Erythrura gouldiae Gouldian Finch [90091]	Endangered	Species or species habitat likely to occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Falcunculus frontatus whitei Crested Shrike-tit (northern), Northern Shrike-tit [26013]	Vulnerable	Species or species habitat likely to occur within area
Geophaps smithii blaauwi Partridge Pigeon (western) [66501]	Vulnerable	Species or species habitat likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Pezoporus occidentalis Night Parrot [59350]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Breeding likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area
Polytelis alexandrae Princess Parrot, Alexandra's Parrot [758]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tyto novaehollandiae kimberli Masked Owl (northern) [26048]	Vulnerable	Species or species habitat likely to occur within area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area
MAMMAL		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat likely to occur within area
Isoodon auratus auratus Golden Bandicoot (mainland) [66665]	Vulnerable	Species or species habitat likely to occur within area
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Macrotis lagotis Greater Bilby [282]	Vulnerable	Species or species habitat likely to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Breeding likely to occur within area
Petrogale concinna monastria Nabarlek (Kimberley) [87607]	Endangered	Species or species habitat likely to occur within area
Phascogale tapoatafa kimberleyensis Kimberley brush-tailed phascogale, Brush-tailed Phascogale (Kimberley) [88453]	Vulnerable	Species or species habitat likely to occur within area
Saccolaimus saccolaimus nudicluniatus Bare-rumped Sheath-tailed Bat, Bare-rumped Sheathtail Bat [66889]	Vulnerable	Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]	Vulnerable	Breeding likely to occur within area
Trichosurus vulpecula arnhemensis Northern Brushtail Possum [83091]	Vulnerable	Species or species habitat likely to occur within area
Xeromys myoides Water Mouse, False Water Rat, Yirrkoo [66]	Vulnerable	Species or species habitat may occur within area
PLANT		
Seringia exastia Fringed Fire-bush [88920]	Critically Endangered	Species or species habitat may occur within area
REPTILE		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Aipysurus fuscus Dusky Sea Snake [1119]	Endangered	Species or species habitat likely to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Liopholis kintorei Great Desert Skink, Tjakura, Warrarna, Mulyamiji, Tjalapa, Nampu [83160]	Vulnerable	Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Tiliqua scincoides intermedia Northern Blue-tongued Skink [89838]	Critically Endangered	Species or species habitat likely to occur within area
Varanus mertensi Mertens' Water Monitor [1568]	Endangered	Species or species habitat likely to occur within area
Varanus mitchelli Mitchell's Water Monitor [1569]	Critically Endangered	Species or species habitat likely to occur within area
SHARK		
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Glyphis garricki Northern River Shark, New Guinea River Shark [82454]	Endangered	Species or species habitat likely to occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Foraging, feeding or related behaviour likely to occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding likely to occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Sula dactylatra Masked Booby [1021]		Breeding likely to occur within area
Sula leucogaster Brown Booby [1022]		Breeding likely to occur within area
Sula sula Red-footed Booby [1023]		Breeding likely to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Dugong dugon Dugong [28]		Foraging, feeding or related behaviour likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Breeding likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Sousa sahulensis as Sousa chinensis		
Australian Humpback Dolphin [87942]	Vulnerable	Breeding likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations)		
Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Migratory Terrestrial Species		
Cecropis daurica		
Red-rumped Swallow [80610]		Species or species habitat may occur within area
Cuculus optatus		
Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat may occur within area
Hirundo rustica		
Barn Swallow [662]		Species or species habitat likely to occur within area
Motacilla cinerea		
Grey Wagtail [642]		Species or species habitat likely to occur within area
Motacilla flava		
Yellow Wagtail [644]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Acrocephalus orientalis		
Oriental Reed-Warbler [59570]		Species or species habitat may occur within area
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Roosting likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area
Calidris pugnax as Philomachus pugnax Ruff [91256]		Roosting likely to occur within area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area
Charadrius bicinctus Double-banded Plover [895]		Roosting likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Roosting likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area
Glareola maldivarum Oriental Pratincole [840]		Roosting likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Pandion haliaetus Osprey [952]		Breeding likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalasseus bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Roosting likely to occur within area
Tringa glareola Wood Sandpiper [829]		Roosting likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area
Tringa totanus Common Redshank, Redshank [835]		Roosting likely to occur within area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Acrocephalus orientalis Oriental Reed-Warbler [59570]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Anseranas semipalmata Magpie Goose [978]		Species or species habitat may occur within area overfly marine area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Roosting likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area overfly marine area
Calidris pugnax as Philomachus pugnax Ruff [91256]		Roosting likely to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area overfly marine area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Cecropis daurica as Hirundo daurica Red-rumped Swallow [80610]		Species or species habitat may occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat likely to occur within area overfly marine area
Charadrius bicinctus Double-banded Plover [895]		Roosting likely to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius ruficapillus Red-capped Plover [881]		Roosting likely to occur within area overfly marine area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Roosting likely to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Breeding likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Foraging, feeding or related behaviour likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area
Glareola maldivarum Oriental Pratincole [840]		Roosting likely to occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting likely to occur within area overfly marine area
Hirundo rustica Barn Swallow [662]		Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area overfly marine area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat likely to occur within area overfly marine area
Motacilla flava Yellow Wagtail [644]		Species or species habitat likely to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding likely to occur within area
Pandion haliaetus Osprey [952]		Breeding likely to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area overfly marine area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting likely to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding likely to occur within area
Stiltia isabella Australian Pratincole [818]		Roosting likely to occur within area overfly marine area
Sula dactylatra Masked Booby [1021]		Breeding likely to occur within area
Sula leucogaster Brown Booby [1022]		Breeding likely to occur within area
Sula sula Red-footed Booby [1023]		Breeding likely to occur within area
Thalasseus bengalensis as Sterna bengalensis Lesser Crested Tern [66546]		Breeding likely to occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes as Heteroscelus brevipes Grey-tailed Tattler [851]		Roosting likely to occur within area
Tringa glareola Wood Sandpiper [829]		Roosting likely to occur within area overfly marine area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area overfly marine area
Tringa totanus Common Redshank, Redshank [835]		Roosting likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
[Xenus cinereus](#) Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area overfly marine area
Fish		
[Bhanotia fasciolata](#) Corrugated Pipefish, Barbed Pipefish [66188]		Species or species habitat may occur within area
[Campichthys tricarinatus](#) Three-keel Pipefish [66192]		Species or species habitat may occur within area
[Choeroichthys brachysoma](#) Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
[Choeroichthys suillus](#) Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
[Corythoichthys amplexus](#) Fijian Banded Pipefish, Brown-banded Pipefish [66199]		Species or species habitat may occur within area
[Corythoichthys flavofasciatus](#) Yellow-banded Pipefish [66200]		Species or species habitat may occur within area
[Corythoichthys intestinalis](#) Australian Messmate Pipefish, Banded Pipefish [66202]		Species or species habitat may occur within area
[Corythoichthys schultzi](#) Schultz's Pipefish [66205]		Species or species habitat may occur within area
[Cosmocampus banneri](#) Roughridge Pipefish [66206]		Species or species habitat may occur within area
[Doryrhamphus dactyliophorus](#) Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus dunckeri Red-hair Pipefish, Duncker's Pipefish [66220]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophora as Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Pipefish, Ribboned Seadragon [94706]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
Dugong dugon Dugong [28]		Foraging, feeding or related behaviour likely to occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat may occur within area
Aipysurus fuscus Dusky Sea Snake [1119]	Endangered	Species or species habitat likely to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Crocodylus johnstoni Freshwater Crocodile, Johnston's Crocodile, Johnstone's Crocodile [1773]		Species or species habitat may occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis coggeri Cogger's Sea Snake, Black-headed Sea Snake [25925]		Species or species habitat may occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis hardwickii as Lapemis hardwickii Spine-bellied Sea Snake [93516]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis macdowelli as Hydrophis mcdowelli		
MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major		
Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus		
Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii		
Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus		
Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii		
Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Hydrophis zweifeli as Enhydrina schistosa		
Australian Beaked Sea Snake [93514]		Species or species habitat may occur within area
Lepidochelys olivacea		
Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding likely to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
[Balaenoptera musculus](#) Blue Whale [36]	Endangered	Migration route known to occur within area
[Balaenoptera omurai](#) Omura's Whale [87136]		Species or species habitat likely to occur within area
[Balaenoptera physalus](#) Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Delphinus delphis](#) Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
[Feresa attenuata](#) Pygmy Killer Whale [61]		Species or species habitat may occur within area
[Globicephala macrorhynchus](#) Short-finned Pilot Whale [62]		Species or species habitat may occur within area
[Grampus griseus](#) Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
[Indopacetus pacificus](#) Longman's Beaked Whale [72]		Species or species habitat may occur within area
[Kogia breviceps](#) Pygmy Sperm Whale [57]		Species or species habitat may occur within area
[Kogia sima](#) Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
[Lagenodelphis hosei](#) Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Breeding likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]	Vulnerable	Breeding likely to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Habitat Critical to the Survival of Marine Turtles [Resource Information]

Scientific Name	Behaviour	Presence
All year (Jun - Aug)		
Natator depressus		
Flatback Turtle [59257]	Nesting	Known to occur
May - Jul		
Lepidochelys olivacea		
Olive Ridley Turtle [1767]	Nesting	Known to occur
Oct - Mar		
Chelonia mydas		
Green Turtle [1765]	Nesting	Known to occur

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Canyons linking the Argo Abyssal Plain with the Scott Plateau	North-west
Continental Slope Demersal Fish Communities	North-west
Mermaid Reef and Commonwealth waters surrounding Rowley Shoals	North-west
Seringapatam Reef and Commonwealth waters in the Scott Reef Complex	North-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Dolphins		
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Foraging	Known to occur
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Reproduction	Known to occur
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Resting	Known to occur
Sousa sahulensis Australian Humpback Dolphin [87942]	Foraging	Likely to occur
Sousa sahulensis Australian Humpback Dolphin [87942]	Reproduction	Likely to occur
Tursiops aduncus Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Foraging	Known to occur
Tursiops aduncus Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Migration	Known to occur
Tursiops aduncus Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Reproduction	Known to occur
Dugong		
Dugong dugon Dugong [28]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Dugong dugon Dugong [28]	Migration	Known to occur
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Reproduction	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Reproduction	Known to occur
Natator depressus Flatback Turtle [59257]	Foraging	Known to occur
Natator depressus Flatback Turtle [59257]	Reproduction	Known to occur
River shark		
Pristis clavata Dwarf Sawfish [68447]	Foraging	Known to occur
Pristis clavata Dwarf Sawfish [68447]	Reproduction	Known to occur
Pristis pristis Largetooth Sawfish [60756]	Foraging	Known to occur
Pristis pristis Largetooth Sawfish [60756]	Reproduction	Known to occur
Pristis zijsron Green Sawfish [68442]	Foraging	Known to occur
Pristis zijsron Green Sawfish [68442]	Reproduction	Known to occur
Seabirds		
Fregata ariel Lesser Frigatebird [1012]	Reproduction	Known to occur

Scientific Name	Behaviour	Presence
Fregata minor Greater Frigatebird [1013]	Reproduction	Known to occur
Phaethon lepturus White-tailed Tropicbird [1014]	Reproduction	Known to occur
Sterna dougallii Roseate Tern [817]	Reproduction	Known to occur
Sterna dougallii Roseate Tern [817]	Resting	Known to occur
Sternula albifrons sinensis Little Tern [82850]	Reproduction	Known to occur
Sternula albifrons sinensis Little Tern [82850]	Resting	Known to occur
Sula leucogaster Brown Booby [1022]	Reproduction	Known to occur
Sula sula Red-footed Booby [1023]	Reproduction	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Reproduction	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Reproduction	Known to occur

Scientific Name	Behaviour	Presence
Megaptera novaeangliae		
Humpback Whale [38]	Resting	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 25-Jun-2026

[Summary](#)
[Details](#)
- [Matters of NES](#)
- [Other Matters Protected by the EPBC Act](#)
- [Extra Information](#)

[Caveat](#)
[Acknowledgements](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	2
National Heritage Places:	4
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	1
Listed Threatened Species:	84
Listed Migratory Species:	80

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	7
Commonwealth Heritage Places:	2
Listed Marine Species:	121
Whales and Other Cetaceans:	34
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	14
Habitat Critical to the Survival of Marine Turtles:	2

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	29
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	43
Key Ecological Features (Marine):	6
Biologically Important Areas:	23
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

World Heritage Properties		[Resource Information]
Name	State	Legal Status
Ningaloo Coast	WA	Declared property
Shark Bay, Western Australia	WA	Declared property

National Heritage Places		[Resource Information]
Name	State	Legal Status
Historic		
HMAS Sydney II and HSK Kormoran Shipwreck Sites	EXT	Listed place
Dirk Hartog Landing Site 1616 - Cape Inscription Area	WA	Listed place
Natural		
Shark Bay, Western Australia	WA	Listed place
The Ningaloo Coast	WA	Listed place

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Aphelocephala leucopsis Southern Whiteface [529]	Vulnerable	Species or species habitat likely to occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat may occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Malurus leucopterus leucopterus White-winged Fairy-wren (Dirk Hartog Island), Dirk Hartog Black-and-White Fairy-wren [26004]	Vulnerable	Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pezoporus occidentalis Night Parrot [59350]	Critically Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Species or species habitat may occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area

[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
[Ctenotus zastictus](#) Hamelin Ctenotus [25570]	Vulnerable	Species or species habitat likely to occur within area
[Dermochelys coriacea](#) Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
[Egernia stokesii badia](#) Western Spiny-tailed Skink, Baudin Island Spiny-tailed Skink [64483]	Endangered	Species or species habitat likely to occur within area
[Eretmochelys imbricata](#) Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
[Natator depressus](#) Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
SHARK		
[Carcharias taurus (west coast population)](#) Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat likely to occur within area
Centrophorus uyato Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area
SPIDER		
Idiosoma nigrum Shield-backed Trapdoor Spider, Black Rugose Trapdoor Spider [66798]	Vulnerable	Species or species habitat likely to occur within area

Listed Migratory Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Species or species habitat may occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Sternula albifrons Little Tern [82849]	Vulnerable	Species or species habitat may occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat likely to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Dugong dugon Dugong [28]		Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Sousa sahulensis as Sousa chinensis Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Migratory Terrestrial Species		
Hirundo rustica Barn Swallow [662]		Species or species habitat likely to occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Pandion haliaetus Osprey [952]		Breeding likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalasseus bergii		
Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes		
Grey-tailed Tattler [851]		Roosting likely to occur within area
Tringa glareola		
Wood Sandpiper [829]		Roosting likely to occur within area
Tringa nebularia		
Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Xenus cinereus		
Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State
Australian Postal Corporation	
Lot 1 S018861 [AGPR7043]	WA
Department of Climate Change, Energy, the Environment and Water	
HMAS Sydney II and HSK Kormoran Shipwreck Sites [CHL_106062]	EXT

Listed Marine Species

[Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding likely to occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area overfly marine area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat likely to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Roosting likely to occur within area overfly marine area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Species or species habitat may occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Breeding likely to occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting likely to occur within area overfly marine area
Hirundo rustica Barn Swallow [662]		Species or species habitat likely to occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding likely to occur within area
Larus pacificus Pacific Gull [811]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area overfly marine area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area
Motacilla flava Yellow Wagtail [644]		Species or species habitat likely to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding likely to occur within area
Pandion haliaetus Osprey [952]		Breeding likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat may occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area overfly marine area
Pterodroma macroptera Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Puffinus assimilis Little Shearwater [59363]		Foraging, feeding or related behaviour known to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Rostratula australis as Rostratula benghalensis (sensu lato)		
Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Stercorarius antarcticus as Catharacta skua		
Brown Skua [85039]		Species or species habitat may occur within area
Sterna dougallii		
Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons as Sterna albifrons		
Little Tern [82849]	Vulnerable	Species or species habitat may occur within area
Sternula nereis as Sterna nereis		
Fairy Tern [82949]		Breeding likely to occur within area
Thalassarche carteri		
Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche cauta		
Shy Albatross [89224]	Endangered	Species or species habitat may occur within area
Thalassarche impavida		
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Thalasseus bengalensis as Sterna bengalensis		
Lesser Crested Tern [66546]		Breeding likely to occur within area
Thalasseus bergii as Sterna bergii		
Greater Crested Tern [83000]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Tringa brevipes as Heteroscelus brevipes		
Grey-tailed Tattler [851]		Roosting likely to occur within area
Tringa glareola		
Wood Sandpiper [829]		Roosting likely to occur within area overfly marine area
Tringa nebularia		
Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Xenus cinereus		
Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area overfly marine area
Fish		
Bulbonaricus brauni		
Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys galei		
Gale's Pipefish [66191]		Species or species habitat may occur within area
Choeroichthys brachysoma		
Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys suillus		
Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Doryrhamphus negrosensis		
Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris		
Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris		
Tiger Pipefish [66217]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophora as Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Pipefish, Ribboned Seadragon [94706]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus breviceps Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus subelongatus West Australian Seahorse [66722]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Idiotropiscis australe as Acentronura australe Southern Pygmy Pipehorse [74958]		Species or species habitat may occur within area
Lissocampus fatiloquus Prophet's Pipefish [66250]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Mitotichthys meraculus Western Crested Pipefish [66259]		Species or species habitat may occur within area
Nannocampus subosseus Bonyhead Pipefish, Bony-headed Pipefish [66264]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Syngnathoides biaculeatus](#) Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
[Trachyrhamphus bicoarctatus](#) Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
[Trachyrhamphus longirostris](#) Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
[Urocampus carinirostris](#) Hairy Pipefish [66282]		Species or species habitat may occur within area
[Vanacampus margaritifer](#) Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Mammal		
[Dugong dugon](#) Dugong [28]		Species or species habitat likely to occur within area
[Neophoca cinerea](#) Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat may occur within area
Reptile		
[Aipysurus apraefrontalis](#) Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
[Aipysurus foliosquama](#) Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat likely to occur within area
[Aipysurus laevis](#) Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
[Aipysurus pooleorum](#) Shark Bay Sea Snake [66061]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Globicephala melas Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Indopacetus pacificus Longman's Beaked Whale [72]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 90-120m depth	South-west
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	North-west
Commonwealth waters adjacent to Ningaloo Reef	North-west
Wallaby Saddle	North-west
Western demersal slope and associated fish communities	South-west
Western rock lobster	South-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Dugong		

Scientific Name	Behaviour	Presence
Dugong dugon Dugong [28]	Foraging	Known to occur
Dugong dugon Dugong [28]	Migration	Known to occur
Dugong dugon Dugong [28]	Reproduction	Known to occur
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Reproduction	Low density
Eretmochelys imbricata Hawksbill Turtle [1766]	Reproduction	Known to occur
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Foraging	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Reproduction	Known to occur
Hydroprogne caspia Caspian Tern [808]	Foraging	Known to occur
Larus pacificus Pacific Gull [811]	Foraging	Known to occur
Onychoprion anaethetus Bridled Tern [82845]	Foraging	Likely to occur
Onychoprion fuscatus Sooty Tern [90682]	Foraging	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Foraging	Known to occur
Puffinus assimilis Little Shearwater [59363]	Foraging	Likely to occur
Sterna dougallii Roseate Tern [817]	Reproduction	Known to occur

Scientific Name	Behaviour	Presence
Sternula nereis Fairy Tern [82949]	Reproduction	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Reproduction	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Eubalaena australis Southern Right Whale [40]	Migration	
Eubalaena australis Southern Right Whale [40]	Reproduction	
Megaptera novaeangliae Humpback Whale [38]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Resting	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 25-Jun-2026

[Summary](#)
[Details](#)
- [Matters of NES](#)
- [Other Matters Protected by the EPBC Act](#)
- [Extra Information](#)

[Caveat](#)
[Acknowledgements](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	2
National Heritage Places:	2
Wetlands of International Importance (Ramsar	1
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	69
Listed Migratory Species:	90

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	93
Commonwealth Heritage Places:	2
Listed Marine Species:	133
Whales and Other Cetaceans:	33
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	11
Habitat Critical to the Survival of Marine Turtles:	4

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	57
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	301
Key Ecological Features (Marine):	6
Biologically Important Areas:	35
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

World Heritage Properties		[Resource Information]
Name	State	Legal Status
Murujuga Cultural Landscape	WA	Declared property
Ningaloo Coast	WA	Declared property

National Heritage Places		[Resource Information]

[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
[Ctenotus zastictus](#) Hamelin Ctenotus [25570]	Vulnerable	Species or species habitat likely to occur within area
[Dermochelys coriacea](#) Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
[Eretmochelys imbricata](#) Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
[Lerista nevinae](#) Nevin's Slider [85296]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Liasis olivaceus barroni		
Pilbara Olive Python [66699]	Vulnerable	Species or species habitat likely to occur within area
Liopholis kintorei		
Great Desert Skink, Tjakura, Warrarna, Mulyamiji, Tjalapa, Nampu [83160]	Vulnerable	Species or species habitat may occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
SHARK		
Carcharias taurus (west coast population)		
Grey Nurse Shark (west coast population) [68752]	Vulnerable	Congregation or aggregation likely to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat likely to occur within area
Pristis clavata		
Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis		
Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Sphyrna lewini		
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai		
Omura's Whale [87136]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding likely to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Breeding likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Sula dactylatra Masked Booby [1021]		Breeding likely to occur within area
Sula leucogaster Brown Booby [1022]		Breeding likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat likely to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Dugong dugon Dugong [28]		Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding likely to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Sousa sahulensis as Sousa chinensis		
Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations)		
Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Migratory Terrestrial Species		
Cuculus optatus		
Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat may occur within area
Hirundo rustica		
Barn Swallow [662]		Species or species habitat likely to occur within area
Motacilla cinerea		
Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava		
Yellow Wagtail [644]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat likely to occur within area
Arenaria interpres		
Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba		
Sanderling [875]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Roosting likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area
Calidris pugnax as Philomachus pugnax Ruff [91256]		Roosting likely to occur within area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area
Calidris subminuta Long-toed Stint [861]		Species or species habitat likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Roosting likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Glareola maldivarum Oriental Pratincole [840]		Roosting likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Pandion haliaetus Osprey [952]		Breeding likely to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Tringa glareola Wood Sandpiper [829]		Species or species habitat likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area
Tringa totanus Common Redshank, Redshank [835]		Roosting likely to occur within area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Ningaloo Marine Area - Commonwealth Waters	WA	Listed place

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding likely to occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Roosting likely to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area overfly marine area
Calidris pugnax as Philomachus pugnax Ruff [91256]		Roosting likely to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area overfly marine area
Calidris subminuta Long-toed Stint [861]		Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat likely to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Roosting likely to occur within area overfly marine area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Roosting likely to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Breeding likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Glareola maldivarum Oriental Pratincole [840]		Roosting likely to occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting likely to occur within area overfly marine area
Hirundo rustica Barn Swallow [662]		Species or species habitat likely to occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding likely to occur within area
Larus pacificus Pacific Gull [811]		Breeding likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area overfly marine area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area
Motacilla flava Yellow Wagtail [644]		Species or species habitat likely to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding likely to occur within area
Pandion haliaetus Osprey [952]		Breeding likely to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Phalaropus lobatus Red-necked Phalarope [838]		Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area overfly marine area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting likely to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]	Vulnerable	Breeding likely to occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding likely to occur within area
Stiltia isabella Australian Pratincole [818]		Roosting likely to occur within area overfly marine area
Sula dactylatra Masked Booby [1021]		Breeding likely to occur within area
Sula leucogaster Brown Booby [1022]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalasseus bengalensis as Sterna bengalensis Lesser Crested Tern [66546]		Breeding likely to occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes as Heteroscelus brevipes Grey-tailed Tattler [851]		Roosting likely to occur within area
Tringa glareola Wood Sandpiper [829]		Species or species habitat likely to occur within area overfly marine area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area overfly marine area
Tringa totanus Common Redshank, Redshank [835]		Roosting likely to occur within area overfly marine area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area overfly marine area
Fish		
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Yellow-banded Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophora as Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Pipefish, Ribboned Seadragon [94706]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Idiotropiscis larsonae as Acentronura larsonae Helen's Pygmy Pipehorse [74959]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Trachyrhamphus longirostris](#) Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
[Dugong dugon](#) Dugong [28]		Species or species habitat likely to occur within area
Reptile		
[Aipysurus apraefrontalis](#) Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
[Aipysurus duboisii](#) Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
[Aipysurus foliosquama](#) Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat likely to occur within area
[Aipysurus laevis](#) Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
[Aipysurus mosaicus as Aipysurus eydouxii](#) Mosaic Sea Snake [87261]		Species or species habitat may occur within area
[Aipysurus tenuis](#) Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
[Crocodylus porosus](#) Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding likely to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Current Scientific Name	Status	Type of Presence
[Delphinus delphis](#) Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
[Eubalaena australis](#) Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
[Feresa attenuata](#) Pygmy Killer Whale [61]		Species or species habitat may occur within area
[Globicephala macrorhynchus](#) Short-finned Pilot Whale [62]		Species or species habitat may occur within area
[Grampus griseus](#) Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
[Indopacetus pacificus](#) Longman's Beaked Whale [72]		Species or species habitat may occur within area
[Kogia breviceps](#) Pygmy Sperm Whale [57]		Species or species habitat may occur within area
[Kogia sima](#) Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
[Lagenodelphis hosei](#) Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
[Megaptera novaeangliae](#) Humpback Whale [38]		Breeding known to occur within area
[Mesoplodon densirostris](#) Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat likely to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Australian Marine Parks	[Resource Information]
Park Name	Zone & IUCN Categories
Dampier	Habitat Protection Zone (IUCN IV)
Gascoyne	Habitat Protection Zone (IUCN IV)

EPBC Act Referrals

[Resource Information]

Title of referral	Reference	Referral Outcome	Assessment Status
3D Seismic Survey in the Carnarvon Bsin on the North West Shelf	2002/778		Completed
Ashburton Infrastructure Project	2021/9064		Completed
Babylon 3D Marine Seismic Survey, Commonwealth Waters, nr Exmouth WA	2013/7081		Completed
Balla Balla Export Facilities ? Design Variation	2022/09254		Assessment

Title of referral	Reference	Referral Outcome	Assessment Status
Browse to North West Shelf Development, Indian Ocean, WA	2018/8319		Approval
Burrup Common User Transmission Infrastructure	2022/09407		Post-Approval
Burrup Peninsula Seawater Supply Scheme Upgrade	2023/09698		Completed
Dampier Cargo Wharf Extension and Landside Redevelopment Project	2022/09237		Post-Approval
Dampier Seawater Desalination Plant	2022/09395		Completed
DAVROS MC 3D marine seismic survey northwaet of Dampier, WA	2013/7092		Completed
Deep Water Northwest Shelf 2D Seismic Survey	2007/3260		Completed
Development of Mutineer and Exeter petroleum fields for oil production, Permit	2003/1033		Completed
Gorgon Gas Development	2003/1294		Post-Approval
Ningaloo Lighthouse Development, 17km north west Exmouth, Western Australia	2020/8693		Post-Approval
North West Shelf Project Extension, Carnarvon Basin, WA	2018/8335		Approval
Offshore Dredge Spoil Disposal - Mardie Project	2024/10054		Referral Decision
Optimised Mardie Project ? Additional Triodia Grassland Habitat Clearing	2024/10094		Referral Decision
Optimised Mardie Solar Salt Project	2022/9169		Post-Approval
Port Hedland Green Steel Project - Stage 1	2023/09764		Assessment
Project Highclere Cable Lay and Operation	2022/09203		Completed
Ridley Magnetite Project	2023/09477		Referral Decision
Single Jetty Deep Water Port Renewable Hub, WA	2021/8942		Assessment

Title of referral	Reference	Referral Outcome	Assessment Status
Winu Copper and Gold Mine (Winu Project)	2024/09804		Completed
Action clearly unacceptable			
Asian Renewable Energy Hub Revised Proposal, WA	2021/8891	Action Clearly Unacceptable	Completed
Highlands 3D Marine Seismic Survey	2012/6680	Action Clearly Unacceptable	Completed
Controlled action			
'Van Gogh' Petroleum Field Development	2007/3213	Controlled Action	Post-Approval
Additional Rail Infrastructure between Herb Elliott Port Facility and Cloudbreak Mine Site	2010/5513	Controlled Action	Post-Approval
Ammonium Nitrate Project	2010/5423	Controlled Action	Completed
Anketell Point Iron Ore Processing & Export Port	2009/5120	Controlled Action	Post-Approval
Asian Renewable Energy Hub, 220 km east of Port Hedland, Western Australia	2017/8112	Controlled Action	Post-Approval
Balmoral South Iron Ore Mine	2008/4236	Controlled Action	Post-Approval
Binowee Iron Ore Project	2001/366	Controlled Action	Proposed Decision
Burrup North East Sand Mining Project	2008/4611	Controlled Action	Completed
Cape Lambert Port B Development	2008/4032	Controlled Action	Post-Approval
Construct and operate LNG & domestic gas plant including onshore and offshore facilities - Wheatston	2008/4469	Controlled Action	Post-Approval
Construction and operation of a Solar Salt Project, SW Onslow, WA	2016/7793	Controlled Action	Assessment Approach
Develop Jansz-Io deepwater gas field in Permit Areas WA-18-R, WA-25-R and WA-26-	2005/2184	Controlled Action	Post-Approval
Development of Angel gas and condensate field, North West Shelf	2004/1805	Controlled Action	Post-Approval
Development of an iron ore mine and associated infrastructure	2010/5630	Controlled Action	Assessment Approach

Title of referral	Reference	Referral Outcome	Assessment Status
Controlled action			
Development of Browse Basin Gas Fields (Upstream)	2008/4111	Controlled Action	Completed
Development of Coniston/Novara fields within the Exmouth Sub-basin	2011/5995	Controlled Action	Post-Approval
Development of Stybarrow petroleum field incl drilling and facility installation	2004/1469	Controlled Action	Post-Approval
Duplication of the Dampier Highway Stages 2 & 6	2010/5419	Controlled Action	Post-Approval
Echo-Yodel Production Wells	2000/11	Controlled Action	Post-Approval
Enfield full field development	2001/257	Controlled Action	Post-Approval
Equus Gas Fields Development Project, Carnarvon Basin	2012/6301	Controlled Action	Completed
Eramurra Industrial Salt Project	2021/9027	Controlled Action	Assessment Approach
Eramurra Industrial Salt Project, near Karratha, WA	2019/8448	Controlled Action	Completed
Gorgon Gas Development 4th Train Proposal	2011/5942	Controlled Action	Post-Approval
Gorgon Gas Revised Development	2008/4178	Controlled Action	Post-Approval
Greater Enfield (Vincent) Development	2005/2110	Controlled Action	Post-Approval
Greater Gorgon Development - Optical Fibre Cable, Mainland to Barrow Island	2005/2141	Controlled Action	Completed
Great Northern Pipeline - 630 km buried gas pipeline	2009/5257	Controlled Action	Completed
Learmonth Bundle Site and Launchway, WA	2017/8079	Controlled Action	Completed
Light Crude Oil Production	2001/365	Controlled Action	Post-Approval
Mardie Project, 80 km south west of Karratha, WA	2018/8236	Controlled Action	Post-Approval
North Star Magnetite Project	2012/6689	Controlled Action	Post-Approval

Title of referral	Reference	Referral Outcome	Assessment Status
Controlled action			
North West Shelf Gas Venture Phase VI Expansion	2007/3436	Controlled Action	Referral Decision
Perdaman Urea Project, near Karratha, WA	2018/8383	Controlled Action	Post-Approval
Pluto Gas Project	2005/2258	Controlled Action	Completed
Pluto Gas Project Including Site B	2006/2968	Controlled Action	Post-Approval
Port Hedland Outer Harbour Development and associated marine and terrestrial in	2008/4159	Controlled Action	Post-Approval
Port Hedland Spoilbank Marina, WA	2019/8520	Controlled Action	Post-Approval
Proposed technical ammonium nitrate production facility	2008/4546	Controlled Action	Post-Approval
Proposed West Pilbara Iron Ore Project	2009/4706	Controlled Action	Post-Approval
Pyrenees Oil Fields Development	2005/2034	Controlled Action	Post-Approval
Simpson Development	2000/59	Controlled Action	Completed
Simpson Oil Field Development	2001/227	Controlled Action	Post-Approval
site preparations	2005/2391	Controlled Action	Post-Approval
The Scarborough Project - FLNG & assoc subsea infrastructure, Carnarvon Basin	2013/6811	Controlled Action	Post-Approval

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region

Name	Region
Ancient coastline at 125 m depth contour	North-west
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	North-west
Commonwealth waters adjacent to Ningaloo Reef	North-west
Continental Slope Demersal Fish Communities	North-west
Exmouth Plateau	North-west
Glomar Shoals	North-west

Biologically Important Areas		[Resource Information]
Scientific Name	Behaviour	Presence
Dugong		
Dugong dugon Dugong [28]	Foraging	Known to occur
Dugong dugon Dugong [28]	Reproduction	Known to occur
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Foraging	Known to occur
Caretta caretta Loggerhead Turtle [1763]	Reproduction	Low density
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Migration	Known to occur
Chelonia mydas Green Turtle [1765]	Reproduction	Likely to occur
Chelonia mydas Green Turtle [1765]	Resting	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Foraging	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Migration	Known to occur

Scientific Name	Behaviour	Presence
Eretmochelys imbricata Hawksbill Turtle [1766]	Reproduction	Known to occur
Natator depressus Flatback Turtle [59257]	Foraging	Known to occur
Natator depressus Flatback Turtle [59257]	Migration	Known to occur
Natator depressus Flatback Turtle [59257]	Reproduction	Known to occur
River shark		
Pristis clavata Dwarf Sawfish [68447]	Foraging	Known to occur
Pristis clavata Dwarf Sawfish [68447]	Reproduction	Known to occur
Pristis pristis Largetooth Sawfish [60756]	Foraging	Known to occur
Pristis pristis Largetooth Sawfish [60756]	Reproduction	Known to occur
Pristis zijsron Green Sawfish [68442]	Foraging	Known to occur
Pristis zijsron Green Sawfish [68442]	Reproduction	Known to occur
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Reproduction	Known to occur
Fregata ariel Lesser Frigatebird [1012]	Reproduction	Known to occur
Phaethon lepturus White-tailed Tropicbird [1014]	Reproduction	Known to occur
Sterna dougallii Roseate Tern [817]	Reproduction	Known to occur

Scientific Name	Behaviour	Presence
Sternula albifrons sinensis Little Tern [82850]	Reproduction	Known to occur
Sternula nereis Fairy Tern [82949]	Reproduction	Known to occur
Sula leucogaster Brown Booby [1022]	Reproduction	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Reproduction	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Eubalaena australis Southern Right Whale [40]	Migration	
Eubalaena australis Southern Right Whale [40]	Reproduction	
Megaptera novaeangliae Humpback Whale [38]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Resting	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	3
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	5
Listed Threatened Ecological Communities:	6
Listed Threatened Species:	112
Listed Migratory Species:	81

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	20
Commonwealth Heritage Places:	3
Listed Marine Species:	125
Whales and Other Cetaceans:	38
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	21
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	48
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	113
Key Ecological Features (Marine):	8
Biologically Important Areas:	23
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

National Heritage Places		[Resource Information]
Name	State	Legal Status
Historic		
HMAS Sydney II and HSK Kormoran Shipwreck Sites	EXT	Listed place
Batavia Shipwreck Site and Survivor Camps Area 1629 - Houtman Abrolhos	WA	Listed place
Natural		
Lesueur National Park	WA	Listed place

Commonwealth Marine Area	[Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Ecological Communities	[Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Aquatic Root Mat Community in Caves of the Swan Coastal Plain	Endangered	Community known to occur within area
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area
Honeymyrtle shrubland on limestone ridges of the Swan Coastal Plain Bioregion	Critically Endangered	Community likely to occur within area

Community Name	Threatened Category	Presence Text
Sedgelands in Holocene dune swales of the southern Swan Coastal Plain	Endangered	Community known to occur within area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community likely to occur within area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Aphelocephala leucopsis Southern Whiteface [529]	Vulnerable	Species or species habitat likely to occur within area
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris tenuirostris Great Knot [862]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Species or species habitat may occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Species or species habitat may occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Turnix varius scintillans Painted Button-quail (Houtman Abrolhos) [82451]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
[Xenus cinereus](#)		
Terek Sandpiper [59300]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Zanda latirostris listed as Calyptorhynchus latirostris](#)		
Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Breeding likely to occur within area
FISH		
[Hoplostethus atlanticus](#)		
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
[Nannatherina balstoni](#)		
Balston's Pygmy Perch [66698]	Vulnerable	Species or species habitat likely to occur within area
INSECT		
[Hesperocolletes douglasi](#)		
Douglas' Broad-headed Bee, Rottnest Bee [66734]	Critically Endangered	Species or species habitat may occur within area
MAMMAL		
[Balaenoptera borealis](#)		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Balaenoptera musculus](#)		
Blue Whale [36]	Endangered	Migration route known to occur within area
[Balaenoptera physalus](#)		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Bettongia penicillata ogilbyi](#)		
Woylie [66844]	Endangered	Species or species habitat likely to occur within area
[Dasyurus geoffroii](#)		
Chuditch, Western Quoll [330]	Vulnerable	Translocated population known to occur within area

Scientific Name	Threatened Category	Presence Text
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding likely to occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Breeding known to occur within area
Parantechinus apicalis Dibbler [313]	Endangered	Translocated population known to occur within area
Petrogale lateralis lateralis Black-flanked Rock-wallaby, Mororong, Black-footed Rock Wallaby [66647]	Endangered	Species or species habitat likely to occur within area
Pseudocheirus occidentalis Western Ringtail Possum, Ngwayir, Womp, Woder, Ngoor, Ngoolangit [25911]	Critically Endangered	Species or species habitat likely to occur within area
Setonix brachyurus Quokka [229]	Vulnerable	Species or species habitat likely to occur within area
PLANT		
Andersonia gracilis Slender Andersonia [14470]	Endangered	Species or species habitat likely to occur within area
Androcalva bivillosa Straggling Androcalva [87807]	Critically Endangered	Species or species habitat likely to occur within area
Anigozanthos viridis subsp. terraspectans Dwarf Green Kangaroo Paw [3435]	Vulnerable	Species or species habitat likely to occur within area
Banksia mimica Summer Honeypot [82765]	Endangered	Species or species habitat may occur within area
Beyeria lepidopetala Small-petalled Beyeria, Short-petalled Beyeria [18362]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Caladenia barbarella Small Dragon Orchid, Common Dragon Orchid [68686]	Endangered	Species or species habitat may occur within area
Caladenia bryceana subsp. cracens Northern Dwarf Spider-orchid [64556]	Vulnerable	Species or species habitat likely to occur within area
Caladenia elegans Elegant Spider-orchid [56775]	Endangered	Species or species habitat likely to occur within area
Caladenia hoffmanii Hoffman's Spider-orchid [56719]	Endangered	Species or species habitat likely to occur within area
Caleana dixonii listed as Paracaleana dixonii Sandplain Duck Orchid [87944]	Endangered	Species or species habitat likely to occur within area
Chorizema humile Prostrate Flame Pea [32573]	Endangered	Species or species habitat may occur within area
Chorizema varium Limestone Pea [16981]	Endangered	Species or species habitat likely to occur within area
Conostylis dielsii subsp. teres Irwin's Conostylis [3614]	Endangered	Species or species habitat may occur within area
Conostylis micrantha Small-flowered Conostylis [17635]	Endangered	Species or species habitat may occur within area
Diuris drummondii Tall Donkey Orchid [4365]	Vulnerable	Species or species habitat may occur within area
Diuris micrantha Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diuris purdiei Purdie's Donkey-orchid [12950]	Endangered	Species or species habitat may occur within area
Drakaea concolor Kneeling Hammer-orchid [56777]	Vulnerable	Species or species habitat likely to occur within area
Drakaea elastica Glossy-leafed Hammer Orchid, Glossy-leaved Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat likely to occur within area
Drakaea micrantha Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat may occur within area
Drummondita ericoides Morseby Range Drummondita [9193]	Endangered	Species or species habitat likely to occur within area
Eleocharis keigheryi Keighery's Eleocharis [64893]	Vulnerable	Species or species habitat likely to occur within area
Eucalyptus argutifolia Yanchep Mallee, Wabling Hill Mallee [24263]	Vulnerable	Species or species habitat likely to occur within area
Eucalyptus cuprea Mallee Box [56773]	Endangered	Species or species habitat likely to occur within area
Grevillea batrachioides Mt Lesueur Grevillea [21735]	Endangered	Species or species habitat may occur within area
Grevillea bracteosa subsp. howatharra [85002]	Critically Endangered	Species or species habitat likely to occur within area
Grevillea humifusa Spreading Grevillea [61182]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hemiandra gardneri Red Snakebush [7945]	Endangered	Species or species habitat likely to occur within area
Hypocalymma angustifolium subsp. Hutt River (S.Patrick 2982) [85023]	Endangered	Species or species habitat likely to occur within area
Lechenaultia chlorantha Kalbarri Leschenaultia [16763]	Vulnerable	Species or species habitat likely to occur within area
Macarthuria keigheryi Keighery's Macarthuria [64930]	Endangered	Species or species habitat may occur within area
Marianthus paralius [83925]	Endangered	Species or species habitat likely to occur within area
Melaleuca sp. Wanneroo (G.J.Keighery 16705) [89456]	Endangered	Species or species habitat likely to occur within area
Pterostylis sinuata Northampton Midget Greenhood, Western Swan Greenhood [84991]	Endangered	Species or species habitat likely to occur within area
Stachystemon nematophorus Three-flowered Stachystemon [81447]	Vulnerable	Species or species habitat likely to occur within area
Styphelia marginata listed as Leucopogon marginatus Thick-margined Leucopogon [91870]	Endangered	Species or species habitat likely to occur within area
Styphelia obtecta listed as Leucopogon obtectus Hidden Beard-heath [50758]	Endangered	Species or species habitat may occur within area
Thelymitra stellata Star Sun-orchid [7060]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
[Thelymitra variegata](#) Queen of Sheba [12582]	Critically Endangered	Species or species habitat may occur within area
[Wurmbea tubulosa](#) Long-flowered Nancy [12739]	Endangered	Species or species habitat may occur within area
REPTILE		
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
[Ctenotus lancelini](#) Lancelin Island Skink [1482]	Vulnerable	Translocated population known to occur within area
[Dermochelys coriacea](#) Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
[Egernia stokesii badia](#) Western Spiny-tailed Skink, Baudin Island Spiny-tailed Skink [64483]	Endangered	Species or species habitat may occur within area
[Liopholis pulchra longicauda](#) Jurien Bay Skink, Jurien Bay Rock-skink [83162]	Vulnerable	Species or species habitat likely to occur within area
[Natator depressus](#) Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
SHARK		
[Carcharias taurus (west coast population)](#) Grey Nurse Shark (west coast population) [68752]	Vulnerable	Congregation or aggregation likely to occur within area
[Carcharodon carcharias](#) White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Centrophorus uyato		
Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Galeorhinus galeus		
Tope, Flake, Oil Shark, School Shark [68453]	Conservation Dependent	Species or species habitat may occur within area
Pristis pristis		
Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sphyrna lewini		
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area
SPIDER		
Idiosoma nigrum		
Shield-backed Trapdoor Spider, Black Rugose Trapdoor Spider [66798]	Vulnerable	Species or species habitat may occur within area

Listed Migratory Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai		
Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes		
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Species or species habitat may occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Onychoprion anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat may occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Species or species habitat may occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		

Scientific Name	Threatened Category	Presence Text
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour may occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharias taurus Grey Nurse Shark [64469]		Congregation or aggregation likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Breeding likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Pristis pristis](#) Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna grisea as Puffinus griseus Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding likely to occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Foraging, feeding or related behaviour likely to occur within area overfly marine area
Calidris tenuirostris Great Knot [862]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Charadrius bicinctus Double-banded Plover [895]		Foraging, feeding or related behaviour likely to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Foraging, feeding or related behaviour likely to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Foraging, feeding or related behaviour likely to occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding likely to occur within area
Larus pacificus Pacific Gull [811]		Breeding likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Foraging, feeding or related behaviour likely to occur within area overfly marine area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Foraging, feeding or related behaviour likely to occur within area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding likely to occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Pelagodroma marina White-faced Storm-Petrel [1016]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat may occur within area
Phalacrocorax fuscescens Black-faced Cormorant [59660]		Breeding likely to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Foraging, feeding or related behaviour likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Foraging, feeding or related behaviour likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area overfly marine area
Pterodroma macroptera Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Puffinus assimilis Little Shearwater [59363]		Foraging, feeding or related behaviour known to occur within area
Puffinus huttoni Hutton's Shearwater [1025]		Foraging, feeding or related behaviour likely to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Foraging, feeding or related behaviour likely to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Stercorarius antarcticus as Catharacta skua Brown Skua [85039]		Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]	Vulnerable	Species or species habitat may occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Thinornis cucullatus as Thinornis rubricollis Hooded Plover, Hooded Dotterel [87735]		Species or species habitat likely to occur within area overfly marine area
Tringa brevipes as Heteroscelus brevipes Grey-tailed Tattler [851]		Foraging, feeding or related behaviour likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Foraging, feeding or related behaviour likely to occur within area overfly marine area
Tringa totanus Common Redshank, Redshank [835]		Foraging, feeding or related behaviour likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
[Xenus cinereus](#) Terek Sandpiper [59300]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area overfly marine area
Fish		
[Campichthys galei](#) Gale's Pipefish [66191]		Species or species habitat may occur within area
[Choeroichthys suillus](#) Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
[Festucalex scalaris](#) Ladder Pipefish [66216]		Species or species habitat may occur within area
[Filicampus tigris](#) Tiger Pipefish [66217]		Species or species habitat may occur within area
[Halicampus brocki](#) Brock's Pipefish [66219]		Species or species habitat may occur within area
[Haliichthys taeniophora as Haliichthys taeniophorus](#) Ribboned Pipehorse, Ribboned Pipefish, Ribboned Seadragon [94706]		Species or species habitat may occur within area
[Heraldia nocturna](#) Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
[Hippocampus angustus](#) Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
[Hippocampus breviceps](#) Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
[Hippocampus histrix](#) Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus subelongatus West Australian Seahorse [66722]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Histiogamphelus cristatus Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
Idiotropiscis australe as Acentronura australe Southern Pygmy Pipehorse [74958]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
Lissocampus fatiloquus Prophet's Pipefish [66250]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Mitotichthys meraculus Western Crested Pipefish [66259]		Species or species habitat may occur within area
Nannocampus subosseus Bonyhead Pipefish, Bony-headed Pipefish [66264]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Vanacampus phillipi](#) Port Phillip Pipefish [66284]		Species or species habitat may occur within area
[Vanacampus poecilolaemus](#) Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Mammal		
[Arctocephalus forsteri](#) Long-nosed Fur-seal, New Zealand Fur-seal [20]		Species or species habitat may occur within area
[Neophoca cinerea](#) Australian Sea-lion, Australian Sea Lion [22]	Endangered	Breeding known to occur within area
Reptile		
[Aipysurus laevis](#) Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
[Aipysurus pooleorum](#) Shark Bay Sea Snake [66061]		Species or species habitat may occur within area
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
[Dermochelys coriacea](#) Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
[Ephalophis greyae as Ephalophis greyi](#) Mangrove Sea Snake [93738]		Species or species habitat may occur within area
[Hydrophis kingii as Disteira kingii](#) Spectacled Sea Snake [93511]		Species or species habitat may occur within area
[Hydrophis major as Disteira major](#) Olive-headed Sea Snake [93512]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis platura as Pelamis platurus		
Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area

Whales and Other Cetaceans [Resource Information]

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata		
Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera omurai		
Omura's Whale [87136]		Species or species habitat likely to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Caperea marginata		
Pygmy Right Whale [39]		Foraging, feeding or related behaviour may occur within area

Current Scientific Name	Status	Type of Presence
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding likely to occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Globicephala melas Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Hyperoodon planifrons Southern Bottlenose Whale [71]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Lissodelphis peronii Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat known to occur within area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 90-120m depth	South-west
Commonwealth marine environment surrounding the Houtman Abrolhos Islands	South-west
Commonwealth marine environment within and adjacent to the west coast inshore lagoons	South-west

Name	Region
Naturaliste Plateau	South-west
Perth Canyon and adjacent shelf break, and other west coast canyons	South-west
Wallaby Saddle	North-west
Western demersal slope and associated fish communities	South-west
Western rock lobster	South-west

Biologically Important Areas		[Resource Information]
Scientific Name	Behaviour	Presence
Seabirds		
Anous stolidus Common Noddy [825]	Foraging	Likely to occur
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Foraging	Known to occur
Ardenna carneipes Flesh-footed Shearwater [82404]	Foraging	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Foraging	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Reproduction	Known to occur
Eudyptula minor Little Penguin [1085]	Foraging	Likely to occur
Hydroprogne caspia Caspian Tern [808]	Foraging	Known to occur
Larus pacificus Pacific Gull [811]	Foraging	Known to occur
Onychoprion anaethetus Bridled Tern [82845]	Foraging	Likely to occur
Onychoprion fuscatus Sooty Tern [90682]	Foraging	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Pterodroma mollis Soft-plumaged Petrel [1036]	Foraging	Known to occur
Puffinus assimilis Little Shearwater [59363]	Foraging	Likely to occur
Sterna dougallii Roseate Tern [817]	Foraging	Known to occur
Sternula nereis Fairy Tern [82949]	Foraging	Known to occur
Seals		
Neophoca cinerea Australian Sea Lion [22]	Foraging	Likely to occur
Sharks		
Carcharodon carcharias White Shark [64470]	Foraging	Known to occur
Whales		
Balaenoptera musculus Blue and Pygmy Blue Whale [36]	Foraging	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Eubalaena australis Southern Right Whale [40]	Migration	
Megaptera novaeangliae Humpback Whale [38]	Migration	Known to occur
Physeter macrocephalus Sperm Whale [59]	Foraging	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 25-Jun-2026

[Summary](#)
[Details](#)
- [Matters of NES](#)
- [Other Matters Protected by the EPBC Act](#)
- [Extra Information](#)

[Caveat](#)
[Acknowledgements](#)

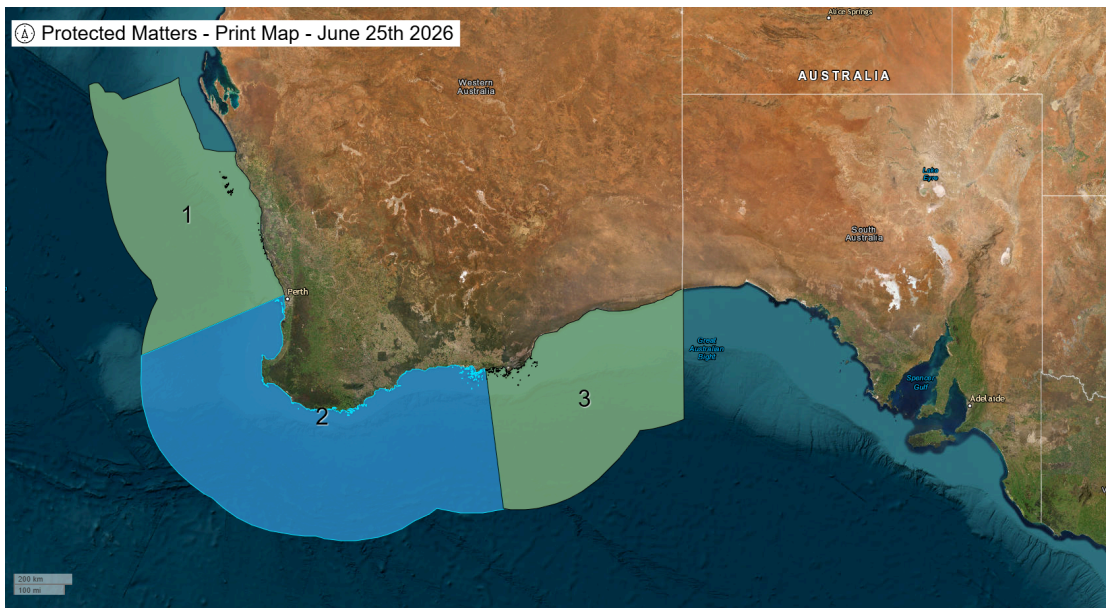

Figure 1: South West Marine Region - Central (Part 2)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	1
National Heritage Places:	3
Wetlands of International Importance (Ramsar	6
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	14
Listed Threatened Species:	176
Listed Migratory Species:	86

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	66
Commonwealth Heritage Places:	5
Listed Marine Species:	124
Whales and Other Cetaceans:	39
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	29
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	158
Regional Forest Agreements:	1
Nationally Important Wetlands:	None
EPBC Act Referrals:	303
Key Ecological Features (Marine):	11
Biologically Important Areas:	27
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

World Heritage Properties [Resource Information]

Name	State	Legal Status
Australian Convict Sites (Fremantle Prison)	WA	Declared property

National Heritage Places [Resource Information]

Name	State	Legal Status
Historic		
Fremantle Prison (former)	WA	Listed place
Indigenous		
Cheetup Rock Shelter	WA	Listed place
Natural		
Fitzgerald River National Park	WA	Listed place

Wetlands of International Importance (Ramsar Wetlands) [Resource Information]

Ramsar Site Name	Proximity
Becher point wetlands	Within Ramsar site
Forrestdale and thomsons lakes	Within Ramsar site
Lake gore	Within Ramsar site
Lake warden system	Within Ramsar site
Peel-yalgorup system	Within Ramsar site
Vasse-wonnerup system	Within Ramsar site

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Aquatic Root Mat Community 1 in Caves of the Leeuwin Naturaliste Ridge	Endangered	Community known to occur within area
Aquatic Root Mat Community 3 in Caves of the Leeuwin Naturaliste Ridge	Endangered	Community known to occur within area
Aquatic Root Mat Community 4 in Caves of the Leeuwin Naturaliste Ridge	Endangered	Community known to occur within area
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area
Clay Pans of the Swan Coastal Plain	Critically Endangered	Community likely to occur within area
Empodisma peatlands of southwestern Australia	Endangered	Community likely to occur within area
Honeymyrtle shrubland on limestone ridges of the Swan Coastal Plain Bioregion	Critically Endangered	Community likely to occur within area
Proteaceae Dominated Kwongkan Shrublands of the Southeast Coastal Floristic Province of Western Australia	Endangered	Community likely to occur within area
Scott River Ironstone Association	Endangered	Community likely to occur within area
Sedgelands in Holocene dune swales of the southern Swan Coastal Plain	Endangered	Community known to occur within area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area
Thrombolite (microbial) community of coastal freshwater lakes of the Swan Coastal Plain (Lake Richmond)	Endangered	Community known to occur within area
Thrombolite (microbialite) Community of a Coastal Brackish Lake (Lake Clifton)	Critically Endangered	Community known to occur within area
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community likely to occur within area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Species or species habitat may occur within area
Aphelocephala leucopsis Southern Whiteface [529]	Vulnerable	Species or species habitat may occur within area
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Atrichornis clamosus Noisy Scrub-bird, Tjimiluk [654]	Endangered	Species or species habitat likely to occur within area
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Cereopsis novaehollandiae grisea Cape Barren Goose (south-western), Recherche Cape Barren Goose [25978]	Vulnerable	Breeding likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Dasyornis longirostris Western Bristlebird [515]	Endangered	Species or species habitat likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area

Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area
Pezoporus flaviventris Western Ground Parrot, Kyloring [84650]	Critically Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area
Psophodes nigrogularis nigrogularis Western Heath Whipbird [64449]	Endangered	Species or species habitat likely to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Species or species habitat may occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Tringa nebularia		
Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Xenus cinereus		
Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area
Zanda baudinii listed as Calyptorhynchus baudinii		
Baudin's Cockatoo, Baudin's Black-Cockatoo, Long-billed Black-cockatoo [87736]	Endangered	Breeding likely to occur within area
Zanda latirostris listed as Calyptorhynchus latirostris		
Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Breeding likely to occur within area
CRUSTACEAN		
Cherax tenuimanus		
Hairy Marron, Margaret River Hairy Marron, Margaret River Marron [78931]	Critically Endangered	Species or species habitat may occur within area
Engaewa pseudoreducta		
Margaret River Burrowing Crayfish [82674]	Critically Endangered	Species or species habitat may occur within area
Engaewa reducta		
Dunsborough Burrowing Crayfish [82675]	Critically Endangered	Species or species habitat likely to occur within area
Engaewa walpolea		
Walpole Burrowing Crayfish [82676]	Endangered	Species or species habitat likely to occur within area
FISH		
Galaxias truttaceus (Western Australian population)		
Western Trout Minnow [89857]	Endangered	Species or species habitat likely to occur within area
Galaxiella munda		
Western Dwarf Galaxias, Western Mud Minnow [79240]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Galaxiella nigrostriata		
Blackstriped Dwarf Galaxias, Black-stripe Minnow [88677]	Endangered	Species or species habitat likely to occur within area
Hoplostethus atlanticus		
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
Nannatherina balstoni		
Balston's Pygmy Perch [66698]	Vulnerable	Species or species habitat likely to occur within area
Nannoperca pygmaea		
Little Pygmy Perch [88315]	Endangered	Species or species habitat likely to occur within area
FROG		
Spicospina flammocaerulea		
Sunset Frog [64782]	Vulnerable	Species or species habitat likely to occur within area
INSECT		
Hesperocolletes douglasi		
Douglas' Broad-headed Bee, Rottnest Bee [66734]	Critically Endangered	Species or species habitat may occur within area
Trioza barrettae		
Banksia brownii plant louse [87805]	Endangered	Species or species habitat likely to occur within area
MAMMAL		
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Bettongia penicillata ogilbyi Woylie [66844]	Endangered	Species or species habitat likely to occur within area
Dasyurus geoffroii Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat likely to occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding likely to occur within area
Myrmecobius fasciatus Numbat [294]	Endangered	Species or species habitat may occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Breeding known to occur within area
Parantechinus apicalis Dibbler [313]	Endangered	Translocated population known to occur within area
Petrogale lateralis hacketti Recherche Rock-wallaby [66849]	Vulnerable	Species or species habitat likely to occur within area
Petrogale lateralis lateralis Black-flanked Rock-wallaby, Mooroorong, Black-footed Rock Wallaby [66647]	Endangered	Translocated population known to occur within area
Phascogale calura Red-tailed Phascogale, Red-tailed Wambenger, Kenngoor [316]	Vulnerable	Species or species habitat may occur within area
Potorous gilbertii Gilbert's Potoroo, Ngilkat [66642]	Critically Endangered	Translocated population known to occur within area
Pseudocheirus occidentalis Western Ringtail Possum, Ngwayir, Womp, Woder, Ngoor, Ngoolangit [25911]	Critically Endangered	Breeding likely to occur within area
Pseudomys shortridgei Heath Mouse, Dayang, Heath Rat [77]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Setonix brachyurus Quokka [229]	Vulnerable	Species or species habitat likely to occur within area
OTHER		
Westralunio carteri Carter's Freshwater Mussel, Ambiguus Mussel [86266]	Vulnerable	Species or species habitat likely to occur within area
PLANT		
Adenanthos dobagii Fitzgerald Woollybush [21253]	Endangered	Species or species habitat likely to occur within area
Adenanthos ellipticus Oval-leaf Adenanthos [4570]	Vulnerable	Species or species habitat likely to occur within area
Andersonia gracilis Slender Andersonia [14470]	Endangered	Species or species habitat may occur within area
Andersonia pinaster Two Peoples Bay Andersonia [67444]	Vulnerable	Species or species habitat likely to occur within area
Anigozanthos bicolor subsp. minor Little Kangaroo Paw, Two-coloured Kangaroo Paw, Small Two-colour Kangaroo Paw [21241]	Endangered	Species or species habitat likely to occur within area
Austrostipa bronweniae listed as Austrostipa bronwenae [92773]	Endangered	Species or species habitat likely to occur within area
Austrostipa jacobsiana [87809]	Critically Endangered	Species or species habitat likely to occur within area
Banksia anatona Cactus Dryandra [82758]	Critically Endangered	Species or species habitat may occur within area
Banksia brownii Brown's Banksia, Feather-leaved Banksia [8277]	Critically Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Banksia goodii Good's Banksia [16727]	Vulnerable	Species or species habitat likely to occur within area
Banksia mimica Summer Honeypot [82765]	Endangered	Species or species habitat may occur within area
Banksia nivea subsp. uliginosa Swamp Honeypot [82766]	Endangered	Species or species habitat likely to occur within area
Banksia pseudoplumosa False Plumed-Banksia [82760]	Endangered	Species or species habitat likely to occur within area
Banksia squarrosa subsp. argillacea Whicher Range Dryandra [82769]	Vulnerable	Species or species habitat likely to occur within area
Banksia verticillata Granite Banksia, Albany Banksia, River Banksia [8333]	Vulnerable	Species or species habitat likely to occur within area
Boronia clavata Bremer Boronia [5538]	Endangered	Species or species habitat likely to occur within area
Boronia exilis Scott River Boronia [64844]	Endangered	Species or species habitat likely to occur within area
Brachyscias verecundus Ironstone Brachyscias [81321]	Critically Endangered	Species or species habitat may occur within area
Caladenia busselliana Bussell's Spider-orchid [24369]	Endangered	Species or species habitat likely to occur within area
Caladenia caesarea subsp. maritima Cape Spider-orchid [64856]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Caladenia excelsa		
Giant Spider-orchid [56717]	Endangered	Species or species habitat likely to occur within area
Caladenia granitora		
[65292]	Endangered	Species or species habitat likely to occur within area
Caladenia harringtoniae		
Harrington's Spider-orchid, Pink Spider-orchid [56786]	Vulnerable	Species or species habitat likely to occur within area
Caladenia hoffmanii		
Hoffman's Spider-orchid [56719]	Endangered	Species or species habitat may occur within area
Caladenia huegelii		
King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid [7309]	Endangered	Species or species habitat likely to occur within area
Caladenia lodgeana		
Lodge's Spider-orchid [68664]	Critically Endangered	Species or species habitat likely to occur within area
Caladenia procera		
Carbunup King Spider Orchid [68679]	Critically Endangered	Species or species habitat likely to occur within area
Caladenia viridescens		
Dunsborough Spider-orchid [56776]	Endangered	Species or species habitat likely to occur within area
Calectasia cyanea		
Blue Tinsel Lily [7669]	Critically Endangered	Species or species habitat likely to occur within area
Chamelaucium lullfitzii listed as Chamelaucium sp. Gingin (N.G.Marchant 6)		
Gingin Wax [92777]	Endangered (listed as Chamelaucium sp. Gingin	Species or species habitat likely to occur within area
Chamelaucium roycei listed as Chamelaucium sp. S coastal plain (R.D.Royce 4872)		
Royce's Waxflower [56751]	Vulnerable (listed as Chamelaucium sp. S coastal plain	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Chordifex abortivus Manypeaks Rush [64868]	Endangered	Species or species habitat likely to occur within area
Commersonia apella Many-flowered Commersonia [86877]	Critically Endangered	Species or species habitat likely to occur within area
Conospermum quadripetalum [65312]	Critically Endangered	Species or species habitat likely to occur within area
Conostylis misera Grass Conostylis [21320]	Endangered	Species or species habitat likely to occur within area
Coopernookia georgei Mauve Coopernookia [21218]	Endangered	Species or species habitat likely to occur within area
Darwinia ferricola Scott River Darwinia [56706]	Endangered	Species or species habitat likely to occur within area
Daviesia obovata Paddle-leaf Daviesia [17311]	Endangered	Species or species habitat likely to occur within area
Daviesia ovata Broad-leaf Daviesia [21193]	Critically Endangered	Species or species habitat likely to occur within area
Diuris drummondii Tall Donkey Orchid [4365]	Vulnerable	Species or species habitat likely to occur within area
Diuris micrantha Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area
Diuris purdiei Purdie's Donkey-orchid [12950]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Drakaea elastica Glossy-leafed Hammer Orchid, Glossy-leaved Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat likely to occur within area
Drakaea micrantha Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat likely to occur within area
Eleocharis keigheryi Keighery's Eleocharis [64893]	Vulnerable	Species or species habitat likely to occur within area
Eucalyptus argutifolia Yanchep Mallee, Wabling Hill Mallee [24263]	Vulnerable	Species or species habitat may occur within area
Eucalyptus burdettiana Burdett Gum [13505]	Endangered	Species or species habitat likely to occur within area
Eucalyptus coronata Crowned Mallee [2308]	Vulnerable	Species or species habitat likely to occur within area
Eucalyptus insularis Twin Peak Island Mallee [3057]	Endangered	Species or species habitat likely to occur within area
Eucalyptus x phylacis Meelup Mallee [87817]	Endangered	Species or species habitat likely to occur within area
Gastrolobium argyrotrichum Metricup Pea [89145]	Critically Endangered	Species or species habitat likely to occur within area
Gastrolobium papilio Butterfly-leaved Gastrolobium [78415]	Endangered	Species or species habitat may occur within area
Grevillea brachystylis subsp. australis [55525]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Grevillea elongata Ironstone Grevillea [64578]	Vulnerable	Species or species habitat may occur within area
Grevillea infundibularis Fan-leaf Grevillea [5772]	Endangered	Species or species habitat likely to occur within area
Isopogon uncinatus Albany Cone Bush, Hook-leaf Isopogon [20871]	Endangered	Species or species habitat likely to occur within area
Kennedia glabrata Northcliffe Kennedia [16452]	Vulnerable	Species or species habitat likely to occur within area
Kennedia lateritia Augusta Kennedia [45985]	Endangered	Species or species habitat likely to occur within area
Kunzea similis subsp. similis [84068]	Critically Endangered	Species or species habitat likely to occur within area
Lambertia echinata subsp. echinata Prickly Honeysuckle [56729]	Endangered	Species or species habitat likely to occur within area
Lambertia echinata subsp. occidentalis Western Prickly Honeysuckle [64528]	Endangered	Species or species habitat may occur within area
Lambertia orbifolia Roundleaf Honeysuckle [15725]	Endangered	Species or species habitat likely to occur within area
Leptomeria dielsiana Diels' Currant Bush [5146]	Vulnerable	Species or species habitat likely to occur within area
Microtis globula South-Coast Mignonette Orchid [6780]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Morelotia australiensis listed as Tetraria australiensis		
Southern Tetraria [92784]	Vulnerable	Species or species habitat likely to occur within area
Myoporum cordifolium		
Jerramungup Myoporum [24223]	Vulnerable	Species or species habitat likely to occur within area
Petrophile latericola		
Laterite Petrophile [64532]	Endangered	Species or species habitat likely to occur within area
Reedia spathacea		
Reedia [2995]	Critically Endangered	Species or species habitat likely to occur within area
Ricinocarpos trichophorus		
Barrens Wedding Bush [19931]	Endangered	Species or species habitat may occur within area
Scaevola macrophylla		
Large-flowered Scaevola [11806]	Critically Endangered	Species or species habitat may occur within area
Sphenotoma drummondii		
Mountain Paper-heath [21160]	Endangered	Species or species habitat likely to occur within area
Stylidium galioides		
Yellow Mountain Triggerplant [4666]	Vulnerable	Species or species habitat likely to occur within area
Synaphea sp. Fairbridge Farm (D.Papenfus 696)		
Selena's Synaphea [82881]	Critically Endangered	Species or species habitat likely to occur within area
Synaphea sp. Serpentine (G.R.Brand 103)		
[86879]	Critically Endangered	Species or species habitat may occur within area
Synaphea stenoloba		
Dwellingup Synaphea [66311]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Thelymitra variegata Queen of Sheba [12582]	Critically Endangered	Species or species habitat likely to occur within area
Verticordia apecta Hay River Featherflower, Scruffy Verticordia [65545]	Critically Endangered	Species or species habitat may occur within area
Verticordia crebra [55678]	Vulnerable	Species or species habitat likely to occur within area
Verticordia densiflora var. pedunculata Long-stalked Featherflower [55689]	Endangered	Species or species habitat may occur within area
Verticordia fimbrilepis subsp. australis Southern Shy Featherflower [24630]	Vulnerable	Species or species habitat likely to occur within area
Verticordia helichrysantha Coast Featherflower [8204]	Vulnerable	Species or species habitat likely to occur within area
Verticordia pityrhops Little Pine Verticordia, Pine-like Featherflower [55798]	Endangered	Species or species habitat likely to occur within area
Verticordia plumosa var. ananeotes Tufted Plumed Featherflower [23871]	Endangered	Species or species habitat may occur within area
Verticordia plumosa var. vassensis Vasse Featherflower [55804]	Endangered	Species or species habitat likely to occur within area
Wurmbea calcicola Naturaliste Nancy [64691]	Endangered	Species or species habitat likely to occur within area
REPTILE		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
SHARK		
Carcharias taurus (west coast population) Grey Nurse Shark (west coast population) [68752]	Vulnerable	Congregation or aggregation likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Centrophorus uyato Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Galeorhinus galeus Tope, Flake, Oil Shark, School Shark [68453]	Conservation Dependent	Species or species habitat may occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area
SPIDER		
Bertmainius tingle Tingle Pygmy Trapdoor Spider [89126]	Endangered	Species or species habitat likely to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text

Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
[Anous stolidus](#) Common Noddy [825]		Species or species habitat likely to occur within area
[Apus pacificus](#) Fork-tailed Swift [678]		Species or species habitat likely to occur within area
[Ardenna carneipes](#) Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
[Ardenna grisea](#) Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
[Ardenna pacifica](#) Wedge-tailed Shearwater [84292]		Breeding likely to occur within area
[Ardenna tenuirostris](#) Short-tailed Shearwater [82652]		Breeding likely to occur within area
[Diomedea amsterdamensis](#) Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
[Diomedea antipodensis](#) Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Diomedea dabbenena](#) Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
[Diomedea epomophora](#) Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area
[Diomedea exulans](#) Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat may occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Species or species habitat may occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche chrysostoma		
Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche impavida		
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Caperea marginata		
Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharias taurus Grey Nurse Shark [64469]		Congregation or aggregation likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Breeding likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Terrestrial Species		
Motacilla cinerea Grey Wagtail [642]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Roosting likely to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area
Calidris pugnax as Philomachus pugnax Ruff [91256]		Roosting likely to occur within area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area
Calidris subminuta Long-toed Stint [861]		Roosting likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area
Charadrius bicinctus Double-banded Plover [895]		Roosting likely to occur within area
Charadrius dubius Little Ringed Plover [896]		Species or species habitat likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area
Glareola maldivarum Oriental Pratincole [840]		Roosting likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Roosting likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Tringa glareola Wood Sandpiper [829]		Roosting likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area
Tringa totanus Common Redshank, Redshank [835]		Roosting likely to occur within area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area

Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna grisea as Puffinus griseus Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding likely to occur within area
Ardenna tenuirostris as Puffinus tenuirostris Short-tailed Shearwater [82652]		Breeding likely to occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting likely to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Roosting likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Roosting likely to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area overfly marine area
Calidris pugnax as Philomachus pugnax Ruff [91256]		Roosting likely to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting likely to occur within area overfly marine area
Calidris subminuta Long-toed Stint [861]		Roosting likely to occur within area overfly marine area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting likely to occur within area overfly marine area
Cereopsis novaehollandiae grisea Cape Barren Goose (south-western), Recherche Cape Barren Goose [25978]	Vulnerable	Breeding likely to occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat likely to occur within area overfly marine area
Charadrius bicinctus Double-banded Plover [895]		Roosting likely to occur within area overfly marine area
Charadrius dubius Little Ringed Plover [896]		Species or species habitat likely to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius ruficapillus Red-capped Plover [881]		Roosting likely to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Species or species habitat may occur within area
Eudyptula minor Little Penguin [1085]		Breeding likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Glareola maldivarum Oriental Pratincole [840]		Roosting likely to occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting likely to occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding likely to occur within area
Larus dominicanus Kelp Gull [809]		Breeding likely to occur within area
Larus pacificus Pacific Gull [811]		Breeding likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting likely to occur within area overfly marine area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat likely to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting likely to occur within area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding likely to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding likely to occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Pelagodroma marina White-faced Storm-Petrel [1016]		Breeding likely to occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat may occur within area
Phalacrocorax fuscescens Black-faced Cormorant [59660]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Phalaropus lobatus Red-necked Phalarope [838]		Roosting likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting likely to occur within area overfly marine area
Pterodroma macroptera Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Puffinus assimilis Little Shearwater [59363]		Foraging, feeding or related behaviour known to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting likely to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Stercorarius antarcticus as Catharacta skua Brown Skua [85039]		Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
Sternula albifrons as Sterna albifrons Little Tern [82849]	Vulnerable	Species or species habitat may occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Thinornis cucullatus as Thinornis rubricollis Hooded Plover, Hooded Dotterel [87735]		Species or species habitat likely to occur within area overfly marine area
Tringa brevipes as Heteroscelus brevipes Grey-tailed Tattler [851]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Tringa glareola Wood Sandpiper [829]		Roosting likely to occur within area overfly marine area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting likely to occur within area overfly marine area
Tringa totanus Common Redshank, Redshank [835]		Roosting likely to occur within area overfly marine area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting likely to occur within area overfly marine area
Fish		
Campichthys galei Gale's Pipefish [66191]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Heraldia nocturna Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus breviceps Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus subelongatus West Australian Seahorse [66722]		Species or species habitat may occur within area
Histiogamphelus cristatus Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
Idiotropiscis australe as Acentronura australe Southern Pygmy Pipehorse [74958]		Species or species habitat may occur within area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
Lissocampus fatiloquus Prophet's Pipefish [66250]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Mitotichthys meraculus Western Crested Pipefish [66259]		Species or species habitat may occur within area
Nannocampus subosseus Bonyhead Pipefish, Bony-headed Pipefish [66264]		Species or species habitat may occur within area
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Vanacampus phillipi Port Phillip Pipefish [66284]		Species or species habitat may occur within area
Vanacampus poecilolaemus Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Mammal		

Scientific Name	Threatened Category	Presence Text
[Arctocephalus forsteri](#)		
Long-nosed Fur-seal, New Zealand Fur-seal [20]		Breeding likely to occur within area
[Neophoca cinerea](#)		
Australian Sea-lion, Australian Sea Lion [22]	Endangered	Breeding known to occur within area
Reptile		
[Aipysurus pooleorum](#)		
Shark Bay Sea Snake [66061]		Species or species habitat may occur within area
[Caretta caretta](#)		
Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
[Chelonia mydas](#)		
Green Turtle [1765]	Vulnerable	Breeding likely to occur within area
[Dermochelys coriacea](#)		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
[Hydrophis kingii as Disteira kingii](#)		
Spectacled Sea Snake [93511]		Species or species habitat may occur within area
[Hydrophis platura as Pelamis platurus](#)		
Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
[Natator depressus](#)		
Flatback Turtle [59257]	Vulnerable	Breeding likely to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
[Balaenoptera acutorostrata](#)		
Minke Whale [33]		Species or species habitat may occur within area
[Balaenoptera bonaerensis](#)		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
[Balaenoptera borealis](#) Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Balaenoptera edeni](#) Bryde's Whale [35]		Species or species habitat likely to occur within area
[Balaenoptera musculus](#) Blue Whale [36]	Endangered	Migration route known to occur within area
[Balaenoptera physalus](#) Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Berardius arnuxii](#) Arnoux's Beaked Whale [70]		Species or species habitat may occur within area
[Caperea marginata](#) Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
[Delphinus delphis](#) Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
[Eubalaena australis](#) Southern Right Whale [40]	Endangered	Breeding likely to occur within area
[Feresa attenuata](#) Pygmy Killer Whale [61]		Species or species habitat may occur within area
[Globicephala macrorhynchus](#) Short-finned Pilot Whale [62]		Species or species habitat may occur within area
[Globicephala melas](#) Long-finned Pilot Whale [59282]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Hyperoodon planifrons Southern Bottlenose Whale [71]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lissodelphis peronii Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Mesoplodon hectori Hector's Beaked Whale [76]		Species or species habitat may occur within area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Tasmacetus shepherdi Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Albany Canyons group and adjacent shelf break	South-west
Ancient coastline at 90-120m depth	South-west
Cape Mentelle upwelling	South-west
Commonwealth marine environment surrounding the Recherche Archipelago	South-west
Commonwealth marine environment within and adjacent to Geographe Bay	South-west
Commonwealth marine environment within and adjacent to the west coast inshore lagoons	South-west
Diamantina Fracture Zone	South-west
Naturaliste Plateau	South-west
Perth Canyon and adjacent shelf break, and other west coast canyons	South-west
Western demersal slope and associated fish communities	South-west
Western rock lobster	South-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Seabirds		
Ardenna carneipes		
Flesh-footed Shearwater [82404]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Ardenna carneipes Flesh-footed Shearwater [82404]	Foraging	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Foraging	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Reproduction	Known to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Known to occur
Eudyptula minor Little Penguin [1085]	Foraging	Likely to occur
Hydroprogne caspia Caspian Tern [808]	Foraging	Known to occur
Larus pacificus Pacific Gull [811]	Foraging	Known to occur
Onychoprion anaethetus Bridled Tern [82845]	Foraging	Likely to occur
Onychoprion fuscatus Sooty Tern [90682]	Foraging	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Foraging	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Foraging	Likely to occur
Pterodroma macroptera macroptera Great-winged Petrel (macroptera race) [1035]	Foraging	Known to occur
Pterodroma mollis Soft-plumaged Petrel [1036]	Foraging	Known to occur
Puffinus assimilis Little Shearwater [59363]	Foraging	Likely to occur
Sterna dougallii Roseate Tern [817]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
[Sternula nereis](#) Fairy Tern [82949]	Foraging	Known to occur
[Thalassarche carteri](#) Indian Yellow-nosed Albatross [64464]	Foraging	Likely to occur
Seals		
[Neophoca cinerea](#) Australian Sea Lion [22]	Foraging	Likely to occur
Sharks		
[Carcharodon carcharias](#) White Shark [64470]	Foraging	Known to occur
Whales		
[Balaenoptera musculus](#) Blue and Pygmy Blue Whale [36]	Foraging	Known to occur
[Balaenoptera musculus brevicauda](#) Pygmy Blue Whale [81317]	Foraging	Likely to be present
[Balaenoptera musculus brevicauda](#) Pygmy Blue Whale [81317]	Migration	Known to occur
[Eubalaena australis](#) Southern Right Whale [40]	Migration	
[Eubalaena australis](#) Southern Right Whale [40]	Reproduction	
[Megaptera novaeangliae](#) Humpback Whale [38]	Migration	Known to occur
[Physeter macrocephalus](#) Sperm Whale [59]	Foraging	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 25-Jun-2026

Summary
Details
Matters of NES
Other Matters Protected by the EPBC Act
Extra Information

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	1
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	2
Listed Threatened Species:	60
Listed Migratory Species:	70

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	98
Whales and Other Cetaceans:	35
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	7
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	10
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	13
Key Ecological Features (Marine):	3
Biologically Important Areas:	18
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

National Heritage Places [Resource Information]

Name	State	Legal Status
Indigenous		
Cheetup Rock Shelter	WA	Listed place

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Proteaceae Dominated Kwongkan Shrublands of the Southeast Coastal Floristic Province of Western Australia	Endangered	Community likely to occur within area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Aphelocephala leucopsis		
Southern Whiteface [529]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Species or species habitat likely to occur within area
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Species or species habitat likely to occur within area
Cereopsis novaehollandiae grisea Cape Barren Goose (south-western), Recherche Cape Barren Goose [25978]	Vulnerable	Breeding likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Species or species habitat likely to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Species or species habitat may occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Species or species habitat likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area
Pezoporus flaviventris Western Ground Parrot, Kyloring [84650]	Critically Endangered	Species or species habitat likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Species or species habitat likely to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Tringa nebularia		
Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Xenus cinereus		
Terek Sandpiper [59300]	Vulnerable	Species or species habitat likely to occur within area
Zanda latirostris listed as Calyptorhynchus latirostris		
Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Species or species habitat likely to occur within area
FISH		
Hoplostethus atlanticus		
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
Seriolella brama		
Blue Warehou [69374]	Conservation Dependent	Species or species habitat likely to occur within area
MAMMAL		
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Dasyurus geoffroii		
Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Eubalaena australis](#) Southern Right Whale [40]	Endangered	Breeding likely to occur within area
[Neophoca cinerea](#) Australian Sea-lion, Australian Sea Lion [22]	Endangered	Breeding known to occur within area
[Petrogale lateralis hacketti](#) Recherche Rock-wallaby [66849]	Vulnerable	Species or species habitat likely to occur within area
[Petrogale lateralis lateralis](#) Black-flanked Rock-wallaby, Moororong, Black-footed Rock Wallaby [66647]	Endangered	Translocated population known to occur within area
PLANT		
[Adenanthos eyrei](#) Toolinna Adenanthos [7763]	Endangered	Species or species habitat likely to occur within area
[Anigozanthos bicolor subsp. minor](#) Little Kangaroo Paw, Two-coloured Kangaroo Paw, Small Two-colour Kangaroo Paw [21241]	Endangered	Species or species habitat likely to occur within area
[Eucalyptus insularis](#) Twin Peak Island Mallee [3057]	Endangered	Species or species habitat likely to occur within area
[Lambertia echinata subsp. echinata](#) Prickly Honeysuckle [56729]	Endangered	Species or species habitat likely to occur within area
[Ricinocarpos trichophorus](#) Barrens Wedding Bush [19931]	Endangered	Species or species habitat may occur within area
REPTILE		
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area
[Dermochelys coriacea](#) Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area

Scientific Name	Threatened Category	Presence Text
SHARK		
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Centrophorus uyato Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Galeorhinus galeus Tope, Flake, Oil Shark, School Shark [68453]	Conservation Dependent	Species or species habitat likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Ardenna tenuirostris Short-tailed Shearwater [82652]		Breeding likely to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Onychoprion anaethetus Bridled Tern [82845]		Foraging, feeding or related behaviour likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour may occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Breeding likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
[Rhincodon typus](#) Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Terrestrial Species		
[Motacilla cinerea](#) Grey Wagtail [642]		Species or species habitat may occur within area
[Motacilla flava](#) Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
[Actitis hypoleucos](#) Common Sandpiper [59309]		Species or species habitat likely to occur within area
[Arenaria interpres](#) Ruddy Turnstone [872]	Vulnerable	Species or species habitat likely to occur within area
[Calidris acuminata](#) Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
[Calidris alba](#) Sanderling [875]		Species or species habitat likely to occur within area
[Calidris canutus](#) Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
[Calidris falcinellus as Limicola falcinellus](#) Broad-billed Sandpiper [91731]		Species or species habitat likely to occur within area
[Calidris ferruginea](#) Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area
[Calidris melanotos](#) Pectoral Sandpiper [858]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Calidris ruficollis Red-necked Stint [860]		Species or species habitat likely to occur within area
Calidris tenuirostris Great Knot [862]	Vulnerable	Species or species habitat likely to occur within area
Charadrius bicinctus Double-banded Plover [895]		Species or species habitat likely to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Species or species habitat likely to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Limosa limosa Black-tailed Godwit [845]	Endangered	Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Species or species habitat likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Species or species habitat likely to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Species or species habitat likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Species or species habitat likely to occur within area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Species or species habitat likely to occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna grisea as Puffinus griseus Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Ardenna tenuirostris as Puffinus tenuirostris Short-tailed Shearwater [82652]		Breeding likely to occur within area
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Species or species habitat likely to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area overfly marine area
Calidris falcinellus as Limicola falcinellus Broad-billed Sandpiper [91731]		Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat likely to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat likely to occur within area overfly marine area
Calidris tenuirostris Great Knot [862]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Cereopsis novaehollandiae grisea Cape Barren Goose (south-western), Recherche Cape Barren Goose [25978]	Vulnerable	Breeding likely to occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat likely to occur within area overfly marine area
Charadrius bicinctus Double-banded Plover [895]		Species or species habitat likely to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Species or species habitat likely to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat likely to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding likely to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Species or species habitat may occur within area
Eudyptula minor Little Penguin [1085]		Breeding likely to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
[Halobaena caerulea](#) Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
[Himantopus himantopus](#) Pied Stilt, Black-winged Stilt [870]		Species or species habitat likely to occur within area overfly marine area
[Hydroprogne caspia as Sterna caspia](#) Caspian Tern [808]		Breeding likely to occur within area
[Larus pacificus](#) Pacific Gull [811]		Breeding likely to occur within area
[Limosa lapponica](#) Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
[Limosa limosa](#) Black-tailed Godwit [845]	Endangered	Species or species habitat likely to occur within area overfly marine area
[Macronectes giganteus](#) Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
[Macronectes halli](#) Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Merops ornatus](#) Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
[Motacilla cinerea](#) Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Foraging, feeding or related behaviour likely to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding likely to occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat likely to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat likely to occur within area
Pelagodroma marina White-faced Storm-Petrel [1016]		Breeding likely to occur within area
Phalacrocorax fuscescens Black-faced Cormorant [59660]		Breeding likely to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Species or species habitat likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pluvialis fulva Pacific Golden Plover [25545]		Species or species habitat likely to occur within area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Pterodroma macroptera Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Puffinus assimilis Little Shearwater [59363]		Foraging, feeding or related behaviour known to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting likely to occur within area overfly marine area
Stercorarius antarcticus as Catharacta skua Brown Skua [85039]		Species or species habitat may occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Thinornis cucullatus as Thinornis rubricollis Hooded Plover, Hooded Dotterel [87735]		Species or species habitat likely to occur within area overfly marine area
Tringa brevipes as Heteroscelus brevipes Grey-tailed Tattler [851]		Species or species habitat likely to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Species or species habitat likely to occur within area overfly marine area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Species or species habitat likely to occur within area overfly marine area
Fish		
Campichthys galei Gale's Pipefish [66191]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Heraldia nocturna Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
Hippocampus breviceps Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
Histiogamphelus cristatus Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
Idiotropiscis australe as Acentronura australe Southern Pygmy Pipehorse [74958]		Species or species habitat may occur within area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Nannocampus subosseus Bonyhead Pipefish, Bony-headed Pipefish [66264]		Species or species habitat may occur within area
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Vanacampus phillipi Port Phillip Pipefish [66284]		Species or species habitat may occur within area
Vanacampus poecilolaemus Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Mammal		
Arctocephalus forsteri Long-nosed Fur-seal, New Zealand Fur-seal [20]		Breeding likely to occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Breeding known to occur within area
Reptile		

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Berardius arnuxii Arnoux's Beaked Whale [70]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
[Caperea marginata](#) Pygmy Right Whale [39]		Foraging, feeding or related behaviour may occur within area
[Delphinus delphis](#) Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
[Eubalaena australis](#) Southern Right Whale [40]	Endangered	Breeding likely to occur within area
[Feresa attenuata](#) Pygmy Killer Whale [61]		Species or species habitat may occur within area
[Globicephala macrorhynchus](#) Short-finned Pilot Whale [62]		Species or species habitat may occur within area
[Globicephala melas](#) Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
[Grampus griseus](#) Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
[Hyperoodon planifrons](#) Southern Bottlenose Whale [71]		Species or species habitat may occur within area
[Kogia breviceps](#) Pygmy Sperm Whale [57]		Species or species habitat may occur within area
[Kogia sima](#) Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
[Lagenorhynchus obscurus](#) Dusky Dolphin [43]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Lissodelphis peronii Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat likely to occur within area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Mesoplodon hectori Hector's Beaked Whale [76]		Species or species habitat may occur within area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Physeter macrocephalus Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Tasmacetus shepherdi Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Albany Canyons group and adjacent shelf break	South-west
Ancient coastline at 90-120m depth	South-west
Commonwealth marine environment surrounding the Recherche Archipelago	South-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Seabirds		
Ardenna carneipes Flesh-footed Shearwater [82404]	Foraging	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Reproduction	Known to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Known to occur
Eudyptula minor Little Penguin [1085]	Foraging	Likely to occur

Scientific Name	Behaviour	Presence
Hydroprogne caspia Caspian Tern [808]	Foraging	Known to occur
Larus pacificus Pacific Gull [811]	Foraging	Known to occur
Onychoprion anaethetus Bridled Tern [82845]	Foraging	Likely to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Foraging	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Foraging	Likely to occur
Pterodroma macroptera macroptera Great-winged Petrel (macroptera race) [1035]	Foraging	Known to occur
Puffinus assimilis Little Shearwater [59363]	Foraging	Likely to occur
Sternula nereis Fairy Tern [82949]	Foraging	Known to occur
Seals		
Neophoca cinerea Australian Sea Lion [22]	Foraging	Likely to occur
Sharks		
Carcharodon carcharias White Shark [64470]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Eubalaena australis Southern Right Whale [40]	Migration	
Eubalaena australis Southern Right Whale [40]	Reproduction	
Physeter macrocephalus Sperm Whale [59]	Foraging	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

APPENDIX B SUPPORTING FIGURES FOR SECTION 2.3 METEOROLOGY AND OCEANOGRAPHY

Browse

Bars show the monthly average total rainfall values, and thick blue and red lines denote monthly average daily minimum and maximum air temperatures, respectively. Shaded blue and red areas denote monthly recorded extremes of daily minimum and maximum air temperature, respectively.

Figure 1: Monthly average total rainfall (mm) and air temperature (°C), calculated based on observations at the Broome Airport weather station from 1939-2020 (Bureau of Meteorology, 2020)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

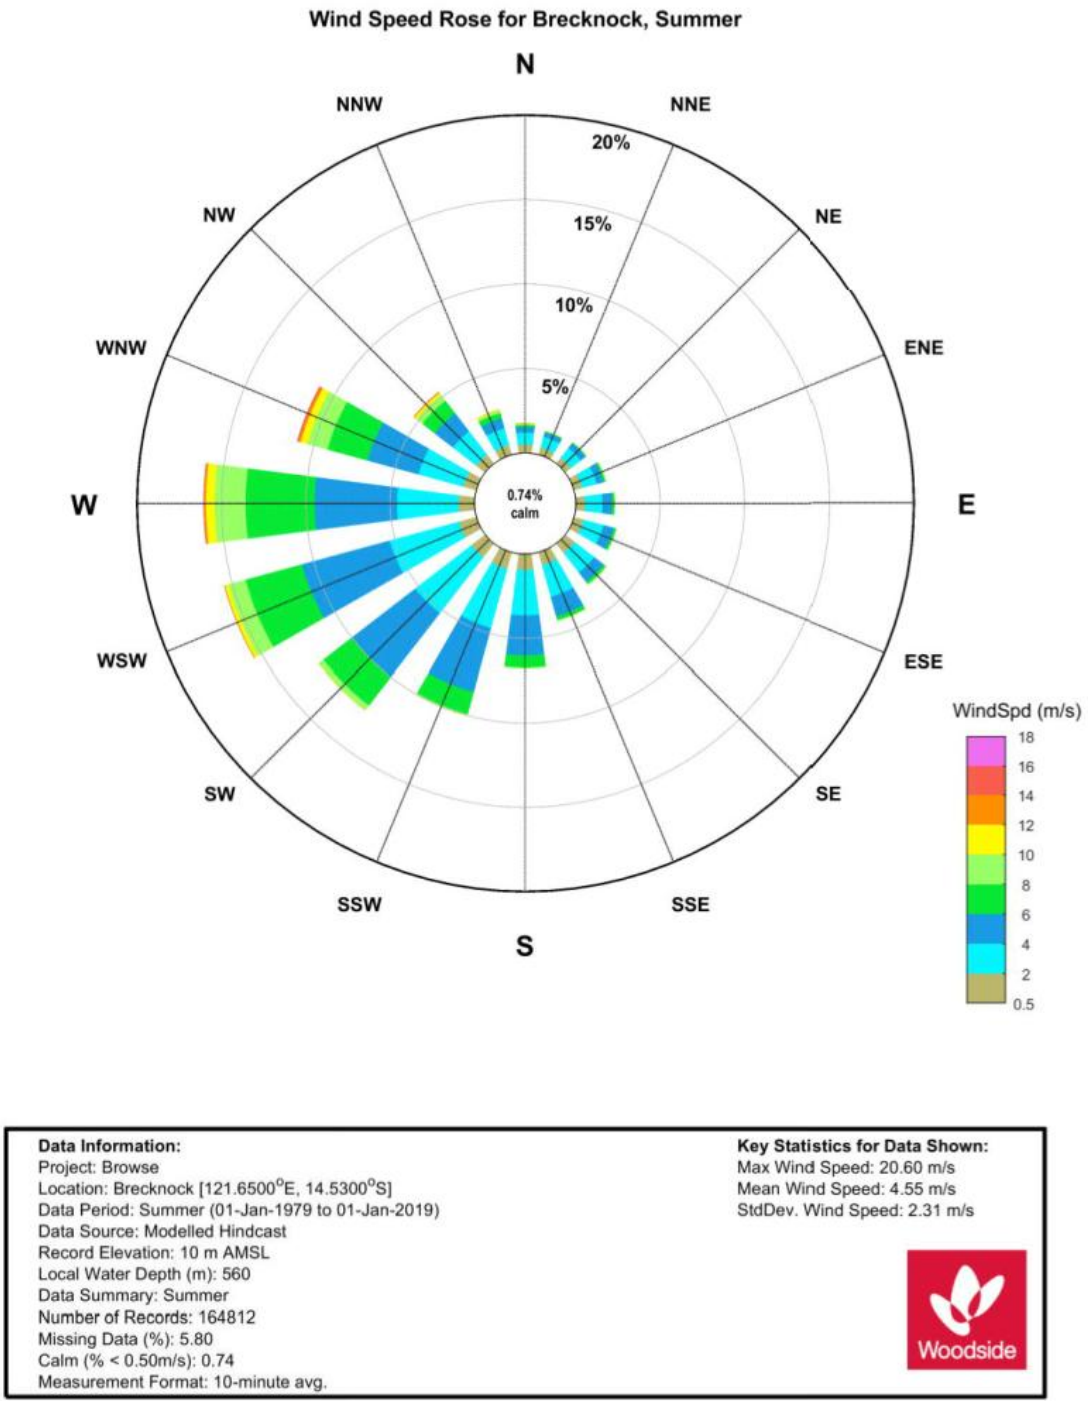

Figure 2: Summer distributions of 10-minute average wind speeds by 22.5° directional sectors at the Brecknock site (Metocean Solutions Ltd, 2019)

Note, tropical cyclone events were not included in this distribution. Winds at Brecknock in summer are predominantly from the west-northwest to southwest due to the North West Monsoon (Woodside, 2019).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

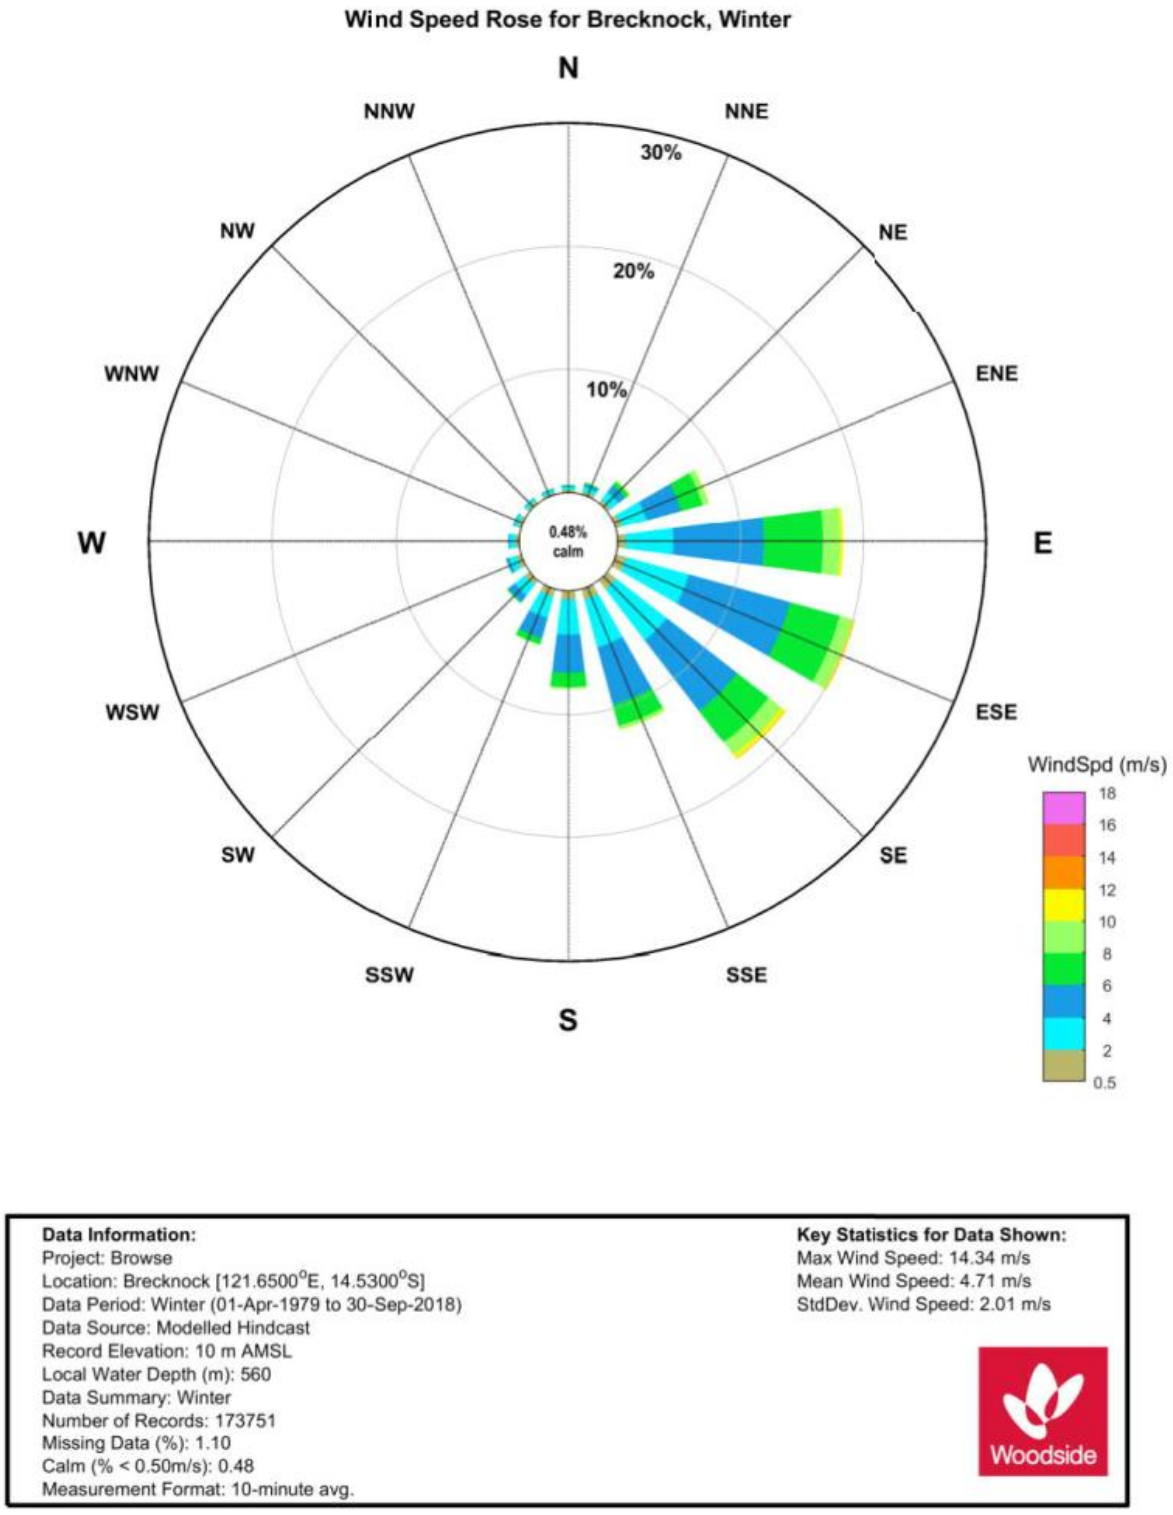

Figure 3: Winter distributions of 10-minute average wind speeds by 22.5° directional sectors at the Brecknock site (Metocean Solutions Ltd 2019)

Note, tropical cyclone events were not included in this distribution. Winds at Brecknock in winter are predominantly from the east to southeast due to the South East Trade Winds coming from the Australian mainland (Woodside, 2019).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

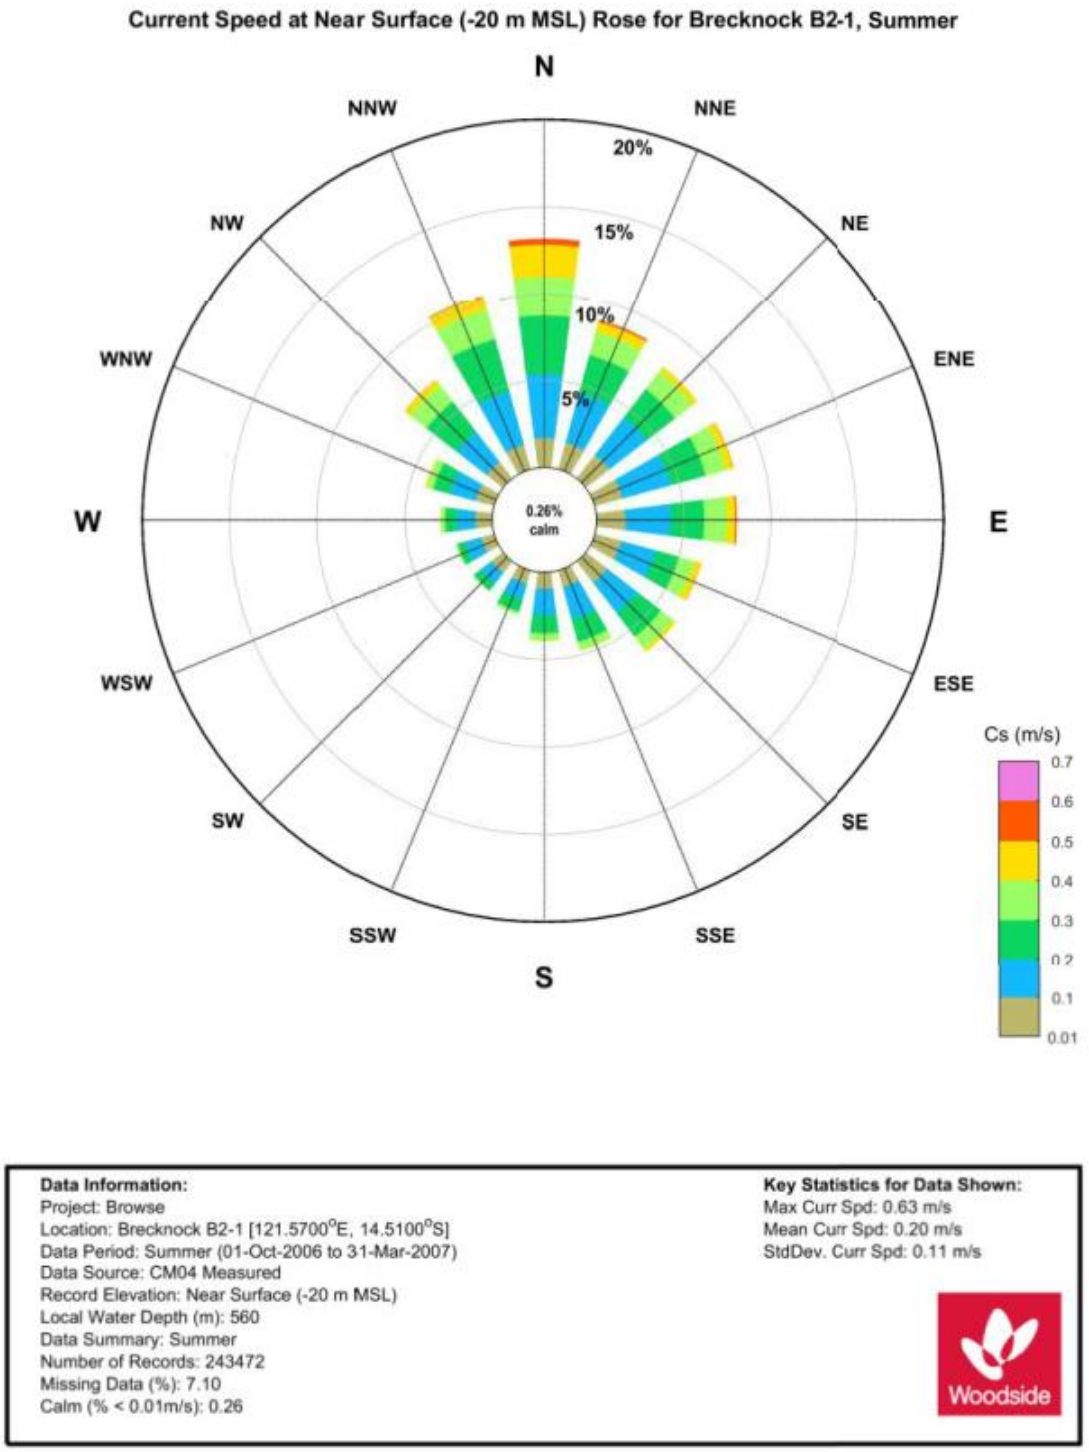

Figure 4: Summer (Nov to Apr) near-surface combined frequency of one-minute mean current speed and direction (towards) measured at Brecknock B2-1 location (cyclones removed) (RPS Metocean Ltd, 2008)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

North West Shelf/Scarborough

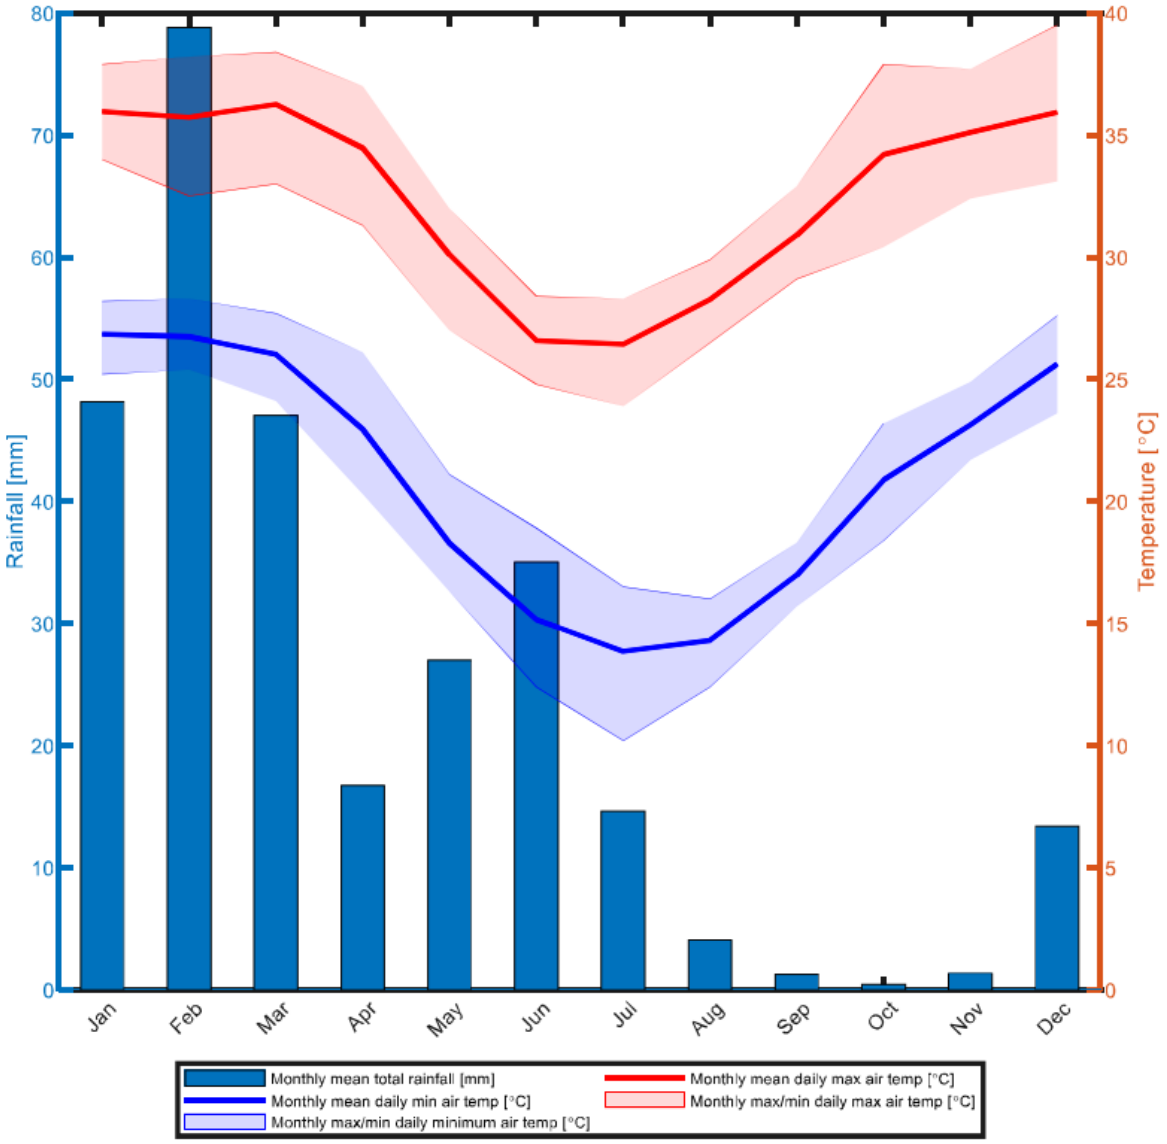

Figure 1: Monthly average total rainfall (mm) and air temperature (°C), calculated based on observations at the Karratha Aero weather station from 1972 to 2020 and 1993 to 2020, respectively (Bureau of Meteorology, 2020)

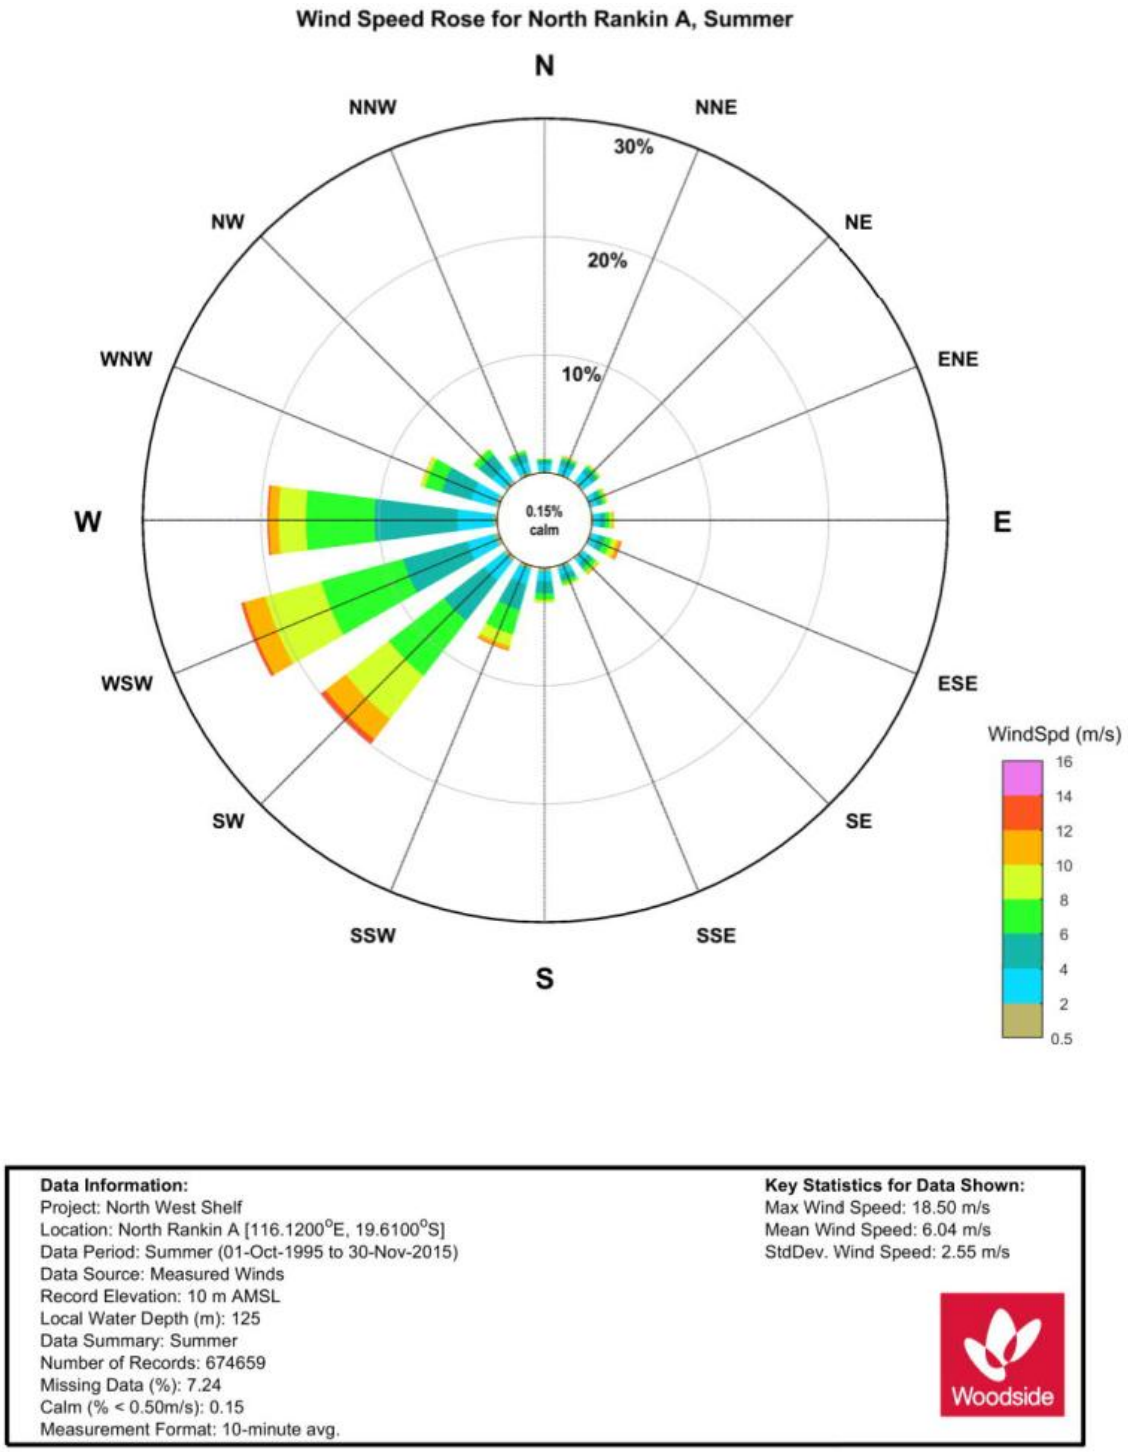
Bars show the monthly average total rainfall values, and thick blue and red lines denote monthly average daily minimum and maximum air temperatures, respectively. Shaded blue and red areas denote monthly recorded extremes of daily minimum and maximum air temperature, respectively.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.



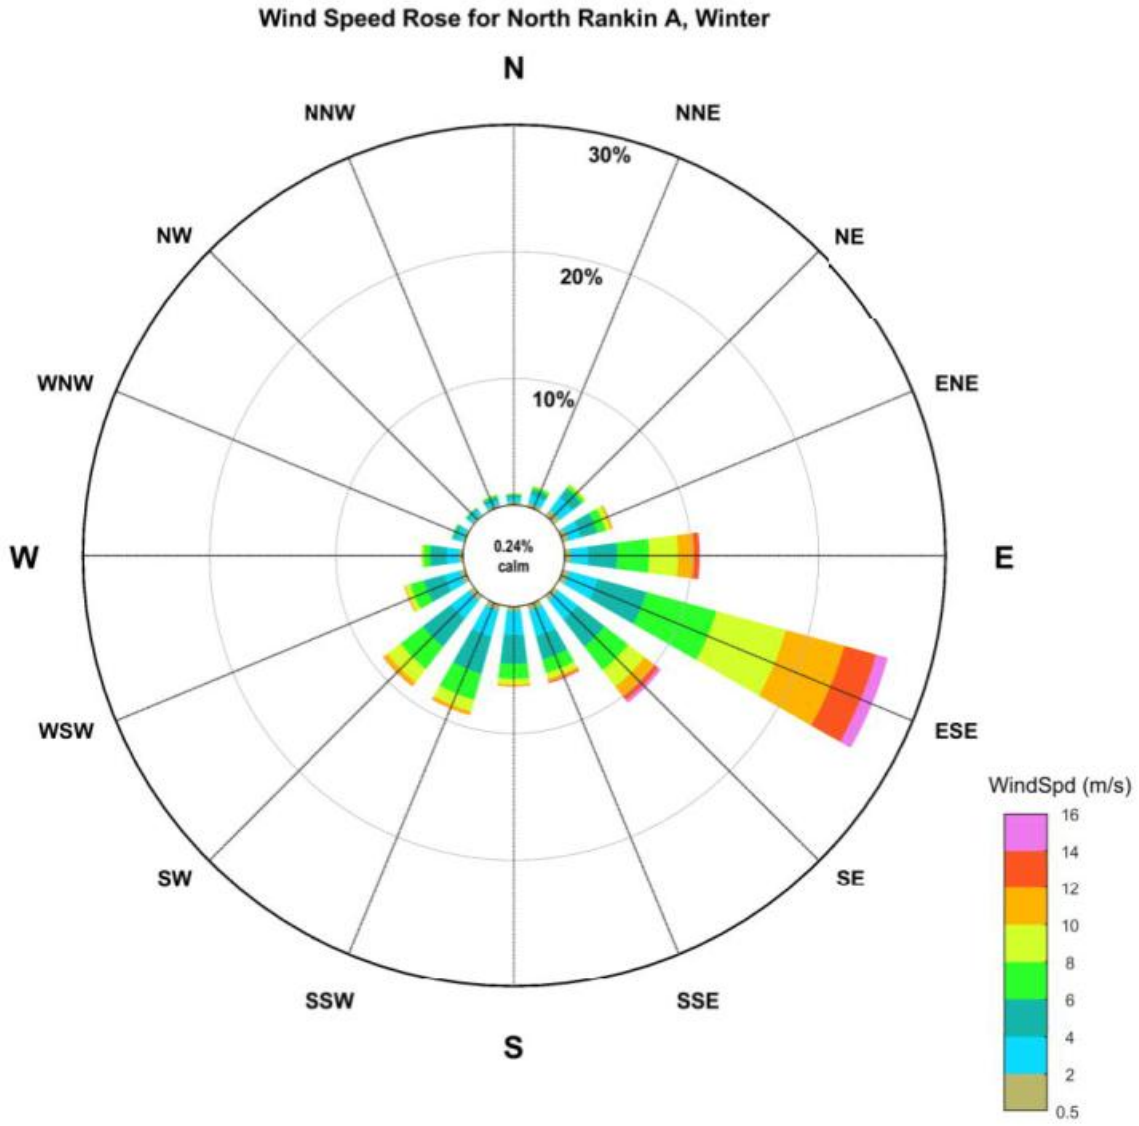


Figure 2: Summer distributions of 10-minute average wind speeds by 22.5° directional sectors at the North Rankin A site (Woodside, 2015)

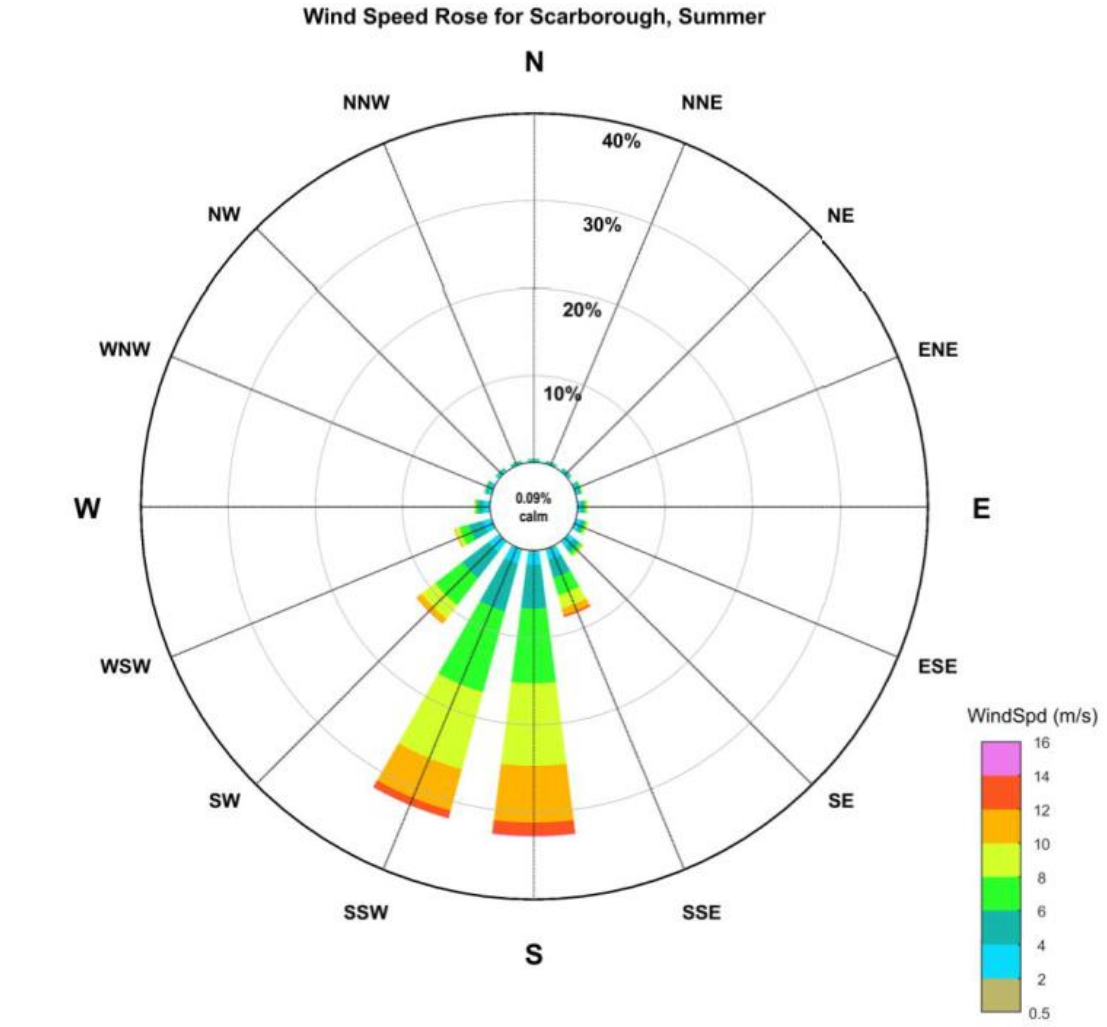
Note tropical cyclone events were not included in this distribution. Winds at North Rankin A in summer are characterised by west to southwest driven by the North West Monsoon (RPS, 2016).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Data Information:
Project: North West Shelf
Location: North Rankin A [116.1200°E, 19.6100°S]
Data Period: Winter (22-Jun-1995 to 30-Sep-2015)
Data Source: Measured Winds
Record Elevation: 10 m AMSL
Local Water Depth (m): 125
Data Summary: Winter
Number of Records: 673213
Missing Data (%): 4.43
Calm (% < 0.50m/s): 0.24
Measurement Format: 10-minute avg.

Key Statistics for Data Shown:
Max Wind Speed: 24.23 m/s
Mean Wind Speed: 6.25 m/s
StdDev. Wind Speed: 3.16 m/s



Woodside

Figure 3: Winter distributions of 10-minute average wind speeds by 22.5° directional sectors at the North Rankin A site (Woodside, 2015)

Note, tropical cyclone events were not included in this distribution. Winds at North Rankin in winter are predominantly influenced by the South East Trade Winds over Australia (RPS, 2016).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Scarborough

Data Information:
Project: North West Shelf
Location: Scarborough [113.2000°E, 19.8800°S]
Data Period: Summer (01-Jan-1979 to 01-Jan-2011)
Data Source: CSFR
Record Elevation: 10 m AMSL
Local Water Depth (m): 950
Data Summary: Summer
Number of Records: 129521
Missing Data (%): 7.46
Calm (% < 0.50m/s): 0.09
Measurement Format: 10-minute avg.

Key Statistics for Data Shown:
Max Wind Speed: 16.75 m/s
Mean Wind Speed: 7.23 m/s
StdDev. Wind Speed: 2.64 m/s

Woodside

Figure 1: Summer distributions of wind speeds (10-minute at 10 m above sea level) by 22.5° directional sectors at the Scarborough site (Woodside, 2018)

Note, tropical cyclone events were not included in this distribution. Winds at Scarborough in summer are predominantly from the south to south-southwest due to a Pilbara Heat Low forming over the northwest coast of Western Australia [R8]. Southwest winds are also experienced at this site due to the monsoon trough.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

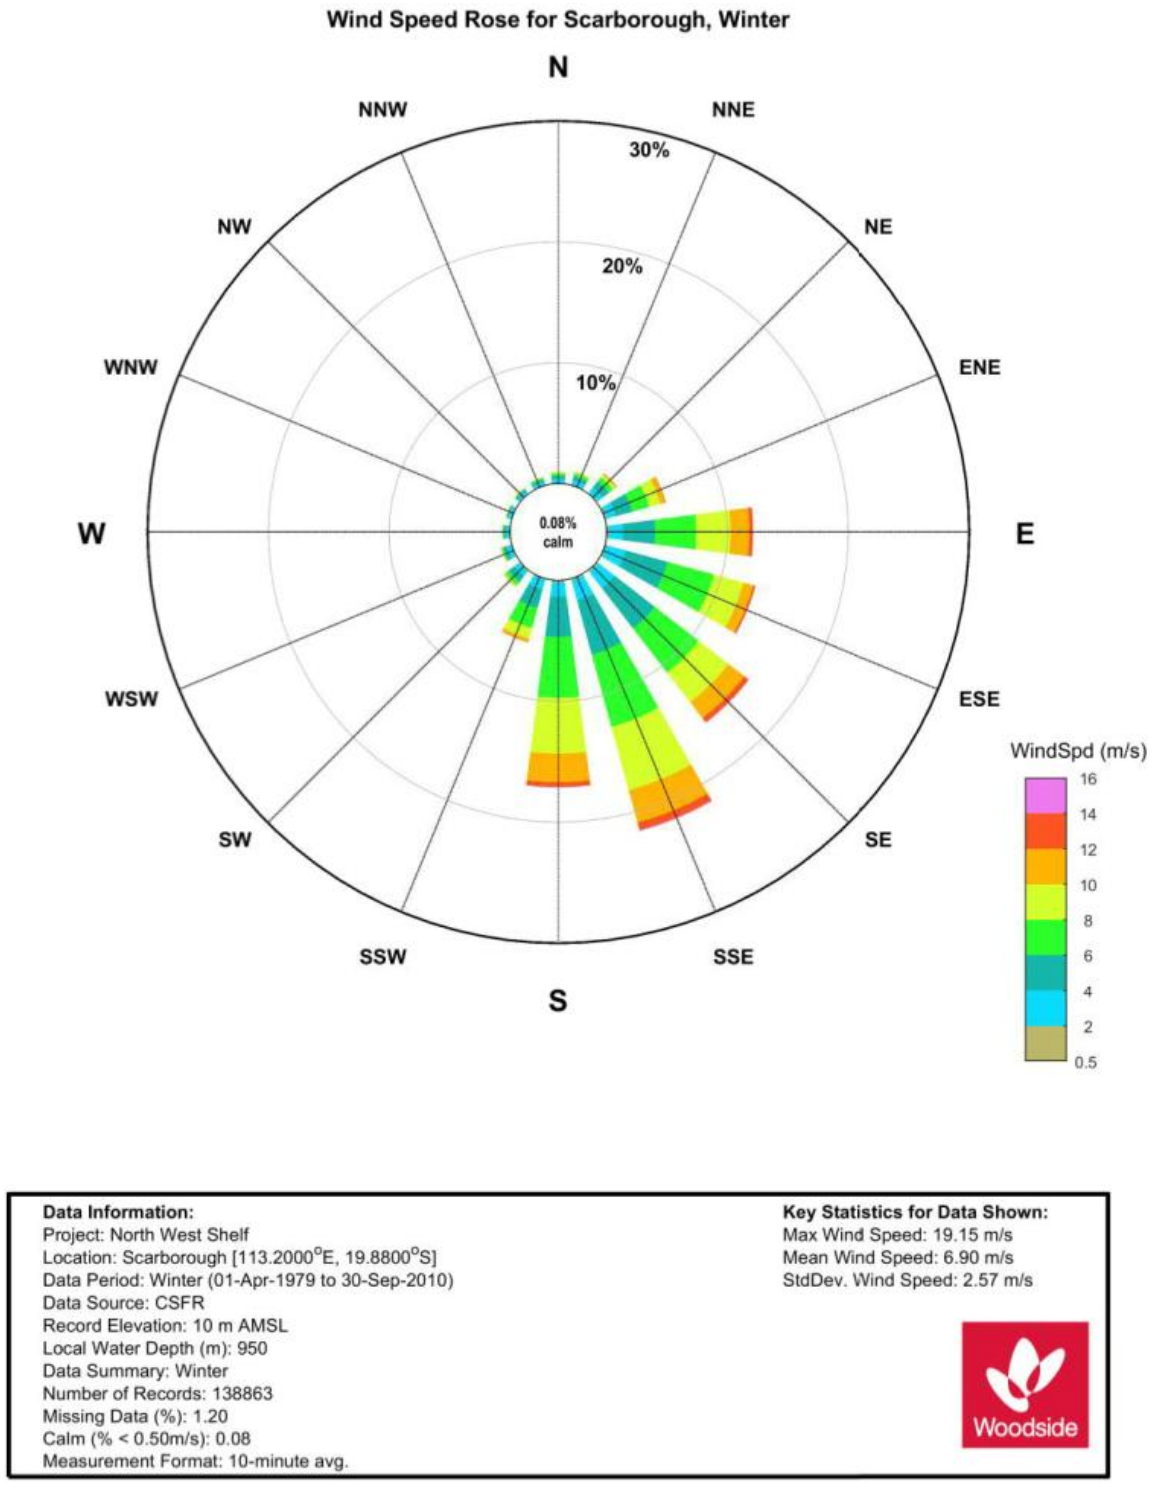


Figure 2: Winter distributions of wind speeds (10-minute at 10 m above sea level) by 22.5° directional sectors at the Scarborough site (Woodside, 2018)

Note, tropical cyclone events were not included in this distribution. Winds at Scarborough in winter are predominantly from the south to east driven by the South East Trade Winds over Australia (RPS, 2016).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

North West Shelf

Data Information:
Project: North West Cape
Location: Vincent [114.0600°E, 21.4400°S]
Data Period: Summer (01-Jan-1979 to 01-Jan-2019)
Data Source: Modelled Hindcast
Record Elevation: 10 m AMSL
Local Water Depth (m): 350
Data Summary: Summer
Number of Records: 159379
Missing Data (%): 8.91
Calm (% < 0.50m/s): 0.20
Measurement Format: 10-minute avg.

Key Statistics for Data Shown:
Max Wind Speed: 18.86 m/s
Mean Wind Speed: 7.10 m/s
StdDev. Wind Speed: 2.75 m/s

Woodside

Figure 2: Summer distributions of wind speeds (10-minute at 10 m above sea level) by 22.5° directional sectors at the Vincent site (Vincent Metocean)

Note, tropical cyclone events were not included in this distribution. Winds at Vincent in summer are predominantly from the southwest to south-southwest in summer due to the presence of the Pilbara Heat Low (MetOcean, Engineers 2005)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

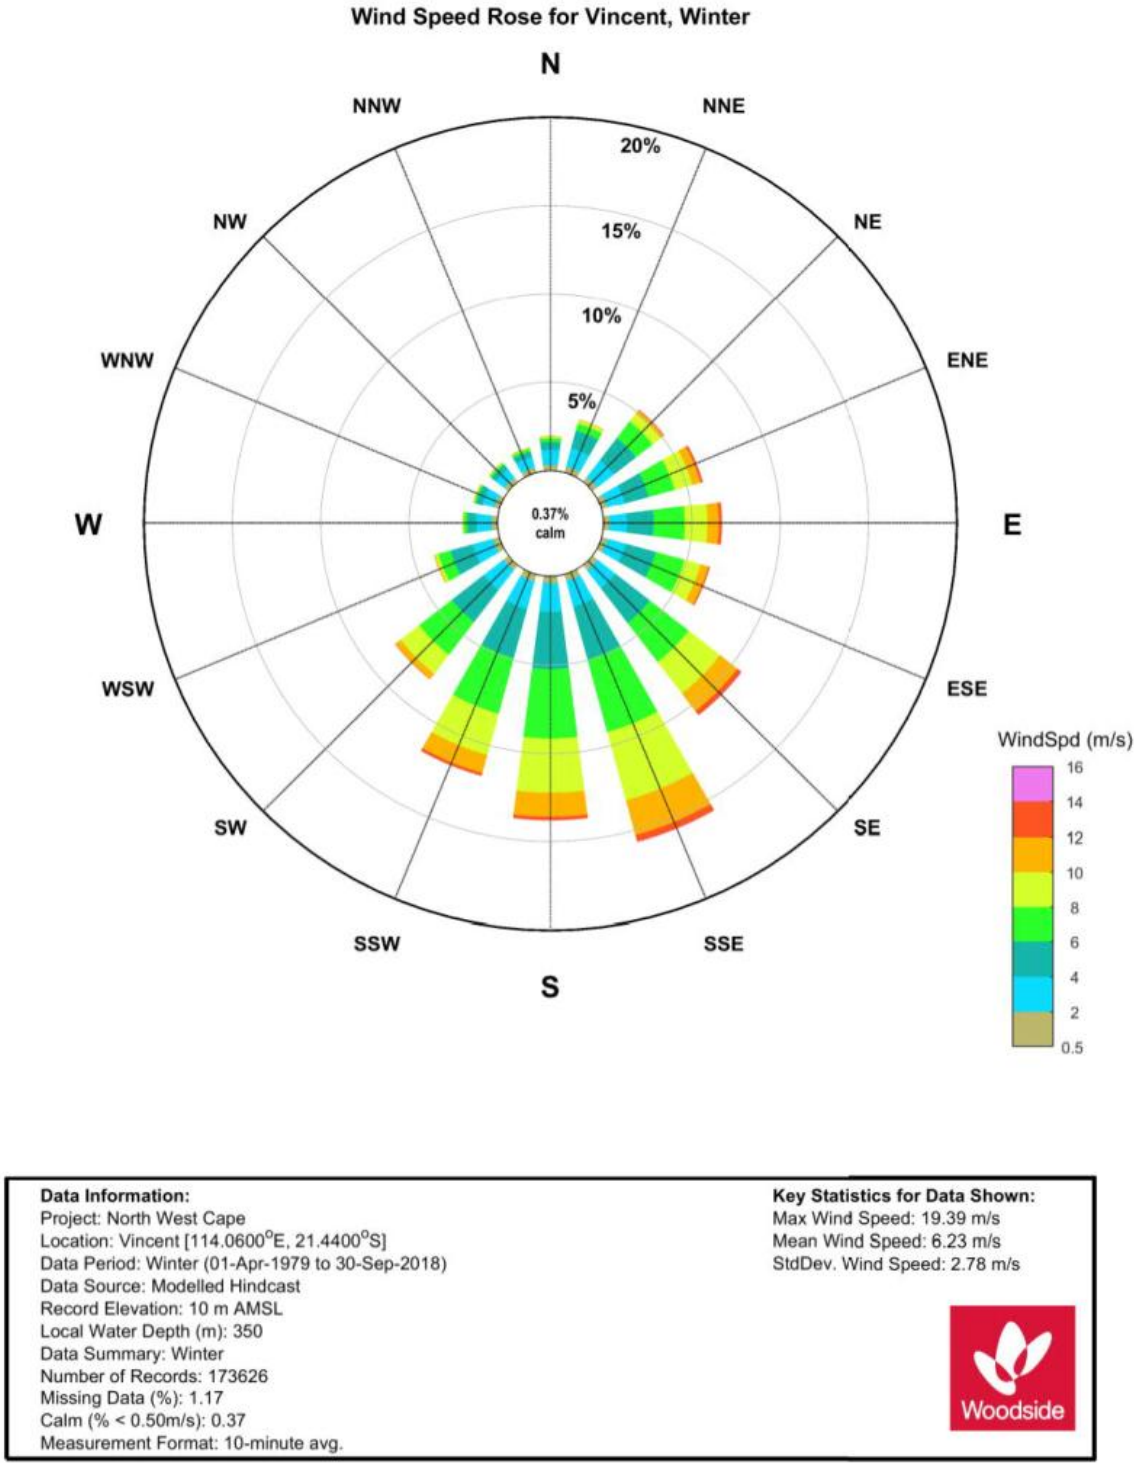

Figure 3: Winter distributions of wind speeds (10-minute at 10 m above sea level) 22.5° directional sectors at the Vincent site (Vincent Metocean)

Note, tropical cyclone events were not included in this distribution. In winter, winds at are predominantly from the south to southeast, associated with the South East Trades. Easterly gales are experienced at the Vincent location due to high pressure systems generating from the Great Australian Bight area to the site (MetOcean Engineers, 2005).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX C SUMMARY OF SEABIRD PRESENCE UPDATES FOR 2026 REVIEW

Table 1 presents a list of the low occurrence threatened and migratory seabird and shorebird species as identified in the PMST that occur within the NWMR.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 1: Low occurrence seabird and migratory shorebird species (threatened/migratory) identified by the EPBC Act PMST report as potentially occurring within the NWMR

Common name	Scientific name	EPBC Act (Commonwealth) (as per PMST report in Appendix A	2024 occurrence value	2026 occurrence value	Description of change
Abbott's booby	*Papasula abbotti*	Endangered	Low	Low	No observed changes between 2024 and 2026
Black-browed albatross	*Thalassarche melanophris*	Vulnerable Migratory	Low	Low	No observed changes between 2024 and 2026
Campbell albatross, Campbell black-browed albatross	*Thalassarche impavida*	Vulnerable Migratory	Low	Low	No observed changes between 2024 and 2026
Indian yellow-nosed albatross	*Thalassarche carteri*	Vulnerable Migratory	Low	Low	No observed changes between 2024 and 2026
Night parrot	*Pezoporus occidentalis*	Critically Endangered	Low	Low	No observed changes between 2024 and 2026
Northern giant petrel	*Macronectes halli*	Vulnerable Migratory	Low	Low	No observed changes between 2024 and 2026
Nunivak bar-tailed godwit, western Alaskan bar-tailed godwit	*Limosa lapponica baueri*	Endangered	Low	Low	No observed changes between 2024 and 2026
Princess parrot, Alexandra's parrot	*Polytelis alexandrae*	Vulnerable	Low	Low	No observed changes between 2024 and 2026
Red-rumped swallow	*Cecropis daurica*	Migratory	Low	Low	No observed changes between 2024 and 2026
Shy albatross	*Thalassarche cauta*	Endangered Migratory	Low	Low	No observed changes between 2024 and 2026
Southern giant-petrel, southern giant petrel	*Macronectes giganteus*	Endangered Migratory	Low	Low	No observed changes between 2024 and 2026
Wandering albatross	*Diomedea exulans*	Vulnerable Migratory	Low	Low	No observed changes between 2024 and 2026
White-capped albatross	*Thalassarche steadi*	Vulnerable Migratory	Low	Low	No observed changes between 2024 and 2026

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 04-Dec-2025

Operational Area A Torosa

Summary

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	25
Listed Migratory Species:	40

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	1
Listed Marine Species:	71
Whales and Other Cetaceans:	25
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	1

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	1
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	33
Key Ecological Features (Marine):	2
Biologically Important Areas:	8
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Anous tenuirostris melanops		
Australian Lesser Noddy [26000]	Vulnerable	Species or species habitat may occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Papasula abbotti		
Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus		
Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis		
Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat known to occur within area
Sternula albifrons		
Little Tern [82849]	Vulnerable	Congregation or aggregation known to occur within area
MAMMAL		
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
REPTILE		
Aipysurus apraefrontalis		
Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus foliosquama		
Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat may occur within area
Aipysurus fuscus		
Dusky Sea Snake [1119]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
SHARK		
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Glyphis garricki Northern River Shark, New Guinea River Shark [82454]	Endangered	Species or species habitat may occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai		
Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat known to occur within area
Fregata ariel		
Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area
Fregata minor		
Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Phaethon lepturus		
White-tailed Tropicbird [1014]		Species or species habitat known to occur within area
Phaethon rubricauda		
Red-tailed Tropicbird [994]		Species or species habitat known to occur within area
Sternula albifrons		
Little Tern [82849]	Vulnerable	Congregation or aggregation known to occur within area
Migratory Marine Species		
Anoxypristis cuspidata		
Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat may occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat likely to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat may occur within area
Migratory Terrestrial Species		
Cecropis daurica Red-rumped Swallow [80610]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hirundo rustica Barn Swallow [662]		Species or species habitat known to occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Continental Slope Demersal Fish Communities	North-west
Seringapatam Reef and Commonwealth waters in the Scott Reef Complex	North-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Marine Turtles		
Chelonia mydas Green Turtle [1765]	Internesting	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting buffer	Known to occur
Chelonia mydas Green Turtle [1765]	Nesting	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Nesting	Known to occur
Seabirds		
Sternula albifrons sinensis Little Tern [82850]	Resting	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	25
Listed Migratory Species:	40

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	1
Listed Marine Species:	69
Whales and Other Cetaceans:	23
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	1

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	1
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	20
Key Ecological Features (Marine):	2
Biologically Important Areas:	7
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Anous tenuirostris melanops		
Australian Lesser Noddy [26000]	Vulnerable	Species or species habitat may occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Papasula abbotti		
Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus		
Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis		
Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat known to occur within area
Sternula albifrons		
Little Tern [82849]	Vulnerable	Congregation or aggregation known to occur within area
MAMMAL		
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
REPTILE		
Aipysurus apraefrontalis		
Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus foliosquama		
Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat may occur within area
Aipysurus fuscus		
Dusky Sea Snake [1119]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
SHARK		
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Glyphis garricki Northern River Shark, New Guinea River Shark [82454]	Endangered	Species or species habitat may occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai		
Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat known to occur within area
Fregata ariel		
Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area
Fregata minor		
Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Phaethon lepturus		
White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area
Phaethon rubricauda		
Red-tailed Tropicbird [994]		Species or species habitat known to occur within area
Sternula albifrons		
Little Tern [82849]	Vulnerable	Congregation or aggregation known to occur within area
Migratory Marine Species		
Anoxypristis cuspidata		
Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat may occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat likely to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area

Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	1
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	5
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	30
Listed Migratory Species:	58

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	2
Commonwealth Heritage Places:	2
Listed Marine Species:	90
Whales and Other Cetaceans:	26
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	4
Habitat Critical to the Survival of Marine Turtles:	1

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	1
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	51
Key Ecological Features (Marine):	4
Biologically Important Areas:	30
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Wetlands of International Importance (Ramsar Wetlands) [Resource Information]

Ramsar Site Name	Proximity
Ashmore reef national nature reserve	Within Ramsar site

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Breeding known to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Breeding known to occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Breeding known to occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Breeding known to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Congregation or aggregation known to occur within area
Sula dactylatra Masked Booby [1021]		Breeding known to occur within area
Sula leucogaster Brown Booby [1022]		Breeding known to occur within area
Sula sula Red-footed Booby [1023]		Breeding known to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat may occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Dugong dugon Dugong [28]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations)		
Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat may occur within area
Migratory Terrestrial Species		
Cecropis daurica		
Red-rumped Swallow [80610]		Species or species habitat may occur within area
Cuculus optatus		
Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat known to occur within area
Hirundo rustica		
Barn Swallow [662]		Species or species habitat known to occur within area
Motacilla cinerea		
Grey Wagtail [642]		Species or species habitat known to occur within area
Motacilla flava		
Yellow Wagtail [644]		Species or species habitat known to occur within area
Migratory Wetlands Species		
Acrocephalus orientalis		
Oriental Reed-Warbler [59570]		Species or species habitat known to occur within area
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat known to occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat known to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat may occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands	[Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State
Department of Climate Change, Energy, the Environment and Water

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Acrocephalus orientalis Oriental Reed-Warbler [59570]		Species or species habitat known to occur within area overfly marine area
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous minutus Black Noddy [824]		Breeding known to occur within area
Anous stolidus Common Noddy [825]		Breeding known to occur within area
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Breeding known to occur within area
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat known to occur within area
Cecropis daurica as Hirundo daurica Red-rumped Swallow [80610]		Species or species habitat may occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Breeding known to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Breeding known to occur within area
Hirundo rustica Barn Swallow [662]		Species or species habitat known to occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding known to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Motacilla cinerea Grey Wagtail [642]		Species or species habitat known to occur within area overfly marine area
Motacilla flava Yellow Wagtail [644]		Species or species habitat known to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat may occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Breeding known to occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Breeding known to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]	Vulnerable	Congregation or aggregation known to occur within area
Sula dactylatra Masked Booby [1021]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
[Sula leucogaster](#) Brown Booby [1022]		Breeding known to occur within area
[Sula sula](#) Red-footed Booby [1023]		Breeding known to occur within area
[Thalasseus bengalensis as Sterna bengalensis](#) Lesser Crested Tern [66546]		Breeding known to occur within area
[Thalasseus bergii as Sterna bergii](#) Greater Crested Tern [83000]		Breeding known to occur within area
Fish		
[Bhanotia fasciolata](#) Corrugated Pipefish, Barbed Pipefish [66188]		Species or species habitat may occur within area
[Campichthys tricarinatus](#) Three-keel Pipefish [66192]		Species or species habitat may occur within area
[Choeroichthys brachysoma](#) Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
[Choeroichthys suillus](#) Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
[Corythoichthys amplexus](#) Fijian Banded Pipefish, Brown-banded Pipefish [66199]		Species or species habitat may occur within area
[Corythoichthys flavofasciatus](#) Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
[Corythoichthys intestinalis](#) Australian Messmate Pipefish, Banded Pipefish [66202]		Species or species habitat may occur within area
[Corythoichthys schultzi](#) Schultz's Pipefish [66205]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus dunckeri Red-hair Pipefish, Duncker's Pipefish [66220]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Ashmore Reef and Cartier Island and surrounding Commonwealth waters	North-west
Continental Slope Demersal Fish Communities	North-west
Seringapatam Reef and Commonwealth waters in the Scott Reef Complex	North-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Dugong		
Dugong dugon Dugong [28]	Breeding	Known to occur
Dugong dugon Dugong [28]	Calving	Known to occur
Dugong dugon Dugong [28]	Foraging	Known to occur
Dugong dugon Dugong [28]	Foraging (high density seagrass beds)	Known to occur

Scientific Name	Behaviour	Presence
Dugong dugon Dugong [28]	Nursing	Known to occur
Marine Turtles		
Chelonia mydas Green Turtle [1765]	Foraging	Likely to occur
Chelonia mydas Green Turtle [1765]	Internesting	Likely to occur
Chelonia mydas Green Turtle [1765]	Internesting	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting buffer	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting buffer	Likely to occur
Chelonia mydas Green Turtle [1765]	Mating	Likely to occur
Chelonia mydas Green Turtle [1765]	Nesting	Known to occur
Chelonia mydas Green Turtle [1765]	Nesting	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Foraging	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Likely to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Nesting	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Nesting	Likely to occur
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur

Scientific Name	Behaviour	Presence
Fregata ariel Lesser Frigatebird [1012]	Breeding	Known to occur
Fregata minor Greater Frigatebird [1013]	Breeding	Known to occur
Phaethon lepturus White-tailed Tropicbird [1014]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula albifrons sinensis Little Tern [82850]	Resting	Known to occur
Sula leucogaster Brown Booby [1022]	Breeding	Known to occur
Sula sula Red-footed Booby [1023]	Breeding	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

NOPSEMA
Australia's offshore energy regulator

FORM

Report of an Accident Dangerous Occurrence Well Integrity or Environmental Incident

Document No: N-03300-FM0831 A159980
Date: 2/12/2025

Accidents, dangerous occurrences, well and environmental reportable incidents can all be reported using this form.

Where an incident occurs, and the titleholder and operator are not the same organisation and have different reporting requirements under the OPGGS Act and regulations, each organisation must submit a separate report.

This form should be used in conjunction with NOPSEMA Guidance Note N-03300-GN2303 - Notification Reporting and Reporting Requirements for Incidents available on the NOPSEMA website.

Part 1 is required within 3 days of a notified incident.

Part 2 is required within 30 days of a notified accident or dangerous occurrence incident.

This form and any attachments are to be submitted by either:

Email: **submissions@nopsema.gov.au** for documents less than 10 MB; or

Secure file transfer: https://securefile.nopsema.gov.au/filedrop/submissions.

NOPSEMA considers that a full report will contain copies of documentary material referenced and/or relied on in the course of completing this form, which may include (but not be limited to) as appropriate: witness statements, management system documents, drawings, diagrams and photographs, third party reports (audit, inspection, material analysis etc.), internal records and correspondence.

Date and time of the initial verbal incident notification to NOPSEMA			
Date		**Time**	

Was NOPSEMA notified through the dedicated notification phone line?			
Yes/No		**If no, who was contacted at NOPSEMA**	

Notification Number provided by NOPSEMA for this incident	
Reference	

Date and time of this written incident report			
Date		**Time**	

Is this the initial incident report?	
Yes/No	

What type of incident is being reported?		***Tick all appropriate incident types***
Accident or dangerous occurrence		Complete parts 1A, 1B, 1E, 1F & 2
Well incident		Complete parts 1A, 1C, 1E, 1F
Environmental incident		Complete parts 1A, 1D, 1E, 1F

What category of incident is being reported?		***Tick all appropriate category types***
To use electronically: MS Word 2007-10 – click in check box		
Accidents	Death Serious Injury Lost time injury ≥3 days	☐ ☐ ☐
Dangerous occurrences	Could have caused death, serious injury or Lost time injury ≥3 days Fire or explosion Collision marine vessel and facility Uncontrolled hydrocarbon release >1 kg or ≥80 L (gas or liquid) Well kick >8 m^3 or 50 barrels Damage, loss or removal of a technical or other control measure critical to safety Pipeline incident Unplanned event – implement ERP Other _____	☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐
Wells	Loss of integrity release >1 kg (gas) Loss of integrity >80 L (liquid) A build-up of pressure or a positive flow check and operation of the BOP Flow from a well has been diverted Failure of well-related equipment Damage to well-related equipment Other unplanned occurrence requiring measures to regain control of the well	☐ ☐ ☐ ☐ ☐ ☐ ☐
Environmental	Hydrocarbon release Chemical release Drilling fluid/mud release Other substance release Loss of waste/materials/equipment EPBC list species death or injury/near miss Detection of marine pest/invasive marine species Displacement of other marine user Underwater cultural heritage, including First Nations underwater cultural heritage Other _____	☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐

Part 1A – Information Required within 3 Days of a Reportable Incident

1. Where did the incident occur? *Fill in all information applicable to the incident location. Multiple facilities/wells may be included if appropriate.*	
Did the incident occur on a facility or Associated Offshore Place (AOP)?	
If yes what type of facility?	Facility or AOP name:
FPSO ☐	
MODU ☐	
Platform – manned ☐	
Platform – not normally manned ☐	
Vessel ☐	
Did the incident occur on a pipeline?	If yes pipeline name:
Did the incident involve a well or wells?	If yes well(s) name and title(s):
Incident location (Provide datum used i.e. GDA2020)	Latitude: Longitude:
Name of petroleum activity being undertaken?	
2. Who is the registered operator/titleholder or person that controls the works site or activity?	
Name	
Position	
Business address	
Business phone no.	
3. When did the incident occur?	
Date	
Time and time zone	
4. Details of person submitting this form.	
Name	
Position	
Email	
Telephone no.	

5. Details of any witnesses. *If more witnesses, copy and insert this section.*	
Full name	
Phone no. (Business hours)	
Phone no. (Home) (Mobile)	
Email (Business) (Private)	
Postal address	

6. Brief description of incident.

7. Work or activity being undertaken at time of incident.

8. What are the internal investigation arrangements?

9. Was there any loss of containment?		
Yes or No *If yes, provide details below*		
Type of loss	Hydrocarbon fluid Hydrocarbon gas Hydrocarbon gas and fluid Non-hydrocarbon gas Chemical Drilling fluid/mud Formation/Produced formation water Hydraulic oil Diesel/Fuel oil Waste Other	☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐
Estimated quantity *Liquid (L), Gas (kg)*		
Estimation Type *Calculation or measurement*		

Composition *Percentage and description*				
Known toxicity to people and/or environment	Yes ☐ No ☐ If yes, provide Safety Data Sheet and ecotox, bioaccumulation and persistence data (if available).			
What equipment was involved in the release?				
Is the equipment critical to safety?				
How was the leak/spill detected?	Fire & gas detection CCTV Visual	☐ ☐ ☐	Other	☐
Did ignition occur?	No Yes	☐ ☐	Immediate Delayed	☐ ☐
If yes, what was the likely ignition source?	Hotwork Spark electrical source Spark metallic contact Hot surface	☐ ☐ ☐ ☐	Other	☐

10. Hydrocarbon release details.

System of hydrocarbon release	Process Drilling Subsea / Pipeline	☐ ☐ ☐	Utilities Well related Marine	☐ ☐ ☐
Estimated inventory in the isolatable system *Liquid (L), Gas (kg)*				
System pressure and size of piping or vessel	Pressure *(MPag)*			
	Size *Piping diameter (mm)* *Piping length (mm)* *or Vessel volume (L)*			
Estimated equivalent hole diameter *(mm)*				

11. Has the release been stopped and/or contained?

Yes or No	
Duration of the release *hh:mm:ss*	
Estimated rate of release *Liquid (L), Gas (kg) per hour*	

Part 1B - Complete for accidents or dangerous occurrences

12. Action taken to make the work-site safe.					
Was permission given by a NOPSEMA inspector to interfere with the site? OPGGS(S)R 2.49. Yes ☐ No ☐					
Action taken					
Details of any disturbance of the work site					
13. Was an emergency response initiated? Yes ☐ No ☐					
Type of response	Manual Automatic alarm	☐ ☐	Muster Evacuation	☐ ☐	
How effective was the emergency response?					
14. Was anyone killed or injured? *Provide details below* Yes ☐ No ☐					
Injured person (IP)					
If different from Part 1A. Employer name		Employer address			
Employer phone no.		Employer email			
IP full name					
IP date of birth		Gender	Male ☐	Female ☐	
			Indeterminate/Intersex/Unspecified ☐		
IP residential address					
IP phone no. (Work)		IP phone no. (Home) (Mobile)			
IP occupation/job title		Core employee or contractor			
Circumstances of injury					

Based on TOOCS (refer to References) Nature of injury	a. Intracranial injury	☐	g. Other injuries	☒
	b. Fractures	☐	h. Mental disease	☐
	c. Wounds, lacerations, amputations, internal organ damage	☐	i. Skin and subcutaneous tissue diseases	☐
			j. Respiratory system diseases	☐

	G5 - 51 Hip	☐	G9 - 90 Unspecified locations	☐
	G5 - 52 Upper leg	☐	Not provided	☐
Mechanism of injury	G0 - 01 Falls from a height	☐	G5 - 53 Exposure to environmental heat	☐
	G0 - 02 Falls on the same level	☐	G5 - 54 Exposure to environmental cold	☐
	G0 - 03 Stepping kneeling or sitting on objects	☐	G5 - 57 Contact with electricity	☐
	G1 - 11 Hitting stationary objects	☐	G5 - 59 Exposure to other and unspecified environmental factors	☐
	G1 - 12 Hitting moving object	☐		
	G2 - 21 Being hit by falling objects	☐	G6 - 61 Single contact with chemical or substance	☐
	G2 - 25 Being trapped by moving machinery or equipment	☐	G6 - 62 Long term contact with chemicals or substances	☐
	G2 - 26 Being trapped between stationary and moving objects	☐	G6 - 69 Other and unspecified contact with chemical or substance	☐
	G2 - 27 Exposure to mechanical vibration	☐		
	G2 - 28 Being hit by moving objects	☐	G8 - 81 Exposure to a traumatic event	☐
	G3 - 31 Exposure to single, sudden sound	☐	G8 - 82 Exposure to workplace or occupational violence	☐
	G3 - 32 Long-term exposure to sound	☐		
	G3 - 38 Explosion	☐	G8 - 84 Work pressure	☐
	G4 - 41 Muscular stress while lifting, carrying or putting down objects	☐	G8 - 85 Suicide or attempted suicide	☐
			G8 - 86 Other mental stress factors	☐
	G4 - 42 Muscular stress while handling objects other than lifting, carrying or putting down	☐	G8 - 87 Work related harassment and/or workplace bullying	☐
	G4 - 43 Muscular stress with no objects being handled	☐	G8 - 88 Other harassment	☐
			G9 - 98 Other and multiple mechanisms of incident	☐
	G4 - 44 Repetitive movement, low muscle loading	☐		
	G5 - 51 Contact with hot objects	☐	G9 - 99 Unspecified mechanisms of incident	☐
	G5 - 52 Contact with cold objects	☐	Not provided'	
Agency of injury	1. Machinery and (mainly) fixed plant	☐	6. Chemicals and chemical products	☐
	2. Mobile plant or transport	☐	7. Material and substances	☐
	3. Powered equipment, tools and appliances	☐	8. Environmental agencies	☐
	4. Non-power hand tools, appliances and equipment	☐	9. Animal, human and biological agencies	☐
	5. Chemicals and chemical products	☐	10. Other and unspecified agencies	☐
			Not provided _____	☐

Details of job being undertaken				
Day and hour of shift	Day *e.g. 5th day of 7 (5 / 7)*		Hour *e.g. 3rd hour of 12 (3 / 12)*	

NB: Copy/paste this section *for each additional injured person and insert here*

15. Was anyone incapacitated from performing work for three or more days (>3 day Loss Time Injury)
Yes ☐ No ☐

Has the worker been cleared to return to full duties?	Yes ☐ No ☐
If not yet returned to work when is the worker expected to be cleared to return to full time duties?	
Total number of workdays lost at time of this report being submitted?	
At the time of this report being submitted is the injury still classified as a LTI >3Days, and if not, what is the new injury classification?	

NB: The injury and workdays lost should be reported to NOPSEMA in the Monthly Operational Activities Report

16. Was there any serious damage? *Provide details below.* Yes ☐ No ☐

Item 1	
Equipment damaged	
Extent of damage	
Will the equipment be shut down?	Yes ☐ No ☐
If yes, for how long?	

NB: Copy/paste this section for each additional item and insert here

17. Will the facility be shut down? *Provide details below.* Yes ☐ No ☐

Facility shutdown	Date		dd/mm/yyyy
	Time		24-hour clock
	Duration		days / hours / minutes

18. What were the immediate causes of the incident?

Part 1C – Complete for Well Incidents

19. What is the WOMP relating to the well?	
WOMP Name Document number Version	
20. Well Phase or Activity	
Drilling Completions Interventions Production Other (please describe)	☐ ☐ ☐ ☐ ☐
21. Brief description of current well status and condition (e.g. Shut-in, Producing, Barrier status etc, Stabilised pressures etc)	
22. Details of all material facts and circumstances concerning the reportable incident that the titleholder knows or is able, by reasonable search or enquiry, to find out.	

23. What were the causes of the incident? *This section should include a detailed analysis of the failure mode, including demonstration that an appropriate internal investigation has been completed in line with the titleholder's management systems, and provide evidence of the internal assurance of the outcomes of the investigation.* *This section should also cover the risk of the same incident occurring in other wells operated by the titleholder (e.g. rule out a systemic issue)* *If this information is not available within the 3 days requirement contact NOPSEMA.*

Part 1D – Complete for environmental incidents

24. What is the accepted environment plan for this incident?		
Environment plan name Document number Version		
25. Has the incident resulted in an impact to the environment? *Provide details below.* Yes ☐ No ☐		
Incident details *e.g. estimated area of impact, nature/significance of impact*		
Environmental Receptors	Open ocean ☐ Shoreline ☐ Population centre ☐ Stakeholders ☐ Other sensitivity ☐ *e.g. conservation area, nesting beach*	Macroalgae ☐ Coral Reef ☐ Benthic invertebrates ☐ Seagrass ☐ Mangrove ☐

Environment Receptor	
Environmental receptor	
Location of environment receptor	
Latitude (Provide datum used i.e. GDA2020)	
Longitude (Provide datum used i.e. GDA2020)	
Date and time of impact	
Action taken to minimise exposure	
Specify each matter protected under Part 3 of the EPBC Act impacted	
NB: Copy/paste this section for each additional environmental receptor and insert here	

26. Are any environments at risk of impact, including as a result of spill response measures? *Provide details below.* **Yes ☐ No ☐**		
Details *e.g. zone of potential impact*		
Environmental Receptors	Open ocean ☐ Shoreline ☐ Population centre ☐ Stakeholders ☐ Other sensitivity ☐ *e.g. conservation area, nesting beach*	Macroalgae ☐ Coral Reef ☐ Benthic invertebrates ☐ Seagrass ☐ Mangrove ☐

Environment Receptor	
Estimated location of 'at-risk' environments	
Estimated impact date & time	
Action required to minimise exposure	

Specify each matter protected under Part 3 of the EPBC Act at risk	
NB: Copy/paste this section for each additional environmental receptor and insert here	
27. Was an oil pollution emergency plan activated? *Provide details below.* **Yes ☐ No ☐**	
If yes, what action has been implemented /planned?	
If yes, how effective is/was the spill response?	
28. Was an environmental monitoring program initiated? *Provide details below.* **Yes ☐ No ☐**	
If yes, what actions have been implemented and/or planned?	
29. Did the incident result in the death or injury of any fauna? *Provide details below.* **Yes ☐ No ☐**	

Injured fauna	**Species 1**	**Species 2**	**Species 3**
Species name (common or scientific name)			
Number of individuals killed or injured	Killed: Injured:	Killed: Injured:	Killed: Injured:
NB: Copy/paste this section for each additional species and insert here			

Part 1E – Complete for actions

30. Actions taken to avoid or mitigate any adverse environmental impacts of the incident.		
Action	**Responsible party**	**Completion date** *Actual or intended*
NB: Copy/paste this section for each additional actions and insert here		
31. Corrective actions taken, or proposed, to stop, control or remedy the incident.		
Action	**Responsible party**	**Completion date** *Actual or intended*
NB: Copy/paste this section for each additional actions and insert here		
32. Actions taken, or proposed, to prevent a similar incident occurring in the future.		
Action	**Responsible party**	**Completion date** *Actual or intended*
NB: Copy/paste this section for each additional actions and insert here		

Part 1F – Complete for attachments

33. Are you attaching any documents? *Provide details below.* **Yes ☐ No ☐**

No.	ID	Revision	Date	Title/description

NB: Copy/paste this section for each document and insert here

Part 2 – Information required within 30 days of accident or dangerous occurrence

NOPSEMA acknowledges that in many circumstances an operator may not have completed an investigation within 3 days of an accident or first detection of a dangerous occurrence and agrees that these items must be provided within 30 days unless otherwise agreed, in writing with NOPSEMA.

In circumstances where an investigation has been completed within 3 days, and these items are available (supplemented, as required by any attachments) this part should also be completed at that time.

34. Is there any change to the LTI information provided at section 15 *Provide details below.* **Yes ☐ No ☐**	
Details	
35. Has the investigation been completed? *Provide details below.* **Yes ☐ No ☐**	
Root cause 1	
Root cause 2	
Root cause 3	
Other root causes	
36. Full report. *Describe investigation in detail, including who conducted the investigation and in accordance with what standard/procedure with reference to attachments listed in the 'attachments table' as applicable*	

37. Actions to prevent recurrence of same or similar incident.		
Action	**Responsible party**	**Completion date** *Actual or intended*

NB: Copy/paste this section for each additional actions and insert here

38. Are you attaching any documents? **Yes ☐ No ☐**

If yes, add to Section 1F Complete for Attachments.

1. CONSULTATION APPROACH

Consultation under regulation 25 of the OPGGS(E) Regulations provides that, in the course of preparing an environment plan, a titleholder must consult each relevant person (regulation 25(1)), must give each relevant person sufficient information to allow the relevant person to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of the relevant person (regulation 25(2)), and must allow a relevant person a reasonable period for consultation (regulation 25(3)).

A titleholder must also give a relevant person a reasonable opportunity to consult – this means that a titleholder will need to demonstrate that what it did constituted consultation appropriate and adapted to the nature of the interests of the relevant person (see Tipakalippa Full Court paragraph 104). The EP must contain a report on all consultations that contains an assessment of the merits of any objection or claim about the adverse impact of each activity to which the EP relates, and a statement of the titleholder's response, or proposed response, if any, to each objection or claim (regulation 24(b)).

The criteria for acceptance of an EP includes that the EP demonstrates that the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate (regulation 34(g)).

For the Browse to NWS Project Geophysical and Geotechnical (GPGT) Surveys (Commonwealth) Environment Plan (EP), Woodside has taken a broad and proactive consultation approach over a period of 5 months, including by:

- allowing a 30-day period for consultation in line with Woodside's methodology
- providing sufficient information adapted to the nature of each relevant person
- engaging in proactive activities to raise awareness of the consultation process and opportunity for relevant persons to provide feedback
- actively inviting participation in the consultation process. This approach was aimed at raising public awareness of the consultation opportunity and to enable self-identification. It included:
  - a social media campaign
  - advertising in national, state, regional and Indigenous newspapers
  - attendance at community events.

The consultation approach is consistent with regulation 25 of the OPGGS(E) Regulations. The approach is proactive, has enabled self-identification and has raised broad awareness of Woodside's activities to be carried out under this EP.

1.1 Woodside's approach to consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside's consultation approach consistent with regulation 25 includes:

- Assessment and identification of relevant persons
- Opportunities for relevant person self-identification through national, state, regional and Indigenous print advertising and regional social media campaign
- Two-way communication through emails, in-person meetings and phone calls
- Follow-up if Woodside considers it is required prior to consultation close
- Sufficient information and a reasonable period of time for consultation (see Section 5 of the EP).

Proactive activities to raise consultation awareness includes:

- Community events and engagement
- Local print advertising
- Website and social media
- Community newsletters
- Community bulletin board posting
- Additional supporting campaigns as needed.

1.2 Proactive consultation

To support broad awareness and understanding of this EP, Woodside provided additional contextual information on the wider Browse Project and the other Browse GPGT Survey EPs during the consultation period which included:

- Additional information regarding the Browse to NWS Project and the role of the 3 Browse Geophysical and Geotechnical (GPGT) survey EPs included in the Consultation Information Sheet
- Broad advertising of the Browse GPGT survey EPs in print and social media (from Broome to Exmouth)
- Proactively contacted organisations including Shire of Broome and Broome Chamber of Commerce and Industry to provide information regarding the EPs prior to the consultation period commencing and held meetings throughout June 2026.
- Promoted the Browse GPGT Survey EPs at the Karratha Community Liaison Group (CLG) meetings in April and July 2026.

This additional contextual information was provided in addition to the provision of sufficient information to relevant persons so that they could make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

1.3 Traditional Custodian consultation approach

Woodside has meaningful long-term relationships with relevant Traditional Custodians specifically tailored to provide for effective engagement which is continuous and is not confined to individual EPs, instead covering all EPs and other issues that are relevant at the time of engagement.

To this end, consultation on any particular EP, including the Browse to NWS Project GPGT Surveys (Commonwealth) EP, happens before, during and after the designated consultation period in a more holistic manner allowing for an understanding of the bigger picture and accommodating cultural requirements. Ongoing consultation remains an important part of consulting with Traditional Custodians based on availability, cultural protocols and the preferred method of consultation for each relevant person.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

1.4 NGO consultation approach

Woodside has an established history of consulting with environmental non-government organisations (NGOs) as part of its EP consultation process. In its methodology (Section 5.3.4, Table 5-2 of the EP), NGOs are considered “Other non-government groups or organisations” and “Research institutes and local conservation groups or organisations”. Relevant person identification for these categories is based on registered non-government groups or organisations with current targeted public website material specific to the proposed activity at the time of developing the EP and who have demonstrated functions, interests or activities relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation.

So that NGOs were given sufficient information and a reasonable period of time to consult, Woodside:

- advertised the consultation period (social and traditional media)
- directly consulted NGOs
- participated in regional community events (which were advertised) in the Pilbara which could be attended by any NGOs including local groups (if NGOs attended these sessions, they did not identify themselves)

1.5 NGO response

Woodside consulted 5 NGOs at its discretion for this EP, with 3 responses being received from the Conservation Council of WA (CCWA), Australian Marine Conservation Society (AMCS), and Greenpeace Australia (GPAP).

Some feedback drew on studies or regulatory decisions relating to conventional marine seismic surveys or concerned the broader Browse to NWS Project. These matters are considered beyond the scope of this EP.

2. RELEVANCY ASSESSMENT

2.1 Assessment of relevant persons for the proposed activity

The result of Woodside's assessment of relevant persons in accordance with regulation 25(1) of the Environment Regulations is outlined below at Table 1 and Table 2.

Persons or organisations that Woodside assessed as not relevant but nonetheless chose to contact at its discretion in accordance with Section 5.3.7 of the EP or self-identified and Woodside assessed as not relevant are summarised below at Table 1 and Table 3.

As per Woodside's methodology (Section 5 of the EP), assessment of relevant persons is informed by the EMBA, shown in Figure 2-1.

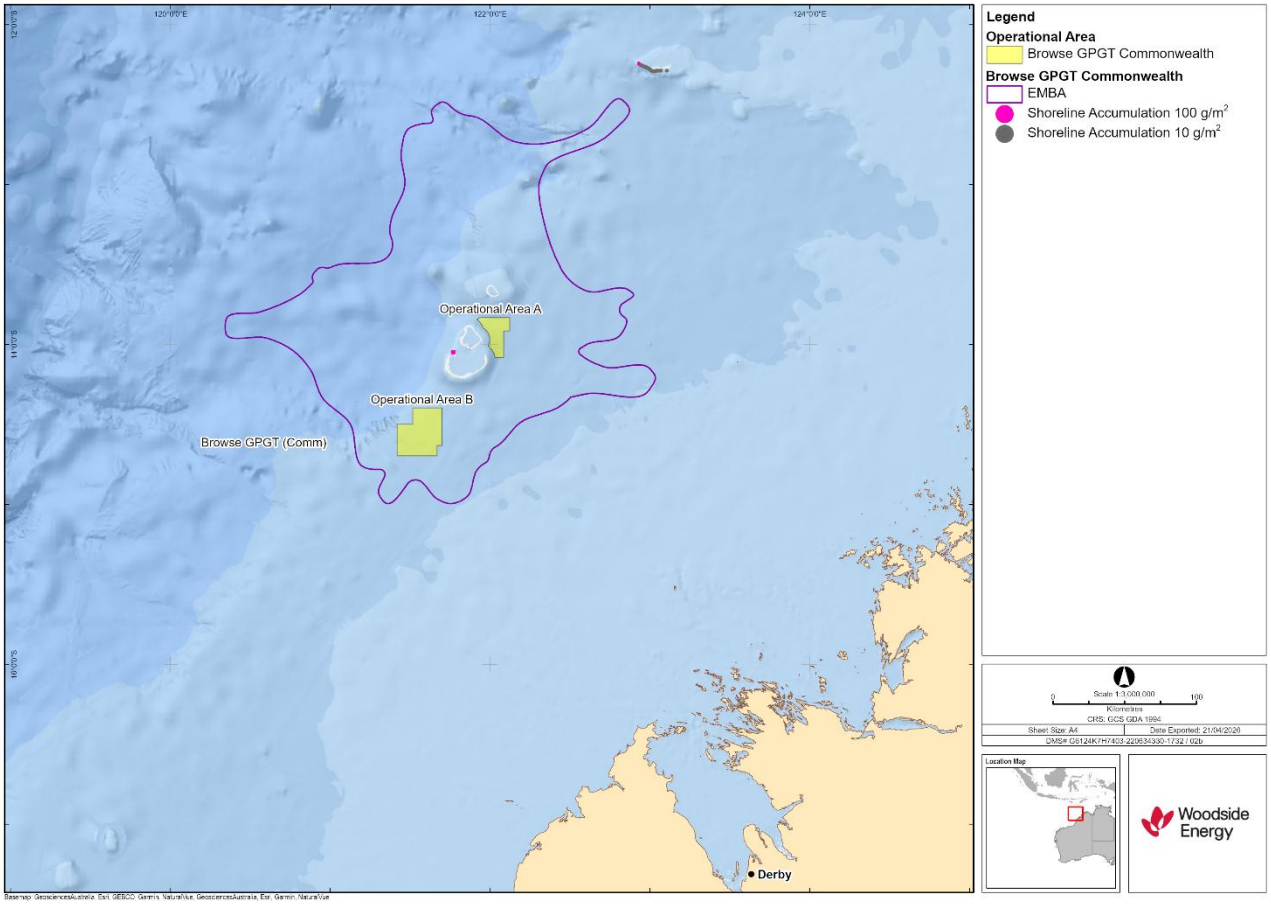

Figure 2-1: Operational Area and EMBA for the Browse to NWS Project GPGT Surveys (Commonwealth) EP

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2.2 Table 1: Assessment of relevance

Government, fisheries, community, titleholders, NGOs, research institutes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Commonwealth and WA State Government Departments or Agencies – Marine			
Australian Border Force (ABF)	Responsible for coordinating maritime security.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ABF's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Communications and Media Authority (ACMA)	Regulator for communications and media.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ACMA's responsibilities may be relevant to the activity as there may be telecommunications lines that intersect the Operational Area.	Yes
Australian Fisheries Management Authority (AFMA)	Responsible for managing Commonwealth fisheries.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope Trawl Fishery is active in the Operational Area and EMBA. AFMA's responsibilities may be relevant to the activity as the North West Slope Trawl Fishery is active in the EMBA.	Yes
Australian Hydrographic Office (AHO)	Responsible for maritime safety and Notices to Mariners.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AHO's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Maritime Safety Authority (AMSA) – Marine Pollution	Legislated responsibility for oil pollution response in Commonwealth waters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Pollution's responsibilities may be relevant to the activity as the proposed activity has a hydrocarbon spill risk which may require AMSA response in Commonwealth waters.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Australian Maritime Safety Authority (AMSA) – Navigational Safety	Statutory agency for vessel safety and navigation.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Navigational Safety's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries	Responsible for implementing Commonwealth policies and programs to support agriculture, fishery, food and forestry industries.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope Trawl Fishery is active in the Operational Area and EMBA. DAFF – Fisheries responsibilities may be relevant to the activity as the North West Slope Trawl Fishery is active in the EMBA.	Yes
Department of Defence (DoD)	Responsible for defending Australia and its national interests.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. DoD's responsibilities may be relevant to the activity as defence training areas lie within the EMBA.	Yes
Department of Planning, Lands and Heritage (DPLH)	Responsible for state level land use planning and management, and oversight of Aboriginal cultural heritage and built heritage matters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. DPLH's responsibilities may be relevant to the activity as there is known Maritime Cultural Heritage overlapping the EMBA.	Yes
Department of Primary Industries and Regional Development (DPIRD)	Responsible for managing State fisheries.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The Marine Aquarium Fish Managed Fishery and Northern Demersal Scalefish Managed Fishery are active in the Operational Area. The Marine Aquarium Fish Managed Fishery, Northern Demersal Scalefish Managed Fishery, and Mackerel Managed Fishery have been active in the EMBA within the past 5 years. DPIRD's responsibilities may be relevant to the activity as the government department responsible for State fisheries.	Yes
Department of Transport and Major Infrastructure (DTMI)	Legislated responsibility for oil pollution response in State waters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has a hydrocarbon spill risk, which may require DTMI response in	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		State waters.	
Kimberley Ports	Responsible for the operation of the Port of Yampi Sound.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The EMBA does not overlap Kimberley Ports area of responsibility. Woodside contacted Kimberley Ports at its discretion, in line with Section 5.3.7, following advice from AMSA – Navigational Safety.	No
Western Australian Museum (WAM)	Manages 200 shipwreck sites of the 1,500 known to be located off the Western Australian coast.	Woodside has applied its methodology for 'Historical cultural heritage groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There are known shipwrecks overlapping the EMBA for which the Western Australian Museum may be responsible.	Yes
Commonwealth and WA State Government Departments or Agencies – Environment			
Clean Energy Regulator (CER)	The Clean Energy Regulator administers schemes legislated by the Australian Government for measuring, managing, reducing or offsetting Australia's carbon emissions.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. CER's responsibilities are not relevant to non-operational EPs.	No
Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)	DAFF administers, implements and enforces the Biosecurity Act 2015. DAFF requests to be consulted where an activity has the potential to transfer marine pests. DAFF also has inspection and reporting requirements to ensure that all conveyances (vessels, installations and aircraft) arriving in Australian territory comply with international health regulations and that any biosecurity risk is managed.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DAFF – Biosecurity's responsibilities may be relevant to the proposed activities in the EMBA in the prevention of introduced marine species.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
	DAFF requests to be consulted where an activity involves the movement of aircraft or vessels between Australia and offshore petroleum activities either inside or outside Australian territory.		
Department of Biodiversity, Conservation and Attractions (DBCA)	Responsible for managing WA's parks, forests and reserves to achieve wildlife conservation and provide sustainable recreation and tourism opportunities.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(b) of the Environment Regulations. The DBCA's responsibilities may be relevant to the activity as the EMBA overlaps WA parks, forests or reserves. Activities have the potential to impact marine tourism in the EMBA.	Yes
Department of Climate Change, Energy, the Environment and Water (DCCEEW)	Responsible for implementing Commonwealth policies and programs to support climate change, sustainable energy use, water resources, the environment and our heritage. Administers the Underwater Cultural Heritage Act 2018 in collaboration with the States, Northern Territory and Norfolk Island, which is responsible for the protection of shipwrecks, sunken aircraft and other types of underwater heritage and their associated artefacts in Commonwealth waters.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DCCEEW's responsibilities may be relevant to the proposed activities in the EMBA as there are potential environmental impacts from the proposed activity. There is known Maritime Cultural Heritage overlapping the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Department of Water Environment Regulation (DWER)	Responsible for management and regulation of WA's environment and water resources.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(b) of the Environment Regulations. DWER has not been assessed as relevant for this activity as EPs are regulated under separate petroleum-specific approval frameworks administered by DMPE or NOPSEMA. DWER may be relevant where an activity requires, or has a clear link to, a DWER or EPA-administered approval or statutory function, however no such approval pathway or statutory function is engaged for this activity. Woodside chose to contact DWER at its discretion, in line with Section 5.3.7 of the EP.	No
Director of National Parks (DNP)	Responsible for the management of Commonwealth parks and conservation zones.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DNP's responsibilities may be relevant to the activity as DNP requires an awareness of activities that occur within Australian Marine Parks (AMPs), and an understanding of potential impacts and risks to the values of parks (NOPSEMA guidance note: N-04750-GN1785 A620236, June 2020). Titleholders are required to consult DNP on offshore petroleum activities if they occur in, or may impact on, the values of marine parks, including where potential spill response activities may occur in the event of a spill (i.e. scientific monitoring).	Yes
Commonwealth and State Government Departments or Agencies – Industry			
Department of Mines, Petroleum and Exploration (DMPE)	Department of relevant State Minister.	Required to be consulted under regulation 25(1)(c) of the Environment Regulations.	Yes
Department of Industry, Science and Resources (DISR)	Department of relevant Commonwealth Minister.	Required to be consulted under regulation 25(1)(a) of the Environment Regulations.	Yes
Commonwealth commercial fisheries and peak representative bodies			
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	Represents the interests of the Southern Bluefin Tuna Fishery and Western Skipjack Fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Southern Bluefin Tuna Fishery overlaps the EMBA. ASBTIA's functions, interests or activities may be relevant to the activity as the Southern	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Bluefin Tuna Fishery overlaps the EMBA.	
Commonwealth Fisheries Association (CFA)	Represents the interests of commercial fishers with licences in Commonwealth waters.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The North West Slope Trawl Fishery is active in the Operational Area and EMBA. CFA's functions, interests or activities may be relevant to the activity as the North-West Slope Trawl Fishery, Southern Bluefin Tuna Fishery, Western Skipjack Fishery, and Western Tuna and Billfish Fishery overlap the EMBA.	Yes
North West Slope Trawl Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the past 5 years.	Yes
Southern Bluefin Tuna Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the past 5 years. Woodside does not consider that the proposed activity will present a risk to licence holders, given since 1992, the majority of Australian catch has concentrated in south-eastern Australia. (Patterson et al., 2022). In addition, given fishing methods by licence holders for species fished in this fishery (Australia has a 35% share of total global allowable catch of Southern Bluefin Tuna, which is value-added through tuna ranching near Port Lincoln (South Australia), or fishing effort in New South Wales (Australian Southern Bluefin Tuna Industry Association).	No
Tuna Australia	Represents the interests of the Western Tuna and Billfish Fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Western Tuna and Billfish Fishery and Western Skipjack Fishery overlap the EMBA. Tuna Australia's functions, interests or activities may be relevant to the activity as the Western Tuna and Billfish Fishery and Western Skipjack Fishery overlap the EMBA.	Yes
Western Skipjack Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the past 5 years. Woodside does not consider that the activity will present a risk to licence holders, given the fishery spans the Australian Fishing Zone west of Victoria and the Torres Strait. The Fishery is not currently active and no fishing has occurred since 2009 (Patterson et al., 2022). In addition, interactions are not expected given the species' pelagic distribution fishing methods for species fished by licence holders.	
Western Tuna and Billfish Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the past 5 years.	No
State commercial fisheries and peak representative bodies			
Aquaculture Council of Western Australia (ACWA)	State peak body for WA's aquaculture industry.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. There are no ACWA members active in the EMBA.	No
Western Australian Fishing Industry Council (WAFIC)	Represents the interests of commercial fishers with licences in State waters.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Marine Aquarium Fish Managed Fishery and Northern Demersal Scalefish Managed Fishery are active in the Operational Area. The Marine Aquarium Fish Managed Fishery, Northern Demersal Scalefish Managed Fishery, and Mackerel Managed Fishery have been active in the EMBA within the past 5 years. WAFIC's functions may be relevant to the activity as the peak representative body for State fisheries. Under an agreement WAFIC issued consultation materials to relevant commercial fisheries licence holders. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would be undertaken only in the event of an unplanned emergency scenario.	
Mackerel Managed Fishery (Area 1 and 2)	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area, it has not been active in the Operational Area within the past 5 years. The fishery overlaps the EMBA and has been active in the EMBA within the past 5 years. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Marine Aquarium Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the past 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting fisheries that are assessed as having a potential for interaction in the Operational Area via WAFIC.	Yes
Northern Demersal Scalefish Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the past 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting fisheries that are assessed as having a potential for interaction in the Operational Area via WAFIC.	Yes
Pearl Oyster Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		The fishery does not overlap the Operational Area but overlaps the EMBA. The fishery has not been active in the Operational Area or EMBA within the past 5 years.	
Pearl Producers Association (PPA)	Peak representative organisation of The Australian South Sea Pearling Industry, with members in Western Australia and the Northern Territory.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Pearl Oyster Managed Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Pearl Oyster Managed Fishery, the PPA has also been assessed as not relevant.	No
Recreational marine users and peak representative bodies			
Marine Tourism WA	Represents the interests of marine tourism in WA.	Woodside has applied its methodology for 'Recreational marine users and representative bodies' under regulation 25(1)(d) of the Environment Regulations. Activities have the potential to impact recreational fishers' functions, interests or activities due to the location offshore and there has been recorded charter effort in the EMBA in the past 5 years.	Yes
Pilbara/Kimberley Recreational Marine Users	Pilbara/Kimberley-based dive, tourism and charter operators.	Woodside has applied its methodology for 'Recreational marine users and representative bodies' under regulation 25(1)(d) of the Environment Regulations. AdCru Assets Pty Ltd, AOA International Pty Ltd, Australian Port and Marine Services Pty Ltd, Bloor Street Investments Pty Ltd, Bondall Pty Ltd, Brefjen Nominees Pty Ltd, Broome Chiropractic Pty Ltd, Capricorn Mist Pty Ltd, Chapel Nominees Pty Ltd, Charter Express Pty Ltd, Cm Marine Pty Ltd, Cm Ventures Pty Ltd, Coastway Investments Pty Ltd, Compagnie Du Ponant Pty Ltd, Coral Princess Cruises (NQ) Pty Ltd, Discovery Holiday Parks Pty Limited, Diversity Charter Company WA Pty Ltd, Eco Wharf Pty Ltd, Eco-Abrolhos Pty Ltd, Fawesome Expeditions Pty Ltd, Go Beyond Broome Pty Ltd, Hartley Motorcycles Pty Ltd, Hotel and Resort Investments Pty Ltd, Humbug Fishing Pty Ltd, KCC Group Pty Ltd, Kimberley Getaway Cruises Pty Ltd, Kimberly Pearl Tours Pty Ltd, King Sound Resort Hotel Pty Ltd, KW Marine Pty Ltd, L & S Family Holdings Pty Ltd, Lake Argyle Cruises Pty Ltd, Lombadina Aboriginal Corporation, Lulamanzi Investments Pty Ltd, Mackerel Islands Pty Ltd, , Marbil WA Pty Ltd, Marine Agents Australia Pty Ltd, Maritime Engineering Services Pty Ltd, Melkit Pty Ltd, Millennial Charters Pty Ltd, Monster Sportfishing Adventures Pty Ltd, North Star Cruises Australia Pty Ltd, Ocean Charters Pty Ltd, Pearl Expeditions Pty Ltd, Sea 2 Pty Ltd, Sealife Charters Pty Ltd, Silverado Charters Pty Ltd, Split Tide Pty Ltd, Super Yachts Perth Pty Ltd, The Great Escape Charter Company Pty Ltd, Western Wave Marine Pty Ltd, Willie Creek Pearl Farm Pty Ltd, Wongs Way Out Pty Ltd, Archipelago Adventures, Broome Tours Pty Ltd, Hampton Harbour Boat & Sailing Club, Mackerel Islands Pty Ltd, Marine Rescue	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Dampier, Nickol Bay Sport Fishing Club, Port Walcott Volunteer Marine Rescue, Port Walcott Yacht Club. The above list of businesses is in addition to individuals as per SI Report A, reference 9.1). Activities have the potential to impact Pilbara/Kimberley-based dive, tourism and charter operator's functions, interests or activities due to the location of activities and there has been recorded charter effort in the EMBA in the past 5 years.	
Recfishwest	Represents the interests of recreational fishers in WA.	Woodside has applied its methodology for 'Recreational marine users and representative bodies' under regulation 25(1)(d) of the Environment Regulations. Activities have the potential to impact recreational fishers' functions, interests or activities due to the location offshore and there has been recorded charter effort in the EMBA in the past 5 years.	Yes
WA Game Fishing Association	Represents the interests of game fishers in WA.	Woodside has applied its methodology for 'Recreational marine users and representative bodies' under regulation 25(1)(d) of the Environment Regulations. Activities have the potential to impact game fishers' functions, interests or activities due to the location offshore and there has been recorded charter effort in the EMBA in the past 5 years.	Yes
Titleholders and Operators			
INPEX	Titleholder or Operator.	Woodside has applied its methodology for 'Titleholders and Operators' under regulation 25(1)(d) of the Environment Regulations. Titleholder or Operator's permit area/s overlap/s the EMBA.	Yes
Origin Energy Browse	Titleholder or Operator.	Woodside has applied its methodology for 'Titleholders and Operators' under regulation 25(1)(d) of the Environment Regulations. Titleholder or Operator's permit area/s overlap/s the EMBA.	Yes
PetroChina International Investment (Australia)	Titleholder or Operator.	Woodside has applied its methodology for 'Titleholders and Operators' under regulation 25(1)(d) of the Environment Regulations. Titleholder or Operator's permit area/s overlap/s the EMBA.	Yes
Santos Offshore / Santos Browse	Titleholder or Operator.	Woodside has applied its methodology for 'Titleholders and Operators' under regulation 25(1)(d) of the Environment Regulations. Titleholder or Operator's permit area/s overlap/s the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Peak Industry Representative bodies			
Australian Energy Producers (AEP)	Represents the interests of oil and gas explorers and producers in Australia.	Woodside has applied its methodology for 'Peak Industry Representative bodies' under regulation 25(1)(d) of the Environment Regulations. AEP's responsibilities are identified as having an intersect with Woodside's planned activities in the EMBA.	Yes
Local government and elected Parliamentary representatives, community groups or organisations			
Broome Chamber of Commerce and Industry (CCI)	Independent not-for-profit organisation responsible for promoting the interests of its members in the business community in the town of Broome and surrounding areas.	Woodside has applied its methodology for 'Local government and community groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Broome Chamber of Commerce and Industry's interests have the potential to be impacted by the proposed activities.	Yes
Shire of Broome	Local government governed by the Local Government Act 1995 representing the suburbs and localities of Mile, Bilingurr, Broome, Cable Beach, Cape Leveque, Coconut Well, Djugun, Lombadina, Minyirr, Morell Park, Skuthorpe	Woodside has applied its methodology for 'Local government and community groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Shire of Broome's area of responsibility overlaps the EMBA.	Yes
Other non-government groups or organisations (NGOs) or individuals			
Australian Conservation Foundation (ACF)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine ACF's relevance for the proposed activity. Woodside has assessed that ACF has publicly available statements, campaigns or initiatives relating to broader environmental and energy policy matters. Woodside chose to contact ACF at its discretion in line with Section 5.3.7 to provide an opportunity to engage with ACF to assist to identify whether its functions, interests or activities may be affected by the planned activities.	No
Australian Marine Conservation Society (AMCS)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine AMCS's relevance for the proposed activity. Woodside has assessed that AMCS has provided feedback and/or has a publicly available statement (or purpose), website or social media material that demonstrates that	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		its functions, interests or activities may be affected by the planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP).	
Conservation Council of Western Australia (CCWA)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine CCWA's relevance for the proposed activity. Woodside has assessed that CCWA has provided feedback and/or has a publicly available statement (or purpose), website or social media material that demonstrates that its functions, interests or activities may be affected by the planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP).	Yes
Greenpeace Australia Pacific (GPAP)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine GPAP's relevance for the proposed activity. Woodside has assessed that GPAP has provided feedback and/or has a publicly available statement (or purpose), website or social media material that demonstrates that its functions, interests or activities may be affected by the planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP).	Yes
Environs Kimberley	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine Environs Kimberley's relevance for the proposed activity. Woodside has assessed that Environs Kimberley has publicly available statements, campaigns or initiatives relating to broader environmental and energy policy matters. Woodside chose to contact Environs Kimberley at its discretion in line with Section 5.3.7 to provide an opportunity to engage with Environs Kimberley to assist to identify whether its functions, interests or activities may be affected by the planned activities.	No
Vocus	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations to determine Vocus' relevance for the proposed activity. There are known Vocus communication cables that intersect within the Operational Area.	Yes
Research institutes and local conservation groups or organisations			
Australian Institute of Marine Science (AIMS)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		There may be research being undertaken by AIMS that intersects within the EMBA. Woodside chose to contact AIMS at its discretion in line with Section 5.3.7 of the EP.	
Commonwealth Scientific and Industrial Research Organisation (CSIRO)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by CSIRO that intersects within the EMBA. Woodside chose to contact CSIRO at its discretion in line with Section 5.3.7 of the EP.	No
Western Australian Marine Science Institution (WAMSI)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by WAMSI that intersects within the EMBA. Woodside chose to contact WAMSI at its discretion in line with Section 5.3.7 of the EP.	No
Curtin University	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by Curtin University that intersects within the EMBA. Woodside chose to contact Curtin University at its discretion in line with Section 5.3.7 of the EP.	No
Edith Cowan University (ECU)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by ECU that intersects within the EMBA. Woodside chose to contact ECU at its discretion in line with Section 5.3.7 of the EP.	No
Murdoch University	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by Murdoch University that intersects within the EMBA. Woodside chose to contact Murdoch University at its discretion in line with Section 5.3.7 of the EP.	No
University of Western Australia (UWA)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by UWA that intersects within the EMBA. Woodside chose to contact UWA at its discretion in line with Section 5.3.7 of the EP.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Traditional custodians and nominated representative corporations

Traditional Custodians and nominated representative corporations			
Bardi and Jawi Niimidiman Aboriginal Corporation RNTBC (BJNAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Bardi and Jawi Native Title Determination for which BJNAC is the Registered Native Title Body Corporate, does not overlap the EMBA. The claim is coastally adjacent to the EMBA. BJNAC is also party to the Bardi Jawi Conservation Estate Indigenous Land Use Agreement which is coastally adjacent to the EMBA.	Yes
Boorroola Moorrool Moorrool	Traditional custodians	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Boorroola Moorrool Moorrool Native Title Claim application is coastally adjacent to the EMBA.	Yes
Dambimangari Aboriginal Corporation (DAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians' under regulation 25(1)(d) of the Environment Regulations. DAC is party to the Dambimangari Country Marine Park Indigenous Land Use Agreement, Dambimangari KSCS Marine Parks ILUA, KTS Co-Existence ILUA, Reserve 30674 ILUA, State KTS ILUA and The Cockatoo Island Co-Existence Indigenous Land Use Agreement which are coastally adjacent to the EMBA.	Yes
Gogolanyngor Aboriginal Corporation RNTBC (GAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Jabirr Jabirr/Ngumbarl Native Title Claim, for which GAC is the Registered Native Title Body Corporate, does not overlap and is not coastally adjacent to the EMBA. Woodside chose to consult GAC at its discretion.	No
Joombarn-buru Aboriginal Corporation (Joombarn-buru)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Joombarn-buru Native Title Claim for which Joombarn-buru is the Registered Native Title Body Corporate, does not overlap and is not coastally adjacent to the EMBA. Woodside does not consider Joombarn-buru to be relevant for this EP.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

La-Djarda Bay Aboriginal Corporation (La-Djarda Bay)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. La-Djarda Bay originated from a separation from Nimanburr Aboriginal Corporation. Woodside chose to consult La-Djarda Bay at its discretion.	No
Mayala Inninalang Aboriginal Corporation RNTBC (MIAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Mayala People, and Mayala #2 Native Title Claims, for which MIAC is the Registered Native Title Body Corporate, do not overlap the EMBA. The claims are coastally adjacent to the EMBA. MIAC is also party to the Kimberley Barramundi Expansion Project ILUA and Mayala Country Marine Park Indigenous Land Use Agreement which are coastally adjacent to the EMBA.	Yes
Nimanburr Aboriginal Corporation RNTBC (Nimanburr)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Bindunbur Native Title Claim, for which the Gogolanyngor Aboriginal Corporation, Nimanburr and Nyul Nyul PBC Aboriginal Corporation are the Registered Native Title Body Corporates, does not overlap, and is not coastally adjacent to the EMBA. Woodside chose to consult Nimanburr at its discretion.	No
Nyul Nyul PBC Aboriginal Corporation RMTBC (NNAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Bindunbur Native Title Claim, for which the Gogolanyngor Aboriginal Corporation, Nimanburr and Nyul Nyul are the Registered Native Title Body Corporates, does not overlap, and is not coastally adjacent to the EMBA. Woodside chose to consult NNAC under its discretion.	No
Walalakoo Aboriginal Corporation RNTBC (WAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Nyikina Mangala, Nyikina Mangala #2 and Booroola Moorrool Moorrool Part A Native Title Claims for which WAC is the registered Native Title Body Corporate, does not overlap and is not coastally adjacent to the EMBA. WAC has self-identified as a relevant person for oil and gas projects in the Browse Basin.	Yes
Wunambal Gaambera Aboriginal Corporation (WGAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside chose to consult WGAC under its discretion.	
Wanjina-Wunggurr (Native Title) Aboriginal Corporation (WWAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Dambimangari, Uunguu Part A, and Wanjina - Wunggurr Wilinggin Native Title Determination No 1 Native Title Claims for which WWAC is the Registered Native Title Body Corporate, do not overlap the EMBA. The claims are coastally adjacent to the EMBA. WWAC is also party to the Dambimangari Country Marine Park Indigenous Land Use Agreement, Dambimangari KSCS Marine Parks ILUA, KTS Co-Existence ILUA, Reserve 30674 ILU, State KTS ILUA, The Cockatoo Island Co-Existence Indigenous Land Use Agreement, and Wilinggin Indigenous Land Use Agreement which are coastally adjacent to the EMBA.	Yes
Warrwa Combined	Traditional Custodians	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Warrwa Combined Native Title claim is coastally adjacent to the EMBA.	Yes
Wilinggin Aboriginal Corporation (Wilinggin)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. Wilinggin is party to the Wilinggin Indigenous Land Use Agreement which is coastally adjacent to the EMBA.	Yes
Yawuru Native Title Holders Aboriginal Corporation RNTBC (Yawuru)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Rubibi Community Native Title Claim, for which the Yawuru Native Title Holders Aboriginal Corporation is the Registered Native Title Body Corporate does not overlap and is not adjacent to the EMBA. Yawuru's functions, interests or activities may be affected by Woodside's proposed planned or unplanned activities to be carried out under the EP.	No
Native Title Representative Bodies			
Kimberley Land Council (KLC)	Native Title Representative Body	Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations. KLC is the Native Title Representative Body for the Kimberley region of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		KLC's functions may be relevant to the proposed activity in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation.	
Northern Land Council (NLC)	Native Title Representative Body	Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations. NLC is the Native Title Representative Body for the Northern Territory. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders. NLC's functions may be relevant to the proposed activity in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation.	Yes
Other Indigenous Groups			
Indigenous Salt Water Advisory Group (ISWAG)	Traditional Owner Representative Body	Woodside has applied its methodology for 'Traditional Custodians and nominated representative corporations' and 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. ISWAG is comprised of nine Kimberley Traditional Owner Groups. Woodside chose to consult ISWAG at its discretion	No
Lombadina Aboriginal Corporation (Lombadina)	Indigenous recreational marine user	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. Lombadina is a registered Aboriginal Corporation located on the Dampier Peninsula. It is not a Registered Native Title Body Corporate. Lombadina is also a Kimberley recreational marine user.	Yes

3. CONSULTATION ACTIVITIES

Woodside has been conducting consultation with relevant persons and other parties for the Browse to NWS Project GPGT Surveys (Commonwealth) EP since April 2026 when consultation commenced as part of a planned, integrated and consistent approach for Woodside's proposed opportunities.

3.1 Discharging Regulation 25 of the Environment Regulations

Consultation for the Browse to NWS Project GPGT Surveys (Commonwealth) EP began with public notification via newspaper and social media advertising and direct engagement with identified relevant persons and other persons and organisations Woodside chose to contact.

This approach has a number of aims, including, where relevant to be inclusive, transparent, voluntary, respectful and two-way. Consultation was undertaken, where relevant, by email, letter, phone call and/or meetings and through advertising. Further details on these activities are provided in the following sections.

3.1.1 Newspaper advertising

Woodside advertised the EP consultation with an overview of planned activities in national, state regional and Indigenous newspapers as per the table below (also see Record of Consultation, reference 6.3) to reach relevant communities within or adjacent to the EMBA.

No direct comments or feedback were received from the advertisements.

Newspaper	Coverage	Readership	Publication dates
1. The Australian	National	Weekly – 453,000	28 April 2026
2. The West Australian	Regional (WA)	Daily – 364,000	28 April 2026
3. National Indigenous Times	Indigenous	Monthly – 1,484,340	28 April 2026
4. Pilbara News	Local (WA)	Weekly – 17,611	29 April 2026
5. Kimberley Echo	Local (WA)	Weekly – 480	30 April 2026
6. Broome Advertiser	Local (WA)	Weekly – 14,474	30 April 2026
7. Koori Mail	Indigenous	Monthly – 80,000	6 May 2026

3.1.2 Direct consultation

Woodside provided a Consultation Information Sheet to relevant persons and to other persons and organisations it chose to contact, during the initial consultation period. See Section 5.3.4 and Section 5.3.7 of the EP.

The Consultation Information Sheet included an overview of the activity, maps, a summary of key risks and/or impacts and associated management measures (Record of Consultation, reference 6.1.1). It also outlined the timeframe for providing feedback and included Woodside's toll-free phone number (1800 442 977) and the consultation email address feedback@woodside.com to support consultation.

As part of the EP's initial consultation, Woodside provided additional targeted information to specific relevant persons, as necessary. This information included:

- GIS shape files
- defence zone map (Record of Consultation, reference 6.1.3)
- vessel density map (Record of Consultation, reference 6.1.4)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- shipwreck information (Record of Consultation, reference 6.1.5)
- submarine communication cable map (Record of Consultation, reference 6.1.6)

Where appropriate, Woodside conducted phone calls and meetings with relevant persons.

Where appropriate, follow-up emails or letters were sent to relevant persons who had not responded prior to the close of the advertised feedback period.

Woodside considered relevant person responses and assessed the merits and relevance of objections and claims about the potential adverse impact of the proposed activity set out in the EP, in accordance with the intended outcome of consultation (see Section 5.2 of the EP).

Consultation activities undertaken with relevant persons are summarised at Appendix F, Table 2.

Engagement with persons or organisations Woodside assessed as not relevant but chose to contact (see Section 5.3.7 of the EP) or self-identified and Woodside assessed as not relevant are summarised at Appendix F, Table 3.

3.1.3 Website and social media

Since the commencement of the initial consultation period (April 2026), the Consultation Information Sheet has been available on Woodside's website. The website also includes alternative methods for relevant persons to provide feedback to Woodside and information on other Woodside activities. From April 2026, Woodside ran a geotargeted paid social media campaign (Record of Consultation, reference 6.4) covering various local government authorities within, or coastally adjacent to, the EMBA for the proposed activities. The campaign focused on persons whose functions, interests or activities might be affected by the EP's activities and directed them to Woodside's Consultation Activities page so that, if they wanted further information, they could learn more about the EP and proposed activities.

Below is a summary of the reach and impact of the social campaign.

Platforms	Geotargeted reach	Post dates	Impact
Meta – Facebook and Instagram	Karratha, Dampier, Onslow, Roebourne, Exmouth, Broome, Derby, Wyndham	29/04/2026 12/05/2026 25/05/2026	Reach: 98,624 Impressions: 191,177 Link Clicks: 735 Click Through Rate: 0.38%

Below is a summary of comments and reactions to the social media campaign. Please note comments and reactions are not available for Instagram.

Platform	Number of reactions	Number of comments	Comments relevant to EP
Meta – Facebook and Instagram	51 👍 1 ❤️ 3 shares	14 comments	0 relevant

3.2 Supporting proactive consultation

3.2.1 Community engagement

The Community Information Sessions or community events that Woodside has conducted or attended are outlined below (and captured in more detail in Record of Consultation, reference 6.5). Woodside published advertisements ahead of these sessions and events in relevant local newspapers and on social media to support attendance.

Date	Location	Event (if applicable)
15 May 2026	Karratha	KDCCI Markets at REAF

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Date	Location	Event (if applicable)
7 June 2026	Dampier	Dampier Beachside Markets
6 July 2026	Roebourne	Waramalgu Markets with Cora-Larni Enterprises
1 – 2 August 2026	Karratha	FeNaCING Festival
8 August 2026	Onslow	Passion of the Pilbara

3.2.2 Newsletters

Woodside's EP focussed newsletter *Let's Talk* is designed to reach existing and potentially relevant persons, supports self-identification and provides information about Woodside's EP-related activities. The newsletter provides updates about EP consultation activities, case studies on effective consultation with relevant persons and other EP related information such as upcoming events where the Woodside team will consult with the local community. *Let's Talk* was published in May during the consultation period and was distributed in a variety of locations including Karratha, Roebourne, Exmouth and Perth as well as across digital platforms including Woodside's website and social media channels. People can also subscribe to receive *Let's Talk* on Woodside's website. (Record of Consultation, reference 6.8.1).

Woodside also publishes the *Karratha Community Update* newsletter quarterly which includes a QR code and encourages people to go to the Consultation Activities page on Woodside's website to subscribe and find information on EPs. The March, June and September 2026 issues were published during and around the timeframe of the consultation period (Record of Consultation, reference 6.8.2).

3.3 Traditional Custodian specific consultation

In addition to the approaches outlined above including community information sessions, additional activities were undertaken with relevant Traditional Custodians, which were specifically designed to provide for effective engagement with Traditional Custodians and so that information was provided in a form that was readily accessible and appropriate (see Section 5.5.4 of the EP).

Consultation undertaken specifically with Traditional Custodians for this EP includes direct engagement with nominated representative bodies via the contact listed on the Office of the Registrar of Indigenous Corporations (ORIC) website, requesting advice on how they would like to be engaged and asking whether other members and/or individuals should be consulted. This has resulted in:

- the EP's Summary Information Sheet, being provided to relevant Traditional Custodian groups (Record of Consultation, reference 6.1.1 and reference 6.1.2). The resource is developed and reviewed by subject matter experts with knowledge and experience in Indigenous affairs, in collaboration with technical experts to ensure content is appropriate to the intended recipients
- meetings with directors, Elders and any nominated representatives, at a time and location nominated by them
- the exchange of written feedback and correspondence
- telephoning relevant persons to provide context, if requested and/or required.

Ongoing efforts were made to engage and develop relationships with these bodies via a variety of means such as email, phone calls, alternative contacts, texts, social media and, in some cases, physical visits.

Consultation meetings with attendees decided by Traditional Custodian groups and supported by senior Woodside representatives, subject matter experts and Indigenous Affairs advisers with skills and experience in community engagement. Meetings are developed through a two-way consultation process to ensure effective information sharing via:

- mutually agreed agenda

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- encouraging Traditional Custodian attendees to control the pace of the meeting and pause at any time to ask questions, seek clarification or provide feedback
- visual aids such as posters, presentations, maps, simplified technical videos and real-world pictures and footage
- emphasis on potential planned and unplanned risks and impacts of the activity
- ample opportunity for questions and feedback
- discussion about ongoing relationship development and opportunities
- distribution of hard-copy Consultation Information Sheets (Record of Consultation, 6.1.1) and Summary Consultation Information Sheets (Record of Consultation, reference 6.1.2) are available face-to-face consultation
- meeting costs such as sitting fees, travel and executive support and other support required
- advertising in Indigenous publications such as the National Indigenous Times (28 April 2026) and Koori Mail (6 May 2026) (Record of Consultation, reference 6.3.3 and reference 6.3.7).

Newspaper	Coverage	Publication dates
Koori Mail	Indigenous	6 May 2026
National Indigenous Times	Indigenous	28 April 2026

Woodside also ran a geotargeted sponsored social media campaign (Record of Consultation, reference 6.4.1) to various communities that are coastally adjacent to the EMBA for the proposed activities.

Social media is a highly effective means to engage Indigenous audiences as outlined in Indigenous Digital Life: The Practice and Politics of Being Indigenous on Social Media (Bronwyn Carlson and Ryan Frazer, 2021).

The campaign brought the proposed activity to the attention of persons who may be interested and advised persons or organisations how they can learn more about Woodside's proposed activities by visiting Woodside's website. The advertisements linked to Woodside's website, which details the intent of consultation with relevant persons under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth).

Woodside uses a diverse range of techniques to reach relevant persons and build awareness of the proposed activity and how it may affect their functions, activities or interests, and to understand how to provide feedback. The combination of Prescribed Bodies Corporate (PBC) engagement meetings, traditional print media, social media and face-to face community interaction provides a wide-ranging opportunity to consult.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4. TABLE 2: CONSULTATION REPORT WITH RELEVANT PERSONS OR ORGANISATIONS

The black numbering **(N)** in the 'Summary of information provided and record of consultation for this EP' in Table 2 denotes an item raised by a stakeholder. The green numbering **(N)** in this section denotes Woodside's response to that issue.

4.1 Commonwealth and WA State Government departments or agencies – marine

4.1.1 Australian Border Force (ABF)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed ABF advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has addressed maritime security-related issues in Section 7 of the EP based on previous offshore activities.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ABF for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ABF sufficient information to allow ABF to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to ABF on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ABF a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to ABF advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ABF 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed ABF a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ABF is appropriate and adapted to the nature of interests of ABF:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding ABF of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ABF did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ABF's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.2 Australian Communications and Media Authority (ACMA)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed ACMA advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Communications infrastructure located in the vicinity of the Operational Area/s is set out in Section 4.10.6 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ACMA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ACMA sufficient information to allow ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to ACMA on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed ACMA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to ACMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ACMA 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed ACMA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ACMA is appropriate and adapted to the nature of interests of ACMA:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding ACMA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ACMA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ACMA's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.3 Australian Fisheries Management Authority (AFMA)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed AFMA advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 11 May 2026, AFMA emailed thanking Woodside for the email. AFMA raised items **(1)** to **(3)** (SI Report A, reference 1.1).
- On 15 May 2026, Woodside responded thanking AFMA for its email. Woodside responded to **(1)** to **(3)** (SI Report A, reference 1.2).
- On 15 June 2026, Woodside sought AFMA's advice on the nature and extent of traditional Indonesian fishing activity within the Australia–Indonesia Memorandum of Understanding (MoU) box, particularly near Scott Reef, to inform its understanding of potential interactions with proposed survey activities (SI Report A, reference 1.3).
- On 19 June 2026, AFMA responded to Woodside thanking it for seeking advice from AFMA. AFMA responded to Woodside's queries with items **(4)** and **(5)** (SI Report A, reference 1.4).
- On 9 July 2026, Woodside replied to AFMA thanking it for providing guidance on this matter. Woodside responded to items **(4)** and **(5)** (SI Report A, reference 1.5).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) AFMA confirmed it had no direct comments to the EP.	**(1)** Woodside notes AFMA had no comments on this EP.	**(1)** Woodside thanked AFMA for its reply and for confirming it had no direct comments on the EP.	**(1)** No changes or additional measures are required.
(2) AFMA requested to be included in future consultation on this matter.	**(2)** Woodside understands that AFMA would like to be informed of future consultation opportunities and has committed to notifying AFMA prior to the commencement of activities.	**(2)** Woodside confirmed it would include AFMA in future consultation for the EP.	**(2)** No changes or additional measures are required. As per Woodside's standard notifications, AFMA will be notified 10 days prior to the commencement of activities and following completion of activities, as referenced as PS 1.5 and set out in Section 7.10 of the EP.
(3) AFMA recommended that Woodside consult with specific Commonwealth fishery stakeholders.	**(3)** Woodside notes AFMA's advice that CFA, Tuna Australia, and ASBTIA should be included in consultation for this EP and Woodside provided	**(3)** Woodside confirmed that consultation materials were provided to CFA, Tuna Australia, and ASBTIA.	**(3)** No changes or additional measures are required. Woodside provided consultation information to CFA, Tuna Australia, and

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	consultation to these organisations for this EP.		ASBTIA, as evidenced in Table 2 of Appendix F in this EP.
(4) In response to a query from Woodside on the nature and extent of traditional Indonesian fishing activity within the Australia–Indonesia Memorandum of Understanding (MoU) box, AFMA clarified that traditional Indonesian fishers may operate within the MoU Box, but noted that AFMA does not license, regulate, or maintain contact details for these fishers.	**(4)** Woodside understands that the MoU box may contain numerous traditional fishers operating and that AFMA does not directly license or regulate the traditional fishers	**(4)** Woodside thanked AFMA for providing guidance and clarifying its role in licencing or regulating traditional fishing.	**(4)** No changes or additional measures are required. Section 6.8.1 of the EP includes controls which address the potential interactions with traditional Indonesian fishers.
(5) In response to a query from Woodside on the nature and extent of traditional Indonesian fishing activity within the Australia–Indonesia Memorandum of Understanding (MoU) box, AFMA recommended contacting the Department of Foreign Affairs and Trade (DFAT) to provide guidance on this matter.	**(5)** Woodside accepts AFMA's advice that DFAT is an appropriate consultation pathway in relation to Indonesian fishers operating within the MoU Box and has addressed this advice by consulting DFAT.	**(5)** Woodside thanked AFMA for providing DFAT contact details and confirmed, in line with AFMA guidance, that consultation information had been provided to DFAT.	**(5)** No changes or additional measures are required. Woodside provided consultation information to DFAT, as evidenced in Table 2 of Appendix F in this EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AFMA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AFMA sufficient information to allow AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AFMA on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 11 May 2026, AFMA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed AFMA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to AFMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AFMA 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed AFMA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AFMA is appropriate and adapted to the nature of interests of AFMA:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AFMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from AFMA.
  - Made no changes or inclusions to the EP as a result of consultation with AFMA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.4 Australian Hydrographic Office (AHO)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed AHO advising of the proposed activity (Record of Consultation, reference 6.1.10), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*', and a vessel density map.
- On 29 April, AHO thanked Woodside for the invitation to comment on the EP. AHO raised items **(1)** and **(2)** (SI Report A, reference 2.1).
- On 1 May 2026, Woodside thanked AHO for its email. Woodside responded to items **(1)** and **(2)** (SI Report A, reference 2.2).
- On 3 June 2026, Woodside sent an update to AHO regarding an update on a separate EP (SI Report A, reference 2.3 and 2.4).
- On 4 June 2026, AHO thanked Woodside for the invitation to comment on the EP. AHO re-raised items **(1)** and **(2)** (SI Report A, reference 2.5).
- On 15 July 2026, Woodside thanked AHO for its email. Woodside responded to items **(1)** and **(2)** (SI Report A, reference 2.6).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) No concerns with the activities.	**(1)** Woodside understands that AHO has no concerns regarding the activities.	**(1)** Woodside noted that AHO had no concerns and thanked AHO for its feedback.	**(1)** No changes or additional measures are required.
(2)	**(2)**	**(2)**	**(2)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No further updates are required until activity beginning.	Woodside will notify AHO prior to activity commencement.	Woodside confirmed it would notify AHO prior to the commencement of the activities. Woodside further confirmed that, as agreed in correspondence not related to this EP, Woodside will provide AHO with Start of Activity notifications no less than four weeks prior to the commencement of the first activity under the EP, and then subsequently when vessels are undertaking activities within the Operational Area for more than three weeks at a time.	No changes or additional measures are required. Woodside will notify AHO as referenced as PS 1.3 and set out in Section 7.10 of the EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AHO for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AHO sufficient information to allow AHO to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AHO on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided AHO with information tailored to AHO by providing a vessel density map in relation to the activity.
- On 29 April 2026 and 4 June 2026, AHO shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AHO to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed AHO a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to AHO advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AHO 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed AHO a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AHO is appropriate and adapted to the nature of interests of AHO:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AHO provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from AHO.
  - Made no changes or inclusions to the EP as a result of consultation with AHO because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.5 Australian Maritime Safety Authority (AMSA) – Marine Pollution

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 April 2026, Woodside emailed AMSA – Marine Pollution advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has addressed oil pollution planning and response at Appendix H.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA – Marine Pollution for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA – Marine Pollution sufficient information to allow AMSA – Marine Pollution to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AMSA – Marine Pollution on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to AMSA – Marine Pollution advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA – Marine Pollution 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA – Marine Pollution is appropriate and adapted to the nature of interests of AMSA – Marine Pollution:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding AMSA – Marine Pollution of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AMSA – Marine Pollution did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AMSA – Marine Pollution's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.6 Australian Maritime Safety Authority (AMSA) – Navigation Safety

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed AMSA – Navigation Safety advising of the proposed activity (Record of Consultation, reference 6.1.10), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community',* and a vessel density map.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 3 June 2026, AMSA – Navigation Safety thanked Woodside for consulting with them (SI Report A, reference 3.1). AMSA – Navigation Safety raised items **(1)** – **(10).**
- On 26 August 2026, Woodside thanked AMSA – Navigation Safety for its email (SI Report A, reference 3.2). Woodside responded to items **(1)** – **(10)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Raised vessel traffic crossing through Operational Area B, highlighting periodic bulk carrier and tanker traffic, including vessels transiting south of Scott Reef and through the south-eastern portion of Operational Area B.	**(1)** Woodside notes the vessel traffic information provided by AMSA. This information has been considered in the assessment of navigational risks associated with the activity.	**(1)** Woodside noted AMSA's advice regarding vessel traffic transiting Operational Area B and appreciates the vessel traffic information provided and will consider this information in its assessment of navigational risks and the appropriateness of proposed risk controls.	**(1)** No changes or additional measures are required. Potential interactions with third-party vessels and the selection of navigational controls are assessed in Section 6.8.1 of the EP
(2) Acknowledged Woodside's proposed controls for managing navigational risks.	**(2)** Woodside notes AMSA's acknowledgement of the proposed navigational controls.	**(2)** Woodside noted AMSA's acknowledgement of the proposed control measures to mitigate potential navigational risks associated with the Petroleum Activity.	**(2)** No changes or additional measures are required.
(3) Recommended Woodside evaluate and implement adequate anti-collision measures when planning and conducting the activity.	**(3)** Woodside acknowledges that potential vessel interactions should be considered when selecting navigational controls and has evaluated AMSA's recommendations against the nature, location and navigational risk profile of the proposed activities.	**(3)** Woodside thanked AMSA for its recommendations regarding anti-collision measures and confirmed that each recommendation would be considered as part of the evaluation of controls in the EP to manage vessel interaction risks.	**(3)** No changes or additional measures are required. Potential interactions with third-party vessels and the selection of navigational controls are assessed in Section 6.8.1 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(4) Recommended Woodside consider additional warnings and/or lights to attract the attention of other marine users during the Petroleum Activity.	**(4)** Woodside considers that vessel visibility and warning requirements are appropriately addressed through compliance with applicable navigational safety requirements, including requirements for navigation lights, shapes and signals appropriate to the nature of the operations.	**(4)** Woodside noted AMSA's recommendation regarding additional warnings and lights and confirmed that it would be considered in the evaluation of navigational risk controls. Woodside further confirmed that compliance with the International Regulations for Preventing Collisions at Sea is mandated aboard Woodside-chartered vessels.	**(4)** No changes or additional measures are required. Potential interactions with third-party vessels and the selection of navigational controls are assessed in Section 6.8.1 of the EP
(5) Recommended that all project vessels be fitted with Automatic Identification System (AIS).	**(5)** Woodside considers that AIS requirements are appropriately addressed through compliance with the navigational requirements applicable to each vessel's size, type and class, including the correct setting of vessel navigational status.	**(5)** Woodside noted AMSA's recommendation regarding AIS and confirmed that compliance with applicable navigational requirements is mandated aboard Woodside-chartered vessels, including ensuring that vessel navigational status is correctly set in the AIS.	**(5)** No changes or additional measures are required. The consideration and selection of controls for interactions with third-party vessels are addressed in Section 6.8.1 of the EP.
(6) Recommended that Woodside consider offshore guard vessels to monitor marine traffic and provide early warning to vessels approaching the area of operations.	**(6)** Woodside considers that the adopted navigational controls are proportionate to the short-duration and localised nature of the proposed activities and the assessed potential for interaction with other marine users.	**(6)** Woodside noted AMSA's recommendation regarding offshore guard vessels and confirmed that the recommendation would be considered as part of the evaluation of controls to manage vessel interaction risks.	**(6)** No changes or additional measures are required. The consideration and selection of controls for interactions with third-party vessels are addressed in Section 6.8.1 of the EP.
(7) Recommended Woodside consults with Kimberley Ports.	**(7)** Woodside accepts AMSA – Navigation Safety's advice that Woodside provide consultation material to Kimberly Ports.	**(7)** Woodside confirmed that Kimberley Ports had been consulted for the purposes of this EP, in line with AMSA – Navigation Safety's guidance.	**(7)** No changes or additional measures are required. Woodside provided consultation information to Kimberley Ports, as evidenced in Table 2 of Appendix F in this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(8) Requested Woodside notify AHO no less than four weeks before operations commence.	**(8)** Woodside commits to notify AHO no less than four weeks prior to the commencement of the first activity under the EP, and then subsequently when vessels are undertaking activities within the Operational Area for more than three weeks at a time.	**(8)** Woodside confirmed that it would notify AHO no less than four weeks prior to the commencement of the first activity under the EP, and then subsequently when vessels are undertaking activities within the Operational Area for more than three weeks at a time	**(8)** No changes or additional measures are required as a notification to AHO has been included in the EP as standard, as referenced as PS 1.3 and 1.4 and set out in Section 7.10.
(9) Requested Woodside notify AMSA's Joint Rescue Coordination Centre (JRCC) 72-96 hours before operations commence.	**(9)** Woodside acknowledges that notification to AMSA is appropriate but considers that a 24-48 hour notification timeframe is proportionate to the short-duration and localised nature of the proposed activities. Potential interactions are limited to the immediate vicinity of the survey vessel, with geophysical vessels retaining sufficient manoeuvrability to avoid conflicting vessel paths under standard navigation rules and stationary geotechnical drilling operations expected to have minimal impact on other marine operations.	**(9)** Woodside confirmed that, where operationally practicable, AMSA's JRCC would be notified at least 24-48 hours before the relevant activities commence for promulgation of radio-navigation warnings. Woodside further noted the vessel, satellite communications, Operational Area, requested-clearance and activity timing information required by AMSA.	**(9)** No changes or additional measures are required. Control C 1.4 requires AMSA's JRCC to be notified 24-48 hours before activities commence.
(10) Reminded Woodside that project vessels should exhibit lights and shapes appropriate to the nature of their operations, comply with the International Regulations for Preventing Collisions at Sea and correctly set their navigational status in AIS.	**(10)** Woodside acknowledges that compliance with applicable collision-prevention and navigational safety requirements is necessary to manage potential interactions with other marine users.	**(10)** Woodside noted AMSA's advice and confirmed that compliance with the International Regulations for Preventing Collisions at Sea and the Navigation Act 2012 is mandated aboard Woodside-chartered vessels, including requirements for appropriate lights and shapes and correct AIS navigational status.	**(10)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the EP relates, as required under Regulation 24.	may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	Controls addressing light emissions and compliance with the international rule for preventing collisions at sea are set out in Section 6 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA – Navigation Safety for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA – Navigation Safety sufficient information to allow AMSA – Navigation Safety to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AMSA – Navigation Safety on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided AMSA – Navigation Safety with information tailored to AMSA – Navigation Safety by providing a vessel density map in relation to the activity.
- On 3 June 2026, AMSA – Navigation Safety shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AHO to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to AMSA – Navigation Safety in response to AMSA – Navigation Safety's feedback (Woodside's email of 26 August 2026).

Reasonable Period

Woodside allowed AMSA – Navigation Safety a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to AMSA – Navigation Safety advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA – Navigation Safety 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed AMSA – Navigation Safety a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA – Navigation Safety is appropriate and adapted to the nature of interests of AMSA – Navigation Safety:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AMSA – Navigation Safety provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from AMSA – Navigation Safety.
  - Made no changes or inclusions to the EP as a result of consultation with AMSA – Navigation Safety because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.7 Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DAFF – Fisheries advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries in Section 4.10.1 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF – Fisheries for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF – Fisheries sufficient information to allow DAFF – Fisheries to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DAFF – Fisheries on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DAFF – Fisheries a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DAFF – Fisheries advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF – Fisheries 30 days for consultation.
- Consultation for this EP commenced 5 months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed DAFF – Fisheries a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF – Fisheries is appropriate and adapted to the nature of interests of DAFF – Fisheries:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding DAFF – Fisheries of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF – Fisheries did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF – Fisheries' functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.8 Department of Foreign Affairs and Trade (DFAT)

Summary of information provided and record of consultation for this EP:

- On 19 June 2026, Woodside emailed DFAT, on the recommendation of AFMA, to seek advice on the Traditional Indonesian fishing Memorandum of Understanding Box near Scott Reef and advising of the proposed activity (Record of Consultation, reference 6.1.42), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 13 July 2026, DFAT responded to Woodside (SI Report A, reference 4.1). DFAT raised items **(1)** and **(2)**.
- On 14 July 2026, Woodside thanked DFAT for its response (SI Report A, reference 4.2). Woodside responded to items **(1)** and **(2)**.
- On 15 July 2026, DFAT thanked Woodside for the reply and confirmed it had consulted with colleagues in Jakarta and the extension will be sufficient (SI Report A, reference 4.3).
- On 21 July 2026, DFAT emailed Woodside (SI Report A, reference 4.4). DFAT raised item **(3)**.
- On 23 July 2026, Woodside responded to DFAT and provided a map detailing the EMBA in relation to the border(s) between Australia and Indonesia's Exclusive Economic Zone (EEZ) (SI Report A, reference 4.5). Woodside responded to item **(3)**.
- On 24 July 2026, DFAT thanked Woodside for providing the advice and confirmed that information had been conveyed to DFAT colleagues in Jakarta (SI Report A, reference 4.6).
- On 11 August 2026, Woodside emailed DFAT a reminder regarding feedback on this EP (SI Report A, reference 4.7).
- On 11 August 2026, DFAT emailed Woodside and raised item **(4)** (SI Report A, reference 4.8).
- On 11 August 2026, Woodside thanked DFAT for its assistance navigating international consultation and responded to item **(4)** (SI Report A, reference 4.8).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Requested an extension to facilitate engagement with DFAT representatives in Jakarta.	**(1)** Woodside understands DFAT and counterparts in Indonesia require additional time to provide feedback.	**(1)** Woodside noted DFAT's request and granted an extension to the consultation period.	**(1)** No changes or additional measures are required.
(2) Requested that Woodside include a specific email address in future consultation with DFAT regarding Indonesia.	**(2)** Woodside acknowledges DFAT's advice and will include the specified email address in future consultation where relevant.	**(2)** Woodside confirmed that moving forward it would include the email in consultation with DFAT regarding Indonesia.	**(2)** No changes or additional measures are required.
(3)	**(3)**	**(3)**	**(3)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Requested confirmation as to whether the EMBA extends beyond Australia's Exclusive Economic Zone.	Woodside has assessed that the EMBA for this EP extends beyond Australia's Exclusive Economic Zone.	Woodside noted that the delineation of the Australia-Indonesia EEZ boundary is complex, as the relevant bilateral treaty has not yet entered into force despite being used operationally for boundary depiction (by Geoscience Australia). Woodside confirmed the EMBA for this EP extends beyond Australia's Exclusive Economic Zone.	No changes or additional measures are required.
(4) DFAT's Indonesian team confirmed they had no feedback and advised other branches of DFAT had received the information.	**(4)** Woodside understands DFAT's Indonesia team has no feedback.	**(4)** Woodside noted that DFAT's Indonesia team had no feedback.	**(4)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside will notify DFAT in the event of an unplanned incident as described in the First Strike Plan (Appendix H) of this EP.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DFAT for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given DFAT sufficient information to allow DFAT to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DFAT on 19 June 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 13 July 2026, DFAT shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DFAT to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DFAT in response to DFAT's feedback (Woodside's email of 23 July 2026).

Reasonable Period

Woodside allowed DFAT a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DFAT advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DFAT 30 days for consultation.
- Consultation for this EP commenced 3 months ago.
- In this context, Woodside allowed DFAT a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DFAT is appropriate and adapted to the nature of interests of DFAT:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DFAT provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from DFAT.
  - Made no changes or inclusions to the EP as a result of consultation with DFAT because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.9 Department of Defence (DoD)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DoD advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community',* and a defence zones map.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has recorded the defence areas overlapping the EMBA in Section 4.10.9 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DoD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DoD sufficient information to allow DoD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DoD on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DoD with information tailored to DoD by providing a defence zones map in relation to the activity.

Reasonable Period

Woodside allowed DoD a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DoD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DoD 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed DoD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DoD is appropriate and adapted to the nature of interests of DoD:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding DoD of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DoD did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DoD's functions, interests or activities.

4.1.10 Department of Planning, Lands and Heritage (DPLH)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DPLH advising of the proposed activity (Record of Consultation, reference 6.1.20), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community',* and shipwrecks data.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. The EP demonstrates that there are no known underwater heritage sites or shipwrecks within the Operational Area and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Sections 4.9.8 and 6.11 of the EP). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.9 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPLH for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPLH sufficient information to allow DPLH to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DPLH on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DPLH with information tailored to DPLH by providing shipwreck data in relation to the activity.

Reasonable Period

Woodside allowed DPLH a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DPLH advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPLH 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed DPLH a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPLH is appropriate and adapted to the nature of interests of DPLH:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding DPLH of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DPLH did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DPLH's functions, interests or activities.

4.1.11 Department of Primary Industries and Regional Development (DPIRD)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DPIRD advising of the proposed activity (Record of Consultation, reference 6.1.15), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has assessed the potential for interaction with State managed fisheries issues in Section 4.10.1 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPIRD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPIRD sufficient information to allow DPIRD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DPIRD on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DPIRD a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DPIRD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPIRD 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed DPIRD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPIRD is appropriate and adapted to the nature of interests of DPIRD:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding DPIRD of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DPIRD did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DPIRD's functions, interests or activities.

4.1.12 Department of Transport and Major Infrastructure (DTMI)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DTMI advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 15 May 2026, DTMI thanked Woodside for the opportunity to provide feedback (SI Report A, reference 5.1). DTMI noted item **(1)**.
- On 15 May 2026, Woodside thanked DTMI for its response (SI Report A, reference 5.2). Woodside responded to item **(1)**.
- On 3 July 2026, Woodside sent DTMI the Oil Pollution First Strike Plan for this EP for DTMI's review and comment (SI Report A, reference 5.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1)	**(1)**	**(1)**	**(1)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

DTMI advised its maritime environmental team had no feedback at this time.	Woodside accepts that DTMI has no feedback at this time.	Woodside noted that DTMI has no feedback.	No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside will consult DTMI if there is a spill impacting State waters from the proposed activity, as referenced in the Oil Pollution First Strike Plan (Appendix H).

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DTMI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DTMI sufficient information to allow DTMI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DTMI on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 29 April 2026, DTMI shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DTMI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed DTMI a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to DTMI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DTMI 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed DTMI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DTMI is appropriate and adapted to the nature of interests of DTMI:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In addition, on 3 July 2026, Woodside provided DTMI with a copy of the Oil Pollution First Strike Plan, giving DTMI further opportunities to provide feedback on the activity.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DTMI provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from DTMI.
  - Made no changes or inclusions to the EP as a result of consultation with DTMI because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.13 Western Australian Museum (WAM)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed WAM advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community',* and shipwreck data.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. The Environment Plan demonstrates that there are no known underwater heritage sites or shipwrecks within the Operational Area and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Sections 4.9.8 and 6.8 of the EP). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.9 of the EP. As part of ongoing consultation engagements as set out in Table 7-6 of the EP, Woodside will notify WAM of any unexpected finds of potential Underwater Cultural Heritage under the Unexpected Finds Procedure (as described in Section 7.2.3 of the EP).
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WAM for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given WAM sufficient information to allow WAM to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WAM on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided WAM with information tailored to WAM by providing shipwreck data in relation to the activity.

Reasonable Period

Woodside allowed WAM a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to WAM advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAM 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed WAM a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAM is appropriate and adapted to the nature of interests of WAM:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding WAM of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WAM did not provide feedback for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WAM's functions, interests or activities.

4.2 Commonwealth and WA State Government departments or agencies – environment

4.2.1 Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DAFF – Biosecurity advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 7.2.2 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF – Biosecurity for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given DAFF – Biosecurity sufficient information to allow DAFF – Biosecurity to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DAFF – Biosecurity on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. – A timeframe for consultation and the provision of feedback. – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.* – Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). **Reasonable Period** Woodside allowed DAFF – Biosecurity a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence to DAFF – Biosecurity advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF – Biosecurity 30 days for consultation. • Consultation for this EP commenced 5 months ago. • In this context, Woodside allowed DAFF – Biosecurity a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF – Biosecurity is appropriate and adapted to the nature of interests of DAFF – Biosecurity: • Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding DAFF – Biosecurity of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF – Biosecurity did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF – Biosecurity's functions, interests or activities.

4.2.2 Department of Biodiversity, Conservation and Attractions (DBCA)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DBCA advising of the proposed activity (Record of Consultation, reference 6.1.23), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 27 May 2026, DBCA thanked Woodside for the information provided (SI Report A, reference 6.1). DBCA raised items **(1)** – **(4)**.
- On 9 July 2026, Woodside thanked DBCA for their response (SI Report A, reference 6.2). Woodside responded to items **(1)** – **(4)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Recommended GPGT surveys are conducted as far as practicable outside important breeding and migration periods for threatened species such as but not limited to green turtles and pygmy blue whales.	**(1)** Woodside has considered the potential presence of marine fauna in the area of the proposed activities and has adopted a risk-based approach to temporal management. As well as standard marine fauna management measures, Woodside will limit activities with potential acoustic impacts within pygmy blue whale foraging BIA when pygmy blue whales are likely to be foraging.	**(1)** Woodside advised the EP had adopted a risk-based approach to temporal management which recognised seasonal patterns of species, applied mitigation measures where fauna might be present, and maintained flexibility for safe and practicable execution of survey activities. In addition to standard marine fauna management measures, Woodside advised it would also limit activities with potential acoustic impacts where possible within the pygmy blue whale	**(1)** No changes or additional measures are required. Controls for underwater noise impacts to marine fauna are addressed in Section 6.8.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		possible foraging BIA during certain times of the year when pygmy blue whales were likely to be foraging including an avoidance period to be applied to geotechnical drilling activities.	
(2) Recommended a risk assessment to determine the likelihood and consequence of potential impacts on marine fauna, accounting for the nature, scale and biological significance of underwater noise generated by the activity. Management of operations should be commensurate with risk level of activities.	**(2)** Woodside has prepared the EP on a risk-based basis. The EP identifies relevant marine fauna receptors that may occur within the project area; assesses credible impact pathways including underwater noise, and evaluates likelihood and consequence of impacts based on nature and scale of the proposed survey activities. Management measures are commensurate with assessed level of risk and to demonstrate that impacts and risks are reduced to ALARP and are of an acceptable level.	**(2)** Woodside advised it agreed survey activities should be informed by a risk assessment that considered the likelihood and consequence of potential impacts to marine fauna, taking into account the nature, scale and biological significance of noise generated, consistent with the EP acceptance criteria under regulation 34 of the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth).* The EP has been prepared on this risk-based basis identifying relevant marine fauna receptors that may occur, assessing credible impact pathways including underwater noise, and evaluating likelihood and consequence of impacts based on nature and scale of the proposed survey activities. Management measures demonstrate impacts and risks are reduced to ALARP and are of an acceptable level.	**(2)** No changes or additional measures are required. Controls for underwater noise impacts to marine fauna are addressed in Section 6.8.3 of the EP.
(3) Best practice management of any significant underwater noise with potential to impact marine fauna should include: • Underwater noise modelling	**(3)** Woodside accepts DBCA's comments regarding best practice underwater noise management and agrees it should be commensurate with potential risk to marine fauna.	**(3)** Woodside noted DMBA's comments regarding best practice underwater noise management and agreed management of underwater noise should be commensurate with potential risk to marine fauna and a structured approach to identifying observation zones and	**(3)** No changes or additional measures are required. Controls for underwater noise impacts to marine fauna are addressed in Sections 6.8.3 and 6.9.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Management zones - where pre start-up visual observation and acoustic monitoring to detect fauna beneath the surface should be standard practice • Marine Fauna Observers (MFOs). Pointed to further information on best practice underwater noise management in EPBC Act Policy Statement 2.1. noting the information was specific to interactions between seismic activities and whales and additional information for other marine fauna was likely required.	Underwater acoustic modelling has been undertaken for this EP. The EP includes the use of MFOs. Additional monitoring technologies, such as passive acoustic monitoring, are typically applied to higher-intensity or large-scale sound sources and are not considered necessary for the proposed activities. If dynamic positioning thrusters were used, a 30-minute pre-start observation period would be applied out to 3.4 km. Woodside notes DBCA's reference to EPBC Act Policy Statement 2.1. however this is not applicable to GPGT survey activities given the different nature and significantly lower intensity of the proposed sound sources as compared to seismic activities.	implementing mitigation measures was appropriate. Woodside advised underwater acoustic modelling had been undertaken to inform the EP, acoustic characteristics of survey equipment were well understood, and that the dominant noise source for the activities were the vessels. The EP included the use of trained crew members to identify and manage interactions with marine fauna and a qualified MFO would be on board for geotechnical drilling activities. Passive acoustic monitoring however was not necessary for the proposed activities. Woodside noted if dynamic positioning thrusters were to be used, a 30-minute pre-start observation period would apply out to 3.4 km, the distance to behavioural response threshold as determined by acoustic modelling. Woodside further noted the reference to EPBC Act Policy Statement 2.1. was specific to seismic activities and was not required to be applied to GPGT activities.	
(4) Recommended acoustic monitoring for operations at night and vessel lighting at night is designed to align with the standards of the National Light Pollution Guidelines for Wildlife (DCCEEW 2023). Regarding BIAs considered in the EP for pygmy blue whales, whale sharks and marine turtles, Recommended that if surveys occur during the northern migration route for pygmy blue whales,	**(4)** Woodside has assessed and managed risks related to operations undertaken at night in the EP and does not agree that acoustic monitoring (e.g. Passive Acoustic Monitoring (PAM) is necessary for night-time operations. Pre-start observations will be completed using a night vision device. The EP has adopted a risk-based approach to light management and will	**(4)** Woodside acknowledged the challenge of detecting marine fauna during night-time operations however advised the EP appropriately assesses and manages these risks. Woodside stated it did not agree acoustic monitoring was necessary and measures in the EP were appropriate. Pre-start observations would be completed using a night vision device.	**(4)** No changes or additional measures are required. Controls for light emission are addressed in Section 6.8.4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

an appropriate shut-down zone is applied. Given remoteness of survey areas, providing relevant information to State, Northern Territory, and Commonwealth agencies, such as underwater video, photographs, or bathymetry, would enhance understanding of the area's biology and ecology. Acknowledged the Browse to NWS proposal is currently under assessment and DBCA will be provided input through the EP process.	consider relevant guidance, including the National Light Pollution Guidelines for Wildlife, where practicable. Woodside considers the EP appropriately considers BIAs and the potential presence of sensitive species, including pygmy blue whales. It is also undertaking ongoing acoustic and ecological monitoring at Scott Reef, to improve understanding of pygmy blue whale distribution, migration patterns and foraging behaviour. Woodside acknowledges the DBCA's email address for future notifications.	Woodside noted it adopted a risk-based approach to light management, including control measures to minimise unnecessary light emissions and would consider relevant guidance, including the National Light Pollution Guidelines for Wildlife, where practicable. Woodside noted the EP appropriately considered BIAs and the potential presence of sensitive species, including pygmy blue whales, and that it was undertaking ongoing acoustic and ecological monitoring at Scott Reef to improve understanding of pygmy blue whale distribution, migration patterns and foraging behaviour. Woodside further noted the recommendation regarding a shut-down zone for pygmy blue whales during migration periods and considered the existing EP controls and management measures to be appropriate. Woodside confirmed it would continue to use DBCA's specified address for future notifications.	
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside will consult DTMI if there is a spill impacting State waters from the proposed activity, as referenced in the Oil Pollution First Strike Plan (Appendix H).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DBCA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DBCA sufficient information to allow DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DBCA on 29 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 29 April 2026, DBCA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DBCA in response to DBCA's feedback (Woodside's email of 9 July 2026).

Reasonable Period

Woodside allowed DBCA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DBCA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DBCA 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed DBCA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DBCA is appropriate and adapted to the nature of interests of DBCA:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DBCA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from DBCA.
  - Made no changes or inclusions to the EP as a result of consultation with DBCA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2.3 Department of Climate Change, Energy, the Environment and Water (DCCEEW)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DCCEEW advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community',* and shipwreck data.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. The Environment Plan demonstrates that there are no known underwater heritage sites or shipwrecks within the Operational Area and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Sections 4.10.4 and 6.6 of the EP). While impacts to underwater

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

			heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DCCEEW for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DCCEEW sufficient information to allow DCCEEW to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DCCEEW on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DCCEEW with information tailored to DCCEEW by providing shipwreck data in relation to the activity.

Reasonable Period

Woodside allowed DCCEEW a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DCCEEW advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DCCEEW 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed DCCEEW a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DCCEEW is appropriate and adapted to the nature of interests of DCCEEW:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding DCCEEW of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DCCEEW did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DCCEEW functions, interests or activities.

4.2.4 Director of National Parks (DNP)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DNP advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 27 May 2026, DNP thanked Woodside for the opportunity to comment (SI Report A, reference 7.1). DNP raised items **(1)** - **(5)**.
- On 9 July 2026, Woodside thnked DNP for the feedback (SI Report A, reference 7.2). Woodside responded to items **(1)** - **(5)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Confirmed that the planned activities do not overlap any Australian Marine Parks, but the EMBA overlaps Ashmore Reef Marine Park Sanctuary Zone, there are	**(1)** Woodside notes DNP's advice is consistent with Woodside's assessment of the activity and EMBA.	**(1)** Woodside acknowledged DNP's advice regarding overlap with marine parks and noted there were no authorisation requirements from the DNP	**(1)** No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

no authorisation requirements from the DNP.			A list of protected places in relation to the activity is set out in Section 4.8 of the EP.
(2) Advises that activities within the Operational Areas, including vessel manoeuvring, equipment deployment and recovery, maintenance, crew changes and resupply, should be included in the EP, noting that any such activity occurring within an Australian Marine Park without the required authorisation or inclusion in an accepted EP may be inconsistent with EPBC Act requirements and relevant marine park management plans.	**(2)** Woodside acknowledges DNP's clarification regarding the scope of operational activities and will not undertake activities within an Australian Marine Park that require authorisation from DNP, unless the relevant authorisation has been obtained.	**(2)** Woodside noted DNP's clarification regarding the scope of Operational Area activities. Woodside confirmed that it would not undertake activities within an Australian Marine Park that require authorisation from DNP, unless the relevant authorisation has been obtained.	**(2)** No additional controls or measures are required.
(3) Noted that the *North-west Marine Parks Network Management Plan 2018* provides additional information on the natural, cultural, heritage and socio-economic values of the Ashmore Reef and Kimberley Australian Marine Parks, and advises that spatial information on these values is available through the Australian Marine Spatial Information System.	**(3)** Woodside has considered the *North-west Marine Parks Network Management Plan 2018* during development of the EP and is aware that spatial information on marine parks' values is located on the Australian Marine Spatial Information System.	**(3)** Woodside confirmed that it has referred to the *North-west Marine Parks Network Management Plan 2018* during development of the EP and notes that information on Australian Marine Park values, including spatial information is available through the Australian Marine Spatial Information System.	**(3)** No additional controls or measures are required. A list of protected places in relation to the activity is set out in Section 4.8 of the EP.
(4) No further notifications are required unless details regarding the activity change and result in an overlap with or new impact to a marine park.	**(4)** Woodside acknowledges that DNP do not require further notifications unless details regarding the activity change and result in a new impact to a marine park.	**(4)** Woodside noted that DNP does not require further notifications but confirmed that it will notify DNP if details regarding the activity change and result in a new impact to a marine park.	**(4)** No additional controls or measures are required.
(5)	**(5)**	**(5)**	**(5)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Requested to be notified as soon as possible of any oil or gas pollution incidents affecting or likely to affect a marine park, outlined the information it required from the notification, and noted DNP might request regular situation reports depending on the severity of an incident.	Woodside acknowledges DNP's expectations and in the highly unlikely event of a hydrocarbon release, Woodside will notify DNP as soon as practicable via the 24-hour Marine Compliance Officer if the incident occurs within a marine park or is likely to impact a marine park.	Woodside advised that for emergency responses, it would notify the 24-hour Marine Compliance Duty Officer based on the information requirements requested. Woodside also noted that DNP may request situational reports based on the scale and severity of the incident.	As set out in the Oil Pollution First Strike Plan (Appendix H), Woodside will notify DNP as soon as practicable where an incident occurs in, or is like to impact on, a marine park.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. The EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values (including ecosystem values) to an ALARP and acceptable level and that the activity is not inconsistent with the management plan (see Section 6.8 of the EP).

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DNP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DNP sufficient information to allow DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DNP on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 27 May 2026, DNP shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed DNP a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DNP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DNP 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed DNP a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DNP is appropriate and adapted to the nature of interests of DNP:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DNP provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from DNP.
  - Made no changes or inclusions to the EP as a result of consultation with DNP because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.3 Commonwealth and WA State Government departments or agencies – industry

4.3.1 Department of Mines, Petroleum and Exploration (DMPE)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DMPE advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DMPE for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DMPE sufficient information to allow DMPE to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DMPE on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DMPE a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DMPE advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's methodology allows a 30-day consultation period and Woodside allowed DMPE 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed DMPE a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DMPE is appropriate and adapted to the nature of interests of DMPE:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding DMPE of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DMPE did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DMPE functions, interests or activities.

4.3.2 Department of Industry, Science and Resources (DISR)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DISR advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DISR for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DISR sufficient information to allow DISR to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to DISR on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DISR a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to DISR advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DISR 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed DISR a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DISR is appropriate and adapted to the nature of interests of DISR:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding DISR of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DISR did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DISR functions, interests or activities.

4.4 Commonwealth commercial fisheries and peak representative bodies

4.4.1 Australian Southern Bluefin Tuna Industry Association (ASBTIA)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed ASBTIA advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.10.1 of the EP.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ASBTIA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given ASBTIA sufficient information to allow ASBTIA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to ASBTIA on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ASBTIA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to ASBTIA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ASBTIA 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed ASBTIA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ASBTIA is appropriate and adapted to the nature of interests of ASBTIA:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding ASBTIA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ASBTIA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on ASBTIA functions, interests or activities.

4.4.2 Commonwealth Fisheries Association (CFA)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed CFA advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.10.1 of the EP. Woodside will notify CFA as referenced as PS 1.5 in Section 6.8.1 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CFA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CFA sufficient information to allow CFA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to CFA on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CFA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to CFA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CFA 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed CFA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CFA is appropriate and adapted to the nature of interests of CFA:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding CFA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CFA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CFA functions, interests or activities.

4.4.3 North West Slope Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed North West Slope Trawl Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.10.1 of the EP. Woodside will notify North West Slope Trawl Fishery licence holders as referenced as PS 1.5 in Section 6.8.1 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given licence holders sufficient information to allow licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to licence holders on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed licence holders a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed licence holders 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with licence holders is appropriate and adapted to the nature of interests of licence holders:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding licence holders of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on licence holders functions, interests or activities.

4.4.4 Tuna Australia

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Tuna Australia advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.10.1 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Tuna Australia for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Tuna Australia sufficient information to allow Tuna Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Tuna Australia on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Tuna Australia a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Tuna Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Tuna Australia 30 days for consultation.
- Consultation for this EP commenced 5 months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed Tuna Australia a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Tuna Australia is appropriate and adapted to the nature of interests of Tuna Australia:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding Tuna Australia of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Tuna Australia did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Tuna Australia functions, interests or activities.

4.5 State commercial fisheries and peak representative bodies

4.5.1 Western Australian Fishing Industry Council (WAFIC)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed WAFIC advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 29 April 2026, WAFIC emailed the Marine Aquarium Managed Fishery and Northern Demersal Scalefish Fishery license holders, on behalf of Woodside, advising of the proposed activity (Record of Consultation, reference 6.1.22), provided a Consultation Information Sheet and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 June 2026, Woodside emailed WAFIC to confirm whether the update had been sent to fisheries pertaining to this EP (and other related Browse EPs) and requested feedback by 17 June 2026 (SI Report A, reference 8.1).
- On 25 June 2026, Woodside emailed WAFIC to confirm whether WAFIC or fishery licence holders associated with this EP (and other related Browse EPs) had feedback on this EP (and other related Browse EPs) (SI Report A, reference 8.2). No response was received.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has assessed the potential for interaction with State managed commercial fisheries in Section 4.10.1 of the EP. Woodside has updated its assessment of relevancy for consultation purposes (see Appendix F, Table 1) to reflect WAFIC's advice and consultation guidelines.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WAFIC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WAFIC sufficient information to allow WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WAFIC on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WAFIC a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to WAFIC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAFIC 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed WAFIC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAFIC is appropriate and adapted to the nature of interests of WAFIC:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding WAFIC of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WAFIC did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WAFIC functions, interests or activities.

4.5.2 Marine Aquarium Managed Fishery and Northern Demersal Scalefish Fishery

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, WAFIC, on behalf of Woodside, emailed Marine Aquarium Managed Fishery and Northern Demersal Scalefish Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- As per advice from WAFIC regarding its consultation guidelines, no follow-up email was required for licence holders.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required. Woodside has assessed the potential for interaction with State managed commercial fisheries in Section 4.10.1 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given licence holders sufficient information to allow licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to licence holders on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed licence holders a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed licence holders 30 days for consultation.
- Consultation for this EP commenced 5 months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with licence holders is appropriate and adapted to the nature of interests of licence holders:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on licence holders functions, interests or activities.

4.6 Recreational marine users and peak representative bodies

4.6.1 Marine Tourism WA

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Marine Tourism WA advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be	No changes or additional measures are required.

		assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Marine Tourism WA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Marine Tourism WA sufficient information to allow Marine Tourism WA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Marine Tourism WA on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Marine Tourism WA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Marine Tourism WA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Marine Tourism WA 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed Marine Tourism WA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Marine Tourism WA is appropriate and adapted to the nature of interests of Marine Tourism WA:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding Marine Tourism WA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Marine Tourism WA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Marine Tourism WA functions, interests or activities.

4.6.2 Pilbara/Kimberley Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed or sent a letter to the Pilbara/Kimberley Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 6.1.16 and 6.1.17) and provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 19 May 2026, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, reference 6.2.1 and 6.2.3).
- On 25 May 2026, an individual Pilbara/Kimberley Recreational Marine User (Pearl Expeditions) emailed Woodside providing feedback (refer to Section 4.6.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Pilbara/Kimberley Recreational Marine Users for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara/Kimberley Recreational Marine Users sufficient information to allow Pilbara/Kimberley Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Pilbara/Kimberley Recreational Marine Users on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Pilbara/Kimberley Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara/Kimberley Recreational Marine Users 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara/Kimberley Recreational Marine Users is appropriate and adapted to the nature of interests of Pilbara/Kimberley Recreational Marine Users:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding Pilbara/Kimberley Recreational Marine Users of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara/Kimberley Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara/Kimberley Recreational Marine Users functions, interests or activities.

4.6.3 Individual Pilbara/Kimberley Recreational Marine User – Pearl Expeditions Pty Ltd (Pearl Expeditions)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside sent a letter to Pearl Expeditions advising of the proposed activity (Record of Consultation, reference 6.1.15) and provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 19 May 2026, as no response had been received, Woodside proactively sent a follow-up letter (Record of Consultation, reference 6.2.3).
- On 25 May 2026, Pearl Expeditions emailed Woodside (SI Report A, reference 10.1). Pearl Expeditions raised items **(1)** – **(20)**.
- On 30 July 2026, Woodside emailed Pearl Expeditions (SI Report A, reference 10.2). Woodside responded to items **(1)** – **(20)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Outlined Pearl Expeditions' role and operational experience in marine expedition tourism and stated that its submission focuses on the adequacy of proposed mitigation measures for potential impacts to listed marine fauna, particularly pygmy blue whales and green turtles.	**(1)** Woodside acknowledges Pearl Expeditions' role, purpose and stated operational experience, and notes that its submission focuses on the adequacy of mitigation measures for potential impacts to listed marine fauna, particularly pygmy blue whales and green turtles.	**(1)** Woodside noted Pearl Expeditions' description of its role and purpose and acknowledged that its submission focuses on the adequacy of mitigation measures within the three GPGT survey EPs for potential impacts to listed marine fauna, particularly pygmy blue whales and green turtles.	**(1)** No changes or additional measures are required.
(2)	**(2)**	**(2)**	**(2)**

Stated that the broader regulatory and scientific context of the Browse to NWS Project, including recent research concerning pygmy blue whale behaviour and habitat use, is relevant to assessment of the proposed GPGT survey activities. Pearl Expeditions considered that potential acoustic impacts in the vicinity of Scott Reef require assessment and mitigation commensurate with the sensitivity of listed marine fauna and the receiving environment.	Woodside acknowledges Pearl Expeditions' comments regarding the broader regulatory and scientific context of the Browse to NWS Project. Woodside considers that the EP assesses impacts and risks on an activity-specific basis appropriate to the nature and scale of the proposed GPGT survey activities, including relevant sound-source characteristics, activity duration and marine fauna exposure pathways. Woodside considers that relevant receptors and impact pathways are identified and assessed using established regulatory datasets and accepted guidance frameworks, with mitigation measures commensurate with the assessed risk. Matters relating to the broader Browse to NWS Project are outside the scope of this EP and are subject to separate approvals processes.	Woodside advised that the EP assesses impacts and risks on an activity-specific basis, taking into account relevant sound-source characteristics, activity duration and marine fauna exposure pathways. Woodside noted that the EP identifies relevant receptors, including listed cetaceans and marine turtles, assessed underwater noise and other potential impact pathways, and include mitigation measures commensurate with the assessed risk. Woodside further advised that the EP uses established regulatory datasets and accepted guidance frameworks, including biologically important areas and relevant Commonwealth guidance. Woodside clarified that matters relating to the broader Browse to NWS Project and its assessment under separate legislation are outside the scope of the EP.	No changes or additional measures are required. Potential impacts and risks are assessed in Section 6, including routine acoustic emissions in Section 6.8.3 of the EP.
(3) Cited scientific literature concerning pygmy blue whale migration, acoustic presence, habitat suitability and foraging behaviour in the Browse Basin. Pearl Expeditions considered that this evidence supports Scott Reef being treated as a functionally important foraging area and that its current classification as a possible foraging BIA may not provide an appropriate basis for assessment and mitigation.	**(3)** Woodside acknowledges that the Browse Basin forms part of a recognised migration pathway for the South-east Indian Ocean pygmy blue whale population. Woodside considers that the EP appropriately identifies pygmy blue whales as a key receptor and assesses potential impacts to migration and foraging behaviour using established regulatory datasets and accepted spatial frameworks. Assessment and mitigation measures are based on the potential	**(3)** Woodside acknowledged that the Browse Basin forms part of a recognised migration pathway for the South-east Indian Ocean pygmy blue whale population and advised that the EP identifies pygmy blue whales as a key receptor and considers both migration and potential foraging behaviour. Woodside noted that the EP uses BIAs and other Commonwealth datasets to identify areas of known or potential biological significance and adopts Scott	**(3)** No changes or additional measures are required. Pygmy blue whales and relevant BIAs are described in Section 4.6 of the EP. Potential impacts from routine acoustic emissions are assessed in Section 6.8.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	presence of pygmy blue whales and are not limited to areas classified as known habitat. Matters relating to formal BIA classification updates are outside the scope of this EP.	Reef's current classification as a possible foraging BIA. Woodside further advised that assessment and mitigation measures are applied based on the potential presence of pygmy blue whales and are not limited to areas classified as known habitat. Woodside clarified that formal updates to BIA classifications are administered by the Commonwealth and are outside the scope of the EP.	
(4) Stated concern that simultaneous use of multiple acoustic sources may contribute to cumulative underwater noise and behavioural disturbance of pygmy blue whales. Pearl Expeditions considered that the proposed 500 m zone may not prevent behavioural disturbance and requested equipment-specific acoustic modelling to define potential behavioural disturbance and injury zones.	**(4)** Woodside acknowledges that the proposed GPGT survey activities may use multiple acoustic sources but considers that vessel noise is the dominant source, with equipment-related emissions contributing a smaller and more localised component to the overall sound field. Woodside considers that equipment-specific modelling is not required because the acoustic characteristics and potential effects of the proposed equipment are well understood, the survey does not involve high-intensity seismic airguns, and potential effects are expected to be primarily limited to localised and temporary behavioural disturbance. Woodside considers that the activity-specific controls are proportionate to the assessed risks and sensitivity of the receiving environment.	**(4)** Woodside advised that vessel noise is the dominant source associated with the proposed activities, while geophysical equipment contributes a comparatively smaller and more localised component to the overall sound field. Woodside noted that the survey does not include high-intensity impulsive sources such as seismic airguns and that potential equipment-related effects are expected to be primarily limited to localised and temporary behavioural disturbance, with auditory effects expected over small and localised ranges. Woodside advised that equipment-specific or more complex acoustic modelling is not considered necessary for the proposed activity. Woodside further advised that relevant controls include compliance with applicable marine fauna interaction requirements. Where possible, activities with potential acoustic impacts will be	**(4)** No changes or additional measures are required. Pygmy blue whales and relevant BIAs are described in Section 4.6 of the EP. Potential impacts from routine acoustic emissions are assessed in Section 6.8.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		limited within the pygmy blue whale possible foraging BIA during periods when pygmy blue whales are likely to be foraging. Where noise may ensonify the possible foraging BIA, pre-start visual observations will be undertaken before starting vessel dynamic positioning and noise-emitting geophysical survey equipment, with start-up delayed if a whale is observed within the applicable observation zone. Where noise may ensonify the possible foraging BIA, a shutdown zone will also apply to sub-bottom profiler activities.	
(5) Stated that pre-start visual observations may not reliably detect pygmy blue whales foraging at depth or during darkness, poor visibility or adverse sea conditions. Pearl Expeditions also considered that the qualified timing restrictions are insufficiently binding and requested independent verification, third-party oversight or alternative detection technologies.	**(5)** Woodside acknowledges that visual detection probability varies with environmental conditions and that pygmy blue whales may remain submerged for extended periods. Woodside considers that these limitations do not render the proposed mitigation measures inadequate for the nature and risk profile of the GPGT survey activities. Woodside considers that pre-start observations and other operational controls, where relevant, appropriately manage credible close-range interaction and temporary behavioural disturbance risks. Woodside does not consider that independent verification, third-party oversight or alternative detection technologies are necessary to demonstrate that impacts and risks will	**(5)** Woodside acknowledged the inherent limitations of visual monitoring where pygmy blue whales are submerged, visibility is reduced or activities occur at night. Woodside advised that visual observations remain an established mitigation measure and are applied with other operational controls where relevant to the credible impact pathways associated with the proposed activities. Where pre-start observations are undertaken at night, a night vision device will be used. Woodside further advised that the phrase “where practicable” reflects a practicability-based assessment under which feasible limitations on survey activities have been evaluated and either adopted or justifiably not adopted, rather than making the mitigation framework discretionary.	**(5)** No changes or additional measures are required. Pygmy blue whales and relevant BIAs are described in Section 4.6 of the EP. Potential impacts from routine acoustic emissions are assessed in Section 6.8.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	be reduced to ALARP and acceptable levels.	Woodside advised that independent verification of whale absence, third-party oversight and alternative detection technologies beyond those proposed in the EP are not considered necessary to demonstrate that impacts and risks will be reduced to ALARP and acceptable levels.	
(6) Stated that the combined cumulative acoustic exposure from the EP over the five-year period has not been assessed or modelled, and considered this a gap in the assessment of potential long-term impacts to listed marine fauna.	**(6)** Woodside does not agree that a separate cumulative acoustic impact assessment across the full five-year survey program is required. Woodside considers that cumulative impacts are appropriately assessed at the activity level where relevant and that the short-duration, intermittent and spatially dispersed nature of the proposed GPGT survey activities limits the potential for temporal and spatial overlap. Woodside considers that potential acoustic impacts are temporary and localised and that the risk of cumulative effects from the GPGT survey activities is low.	**(6)** Woodside advised that environmental assessments are undertaken at the activity level, with cumulative impacts considered where relevant. Woodside noted that the short-duration, intermittent and spatially dispersed nature of the proposed GPGT survey activities is expected to result in limited temporal and spatial overlap of acoustic exposure. Woodside further advised that acoustic impacts are expected to be temporary and localised, the risk of cumulative effects from the GPGT surveys is low, and a separate cumulative acoustic impact assessment across the full five-year survey program is not considered necessary.	**(6)** No changes or additional measures are required. The timing and duration of the proposed survey activities are described in Section 3.5 of the EP. Routine acoustic emissions are assessed in Section 6.8.3 of the EP. Potential cumulative impacts are considered within the relevant impact and risk assessments in Section 6 of the EP.
(7) Requested that passive acoustic monitoring (PAM) be required before all noise-generating survey activities, with a detection zone based on the modelled behavioural disturbance range of the equipment used.	**(7)** Woodside does not consider passive acoustic monitoring to be a proportionate control for the proposed GPGT survey activities, given the lower source levels and risk profile of the equipment. Woodside considers that PAM is not required to demonstrate that impacts and risks are reduced to ALARP.	**(7)** Woodside advised that PAM is typically applied to higher-intensity seismic sources and is not considered a proportionate or necessary control for achieving ALARP outcomes for the proposed GPGT survey activities, given the lower source levels and risk profile of the equipment.	**(7)** No changes or additional measures are required. Routine acoustic emissions are assessed in Section 6.8.3 of the EP.
(8)	**(8)**	**(8)**	**(8)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Requested acoustic propagation modelling for all proposed acoustic sources to define potential behavioural disturbance and injury zones for pygmy blue whales.	Woodside considers that modelling of individual geophysical survey equipment is not required because vessel noise represents the principal contributor to underwater acoustic emissions, while equipment-related emissions are lower intensity, more localised and predictable from known source characteristics. Woodside considers that vessel-noise modelling sufficiently characterises the maximum credible acoustic exposure associated with the proposed activities.	Woodside confirmed that underwater acoustic modelling has been undertaken for vessel-noise scenarios within the Operational Area and documented in the EP. Woodside advised that individual equipment modelling is not considered necessary because vessel noise is the principal contributor to underwater acoustic emissions, while equipment-related emissions are comparatively smaller and more localised. Woodside noted that Multibeam echosounder (MBES) and side scan sonar (SSS) operate at high frequencies and attenuate rapidly outside their directional beams, while audible sources such as sub-bottom profiler's (SBP)s are low-power, short-pulse and directional, resulting in localised and short-range effects. Woodside therefore considers the vessel-noise assessment sufficient to characterise the maximum credible acoustic exposure associated with the proposed activities.	No changes or additional measures are required. Routine acoustic emissions are assessed in Section 6.8.3 of the EP.
(9) Requested that the qualified timing restrictions for activities within the pygmy blue whale BIA be replaced with binding, time-defined exclusion periods aligned with peak foraging and migration periods.	**(9)** Woodside does not agree that the phrase "where practicable" makes the mitigation framework discretionary or insufficiently binding. Woodside considers that the wording reflects a practicability-based assessment through which feasible limitations on survey activities are evaluated and either adopted or justifiably not adopted.	**(9)** Woodside advised that the phrase "where practicable" reflects a practicability-based assessment in which feasible limitations on survey activities have been evaluated and either adopted or justifiably not adopted. Woodside disagreed that the wording makes the mitigation framework discretionary or insufficiently binding.	**(9)** No changes or additional measures are required. Pygmy blue whales and relevant BIAs are described in Section 4.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(10) Requested that Woodside initiate a formal Commonwealth review of the Scott Reef pygmy blue whale BIA classification before survey activities commence, having regard to recent scientific literature.	**(10)** Woodside notes Pearl Expeditions' request and considers that formal review or amendment of BIA classifications is administered by the Commonwealth and is outside the scope of this EP.	**(10)** Woodside advised that formal updates to BIA classifications are administered by the Commonwealth and are outside the scope of the EP.	**(10)** No changes or additional measures are required.
(11) Requested a cumulative acoustic impact assessment for the five-year survey program, including combined noise exposure across the three Browse to NWS GPGT surveys EPs and potential seasonal overlap with the pygmy blue whale migration corridor.	**(11)** Woodside does not consider a separate cumulative acoustic impact assessment across all three EPs to be necessary. Woodside considers that each EP assesses cumulative impacts where there is potential for temporal and spatial overlap with other activities, proportionate to the scale, duration and nature of the proposed activities. Given the localised, short-term and transient nature of GPGT acoustic emissions, Woodside considers the likelihood of meaningful cumulative noise exposure affecting the pygmy blue whale migration corridor to be low.	**(11)** Woodside advised that each EP includes an assessment of cumulative impacts, including consideration of other activities with the potential for temporal and spatial overlap. Woodside noted that these assessments are proportionate to the scale, duration and nature of the activities. Given the localised, short-term and transient nature of GPGT acoustic emissions and their limited spatial extent, Woodside advised that the likelihood of meaningful cumulative noise exposure affecting the pygmy blue whale migration corridor is low. Woodside therefore considers the existing EP assessments sufficient and does not consider a separate cumulative acoustic assessment across all three EPs necessary.	**(11)** No changes or additional measures are required. The timing and duration of the proposed survey activities are described in Section 3.5 of the EP. Routine acoustic emissions are assessed in Section 6.8.3 of the EP. Potential cumulative impacts are considered within the relevant impact and risk assessments in Section 6 of the EP.
(12) Described the conservation significance and vulnerability of the green turtle population nesting at Sandy Islet, including the importance of the nesting habitat and the population's genetic isolation.	**(12)** Woodside acknowledges that Sandy Islet is an important green turtle nesting location and that marine turtle populations in the region are sensitive environmental receptors. Woodside considers that the EP appropriately identifies and assesses the	**(12)** Woodside acknowledged the importance of Sandy Islet as a green turtle nesting location and the sensitivity of marine turtle populations in the region. Woodside advised that the EP identifies and assess marine turtles, including green turtles, as relevant receptors and	**(12)** No changes or additional measures are required. Protected species, including green turtles, are described in Section 4.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	presence and conservation significance of green turtles and includes measures to avoid or minimise potential impacts from the proposed GPGT survey activities.	include management measures to avoid or minimise potential impacts from the proposed GPGT survey activities.	Potential impacts and associated controls relevant to marine turtles are addressed in the applicable impact and risk assessments in Section 6.
(13) Stated concern that artificial lighting from survey vessels operating at night could disorient green turtle hatchlings at Sandy Islet. Pearl Expeditions requested defined lighting limits and independent monitoring where survey activities overlap with green turtle nesting and hatchling emergence periods.	**(13)** Woodside acknowledges that artificial lighting is a potential impact pathway for marine turtles, particularly hatchlings, but does not agree that defined lighting limits or independent monitoring are required. Woodside considers that potential lighting impacts are appropriately assessed and managed, having regard to the short duration of the activities, the distance from Sandy Islet and controls to minimise unnecessary light emissions while maintaining safe operations.	**(13)** Woodside advised that Sandy Islet is at least 14 km from the Operational Area boundary (of the Browse to NWS Project GPGT Surveys State EP) and that no survey activities are planned within 14 km of the nesting location. Woodside further advised that potential lighting impacts are limited by the short duration and distance of the activities and are managed through controls designed to minimise unnecessary light emissions while maintaining safe operations. Woodside therefore did not consider fixed lighting limits or independent monitoring of green turtle nesting and hatchlings necessary to appropriately manage the potential impacts and risks.	**(13)** No changes or additional measures are required. Protected species, including green turtles, are described in Section 4.6 of the EP. Routine light emissions are assessed in Section 6.8.4 of the EP.
(14) Stated concern that geotechnical survey activities may disturb and compact seabed sediments and contribute to subsidence effects at Sandy Islet. Pearl Expeditions also raised concerns regarding the currency, transparency and independent verification of production-related subsidence modelling for the broader Browse to NWS Project.	**(14)** Woodside acknowledges that geotechnical survey activities involve localised seabed interaction through sampling and in situ testing. Woodside considers that these activities have a limited footprint, involve discrete sampling locations and do not remove material at a scale capable of altering seabed structure beyond the immediate sampling area. Woodside considers there is no credible pathway for the proposed GPGT survey activities to cause subsidence effects at	**(14)** Woodside advised that geotechnical survey activities involve localised seabed interaction at discrete sampling locations and do not remove material at a scale capable of altering seabed structure beyond the immediate sampling area. Woodside therefore advised that there is no credible pathway for the proposed GPGT survey activities to result in subsidence effects at Sandy Islet.	**(14)** No changes or additional measures are required. Potential seabed disturbance associated with geotechnical survey activities are assessed in Section 6.8.2 of the EP, with routine and non-routine discharges addressed in Section 6.8.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Sandy Islet. Production-related subsidence and associated modelling are outside the scope of this EP and are addressed through separate approvals processes.	Woodside clarified that production-related subsidence, including associated modelling assumptions, data transparency and cumulative effects, is outside the scope of the EP and is addressed through separate approvals processes. Woodside also did not agree that the referenced production-related modelling had not been independently verified, noting that independent experts undertook the modelling and that the results were published by SLB (formerly known as Schlumberger).	
(15) Requested quantified lighting levels and binding maximum lux thresholds at the Operational Area boundary and specified distances from Sandy Islet during the green turtle nesting season.	**(15)** Woodside does not consider quantified lighting levels or binding lux thresholds at the distances proposed by Pearl Expeditions to be required, as survey activities are not planned within 5 km of Sandy Islet and the Operational Areas are located more than 14 km from Sandy Islet.	**(15)** Woodside advised that no survey activities are planned within 5 km of Sandy Islet and that the Operational Areas are located more than 14 km from Sandy Islet.	**(15)** No changes or additional measures are required. Routine light emissions are assessed in Section 6.8.4 of the EP.
(16) Requested independent monitoring of green turtle nesting and hatchling emergence during any survey activities that overlap with the nesting and hatchling emergence season.	**(16)** Woodside does not consider independent monitoring of green turtle nesting and hatchlings necessary to appropriately manage potential impacts from the proposed activities. Woodside considers that potential lighting impacts are limited by the short duration of the activities and are appropriately managed through controls and management plans designed to minimise unnecessary light emissions while maintaining safe operations.	**(16)** Woodside advised that potential lighting impacts are limited by the short duration of the activities and managed through controls and management plans designed to minimise unnecessary light emissions while maintaining safe operations. Woodside did not agree that independent monitoring of green turtle nesting and hatchlings is necessary to appropriately manage the potential impacts and risks associated with the proposed activities.	**(16)** No changes or additional measures are required. Protected species, including green turtles, are described in Section 4.6 of the EP. Routine light emissions are assessed in Section 6.8.4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(17) Requested an independent geomechanical review of potential subsidence effects near Scott Reef before the geotechnical survey program commences.	**(17)** Woodside does not consider an independent geomechanical review necessary for the proposed GPGT survey activities. Woodside considers that seabed disturbance is limited to discrete sampling locations and that, as the surveys do not interact with the reservoir, there is no credible pathway linking the activities to measurable subsidence effects at Scott Reef.	**(17)** Woodside advised that disturbance from the proposed survey activities is limited in footprint and spatial extent and involves discrete sampling locations. Woodside did not agree that production-related subsidence studies are relevant to the assessment of GPGT survey activities, as the surveys do not interact with the reservoir and no credible pathway exists linking them to measurable subsidence effects at a reef-scale feature.	**(17)** No changes or additional measures are required.
(18) Requested that Woodside publicly release the full subsidence modelling dataset.	**(18)** Woodside considers that production-related subsidence modelling related to the broader Browse to NWS Project and is outside the scope of this EP. These matters are addressed through separate approvals processes.	**(18)** Woodside advised that production-related subsidence matters associated with the broader Browse to NWS Project, including modelling assumptions, data transparency and cumulative effects, are addressed through separate approvals processes and are outside the scope of the EP.	**(18)** No changes or additional measures are required.
(19) Stated concern that the current Scott Reef pygmy blue whale BIA classification may not reflect recent scientific information on migration and foraging behaviour, potentially resulting in underestimation of risk and insufficient mitigation. Pearl Expeditions requested that relevant Commonwealth regulators be notified and that a precautionary approach be adopted pending any formal BIA review.	**(19)** Woodside acknowledges that scientific understanding of pygmy blue whale distribution, migration and foraging behaviour continues to evolve. Woodside has assessed that the EP appropriately applies current regulatory BIAs, Commonwealth datasets and accepted spatial frameworks, supplemented by available scientific information and ongoing acoustic and ecological monitoring. Woodside considers that assessment and mitigation measures are based on	**(19)** Woodside acknowledged that scientific understanding of pygmy blue whale distribution and behaviour continues to evolve and noted that ongoing acoustic and ecological monitoring is being undertaken in the Browse Basin, including within and outside the Scott Reef BIA, to improve understanding of whale distribution, migration and potential foraging behaviour. Woodside advised that the EP applies current BIAs and other Commonwealth datasets to identify areas of known or	**(19)** No changes or additional measures are required. Pygmy blue whales and relevant BIAs are described in Section 4.6 of the EP. Potential impacts from routine acoustic emissions are assessed in Section 6.8.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the potential presence of pygmy blue whales and are not limited to areas classified as known habitat. Formal review or amendment of BIA classifications is administered by the Commonwealth and is outside the scope of this EP.	potential biological significance and adopt Scott Reef's current classification as a possible foraging BIA. Woodside further advised that assessment and mitigation measures are applied based on the potential presence of pygmy blue whales and are not limited to areas classified as known habitat. Woodside clarified that formal BIA classification updates are administered by the Commonwealth and are outside the scope of the EP.	
(20) Outlined the environmental significance of Scott Reef but considered that the proposed mitigation framework does not adequately address visual-monitoring limitations, cumulative acoustic impacts or potential limitations in the current BIA classification. Pearl Expeditions concluded that the EP does not demonstrate that impacts and risks will be reduced to ALARP and requested that its proposed additional measures be incorporated.	**(20)** Woodside acknowledges that Scott Reef is an area of exceptional environmental value and considers that the proposed environmental management measures reflect the sensitivity of the receiving environment. Woodside does not agree that the EP fails to demonstrate that impacts and risks will be reduced to ALARP and acceptable levels. Woodside considers that the activity-specific controls detailed in the EP are appropriate to reduce and manage the identified impacts and risks.	**(20)** Woodside acknowledged the exceptional environmental value of Scott Reef and advised that the proposed environmental management measures reflect the sensitivity of the receiving environment. Woodside did not agree with Pearl Expeditions' conclusion that the EP fails to demonstrate that impacts and risks will be reduced to ALARP. Woodside advised that each EP details the control measures used to reduce the impacts and risks associated with the relevant activities and must demonstrate to the regulator that these will be reduced to ALARP and acceptable levels.	**(20)** No changes or additional measures are required. The environmental impact and risk assessment methodology, including the assessment of ALARP and acceptability, is included in Section 2 of the EP.
Woodside has addressed claims or objections as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.7.1 of the EP).	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Pearl Expeditions for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given Pearl Expeditions sufficient information to allow Pearl Expeditions to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Pearl Expeditions on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. – A timeframe for consultation and the provision of feedback. – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.* – Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations). • On 25 May 2026, Pearl Expeditions shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Pearl Expeditions to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. • In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Pearl Expeditions in response to Pearl Expeditions' feedback (Woodside's email of 30 July 2026). **Reasonable Period** Woodside allowed Pearl Expeditions a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence to Pearl Expeditions advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period and Woodside allowed Pearl Expeditions 30 days for consultation. • Consultation for this EP commenced 5 months ago. • In this context, Woodside allowed Pearl Expeditions a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pearl Expeditions is appropriate and adapted to the nature of interests of Pearl Expeditions:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation letter on 19 May 2026, reminding Pearl Expeditions of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Pearl Expeditions provided feedback or claims or objections regarding the adverse impact of the proposed activity to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Pearl Expeditions and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
  - Made no changes or inclusions to the EP as a result of consultation with Pearl Expeditions because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.6.4 Recfishwest

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Recfishwest advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 19 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 29 May 2026, Recfishwest thanked Woodside for its email (SI Report A, reference 11.1). Recfishwest raised items **(1)** – **(3)**.
- On 9 July 2026, Woodside thanked Recfishwest for its feedback (SI Report A, reference 11.2). Woodside responded to items **(1)** – **(3)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Recfishwest reiterated information provided to confirm that the information was understood correctly.	**(1)** Woodside notes that Recfishwest has correctly understood details of the EP.	**(1)** Woodside noted that that Recfishwest had understood the information provided.	**(1)** No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(2) Acknowledged the importance of Scott Reef as a world class recreational fishing location.	**(2)** Woodside notes Recfishwest's comments regarding the importance of Scott Reef to the fishing community.	**(2)** Woodside noted the comments by Recfishwest regarding the importance of Scott Reef to recreational fishers.	**(2)** No changes or additional measures are required.
(3) Requested to be kept informed as activities progress.	**(3)** Woodside will keep Recfishwest informed as the activity progresses via activity notifications.	**(3)** Woodside confirmed it would provide notifications so Recfishwest can stay informed as the activity progresses.	**(3)** No changes or additional measures are required. Woodside will provide notifications to Recfishwest as set out in Section 7.10 of the EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Recfishwest for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Recfishwest sufficient information to allow Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Recfishwest on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 29 May 2026, Recfishwest shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Recfishwest a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Recfishwest advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Recfishwest 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed Recfishwest a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Recfishwest is appropriate and adapted to the nature of interests of Recfishwest:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on (21 May 2026), reminding Recfishwest of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Recfishwest provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Recfishwest.
  - Made no changes or inclusions to the EP as a result of consultation with Recfishwest because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.6.5 WA Game Fishing Association

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 April 2026, Woodside emailed WA Game Fishing Association advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WA Game Fishing Association for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WA Game Fishing Association sufficient information to allow WA Game Fishing Association to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to WA Game Fishing Association on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WA Game Fishing Association a reasonable period for consultation in the preparation of the EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to WA Game Fishing Association advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WA Game Fishing Association 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed WA Game Fishing Association a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WA Game Fishing Association is appropriate and adapted to the nature of interests of WA Game Fishing Association:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding WA Game Fishing Association of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WA Game Fishing Association did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WA Game Fishing Association functions, interests or activities.

4.7 Titleholders and operators

4.7.1 Beach Energy Ltd; INPEX; Origin Energy Browse (Titleholders)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Titleholders advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Titleholders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Titleholders sufficient information to allow Titleholders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Titleholders on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Titleholders a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Titleholders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Titleholders 30 days for consultation.
- Consultation for this EP commenced 5 months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed Titleholders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Titleholders is appropriate and adapted to the nature of interests of Titleholders:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding Titleholders of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Titleholders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Titleholders functions, interests or activities.

4.7.2 PetroChina International Investment (Australia)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed PetroChina International Investment (Australia) advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
- On 20 May 2026, Woodside sent a follow up email to PetroChina International Investment (Australia) on the proposed activity as an out of office was received to the initial email and provided the Consultation Information Sheet (SI Report A, reference 12.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Change and Revision process (see Section 7.8.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with PetroChina International Investment (Australia) for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given PetroChina International Investment (Australia) sufficient information to allow PetroChina International Investment (Australia) to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to PetroChina International Investment (Australia) on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed PetroChina International Investment (Australia) a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to PetroChina International Investment (Australia) advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed PetroChina International Investment (Australia) 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed PetroChina International Investment (Australia) a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with PetroChina International Investment (Australia) is appropriate and adapted to the nature of interests of PetroChina International Investment (Australia):

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 20 May 2026, reminding PetroChina International Investment (Australia) of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as PetroChina International Investment (Australia) did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on PetroChina International Investment (Australia) functions, interests or activities.

4.7.3 Santos Offshore / Santos Browse

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Santos advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 14 May 2026, Santos thanked Woodside for their email (SI Report A, reference 13.1). Santos noted item **(1)**
- On 15 May 2026, Woodside thanked Santos for its email (SI Report A, reference 13.2). Woodside responded to item **(1).**

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) No objections or claims in relation to the planned activity.	**(1)** Woodside understands that Santos has no objections or claims in relation to the planned activity.	**(1)** Woodside noted that Santos had no objections or claims in relation to the planned activity	**(1)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its	No changes or additional measures are required.

		Management of Change and Revision process (see Section 7.8.1 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Santos for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Santos sufficient information to allow Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Santos on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 14 May 2026, Santos shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Santos a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Santos advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Santos 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed Santos a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Santos is appropriate and adapted to the nature of interests of Santos:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Santos provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Santos.
  - Made no changes or inclusions to the EP as a result of consultation with Santos because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.8 Peak industry representative bodies

4.8.1 Australian Energy Producers (AEP)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed AEP advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AEP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given AEP sufficient information to allow AEP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AEP on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. – A timeframe for consultation and the provision of feedback. – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.* – Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). **Reasonable Period** Woodside allowed AEP a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence to AEP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period and Woodside allowed AEP 30 days for consultation. • Consultation for this EP commenced 5 months ago. • In this context, Woodside allowed AEP a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AEP is appropriate and adapted to the nature of interests of AEP: • Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding AEP of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AEP did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AEP functions, interests or activities.

4.9 Local government and elected parliamentary representatives, community groups or organisations

4.9.1 Broome Chamber of Commerce and Industry (Broome CCI)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Broome CCI advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 28 April 2026, Woodside emailed Broome CCI providing further information on this and two other related Browse EPs (SI Report A, reference 19.1).
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 11 June 2026, a meeting was held between Woodside and Broome CCI to provide an overview of this and two other related Browse EPs (SI Report A, reference 19.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Broome CCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given Broome CCI sufficient information to allow Broome CCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Broome CCI on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures. – A timeframe for consultation and the provision of feedback. – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.* – Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). **Reasonable Period** Woodside allowed Broome CCI a reasonable period for consultation in the preparation of the EP because: • A consultation period was stated in the initial correspondence to Broome CCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period and Woodside allowed Broome CCI 30 days for consultation. • Consultation for this EP commenced 5 months ago. • In this context, Woodside allowed Broome CCI a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Broome CCI is appropriate and adapted to the nature of interests of Broome CCI: • Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding Broome CCI of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Broome CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Broome CCI functions, interests or activities.

4.9.2 Shire of Broome

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed the Shire advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 28 April 2026, Woodside emailed the Shire providing further information on this and two other related Browse EPs (SI Report A, reference 18.1).
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 11 June 2026, a meeting was held between Woodside and the Shire to provide an overview of this and two other related Browse EPs (SI Report A, reference 18.2)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with the Shire for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given the Shire sufficient information to allow the Shire to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to the Shire on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed the Shire a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to the Shire advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed the Shire 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed the Shire a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with the Shire is appropriate and adapted to the nature of interests of the Shire:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding the Shire of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as the Shire did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on the Shire functions, interests or activities.

4.10 Other non-government groups or organisations (NGOs) or individuals

4.10.1 Australian Marine Conservation Society (AMCS)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed AMCS advising of the proposed activity (Record of Consultation, reference 6.1.7) and provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 28 May 2026, AMCS emailed Woodside and raised item **(1)** (SI Report A, reference 14.1).
- On 28 May 2026, Woodside emailed AMCS and responded to item **(1)** (SI Report A, reference 14.2).
- On 3 June 2026, Woodside sent an update to AMCS regarding an update on a separate but related EP.
- On 4 June 2026, AMCS emailed Woodside acknowledging the extended timeline (SI Report A, reference 14.3).
- On 16 June 2026, AMCS emailed Woodside. AMCS raised items **(2)** – **(9)** (SI Report A, reference 14.4).
- On 30 July 2026, Woodside emailed AMCS. Woodside responded to items **(2)** – **(9)** (SI Report A, reference 14.5).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Requested an extension of time to provide feedback.	**(1)** Woodside considered AMCS's request for an extension and agreed to provide additional time	**(1)** Woodside noted AMCS's request and granted an extension to the consultation period.	**(1)** No changes or additional measures are required.
(2) Provided an overview of AMCS and its core focus areas.	**(2)** Woodside notes the organisation's focus areas as stated in its correspondence.	**(2)** Woodside noted AMCS's focus areas.	**(2)** No changes or additional measures are required.
(3) Stated that the complexity and number of proposed EPs, the resources required to assess them and the limited	**(3)** Woodside considers that AMCS was provided with sufficient information and a reasonable period to make an informed	**(3)** Woodside advised that it was aware of the requirement to provide relevant	**(3)** No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

resources available to environmental advocacy organisations affected AMCS's ability to participate comprehensively in consultation. AMCS expressed concern that feedback from environmental organisations is not given due consideration or reflected in substantive changes to EP design, described the consultation process as inadequate and stated that its comments were overarching and not exhaustive.	assessment of the possible consequences of the activity on its functions, interests or activities, was granted additional time to provide feedback, and had its objections and claims considered in the preparation of the EP.	persons with a reasonable period for consultation. Woodside clarified that it assesses the merits of objections and claims about the adverse impacts of the proposed activity and records its response in the EP.	
(4) Stated the proposed activities raise multiple risks for marine life, including: • underwater noise • light pollution • habitat and seabed disturbance • cumulative impacts.	**(4)** Woodside considers that the EP addresses impacts and risks associated with underwater acoustic emissions from survey vessels and equipment, light emissions, habitat and seabed disturbance, and potential cumulative impacts where there is temporal and spatial overlap with other activities.	**(4)** Woodside advised that the EP addresses impacts and risks associated with underwater acoustic emissions from survey vessels and equipment, light emissions, habitat and seabed disturbance, and potential cumulative impacts where there is temporal and spatial overlap with other activities.	**(4)** No changes or additional measures are required. Potential impacts and risks associated with seabed disturbance, routine acoustic emissions and routine light emissions are assessed in Sections 6.8.2, 6.8.3 and 6.8.4 of the EP, respectively.
(5) Stated impacts from those risks may include: • habitat damage • smothering of benthic habitat • increased turbidity and sedimentation • disruption of marine species' behaviours • disorientation • persistent accumulation and bioaccumulation of toxic substances in the environment • injury or death of marine life.	**(5)** Woodside considers that the EP addresses risks with the potential to impact relevant receptors, including marine habitats, benthic communities, marine fauna and protected species. Relevant impact pathways are assessed in the EP and managed through controls and management measures to avoid or minimise impacts and reduce risks to ALARP and acceptable levels.	**(5)** Woodside advised that the EP addresses risks with the potential to impact marine habitats, benthic communities, marine fauna and protected species. Woodside further advised that relevant impact pathways are assessed and are subject to controls and management measures to avoid or minimise impacts and reduce risks to ALARP and acceptable levels.	**(5)** No changes or additional measures are required. Potential impacts associated with seabed disturbance, routine acoustic emissions, routine light emissions and routine and non-routine discharges are assessed in Sections 6.8.2, 6.8.3, 6.8.4 and 6.8.6 of the EP, respectively. Unplanned activities are assessed in Sections 6.9 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(6) Stated concern regarding cumulative acoustic impacts from the proposed GPGT surveys near Scott Reef, including potential continuous acoustic activity over the EP period, synergistic impacts if Browse GPGT EPs progress concurrently, and potential risks of seismic surveys to marine fauna including zooplankton and marine mammals.	**(6)** Woodside considers that the proposed GPGT survey activities are not equivalent to conventional marine seismic surveys, as they are lower intensity, more localised and more temporary in nature. Woodside further considers that the EP conservatively assesses potential activities over the five-year EP term, including repeated and recurring activities and potential cumulative impacts where relevant.	**(6)** Woodside advised that the proposed activities are GPGT survey activities and are lower intensity, more localised and more temporary than conventional marine seismic surveys. Woodside further advised that the EPs conservatively assess potential activities over the five-year EP term, including repeated, recurring and cumulative impacts where relevant.	**(6)** No changes or additional measures are required. The timing and duration of the proposed activities and geophysical survey methods are described in Sections 3.5 and 3.6 of the EP. Routine acoustic emissions are assessed in Section 6.8.3.
(7) Stated that limitations in available species, habitat and environmental data, including information on migratory species' spatio-temporal habitat use and interactions with industrial activities, make it difficult to assess potential impacts from noise, light and pollution on marine life. AMCS also stated that available information may be outdated, persistent knowledge gaps remain and the interacting cumulative pressures of climate change, industrial development, global shipping and fishing are poorly understood. AMCS noted that warming oceans may alter species distributions and food availability along migratory routes.	**(7)** Woodside considers that the range of available environmental information, including scientific literature, government datasets, protected-matters information, environmental studies, monitoring data, species-distribution information and project-specific investigations, provides an appropriate basis for identifying environmental receptors and assessing potential impact pathways and risks. Woodside considers that this information, together with recognised impact and risk assessment methodologies and the controls described in the EP, demonstrates that impacts and risks can be reduced to ALARP and acceptable levels.	**(7)** Woodside acknowledged that uncertainty exists in environmental assessments, that scientific understanding of marine ecosystems continues to evolve and that marine ecosystems are subject to natural and anthropogenic pressures. Woodside advised that the EPs were informed by available environmental information relevant to the proposed activities, including published scientific literature, government datasets, protected-matters information, environmental studies, monitoring data, species-distribution information and project-specific investigations. Woodside noted that long-running ecological monitoring has been undertaken at Scott Reef through the AIMS Scott Reef Research Program and that Woodside is undertaking long-term passive acoustic monitoring and ecological monitoring of productivity and prey availability. Woodside advised that	**(7)** No changes or additional measures are required. The description of the existing environment is covered in Section 4 of the EP. Potential impacts associated with routine acoustic emissions, routine light emissions and routine and non-routine discharges are assessed in Sections 6.8.3, 6.8.4 and 6.8.6, respectively.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		this information is used with recognised impact and risk assessment methodologies to identify environmental receptors and assess potential impact pathways. Woodside further advised that the EPs demonstrate that impacts and risks can be reduced to ALARP and acceptable levels through the controls and management measures described in the EPs.	
(8) Cited Boisseau et al. (2026) regarding environmental performance of offshore petroleum activities in the Mediterranean Sea and recommended Woodside implements the study's recommendations to minimise impacts to threatened marine species and marine protected areas.	**(8)** Woodside does not agree that conclusions from activities undertaken in different environmental, regulatory and operational settings can be directly applied to the proposed GPGT survey activities. Woodside considers that the EP assesses potential impacts and risks based on the specific equipment, operational characteristics, receiving environment and environmental receptors relevant to the proposed activities, using relevant scientific literature, monitoring information, industry guidance and multiple lines of evidence.	**(8)** Woodside acknowledged that scientific studies on offshore activity performance may inform environmental risk management and control design. Woodside advised that conclusions from activities undertaken in different environmental, regulatory and operational settings cannot be directly applied to the proposed GPGT survey activities, which have been assessed based on the specific equipment, operational characteristics, receiving environment and environmental receptors relevant to the EP. Woodside further advised that continual improvement and consideration of emerging scientific information are important components of environmental management and that the assessment considered relevant scientific literature, environmental monitoring information, industry guidance and multiple lines of evidence. Woodside advised that the EPs demonstrate that impacts and risks can	**(8)** No changes or additional measures are required. The environmental impact and risk assessment methodology, including the assessment of ALARP and acceptability, is addressed in Section 2 of the EP. The impact and risk analysis and evaluation are assessed in Section 6, including routine acoustic emissions in Section 6.8.3. Implementation, monitoring, audit and review arrangements are addressed in Section 7.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		be reduced to ALARP and acceptable levels through the controls and management measures described in the EP.	
(9) Stated concern regarding the contribution of fossil fuel production to climate change and associated downstream impacts on oceans and marine life, including ocean acidification, ocean warming, sea level rise and extreme weather events.	**(9)** Woodside notes AMCS's position.	**(9)** Woodside noted AMCS's position.	**(9)** No changes or additional measures are required.
Woodside has addressed claims or objections as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.7.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMCS for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMCS sufficient information to allow AMCS to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to AMCS on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 28 May 2026 and 16 June 2026, AMCS shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AMCS to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to AMCS in response to AMCS's feedback (Woodside's email of 30 July 2026).

Reasonable Period

Woodside allowed AMCS a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to AMCS advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMCS 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed AMCS a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMCS is appropriate and adapted to the nature of interests of AMCS:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding AMCS of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AMCS provided feedback or claims or objections regarding the adverse impact of the proposed activity to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from AMCS and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
  - Made no changes or inclusions to the EP as a result of consultation with AMCS because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.10.2 Conservation Council of Western Australia (CCWA)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed GPAP advising of the proposed activity (Record of Consultation, reference 6.1.7) and provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 19 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 28 May 2026, CCWA emailed Woodside (SI Report A, reference 15.1). CCWA raised items **(1)** – **(37)**.
- On 30 July 2026, Woodside emailed CCWA (SI Report A, reference 15.2). Woodside responded to items **(1)** – **(37)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Outlined CCWA's interests in relation to environmental protection, Scott Reef, marine species, climate change and industrial development, and stated that its interests may be affected by the proposed GPGT survey activities.	**(1)** Woodside understands CCWA's interests in relation to environmental protection, marine habitats, marine species, climate change and proposed industrial developments in Western Australia.	**(1)** Woodside noted CCWA's comments, including its stated interests.	**(1)** No changes or additional measures are required.
(2) Outlined CCWA's role, functions, interests and activities in relation to environmental protection, sustainability, climate change and conservation in WA, and stated that the Consultation Information Sheet did not provide sufficient information for CCWA to assess the possible consequences of the proposed GPGT survey activities on those functions, interests and activities.	**(2)** Woodside understands CCWA's purpose, role, functions, interests and activities and acknowledges the requirement under regulation 25(2) of the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth)* to provide sufficient information to allow an informed assessment of the possible consequences of the activity on the relevant person's functions, interests or activities. Woodside does not agree that the Consultation Information Sheets were	**(2)** Woodside noted CCWA's purpose, role, functions, interests and activities. Woodside disagreed that the Consultation Information Sheets were insufficient for CCWA to assess the possible consequences of the activity on its functions, interests and activities.	**(2)** No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	insufficient for CCWA to make that assessment.		
(3) Stated that Woodside had not provided sufficient information to enable consultation to occur. CCWA stated that the consultation period should take account of the complexity and volume of information, CCWA's availability and accessibility considerations, and should support two-way communication, transparency, collaboration, inclusiveness and integrity.	**(3)** Woodside does not agree that insufficient information or an unreasonable period was provided for consultation. Woodside considers that CCWA was provided with sufficient information to make an informed assessment of the possible consequences of the activity on its functions, interests or activities and was allowed a reasonable period and opportunity to provide feedback. Woodside considered CCWA's correspondence and provided responses to the matters raised.	**(3)** Woodside advised that it was aware of the requirement to allow relevant persons a reasonable period for consultation. Woodside disagreed that the Consultation Information Sheets did not provide sufficient information to allow consultation to occur. Woodside confirmed that CCWA's feedback had been received and considered as part of the development of the EP.	**(3)** No changes or additional measures are required.
(4) Requested information in relation to a worst-case oil spill scenario.	**(4)** Woodside considers that the EP comprehensively identifies and assesses planned and unplanned impacts and risks associated with the proposed GPGT survey activities, including a worst-case credible spill scenario, and demonstrates that risks can be reduced to ALARP and acceptable levels.	**(4)** Woodside confirmed that planned and unplanned impacts and risks have been identified and assessed in the EP. Woodside advised that the assessment includes a worst-case credible spill scenario, modelled using conservative assumptions to define the EMBA and assess receptor exposure, with impacts evaluated against consequence criteria and reduced to ALARP and acceptable levels. Woodside also noted that the proposed GPGT survey activities do not involve hydrocarbon production, storage or transfer, and that the worst-case credible spill scenario is a Marine Gas Oil spill resulting from a vessel collision.	**(4)** No changes or additional measures are required. Unplanned activities, including an unplanned hydrocarbon release, are assessed in Section 6.9.2 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(5) Requested information on potential impacts and risks to Scott Reef Marine Park and other significant marine ecosystems, including from a worst-case oil spill.	**(5)** Woodside considers that the EP identifies Scott Reef Nature Reserve, surrounding habitats, protected areas, key ecological features and other significant marine receptors and assesses potential planned and unplanned impacts and risks to these receptors, including from the worst-case credible spill scenario. Woodside considers that the relevant risks are reduced to ALARP and acceptable levels.	**(5)** Woodside advised that the EP identifies Scott Reef Nature Reserve, surrounding habitats, protected areas, key ecological features and other significant marine receptors and assesses planned and unplanned impacts and risks to these receptors. Woodside noted that planned impacts from the GPGT survey activities are expected to be localised and temporary and that the worst-case credible spill scenario is an instantaneous 200 m^3 Marine Gas Oil release resulting from a vessel collision. Woodside advised that the associated risks are managed to ALARP and acceptable levels.	**(5)** No changes or additional measures are required. Unplanned activities, including an unplanned hydrocarbon release, are assessed in Section 6.9.2 of the EP.
(6) Requested information on potential impacts and risks to Sea Country and areas of Aboriginal cultural significance or heritage, including from a worst-case oil spill.	**(6)** Woodside considers that the EP identifies and assesses Sea Country values and Aboriginal cultural heritage, using information from Indigenous relevant persons and desktop review, and includes controls where required to manage potential impacts.	**(6)** Woodside confirmed that the EP identifies and assesses potential impacts and risks to Sea Country values and Aboriginal cultural heritage, using information from Indigenous relevant persons and desktop review. Woodside advised that controls are implemented where required, including spill response measures and relevant engagement to avoid potential impacts to cultural features and heritage values.	**(6)** No changes or additional measures are required. Cultural values and heritage are described in Section 4.9 of the EP. The cultural features and heritage values assessment is included in Section 6.11 of the EP.
(7) Requested information on the minimum and maximum expected operational duration of the proposed GPGT survey activities over the five-year EP term.	**(7)** Woodside acknowledges CCWA's interest in the duration of the proposed activities. The GPGT survey activities are planned to occur intermittently over the five-year EP term.	**(7)** Woodside confirmed that the GPGT survey activities will occur intermittently over the five-year EP term, typically in campaigns lasting 20 to 60 days, with up to 90 operational days per year and no fixed minimum total operational period.	**(7)** No changes or additional measures are required. The timing and duration of the proposed activities are described in Section 3.5 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(8) Requested information on potential impacts to species not listed in the Consultation Information Sheets.	**(8)** Woodside considers that the EP assesses relevant ecological receptors using both species-specific and habitat-based approaches, including where relevant to non-listed species and ecological communities.	**(8)** Woodside confirmed that environmental receptors are identified using species-specific and habitat-based approaches, which captures ecological communities and non-listed species through assessment of habitats, ecosystem processes and receptor groups.	**(8)** No changes or additional measures are required. The description of the existing environment is covered in Section 4 of the EP.
(9) Asked how environmental impacts from the proposed GPGT survey activities would be minimised.	**(9)** Woodside considers that the EP applies a risk-based process to identify, assess and manage planned and unplanned impacts, with controls selected in proportion to the nature and scale of the activities.	**(9)** Woodside advised that environmental impacts are minimised through a risk-based EP process that reduces impacts and risks to ALARP and acceptable levels. Woodside noted that the surveys are intermittent and localised, and that controls are selected using the hierarchy of controls, including elimination, substitution, engineering controls, administrative controls and emergency response planning.	**(9)** No changes or additional measures are required. Impact and risk assessment methodology, ALARP and acceptability are addressed in Section 2 and applied in Section 6 of the EP.
(10) Asked how geophysical surveys are considered non-intrusive.	**(10)** Woodside considers geophysical surveys to be non-intrusive because they use acoustic mapping and do not involve excavation, drilling or direct mechanical interaction with the seabed.	**(10)** Woodside advised that geophysical surveys use acoustic mapping and do not involve excavation, drilling or direct mechanical interaction with the seabed.	**(10)** No changes or additional measures are required. Geophysical survey methods and equipment are described in Section 3.6 of the EP.
(11) Requested information on the difference between the spatial footprint of geophysical surveys and seismic surveys.	**(11)** Woodside considers that GPGT geophysical surveys are materially different from seismic surveys, including in their purpose, acoustic characteristics, spatial extent and seabed-focused footprint.	**(11)** Woodside advised that GPGT geophysical surveys are used to characterise seabed and shallow sub-seabed features using short, directional acoustic pulses focused toward the seabed. Woodside noted that these surveys have a more limited spatial and acoustic footprint than seismic surveys,	**(11)** No changes or additional measures are required. Geophysical survey methods and routine acoustic emissions are described and assessed in Sections 3.6 and 6.8.3 of the EP, respectively.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		which use higher-energy sources over broader areas to image deeper geological formations.	
(12) Requested information on the sound sources used to map geological layers and their estimated noise levels.	**(12)** Woodside has assessed that estimated noise levels for relevant geophysical survey techniques have been provided to support assessment of potential underwater noise impacts.	**(12)** Woodside provided estimated source sound-pressure levels, sound-exposure levels and dominant frequency ranges for the relevant geophysical survey techniques, including MBES, SSS, SBP and USBL positioning equipment.	**(12)** No changes or additional measures are required. Routine acoustic emissions are assessed in section 6.8.3 of the EP.
(13) Requested information on underwater noise management measures and their effectiveness.	**(13)** Woodside considers that the EP assesses relevant sound sources and applies proportionate mitigation and adaptive management measures to manage potential underwater noise impacts to marine fauna.	**(13)** Woodside advised that underwater noise is managed through a risk-based combination of assessment, mitigation and adaptive management measures. Woodside noted that measures include fauna observations, observation zones, vessel controls, trained observers, equipment maintenance and adaptive operational responses, and are selected to be proportionate to the activity type and risk profile.	**(13)** No changes or additional measures are required. Routine acoustic emissions are assessed in section 6.8.3 of the EP.
(14) Requested information on adaptive management measures during noise-generating activities.	**(14)** Woodside considers that adaptive management measures, including real-time observations and operational responses, are used to minimise potential impacts from noise-generating activities.	**(14)** Woodside advised that adaptive management includes real-time marine-fauna observations and modification or delay of activities where required. Measures include pre-start observations before activating geophysical equipment and, where the pygmy blue whale possible-foraging BIA may be ensonified, before commencing dynamic positioning for geotechnical drilling.	**(14)** No changes or additional measures are required. Routine acoustic emissions are assessed in section 6.8.3 of the EP
(15)	**(15)**	**(15)**	**(15)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Requested information on the noise levels and potential impacts of different geophysical survey equipment.	Woodside considers that the EP assesses relevant geophysical survey equipment sound sources and potential effects on marine fauna and benthic communities.	Woodside referred to the estimated noise levels provided for relevant geophysical equipment and advised that effects on cetaceans are expected to be localised, with temporary threshold shift highly unlikely. Woodside also advised that modelling indicates no impact to benthic invertebrates from Sub-bottom profiler, Multibeam echosounder or Side scan sonar sound levels.	No changes or additional measures are required. Routine acoustic emissions are assessed in section 6.8.3 of the EP.
(16) Requested information on EMBA modelling and modelled worst-case spill outcomes for Scott Reef, the Kimberley coast and fisheries, including who undertakes the modelling and its independence.	**(16)** Woodside considers that EMBA modelling uses recognised industry tools, specialists and conservative assumptions to assess potential exposure and inform impact assessment for relevant receptors and activities.	**(16)** Woodside advised that EMBA modelling was undertaken using recognised industry modelling tools, specialists and conservative assumptions. Woodside noted that the worst-case credible spill scenario is low likelihood, with modelling indicating limited-duration exposure at Scott Reef, no predicted contact with the Kimberley coastline, and potential fisheries impacts limited to temporary exclusion and short-term productivity effects.	**(16)** No changes or additional measures are required. Unplanned activities, including a unplanned hydrocarbon release, are assessed in Section 6.9.2 of the EP.
(17) Requested information on the impacts of geophysical and geotechnical surveys compared with seismic surveys.	**(17)** Woodside considers that GPGT activities have lower acoustic energy, a smaller spatial extent and a lower ecological risk profile than seismic survey activities.	**(17)** Woodside advised that geophysical and geotechnical surveys have lower acoustic energy, a smaller spatial extent and lower ecological risk than seismic survey activities.	**(17)** No changes or additional measures are required. Routine acoustic emissions are assessed in section 6.8.3 of the EP.
(18) Requested information on the expected displacement of commercial fishing activities.	**(18)** Woodside has assessed that any displacement of commercial fisheries would be temporary and limited to the	**(18)** Woodside confirmed that any displacement of commercial fisheries would be temporary, localised and	**(18)** No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	active survey area during survey operations.	limited to the active survey area during survey operations.	Potential interaction with commercial fisheries and other marine users is assessed in Section 6.8.1 of the EP.
(19) Requested information on the composition of cuttings and fluids discharged during geotechnical surveys.	**(19)** Woodside considers that geotechnical survey cuttings and fluids are expected to be limited to natural sediments, rock, seawater and, where required, low-toxicity additives assessed through Woodside's chemical assessment process.	**(19)** Woodside advised that geotechnical cuttings are expected to comprise natural seabed and sub-seabed sediments or rock, with fluids primarily comprising seawater and, where required, low-toxicity additives. Woodside noted that potential impacts from discharges are assessed as localised and temporary.	**(19)** No changes or additional measures are required. Routine and non-routine discharges are addressed in Section 6.8.6 of the EP.
(20) Requested information on the potential impacts of geotechnical survey activities.	**(20)** Woodside has assessed that potential impacts from geotechnical survey activities are localised, temporary and appropriately assessed in the EP.	**(20)** Woodside advised that geotechnical surveys may result in localised and temporary seabed disturbance, changes to water and sediment quality, benthic habitat disturbance and underwater noise. Woodside noted these impacts are expected to be highly localised, temporary and not result in lasting effects to seabed or benthic communities.	**(20)** No changes or additional measures are required. Disturbance to the seabed from geotechnical and geophysical surveys is addressed in section 6.8.2 of the EP. Routine and non-routine discharges are addressed in Section 6.8.6 of the EP.
(21) Asked how disturbance to marine fauna from underwater noise would be avoided.	**(21)** Woodside has assessed that controls for underwater noise impacts to marine fauna have been selected based on the activity risk profile and sensitivity of the receiving environment.	**(21)** Woodside advised that routine acoustic emissions will be managed through controls selected in accordance with ALARP and acceptability criteria. Controls include pre-start observations by trained personnel before activating geophysical equipment and night-time observations using a night-vision device. Where activities may ensonify the pygmy blue whale possible-foraging BIA, additional controls include seasonal	**(21)** No changes or additional measures are required. Routine acoustic emissions are assessed in Section 6.8.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		avoidance for geotechnical drilling where relevant, pre-start observations by a qualified marine fauna observer before commencing dynamic positioning for geotechnical drilling, and a shutdown zone for SBP activities.	
(22) Requested information on expected underwater noise levels and remaining uncertainty regarding potential underwater noise impacts.	**(22)** Woodside has assessed that expected underwater noise levels and potential effects are assessed using source-specific information, modelling and conservative thresholds.	**(22)** Woodside advised that underwater noise levels vary by source, vessel type, equipment settings, water depth and distance from the source, and that exposure above behavioural thresholds is spatially limited. Woodside noted that uncertainty in species-specific responses is addressed through conservative thresholds, modelling and precautionary controls.	**(22)** No changes or additional measures are required. Routine acoustic emissions are assessed in Section 6.8.3 of the EP.
(23) Requested information on behavioural changes, potential injury and long-term impacts to marine fauna from acoustic emissions.	**(23)** Woodside considers that the EP assesses behavioural disturbance, displacement and hearing-related injury pathways associated with acoustic emissions. Woodside considers potential effects from the proposed GPGT survey activities to be localised and temporary, with injury unlikely and no long-term impacts expected.	**(23)** Woodside advised that behavioural responses to acoustic emissions may include avoidance, displacement or temporary cessation of feeding, depending on factors such as species, received sound level, distance from source and exposure duration. Woodside noted that potential injury pathways, including temporary threshold shift (TTS) and permanent threshold shift (PTS), are assessed separately from behavioural disturbance, but injury is unlikely because animals are not expected to remain close enough to sound sources for long enough to exceed relevant thresholds. Woodside advised that acoustic effects are expected to be localised and temporary, with no lasting impacts on	**(23)** No changes or additional measures are required. Routine acoustic emissions are assessed in Section 6.8.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		protected species, ecosystems or ecological functions.	
(24) Asked how Woodside can guarantee pygmy blue whales will not be foraging during planned activities.	**(24)** Woodside acknowledges that species absence during planned activities cannot be guaranteed. Woodside considers that potential risks to pygmy blue whales are managed through schedule flexibility, monitoring and operational controls.	**(24)** Woodside clarified that it cannot guarantee pygmy blue whales will be absent during planned activities. Woodside advised that risks are managed through schedule flexibility, pre-start observations, limiting relevant acoustic activities within the pygmy blue whale possible-foraging BIA where possible during periods when pygmy blue whales are likely to be foraging, and compliance with applicable cetacean interaction requirements, including approach-distance and vessel-speed requirements.	**(24)** No changes or additional measures are required. Potential interactions with marine fauna, are addressed in Section 6.9.3 of the EP.
(25) Requested information on chemicals that may be present in non-routine discharges and their potential impacts.	**(25)** Woodside considers that potential chemicals and impacts associated with non-routine discharges are assessed and managed through Woodside's chemical assessment process.	**(25)** Woodside advised that non-routine discharges may include small volumes of hydrocarbons, operational fluids or hydraulic fluid, with chemicals selected to minimise practicable environmental impacts and risks. Woodside noted that potential impacts are expected to be localised and short term, primarily involving temporary reduced water quality near the release.	**(25)** No changes or additional measures are required. Chemical selection and unplanned discharges: deck and subsea spills from geotechnical and geophysical equipment are addressed in Sections 7.2.1 and 6.9.6 of the EP, respectively.
(26) Requested information on the composition of drill cuttings and drilling fluids discharged during geotechnical surveys, including potential toxic additives.	**(26)** Woodside considers that drilling fluids and additives are assessed and managed through Woodside's chemical assessment process, with chemicals selected to minimise practicable environmental impacts and risks subject to technical constraints.	**(26)** Woodside advised that drilling fluids comprise water-based systems with regulated additives, and that all chemicals are selected to minimise practicable environmental impacts and risks, subject to technical constraints,	**(26)** No changes or additional measures are required. Routine and non-routine discharges are addressed in Section 6.8.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		and approved through Woodside's chemical assessment process.	
(27) Asked how impacts from light emissions would be avoided.	**(27)** Woodside acknowledges that light emissions cannot be avoided where required for navigation, safe operations, crew safety and vessel visibility. Woodside considers that light emission impacts are managed through minimising non-essential external lighting and implementing relevant seabird and turtle-related controls.	**(27)** Woodside clarified that light emissions cannot be avoided where lighting is required for navigation, safe night-time operations, crew safety and vessel visibility. Woodside advised that impacts will be managed by minimising non-essential external lighting, implementing the Woodside Offshore Seabird Management Plan and applying relevant crew-training and light-reduction measures when operating within 20 km of Sandy Islet during green turtle nesting and peak hatchling emergence periods.	**(27)** No changes or additional measures are required. Routine light emissions are assessed in Section 6.8.4. of the EP.
(28) Requested information on the procedure following a marine fauna strike.	**(28)** Woodside considers that accidental vessel collision with threatened or migratory marine fauna is identified as a potential unplanned interaction in the EP, with incident reporting and investigation requirements in place to inform corrective actions.	**(28)** Woodside advised that accidental collision between survey vessels and threatened or migratory marine fauna is identified as a potential unplanned interaction in the EP. Woodside noted that any threatened or migratory marine fauna strike would be reported to relevant authorities in accordance with incident reporting requirements, with investigation undertaken to inform corrective actions.	**(28)** No changes or additional measures are required. Section 7.11.4 addresses external incident reporting requirements (Table 7-7).
(29) Requested information on objects or equipment that may be dropped or lost during planned activities.	**(29)** Woodside considers that potential dropped objects and lost equipment are identified and assessed in the EP, with impacts expected to be localised and managed through procedural controls,	**(29)** Woodside advised that objects or equipment may be dropped or lost during vessel deck activities or deployment, operation and retrieval of survey equipment.	**(29)** No changes or additional measures are required. Dropped objects and loss of geophysical or geotechnical equipment are assessed in Section 6.9.4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	cultural heritage assessment and recovery where safe and practicable.	Woodside noted that potential impacts may include localised disturbance to benthic habitat and, where relevant, cultural heritage, and that dropped objects and equipment will be recovered where safe and practicable.	
(30) Requested information on the types, volumes and chemicals associated with accidental discharges from survey vessels, and potential impacts from changes to water quality.	**(30)** Woodside considers that potential accidental discharges and associated water quality impacts are assessed and managed in the EP, with impacts expected to be localised, short term and limited to the immediate release location.	**(30)** Woodside advised that non-routine discharges may include small volumes of hydrocarbons, operational fluids or hydraulic fluid, with chemicals selected to minimise practicable environmental impacts and risks through Woodside's chemical assessment process. Woodside noted that potential impacts are expected to be localised and short term, primarily involving temporary reduced water quality and potential contact with marine fauna near the release location.	**(30)** No changes or additional measures are required. Unplanned deck and subsea spills from geotechnical and geophysical equipment are addressed in Section 6.9.6 of the EP.
(31) Requested information on cumulative impacts of the proposed GPGT survey activities with existing and proposed nearby activities, and cumulative impacts associated with broader upstream and downstream Browse Project activities.	**(31)** Woodside considers that the EP assesses cumulative impacts relevant to the proposed GPGT survey activities, including interaction with other activities where there is realistic potential for temporal and spatial overlap. Woodside maintains that broader upstream and downstream activities, including gas production, pipeline operation and onshore processing, are outside the scope of the EP and are subject to separate environmental approvals and assessments.	**(31)** Woodside advised that the proposed GPGT surveys are discrete, short-term and localised data acquisition activities addressed through separate EPs. Woodside noted that the EP considers cumulative impacts where there is realistic potential for overlapping temporal and spatial effects, and that potential cumulative impacts are expected to be limited and temporary. Woodside clarified that broader upstream and downstream activities are outside the scope of the EP and are subject to separate environmental approvals and assessments.	**(31)** No changes or additional measures are required. Cumulative impacts relevant to the proposed GPGT survey activities are considered within the impact and risk assessment sections of Section 6.8 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(32) Requested information demonstrating that environmental impacts and risks of the proposed activities will be reduced to ALARP, including through consideration of control measures.	**(32)** Woodside considers that the EP demonstrates impacts and risks are reduced to ALARP through structured hazard and impact identification, evaluation of proportionate control measures, and application of controls consistent with industry practice and regulatory expectations.	**(32)** Woodside advised that the EP demonstrates impacts and risks are reduced to ALARP through structured risk assessment processes, evaluation of control measures proportionate to risk, and application of controls consistent with industry practice and regulatory expectations.	**(32)** No changes or additional measures are required. The ALARP assessment methodology is addressed in Section 2, and ALARP demonstrations are included in the planned and unplanned impact and risk assessment sections of Section 6 of the EP.
(33) Requested information demonstrating that environmental impacts and risks of the proposed activities will be of an acceptable level.	**(33)** Woodside considers that residual impacts and risks are evaluated against defined consequence and acceptability criteria, and that the EP demonstrates impacts and risks will be of an acceptable level.	**(33)** Woodside advised that residual impacts and risks are evaluated against defined consequence criteria and demonstrated to be of an acceptable level, with no significant or long-term impacts to environmental receptors predicted.	**(33)** No changes or additional measures are required. The ALARP assessment methodology is addressed in Section 2, and ALARP demonstrations are included in the planned and unplanned impact and risk assessment sections of Section 6 of the EP.
(34) Requested information on the environmental performance outcomes, environmental performance standards and measurement criteria adopted for the proposed GPGT survey activities.	**(34)** Woodside confirms that the EP includes environmental performance outcomes, environmental performance standards and measurement criteria for each credible impact and risk associated with the proposed GPGT survey activities.	**(34)** Woodside advised that the EP includes activity-specific environmental performance outcomes, environmental performance standards and measurement criteria for each evaluated impact and risk. Woodside noted these are linked to controls adopted through the ENVID and ALARP process and provide the basis for monitoring, auditing and measuring whether impacts and risks are managed to ALARP and acceptable levels.	**(33)** No changes or additional measures are required. Environmental performance outcomes, environmental performance standards and measurement criteria are included in the planned and unplanned impact and risk assessment sections of Section 6 of the EP.
(35) Requested information on the implementation strategy and monitoring, recording and reporting arrangements	**(35)** Woodside confirms that the EP includes an implementation strategy that sets out roles and responsibilities, monitoring,	**(35)** Woodside advised that the EP includes an implementation strategy outlining roles and responsibilities, monitoring,	**(35)** No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

for managing environmental impacts and risks associated with the proposed GPGT survey activities.	recording and reporting requirements, and audit and review processes to support effective implementation of environmental controls and ongoing compliance.	recording and reporting requirements, and audit and review processes. Woodside noted these arrangements support effective implementation of environmental controls and ongoing compliance.	The implementation strategy, including monitoring, audit and review arrangements, is addressed in Section 7 of the EP.
(36) Stated that access to a draft EP would assist CCWA to make an informed assessment of the proposed activities and associated environmental impacts and risks.	**(36)** Woodside does not provide EP drafts during the development of an EP. The Consultation Information Sheet provided to CCWA provided sufficient information for CCWA to make an informed assessment of the potential impacts of the activity and provide feedback during consultation.	**(36)** Woodside advised that the EP will be made available on NOPSEMA's website following submission.	**(36)** No changes or additional measures are required.
(37) Stated that the EP should not be accepted until the requirements of regulation 25 of the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth)* had been met.	**(37)** Woodside notes CCWA's position and does not agree that the EP fails to meet the applicable consultation or acceptance requirements.	**(37)** Woodside noted CCWA's position. Woodside advised that it does not agree that the Commonwealth EP has not met the criteria for acceptance under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth).*	**(37)** No changes or additional measures are required.
Woodside has addressed claims or objections as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.7.1 of the EP).	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CCWA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CCWA sufficient information to allow CCWA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to CCWA on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 28 May 2026, CCWA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable CCWA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to CCWA in response to CCWA's feedback (Woodside's email of 30 July 2026).

Reasonable Period

Woodside allowed CCWA a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to CCWA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CCWA 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed CCWA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CCWA is appropriate and adapted to the nature of interests of CCWA:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding CCWA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- CCWA provided feedback or claims or objections regarding the adverse impact of the proposed activity to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from CCWA and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
  - Made no changes or inclusions to the EP as a result of consultation with CCWA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.10.3 Greenpeace Australia Pacific (GPAP)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed GPAP advising of the proposed activity (Record of Consultation, reference 6.1.7) and provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 19 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 28 May 2026, GPAP emailed Woodside and raised item **(1)** (SI Report A, reference 16.1).
- On 28 May 2026, Woodside emailed GPAP and responded to item **(1)** (SI Report A, reference 16.2).
- On 18 June 2026, GPAP emailed Woodside. GPAP raised items **(2) – (21)** (SI Report A, reference 16.3).
- On 30 July 2026, Woodside emailed GPAP. Woodside responded to items **(2)** – **(21)** (SI Report A, reference 16.4).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1)	**(1)**	**(1)**	**(1)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Requested an extension of time to provide feedback.	Woodside considered GPAP's request for an extension and agreed to provide additional time.	Woodside noted GPAP's request and granted an extension to the consultation period.	No changes or additional measures are required.
(2) Stated that the complexity and number of proposed EPs, the resources required to assess them and the limited resources available to environmental advocacy organisations affected GPAP's ability to participate comprehensively in consultation. GPAP questioned whether sufficient information and a reasonable period had been provided and whether the consultation process achieved its intended purpose.	**(2)** Woodside does not agree that GPAP was not provided with sufficient information or a reasonable period to participate in consultation. Woodside considers that sufficient information was provided to enable GPAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Woodside also granted GPAP's request for additional time to provide feedback and considered the substantive matters raised in its correspondence.	**(2)** Woodside advised that it did not agree with GPAP's contention that sufficient information had not been provided. Woodside noted that GPAP had been provided with consultation information concerning the proposed activities, receiving environment, potential impacts and risks, and proposed management measures. Woodside also granted GPAP additional time to provide feedback and assessed the merits of relevant objections and claims raised in GPAP's correspondence.	**(2)** No changes or additional measures are required.
(3) Provided an overview of GPAP and its core focus areas.	**(3)** Woodside notes the items raised and the organisation's focus areas as stated in its correspondence.	**(3)** Woodside noted the items raised by GPAP.	**(3)** No changes or additional measures are required.
(4) Stated concern that the EP does not adequately assess potential impacts to Scott Reef and its ecological values, including pygmy blue whales and nesting turtles, due to an asserted lack of site-specific acoustic modelling, ecological baseline information and cumulative impact assessment. GPAP further stated that acoustic survey activities could cause catastrophic and cascading harm to marine ecosystems.	**(4)** Woodside considers that the EP identifies Scott Reef Nature Reserve, surrounding habitats, protected areas and key ecological features as important environmental receptors and assesses potential planned and unplanned impacts and risks to these receptors. Woodside does not agree that the proposed GPGT survey activities would cause catastrophic or cascading harm to marine ecosystems and considers that relevant impacts and risks can be reduced to ALARP and acceptable	**(4)** Woodside advised that the EP identifies Scott Reef Nature Reserve and surrounding habitats, protected areas and key ecological features as important environmental receptors and assesses planned and unplanned impacts and risks to these receptors. Woodside confirmed that underwater acoustic modelling of vessel noise has been undertaken and noted that vessel noise is the dominant noise source, with	**(4)** No changes or additional measures are required. Scott Reef Nature Reserve, relevant protected areas, key ecological features and protected species are described in Sections 4.6 to 4.8 of the EP. Routine acoustic emissions are assessed in Section 6.8.3 of the EP. Unplanned impacts and risks are assessed in Sections 6.9 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	levels through the controls described in the EP.	equipment-related noise contributing a smaller and more localised component. Woodside disagreed that the proposed activities would cause catastrophic or cascading harm to marine ecosystems.	
(5) Stated its general objection to new oil and gas projects and its support for the phase-out of fossil fuel production and operations.	**(5)** Woodside notes GPAP's position.	**(5)** Woodside noted GPAP's position.	**(5)** No changes or additional measures are required.
(6) Identified Scott Reef's ecological significance and protected status, and stated that the Operational Area overlaps key ecological features and biologically important areas (BIA) for pygmy blue whales, green turtles and hawksbill turtles.	**(6)** Woodside notes GPAP's comments regarding the ecological significance and protected status of Scott Reef and the identified key ecological features and BIAs. Woodside is aware Scott Reef is a Commonwealth Nature Reserve.	**(6)** Woodside advised that it is aware of Scott Reef's designation as a Commonwealth Nature Reserve and noted GPAP's comments regarding the identified key ecological features and BIAs.	**(6)** No changes or additional measures are required. Protected species and BIAs, key ecological features and protected areas relevant to the proposed activities are described in Sections 4.6 to 4.9 of the EP.
(7) Described Scott Reef and Seringapatam Reef as unique atoll-form reef systems supporting high biodiversity, including species not yet formally described and species with limited regional distributions.	**(7)** Woodside acknowledges the ecological significance of Scott Reef and Seringapatam Reef. Woodside considers them to be among a limited number of remote, oceanic, atoll-form or atoll-like reef systems in Australian waters.	**(7)** Woodside advised that Scott Reef and Seringapatam Reef are among a limited number of remote, oceanic, atoll-form or atoll-like reef systems in Australian waters, noting other examples including Rowley Shoals, Ashmore Reef, and Elizabeth and Middleton Reefs.	**(7)** No changes or additional measures are required. Scott Reef, Seringapatam Reef and relevant reef habitats, biological communities and key ecological features are described in Sections 4.5, 4.7 and 4.8 of the EP.
(8) In regard to the wider Browse to NWS Project, GPAP stated independent ecological analysis found that Scott Reef supports internationally significant migratory species, including pygmy blue whales, and that the proposed project activities risk breaching Australia's	**(8)** Woodside acknowledges the ecological significance of Scott Reef and the broader region, including the presence of migratory species such as pygmy blue whales. Woodside does not agree that the proposed GPGT survey activities would	**(8)** Woodside acknowledged the ecological significance of Scott Reef and the broader region, including the presence of migratory species such as pygmy blue whales. Woodside advised that it does not agree the activities proposed under the EP	**(8)** No changes or additional measures are required. Protected species, including pygmy blue whales, and relevant BIAs are described in Section 4.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

international biodiversity and migratory species obligations.	result in a breach of Australia's international biodiversity or migratory species obligations and considers that the EP assesses and manages impacts and risks to relevant protected species and environmental values in accordance with applicable Australian legislative and regulatory requirements. Matters relating to the broader Browse to NWS Project are outside the scope of this EP.	would breach Australia's international biodiversity or migratory species obligations and noted that the EP has been prepared in accordance with applicable Australian legislative and regulatory requirements. Woodside clarified that matters relating to the broader Browse to NWS Project are outside the scope of this EP.	
(9) Stated that the characterisation of acoustic impacts from GPGT survey equipment as localised, temporary and unlikely to result in lasting effects is not supported by evidence or site-specific data.	**(9)** Woodside considers that potential impacts from the proposed GPGT survey equipment are primarily limited to localised and temporary behavioural disturbance, with physiological auditory effects expected to occur over small and predictable ranges. Woodside has assessed that additional equipment-specific modelling is not required because vessel noise is the dominant sound source and equipment-related noise is comparatively smaller and more localised.	**(9)** Woodside advised that underwater acoustic modelling has been undertaken for vessel noise scenarios and documented in the EP. Woodside noted that vessel noise is the dominant sound source, while equipment-related noise is comparatively smaller and more localised. Woodside further advised that MBES and SSS produce high-frequency, directional sound that attenuates rapidly, while detectable SBP emissions are low-power, intermittent, short-pulse and highly directional, with potential impacts expected to be localised and short-range.	**(9)** No changes or additional measures are required. Geophysical survey equipment is described in Section 3.6 of the EP. Routine acoustic emissions are assessed in Section 6.8.3 of the EP.
(10) Stated that baseline ecological surveys for Scott Reef and the Operational Area have not been completed or referenced, and that the environmental information is not available to support the impact assessment.	**(10)** Woodside considers that the range of available environmental information, including published literature, government datasets, protected matters information, environmental studies and long-term monitoring at Scott Reef,	**(10)** Woodside advised that the EP is informed by a broad range of available environmental information, including published literature, government datasets, protected matters information,	**(10)** No changes or additional measures are required. The description of the existing environment is covered in Section 4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	provides an appropriate basis for assessing potential impacts and risks associated with the proposed activities.	environmental studies and knowledge of the receiving environment. Woodside also noted that long-running monitoring programs, including the AIMS Scott Reef Research Program and ongoing acoustic and ecological monitoring, provide a strong basis for the impact assessments in the EP.	Routine acoustic emissions are assessed in Section 6.8.3 of the EP.
(11) Stated that site-specific acoustic modelling has not been undertaken for proposed geophysical survey equipment and that ALARP cannot be demonstrated.	**(11)** Woodside has assessed that vessel noise is the dominant sound source and that equipment-related acoustic emissions are smaller, intermittent, more localised and predictable based on known equipment specifications and previous activities. Potential effects are expected to be primarily limited to temporary behavioural disturbance, with physiological auditory effects occurring over small and predictable ranges.	**(11)** Woodside confirmed that underwater acoustic modelling of vessel noise sources has been undertaken to inform the EP. Woodside advised that the acoustic characteristics of the proposed survey equipment are well understood and predictable, and that equipment-related noise contributes a smaller, intermittent and more localised component to the overall sound field than vessel noise. Woodside further advised that additional equipment-specific or more complex acoustic modelling is not considered necessary because the proposed GPGT activities do not involve high-intensity, large-scale or impulsive sound fields, or a credible pathway for accumulated exposure leading to injury.	**(11)** No changes or additional measures are required. Geophysical survey equipment is described in Section 3.6 of the EP. Routine acoustic emissions are assessed in Section 6.8.3 of the EP.
(12) Stated that the proposed underwater noise controls are not adequately tailored to near Scott Reef, and questioned the effectiveness of visual observations.	**(12)** Woodside has assessed that the controls are proportionate to the potential impacts and risks to marine fauna and appropriately account for BIAs and the potential presence of sensitive species, including pygmy blue whales.	**(12)** Woodside advised that the EP includes observation-based controls, including trained crew to identify and manage marine fauna interactions and a qualified marine fauna observer for geotechnical drilling activities.	**(12)** No changes or additional measures are required. Pygmy blue whale BIA and relevant protected species are described in Section 4.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside considers that activity-specific observation, timing and operational controls are appropriate where the relevant environmental and operational prerequisites apply.	For activities that may ensonify the pygmy blue whale possible foraging BIA and require the use of dynamic positioning thrusters, a 30-minute pre-start observation period will apply out to the modelled 3.4 km behavioural response threshold. Woodside further advised that, where possible, activities with potential acoustic impacts will be limited within the possible foraging BIA during times when pygmy blue whales are likely to be foraging, including an avoidance period for geotechnical drilling activities. Woodside also noted that ongoing acoustic and ecological monitoring is being undertaken at Scott Reef.	Routine acoustic emissions are assessed in Section 6.8.3 of the EP.
(13) Cited reported impacts from marine seismic surveys on commercial fishing and NOPSEMA's decision on the Regia 3D Marine Seismic Survey.	**(13)** Woodside does not agree that the studies cited by GPAP or NOPSEMA's decision on the Regia 3D Marine Seismic Survey demonstrate that impacts and risks from the proposed GPGT survey activities cannot be reduced to ALARP and acceptable levels. Woodside considers that the proposed GPGT survey activities are not analogous to the referenced marine seismic survey.	**(13)** Woodside advised that it does not agree the cited studies or NOPSEMA's decision on the Regia 3D Marine Seismic Survey demonstrate that impacts and risks from the proposed GPGT survey activities cannot be reduced to ALARP and acceptable levels. Woodside clarified that the proposed activities are geophysical and geotechnical survey activities and are not analogous to the referenced marine seismic survey.	**(13)** No changes or additional measures are required.
(14) Stated that the proposed activities raise potential risks including underwater noise, light emissions, habitat and seabed disturbance, and cumulative	**(14)** Woodside has assessed that the EP addresses impacts and risks associated with underwater acoustic emissions, light emissions, habitat and seabed	**(14)** Woodside advised that the EP addresses impacts and risks associated with underwater acoustic emissions, light emissions, habitat and seabed	**(14)** No changes or additional measures are required. Potential impacts and risks associated with seabed disturbance, routine

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

impacts associated with other offshore activities.	disturbance, and potential cumulative impacts where there is temporal and spatial overlap with other activities.	disturbance, and potential cumulative impacts where there is temporal and spatial overlap with other activities.	acoustic emissions and routine light emissions are assessed in Sections 6.8.2, 6.8.3 and 6.8.4 of the EP, respectively.
(15) Stated that potential impacts include habitat damage, smothering of benthic habitats, increased turbidity and sedimentation, behavioural disruption, disorientation, bioaccumulation of toxic substances, injury and mortality.	**(15)** Woodside considers that the EP addresses risks with the potential to impact relevant receptors, including marine habitats, benthic communities, marine fauna and protected species. Woodside considers that relevant impact pathways are assessed and subject to controls and management measures to avoid or minimise impacts and reduce risks to ALARP and acceptable levels.	**(15)** Woodside advised that the EP addresses risks with the potential to impact marine habitats, benthic communities, marine fauna and protected species. Woodside further advised that relevant impact pathways, including underwater noise, vessel presence, seabed interaction, discharges and accidental events where applicable, are assessed based on the nature, scale, duration and location of the activities, with controls and management measures developed to avoid or minimise impacts and reduce risks to ALARP and acceptable levels.	**(15)** No changes or additional measures are required. Potential impacts associated with seabed disturbance, routine acoustic emissions, routine light emissions and routine and non-routine discharges are assessed in Sections 6.8.2, 6.8.3, 6.8.4 and 6.8.6 of the EP, respectively. Potential unplanned impacts and risks are assessed in Sections 6.9 of the EP.
(16) Stated concern regarding the cumulative acoustic impacts of GPGT survey activities near Scott Reef.	**(16)** Woodside considers that the proposed GPGT survey activities are not equivalent to conventional marine seismic surveys, as they are lower intensity, more localised and more temporary in nature. Woodside considers that noise-generating activities are unlikely to occur continuously throughout each survey period and that the EP conservatively assesses repeated, recurring and potential cumulative impacts where relevant.	**(16)** Woodside advised that the proposed GPGT survey activities are lower intensity, more localised and more temporary than conventional marine seismic surveys. Woodside further advised that, while activities may occur over the five-year EP term, noise-generating activities are unlikely to operate continuously throughout each survey period due to operational pauses, downtime and scheduling considerations. The EP assesses potential activities conservatively, including repeated,	**(16)** No changes or additional measures are required. The timing and duration of the proposed activities are described in Section 3.5 of the EP. Routine acoustic emissions are assessed in Section 6.8.3 of the EP. Potential cumulative impacts are considered within the relevant impact and risk assessments in Section 6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		recurring and cumulative impacts where relevant.	
(17) Stated that the proposed geophysical survey equipment may generate underwater acoustic emissions capable of impacting marine fauna and that these risks should be characterised and managed in accordance with the precautionary principle and ALARP framework.	**(17)** Woodside considers that the acoustic characteristics and potential impacts and risks of the proposed geophysical survey equipment are appropriately described and assessed in the EP. Woodside considers that GPGT equipment differs from conventional seismic survey sources in its acoustic energy, directionality, penetration depth and spatial extent, and that controls have been selected according to the sensitivity of the receiving environment and in accordance with ALARP and acceptability criteria.	**(17)** Woodside advised that MBES and SSS use short, high-frequency, directional pulses focused toward the seabed, while SBP systems are used for shallow sub-bottom profiling and have a more limited penetration depth than conventional seismic survey methods. Woodside advised that these sources differ from those with sources used by seismic surveys over broader areas to image deeper geological formations. Woodside further advised that the EP assesses the potential impacts and risks associated with predicted acoustic emissions and includes controls selected according to the sensitivity of the receiving environment and in accordance with ALARP and acceptability criteria.	**(17)** No changes or additional measures are required. Routine acoustic emissions are assessed in Section 6.8.3 of the EP.
(18) Cited studies on potential effects of marine seismic surveys on commercial fish catch rates, zooplankton and krill, cetaceans, reef-associated invertebrates and coral communities. GPAP stated that these findings indicate potential impacts to marine ecosystems and pygmy blue whale prey availability at Scott Reef.	**(18)** Woodside acknowledges that the cited studies may inform understanding of potential effects from marine seismic surveys but does not agree that their findings can be directly applied to the proposed GPGT survey activities without considering differences in activity type, acoustic source characteristics, receiving environment and receptor ecology. Woodside considers that the EP assesses underwater acoustic emissions and seabed disturbance as relevant	**(18)** Woodside acknowledged the studies cited by GPAP regarding potential effects of marine seismic surveys on commercial fisheries, zooplankton, krill, cetaceans and reef-associated fauna. Woodside advised that caution is required when applying these findings to the proposed GPGT survey activities because the cited studies principally relate to high-energy seismic airgun surveys, which differ from the proposed MBES, SSS and SBP equipment in source characteristics, operating	**(18)** No changes or additional measures are required. Routine acoustic emissions are assessed in Section 6.8.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	impact pathways, including potential effects on planktonic communities, benthic invertebrates, coral communities, marine fauna and key ecological features. Woodside does not agree that reef-associated invertebrates or coral communities have been excluded from assessment in the EP.	frequencies, source levels and acoustic footprints. Woodside further advised that the EP assesses potential effects of underwater acoustic emissions and seabed disturbance on habitats and ecosystems, including planktonic communities, benthic invertebrates, coral communities and key ecological features. Woodside also noted that long-term ecological and acoustic monitoring is being undertaken at Scott Reef to improve understanding of pygmy blue whale presence, prey availability and the relationship between prey occurrence and whale activity.	
(19) Cited NOPSEMA's decision on the Regia 3D Marine Seismic Survey and stated that the same precautionary standard should be applied to the proposed activities.	**(19)** Woodside does not agree that NOPSEMA's decision on the Regia 3D Marine Seismic Survey demonstrates that impacts and risks associated with the proposed GPGT survey activities cannot be reduced to ALARP and acceptable levels. Woodside considers that the proposed GPGT survey activities are not analogous to the referenced marine seismic survey.	**(19)** Woodside advised that it does not agree NOPSEMA's decision on the Regia 3D Marine Seismic Survey demonstrates that impacts and risks associated with the proposed GPGT survey activities cannot be reduced to ALARP and acceptable levels. Woodside clarified that the proposed activities are GPGT activities and are not analogous to the referenced marine seismic survey.	**(19)** No changes or additional measures are required.
(20) Objected to the EP and requested that NOPSEMA withhold acceptance.	**(20)** Woodside notes GPAP's position and does not agree that the EP fails to meet the applicable acceptance criteria.	**(20)** Woodside noted GPAP's objection and request that NOPSEMA withhold acceptance. Woodside advised that it does not agree that the EP has not met the criteria for acceptance under the *Offshore Petroleum and Greenhouse Gas*	**(20)** No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Storage (Environment) Regulations 2023 (Cth).	
(21) Stated its objection to the proposed activities.	**(21)** Woodside notes GPAP's position.	**(21)** Woodside noted GPAP's position.	**(21)** No changes or additional measures are required.
Woodside has addressed claims or objections as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.7.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with GPAP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given GPAP sufficient information to allow GPAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to GPAP on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 18 June 2026, GPAP shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable GPAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to GPAP in response to GPAP's feedback (Woodside's email of 30 July 2026).

Reasonable Period

Woodside allowed GPAP a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to GPAP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed GPAP 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed GPAP a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with GPAP is appropriate and adapted to the nature of interests of GPAP:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Between May and August 2026, Woodside held information stalls at community events in the Pilbara region to raise awareness of the EP and provide additional opportunities for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 May 2026, reminding GPAP of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- GPAP provided feedback or claims or objections regarding the adverse impact of the proposed activity to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from GPAP and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
  - Made no changes or inclusions to the EP as a result of consultation with GPAP because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.10.4 Vocus

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Vocus advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community',* and a submarine communication cables map.
- On 30 April 2026, Vocus thanked Woodside for the notification (SI Report A, reference 17.1). Vocus raised items **(1)** – **(2)**.
- On 9 July 2026, Woodside thanked Vocus for their email (SI Report A, reference 17.2). Woodside responded to items **(1)** – **(2)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Noted that the North West Cable System (NWCS) Vocus fibre optic cable shown as proposed is in fact active.	**(1)** Woodside is aware NWCS Vocus fibre optic cable is active and not proposed.	**(1)** Woodside confirmed it is aware the NWCS Vocus fibre optic cable is no longer proposed, but active.	**(1)** No changes or additional measures are required. Submarine communication infrastructure is described in Section 4.10.6 of the EP.
(2) Noted that as the activity relates to a survey only Vocus has no concerns.	**(2)** Woodside acknowledges that Vocus has no concerns due to the nature of the activity.	**(2)** Woodside noted that as the activity was for GPGT surveys, Vocus had no concerns.	**(2)** No changes or additional measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Vocus for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Vocus sufficient information to allow Vocus to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since April 2026. Woodside gave this information to Vocus on 28 April 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the Petroleum Activities Program, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided Vocus with information tailored to Vocus by providing a submarine cables map in relation to the activity.
- On 30 April 2026, Vocus shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Vocus to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Vocus a reasonable period for consultation in the preparation of the EP because:

- A consultation period was stated in the initial correspondence to Vocus advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Vocus 30 days for consultation.
- Consultation for this EP commenced 5 months ago.
- In this context, Woodside allowed Vocus a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Vocus is appropriate and adapted to the nature of interests of Vocus:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Vocus provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24(b) and 34(g), Woodside has:
  - Responded to feedback from Vocus.
  - Made no changes or inclusions to the EP as a result of consultation with Vocus because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.11 Traditional custodians and nominated representative corporations

4.11.1 Bardi and Jawi Niimidiman Aboriginal Corporation (BJNAC)

BJNAC is established under the *Native Title Act 1993 (Cth)* by the Bardi and Jawi People to represent the Bardi and Jawi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed BJNAC advising of the proposed activity (Record of Consultation, reference 6.1.24). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Information about an Underwater Cultural Heritage study of the proposed Browse to NWS Project Area.
- On 19 May 2026, Woodside emailed BJNAC a reminder about the proposed activity (SI Report B, reference 1.1.1). The email included:
  - A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- **(1-3)** On 29 September 2026, BJNAC, Nimanburr (which Woodside chose to contact but is not relevant to this EP), WAC and Joombarn-buru (a group not relevant to this EP) emailed a letter to Woodside (SI Report B, reference 1.1.2).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1-3)** On 5 October 2026, Woodside replied to BJNAC, Nimanburr (which Woodside chose to contact, but is not relevant to this EP), WAC and Joombarn-buru (a group not relevant to this EP) and informed the PBCs that their letter dated 29 September 2026 had been referred to another part of the Woodside business for response (SI Report B, reference 1.1.3).
- **(1-3)** On 6 October 2026, Woodside responded to BJNAC, Nimanburr (which Woodside chose to contact but is not relevant to this EP), WAC and Joombarn-buru) (a group not relevant to this EP) and addressed matters raised in correspondence dated 29 September 2026 (SI Report 1.1.4)
- **(1-3)** On 14 October 2026, Woodside received an email from Joombarn-buru (a group not relevant to this EP), BJNAC, Nimanburr (which Woodside chose to contact but is not relevant to this EP) and WAC (SI Report B, reference 1.1.5).
- **(1-3)** On 22 October 2026, Woodside replied to the email received on 14 October 2026 (SI Report B, reference 1.1.6).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Woodside has not meaningfully consulted with Traditional Owners. Being contacted is not the same as being properly consulted. The timeframe for consultation did not give Traditional Owners a practical opportunity to respond. A lack of response to correspondence should not be interpreted as an absence of concern.	**(1)** Woodside rejects the assertion that it has not meaningfully consulted with Traditional Owners. Woodside has determined relevant Traditional Owner groups to consult with in accordance with its established consultation methodology. Woodside has met its regulatory obligations by providing relevant Traditional Owner groups: • Sufficient information. • A reasonable consultation period, • A reasonable opportunity to provide feedback.	**(1)** Woodside does not agree that it has not provided meaningful opportunities for Traditional Owner groups assessed as relevant for this EP to provide feedback and engage in consultation. Woodside began consultation on 28 April 2026 and requested feedback by 28 May 2026 to support preparation of the EPs. Woodside provided a Summary Information Sheet specifically developed by Woodside's Indigenous Affairs Team, along with a link to a more detailed Consultation Information Sheet. Woodside also invited questions, requests for further information and offered to meet to discuss the proposed activities. Although the formal consultation period has closed, Woodside continues to receive feedback for the life of the EP which will be considered as part of ongoing engagement.	**(1)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(2) Consultation with a PBC should not be treated as a substitute for engagement with the relevant Traditional Owners and cultural knowledge holders.	**(2)** In accordance with Woodside's established methodology, Woodside engages Traditional Owners through their nominated representative bodies when consulting on EPs.	**(2)** Woodside's consultation with Traditional Owners about Woodside's activities is guided by an established methodology designed to support compliance with applicable regulations and informed by the principles of the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP). Woodside engages Traditional Owners through their nominated representative bodies and invites them to share information with members.	**(2)** No action required.
(3) Joombarn-buru has requested Woodside meet Joombarn-buru, BJNAC, Nimanburr, and WAC in Broome. The agenda would include discussion about a joint consultation approach and consultation framework regarding Woodside's offshore activities relevant to Kimberley Sea Country.	**(3)** Titleholders are not required to receive or enter into consultation framework agreements with relevant persons to satisfy consultation requirements. Woodside is willing to discuss proposals for consultation framework agreements. These discussions would occur in parallel to EP consultation.	**(3)** Woodside has agreed to meet Joombarn-buru, BJNAC, Nimanburr and WAC to discuss this EP and the wider Browse Project. Woodside has also requested that the groups inform it if would like information about any other Woodside activities that may impact the groups' functions, interests and activities. Any proposal regarding a consultation framework agreement would need to be considered through Woodside's established governance and approval processes. While Woodside is open to discussing a consultation framework agreement with the PBCs, it is not a prerequisite for EP consultation. Any discussions regarding a consultation framework agreement would occur separately and in parallel to EP consultation.	**(3)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has addressed objections and claims, as noted above.	Woodside has assessed the merits of any objection or claim (if any) about the adverse impact of the activity to which the EP relates as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, no changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 28 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 28 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- While feedback was received, there were no objections or claims relating specifically to the activity.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.2 Boorroola Moorrool Moorrool (BMM)

The Boorroola Moorrool Moorrool claim was filed in 2016 and covers approximately 378 square kilometres of land and waters in the north-west Kimberley in Western Australia. The claim area includes Derby and overlaps another native title claim, the Warrwa Combined application. Woodside has consulted with BMM through the group's legal representatives as noted by the Native Title Tribunal (Applications and Determinations).

Summary of information provided and record of consultation for this EP:

- On 10 August 2026, Woodside emailed BMM via its legal representative advising of the proposed activity (Record of Consultation, reference 6.1.25). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 10 September 2026 for the purposes of preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.

- On 24 August 2026, Woodside emailed BMM via its legal representative a reminder about the proposed activity (SI Report B, reference 1.2.1). The email included:
  - A reference to the original consultation email for this EP sent on 10 August 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 10 September 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- **(1-4)** On 10 September 2026, BMM via its legal representative emailed Woodside (SI Report B, reference 1.2.2).
- **(1-4)** On 22 September 2026, Woodside replied to BMM's letter of 10 September 2026 (SI Report B, reference 1.2.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) No meaningful consultation has occurred.	**(1)** Woodside rejects this assertion. Woodside has provided BMM via its legal representative sufficient information, a reasonable period and reasonable opportunity to provide feedback in relation to this EP. Woodside will continue to accept feedback from BMM as part of ongoing consultation and has offered to meet BMM to discuss the EP in more detail.	**(1)** Woodside has confirmed in writing that consultation in relation to the EP commenced on 10 August 2026 when Woodside provided consultation information and made offers to provide further information, answer questions or meet. Woodside confirmed that although the formal consultation period has closed, BMM is welcome to provide feedback throughout the life of the EP.	**(1)** No action required.
(2) The timeframes for consultation were inadequate. BMM requests Woodside extend the consultation period.	**(2)** Woodside began consulting with BMM on 10 August 2026 and requested feedback by 10 September 2026. This	**(2)** Timeframes provided for consultation on this EP aligned with Woodside's established consultation methodology.	**(2)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	period aligned with Woodside's established methodology. The formal consultation period has closed however BMM is welcome to submit feedback throughout the life of the EP.	Although the formal consultation period has closed, BMM is welcome to provide feedback throughout the life of the EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	
(3) BMM requests Woodside enter a consultation protocol for the broader North West Shelf project. BMM has provided Woodside with a draft protocol and requested a meeting to discuss this document.	**(3)** A consultation protocol is not a pre-requisite for EP consultation.	**(3)** Woodside will review BMM's draft consultation protocol and will provide feedback separately in due course. A consultation protocol is not a prerequisite for EP consultation however Woodside values the opportunity to discuss the protocol and will continue those discussions separately and in parallel to consultation for this EP.	**(3)** No action required.
(4) BMM requests any available documentation that will inform the EP and the draft EP.	**(4)** Woodside has provided BMM with sufficient information including a summary information sheet and link to a detailed consultation information sheet. The EP and its contents will be available on the NOPSEMA website after submission. Woodside has offered to meet BMM to discuss the EP's contents in more detail.	**(4)** As the EP is still being drafted at the time of consultation, Woodside offered to provide further detail on any specific aspects relating to the possible consequences on the activity on any of BMM's functions, interests and activities, or provide any further information so that BMM has the opportunity to understand the possible consequences of the proposed activities. Woodside advised BMM that the EP and its contents will be available on the NOPSEMA website after submission.	**(4)** No action required.
Woodside has addressed objections and claims, as noted above.	Woodside has assessed the merits of any objection or claim (if any) about the adverse impact of the activity to which	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be	Based on the engagement to date, no changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the EP relates as required under Regulation 24.	assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided BMM information on 10 August 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 10 August 2026 and requested feedback by 10 September 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's initial email about this EP on 10 August 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- BMM has provided feedback on Woodside's consultation which Woodside has addressed. BMM has not provided feedback relating to the activities within the EP therefore additions to the EP are not required.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.3 Dambimangari Aboriginal Corporation (DAC)

DAC is established under the *Native Title Act 1993 (Cth)* by the Dambimangari people to represent the Dambimangari people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 April 2026 Woodside emailed DAC advising of the proposed activity (Record of Consultation, reference 6.1.26). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Information about an Underwater Cultural Heritage study of the proposed Browse to NWS Project Area.

- On 18 May 2026, DAC responded to Woodside's Record of Consultation and provided two items of feedback **(1, 2)** (SI Report B, reference 1.3.1)
- On 19 May 2026, Woodside emailed DAC a reminder about the proposed activity (SI Report B, reference 1.3.2). The email included:
  - A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 29 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 20 May 2026, Woodside and DAC exchanged emails about **(1, 2)** (SI Report B, references 1.3.3 – 1.3.4).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) DAC will refrain from comment as the EP covers an area north of DAC waters.	**(1)** Woodside acknowledges DAC's decision to refrain from comment.	**(1)** Woodside thanked DAC for its response.	**(1)** No action required.
(2) DAC requested to be notified if its territory is affected by hazardous materials.	**(2)** Woodside notifies relevant Traditional Owner groups in the unlikely event of an unplanned incident.	**(2)** Woodside explained to DAC that this EP relates to sea bottom sampling and scanning but it would inform all stakeholders in the unlikely event of an unplanned incident.	**(2)** No action required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of feedback about the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its	Based on the engagement to date, No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Management of Change and Revision process (see Section 7.8 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 28 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 28 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 April 2026:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
- Offered for Woodside to speak with members as well as the Board.
- Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- While feedback was received there were no objections or claims.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.4 Mayala Inninalang Aboriginal Corporation (MIAC)

MIAC is established under the *Native Title Act 1993 (Cth)* by the Mayala people to represent the Mayala people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed MIAC advising of the proposed activity (Record of Consultation, reference 6.1.32). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.
- On 8 May 2026, MIAC emailed Woodside and requested item **(1)** (SI Report B, reference 1.8.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 11 May 2026, Woodside emailed MIAC a response to item **(1)** (SI Report B, reference 1.8.2).
- Between 12 May and 12 June 2026, Woodside and MIAC exchanged phone calls **(1)**, **(1)** (SI Report B, reference 1.8.3).
- On 19 May 2026, Woodside emailed MIAC a reminder about the proposed activity (SI Report B, reference 1.8.4). The email included:
  - A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 29 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) MIAC requested a summary of Woodside's projects and exploration in the region that might affect MIAC and a consultation schedule. MIAC also sought information about the timing of the Browse Project.	**(1)** Dates for future EP consultation have not been finalised. However, Woodside has material to share with stakeholders about the proposed Browse Project.	**(1)** Woodside spoke to MIAC over the phone about EP timing and the Browse Project. Woodside also offered to meet MIAC in-person to discuss this in more detail.	**(1)** No action required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of feedback about the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, No changes or additional measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 28 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 28 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 April:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.
- Woodside spoke to MIAC on the phone and offered to meet on a number of occasions to discuss the proposed activity.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- While feedback was received there were no objections or claims.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.5 Walalakoo Aboriginal Corporation (WAC)

WAC is established under the *Native Title Act 1993 (Cth)* by the Nyikina Mangala people to represent their communal interests, including the management and protection of cultural values. WAC has self-identified as a relevant person for oil and gas projects in the Browse Basin. As per WAC's direction, Woodside includes WAC's legal representative in all communications about EPs. Woodside has an established but intermittent engagement history with WAC characterised by repeated attempts to initiate consultation and limited direct response.

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed WAC and its legal representative advising of the proposed activity (Record of Consultation, reference 6.1.36). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
- On 19 May 2026, Woodside emailed WAC and its legal representative a reminder about the proposed activity (SI Report B, reference 1.11.1). The email included:
  - A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

- **(1-3)** On 29 September 2026, BJNAC, Nimanburr (which Woodside chose to contact, but is not relevant to this EP), WAC and Joombarn-buru (a group not relevant to this EP) emailed a letter to Woodside (SI Report B, reference 1.11.2).
- **(1-3)** On 5 October 2026, Woodside replied to BJNAC, Nimanburr (which Woodside chose to contact but is not relevant to this EP), WAC and Joombarn-buru (a group not relevant to this EP) and informed the PBCs that their letter dated 29 September 2026 had been referred to another part of the Woodside business for response (SI Report B, reference 1.11.3).
- **(1-3)** On 6 October 2026, Woodside responded to BJNAC, Nimanburr (which Woodside chose to contact but is not relevant to this EP), WAC and Joombarn-buru (a group not relevant to this EP) and addressed matters raised in correspondence dated 29 September 2026 (SI Report 1.11.4)
- **(1-3)** On 14 October 2026, Woodside received an email from Joombarn-buru (a group not relevant to this EP), BJNAC, Nimanburr (which Woodside chose to contact but is not relevant to this EP) and WAC (SI Report B, reference 1.11.5).
- **(1-3)** On 22 October 2026, Woodside replied to the email received on 14 October 2026 (SI Report B, reference 1.11.6).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Woodside has not meaningfully consulted with Traditional Owners. Being contacted is not the same as being properly consulted. The timeframe for consultation did not give Traditional Owners a practical opportunity to respond. A lack of response to correspondence should not be interpreted as an absence of concern.	**(1)** Woodside rejects the assertion that it has not meaningfully consulted with Traditional Owners. Woodside has determined relevant Traditional Owner groups to consult with in accordance with its established consultation methodology. Woodside has met its regulatory obligations by providing relevant Traditional Owner groups: • Sufficient information. • A reasonable consultation period, • A reasonable opportunity to provide feedback.	**(1)** Woodside does not agree that it has not provided meaningful opportunities for Traditional Owner groups assessed as relevant for this EP to provide feedback and engage in consultation. Woodside began consultation on 28 April 2026 and requested feedback by 28 May 2026 to support preparation of the EPs. Woodside provided a Summary Information Sheet specifically developed by Woodside's Indigenous Affairs Team, along with a link to a more detailed Consultation Information Sheet. Woodside also invited questions, requests for further information and offered to meet to discuss the proposed activities. Although the formal consultation period has closed, Woodside continues to	**(1)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		receive feedback for the life of the EP which will be considered as part of ongoing engagement.	
(2) Consultation with a PBC should not be treated as a substitute for engagement with the relevant Traditional Owners and cultural knowledge holders.	**(2)** In accordance with Woodside's established methodology, Woodside engages Traditional Owners through their nominated representative bodies when consulting on EPs.	**(2)** Woodside's consultation with Traditional Owners about Woodside's activities is guided by an established methodology designed to support compliance with applicable regulations and informed by the principles of the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP). Woodside engages Traditional Owners through their nominated representative bodies and invites them to share information with members.	**(2)** No action required.
(3) Joombarn-buru has requested Woodside meet Joombarn-buru, BJNAC, Nimanburr, and WAC in Broome. The agenda would include discussion about a joint consultation approach and consultation framework regarding Woodside's offshore activities relevant to Kimberley Sea Country.	**(3)** Titleholders are not required to receive or enter into consultation framework agreements with relevant persons to satisfy consultation requirements. Woodside is willing to discuss proposals for consultation framework agreements. These discussions would occur in parallel to EP consultation.	**(3)** Woodside has agreed to meet Joombarn-buru, BJNAC, Nimanburr and WAC to discuss this EP and the wider Browse Project. Woodside has also requested that the groups inform it if would like information about any other Woodside activities that may impact the groups' functions, interests and activities. Any proposal regarding a consultation framework agreement would need to be considered through Woodside's established governance and approval processes. While Woodside is open to discussing a consultation framework agreement with the PBCs, it is not a prerequisite for EP consultation.	**(3)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Any discussions regarding a consultation framework agreement would occur separately and in parallel to EP consultation.	
Woodside has addressed objections and claims, as noted above.	Woodside has assessed the merits of any objection or claim (if any) about the adverse impact of the activity to which the EP relates as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, no changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 28 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 28 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has addressed and responded to feedback for five months, demonstrating a “reasonable period” of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside’s approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group’s preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside’s initial email about this EP on 28 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside’s Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- While feedback was received, there were no objections or claims relating specifically to the activity.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.6 Wanjina-Wunggurr (Native Title) Aboriginal Corporation (WWAC)

WWAC is established under the *Native Title Act 1993 (Cth)* by the Wanjina and Wunggur people to represent the Wanjina and Wunggur people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed WWAC advising of the proposed activity (Record of Consultation, 6.1.39). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Information about an Underwater Cultural Heritage study of the proposed Browse to NWS Project Area.

• On 19 May 2026, Woodside emailed WWAC a reminder about the proposed activity (SI Report B, reference 1.12.1). The email included:

- A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
- A reminder that consultation for the preparation of the EP closes on 28 May 2026.
- A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

• On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside provided information on 28 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 28 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information during consultation was provided for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.7 Warrwa Combined (Warrwa)

The Warrwa Combined claim was filed in 2014 and covers approximately 378 square kilometres of land and waters in the north-west Kimberley in Western Australia. The claim area includes Derby and overlaps another native title claim, the Boorroola Moorrool Moorrool. Woodside has consulted Warrwa through the KLC, the group's representative as noted by the Native Title Tribunal.

Summary of information provided and record of consultation for this EP:

- On 10 August 2026, Woodside emailed Warrwa (via KLC) advising of the proposed activity (Record of Consultation, reference 6.1.37). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 10 September 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.
- On 24 August 2026, Woodside emailed Warrwa (via KLC) a reminder about the proposed activity (SI Report B, reference 1.13.1). The email included:
  - A reference to the original consultation email for this EP sent on 10 August 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 10 September 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 10 August 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 10 August 2026 and requested feedback by 10 September 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (6.3.3) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 10 August 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information during consultation was provided for this EP.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.11.8 Wilinggin Aboriginal Corporation (Wilinggin)

Wilinggin Aboriginal Corporation is established under the *Native Title Act 1993 (Cth)* by the Ngarinyin people to represent their communal interests, including the management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Wilinggin advising of the proposed activity (Record of Consultation, reference 6.1.40). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines*, *Consultation Brochure*, and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.

- On 19 May 2026, Woodside emailed Wilinggin a reminder about the proposed activity (SI Report B, reference 1.14.1). The email included:
  - A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 28 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 28 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information during consultation was provided for this EP.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.12 Native Title representative bodies

4.12.1 Kimberley Land Council (KLC)

Kimberley Land Council is the Native Title Representative Body for the Kimberley region of Western Australia. As such, it is not a Prescribed Body Corporate or Registered Native Title Body Corporate but exists to assist Native Title claimants and holders.

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed KLC advising of the proposed activity (Record of Consultation, reference 6.1.29). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines*, *Consultation Brochure*, and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.
- On 19 May 2026, Woodside emailed KLC a reminder about the proposed activity (SI Report B, reference 2.1.1). The email included:
  - A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 28 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines*, *Consultation Brochure*, and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
  - Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 28 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.

Woodside's initial email about this EP on 28 April 2026:

- Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
- Offered for Woodside to speak with members as well as the Board.
- Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information during consultation was provided for this EP.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.2 Northern Land Council (NLC)

NLC is the Native Title Representative Body for the Northern Territory. As such, they are not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community but exist to assist native title claimants and holders.

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed NLC advising of the proposed activity (Record of Consultation, reference 6.1.34). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines*, *Consultation Brochure*, and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.

- On 19 May 2026, Woodside emailed NLC a reminder about the proposed activity (SI Report B, reference 2.2.1). The email included:
  - A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 15 September 2026, Woodside emailed NLC an invitation to meet in Darwin as part of general engagement (SI Report B, reference 2.2.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026 Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 28 April 2026 when consultation commenced. Woodside provided:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 28 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information during consultation was provided for this EP.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.13 Other Indigenous groups

4.13.1 Lombadina Aboriginal Corporation (Lombadina)

Lombadina is a Kimberley□based Aboriginal organisation with connections to coastal and marine environments. Lombadina is not a Prescribed Body Corporate or Registered Native Title Body Corporate under the *Native Title Act 1993 (Cth)*. Lombadina is a recreational marine user (operating under business names 'Garr Kayaking' and 'Lombadina Tours') and is therefore considered a relevant person for this EP.

Summary of information provided and record of consultation for this EP:

- On 29 April 2026, Woodside emailed Lombadina advising of the proposed activity (Record of Consultation, reference 6.1.31). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Policy for Managing Gender-Restricted Information and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.
- On 19 May 2026, Woodside emailed Lombadina a reminder about the proposed activity (SI Report B, reference 1.7.1). The email included:
  - A reference to the original consultation email for this EP sent on 29 April 2026, which included a Summary Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 20 May 2026, Lombadina emailed Woodside and advised it was unable to open the attachments in Woodside's initial consultation email (Summary Information Sheet and Underwater Cultural Heritage study factsheet). Woodside called Lombadina and explained the material. Woodside also made plans to deliver hard copies to Lombadina (SI Report B, references 1.7.2 – 1.7.3).
- On 28 May 2026, Woodside met with Lombadina to discuss this EP and another unrelated activity (SI Report B, reference 1.7.4). Relevant matters discussed included:
  - An overview of the activity.
  - An enquiry from Lombadina **(1)** and Woodside response **(1).**

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Lombadina enquired whether a pipeline would be built as part of the Browse Project.	**(1)** The proposed Browse Project does include a proposed pipeline however this is not part of this EP.	**(1)** Woodside confirmed that the proposed project included a pipeline.	**(1)** No action required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of feedback about the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 29 April 2026 when consultation commenced. Woodside provided:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 29 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside met with Lombadina on 28 May 2026, however, Lombadina did not provide any feedback or information specific to the activities in this EP during consultation. Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5. TABLE 3: ENGAGEMENT REPORT WITH PERSONS OR ORGANISATIONS ASSESSED AS NOT RELEVANT

The black numbering **(N)** in the 'Summary of information provided and record of consultation for this EP' in Table 3 denotes an item raised by a stakeholder. The green numbering **(N)** in this section denotes Woodside's response to that issue.

5.1 Commonwealth and WA State Government departments or agencies – marine

5.1.1 Kimberley Ports

Summary of information provided and record of consultation for this EP:

- On 9 June 2026, Woodside emailed Kimberley Ports, on the recommendation of ASMA – Navigation Safety, of the proposed activity (Record of Consultation, reference 6.1.43), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 2 July 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

- While Kimberley Ports is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Kimberley Ports to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.2 Commonwealth and WA State Government Departments or Agencies – Environment

5.2.1 Department of Water Environment Regulation (DWER)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed DWER advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

- While DWER is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for DWER to provide feedback during the consultation process.

5.3 Other non-government groups or organisations (NGOs) or individuals

5.3.1 Australian Conservation Foundation (ACF)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed ACF advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.
Summary Report – Consultation Complete			
• While ACF is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACF to provide feedback during the consultation process.			

5.3.2 Environs Kimberley

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Environs Kimberley advising of the proposed activity (Record of Consultation, reference 6.1.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
• While Environs Kimberley is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Environs Kimberley to provide feedback during the consultation process.

5.4 Research institutes and local conservation groups or organisations

5.4.1 Australian Institute of Marine Science (AIMS), Commonwealth Scientific and Industrial Research Organisation (CSIRO), Western Australian Marine Science Institution (WAMSI), Curtin University, Edith Cowan University (ECU), Murdoch University, University of Western Australia (UWA) (Collectively: Research organisations)

Summary of information provided and record of consultation for this EP:

- On 28 April 2026, Woodside emailed Research organisations advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 May 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8.1 of the EP).	No changes or additional measures are required.

Summary Report – Consultation Complete
• While these research organisations are not relevant persons under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for these research organisations to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.5 Traditional custodians and nominated representatives

5.5.1 Gogolanyngor Aboriginal Corporation (GAC)

GAC is established under the *Native Title Act 1993 (Cth)* by the Jabirr Jabirr/Ngumbarl and Bindunbur people to represent the Jabirr Jabirr/Ngumbarl and Bindunbur people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 29 April 2026, Woodside emailed GAC advising of the proposed activity (Record of Consultation, reference 6.1.27). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.
- On 19 May 2026, Woodside emailed GAC a reminder about the proposed activity (SI Report B, reference 1.4.1). The email included:
  - A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 May 2026, Woodside met with GAC in Broome (SI Report B, reference 1.4.2). Matters discussed included:
  - An overview of the proposed activity/EP and another unrelated activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Details about the timing of the proposed activity.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 29 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 29 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside met GAC during the consultation period. Woodside provided feedback about this EP however GAC had no specific feedback about the EP.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

5.5.2 La-Djarda Bay Aboriginal Corporation (La-Djarda Bay)

La-Djarda Bay Aboriginal Corporation originated from a separation from Nimanburr Aboriginal Corporation (Nimanburr).

Summary of information provided and record of consultation for this EP:

- On 29 April 2026, Woodside emailed La-Djarda Bay advising of the proposed activity (Record of Consultation, 6.1.30). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines*, *Consultation Brochure*, and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.

- Between 8 and 21 May 2026, Woodside and La-Djarda Bay had discussions and exchanged emails about meeting as part of ongoing engagement (SI Report B, references 1.6.1 – 1.6.4, 1.6.6 – -1.6.8).
- On 19 May 2026, Woodside emailed La-Djarda Bay a reminder about the proposed activity (SI Report B, reference 1.6.5). The email included:
  - A reference to the original consultation email for this EP sent on 29 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 29 April 2026 when consultation commenced. Woodside provided:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 29 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information during consultation was provided for this EP.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.5.3 Nimanburr Aboriginal Corporation (Nimanburr)

Nimanburr is established under the *Native Title Act 1993 (Cth)* by the Nimanburr people to represent the Nimanburr people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. Woodside assessed Nimanburr as not relevant for this EP but chose to consult with Nimanburr at Woodside's discretion.

Summary of information provided and record of consultation for this EP:

- On 29 April 2026, Woodside emailed Nimanburr advising of the proposed activity (Record of Consultation, reference 6.1.33). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.
- On 19 May 2026, Woodside emailed Nimanburr a reminder about the proposed activity (SI Report B, reference 1.9.1). The email included:
  - A reference to the original consultation email for this EP sent on 29 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- **(1-3)** On 29 September 2026, BJNAC, Nimanburr, WAC and Joombarn-buru (a group not relevant to this EP) emailed a letter to Woodside (SI Report B, reference 1.9.2).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1-3)** On 5 October 2026, Woodside replied to BJNAC, Nimanburr, WAC and Joombarn-buru (a group not relevant to this EP) and informed the PBCs that their letter dated 29 September 2026 had been referred to another part of the Woodside business for response (SI Report B, reference 1.9.3).
- **(1-3)** On 6 October 2026, Woodside responded to BJNAC, Nimanburr, WAC and Joombarn-buru (a group not relevant to this EP) and addressed matters raised in correspondence dated 29 September 2026 (SI Report 1.9.4)
- **(1-3)** On 14 October 2026, Woodside received an email from Joombarn-buru (a group not relevant to this EP), BJNAC, Nimanburr and WAC (SI Report B, reference 1.9.5).
- **(1-3)** On 22 October 2026, Woodside replied to the email received on 14 October 2026 (SI Report B, reference 1.9.6).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Woodside has not meaningfully consulted with Traditional Owners. Being contacted is not the same as being properly consulted. The timeframe for consultation did not give Traditional Owners a practical opportunity to respond. A lack of response to correspondence should not be interpreted as an absence of concern.	**(1)** Woodside rejects the assertion that it has not meaningfully consulted with Traditional Owners. Woodside has determined relevant Traditional Owner groups to consult with in accordance with its established consultation methodology. Woodside has met its regulatory obligations by providing relevant Traditional Owner groups: • Sufficient information. • A reasonable consultation period • A reasonable opportunity to provide feedback.	**(1)** Woodside does not agree that it has not provided meaningful opportunities for Traditional Owner groups assessed as relevant for this EP to provide feedback and engage in consultation. Woodside began consultation on 29 April 2026 and requested feedback by 28 May 2026 to support preparation of the EPs. Woodside provided a Summary Information Sheet specifically developed by Woodside's Indigenous Affairs Team, along with a link to a more detailed Consultation Information Sheet. Woodside also invited questions, requests for further information and offered to meet to discuss the proposed activities. Although the formal consultation period has closed, Woodside continues to receive feedback for the life of the EP which will be considered as part of ongoing engagement.	**(1)** No action required.
(2)	**(2)**	**(2)**	**(2)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Consultation with a PBC should not be treated as a substitute for engagement with the relevant Traditional Owners and cultural knowledge holders.	In accordance with Woodside's established methodology, Woodside engages Traditional Owners through their nominated representative bodies when consulting on EPs.	Woodside's consultation with Traditional Owners about Woodside's activities is guided by an established methodology designed to support compliance with applicable regulations and informed by the principles of the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP). Woodside engages Traditional Owners through their nominated representative bodies and invites them to share information with members.	No action required.
(3) Joombarn-buru has requested Woodside meet Joombarn-buru, BJNAC, Nimanburr, and WAC in Broome. The agenda would include discussion about a joint consultation approach and consultation framework regarding Woodside's offshore activities relevant to Kimberley Sea Country.	**(3)** Titleholders are not required to receive or enter into consultation framework agreements with relevant persons to satisfy consultation requirements. Woodside is willing to discuss proposals for consultation framework agreements. These discussions would occur in parallel to EP consultation.	**(3)** Woodside has agreed to meet Joombarn-buru, BJNAC, Nimanburr and WAC to discuss this EP and the wider Browse Project. Woodside has also requested that the groups inform it if would like information about any other Woodside activities that may impact the groups' functions, interests and activities. Any proposal regarding a consultation framework agreement would need to be considered through Woodside's established governance and approval processes. While Woodside is open to discussing a consultation framework agreement with the PBCs, it is not a prerequisite for EP consultation. Any discussions regarding a consultation framework agreement would occur separately and in parallel to EP consultation.	**(3)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has addressed objections and claims, as noted above.	Woodside has assessed the merits of any objection or claim (if any) about the adverse impact of the activity to which the EP relates as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, no changes or additional measures are required.

Summary Report t – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 29 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 29 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- While feedback was received, there were no objections or claims relating specifically to the activity.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

5.5.4 Nyul Nyul Aboriginal Corporation (NNAC)

NNAC is established under the *Native Title Act 1993 (Cth)* by the Nyul Nyul people to represent the Nyul Nyul people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 29 April 2026, Woodside emailed NNAC advising of the proposed activity (Record of Consultation, reference 6.1.35). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.

- On 3 May 2026, NNAC emailed Woodside about the proposed activity/EP and another unrelated activity, and requested a consultation meeting (SI Report B, reference 1.10.1).
- Between 4 May and 4 June 2026, Woodside and NNAC exchanged texts and emails about an in-person meeting to discuss the proposed activity/EP and another unrelated activity (SI Report B, references 1.10.2 – 1.10.6, 1.10.8 – 1.10.10).
- On 19 May 2026, Woodside emailed NNAC a reminder about the proposed activity (SI Report B, reference 1.10.7). The email included:
  - A reference to the original consultation email for this EP sent on 29 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 4 June 2026, NNAC emailed Woodside details of a planned meeting scheduled for 12 June 2026 (SI Report B, reference 1.10.11).
- On 12 June 2026, Woodside met NNAC in Broome (SI Report B, reference 1.10.12). During the meeting:
  - Woodside provided information about the proposed Browse Project. Items **(1-13)** were raised
  - Woodside addressed these items or took questions on notice **(1-13)**.
- On 7 July 2026, Woodside emailed NNAC responses to questions taken on notice **(6-7, 10-12)** during the meeting on 12 June 2026 (SI Report B, reference 1.10.13).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) NNAC raised concerns about cultural artefacts being destroyed by industry.	**(1)** Woodside assesses the social, economic and cultural features of the environment in which it operates and puts in place mitigation measures in EPs. Woodside understands this concern to be raised in relation to	**(1)** Woodside explained that it seeks feedback from Traditional owners about cultural artefacts and values and includes mitigation measures in EPs.	**(1)** Cultural values including artefacts are in Section 4.9 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	onshore activities and is therefore not relevant to this activity.		
(2) NNAC enquired about Woodside's spill response procedures.	**(2)** Woodside has completed spill modelling for this EP and has included a First Strike Plan and other mitigation measures that would be implemented in the unlikely event of an unplanned incident.	**(2)** Woodside explained its spill response procedures to NNAC including: • The provision of spill response kits on all vessels. • Spill response training for staff. • Notification and consultation with Traditional Owners in the unlikely event of a spill.	**(2)** Emergency preparedness and response is detailed in Section 7.12 of the EP. The Oil Pollution First Strike Plan is in Appendix H of the EP.
(3) NNAC enquired about the benefits of the Browse Project including support for rangers.	**(3)** Woodside has committed to social investment in the Kimberley including funding for ISWAG to support ranger programs and dugong monitoring. The Browse Project may lead to further social investment in the future.	**(3)** Woodside provided details to NNAC about its social investment in ISWAG and noted that if the Browse Project goes ahead, there may be more opportunities for social investment in the Kimberley.	**(3)** No action required.
(4) NNAC asked if Woodside would invest in a blue carbon project in the Kimberley	**(4)** Woodside's carbon business was established in 2018* to develop and manage a portfolio of carbon credits. *Woodside Energy Carbon (Services) Pty Ltd was established in 2021.	**(4)** Woodside explained that it already engages in a number of activities relating to carbon including tree planting.	**(4)** No action required.
(5) NNAC enquired about environmental studies about seagrass and fauna that feed on it.	**(5)** Woodside completes an assessment of potential impacts to the environment in which it operates.	**(5)** Woodside explained the importance of surveying the environment where it operates. Woodside also provided details about its funding to ISWAG for dugong monitoring.	**(5)** Habitats and biological communities are described in Section 4 of the EP and where appropriate included controls are in Sections 6.8 and 6.9 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(6) [Redacted Sentence 1] NNAC enquired about how Woodside monitors whales during an activity and requested information about baseline studies into whale monitoring.	**(6)** Woodside acknowledged NNAC's feedback about whales. Woodside has mitigation measures in place relating to whales.	**(6)** [Redacted Sentence 2]. Woodside explained how marine fauna observers and trained crew members monitor whale activity. On 7 July 2026, Woodside emailed NNAC a 2024 Blue Whale Acoustic Monitoring Report with a high-level summary. Woodside also offered to support NNAC to run a workshop about cultural values relevant to the Browse Project. Woodside also invited NNAC to provide any further information about its cultural values.	**(6)** Cultural values are considered in Section 4.9 of the EP and where appropriate Woodside has included controls in Sections 6.8 and 6.9 , 6.11 of the EP.
(7) NNAC enquired about cooling and extraction systems for water and Woodside's use of desalination.	**(7)** Woodside acknowledged this enquiry during the meeting on 12 June 2026 and committed to providing details to NNAC.	**(7)** Woodside acknowledged this enquiry during the meeting on 12 June 2026 and committed to providing details to NNAC.	**(7)** Woodside has included controls in Section 6.8 of the EP.
(8) NNAC enquired about the introduction of invasive species, for example the black lipped oyster.	**(8)** Woodside has measures in place to prevent and mitigate the introduction of invasive species.	**(8)** Woodside explained that there were strict measures taken to prevent the introduction of invasive species at Scott Reef in accordance with Woodside's Invasive Marine Species (IMS) risk assessment process.	**(8)** Woodside has included controls in Section 6.9 of the EP.
(9) NNAC enquired about the proposed Browse Project trunkline, how it would be stabilised, what the diameter was and if it would be permanent.	**(9)** The proposed Browse Project trunkline is not part of this EP.	**(9)** Woodside explained how the pipeline would be constructed and its diameter. Woodside also explained the decommissioning process for Woodside assets.	**(9)** No action required.
(10)	**(10)** Woodside acknowledged this feedback. Woodside consults with Traditional	**(10)** Woodside explained that part of the consultation process was seeking	**(10)** Cultural values including Songlines have been recorded in 4.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

NNAC raised concerns about disruption to Songlines and connections to people further north.	Owner groups to learn about Songlines and cultural values so these can be included in the development of EPs.	feedback about cultural values to account for these in EP development. On 7 July 2026, Woodside emailed NNAC a response to questions taken on notice during their meeting on 12 June 2026. Woodside advised it would appreciate any further feedback from NNAC about Songlines and cultural values and offered to support NNAC to run a workshop about is cultural values relevant to the Browse Project.	
(11) NNAC queried the source of cultural values Woodside has on record for the group. NNAC advised it would need to workshop cultural values with families.	**(11)** Woodside sources information about cultural values through reviews of publicly available literature and consultation.	**(11)** Woodside explained that its record of cultural values for NNAC had been sourced from publicly available literature but welcomed additions and feedback to these values. On 7 July 2026, Woodside emailed NNAC its record of NNAC cultural values and invited the group to provide further feedback. Woodside also offered to support NNAC to run a workshop about its cultural values relevant to the Browse Project.	**(11)** No action required.
(12) NNAC requested a copy of Woodside's Cultural Safety Protocol.	**(12)** Woodside has procedures in place to protect sensitive cultural information.	**(12)** On 7 July 2026, Woodside emailed NNAC a response to questions taken on notice during their meeting on 12 June 2026. Woodside provided details of how it manages cultural information and explained that NNAC could share information directly with NOPSEMA if it preferred.	**(12)** No action required.
(13)	**(13)**	**(13)**	**(13)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

NNAC suggested Woodside consider sharing information about the Browse Project with the Beagle Bay Futures Indigenous Corporation in future.	Woodside welcomes advice from Traditional Owner groups about other groups or people who may be interested in Woodside's activities.	Woodside has documented this feedback and will consider the Beagle Bay Futures Indigenous Corporation when completing relevancy assessments for future Browse Project EPs.	No action required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of feedback about the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 29 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 29 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside assessed and responded to feedback from the group and as a result of the feedback, Woodside updated Section 4.9 of the EP to include information provided about cultural values.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

5.5.5 Wunambal Gaambera Aboriginal Corporation (WGAC)

WGAC is established under the *Native Title Act 1993 (Cth)* by the Wanambal Gaambera (Uunguu) people to represent their communal interests, including the management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 10 August 2026, Woodside emailed WGAC advising of the proposed activity (Record of Consultation, reference 6.1.38). The email included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A Summary Information Sheet.
- A link to the Consultation Information Sheet.
- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
- A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 10 September 2026 for the purposes of preparation of the EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for the group to provide information about the proposed activity to other individuals as required.
- Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.

• On 24 August 2026, Woodside emailed WGAC a reminder about the proposed activity (SI Report B, reference 1.15.1). The email included:

- A reference to the original consultation email for this EP sent on 10 August 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
- A reminder that consultation for the preparation of the EP closes on 10 September 2026.
- A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No changes or additional measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 10 August 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 10 August 2026 and requested feedback by 10 September 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 10 August 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- No feedback or information during consultation was provided for this EP.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

5.5.6 Yawuru Aboriginal Corporation (Yawuru)

Yawuru is established under the *Native Title Act 1993 (Cth)* by the Yawuru people to represent the Yawuru people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 29 April 2026, Woodside emailed Yawuru advising of the proposed activity (Record of Consultation, reference 6.1.41). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.
- On 19 May 2026, Woodside emailed Yawuru a reminder about the proposed activity (SI Report B, reference 1.16.1). The email included:
  - A reference to the original consultation email for this EP sent on 28 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No changes or additional measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 April 2026, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 29 August 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 29 April 2026 and requested feedback by 28 September 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 August 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No feedback or information during consultation was provided for this EP.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP)

5.5.7 Joombarn-buru Aboriginal Corporation (Joombarn-buru)

Joombarn-buru is established under the *Native Title Act 1993* (Cth). The Determination Area is an inland region which does not overlap nor is coastally adjacent to the EMBA for this EP. Accordingly, Woodside does not consider Joombarn-buru relevant for this EP. Woodside has received joint correspondence from Joombarn-buru, BJNAC, Nimanburr (which Woodside chose to contact, but is not relevant for this EP) and WAC regarding the adequacy of consultation for this EP. The correspondence did not include specific feedback about the activities outlined in this EP and focussed on a request for a consultation framework agreement. After being contacted by Joombarn-buru, Woodside provided the group with a link to the Consultation Information Sheet for this EP and invited Joombarn-buru to provide information about any of its functions, interests or activities that may be affected by the proposed activities under this EP. To date, Joombarn-buru has not provided Woodside with this information.

Summary of information provided and record of consultation for this EP:

- **(1-3)** On 7 September 2026, Woodside received an email from Joombarn-buru (SI Report 3.1.1). The email stated the sender also represented BJNAC and WAC.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1-3)** On 17 September 2026, Woodside responded to Joombarn-buru's email of 7 September 2026 (SI Report 3.1.2).
- **(1-3)** On 29 September 2026, Joombarn-buru sent Woodside an email signed by the chairs of Joombarn-buru, BJNAC, Nimanburr (which Woodside chose to contact but is not relevant to this EP) and WAC (SI Report B, reference 3.1.3).
- **(1-3)** On 5 October 2026, Woodside replied to correspondence received on 29 September 2026 and informed the PBCs that their letter had been referred to another part of the Woodside business for response (SI Report B, reference 3.1.4).
- **(1-3)** On 6 October 2026, Woodside responded to Joombarn-buru, BJNAC, Nimanburr (which Woodside chose to contact but is not relevant to this EP) and WAC and addressed matters raised in correspondence dated 29 September 2026 (SI Report B 3.1.5)
- **(1-3)** On 14 October 2026, Woodside received an email from Joombarn-buru, BJNAC, Nimanburr (which Woodside chose to contact but is not relevant to this EP) and WAC (SI Report B, reference 3.1.7).
- **(1-3)** On 22 October 2026, Woodside replied to the email received on 14 October 2026 (SI Report B, reference 3.1.7).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Response	Inclusion in Environment Plan
(1) Woodside has not meaningfully consulted with Traditional Owners. Being contacted is not the same as being properly consulted. The timeframe for consultation did not give Traditional Owners a practical opportunity to respond. A lack of response to correspondence should not be interpreted as an absence of concern.	**(1)** Woodside rejects the assertion that it has not meaningfully consulted with Traditional Owners. Woodside has determined relevant Traditional Owner groups to consult with in accordance with its established consultation methodology. Joombarn-buru was not identified as relevant. Woodside has met its regulatory obligations by providing relevant Traditional Owner groups: • Sufficient information. • A reasonable consultation period • A reasonable opportunity to provide feedback.	**(1)** Woodside does not agree that it has not provided meaningful opportunities for Traditional Owner groups assessed as relevant for this EP to provide feedback and engage in consultation. Joombarn-buru was not determined to be relevant to this EP. Woodside began consultation on 29 April 2026 with relevant groups and requested feedback by 28 May 2026 to support preparation of the EPs. Woodside provided a Summary Information Sheet specifically developed by Woodside's Indigenous Affairs Team, along with a link to a more detailed Consultation Information Sheet. Woodside also invited questions, requests for further information and offered to meet to discuss the proposed activities.	**(1)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		After being contacted by Joombarn-buru, Woodside provided the PBC with a link to information for this EP and invited Joombarn-buru to provide information about why it believes that it has functions, interests or activities that may be affected by the proposed activities under this EP. To date, Joombarn-buru has not provided Woodside with this information. Although the formal consultation period has closed, Woodside continues to receive feedback for the life of the EP which will be considered as part of ongoing engagement.	
(2) Consultation with a PBC should not be treated as a substitute for engagement with the relevant Traditional Owners and cultural knowledge holders.	**(2)** In accordance with Woodside's established methodology, Woodside engages Traditional Owners through their nominated representative bodies when consulting on EPs.	**(2)** Woodside's consultation with Traditional Owners about Woodside's activities is guided by an established methodology designed to support compliance with applicable regulations and informed by the principles of the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP). Woodside engages Traditional Owners through their nominated representative bodies and invites them to share information with members.	**(2)** No action required.
(3) Joombarn-buru has requested Woodside meet Joombarn-buru, BJNAC, Nimanburr, and WAC in Broome. The agenda would include discussion about a joint consultation approach and consultation framework regarding	**(3)** Titleholders are not required to receive or enter into consultation framework agreements with relevant persons to satisfy consultation requirements. Woodside is willing to discuss proposals for consultation framework agreements.	**(3)** Woodside has agreed to meet Joombarn-buru, BJNAC, Nimanburr and WAC to discuss this EP and the wider Browse Project. Woodside has also requested that the groups inform it if would like information about any other Woodside activities that may impact the	**(3)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside's offshore activities relevant to Kimberley Sea Country.	These discussions would occur in parallel to EP consultation.	groups' functions, interests and activities. Any proposal regarding a consultation framework agreement would need to be considered through Woodside's established governance and approval processes. While Woodside is open to discussing a consultation framework agreement with the PBCs, it is not a prerequisite for EP consultation. Any discussions regarding a consultation framework agreement would occur separately and in parallel to EP consultation.	
Woodside has addressed objections and claims, as noted above.	Woodside has assessed the merits of any objection or claim (if any) about the adverse impact of the activity to which the EP relates as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, no changes or additional measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically: Woodside's methodology did not identify Joombarn-buru as relevant to this EP and therefore did not send Joombarn-buru consultation material when consultation began in April 2026. After being contacted by Joombarn-buru in September 2026, Woodside sent Joombarn-buru a link to the Consultation Information Sheet and invited the group to provide information about why it believes that it has functions, interests or activities that may be affected by the proposed activities under this EP. To date, Joombarn-buru has not provided Woodside with this information or any feedback relating specifically to the activity.			

5.6 Other Indigenous Groups

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.6.1 Indigenous Salt Water Advisory Group (ISWAG)

ISWAG is a Kimberley-based Indigenous organisation that acts as a collective supporting coastal Prescribed Body Corporates (PBCs) and ranger groups, with a focus on marine conservation, cultural preservation and Indigenous-led saltwater management initiatives. ISWAG plays a regional coordination role, including facilitating collaboration between Traditional Owner groups on sea country matters and supporting ranger programs and environmental monitoring activities.

Summary of information provided and record of consultation for this EP:

- On 29 April 2026, Woodside emailed ISWAG advising of the proposed activity (Record of Consultation, reference 6.1.28). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information* and contact details.
  - A request for information on the group's preferred ways to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 28 May 2026 for the purposes of preparation of the EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for the group to provide information about the proposed activity to other individuals as required.
  - Information about an Underwater Cultural Heritage study survey of the proposed Browse to NWS Project Area.
- On 30 April 2026, Woodside and ISWAG exchanged emails during which ISWAG made an enquiry **(1)** and Woodside replied **(1)** (SI Report B, references 1.5.1 – 1.5.2).
- On 19 May 2026, Woodside emailed ISWAG a reminder about the proposed activity (SI Report B, reference 1.5.3). The email included:
  - A reference to the original consultation email for this EP sent on 29 April 2026, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of the EP closes on 28 May 2026.
  - A request for information on how the group would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 27 May 2026, Woodside met ISWAG (SI Report B, reference 1.5.4). During the meeting:
  - Woodside provided an overview of the proposed activity/EP and another unrelated activity.
  - Woodside reiterated that feedback could be received throughout the life of an EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– ISWAG enquired about **(1)** and Woodside responded **(1)**.
– ISWAG provided feedback **(2)** and Woodside provided further information **(2)**.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim about the adverse impact of the activity	Woodside's Statement of Response	Inclusion in Environment Plan
(1) ISWAG enquired about Woodside's engagement with Kimberley PBCs.	**(1)** Woodside's consultation with Kimberley PBCs is detailed in App F.	**(1)** Woodside provided details about engagement with Kimberley PBCs relating to this EP and consultation overall.	**(1)** No action required.
(2) During a meeting on 27 May 2026, ISWAG advised it would speak to its members about providing cultural values to Woodside.	**(2)** Woodside incorporates cultural values provided by groups into its EPs.	**(2)** At the time of submission, ISWAG had not provided cultural values to Woodside. Should ISWAG provide cultural values to Woodside during the life of the EP, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	**(2)** No action required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of feedback about the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, No changes or additional measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically: **Sufficient Information**			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient information has been provided because:

- On 28 April 2026 Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information on 29 April 2026 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Traditional Custodian groups and reviewed by a member of the Indigenous Affairs team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, a summary of the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure,* and *Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of the group's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP on 29 April 2026 and requested feedback by 28 May 2026 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to feedback for five months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on the group's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Traditional Custodian groups.
- Woodside has made information on this EP publicly available for five months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (6 May 2026) and National Indigenous Times (28 April 2026) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 April 2026:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with members as well as the Board.
  - Asked the group to advise how it would like Woodside to engage and whether further information is required.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- During a meeting on 27 May 2026, ISWAG advised it would speak to its members about providing information about its cultural values to Woodside. At the time of submission this information had not been provided to Woodside.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6. RECORD OF CONSULTATION

6.1 Initial consultation

6.1.1 Consultation Information Sheet

Woodside Energy

Consultation Information Sheet
April 2026

Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth)

Browse Basin, North West Australia

Activity overview

The Browse to North West Shelf (NWS) Project Geophysical and Geotechnical Surveys Environment Plan (EP) (Commonwealth) is a five-year EP which covers:

- Geophysical and geotechnical surveys within two Operational Areas involving seafloor sampling and scanning
- Survey vessel operations.

Context

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts. A series of new GPGT surveys are proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation information sheet
- Browse to NWS Project GPGT Surveys EP (State)
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities. More information is found on **Page 2.**

Location

In Commonwealth waters **(Figure 5):**

- ~ 430 km north-northwest of Broome (Operational Area A)
- ~ 370 km north-northwest of Broome (Operational Area B).

Water depth

~ 350 m - 900 m deep.

Timing and duration

- Anticipated to commence from – Q3 2027.
- Surveys anticipated to be completed over several multi-week campaigns (typically 20-60 days in duration) split over the 5-year duration of the EP.
- Estimated to take up to a maximum of 90 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day.
- Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.

Joint Venture

- Operator – Woodside Browse Pty Ltd
- Joint Venture participants - BP Developments Australia Pty Ltd, Japan Australia LNG (MIMI Browse) Pty Ltd, and PetroChina International Investment (Australia) Pty Ltd.

We would like to hear from you

We would like relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to provide feedback on our proposed activity, in accordance with the intended outcome of consultation.

Woodside must consult relevant persons when developing an EP to confirm current measures or identify additional measures, which could lessen or avoid potential adverse effects of the proposed activity on the environment.

Woodside aims to ensure the proposed activity is consistent with the principles of ecologically sustainable development, by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level.

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by the activities under this EP, we would like your feedback by **28 May 2026**.

feedback@woodside.com
Toll free: 1800 442 977
woodside.com

A summary of the activity and location is found in Table **1** and **2**.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to Indigenous Peoples and communities around the world.

About geophysical and geotechnical surveys

Geophysical and geotechnical surveys are necessary preliminary work for the feasibility of the proposed Browse to NWS Project.

Survey information supports safe and efficient well and infrastructure design, helps reduce technical and environmental risks, and informs regulatory approvals and investment decisions.

Geophysical surveys are non-intrusive surveys that map the seafloor and the geology beneath it, while geotechnical surveys may take physical samples of seabed materials.

Woodside undertakes these surveys to inform engineering design and help minimise potential impacts on the marine environment.

How do geophysical surveys differ from seismic surveys?

Geophysical surveys typically have a smaller spatial footprint and shorter duration than seismic surveys, as they use different sound sources designed to map shallow geological layers of the seabed, whereas seismic surveys use higher-intensity sound sources to image deeper geological structures.

Geophysical surveys

Vessels carrying out geophysical surveys gather information by using various types of sonar equipment which use different frequencies of sound. Examples of equipment typically used for these surveys include, but are not limited to, multi-beam echo sounders, side scan sonar, magnetometers, sub bottom profilers, and underwater cameras to map the seafloor and identify potential hazards or features.

Geotechnical surveys

Vessels carrying out geotechnical surveys test seabed soil and rock and the shallow geology beneath the seabed using sampling and testing equipment. This may include various types of sampling such as core sampling and grab sampling, and in situ testing such as cone penetrometer testing.

Indicative images not to scale.

Proposed Browse to NWS Project

The proposed Browse to NWS Project will deliver natural gas from the Torosa, Calliance and Brecknock gas fields, located approximately 425 km north of Broome in the offshore Browse Basin, to the existing Karratha Gas Plant. The gas will be transported via an approximately 900 km trunkline connected to two FPSO facilities.

Woodside plans to collect GPGT data to inform potential future activities associated with the Browse to NWS Project. The activities will be undertaken across both State and Commonwealth waters and are covered by three separate EPs (**Figure 4**):

- **Browse to NWS Project Geophysical and Geotechnical Surveys EPs** – a Commonwealth and a State EP for survey work in the vicinity of the Torosa, Calliance and Brecknock gas fields (see blue and green box in legend in map on **page 3**).
- **Browse to NWS Project Trunkline Geophysical and Geotechnical Surveys EP** – a Commonwealth EP for survey work in the vicinity of the proposed trunkline (see yellow box in legend in map on **page 3**).

These EPs are focused on the GPGT surveys only. It is expected that additional EPs will be required as the proposed Browse to NWS Project progresses for a range of project and operational activities.

The proposed Browse to NWS Project is currently being separately assessed by State and Commonwealth Regulators under the *Environment Protection Act 1986* (WA) and *Environment Protection and Biodiversity Conservation Act 1999* (Cth) (EPBC Act). The GPGT surveys discussed within this consultation information sheet associated with the proposed Browse to NWS Project in Commonwealth waters are regulated by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) under the *Offshore Petroleum and Greenhouse Gas Storage Act 2006* and associated regulations. In State waters, these GPGT activities are regulated by the Department of Mines, Petroleum and Exploration (DMPE) under the *Petroleum (Submerged Lands) Act 1982* and associated regulations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

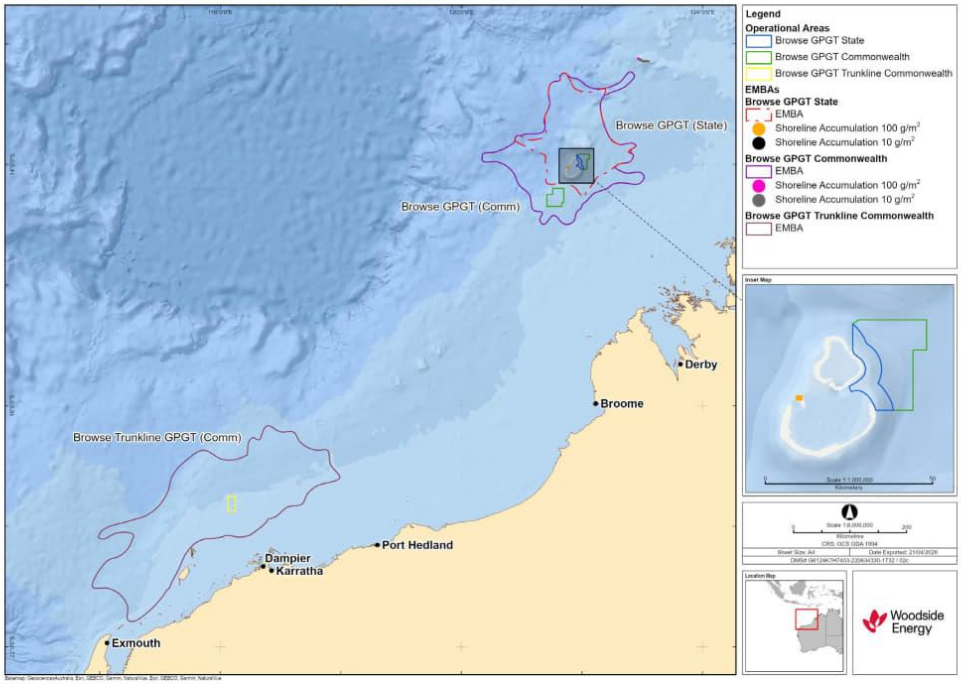

Figure 4: EMBA and Operational Area for the Browse to NWS Project GPGT Surveys Commonwealth and State EPs and for the Browse to NWS Project Trunkline GPGT Surveys EP.

Key measures incorporated into the EPs for the proposed Browse GPGT surveys:

Hydrocarbon spill measures

Woodside's approach to marine pollution preparedness includes having a comprehensive hydrocarbon spill response plan supported by a 24/7 response capability. The Oil Pollution Emergency Plan (OPEP) addresses activity-specific risks and potential impacts from a hydrocarbon spill and demonstrates how Woodside plans to respond to and manage a hydrocarbon spill effectively.

Fauna management

Vessels conducting GPGT surveys will implement a range of measures to minimise potential impacts to marine fauna and the marine environment. These measures are consistent with regulatory requirements and, where practicable, exceed minimum compliance.

Key management measures include vessel speed restrictions, underwater noise management, consideration of seasonal presence of fauna, light reduction measures and the implementation of regulations and guidance for interactions with marine fauna.

Green turtles

Some parts of the proposed survey area overlap or are close to habitat used by green turtles, particularly around Scott Reef, recognised as an important nesting and internesting area.

Woodside is required to manage and minimise impacts to marine turtles through mitigation measures which demonstrate that potential impacts are avoided or reduced to acceptable and as low as reasonably practicable (ALARP) levels before EPs can be accepted.

Mitigation measures include vessel speed management, implementation of regulations and guidance for interactions with marine fauna to avoid vessel collisions, underwater noise management and light reduction measures to avoid impacts to hatchlings and nesting turtles.

Pygmy blue whales

Some parts of the proposed survey area overlap or are close to habitat used by pygmy blue whales, particularly around Scott Reef, recognised as a possible foraging biologically important area (BIA).

Woodside is required to manage and minimise impacts to pygmy blue whales through avoidance and mitigation measures which demonstrate that potential impacts are avoided or reduced to ALARP levels before EPs can be accepted.

Mitigation measures include vessel speed management, implementation of regulations and guidance for interactions with marine fauna to avoid vessel collisions, underwater noise management such as limiting activities with potential noise impacts within the pygmy blue whale BIA during likely foraging periods as far as practicable, prestart observations and adaptive management during noise generating activities.

Invasive Marine Species management

In accordance with the *Australian Biosecurity Act 2015* (Cth), Woodside implements rigorous procedures to prevent and manage the introduction of invasive marine species through its Invasive Marine Species Management Plan. The plan includes a risk assessment process for vessels undertaking activities and applies commensurate risk mitigation measures such as treatment of internal systems, invasive marine species inspections and cleaning.

Activity Location

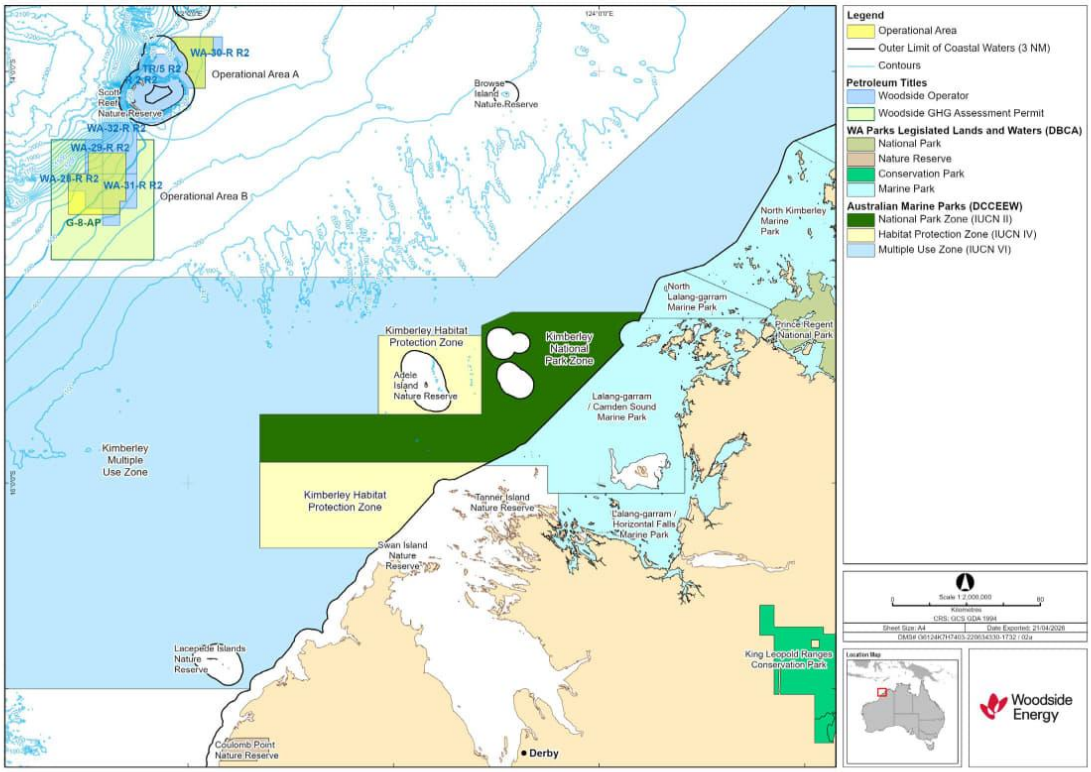

Figure 5. Location of the activity, including Operational Areas of the Browse to NWS Project GPGT Surveys EP (Commonwealth).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 1 – Activity and location summary

Browse to NWS Project GPGT Surveys EP (Commonwealth)	
Activity details	**Geophysical surveys:** • Geophysical surveys in this GPGT Survey Program involve acoustic measurements to characterise the seabed features and sub-seabed sediment types. • Geophysical surveys within the Operational Area using: - Multibeam echosounder (MBES), single beam echo sounder, altimeter - Side scan sonar (SSS) including variants such as multi-aperture and synthetic aperture sonar - Magnetometer/gradiometer and pipe tracker - Sub-bottom profiler (SBP), such as but not limited to boomer, sparker, pinger, chirp, and parametric SBP. **Geotechnical surveys:** • The geotechnical surveys will be performed using standard industry equipment and will consist of in situ testing and the recovery of soil/rock samples at locations within the Operational Area to ground truth existing geophysical data and provide geotechnical data for engineering design. • Geotechnical surveys within the Operational Area using: - Box corer/grab sampler - Shallow cores and probes: piston core/gravity core/vibrocore - Borehole sampling/coring/in situ testing - Cone penetrometer testing (CPT/PCPT/CPTu). **Other survey equipment being used:** - Water sampler - Sound velocity sensor/multi-parameter conductivity-temperature-depth profiler - Ultra-short baseline (USBL) positioning system - Doppler velocity log and inertial navigation system - Underwater camera - Underwater laser scanner - Remotely operated vehicle (ROV) - Autonomous underwater vehicle (AUV).
Titles	• Petroleum licences: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R. • Greenhouse Gas permit G-8-AP.
Vessels	• Multi-purpose vessels, uncrewed surface vessels, geotechnical drilling vessels and support vessels.
Operational Area and exclusion zones	• The exact location of the proposed surveys within the Operational Areas may vary. • Operational Areas are within Commonwealth waters. • A temporary 500m exclusion zone around vessels conducting survey activities to manage vessel movements.
Communication with mariners	• Commercial fishers and other marine users are permitted to use the Operational Area but should take care around operations by adhering to standard navigation rules and remain clear of the exclusion zone. • Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby.
Distance to nearest marine park/nature reserve	• Scott Reef Nature Reserve – 6 km south-west of Operational Area A, ~ 23 km north-east of Operational Area B. • Kimberley Multiple Use Zone ~ 101 km south of Operational Area A, ~ 33 km south of Operational Area B.

Table 2 – Approximate locations of Browse to NWS Project GPGT Surveys EP (Commonwealth) Operational Area

Location	Water Depth (m)	Latitude	Longitude	Titles
Survey Area				
Operational Area A Offshore area in Commonwealth waters	~ 400 - 600 m	13° 49' 55.00" S	122° 07' 19.52" E	WA-30-R
		13° 54' 54.94" S	122° 07' 19.52" E

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA was developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenario that informs the EMBA is vessel collision. The EMBA is depicted in **Figure 6**.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release. To learn more about an EMBA, please see the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) video on oil spill modelling at **www.nopsema.gov.au**.

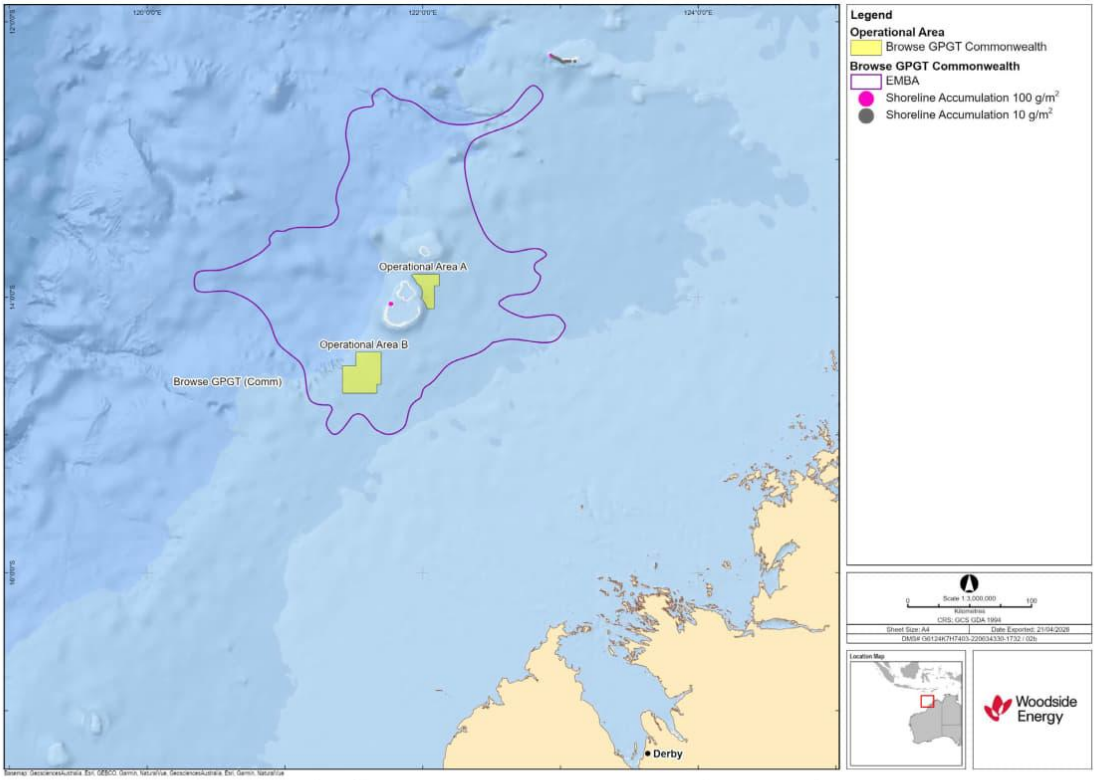

Figure 6. Environment that May Be Affected (EMBA) by the Browse to NWS Project GPGT Surveys EP (Commonwealth).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impacts/Risks, and Mitigation and/or Management Measures

Woodside assessed the impacts and risks to the environment arising from the planned activities and unplanned events. This assessment considers the timing, duration and location of the activities. Proposed mitigation and management measures are summarised in Table 3. Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental, social and cultural impacts and risks associated with the proposed activities, and Woodside seeks your feedback to inform our decision-making.

Table 3 – Summary of key impacts and risks and proposed management measures*

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Planned activities (routine and non-routine)			
Physical presence: *interaction with other marine users*	• The physical presence and movement of survey vessels and towed equipment within the Operational Area. • The following vessels may be involved in survey activities: - Offshore geophysical and light geotechnical vessel - Geotechnical vessels (geotechnical drilling vessels) - Uncrewed surface vessels (USVs). • Activity may not be executed as a single survey, meaning vessel-based activities may occur at any time during the approval period of the EP.	• Commercial fishing activities/equipment and commercial shipping vessels may be affected by survey vessels and related equipment in the Operational Area. • Other marine users may be present in the Operational Area. These include recreational fishing areas, tourism, and commercial shipping fairways. • Due to the localised nature of the activity, any potential displacement is expected to be negligible with no lasting effect.	• Vessels to adhere to the navigation safety requirements including the *Navigation Act 2012* and any subsequent Marine Orders. • Notify the Australian Hydrographic Office (AHO) prior to commencement of the activity so that marine users are aware of the activity. • Notify relevant government departments, fishing industry representative bodies and licence holders (where requested during consultation) of activities prior to commencement and on completion of activities. • Consult with marine users so they are informed of the proposed activities. • Establish a temporary 500 m safety exclusion zone around the survey vessels which is communicated to marine users.
Physical presence: *disturbance to the seabed from geotechnical surveys*	• Geotechnical survey activities are likely to result in localised and temporary physical impacts to a small area of the seabed within the Operational Area. • The source of impact from geotechnical surveys are: - Piston/gravity cores - Vibrocores - Box cores - Boreholes (PCPT, cored boreholes). • The geotechnical seabed coring may result in the indirect discharge of a small quantity of drill cuttings and fluid at the seafloor.	• Localised impact and is not expected to result in lasting effects/impacts to seabed and associated benthic communities, arising from: - Localised modification of seabed habitat within the Operational Area. - Localised change in habitat, water quality, and sediment quality, which may affect marine fauna. • The Operational Area is expected to consist mainly of sandy substrate. • The Operational Area overlaps the Ancient Coastline Key Ecological Features. • Due to the short duration and localised nature of the activity, any physical impacts to the seabed are expected to be negligible.	• No routine anchoring will occur during surveys. • Comply with regulatory requirements for Underwater Cultural Heritage (UCH). • An Unexpected Finds Procedure will be in place in the event of the discovery of what appears to be UCH. • Relevant vessel crew and ROV operators will be advised in an induction of the potential to encounter UCH, and of their requirement to follow the Unexpected Finds Procedure. • Monitor inventory deployed to the field and track removal of equipment during activity to enable deployed equipment to be retrieved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Routine and non-routine acoustic emissions: ***generation of noise from vessels and geophysical and geotechnical survey equipment***	· Generation of underwater noise from: - Vessels through the operation of thrusters, engines, propellers and onboard machinery - Geophysical survey equipment such as sub-bottom profiler, multibeam echo sounder, side-scan sonar and ultra short baseline positioning system, and - Geotechnical survey equipment such as core penetration tests, geotechnical boreholes, box core sampling and piston/push sampling.	· Underwater noise may affect marine fauna, including marine mammals in three main ways: 1. By causing direct physical effects, including injury or hearing impairment. 2. Through disturbance leading to behavioural changes or displacement from important areas. The occurrence and intensity of disturbance is highly variable and depends on a range of factors relating to the animal and situation. 3. By masking or interfering with other biologically important sounds (including vocal communication, echolocation, signals and sounds produced by predators or prey). · Biologically Important Areas (BIAs) overlapping the Operational Area include the pygmy blue whale foraging and migration BIAs, the green turtle and hawksbill turtle nesting/internesting BIAs and the green turtle nesting/internesting habitat critical to the survival of a species. · The noise generated by the vessels, geophysical and geotechnical survey equipment may result in localised and temporary behavioural changes to marine fauna. · Potential behavioural effects are not likely to have a lasting impact on protected species, ecosystems, and functions.	· Comply with *EPBC Regulations 2000 part 8 Division 8.1* and guidance for interactions with marine fauna. · All vessels will not travel at speeds greater than 12 knots within the pygmy blue whale possible foraging area that overlaps Scott Reef during peak migration periods, unless required for SOLAS. · Comply with *Biodiversity Conservation Regulations 2018* for whale sharks. · Limit activities with potential acoustic impacts where possible within the pygmy blue whale possible foraging BIA during certain times of the year when pygmy blue whales are likely to be foraging. · Pre-start visual observations for whales undertaken prior to start-up of vessel DP and noise emitting geophysical survey equipment. Start-up is to be delayed if a whale is sighted within the observation zone.
Routine and non-routine discharges: ***survey vessels utility systems (bilge water, greywater, sewage, putrescible wastes and deck drainage water)***	· Routine discharge of sewage, grey water and putrescible wastes to marine environment from survey vessels. · Routine discharge of deck and bilge water to marine environment from survey vessels.	· The main impact associated with ocean disposal of sewage and other organic wastes (i.e., putrescible waste) is eutrophication. Eutrophication occurs when the addition of nutrients, such as nitrates and phosphates, causes adverse changes to the ecosystem including short-term, localised impacts to water quality. · No significant impacts are expected to water quality from planned discharges because of the minor quantities involved, the expected localised mixing zone, and the high level of dilution into the open water marine environment of the Operational Area. · Similarly, although some marine fauna may transit the Operational Area, potential for impacts remains low due to the short-term and localised nature of discharges and rapid dilution.	· Vessel discharges will be managed according to regulatory requirements as applicable to vessel class. · Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical and feasibility constraints and approved through the Woodside chemical assessment process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Routine and non-routine discharges: ***drill cuttings and drilling fluids during geotechnical drilling***	· Drill cuttings and fluids will be discharged at the borehole location for geotechnical surveys. · Drilling fluid will consist primarily of seawater and may include low toxicity additives.	· Geotechnical survey activities are likely to result in localised and temporary physical modification and disturbance to a small area of the seabed. Potential impacts include: - localised reduction in water and sediment quality - Localised loss or damage to benthic habitats. · The Operational Area overlaps with the Continental Slope Demersal Fish Communities Key Ecological Features and the Seringapatam Reef and Commonwealth waters in the Scott Reef Complex Key Ecological Features. Impacts to benthic marine fauna as a result of geotechnical surveying are expected to be highly localised to surface area of the borehole, drill cuttings and the footprint of the geotechnical equipment, which is a relatively small area compared to the regional extent of the Key Ecological Features.	· Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process.
Routine light emissions: ***external lighting on survey vessels***	· Vessels will use external lighting to navigate and conduct safe operations at night, including to maintain good night visibility for crew members and to communicate the vessel's presence to other marine users.	· Light emissions may affect fauna (such as marine turtles and birds) in two main ways: 1. Behaviour: artificial lighting has the potential to create a constant level of light at night that can override natural levels and cycles. 2. Orientation: if an artificial light source is brighter than a natural source, the artificial light may override natural cues, leading to disorientation. · Potential to temporarily affect fauna such as fish, marine reptiles and seabirds by influencing changes in their behaviour or impacting orientation in close proximity to vessels. · Biologically Important Areas (BIAs) overlapping the Operational Areas include the little tern resting BIA.	· Implementation of the Woodside Offshore Seabird Management Plan. · Lighting will be limited to the minimum required for navigation and safe operational requirements, with the exception of emergency events.
Routine and non-routine: ***atmospheric and greenhouse gas (GHG) emissions***	· Atmospheric emissions and GHG emissions associated with survey vessels. · Emissions are generated from internal combustion engines, machinery, and incinerators on vessels.	· Emissions associated with survey vessels could result in temporary, localised reductions in air quality in the immediate vicinity. · The exposed location of the survey vessels is expected to result in the rapid dispersion of the low volumes of atmospheric emissions, as such the potential impacts are expected to be localised and are not expected to result in lasting effects/impacts.	· Comply with regulatory requirements for GHG emissions reporting. · Vessel operations planned, where practicable, to minimise fuel consumption and associated GHG/air emissions. · Fuel types will be selected to reduce expected GHG emissions (i.e., survey vessels will not likely use heavy fuel oil (HFO) or intermediate fuel oil (IFO)).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Unplanned events (accidents/incidents)			
Accidental introduction of invasive marine species (IMS)	· Survey vessels have the potential to introduce IMS to the Operational Area through marine biofouling (containing IMS), as well as within high-risk ballast water exchange. · There is also a remote potential that cross contamination between vessels can also occur (such as IMS translocated between survey vessels) or onto seabed habitat within shallower areas.	· The likelihood of IMS being introduced and establishing viable populations within the Operational Area or immediate surrounds is considered remote. · Given the low likelihood of IMS translocation to and colonisation within the Operational Area, survey activities are unlikely to result in establishment of IMS, and as such will not adversely affect other marine user activities in the region.	· Vessels will manage their ballast water using one of the approved ballast water management options, as outlined in the Australian Ballast Water Management Requirements as applicable to vessel class. · Woodside's IMS risk assessment process will be applied to vessels and immersible equipment undertaking the activities.
Unplanned interaction with marine fauna	· Accidental collision between vessels and marine fauna. · Survey vessels would typically be stationary or moving at low speeds when supporting the survey activities.	· Vessel movements have the potential to result in accidental collisions between the vessel (hull and propellers) and marine fauna. · Given the short duration of activities within the Operational Area, and the slow speeds at which the vessels typically operate, collisions with cetaceans are considered unlikely. · Biologically Important Areas (BIAs) overlapping the Operational Areas include the pygmy blue whale foraging and migration BIAs.	· Comply with *EPBC Regulations 2000 part 8 Division 8.1* and guidance for interactions with marine fauna. · Vessels will not travel at speeds greater than 12 knots within the pygmy blue whale possible foraging area that overlaps Scott Reef during peak migration periods, unless required for SOLAS.
Physical presence: *disturbance to seabed from dropped objects, equipment loss*	· Dropped objects resulting in the disturbance of seabed habitat.	· Unplanned seabed disturbance may result in localised changes to water and sediment quality or a localised temporary impact to benthic communities and is therefore considered to present a negligible risk. · Potential impacts to Key Ecological Features which intersect the Operational Area are considered to have a temporary disruption and no lasting effects to a small area of the seabed, as they would be limited to the footprint of a dropped object resulting in potential highly localised and temporary change in habitat. Dropped objects within the Operational Area could impact cultural heritage associated with this area, however, this would also comprise a small area.	· Survey vessel inductions include control measures for dropped object prevention. · Dropped objects and geophysical/geotechnical equipment to be recovered where safe and practicable to do so. · Apply safe work procedures to prevent dropped objects from vessels and during deployment and retrieval of equipment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Unplanned discharges: ***loss of solid hazardous and nonhazardous wastes/ equipment***	· Accidental discharge of hydrocarbons/ chemicals from survey vessels deck activities and equipment, from subsea ROV hydraulic leaks. · Unplanned release of chemicals or hydraulic fluid due to failure of subsea equipment. · Accidental loss of hazardous or nonhazardous solid wastes/ equipment to the marine environment.	· Potential for contamination of the environment as well as secondary impacts relating to potential contact of marine fauna with wastes. · The temporary or permanent loss of waste materials/equipment into the marine environment is not likely to have a significant environmental impact, based on the location of the activity, the types, size and frequency of wastes that could occur, and species present.	· Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes (i.e., Marine Orders 95 and 94). · Implement a Vessel Waste Management Plan. · Solid waste/equipment dropped to the marine environment is to be recovered where safe and practicable to do so.
Unplanned discharges: ***deck and subsea spills from geotechnical and geophysical survey vessels and equipment***	· Accidental discharge to the ocean of other hydrocarbons/chemicals/ geotechnical drilling fluids from survey vessels deck activities and equipment (e.g., cranes). · Unplanned release of chemicals or hydraulic fluid due to failure of geotechnical and geophysical survey equipment.	· Unplanned discharges of non-process chemicals and hydrocarbons may decrease the water quality in the immediate vicinity of the release. Only small volumes are anticipated, resulting in very short-term impacts to water quality, limited to the immediate release location. · As a result of a change in water quality, further impacts to receptors may occur, however impacts to marine fauna are expected to be limited to temporary irritation of sensitive membranes to individuals and are considered slight or less (negligible).	· Comply with regulatory requirements for the prevention of marine pollution for vessels as applicable to vessel class. · Liquid chemical and fuel storage areas are bunded or secondarily contained when they are not being handled/moved temporarily on survey vessels. · Spill kits positioned in high-risk locations around the vessels (near potential spill points such as transfer stations). · Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process.
Unplanned hydrocarbon release: ***vessel collision***	· Loss of hydrocarbons to marine environment due to vessel collision (e.g., other vessels or marine users). · For a collision to result in the worst-case scenario diesel release, several factors must occur as follows: 1. Vessel interaction must result in a collision. 2. The collision has enough force to penetrate the vessel hull and in the exact location of the fuel tanks, and 3. The fuel tank must be full or at least filled with a volume of fuel which is higher than the point of penetration.	· In the highly unlikely event of a vessel collision causing a release of marine diesel, impacts to water quality and marine ecosystems could occur. · Modelling of a surface release of marine diesel was used to understand potential impacts. In the event of a hydrocarbon release, potential impacts across the EMBA will be assessed including receptors such as plankton, fish, marine turtles, marine mammals, seabirds and migratory shorebirds, marine primary producers, tourism, recreation, commercial fisheries, commercial shipping and cultural heritage. · Marine diesel is a relatively volatile, non-persistent hydrocarbon with up to 40% evaporating within the first 24 hours. · Potential to result in reduction to water quality. · Potential disruption to marine fauna, including protected species. · Potential interference with or displacement of other marine users including fisheries, tourism and recreation.	**Preventing marine vessel collisions:** · Comply with regulatory requirements for navigational safety and prevention of vessel collisions as applicable to vessel class. · Notify the Australian Hydrographic Office (AHO) prior to commencement of the activity so that marine users are aware of the activity. · Notify relevant government departments, fishing industry representative bodies and licence holders (where requested during consultation) of activities prior to commencement and on completion of activities. · Establish a temporary 500 m safety exclusion zone around the survey vessels which is communicated to marine users. · A management plan for simultaneous operations is in place when working in vicinity of other Woodside operations/activities. **Spill response arrangements:** · In the event of a spill, emergency response activities would be implemented in accordance with the Oil Pollution Emergency Plan (OPEP). · Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented as planned.

** These mitigation and management measures are subject to change through the consultation and subsequent assessment process and may not represent content in the publicly available EP or in the final plan once accepted.*

Feedback

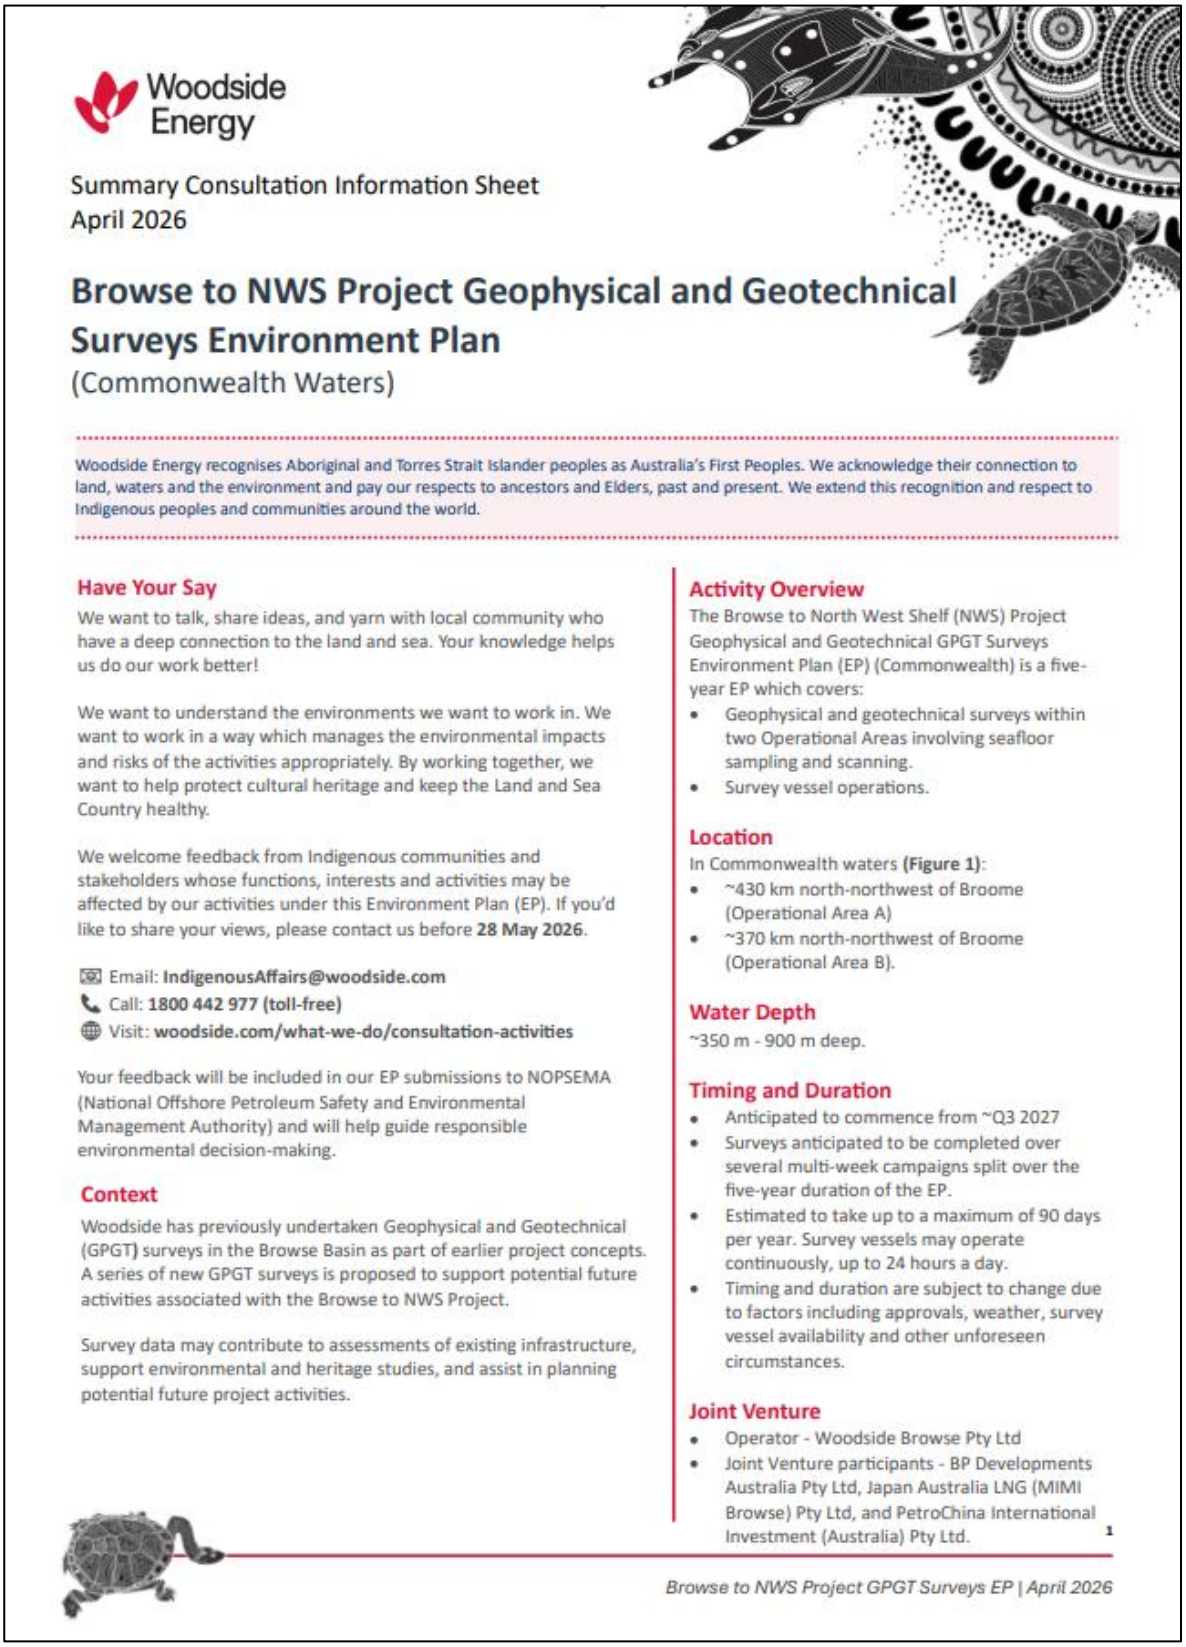
Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities'.

If you would like to comment on the proposed activities outlined in this information sheet, please provide feedback to Woodside by **28 May 2026** via:

feedback@woodside.com
Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:
woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to NOPSEMA as required under legislation. Woodside will communicate any material changes to the proposed activity to affected relevant persons as relevant and appropriate.



Your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit:
woodside.com/what-we-do/consultation-activities

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6.1.2 Summary Information Sheet and Underwater Cultural Heritage Study Information Sheet

Woodside Energy

Summary Consultation Information Sheet
April 2026

Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan
(Commonwealth Waters)

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to Indigenous peoples and communities around the world.

Have Your Say

We want to talk, share ideas, and yarn with local community who have a deep connection to the land and sea. Your knowledge helps us do our work better!

We want to understand the environments we want to work in. We want to work in a way which manages the environmental impacts and risks of the activities appropriately. By working together, we want to help protect cultural heritage and keep the Land and Sea Country healthy.

We welcome feedback from Indigenous communities and stakeholders whose functions, interests and activities may be affected by our activities under this Environment Plan (EP). If you'd like to share your views, please contact us before **28 May 2026**.

Email: **IndigenousAffairs@woodside.com**
Call: **1800 442 977 (toll-free)**
Visit: **woodside.com/what-we-do/consultation-activities**

Your feedback will be included in our EP submissions to NOPSEMA (National Offshore Petroleum Safety and Environmental Management Authority) and will help guide responsible environmental decision-making.

Context

Woodside has previously undertaken Geophysical and Geotechnical (GPGT) surveys in the Browse Basin as part of earlier project concepts. A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project.

Survey data may contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

Activity Overview

The Browse to North West Shelf (NWS) Project Geophysical and Geotechnical GPGT Surveys Environment Plan (EP) (Commonwealth) is a five-year EP which covers:

- Geophysical and geotechnical surveys within two Operational Areas involving seafloor sampling and scanning.
- Survey vessel operations.

Location

In Commonwealth waters **(Figure 1)**:

- ~430 km north-northwest of Broome (Operational Area A)
- ~370 km north-northwest of Broome (Operational Area B).

Water Depth

~350 m - 900 m deep.

Timing and Duration

- Anticipated to commence from ~Q3 2027
- Surveys anticipated to be completed over several multi-week campaigns split over the five-year duration of the EP.
- Estimated to take up to a maximum of 90 days per year. Survey vessels may operate continuously, up to 24 hours a day.
- Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.

Joint Venture

- Operator - Woodside Browse Pty Ltd
- Joint Venture participants - BP Developments Australia Pty Ltd, Japan Australia LNG (MIMI Browse) Pty Ltd, and PetroChina International Investment (Australia) Pty Ltd.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Activity Location

The EP explains how Woodside will manage environmental risks and impacts while carrying out our activities. These plans help us conduct operations safely and responsibly, with respect for the environment and cultural heritage. The location where the work will be done is known as the Operational Area (**Figure 1**).

Woodside must consult with relevant persons, including Traditional Custodian groups whose functions, interests or activities may be affected by the activities to be carried out under the EP or that are considered relevant, to listen to concerns and, where required, incorporate feedback into the EP.

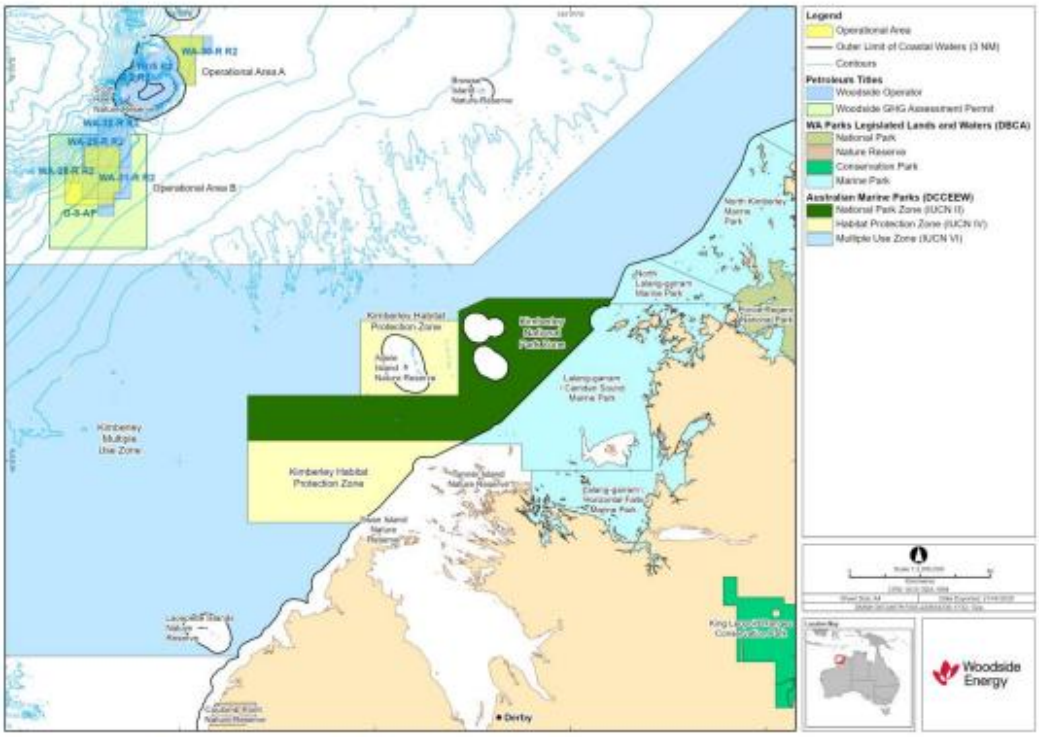

Figure 1: Location of the activity, including Operational Area and associated infrastructure

Planned Activities and Unplanned Events

We assess both planned activities and unplanned events which may result in environmental risks and impacts.

Planned activities are activities that Woodside knows will happen as part of the work under the EP. This could include generating underwater noise, light emissions, associated atmospheric emissions or routine discharges (such as sewage, waste, and deck drainage). We take steps so that planned activities comply with legislative and regulatory requirements.

Unplanned events are very unlikely. They may be the result of an accident, incident or emergency, such as a spill of fuel or oil from a ship (vessel) collision, a spill on the deck of a vessel (like during refuelling), unplanned seabed and/or marine life disturbance, or accidental introduction of invasive species from outside the region.

Planned and unplanned activities, potential impacts, and management measures are included in the Consultation Information Sheet for this activity, available at www.woodside.com/what-we-do/consultation-activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

The EMBA map (**Figure 2**) is a model of the largest spatial area where the activity could have a potential environmental impact. It combines multiple modelling outputs for both planned and unplanned activities in the highly unlikely event of an oil and natural gas (hydrocarbon) release to the environment. The modelling scenarios that inform the EMBA is vessel collision.

The EMBA does not show the predicted impact of a single event - it is the merged area of many possible scenarios that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time. This means that if a hydrocarbon release was to occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of a release.

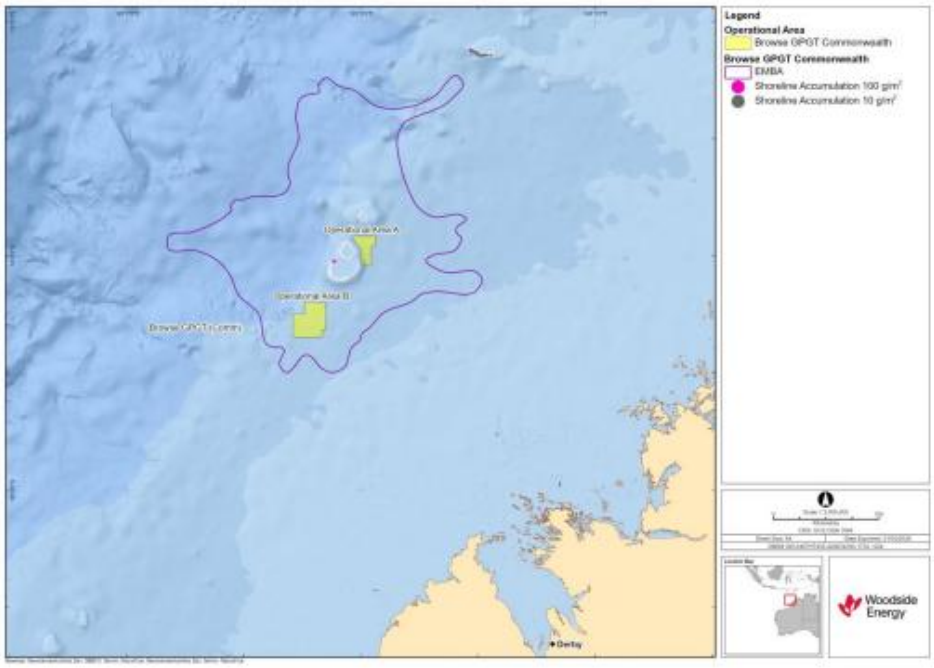

Figure 2: Environment that May Be Affected (EMBA) map

Your Feedback is Important

Woodside consults with relevant persons during the preparation of EPs to notify them about the activity and hear their feedback. By working together, we aim to protect biodiversity and maintain the health of ecosystems while carrying out our projects.

Your feedback helps shape the EP by:

- Identifying additional possible measures to reduce environmental impacts.
- Helping us consider cultural heritage and environmental values.
- Providing information that may help improve Woodside's environmental practices.

If there is particular information that you provide during consultation that you'd prefer not to be published, please let us know. We'll make your request known to NOPSEMA.

We'll manage any personal information collected during our consultation with you in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand more, please visit www.woodside.com/what-we-do/consultation-activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside Energy

Information Sheet

Underwater Cultural Heritage Study Browse to North West Shelf (NWS) Project

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to Indigenous Peoples and communities around the world.

Woodside commissioned an Underwater Cultural Heritage desktop study in 2025 which covered the proposed activity area of the Browse to NWS Project (proposed activity area). This study builds on Woodside's knowledge about the submerged cultural landscape and helps inform project planning so we can put in place relevant measures to manage our impact and mitigate potential risks to the seabed in the proposed activity area.

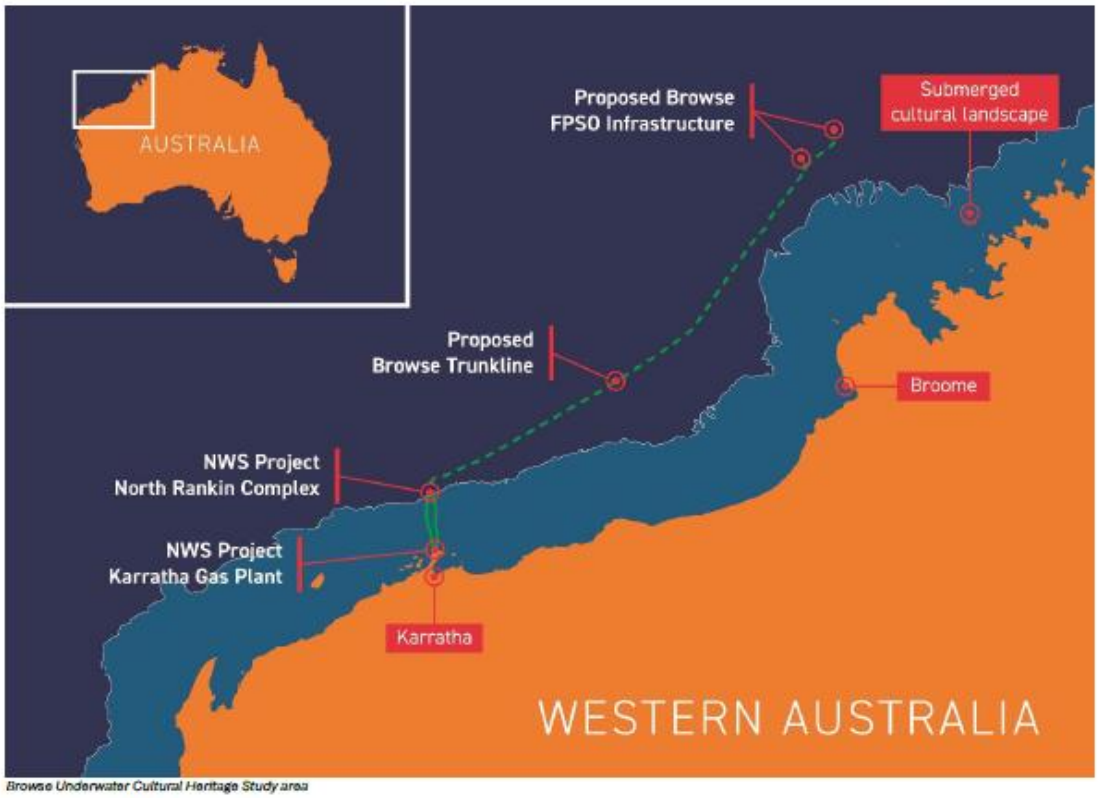
We'd like to hear from Traditional Owners and Custodians about their cultural values, stories and traditional knowledge of this proposed activity area to build on what we've found.

The Browse to NWS Project

Woodside and its Joint Venture participants are proposing to develop the Calliance, Brecknock and Torosa natural gas fields which are located in the offshore Browse Basin, about 425 kms north of Broome, WA. The proposal includes development within the Browse Basin, as well as approximately 900 km of new trunkline which would be laid on the seabed in the proposed activity area.

Why did we do a study?

Woodside commissioned the study as part of planning for the proposed project to help us understand any heritage features around the proposed activity area. We wanted to identify areas that may contain underwater cultural heritage. During the last Ice Age (between 30,000 and 15,000 years ago), sea levels in the NWS region would have been approximately 125 m lower than present. This means the coastline would have extended further than it does today and Indigenous people may have occupied this area.



How was the study done?

Over the years of planning for the proposed Browse to NWS Project, Woodside has collected information about the seabed through various survey methods.

Woodside engaged independent, specialist archaeologists to review this data, as well as publicly available information along the proposed trunkline route in the proposed activity area. The archaeologists compiled their findings into a report.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Browse Underwater Cultural Heritage Study area

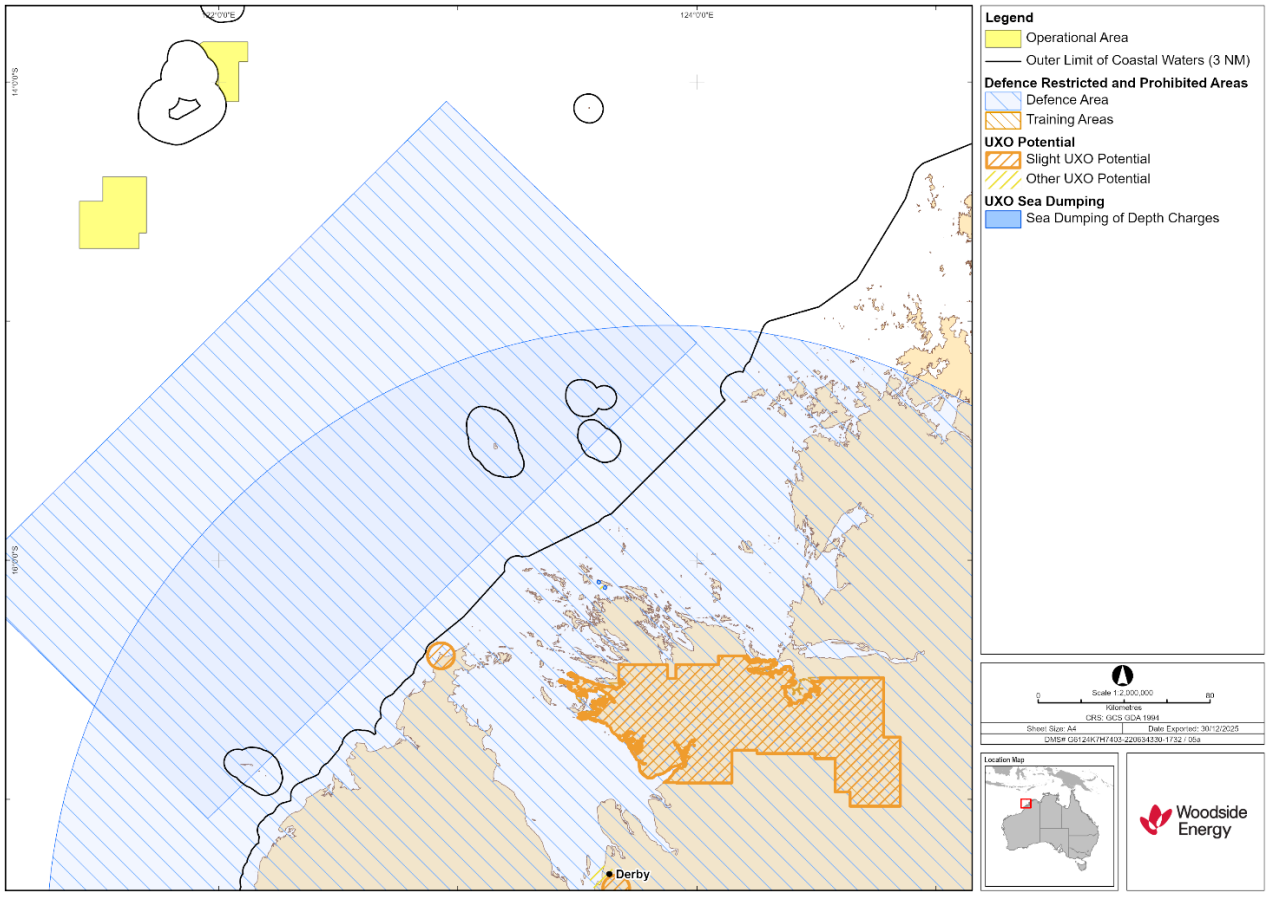
Where did we study?

The study focussed on the path of the proposed Browse trunkline (the dotted green line in the above map) and activity areas.

What did the study find?

The study confirmed:

- Most of the proposed activity area would have been underwater when people moved into what is now northern Australia.
- A section of the southern end of the proposed trunkline is in shallower water. This part of the seabed was dry land approximately 40,000 years ago and may have been inhabited.
- There was no evidence of Indigenous cultural material in the study area.
- There was no evidence of other underwater cultural heritage within the study area (for example shipwrecks).



We'd like your feedback

We'd like to build on the results of this study by hearing about your cultural values, stories and traditional knowledge of the study area. We'd also like the opportunity to present our findings to you.

To provide feedback and learn more about the study please contact us at IndigenousAffairs@woodside.com.

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please provide feedback to Woodside by **28 May 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

Activity and location summary

Communication with mariners	• Commercial fishers and other marine users are permitted to use the Operational Area but should take care around operations by adhering to standard navigation rules and remain clear of the safety exclusion zone. • Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby.	

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are for a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EPs. The Commonwealth EP will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). The State EP will be submitted to the Department of Mines, Petroleum and Exploration (DMPE) for acceptance in accordance with the *Petroleum (Submerged Lands) (Environment) Regulations 2012* (WA). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Feedback

6.1.8 Email sent to Department of Defence – 28 April 2026

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome.
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please provide feedback to Woodside by **28 May 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

Please also find attached a defence area map in the areas surrounding the Operational Area.

means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Notifications

Please note that Woodside will:

- Notify the AHO no less than 4 weeks before activities commence.
- Notify AMSA's Response Centre (ARC) at least 24-48 hours before activities commence.
- Provide updates to both the AHO and AMSA on any material changes to planned activities
- Ensure vessels exhibit appropriate lights and shapes to reflect the nature of operations and the obligation to comply with the International Rules for Preventing Collisions at Sea (COLREGS)
- Evaluate and implement adequate anti-collision measures including but not limited to additional warnings and/or lights to attract attention, and installation of Automatic Identification System (AIS) units.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EPs. The Commonwealth EP will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). The State EP will be submitted to the Department of Mines, Petroleum and Exploration (DMPE) for acceptance in accordance with the *Petroleum (Submerged Lands) (Environment) Regulations 2012* (WA). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.11 Email sent to Australian Fisheries Management Authority (AFMA); Commonwealth Fisheries Association (CFA); Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries; North West Slope Trawl Fishery Licence Holders – 28 April 2026

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome.
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please provide feedback to Woodside by **28 May 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

Activity details	**Geophysical surveys within the Operational Area using:** • Multibeam echosounder (MBES), single beam echo sounder, altimeter • Side scan sonar (SSS) including variants such as multi-aperture and synthetic aperture sonar • Magnetometer / gradiometer and pipe tracker • Sub-bottom profiler (SBP), such as but not limited to boomer, sparker, pinger, chirp, and parametric SBP. **Geotechnical surveys within the Operational Area using:** • Box corer / grab sampler • Shallow cores and probes: piston core / gravity core / vibrocore • Borehole sampling / coring / in situ testing • Cone penetrometer testing (CPT/PCPT/CPTu). **Other survey equipment being used:** • Water sampler • Sound velocity sensor / multi-parameter conductivity-temperature-depth profiler • Ultra-short baseline (USBL) positioning system • Doppler velocity log and Inertial navigation system • Underwater camera • Underwater laser scanner • Remotely operated vehicle (ROV) • Autonomous underwater vehicle (AUV).	
Titles	• Petroleum licences: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R. • Greenhouse Gas permit G-8-AP.	• Petroleum licence: TR/5 R2.
Location	In Commonwealth waters ~ 430 km north-northwest of Broome (Operational Area A) and ~ 370 km north-northwest of Broome (Operational Area B).	In State waters ~ 430 km north-northwest of Broome.
Water depth	~ 350 m - 900 m	~ 75 m - 700 m
Timing	Anticipated to commence from ~ Q3 2027.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Duration	• Surveys anticipated to be completed over several multi-week campaigns (typically 20-60 days in duration) split over the five-year duration of the EP. • Estimated to take up to a maximum of 90 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day. • Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.	• Surveys anticipated to be completed over several multi-week campaigns (typically 20-40 days in duration) split over the five-year duration of the EP. • Estimated to take up to a maximum of 40 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day. • Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.
Vessels	Multi-purpose vessels, uncrewed surface vessels, geotechnical drilling vessels and support vessels.	
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • Temporary 500m exclusion zone around vessels conducting survey activities to manage vessel movements. To note: • The exact location of the proposed surveys within the Operational Area may vary. • Operational Area is within Commonwealth waters.	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • Temporary 500m exclusion zone around vessels conducting survey activities to manage vessel movements. To note: • The exact location of the proposed surveys within the Operational Area may vary. • Operational Area is within State waters.
Communication with mariners	• Commercial fishers and other marine users are permitted to use the Operational Area but should take care around operations by adhering to standard navigation rules and remain clear of the safety exclusion zone. • Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby.	

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are for a vessel collision.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Commonwealth fisheries

Commonwealth fisheries active in the Operational Area:

- North West Slope Trawl Fishery

Commonwealth fisheries active in the EMBA:

- North West Slope Trawl Fishery

Please note that Woodside has provided consultation information directly to licence holders it has assessed as 'relevant persons' for this EP, as well as relevant fishery representative bodies.

Notifications

Please let us know if you **do not** require notification prior to and on completion of the proposed activities, otherwise notifications will be provided. .

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EPs. The Commonwealth EP will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). The State EP will be submitted to the Department of Mines, Petroleum and Exploration (DMPE) for acceptance in accordance with the *Petroleum (Submerged Lands) (Environment) Regulations 2012* (WA). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Biosecurity

With respect to the biosecurity matters, please note the following information below:

<table>
<tr><th colspan="2">Environment description</th></tr>
<tr><td colspan="2">Project vessels and survey equipment used during the petroleum activity present a potential pathway for the introduction of invasive marine species (IMS) into the operational area. IMS may be transported via vessel movements and equipment mobilised from other regions.
Potential sources include:
• Biofouling on vessel hulls (e.g. niches, sea chests, unpainted surfaces)
• Ballast water uptake and discharge
• Submersible geophysical and geotechnical equipment previously used on other projects
• International or interstate vessel mobilisation to the operational area.
The establishment of invasive marine species (IMS) can result in environmental and economic consequences, particularly where suitable habitat allows them to spread and persist.
Potential impacts include:
• Predation on native species
• Competition for food, space, and light
• Hybridisation with endemic species
• Alteration of local ecosystems
• Economic impacts (e.g. infrastructure fouling, fisheries losses)
• High cost and difficulty of eradication once established.</td></tr>
<tr><th colspan="2">Browse to NWS Project GPGT Surveys (Commonwealth) EP</th></tr>
<tr><th>Potential IMS risk</th><th>IMS mitigation management</th></tr>
<tr><td>• It is not credible for IMS to be introduced and establish on the seabed or subsea structures in the Operational Area as these deep waters are not conducive to the settlement and establishment of IMS. The likelihood of IMS being introduced and establishing viable populations within the Operational Area or immediate surrounds is considered remote.
• Given the low likelihood of IMS translocation to and colonisation within the Operational Area, project activities are unlikely to result in establishment of IMS, and as such will not adversely affect other marine user activities in the region.</td><td>• Project vessels will manage their ballast water using one of the approved ballast water management options, as outlined in the Australian Ballast Water Management Requirements as applicable to vessel class.
• Woodside’s IMS risk assessment process will be applied to project vessels and immersible equipment undertaking the activities.</td></tr>
</table>

- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

Please also find attached GIS shape files.

	• Estimated to take up to a maximum of 90 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day. • Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.	• Estimated to take up to a maximum of 40 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day. • Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.
Vessels	Multi-purpose vessels, uncrewed surface vessels, geotechnical drilling vessels and support vessels.	
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • Temporary 500m exclusion zone around vessels conducting survey activities to manage vessel movements. To note: • The exact location of the proposed surveys within the Operational Area may vary. • Operational Area is within Commonwealth waters.	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • Temporary 500m exclusion zone around vessels conducting survey activities to manage vessel movements. To note: • The exact location of the proposed surveys within the Operational Area may vary. • Operational Area is within State waters.
Communication with mariners	• Commercial fishers and other marine users are permitted to use the Operational Area but should take care around operations by adhering to standard navigation rules and remain clear of the safety exclusion zone. • Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby.	

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are for a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Australian Marine Parks (AMPs)

We note Australian Government Guidance on consultation activities and confirm that:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Browse to NWS Project GPGT Surveys (Commonwealth) EP • The Operational Area does not overlap any AMPs. The closest are: ○ Kimberley Multiple Use Zone ~ 101 km south of Operational Area A, ~ 33 km south of Operational Area B.
Browse to NWS Project GPGT Surveys (State) EP • The Operational Area does not overlap any AMPs. The closest are: ○ Kimberley Multiple Use Zone ~ 110 km south.

- The worst-case credible spill scenario access in these EPs is a vessel collision. Through review of hydrocarbon spill modelling, and with consideration of a 50 ppb dissolved and 100 ppb entrained hydrocarbon threshold, the following AMPs may be contacted in the event of a spill:
  - Ashmore Reef Commonwealth Marine Reserve
- A Commonwealth Government-approved oil spill response plan will be in place for the duration of the activities, which will include notification to relevant agencies and organisations as to the nature and scale of the event, as soon as practicable following an occurrence. The Director of National Parks will be advised if an environmental incident occurs that may impact the values of any AMP.

Woodside is aware of and will consider the *'Petroleum Activities and Australian Marine Parks'* guidance note developed and published jointly by DNP and NOPSEMA, while preparing these EPs to ensure that the EP:

- Identifies and manages all impacts and risks on AMP values (including ecosystem values) to an acceptable level and has considered all options to avoid or reduce them to as low as reasonably practicable (ALARP).
- Clearly demonstrates that the activities will not be inconsistent with the North West Marine Parks Network Management Plan 2018.

If there is a change in activities which results in an overlap or new impact to a marine park, Woodside will notify DNP.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EPs. The Commonwealth EP will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). The State EP will be submitted to the Department of Mines, Petroleum and Exploration (DMPE) for acceptance in accordance with the *Petroleum (Submerged Lands) (Environment) Regulations 2012* (WA). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Woodside Energy Feedback

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6.1.15 Email sent to Department of Primary Industries and Regional Development (DPIRD) – 28 April 2026

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome.
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please provide feedback to Woodside by **28 May 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are for a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

State fisheries

State fisheries active in the Operational Area:

1. Marine Aquarium Fish Managed Fishery
2. Northern Demersal Scalefish Managed Fishery

State fisheries active in the EMBA:

3. Marine Aquarium Fish Managed Fishery
4. Northern Demersal Scalefish Managed Fishery
5. Mackerel Managed Fishery

Please note that Woodside has provided consultation information to the Western Australian Fishing Industry Council (WAFIC) and Recfishwest. Information provided to these bodies includes the planned timing and duration of the activities, and the spatial extent of the proposed activities (including any exclusion zones).

Woodside consults individual fishing license holders based on WAFIC's guidance and advice, whereby WAFIC:

- directly consults fishery licence holders that are assessed as having a potential for interaction in the Operational Area
- consults fisheries that are assessed as having a potential for interaction in the EMBA only in the event of an unplanned emergency scenario.

Woodside also consults with relevant Traditional Owners in the preparation of this EP.

Spill Contingency Plans

Within Woodside's Oil Pollution First Strike Plan (FSP), Woodside commits to notifying Department of Transport and Major Infrastructure (DTMI) within 2 hours of becoming aware of a marine pollution incident that occurs in or may impact State waters. Woodside also consults DTMI in the development of the FSP.

Woodside commits to notify DPIRD within 24 hours of our reporting the incident to the appropriate authority. We have noted this contact as environment@dpird.wa.gov.au and placed this in the Notification section of the FSP.

In addition, within the FSP, Woodside commits to identify and notify additional relevant persons and organisations such as, but not limited to, commercial fishers or tourism operators that may be affected during a spill event. Woodside would, at the relevant time, engage with these parties as appropriate and will re-assess relevant persons and organisations throughout the response period.

Woodside mitigates the risk of spill events through the adoption of a range of preventative controls (including engineering design) that all contribute to reducing the likelihood of a spill event to an unlikely level. The potential for hydrocarbons to reach coastal regions would be further minimised in the event of a spill by offshore response actions. Such responses would be aimed at reducing hydrocarbon contact with sensitive coastal areas, including commercially important fish species' spawning and aggregation areas.

Woodside's oil spill Operational and Scientific Monitoring (OSM) Program is executed under the Joint Industry OSM Framework (AEP, 2021). In the event of a spill, the OSM Framework will guide the situational awareness and response as well as undertake a suite of comprehensive science-based monitoring programs to evaluate environmental impacts. One such program is dedicated to the impacts on fisheries. The fisheries impact assessment has two objectives – to assess any physiological impacts to important fish and shellfish species and to assess targeted fish and shellfish species for hydrocarbon contamination.

Biosecurity

Woodside contracts survey vessel for the petroleum activity described in the EPs.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside works closely with contractors to ensure compliance with all requirements previously requested by DPIRD including DPIRD's policy that marine pests or disease are reported within 24 hours. A 24-hour notification will be formally captured as a notification within the EPs and communicated to vessel operators.

All vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing invasive marine species (IMS). Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan. Woodside's Invasive Marine Species Management Plan includes a risk assessment process that is applied to vessels undertaking activities. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EPs. The Commonwealth EP will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). The State EP will be submitted to the Department of Mines, Petroleum and Exploration (DMPE) for acceptance in accordance with the *Petroleum (Submerged Lands) (Environment) Regulations 2012* (WA). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

6.1.16 Email sent to Pilbara/Kimberly Recreational Marine Users – 28 April 2026

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome.
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please provide feedback to Woodside by **28 May 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

Dear Stakeholder

BROWSE TO NORTH WEST SHELF PROJECT GEOPHYSICAL AND GEOTECHICAL SURVEYS ENVIROMENT PLANS

Woodside is planning to submit the following Environment Plans (EPs):

1. Browse to North West Shelf (NWS) Project Geophysical and Geotechnical Surveys (GPGT) Commonwealth EP
2. Browse to North West Shelf (NWS) Project Geophysical and Geotechnical Surveys (GPGT) State EP
3. Browse to North West Shelf (NWS) Project Trunkline Geophysical and Geotechnical Surveys (GPGT) Commonwealth EP.

If you would like to comment on the proposed activities, please provide feedback to Woodside by 28 May 2026 using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth)
- Browse to NWS Project GPGT Surveys EP (State)
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website at https://www.woodside.com/what-we-do/developments-and-exploration/browse.

Consultation information

Consultation Information Sheets for the above-mentioned EPs are enclosed, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website at www.woodside.com/what-we-do/consultation-activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are for a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form at www.woodside.com/what-we-do/consultation-activities by **28 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EPs, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plans made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. You can access the brochure online through the QR code below.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit www.woodside.com/what-we-do/consultation-activities.

6.1.18 Email sent to Australian Institute of Marine Science (AIMS); Commonwealth Scientific and Industrial Research Organisation (CSIRO); Curtin University; Edith Cowan University (ECU); Murdoch University; University of Western Australia (UWA); Western Australian Marine Science Institution (WAMSI) – 28 April 2026

XX

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome.
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please provide feedback to Woodside by **28 May 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

Woodside is seeking your advice regarding any research activities that your institution may be undertaking that may overlap with our proposed activities.

Activity and location summary

	Commonwealth EP	State EP
Activity details	**Geophysical surveys within the Operational Area using:** • Multibeam echosounder (MBES), single beam echo sounder, altimeter • Side scan sonar (SSS) including variants such as multi-aperture and synthetic aperture sonar • Magnetometer / gradiometer and pipe tracker • Sub-bottom profiler (SBP), such as but not limited to boomer, sparker, pinger, chirp, and parametric SBP. **Geotechnical surveys within the Operational Area using:** • Box corer / grab sampler • Shallow cores and probes: piston core / gravity core / vibrocore • Borehole sampling / coring / in situ testing • Cone penetrometer testing (CPT/PCPT/CPTu). **Other survey equipment being used:** • Water sampler • Sound velocity sensor / multi-parameter conductivity-temperature-depth profiler • Ultra-short baseline (USBL) positioning system • Doppler velocity log and Inertial navigation system • Underwater camera • Underwater laser scanner • Remotely operated vehicle (ROV) • Autonomous underwater vehicle (AUV).	
Titles	• Petroleum licences: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R. • Greenhouse Gas permit G-8-AP.	• Petroleum licence: TR/5 R2.
Location	In Commonwealth waters ~ 430 km north-northwest of Broome (Operational Area A) and ~ 370 km north-northwest of Broome (Operational Area B).	In State waters ~ 430 km north-northwest of Broome.
Water depth	~ 350 m - 900 m	~ 75 m - 700 m
Timing	Anticipated to commence from ~ Q3 2027.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Duration	• Surveys anticipated to be completed over several multi-week campaigns (typically 20-60 days in duration) split over the five-year duration of the EP. • Estimated to take up to a maximum of 90 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day. • Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.	• Surveys anticipated to be completed over several multi-week campaigns (typically 20-40 days in duration) split over the five-year duration of the EP. • Estimated to take up to a maximum of 40 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day. • Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.
Vessels	Multi-purpose vessels, uncrewed surface vessels, geotechnical drilling vessels and support vessels.	
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • Temporary 500m exclusion zone around vessels conducting survey activities to manage vessel movements. To note: • The exact location of the proposed surveys within the Operational Area may vary. • Operational Area is within Commonwealth waters.	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • Temporary 500m exclusion zone around vessels conducting survey activities to manage vessel movements. To note: • The exact location of the proposed surveys within the Operational Area may vary. • Operational Area is within State waters.
Communication with mariners	• Commercial fishers and other marine users are permitted to use the Operational Area but should take care around operations by adhering to standard navigation rules and remain clear of the safety exclusion zone. • Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby.	

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are for a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EPs. The Commonwealth EP will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). The State EP will be submitted to the Department of Mines, Petroleum and Exploration (DMPE) for acceptance in accordance with the *Petroleum (Submerged Lands) (Environment) Regulations 2012* (WA). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.20 Email sent to Department of Planning, Lands and Heritage (DPLH) – 28 April 2026

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome.
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please provide feedback to Woodside by **28 May 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

Please also find attached the details of WA shipwrecks that are relevant for these EPs.

Given the proximity of the proposed activities to Marine Parks, Woodside is consulting with the Department of Biodiversity, Conservation and Attractions (DBCA) for these EPs. Woodside is also consulting with the Western Australian Museum and provided it with relevant shipwreck information for these EPs.

6.1.21 Email sent to Western Australian Fishing Industry Council (WAFIC) – 28 April 2026

Dear WAFIC

Please see below consultation information for the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP). The consultation period is due to close on **28 May 2026**.

Consultation Information Sheets are also attached.

Under the fee-for-service agreement Option A, can WAFIC please provide the consultation information to the following fisheries based on active fishing (Fishcube data) in the Operational Area:

- Marine Aquarium Fish Managed Fishery
- Northern Demersal Scalefish Managed Fishery

Should distribution to licence holders be delayed, we kindly request that the feedback close date be adjusted accordingly to ensure members continue to receive a full 30-day consultation period. The current close date (**28 May 2026**) appears twice in the draft email below.

Draft email for WAFIC to send to Individual Licence Holders

Dear Licence Holders

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome.
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please contact WAFIC by **28 May 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

The table below provides a summary of the proposed activities under these EPs. The attached Consultation Information Sheets provides additional information including a map of impacted areas, summaries of potential impacts and risks relating to the proposed activities, and associated management measures, as well as our approach to consultation. This is also available on Woodside's website.

Activity and location summary

Communication with mariners	• Commercial fishers and other marine users are permitted to use the Operational Area but should take care around operations by adhering to standard navigation rules and remain clear of the safety exclusion zone. • Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby.

Notifications

Please let WAFIC know if you require notification prior to and on completion of the proposed activities.

Feedback

Please provide feedback specific to the proposed activities described to **[Contact 7]** by **28 May 2026**.

Your feedback and Woodside's response will be included in Woodside's EPs. The Commonwealth EP will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). The State EP will be submitted to the Department of Mines, Petroleum and Exploration (DMPE) for acceptance in accordance with the *Petroleum (Submerged Lands) (Environment) Regulations 2012* (WA). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published and if so, Woodside will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit Woodside's website.

Regards

6.1.22 Email sent to Marine Aquarium Fish Managed Fishery & Northern Demersal Scalefish Managed Fishery Licence Holders – 29 April 2026

Dear Licence Holders,

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

· Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome.

· Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please contact WAFIC by **29 May 2026** using the details below.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are for a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Areas of ecological importance

Woodside affirms that areas of ecological importance in the Operational Area will not be impacted by planned activities.

Woodside maintains knowledge and an understanding of areas of ecological importance within and adjacent to the Operational Area. An information system to track current existing environment knowledge is regularly updated and covers the following topics:

- EPBC Act Matters of National Ecological Significance (MNES) including threatened and migratory listed species
- WA Biodiversity Conservation Act 2016 – threatened and priority fauna list, the Part 13 Instruments, i.e., threatened species recovery plans and Biodiversity Regulations 2018
- EPBC Act threatened Species, Recovery Plans and Conservation advice
- State protected areas information and management plans on the habitats and associated fish and benthic communities.

The sources of information include credible published scientific research, industry and research agencies (government and university) study reports including baseline and monitoring programs. Woodside is also committed to sharing knowledge and contributes to the Index of Marine Surveys for Assessment (IMSA) hosted by the Department of Water and Environmental Regulation (WA) and supported by WAMSI.

National Light Pollution Guidelines

The lighting associated with the Browse to NWS Project GPGT Surveys EPs activity vessels is required as a priority for safe operation. Woodside has considered the Commonwealth Department of Climate Change, Energy, the Environment and Water's National Light Pollution Guidelines for Wildlife (NLPG; Commonwealth of Australia 2023) with respect to vessel activities. The assessment of potential impacts to seabird and turtle behaviour, is based on recommendations in the NLPG. This impact assessment determined that the impacts of lighting are as low as reasonably practicable (ALARP).

Operational and Scientific Monitoring Program

Woodside's oil spill Operational and Scientific Monitoring (OSM) Program, executed under the Joint Industry OSM Framework (AEP, 2021), provides for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors including but not limited to the Ningaloo Marine Park (M 2), Montebello Islands Marine Park (M 9) and the Barrow Island Nature Reserve (R 11648). The OSM comprises ten scientific monitoring programs (SMPs) and six operational monitoring programs (OMPs). The SMPs are targeted environmental monitoring programs to assess and quantify the environmental impact of a hydrocarbon spill range of physical-chemical (water and sediment) and biological (species and habitats) receptors, including EPBC Act listed species, environmental values associated with protected areas and socio-economic values, such as fisheries. The ten SMPs address a range of receptors most vulnerable to the impacts of a hydrocarbon release. The actual design and execution of the OSM program will be dependent on the nature and scale of the spill and the receptors predicted to be impacted. One of the priority focus areas in the early phase of an incident would be to identify and execute OSM at First Strike Monitoring Priorities.

Incidents and emergency response

Woodside's Oil Pollution First Strike Plan for this activity includes a commitment that the DBCA will be notified via phone call as soon as practicable if there is potential for oiled wildlife or the spill is expected to contact land or waters managed by WA DBCA. Woodside has incorporated the DBCA Pilbara regional office phone number as part of the notifications as listed in the Oil Pollution First Strike Plan.

This plan describes the incident management structure, notification and reporting requirements, the Operational Area, activity specific credible spill scenarios, and the hydrocarbon spill response strategies

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

available for the protection of priority receptors. Links are included in the plan to a suite of existing Operational Plans and Tactical Response Plans (TRPs) to commence the mobilisation of response resources immediately, including 'monitor and evaluate' services, operational and scientific monitoring, and shoreline clean-up where required. Woodside understands that DBCA will not implement an oiled wildlife management response on behalf of a petroleum operator.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 May 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EPs. The Commonwealth EP will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). The State EP will be submitted to the Department of Mines, Petroleum and Exploration (DMPE) for acceptance in accordance with the *Petroleum (Submerged Lands) (Environment) Regulations 2012* (WA). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

Woodside Energy Feedback

6.1.24 Email sent to Bardi and Jawi Niimidiman Aboriginal Corporation (BJNAC) – 28 April 2026

We are contacting you as the delegated representative for Bardi and Jawi Niimidiman Aboriginal Corporation (BJNAC).

Woodside would like to consult with BJNAC about two Environment Plans (EPs):

- Browse to NWS Project Geophysical and Geotechnical Surveys EP (Commonwealth)
- Browse to NWS Project Geophysical and Geotechnical Surveys EP (State).

The EPs relate to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in both Commonwealth and State waters.

Consultation for both EPs opens on 28 April 2026 and closes on 28 May 2026.The purpose of Woodside's consultation with BJNAC is to understand how the activities in the EPs could potentially impact the group's cultural values, interests and activities.

Woodside in the course of developing the EPs, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EPs.

The purpose of this email is to:

- Inform you about our plans for these activities.
- Invite you to submit feedback for these activities.
- Provide an opportunity to discuss these activities.
- Discuss further ways to consult and engage for these activities.

The Browse to North West Shelf (NWS) Project
Woodside and its Joint Venture partners are proposing to deliver natural gas from the Torosa, Calliance and Brecknock gas fields, located approximately 425 km north of Broome in the offshore Browse Basin, to the existing Karratha Gas Plant. The gas would be transported via an approximately 900 km trunkline connected to two floating production storage and offtake (FPSO) facilities.

Consultation with Woodside
The attached Summary Consultation Information Sheets have been developed for an Indigenous audience and provide a high-level overview of the activities including the Environment that May Be Affected (EMBA) (Commonwealth EP) and the Operational Area (Commonwealth and State EP). We have also linked the more detailed Consultation Information Sheets here with further information including an assessment of the potential impacts and risks relevant to the activities, as well as mitigation and management measures.
Your consultation correspondence with us about the Commonwealth EP, along with any appropriate control measures included in the EP are considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA), when we submit the EP for assessment.
Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au.
The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au)

Your feedback, opinions and comments about the state EP will be reflected in the EPs and considered by the Department of Mines, Petroleum and Exploration (DMPE).

Your Feedback
We'd like to gather your feedback about:

- How the activity could impact your cultural values, interests, and activities
- Protection of the environment and its relationship to your cultural values
- Your concerns about the proposed activities
- Other elements we should consider in the Environment Plans
- Any other individuals, groups, or organisations we should talk to about these activities

Underwater Cultural Heritage Study
We've recently completed a desktop study on the Underwater Cultural Heritage of the proposed Browse to NWS Project activity area and have attached an information sheet for your review. We'd like to hear from Traditional Owners and Custodians about their cultural values, stories and traditional knowledge of this proposed activity area to build on what we've found. To provide feedback and learn more about the study please contact us at IndigenousAffairs@woodside.com.

Consultation preferences
Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity.
Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information
Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Ongoing Feedback
Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached documents to members of BJNAC and other people and organisations who may be interested.

I look forward to your response and please feel free to call or provide guidance on next steps.

Kind regards

6.1.25 Email sent to Boorroola Moorrool Moorrool via legal representative – 10 August 2026

We are contacting you as the representative for the Boorroola Moorrool Moorrool Native Title Claim (WC2016/005). We ask that you please provide the following information to the Boorroola Moorrool Moorrool claim group (BMM).

Woodside would like to consult with BMM about the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

This Environment Plan (EP) relates to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in Commonwealth waters.

The purpose of Woodside's consultation with BMM is to understand how the activities in the EP could potentially impact the group's cultural values, interests and activities.

All feedback provided by BMM before 10 September 2026 will be reflected in our EP submission and considered by the Commonwealth regulator, National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Woodside in the course of developing the EP, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EPs.

The purpose of this email is to:

- Inform you about our plans for this activity.
- Invite you to submit feedback for this activity.
- Provide an opportunity to discuss this activity.
- Discuss further ways to consult and engage for this activity.

The Browse to North West Shelf (NWS) Project

Woodside and its Joint Venture partners are proposing to deliver natural gas

from the Torosa, Calliance and Brecknock gas fields, located approximately 425 km north of Broome in the offshore Browse Basin, to the existing Karratha Gas Plant. The gas would be transported via an approximately 900 km trunkline connected to two floating production storage and offtake (FPSO) facilities.

Consultation with Woodside

The attached Summary Consultation Information Sheet has been developed for an Indigenous audience and provides a high-level overview of the EP including the Environment that May Be Affected (EMBA). We have also linked the more detailed Consultation Information Sheet here with further information including an assessment of the potential impacts and risks relevant to the activities, as well as mitigation and management measures.

Your consultation correspondence with us, along with any appropriate control measures included in the EP will be considered by NOPSEMA, when we submit the EP for assessment.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- Policy: Managing gender-restricted information PL2098.pdf (nopsema.gov.au)

Your Feedback

We'd like to gather your feedback about:

- How the activity could impact your cultural values, interests, and activities
- Protection of the environment and its relationship to your cultural values
- Your concerns about the proposed activity
- Other elements we should consider in the Environment Plans
- Any other individuals, groups, or organisations we should talk to about this activity.

Underwater Cultural Heritage Study

We've recently completed a desktop study on the Underwater Cultural Heritage of the proposed Browse to NWS Project activity area and have attached an information sheet for your review. We'd like to hear from Traditional Owners and Custodians about their cultural values, stories and traditional knowledge of this proposed activity area to build on what we've found. To provide feedback and learn more about the study please contact us at IndigenousAffairs@woodside.com.

Consultation preferences

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information

Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please feel free to forward this email and the attached documents to members of BMM and other people and organisations who may be interested.

I look forward to your response and please feel free to call or provide guidance on next steps.

6.1.26 Email sent to Dambimangari Aboriginal Corporation (DAC) – 28 April 2026

Dear Dambimangari Aboriginal Corporation (DAC),

Woodside would like to consult with DAC about two Environment Plans (EPs):

- Browse to NWS Project Geophysical and Geotechnical Surveys EP (Commonwealth)
- Browse to NWS Project Geophysical and Geotechnical Surveys EP (State).

The EPs relate to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in both Commonwealth and State waters.
Consultation for both EPs opens on 28 April 2026 and closes on 28 May 2026.

The purpose of Woodside's consultation with DAC is to understand how the activities in the EPs could potentially impact the group's cultural values, interests and activities.

Woodside in the course of developing the EPs, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EPs.

The purpose of this email is to:

- Inform you about our plans for these activities
- Invite you to submit feedback for these activities.
- Provide an opportunity to discuss these activities.
- Discuss further ways to consult and engage for these activities.

6.1.29 Email sent to Kimberley Land Council (KLC) – 28 April 2026

We are contacting you as the delegated representative for the Kimberley Land Council (KLC).

Woodside would like to consult with KLC about three Environment Plans (EPs):

- Browse to NWS Project Trunkline Geophysical and Geotechnical Surveys EP
- Browse to NWS Project Geophysical and Geotechnical Surveys EP (Commonwealth)
- Browse to NWS Project Geophysical and Geotechnical Surveys EP (State).

The EPs relate to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in both Commonwealth and State waters.

Consultation for the three EPs opens on 28 April 2026 and closes on 28 May 2026.

The purpose of Woodside's consultation with KLC is to understand how the activities in the EPs could potentially impact the groups' cultural values, interests and activities.

Woodside in the course of developing the EPs, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EPs.

The purpose of this email is to:

- Inform you about our plans for these activities.
- Invite you to submit feedback for these activities.
- Provide an opportunity to discuss these activities.
- Discuss further ways to consult and engage for these activities.

6.1.31 Email sent to Lombadina Aboriginal Corporation (Lombadina) – 29 April 2026

Woodside would like to consult with Lombadina Aboriginal Corporation (Lombadina) about two Environment Plans (EPs):

- Browse to NWS Project Geophysical and Geotechnical Surveys EP (Commonwealth)
- Browse to NWS Project Geophysical and Geotechnical Surveys EP (State).

The EPs relate to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in both Commonwealth and State waters.
Consultation for both EPs opens on 28 April 2026 and closes on 28 May 2026.

The purpose of Woodside's consultation with Lombadina is to understand how the activities in the EPs could potentially impact the group's cultural values, interests and activities.
Woodside in the course of developing the EPs, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EPs.

The purpose of this email is to:

- Inform you about our plans for these activities.
- Invite you to submit feedback for these activities.
- Provide an opportunity to discuss these activities.
- Discuss further ways to consult and engage for these activities.

The Browse to North West Shelf (NWS) Project
Woodside and its Joint Venture partners are proposing to deliver natural gas from the Torosa, Calliance and Brecknock gas fields, located approximately 425 km north of Broome in the offshore Browse Basin, to the existing Karratha Gas Plant. The gas would be transported via an approximately 900 km trunkline connected to two floating production storage and offtake (FPSO) facilities.

Consultation with Woodside
The attached Summary Consultation Information Sheets have been developed for an Indigenous audience and provide a high-level overview of the activities including the Environment that May Be Affected (EMBA) (Commonwealth EP) and the Operational Area (Commonwealth and State EP). We have also linked the more detailed Consultation Information Sheets here with further information including an assessment of the potential impacts and risks relevant to the activities, as well as mitigation and management measures.

Your consultation correspondence with us about the Commonwealth EP, along with any appropriate control measures included in the EP are considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA), when we submit the EP for assessment.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Policy: Managing gender-restricted information PL2098.pdf (nopsema.gov.au)

Your feedback, opinions and comments about the state EP will be reflected in the EPs and considered by the Department of Mines, Petroleum and Exploration (DMPE).

Your Feedback
We'd like to gather your feedback about:

- How the activity could impact your cultural values, interests, and activities
- Protection of the environment and its relationship to your cultural values
- Your concerns about the proposed activities
- Other elements we should consider in the Environment Plans
- Any other individuals, groups, or organisations we should talk to about these activities

Underwater Cultural Heritage Study
We've recently completed a desktop study on the Underwater Cultural Heritage of the proposed Browse to NWS Project activity area and have attached an information sheet for your review. We'd like to hear from Traditional Owners and Custodians about their cultural values, stories and traditional knowledge of this proposed activity area to build on what we've found. To provide feedback and learn more about the study please contact us at IndigenousAffairs@woodside.com.

Consultation preferences
Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information
Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Ongoing Feedback
Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached documents to members of Lombadina and other people and organisations who may be interested.

I look forward to your response and please feel free to call or provide guidance on next steps.

6.1.32 Email sent to Mayala Inninalang Aboriginal Corporation (MIAC) via KLC – 28 April 2026

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

We are contacting you as the delegated representative for Mayala Inninalang Aboriginal Corporation (MIAC).

Woodside would like to consult with Mayala Inninalang Aboriginal Corporation (MIAC) about two Environment Plans (EPs):

- Browse to NWS Project Geophysical and Geotechnical Surveys EP (Commonwealth)
- Browse to NWS Project Geophysical and Geotechnical Surveys EP (State).

The EPs relate to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in both Commonwealth and State waters.

Consultation for both EPs opens on 28 April 2026 and closes on 28 May 2026.

The purpose of Woodside's consultation with MIAC is to understand how the activities in the EPs could potentially impact the group's cultural values, interests and activities.

Woodside in the course of developing the EPs, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EPs.

The purpose of this email is to:

- Inform you about our plans for these activities.
- Invite you to submit feedback for these activities.
- Provide an opportunity to discuss these activities.
- Discuss further ways to consult and engage for these activities.

The Browse to North West Shelf (NWS) Project

6.1.36 Email sent to Walalakoo Aboriginal Corporation (WAC) – 28 April 2026

Dear Walalakoo Aboriginal Corporation (WAC),

Woodside would like to consult with WAC about two Environment Plans (EPs):

- Browse to NWS Project Geophysical and Geotechnical Surveys EP (Commonwealth)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Browse to NWS Project Geophysical and Geotechnical Surveys EP (State).

The EPs relate to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in both Commonwealth and State waters.

Consultation for both EPs opens on 28 April 2026 and closes on 28 May 2026.

The purpose of Woodside's consultation with WAC is to understand how the activities in the EPs could potentially impact the group's cultural values, interests and activities.

Woodside in the course of developing the EPs, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EPs.

The purpose of this email is to:

- Inform you about our plans for these activities.
- Invite you to submit feedback for these activities.
- Provide an opportunity to discuss these activities.
- Discuss further ways to consult and engage for these activities.

The Browse to North West Shelf (NWS) Project
Woodside and its Joint Venture partners are proposing to deliver natural gas
from the Torosa, Calliance and Brecknock gas fields, located approximately 425 km north of Broome in the offshore Browse Basin, to the existing Karratha Gas Plant. The gas would be transported via an approximately 900 km trunkline connected to two floating production storage and offtake (FPSO) facilities.

Consultation with Woodside
The attached Summary Consultation Information Sheets have been developed for an Indigenous audience and provide a high-level overview of the activities including the Environment that May Be Affected (EMBA) (Commonwealth EP) and the Operational Area (Commonwealth and State EP). We have also linked the more detailed Consultation Information Sheets here with further information including an assessment of the potential impacts and risks relevant to the activities, as well as mitigation and management measures.

Your consultation correspondence with us about the Commonwealth EP, along with any appropriate control measures included in the EP are considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA), when we submit the EP for assessment.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- Policy: Managing gender-restricted information PL2098.pdf (nopsema.gov.au)

Your feedback, opinions, and comments about the State EP will be reflected in the EP and considered by the Department of Mines, Petroleum and Exploration (DMPE).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Your Feedback
We'd like to gather your feedback about:

- How the activity could impact your cultural values, interests, and activities
- Protection of the environment and its relationship to your cultural values
- Your concerns about the proposed activities
- Other elements we should consider in the Environment Plans
- Any other individuals, groups, or organisations we should talk to about these activities

Underwater Cultural Heritage Study
We've recently completed a desktop study on the Underwater Cultural Heritage of the proposed Browse to NWS Project activity area and have attached an information sheet for your review. We'd like to hear from Traditional Owners and Custodians about their cultural values, stories and traditional knowledge of this proposed activity area to build on what we've found. To provide feedback and learn more about the study please contact us at IndigenousAffairs@woodside.com.

Consultation preferences
Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity.
Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information
Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Ongoing Feedback
Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.
Please feel free to forward this email and the attached documents to members of WAC and other people and organisations who may be interested.

I look forward to your response and please feel free to call or provide guidance on next steps.

6.1.37 Email sent to Warrwa Combined via KLC – 10 August 2026

We are contacting KLC as the representative for the Warrwa Combined (WC2014/004) Native Title claim. We ask that you please provide the following information to the Warrwa Combined claim group (Warrwa).

Woodside would like to consult with Warrwa about the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The Environment Plan (EP) relates to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in Commonwealth waters.

The purpose of Woodside's consultation with Warrwa is to understand how the activities in the EP could potentially impact the groups' cultural values, interests and activities.

All feedback provided by Warrwa before 10 September 2026 will be reflected in our EP submission and considered by the Commonwealth regulator, National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Woodside in the course of developing the EP, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EP.

The purpose of this email is to:

- Inform you about our plans for this activity.
- Invite you to submit feedback for this activity.
- Provide an opportunity to discuss this activity.
- Discuss further ways to consult and engage for this activity.

The Browse to North West Shelf (NWS) Project

Woodside and its Joint Venture partners are proposing to deliver natural gas from the Torosa, Calliance and Brecknock gas fields, located approximately 425 km north of Broome in the offshore Browse Basin, to the existing Karratha Gas Plant. The gas would be transported via an approximately 900 km trunkline connected to two floating production storage and offtake (FPSO) facilities.

Consultation with Woodside

The attached Summary Consultation Information Sheet has been developed for an Indigenous audience and provide a high-level overview of the activitiy including the Environment that May Be Affected (EMBA). We have also linked the more detailed Consultation Information Sheets here with further information including an assessment of the potential impacts and risks relevant to the activities, as well as mitigation and management measures.

Your consultation correspondence with us about the EP, along with any appropriate control measures included in the EP will be considered by NOPSEMA, when we submit the EP for assessment.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- Policy: Managing gender-restricted information PL2098.pdf (nopsema.gov.au)

Your Feedback

- We'd like to gather your feedback about:
- How the activity could impact your cultural values, interests, and activities
- Protection of the environment and its relationship to your cultural values
- Your concerns about the proposed activity
- Other elements we should consider in these Environment Plans
- Any other individuals, groups, or organisations we should talk to about these activities

Underwater Cultural Heritage Study

We've recently completed a desktop study on the Underwater Cultural Heritage of the proposed Browse to NWS Project activity area and have attached an information sheet for your review. We'd like to hear from Traditional Owners and Custodians about their cultural values, stories and traditional knowledge of this proposed activity area to build on what we've found. To provide feedback and learn more about the study please contact us at IndigenousAffairs@woodside.com.

Consultation preferences

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information

Information can be sent to IndigenousAffairs@woodside.com, via telephone on 1800 442 977 or directly to me.

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached documents to members of Warrwa Combined and other people and organisations who may be interested.

I look forward to your response and please feel free to call or provide guidance on next steps.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6.1.38 Email sent to Wunambal Gaambera Aboriginal Corporation (WGAC) – 10 August 2026

Dear Wunambal Gaambera Aboriginal Corporation,

Woodside would like to consult with Wunambal Gaambera Aboriginal Corporation (WGAC) about the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

This Environment Plan (EP) relates to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in Commonwealth waters.

The purpose of Woodside's consultation with WGAC is to understand how the activities in the EP could potentially impact the group's cultural values, interests and activities.

All feedback provided by WGAC before 10 September 2026 will be reflected in our EP submission and considered by the Commonwealth regulator, National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Woodside in the course of developing the EP, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EPs.

The purpose of this email is to:

- Inform you about our plans for this activity.
- Invite you to submit feedback for this activity.
- Provide an opportunity to discuss this activity.
- Discuss further ways to consult and engage for this activity.

6.1.39 Email sent to Wanjina-Wunggurr Aboriginal Corporation (WWAC) – 28 April 2026

We are contacting you as the delegated representative for Wanjina-Wunggurr Aboriginal Corporation (WWAC),

Woodside would like to consult with WWAC about two Environment Plans (EPs):

- Browse to NWS Project Geophysical and Geotechnical Surveys EP (Commonwealth)
- Browse to NWS Project Geophysical and Geotechnical Surveys EP (State).

The EPs relate to geophysical and geotechnical survey activities involving seafloor sampling and scanning, and survey vessel operations in both Commonwealth and State waters.

Consultation for both EPs opens on 28 April 2026 and closes on 28 May 2026.

The purpose of Woodside's consultation with WWAC is to understand how the activities in the EPs could potentially impact the group's cultural values, interests and activities.

Woodside in the course of developing the EPs, will assess feedback, opinions and comments provided by the consultation closing date, and where relevant, consider appropriate control measures to include in the EPs.

The purpose of this email is to:

- Inform you about our plans for these activities.
- Invite you to submit feedback for these activities.
- Provide an opportunity to discuss these activities.
- Discuss further ways to consult and engage for these activities.

6.1.42 Email sent to Department of Foreign Affairs and Trade (DFAT) – 19 June 2026

Dear Department of Foreign Affairs and Trade

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please provide feedback to Woodside by **20 July 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

International Consultation

Woodside's approach to international consultation has been developed following advice provided by the Department of Foreign Affairs and Trade (DFAT) during consultation on the Pyrenees Facility Operations Environment Plan, Stybarrow Plug and Abandonment Environment Plan and WA-34-L Pyxis Drilling and Subsea Installation Environment Plan Revision.

Woodside acknowledges that DFAT is responsible for the management of communications and sensitivities with other countries, and that DFAT has requested Woodside not contact foreign embassies directly.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside is consulting DFAT as the Environment that may be affected (EMBA) for these EPs overlaps the Traditional Indonesian fishing Memorandum of Understanding Box near Scott Reef. Woodside has also consulted AFMA in relation to these EPs.

Activity and location summary

Browse to NWS Project GPGT Surveys Environment Plan (EP)		
	Commonwealth EP	**State EP**
Activity details	**Geophysical surveys within the Operational Area using:** • Multibeam echosounder (MBES), single beam echo sounder, altimeter • Side scan sonar (SSS) including variants such as multi-aperture and synthetic aperture sonar • Magnetometer / gradiometer and pipe tracker • Sub-bottom profiler (SBP), such as but not limited to boomer, sparker, pinger, chirp, and parametric SBP. **Geotechnical surveys within the Operational Area using:** • Box corer / grab sampler • Shallow cores and probes: piston core / gravity core / vibrocore • Borehole sampling / coring / in situ testing • Cone penetrometer testing (CPT/PCPT/CPTu). **Other survey equipment being used:** • Water sampler • Sound velocity sensor / multi-parameter conductivity-temperature-depth profiler • Ultra-short baseline (USBL) positioning system • Doppler velocity log and Inertial navigation system • Underwater camera • Underwater laser scanner • Remotely operated vehicle (ROV) • Autonomous underwater vehicle (AUV).	
Titles	• Petroleum licences: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R. • Greenhouse Gas permit G-8-AP.	• Petroleum licence: TR/5 R2.
Location	In Commonwealth waters ~ 430 km north-northwest of Broome (Operational Area A) and ~ 370 km north-northwest of Broome (Operational Area B).	In State waters ~ 430 km north-northwest of Broome.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Water depth	~ 350 m - 900 m	~ 75 m - 700 m
Timing	Anticipated to commence from ~ Q3 2027.	
Duration	• Surveys anticipated to be completed over several multi-week campaigns (typically 20-60 days in duration) split over the five-year duration of the EP. • Estimated to take up to a maximum of 90 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day. • Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.	• Surveys anticipated to be completed over several multi-week campaigns (typically 20-40 days in duration) split over the five-year duration of the EP. • Estimated to take up to a maximum of 40 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day. • Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.
Vessels	Multi-purpose vessels, uncrewed surface vessels, geotechnical drilling vessels and support vessels.	
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • Temporary 500m exclusion zone around vessels conducting survey activities to manage vessel movements. To note: • The exact location of the proposed surveys within the Operational Areas may vary. • Operational Areas are within Commonwealth waters.	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • Temporary 500m exclusion zone around vessels conducting survey activities to manage vessel movements. To note: • The exact location of the proposed surveys within the Operational Area may vary. • Operational Area is within State waters.
Communication with mariners	• Commercial fishers and other marine users are permitted to use the Operational Area but should take care around operations by adhering to standard navigation rules and remain clear of the safety exclusion zone. • Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby.	

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on

highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are for a vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at feedback@woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **20 July 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EPs. The Commonwealth EP will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). The State EP will be submitted to the Department of Mines, Petroleum and Exploration (DMPE) for acceptance in accordance with the *Petroleum (Submerged Lands) (Environment) Regulations 2012* (WA). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Feedback

6.1.43 Email sent to Kimberley Ports – 9 June 2026

Woodside is planning to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP).

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

If you would like to comment on the proposed activities, please provide feedback to Woodside by **9 July 2026** using the details below.

Overview

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts.

A series of new GPGT surveys is proposed to support potential future activities associated with the Browse to NWS Project. These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans (EPs):

- Browse to NWS Project GPGT Surveys EP (Commonwealth) – the subject of this consultation
- Browse to NWS Project GPGT Surveys EP (State) – the subject of this consultation
- Browse to NWS Project Trunkline GPGT Surveys EP (Commonwealth).

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs).

Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

You can read more about the Browse Project on our website.

Consultation information

Consultation Information Sheets are attached, which provide additional background on our approach to consultation, and on the proposed activities including summaries of potential key impacts and risks and associated management measures. These are also available on our website.

Activity and location summary

Browse to NWS Project GPGT Surveys Environment Plans		
	Commonwealth EP	**State EP**

Activity details	**Geophysical surveys within the Operational Area using:** • Multibeam echosounder (MBES), single beam echo sounder, altimeter • Side scan sonar (SSS) including variants such as multi-aperture and synthetic aperture sonar • Magnetometer / gradiometer and pipe tracker • Sub-bottom profiler (SBP), such as but not limited to boomer, sparker, pinger, chirp, and parametric SBP. **Geotechnical surveys within the Operational Area using:** • Box corer / grab sampler • Shallow cores and probes: piston core / gravity core / vibrocore • Borehole sampling / coring / in situ testing • Cone penetrometer testing (CPT/PCPT/CPTu). **Other survey equipment being used:** • Water sampler • Sound velocity sensor / multi-parameter conductivity-temperature-depth profiler • Ultra-short baseline (USBL) positioning system • Doppler velocity log and Inertial navigation system • Underwater camera • Underwater laser scanner • Remotely operated vehicle (ROV) • Autonomous underwater vehicle (AUV).	
Titles	• Petroleum licences: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R. • Greenhouse Gas permit G-8-AP.	• Petroleum licence: TR/5 R2.
Location	In Commonwealth waters ~ 430 km north-northwest of Broome (Operational Area A) and ~ 370 km north-northwest of Broome (Operational Area B).	In State waters ~ 430 km north-northwest of Broome.
Water depth	~ 350 m - 900 m	~ 75 m - 700 m
Timing	Anticipated to commence from ~ Q3 2027.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Duration	• Surveys anticipated to be completed over several multi-week campaigns (typically 20-60 days in duration) split over the five-year duration of the EP. • Estimated to take up to a maximum of 90 days per year (during anytime in the calendar year). Survey vessels may operate continuously, up to 24 hours a day. • Timing and duration are subject to change due to factors including approvals, weather, survey vessel availability and other unforeseen circumstances.	• Surveys anticipated to be completed over several multi-week campaigns (typically 20-40 days in duration) split over the five-year duration of the EP. • Estimated to take up to a maximum of 40 days per year (during anytime in the calendar year). 6.2.2 Email sent to Western Australian Fishing Industry Council (WAFIC) – 21 May 2026

Dear WAFIC

Woodside previously consulted you on its plans to submit the Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys Commonwealth and State Environment Plans (EP)s.

The Operational Area for the **Browse to NWS Project GPGT Surveys (Commonwealth) EP** covers several petroleum titles in Commonwealth waters: WA-30-R, WA-28-R, WA-29-R, WA-31-R, WA-32-R, and G-8-AP. It includes:

- Operational Area A – the Torosa field, located approximately 430 km north-northwest of Broome
- Operational Area B – the Calliance and Brecknock fields, located approximately 370 km north-northwest of Broome.

The Operational Area for the **Browse to NWS Project GPGT Surveys (State) EP** overlaps Petroleum Titles TR/5 R2, located in State waters approximately 430 km north-northwest of Broome.

Additional information on the EPs is provided in the previous email below and in the Consultation Information Sheets attached, which are also available on Woodside's website.

As per WAFIC's consultation guidance, Woodside does not require this reminder to be distributed to individual licence holders.

6.3.1 The Australian – 28 April 2026

THE AUSTRALIAN TUESDAY, APRIL 28, 2026

The kitchen table pitch to salvage state Libs

INSIDE STORY

ANTHONY GALLOWAY
VICTORIAN POLITICAL EDITOR

Brian Loughnane sat at Jess Wilson's kitchen table in Melbourne's eastern suburbs, listening as the Victorian Liberal leader and her friend, federal senator James Paterson, made their pitch.

It was Saturday morning, April 11, and the conversation carried consequences well beyond the room. Wilson and Paterson wanted Loughnane, the party's former federal and state director and one of its most experienced campaign strategists, to take over the state presidency of a division long plagued by internal conflict. Two decades earlier, such an approach would have been made in the smoke-filled rooms of the Melbourne Club, but this was conducted in the home of a 35-year-old leader trying to steady a fractious party, as her young son Patrick's toys lay scattered on the floor.

For Wilson and Paterson, Loughnane was the ideal candidate: a seasoned operator who had overseen the federal party's landslide victories in 2004 and 2013, and who might impose a measure of discipline and professionalism on a divided state division.

But he needed convincing.

Loughnane needed only to consider the circumstances confronting the incumbent, Philip Davis, to understand the risks of taking on this unpaid role.

Davis was being sued by members of his own state executive over a $1.55m loan to former leader John Pesutto, a dispute that had come to symbolise the party's internal dysfunction.

In fact, the Victorian division's factional warfare stretches back more than a decade, defying successive attempts at reconciliation and leaving no figure yet able to unite its warring camps.

If Loughnane were to step in, it would be on his terms. Any nomination would need to be uncontested, carry support across the party's factions, and be strictly time-limited. He would guide the party's organisational wing to the November state election, then leave shortly after.

Along with the two senior Victorians, federal leader Angus Taylor was also urging Loughnane to take on the position.

Wilson and Paterson then went about the delicate task of winning over the opposing factions in the party, in the hope that a reluctant recruit might yet be convinced to take on one of the most thankless roles in Victorian politics.

'Line in the sand'

On the day Wilson claimed party leadership from Brad Battin in November, she reached for a familiar political metaphor.

"Today is a line in the sand," she told Sky News host Peta Credlin, pitching her unopposed elevation as both a reset and a chance to steady a party that had just turned to its third leader in a year. Credlin, Tony Abbott's former chief of staff, also happens to be married to Loughnane.

Wilson spoke of unity, of a "broad church" leadership team, and of a party at its best when its competing factions pull in the same direction.

The moderate Wilson had taken the leadership with the support of conservative backers including upper house MP Bev McArthur, who became upper house leader, and Paterson, a key powerbroker in the national Right.

The problem for Wilson was that while she had successfully brought the parliamentary team together, the organisational wing was still in an internal war.

The rebel group of conservative members, led by state executive member Colleen Harkin, was suing the party and its leadership over the loan to Pesutto to cover his defamation of Liberal MP Moira Deeming over her appearance at a Let Women Speak rally in March 2023.

Davis ally and state director Stuart Smith had also recently resigned after leaked messages published in The Australian showed him mocking the party's women's council and 76-year-old McArthur. While Wilson, 36, and Davis, 73, are both associated with the moderate faction, they are not aligned. When she took the leadership, there was no immediate move against Davis, who had only narrowly fended off a challenge from Greg Mirabella to retain the presidency two months earlier.

But in the months that followed, the relationship steadily deteriorated.

Davis fate sealed

The balance shifted decisively on March 29, when Deeming was dumped from the upper house ticket in favour of Dinesh Gounaserty. Within hours, it emerged Gounaserty had provided a character reference for a convicted sex offender, rendering him ineligible. Davis, as chair of the applicant review committee that vetted candidates, came under renewed pressure. His internal critics, including Harkin and fellow state executive member Marcus Li, moved quickly to call for his resignation.

Even then, Wilson's camp held back. It lacked a viable alternative, and state conference was looming on May 23.

The turning point came a week later. In an interview with The Age on Sunday, April 6, Davis accused what he implied to be a cabal of conspirators – internal critics, Sky News, Credlin and News Corp newspapers – of seeking to remake the party into One Nation-lite.

For Wilson and her allies, the intervention was the moment they decided Davis needed to go. It reinforced a growing view within her camp that Davis could not bridge the divide in the party, and was only further entrenching it.

The difficulty was finding a replacement.

Several senior Liberal figures, including former federal ministers Mitch Fifield and Greg Hunt, ex-state cabinet minister Mark Birrell and former party president Ian Cancon, had already been approached and declined.

Moderates needed convincing

Loughnane was always Wilson and Paterson's dream candidate given his stature in the party and campaign expertise.

The pitch was very much modelled on Wilson's own ascent to the leadership, in which she was backed by both conservatives and moderates and avoided a "winner's takes all approach". But the moderate wing, in particular, needed reassurance.

The night after Davis's comments were published, Credlin sharpened the pressure on Davis publicly, questioning whether he was up to the job of uniting the party. "If Phil Davis can't do that, then he should just resign and let someone who knows how to win... do the job that he, self-evidently is not up to," she said on her Sky News program.

While those who have known Loughnane and Credlin for decades insist it is simplistic to view them as a single entity, some still sought reassurance. On the night of Friday, April 17, Paterson and Loughnane met in Melbourne's CBD with three of Davis's vice-presidents – Holly Byrne, Catherine Burnett-Wake and Geoff Gledhill – and treasurer Karen Sobels. The meeting with the key moderates, held before a gathering of the party's state assembly, proved pivotal.

Some moderates who worked under Loughnane during federal campaigns tell The Australian they needed little persuasion, viewing him as a disciplined operator above factional politics. Others were wary, concerned the move amounted to Credlin gaining the presidency "by stealth". Quiet assurances from those who had worked with Loughnane helped settle those doubts.

While not all welcomed the loss of factional control, few were prepared to stand in the way of Wilson's preferred candidate.

Loughnane's name was also floated with Liberal luminaries including Jeff Kennett, Peter Costello, Michael Kroger and Ted Baillieu, who were all supportive.

By April 23, after The Australian revealed Wilson's approach, she and Paterson began calling MPs across the party. There was near-uniform support for the move – unheard of in the Victorian division. But less than 48 hours before nominations closed, the outcome remained uncertain.

Loughnane lodged his nomination on Friday. But there was one final complication.

Four other candidates – Davis, Gledhill, Nigel Kibble and Ian Quick – also nominated. Kibble, Quick and Gledhill quickly withdrew. But as Wilson marked her 36th birthday on Saturday, it was still unclear if the deal would hold.

On Sunday, Davis withdrew.

People who had spent years fighting each other agreed to back Loughnane, a decision senior figures hope shows a determination to move on from the petty internal fights of the past for the sake of winning the state election.

For Wilson, it was the final piece to fall into place as she prepares for the real contest against Jacinta Allan in November.

'Worst nightmare': hunt for girl, 5, taken from her bed

Continued from Page 1

seen wearing a blue short-sleeve T-shirt with a white ring stripe around the end of the sleeves and black boxer-style underwear.

As the community braces for a possible worst case scenario, Northern Territory senator Jacinta Nampijinpa Price has called on anyone with information to come forward.

"To the community: this is the moment to step up. Someone knows something," she said. "Let's help bring her home."

She said the suspected abduction is "every parent's worst nightmare". "To her family, our thoughts are with you," she said.

Local Targeted Area Council president Maxine Carlton said the community was praying for a positive outcome.

"We are all distraught at what has taken place," she told the ABC. "We hope that there will be a light at the end of the tunnel and we find our granddaughter."

The incident is likely to put a greater focus on violence in NT town camps, where hundreds of predominantly Indigenous children live in multigenerational homes.

Police found items of interest in their search on Monday that are being examined by forensics officers to establish if they are relevant to the case. Several helicopters and a police thermal-imaging drone scoured Alice Springs for the little girl, as did police and volunteers on the ground.

Acting Commander Mark Grieve from NT Police Crime and Intelligence Command said Lewis is believed to have been "in the area" around the home of Sharon's disappearance and had been seen at the residence.

"He currently remains one of the few people who were in Old Timers camp at the time and who has not made themselves known to police, nor have police been able to locate him at this point in time," he said. "Police can confirm he has recently been released from prison and is the subject of no conditions."

Commander Grieve said police did not believe Lewis had access to a vehicle.

"We're hoping that he's still in the immediate area and, if he's involved, we certainly hope that no harm has come to Sharon," he said.

Lewis pleaded guilty in March last year while in prison to resisting police and a separate count of breaching a domestic violence order. He was sentenced to three months in prison.

In 2022 he served eight months in prison for aggravated assault but breached a 12-month good behaviour bond while on parole.

Sharon is from a large and well-known Central Australian family. The patriarch is prominent Walpiri elder Robin Japanangka Granites, an interpreter and cultural authority. Her extended family includes acclaimed desert artists.

NT Police hold concerns for Sharon Granites' welfare

Macca's to build on 'coolest street'

TIA CLARKSON-PASCOE

One of Melbourne's trendiest streets is set to receive a 24/7 McDonald's restaurant after the fast-food conglomerate won an appeal in Victoria's administrative tribunal.

The fast food giant fought back against Darebin City Council's decision blocking construction of a McDonald's restaurant in Melbourne's inner north.

The planning permit applies to the land on High Street in Northcote which was declared the "coolest street" by Time Out magazine in 2024.

The Victorian Civil and Administrative Tribunal (VCAT) ultimately ruled in favour of the fast food chain despite the council's many points of issues submitted to the court.

The council opposed the planning permit, saying the "large-format fast-food outlet will materially alter the look, feel, and identity of the precinct".

It also raised concerns about the environmental impacts, potentially negative effect on property prices, and the increase of traffic and congestion in the area.

A petition to "stop McDonald's from opening in Northcote" gained more than 11,300 signatures from people concerned the street, renowned for its "local charm and community-based spirit", would be "overshadowed" by the 24/7 outlet.

There are already two existing McDonald's stores within a 3.6km radius of the proposed site of 319-325 High Street.

However, VCAT member Michael Deidun said he could not refuse the application based purely on who intended to occupy the site.

"This tribunal does not have the power to review the corporate approach of McDonald's, its work practices and ethics, the type of food it produces, its impact on human health, or whether it fits the 'cool' vibes of its context," he said.

A McDonald's spokesperson said the appeal was "fairly and rightly assessed on its merits".

"The restaurant will be owned and operated by a local franchisee, who will contribute to the local area through employment, access to training and development opportunities, and supporting local community organisations," the spokesperson said.

"We look forward to joining Northcote and playing an active role in the local community."

30 years since Port Arthur 'horror'

JOSEPH OLBRYCHT-PALMER

Anthony Albanese has deplored the "unspeakable horror" of the Port Arthur Massacre, as Australia marks 30 years since its worst mass shooting.

Martin Bryant shot dead 35 people and wounded a further 23 in a violent rampage across the Tasmanian tourist hotspot of Port Arthur on April 28, 1996.

The attack prompted snap gun laws outlawing semi-automatic and pump-action shotguns, heavily restricting firearm licences, and rolling out a national buyback scheme that destroyed more than 650,000 firearms.

"Thirty years after the Port Arthur massacre, the horrible injustice of that day remains beyond understanding," the Prime Minister said in a statement.

"Australia pauses today to remember the 35 people whose lives and futures were so pitilessly stolen from them just because they happened to be there.

"We think of everyone whose world was shattered by the loss of those who had been the bright centre of their lives, their love left desperately wrapped around an absence."

Among those killed were six-year old Alannah and three-year old Madeline Mikac.

Bryant, fleeing the historic grounds of Port Arthur, stopped where the young girls were walking with their mother, Nanette.

He fatally shot Ms Mikac and Madeline before gunning down Alannah as the older daughter ran away.

Left widowed and childless, Walter Mikac led the charge for gun reform in the wake of the massacre and co-founded The Alannah and Madeline Foundation to support child victims of violent crimes.

Reflecting on "the extraordinary courage that emerged from shattering grief", Mr Albanese praised Mr Mikac for championing "his devastating loss into a call for national action on gun reform, writing to then prime minister John Howard with a message that echoes through the decades: 'Be strong, act now'."

Bryant, now 58, is serving 35 life sentences at Hobart's Risdon Prison.

6.3.2 The West Australian – 28 April 2026

State gripped by a month of carnage

BROOKE ROLFE & KIRSTY LICHTENSTEIN

The carnage on WA roads has continued with two young girls dying in hospital 10 days after a car they were travelling in slammed into a tree, while two women were killed in separate crashes on the weekend.

The two girls, aged three and four, died in Perth Children's Hospital on Sunday. They were passengers in a Ford Territory that left the road on Muriel Street, Viveash, and hit a tree on April 17.

The 24-year-old male driver and a 24-year-old female passenger were taken to Royal Perth Hospital with serious injuries.

Also on Sunday, a 36-year-old woman was killed when her Holden Statesman sedan left Spencers Brook Road near Burlong Park, about 95km east of Perth, and hit a tree about 5.30pm.

An hour later, an 80-year-old woman was hit by a Kia Rio hatchback outside a tavern on Blanche Street in Gosnells. According to police, the woman was crossing George Street when she was hit.

Bystanders and police provided first aid to the woman before she was taken to Fiona Stanley Hospital, where she later died from her injuries.

All three crashes are under investigation and police are appealing for any witnesses or anyone with dashcam footage to contact Crime Stoppers.

The latest deaths bring the number of fatalities to more than 60 so far this year, after an Easter school holiday period during which three people were killed in a single day.

At this time last year, 69 people had died on roads.

DEADLY MONTH ON WA ROADS

Derby – 18yo woman

APRIL 26
Burlong Park – 36yo woman
Gosnells – 80yo woman
Viveash – 3yo girl and 4yo girl after April 17 crash

On April 2, 14-year-old Jaxxon Brinkworth was killed when his dirt-bike collided with a Ford F150 utility on Albany Highway, in Bedfordale, about 4.25pm.

Minutes later, a 30-year-old man lost control of his Harley-Davidson motorcycle while riding on a remote stretch of road on Kingsbury Drive in Jarrahdale. He died at the scene.

Hours later, an 18-year-old woman was killed during a late-night drive in the mudflats near Rowan Street, in Derby, after the 19-year-old driver lost control of his Nissan Patrol and rolled.

The devastation prompted Road Policing Commander Mike Peters to issue a plea to drivers to stay safe.

"Every decision made behind the wheel matters," he said.

"Those decisions determine whether you arrive home safely or whether police are left delivering devastating news to a family. That responsibility must be taken seriously by every driver."

Dr TikTok is in the house

Australian parents are increasingly turning to social media and AI-powered tools for health advice to support their physical and mental wellbeing, as the cost of living and time pressures make traditional care harder to access.

Research reveals social media is the go-to for parents, who are more likely than non-parents to trust, act on, and even spend money based on health content they view online that can lead to adverse health outcomes with no clinical oversight.

Three in 10 parents have bought a health product influenced by online content.

Tax time alert for online tips

The Australian Taxation Office is warning the community to be wary of incorrect or misleading information this tax time, particularly claims promising greater refunds, shortcuts or hacks. The ATO says there is a rise in tax-related content and "tips" being shared — especially online — and is urging taxpayers to treat unverified advice with caution. ATO Assistant Commissioner Anita Challen says Australians should think twice before acting on information from third-party sources.

6.3.3 National Indigenous Times – 28 April 2026

20 NIT THE INDIGENOUS BUSINESS REVIEW theibr.com.au

Steering a new pathway

NATASHA CLARK

Kimberley Agricultural Pastoral Company has sold its first steers since transitioning from bulls in 2024, with the cattle shipped to Malaysia and Indonesia this month aboard early-season live export vessels.

The 100 per cent Indigenous-owned company, operating across four cattle stations in WA's Kimberley region, was able to capitalise on the first export ships of the season, with steers prepared for sale in higher, drier country benefiting from all-weather road access.

While cattle producers across the Northern Territory are currently constrained by wet season conditions and limited transport access, Kimberley producers with reliable roads have benefited from strong demand and competitive pricing as high-volume export buyers seek to fill ships.

Leading hand Ivan Watson said the transition from bulls to steers has opened new opportunities for the company.

"It feels great that this has happened, and thanks to the change from bulls to steers, we have opened up whole new domestic and international markets—a stepping stone to bigger things for KAPCO," Mr Watson told National Indigenous Times.

KAPCO crew. Picture: KAPCO

"Not just because of the market, but because it also creates further employment opportunities for Indigenous people who are looking to excel in the industry and use KAPCO as a stepping stone to further opportunities in their lives."

The steers were sold from Myroodah Station, which is about 150km from Derby, where KAPCO runs a herd of brahman, droughtmaster, and shorthorn cattle primarily for the live export market.

Shorthorn-cross cattle are also processed under the company's own brand, KAPCO Beef, which is sold in supermarkets across the Kimberley region.

KAPCO is expected to turn off about 4500 head this year.

Fellow leading hand Cheyden Dolby said conditions were tough but rewarding.

"It was dusty and extremely hot at this time of year, and we camped out to get the job done — it was a great feeling to see those trucks roll out full of fat steers," he said.

Mr Dolby emphasised the value of the team environment and said he relished seeing growing opportunities for young Aboriginal workers.

"I really enjoy working for KAPCO and leading a close-knit team. It is great to see more young Indigenous people join KAPCO each year," he told National Indigenous Times.

Note: KAPCO chair Wayne Bergmann is a co-owner of National Indigenous Times.

6.3.4 Pilbara News – 29 April 2026

Pilbara NEWS
Wednesday, April 29, 2026

A man was rescued off Picard Island after his inflatable dinghy broke anchor.

Rescue reminder

SOPHIE GANNON

Police have found and rescued a severely dehydrated man who went on a solo snorkelling mission kilometres off the north-west coast of WA.

Officers aboard a charted search plane spotted the man in knee-deep water late on Friday, April 17 — several hours after his family had alerted authorities that he had failed to return from a planned solo boating and camping trip to Picard Island.

The 28-year-old man had set off in a 3.3m inflatable dinghy and had been snorkelling about 5km from the island when his vessel broke anchor, leaving him stranded.

He tried to swim to another nearby island and spent several hours in the water before eventually reaching land, where he remained until he was picked up by a commercial fishing vessel, which was nearby and was able to be directed to the scene.

Officers from Roebourne and Karratha were assisted by Volunteer Marine Rescue crews, along with commercial and private vessels.

The multi-agency search from the skies was coordinated by the water police coordination centre in North Fremantle, with support from the Pilbara police district, WA Police emergency operations unit and police air wing.

The man was taken to Point Samson, where St John WA paramedics treated him for severe dehydration.

In a statement on Sunday police reminded skippers to always plan ahead before heading offshore, monitor weather and tide conditions, carry essential safety equipment including lifejackets, an EPIRB, flares and a first-aid kit, maintain reliable communication, and inform others of their travel plans and expected return time.

Pluto LNG Facility update

As operator of the Pluto LNG Facility, Woodside's priority is safe and reliable operations.

Woodside advises it will be undertaking planned maintenance at the Pluto LNG Facility in the coming weeks, which may result in increased flaring with the potential for dark smoke during some of the maintenance period. Flaring is essential for the safe operation of a gas plant and is required during some maintenance activities.

Woodside closely monitors and aims to minimise its flaring as part of normal operations.

If you would like further information on these activities, scan the QR code below or call Woodside's Community Line on 1800 634 988.

6.3.5 Kimberley Echo – 30 April 2026

6 NEWS kimberleyecho.com.au Thursday, April 30, 2026

Voices of the region part of committee

PHOEBE SOLON

The State Government says the Kimberley will have stronger representation in WA's justice reform efforts after new appointments to the Aboriginal Justice Advisory Committee.

Twelve Aboriginal leaders from across the State have been added to the committee which provides independent cultural advice to the Department of Justice, helping shape policies and services that better reflect the lived experiences of Indigenous people, particularly in regions such as the Kimberley.

Attorney-General Tony Buti said the cultural knowledge and experience of Aboriginal communities was essential in building a fair, safe, and just system for everyone.

"By embedding Aboriginal voices into decision-making, we can strengthen trust in the justice system and deliver lasting, meaningful change," he said.

Among the appointees is Jean O'Reeri, a Ngarinyin woman from Karunjie Station on the Gibb River Road.

She has lived and worked in Wyndham since the 1960s, dedicating decades to community advocacy and supporting young people. With more than 40 years experience as an Aboriginal teaching assistant, she has also contributed to Aboriginal corporations and medical services across the region.

Dylan McCarthy, also representing the West Kimberley, is a Gooniyandi, Gija and Bardi man with strong ties to Ardyaloon Community and Fitzroy Crossing.

Born in Derby, he has worked in mining, health and community services, and now supports Aboriginal engagement at Legal Aid WA.

The AJAC has identified five strategic priority areas: young people; safe housing and homelessness; Aboriginal workforce development and employment; procurement and Aboriginal community controlled organisations; and prevention of deaths in custody.

WA Aboriginal Affairs Minister Don Punch said he was pleased with the committee's strong regional representation.

"It is pleasing to see strong regional representation on AJAC so that decisions about policy development are shaped by Aboriginal people who understand what's happening in their own communities and can advocate for place-based approaches to shape a more responsive and culturally informed justice system," he said.

6.3.6 Broome Advertiser – 30 April 2026

10 NEWS broomead.com.au Broome Advertiser Thursday, April 30, 2026

Croc attacks sleeper in swag

BROOKE ROLFE

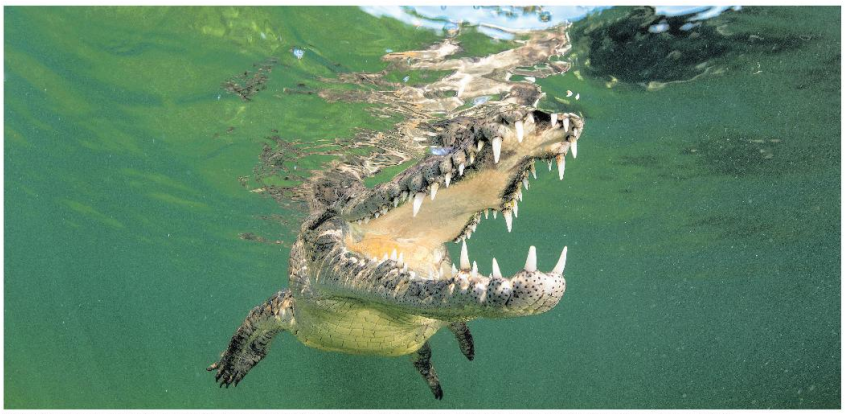
A young man was asleep in his swag when he was attacked by a 3m saltwater crocodile at a remote camping location in WA's north.

The man, in his 20s, survived being mauled at a beach beyond the Coulomb Point Nature Reserve, beside Hidden Creek, about 50km north of Broome.

He was taken to Broome Hospital after the early-morning attack on April 18 before being flown by the Royal Flying Doctor Service to Perth the following day, where it is understood he underwent surgery at Royal Perth Hospital.

His injuries are described as significant but not life-threatening.

The man, who opted to conceal his identity, said he wanted to focus on his recovery rather than the details of the attack.



I would like to take this opportunity to thank everyone for their messages of concern over the past few days," he said in a statement.

"I am grateful for the well wishes as I recover from my injuries.

"I would like to give particular thanks to my friends and family who were there to help and support me when I needed it most.

"I would also like to offer my sincere gratitude to the staff at Broome Hospital and the Royal Flying Doctor Service for the treatment and care they provided while preparing me for my journey to Royal Perth Hospital."

He said he would be concentrating on his recovery and return to regular life.

Saltwater crocodiles are the world's biggest reptile and are responsible for most crocodile attacks in northern Australia. Picture: Adobe

It is understood people nearby may have seen the attack which unfolded near a remote stretch of the unsealed Manari Road on the Dampier Peninsula.

The spot is well known among residents and visitors for its long, untouched beaches, tidal creeks, and pindan vegetation that can survive in the red, sandy plains.

The Department of Biodiversity, Conservation and Attractions is investigating the crocodile attack, and intends to visit the site, as well as speak with the injured survivor.

However, tidal conditions in the Kimberley have made the beach temporarily inaccessible.

It is the second reported crocodile attack in the region this year.

In January, a man suffered lacerations after an encounter with a 3m saltwater crocodile near the remote La Djardarr Bay Community. Another man was attacked in 2024 by a 3m saltwater crocodile while spearfishing off the coast of nearby One Arm Point.

Saltwater crocodiles are common along the Kimberley coastline and are known to inhabit beaches, creeks and tidal waterways.

They are the world's biggest living reptiles and are responsible for most crocodile attacks in northern Australia.

The DBCA has warned people to be vigilant along the Kimberley Coast and at all water bodies across northern Australia, including estuaries, tidal rivers, river pools, and the waters near offshore islands.

The Parks and Wildlife service should be contacted if a crocodile makes an approach, shows aggressive behaviour, poses a risk to public safety, or if people are seen interfering or interacting with crocodiles.

Woodside is proposing to undertake a series of geophysical and geotechnical surveys to inform potential future activities related to the proposed Browse to North West Shelf (NWS) Project. Woodside is consulting relevant persons on three Environment Plans regarding the proposed surveys:

- **Browse to NWS Project Geophysical and Geotechnical Surveys** – a Commonwealth Environment Plan for survey work in the vicinity of the Torosa, Calliance and Brecknock gas fields.
- **Browse to NWS Project Geophysical and Geotechnical Surveys** – a State Environment Plan for survey work in the vicinity of the Torosa, Calliance and Brecknock gas fields.
- **Browse to NWS Project Trunkline Geophysical and Geotechnical Surveys** – a Commonwealth Environment Plan for survey work in the vicinity of the proposed trunkline.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. In the highly unlikely event a hydrocarbon release does occur, the whole EMBA would not be affected.

We would like to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by the activities under these Environment Plans, we would like to hear from you by **28 May 2026.**

6.3.7 Koori Mail – 6 May 2026

Dancers performing at the healing ceremony. *All pictures: Ali Mc*

Children and attendees come together around the fire for the closing dance.

● continued from previous page

"I've experienced racism when I was in primary school, when I was in high school and playing football, and after football. That's something that just seems to always be there."

In 2021, Lovett-Murray and Winmar produced a documentary about racism in sports, *The Ripple Effect*, and established a schools education program called 'Point and be Proud'.

"It was about him and other Indigenous and multicultural athletes that have been through racism and the impact it had on their mental health and wellbeing," he said.

"We were going into schools and showing that documentary and having discussions with the students: If you're racist, what is the impact on that person's mental health and well being?"

He said the impact of racism on First Nations children and young people was severe, and that more needed to be done to eradicate racism and support better mental health.

"We hear stories of young Aboriginal kids committing suicide because of racism," he said. "That's the worst case scenario, but it's something that I believe that we've got to keep educating the younger ones on."

He said it was important that ceremonies like Ngarra Jarra Noun continued as part of the healing and to contribute to cultural strength and pride.

"Those ceremonies, it's something that we've done for many hundreds, thousands of years," he said.

"A big reason why we are the oldest culture in the world is because these ceremonies, these songs, these dances, they're passed down from generation to generation."

Aunty Reio Ellis from Grandmothers Against Removals (GMAR) with her grandchildren.

Nathan-Lovett Murray, from Indigenous Sports Network, organiser of Ngarra Jarra Noun Healing Ceremony.

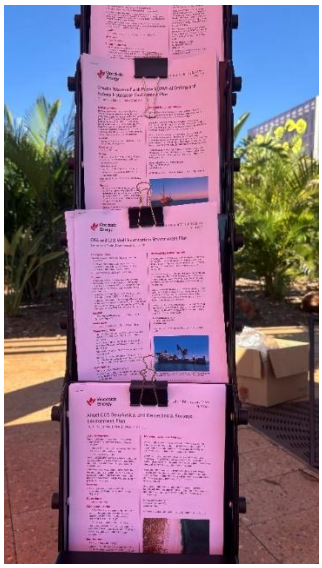
6.5 Community information sessions

The community information sessions that Woodside has conducted are captured below:

6.5.1 Pilbara Region

6.5.1.1 KDCCI Markets at REAF – 15 May 2026



Location	Dampier
Activity	KDCCI Markets at REAF
Date	15 May 2026
Description of the consultation	Woodside hosted a stand at the Karratha District Chamber of Commerce (KDCCI Red Earth Arts Festival (REAF) markets, a community event bringing together local businesses selling local products, a variety of food vendors and community groups and performances. The stand was staffed by members of Woodside's Corporate Affairs and Environment teams. Woodside displayed a QR code on a banner at the stand linking to the 'Consultation activities' page of the Woodside website. Woodside displayed and made available printed Consultation Information Sheets on the Browse to NWS Project GPGT Surveys EP.
Advertising and invitations	Over 500 community members attended the event.
Estimated number of individuals consulted	Woodside spoke to many community members, recording 10 conversations.
Summary of Feedback, Objection or Claim	
• Queries around employment opportunities. • General interest in the Scarborough Energy Project progress and Pluto Train 2 and Train 1 modifications projects. • General interest from Woodside employees around the Browse to NWS Project. • Patrons shared their views on future of gas in the energy transition and how this compares to alternative power options; solar and nuclear. • Interest in Woodside's supply of DOMGAS to WA. • EP community consultation and approval process discussed and why we want to talk to community. No concerns raised. • Discussions with children about what Woodside does and where gas comes from. • Pleasant interactions with Woodside, Woodside contractor companies and near neighbour employees.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims. The participation in the market was part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 3.2).

6.5.1.2 Dampier Beachside Markets – 7 June 2026

Location	Dampier
Activity	Dampier Beachside Markets
Date	7 June 2026
Description of the consultation	Woodside hosted a stand at the Dampier Beachside Markets, a community event bringing together local businesses selling local products, a variety of food vendors and community groups. The stand was staffed by members of Woodside's Corporate Affairs team. Woodside displayed a QR code at the stand linking to the 'Consultation activities' page of the Woodside website. Woodside displayed and made available printed Consultation Information Sheets on the Browse to NWS Project GPGT Surveys EP.
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and to allow individuals to provide feedback on proposed activities, through the following: • An advertisement published in the Pilbara News on 3 June 2026. • A social media post via Woodside North West Facebook account advising that Woodside would be in attendance at the event on 7 June 2026 • A social media post via Dampier Beachside Markets - DCA Facebook account advising that Woodside would be in attendance at the event on 4 June 2026 • An advertisement displayed on community noticeboards at Lo's Karratha on 26 May 2026 • An advertisement displayed on community noticeboards at Lo's Karratha, and IGA Good Grocer Karratha on 26 May 2026 • An EP consultation display with QR code (linked to the 'Consultation activities' page on Woodside's website) displayed at Woodside's stand. • EP consultation banner with QR code (linked to 'Consultation activities' page on Woodside website), displayed at Woodside's stand along with current EP consultation information sheets (see table below)
Estimated number of individuals consulted	Over 1000 community members attended the event. Woodside spoke to many community members, recording 20 conversations.
Summary of Feedback, Objection or Claim	
• Queries around employment opportunities. • Discussion around flaring, why Woodside flares, informing community abour upcoming flaring activity. no concerns raised - neutral sentiment. • General interest in the Scarborough Energy Project progress and Pluto Train 2 and Train 1 modifications projects. • General interest from Woodside employees around the Browse to NWS project. • General interest in Bass Straight activities. • Patrons shared their views on future of gas in the energy transition. • Environment Plan community consultation and approval process discussed and why we want to talk to community. No concerns raised. • Discussions with children about what Woodside does and where gas comes from. • Pleasant interactions with Woodside, Woodside contractor companies and near neighbour employees.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or

6.5.1.3 Waramalgu Markets with Cora-Larni Enterprises – 6 July 2026

Location	Roebourne
Activity	Waramalgu Markets with Cora-Larni Enterprises
Date	6 July 2026
Description of the consultation	Woodside hosted a stand at the Waramalgu Markets with Cora-Larni Enterprises, a City of Karratha community event in Roebourne as part of NAIDOC Week which brings together local businesses selling local products, a variety of food vendors and community groups and features performances. The stand was staffed by members of Woodside's Indigenous Affairs, Corporate Affairs and training partner, Programmed. Woodside displayed and made available printed Consultation Information Sheets on the Browse to NWS Project GPGT Surveys EP.
Advertising and invitations	Woodside advertised the event as a broader invitation to attend and discuss Woodside operations and projects via a social media post on the Woodside North West Facebook account.
Estimated number of individuals consulted	Event organisers estimated over 250 community members attended the event. Woodside spoke to many community members, recording 10 conversations.
Summary of Feedback, Objection or Claim	
• Queries around jobs, apprenticeships and traineeship opportunities. • Interest in Scarborough Energy project and Browse to NWS Project concept. • NAIDOC and what this means to community. • General Woodside awareness. • Future of energy security. • Social investment in Roebourne, how does Woodside direct funding? • No questions/discussions on Environment Plans.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

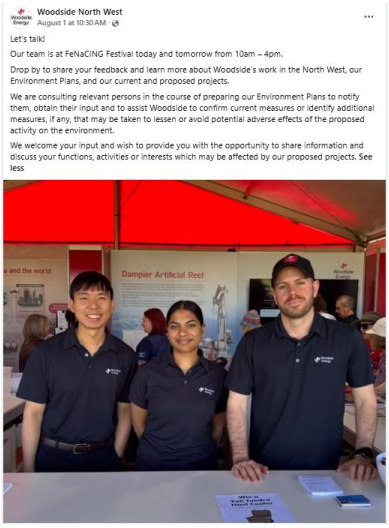
6.5.1.4 FeNaCING Festival – 1 to 2 August 2026

Location	**Karratha**
Activity	FeNaCING Festival
Date	1 to 2 August 2026

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.



Description of the consultation	Woodside hosted a stall at the FeNaCING Festival, Karratha, to engage community members on Woodside activities. The stand was staffed by Woodside representatives including from Environment and Corporate Affairs teams. Information was available on Woodside's activities in the north-west region and information sheets on flaring and marine seismic surveys were on display. Woodside displayed and made available printed Consultation Information Sheets on the Browse to NWS Project GPGT Surveys EP.
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and to allow individuals to provide feedback on proposed activities, through the following: (see evidence table below) • An advertisement published in the Pilbara News on 29 July 2026 edition • A social media post via Woodside North West Facebook account advising that Woodside would be in attendance at the event on 1 August 2026 • A social media post via FeNaCING Festival Facebook account advising that Woodside would be in attendance at the event on 30 July 2026 • An advertisement displayed on community noticeboards at Lo's Karratha on 28 July 2026 • An advertisement displayed on community noticeboards at IGA Good Grocer Karratha on 29 July 2026 • An EP consultation display with QR code (linked to the 'Consultation activities' page on Woodside's website) displayed at Woodside's stand.
Estimated number of individuals consulted	Over 10,000 community members attended the event. Woodside spoke to many community members, over 1,100 engaged in a Woodside quiz, recording approximately 100 meaningful conversations.
Summary of Feedback, Objection or Claim	
• Interest in local jobs, training opportunities and local procurement opportunities. • Interest in Woodside's social contribution activities in City of Karratha. • Conversations about Woodsides flaring activities. • Conversations about Woodside's approach to cultural heritage management. • Query about Woodside's tax contribution. • Conversation about Woodside's approach to the energy transition and energy security. • Interest in industry's political influence. • General conversations about Woodside's activities in Western Australia, including the North West Shelf and Scarborough Energy Project, Pluto Train 2 and Pluto Train 1 modifications. • Questions relating to the current status of the Browse to North West Shelf concept and considerations for Scott Reef. • How and why Woodside develops EPs and the EP approval process. • General interest in Woodside's health, safety and environmental management measures and mitigations, particularly in relation to seismic activities and potential impacts to fauna. • Discussions with children about what Woodside does and where gas comes from.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims. The participation in the festival was part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to provide feedback for Woodside to consider in developing its EP. Feedback received is assessed to assist in identifying appropriate measures in response to the feedback so that the activity may be carried out in a manner in which the impacts and risks of the activity will be reduced to ALARP and will be of an acceptable level, consistent with the intended outcome of consultation (see Section 5.2 of the EP).

6.5.1.5 Passions of the Pilbara – 8 August 2026

Location	Onslow
Activity	Passions of the Pilbara
Date	8 August 2026
Description of the consultation	Woodside hosted a stand at the Passion of the Pilbara Festival to engage community members on Woodside activities. The stand was staffed by Woodside Operations and Corporate Affairs representatives. Information was available on Woodside's activities in the Onslow region and information sheets on marine seismic surveys were also on display. Woodside displayed and made available printed Consultation Information Sheets on the Browse to NWS Project GPGT Surveys EP.
Advertising and invitations	Woodside promoted the market stall on its North West Facebook page.
Estimated number of individuals consulted	Over 500 community members attended the event. Woodside spoke to many community members, recording approximately 30 conversations.
Summary of Feedback, Objection or Claim	
• General queries about Woodside's footprint in Onslow, including Macedon Gas Plant (operator) and Wheatstone LNG (non-operator) • Interest in Woodside's social contribution activities in Onslow and broader region and potential support for family support services. • General conversations about Woodside's activities in Western Australia, including the North West Shelf. • Questions relating to the current status of the Browse project. • General interest in job and training opportunities. • General interest in the role of gas in supporting energy security. • General interest in Woodside's approach to health, safety and environmental management.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Presence at the Festival was part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

Woodside Energy

Let's Talk

Our Plans, Your Say

Edition 7 | May 2026

Deep Orient vessel.

The rundown

Woodside crews aboard the Deep Orient vessel have wrapped up one of their most complex decommissioning campaigns to date, safely delivering the Deep Orient program in Western Australia's North West.

Decommissioning involves removing infrastructure that's no longer required. It's considered from the start of a project and is an ongoing consideration.

The Deep Orient activities spanned the Griffin and Stybarrow fields, as well as Echo Yodel, a subsea tieback to Goodwyn A. These assets stopped producing in 2009, 2015 and 2012 respectively.

Following the safe plugging and abandonment of the wells, crews on the TechnipFMC-operated vessel safely recovered a total of 4,000 tonnes of subsea infrastructure, including 73 kilometres of pipelines. That's around the distance from Woodside's Perth headquarters to Mandurah. They also recovered 37 subsea structures such as Xmas trees, buoys, wellheads and umbilical termination assemblies.

Our decommissioning program is among the largest in Australia. Reducing risk, applying lessons learned and continually improving how we work keeps us focused on safety, the environment and carrying out the work efficiently.

Our focus is also on reducing, reusing, recycling and treating materials before disposal is considered.

In 2025, crews completed a multi-year decommissioning program at the Enfield field, approximately 38 km north of the North West Cape, Western Australia. The program included plugging and abandoning 18 Enfield wells, recovering and deconstructing the Nganhurra riser turret mooring, and removing flexible flowlines, umbilicals and other subsea structures. The deconstruction of the Nganhurra riser turret mooring saw 99.6 per cent of materials reused, repurposed or recycled.

This marks Woodside's first complete lifecycle project, from exploration through development and operations to final decommissioning.

Upcoming engagement opportunities

Woodside is consulting with local community members at events, making it easy to speak to us about our operations, decommissioning activities and proposed projects.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly teams at the locations below, follow the Woodside North West Facebook page or email us at: **feedback@woodside.com**

You can meet us at:

- **KDCCI Markets at REAF**
  Friday, 15 May 2026,
  3 pm – 8 pm. The Quarter,
  20 Sharpe Avenue, Karratha,
  WA, 6714
- **Dampier Beachside Markets**
  Sunday, 7 June 2026,
  9 am – 12 noon. Hampton Oval,
  Dampier, WA, 6713
- **FeNaCING Festival**
  1-2 August 2026, 9 am – 4 pm.
  Bulgarra Oval, Karratha, WA,
  6714

Dampier fishers land a solid catch with new artificial reef

The bold vision of Woodside and Recfishwest to enhance marine life and recreational fishing in the Pilbara has become reality with the successful installation of an artificial reef off the coast of Dampier in north west Australia.

Installation of the reef.

The reef comprises 48 purpose-built concrete modules. They were carefully transported and installed in early December 2025.

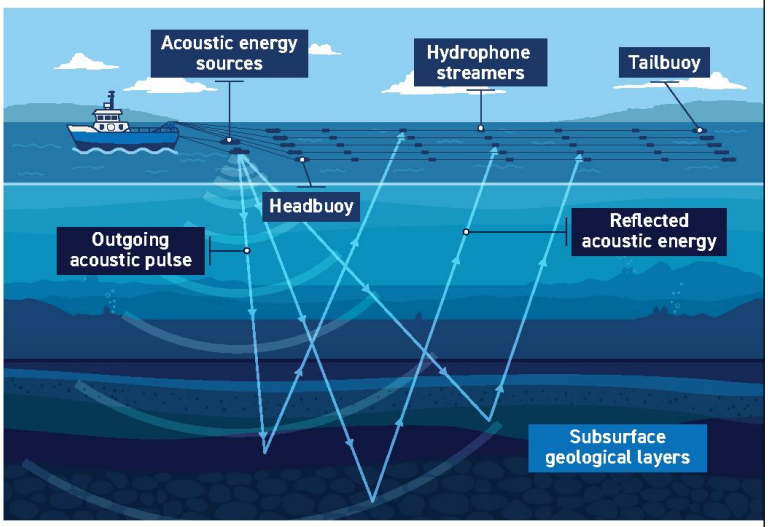
The reef sits in some 35 metres of water, about 30 kilometres from the Dampier boat ramp. Over time, the site is expected to become a high-quality fishing location for species such as Spanish mackerel, cobia, emperor, cod and even sailfish.

Delivered with the support of the WA Government, the City of Karratha, Traditional Owners and local fishing clubs, the Dampier Artificial Reef represents a significant collaboration to provide an accessible and productive marine environment the community can enjoy now and in the future.

The installation of the reef was funded by Woodside and its Scarborough Joint Venture partners JERA Australia and LNG Japan. Woodside also acknowledges its Enfield Joint Venture partner, Mitsui E&P Australia, for contributing to the acquisition of the concrete modules.

As the reef establishes, we understand Recfishwest plans to share updates with local fishers, families and visitors who are set to enjoy a richer marine environment and better fishing in the years ahead.

Talking point



Pluto 4D M3 Marine Seismic Survey

Woodside's Pluto 4D M3 Marine Seismic Survey Environment Plan covers seismic survey activities in the Carnarvon Basin, north-west Australia, planned for late December 2026 to early February 2027, or the same period in the subsequent year.

Marine seismic surveys are a key technique used for geophysical exploration to understand what lies beneath the seabed, or subsurface. Woodside's seismic surveys are conducted under strict Australian and international regulations and management controls.

Marine seismic surveys are conducted by purpose-built survey vessels that tow specialised equipment placed in an array of long marine streamers. These vessels proceed at low speeds, typically around 4–5 knots (7.4–9.3 kilometres per hour), following predetermined sail lines to systematically map the survey area.

As the vessel moves, a sound source located at its rear releases compressed air as soundwaves into the water column at regular, short intervals. The soundwaves are reflected from subsurface rock layers to the water's surface, a bit like an echo. Sensitive microphones known as hydrophones, which are positioned within the streamers trailing behind the vessel, detect these soundwaves.

Alternatively, hydrophones and motion-sensitive sensors known as geophones can be embedded in small devices called ocean bottom seismic nodes, which are temporarily placed on the sea floor. The recorded sound is processed to generate images of subsurface structures, rock layers and other features for interpretation.

To learn more about marine seismic surveys, including methods that protect the marine environment, watch this video.

Carnaby's black cockatoos. Picture: Dean Arthurell.

Let's talk about... The Watheroo Biodiversity Project

Woodside's Watheroo Biodiversity Project is a collaborative effort to restore landscapes and support biodiversity in WA's northern Wheatbelt.

The project focuses on having positive biodiversity outcomes for habitats, threatened species and ecological function, through working with government agencies, non-government organisations, and local Indigenous and community groups.

As of December 2025, Woodside has planted approximately 5.5 million seedlings across 8,500 hectares in the Watheroo area. The land under reforestation in Watheroo is adjacent to a large area of conservation estate, the Watheroo National Park and connected reserves, as well as a significant area of remnant vegetation currently designated as unallocated Crown land. Together the combined area is over 130,000 hectares.

In addition to generating Australian Carbon Credit Units (for more information, click here), the plantings will provide additional habitat for fauna and create connectivity between these areas of remnant vegetation and conservation estate.*

One highlight of the Watheroo Biodiversity Project is the support for threatened Carnaby's black cockatoos. These large birds are under threat primarily from habitat loss due to historic land clearing. Together with not-for-profit conservation charity group Carnaby's Crusaders, numerous artificial hollows were installed in 2024 and 2025 to address a shortage of natural nesting sites because hollows large enough for the species to nest within typically only form in trees well over 100 years of age.

Additional programs within the project include a large-scale Light Detection and Ranging (LiDAR) survey to provide insight into the current status of the vulnerable malleefowl population in the region, motion detection camera fauna monitoring, annual bird surveys to track change within reforested areas, vegetation surveys to understand current condition of and stressors on remnant vegetation, and management of invasive species.

Woodside recognises that restoring biodiversity is a long-term commitment, and outcomes will continue to be monitored and reported transparently.

**All planting has been completed under the Carbon Credits (Carbon Farming Initiative) (Restoration by Environmental or Mallee Plantings - FullCAM) Methodology Determination 2024, which is authorised by the Carbon Credits (Carbon Farming Initiative) Act 2011.*

You can read more about Woodside's Biodiversity management and initiatives here.

Browse to North West Shelf (NWS) Project Geophysical and Geotechnical (GPGT) Surveys

Woodside has previously undertaken GPGT surveys in the Browse Basin as part of earlier project concepts. A series of new GPGT surveys are proposed to support potential future activities associated with the Browse to NWS Project.

Survey data is intended to inform the design and installation of the proposed trunkline, pipelines and umbilicals, subsea structures, and the mooring systems for the two proposed floating production storage and offtake (FPSO) facilities and mobile offshore drilling units (MODUs). Data may also contribute to assessments of existing infrastructure, support environmental and heritage studies, and assist in planning potential future project activities.

These surveys will be conducted across both Commonwealth and State waters and are organised into three Environment Plans. Woodside is consulting on these Environment Plans in April-May 2026. For more information, you can view the Consultation Information Sheets.

6.6.2 Karratha Community Update

6.6.2.1 Edition Q1 – March 2026

Karratha Community Update

March 2026

The Scarborough FPU weighs approximately 70,000 tonnes and was towed over 4,000 nautical miles to the Scarborough field in the Carnarvon Basin.

Scarborough sails towards start up

This year marks a defining year for Woodside as the Scarborough Energy Project, including our Pluto Train 2 and Pluto Train 1 Modifications Projects in Karratha, move through final construction, commissioning and start up phases.

Across the Scarborough Energy Project, progress continues to track strongly toward first LNG cargo in the fourth quarter of 2026. The development is now more than 94% complete (excluding Pluto Train 1 modifications) and has already delivered economic benefits to the Karratha and Roebourne communities. Once operating, it is expected to support long-term energy supply for Western Australia and the wider Asia-Pacific region.

Offshore, a major milestone was achieved early this year with the safe arrival of the Floating Production Unit (FPU) at the Scarborough field, 375 km off the coast of Karratha. Hook-up and commissioning activities are underway in preparation for production.

Onshore, work at Pluto Train 2 remains focused on piping and electrical installation, system testing and commissioning, ahead of introduction of Scarborough gas to site later in the year.

Meanwhile, the Pluto Train 1 Modifications Project has ramped up. These modifications will enable the processing of additional Scarborough gas through our existing LNG train at Pluto LNG. New modules are expected to arrive through Dampier Port over the coming months.

Collectively, these projects represent the most significant investment in the region in more than a decade.

Together with our contractors, we've invested more than A$260 million with 200 Pilbara-based businesses. A$149 million of that figure has been invested with Pilbara-based businesses engaged on the Pluto Train 2 Project.

As we approach the finish line and a future with two trains operating at the Pluto LNG Park, we will continue to focus on managing impacts and delivering positive outcomes for the Karratha and Roebourne communities.

Mike Price
Woodside Vice President Pluto Scarborough Asset

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha.

We extend this recognition and respect to First Nations peoples and communities around the world.

Refreshed North West Shelf Visitor Centre

With the support of local Karratha contractors, last year the North West Shelf (NWS) Project Visitor Centre underwent a refresh to enhance the experience for visitors.

The Visitor Centre welcomes thousands of community members through its doors each year, from visitors to the region to school groups. It offers an opportunity to learn more about the NWS Project's history in Karratha, its operations and its ongoing role in supplying energy security in Western Australia and beyond.

Acting Asset Manager NWS Onshore, Perrine Lombart, said working closely with local contractors was a key focus in creating a modern visitor experience.

"We are proud to be part of the Karratha community, and the refreshed Visitor Centre allows us to share our story - from the history of Woodside and the NWS Project, to the important role we play in supporting the communities where we live and work."

The works brought together local contractors, including Birndirri, Impact Digi and C Signs, strengthening the NWS Project's contribution to the regional economy and prioritising local capability. Their involvement drew on longstanding experience of working in the Pilbara.

Jake Throssell, Construction Supervisor at Birndirri, said the project demonstrated the value of working closely with local contractors.

"Working with the Woodside team to deliver the Visitor Centre refresh was a positive experience and we are proud to have contributed to a space that visitors can enjoy for many years to come."

Jason Miltrup, Operations Manager at Impact Digi, said working with Woodside to redesign the Visitor Centre signage has been a great project for the team.

"We're proud to have played a role in transforming the space into a modern and engaging environment for visitors."

Cameron Inch, Director of C Signs, said the project was a valuable opportunity for local businesses.

Visitors are warmly welcome to experience the refreshed centre.

"Being part of the Visitor Centre refresh allowed us to bring the NWS Project's history and operations into focus and showcase the capabilities of our small business."

The Visitor Centre will be open from Tuesday, 7 April 2026, more details below:

Street Address:
Burrup Road, Burrup Peninsular, Dampier WA, 6713
Opening Times:
April - October
School term: 10am - 2pm, Tuesday and Wednesday
School holidays: 10am - 2pm, Tuesday - Friday

Follow the Woodside North West Facebook page for updates to opening hours here.

Woodside welcomes new apprentices and trainees

New starters at Woodside Training Academy.

Woodside are delighted to welcome the 2026 trainee and apprentice cohort across our North West operations.

This year, 23 Karratha-based recruits will be hosted at the Woodside Training Academy, 13 are local school leavers. Employed by Programmed Skilled Workforce, roles include service operator trainees, apprentices, pathway trainees and school-based trainees.

The new recruits now form part of a broader group of 63 apprentices and trainees developing their skills across Woodside's Karratha Gas Plant, Pluto LNG Park and Karratha Supply Facilities.

Reflecting our commitment to diversity, 47% of recruits this year are women and 52% are Indigenous, strengthening our future workforce and continuing our long-standing investment in local capability.

We can't wait to see where this journey takes our newest team-mates.

Pluto LNG and flare maintenance underway

In 2026, Woodside is undertaking a series of important works at Pluto LNG as we prepare to integrate the exiting facility with the Scarborough Energy Project. This includes improvement works to our flare system and a major planned maintenance campaign, known as a turnaround, commencing in May 2026.

Together with the upcoming commissioning and start-up of the new Pluto Train 2 facilities later this year, these staged works support the safe and reliable operations of Pluto LNG.

The turnaround includes a planned shutdown of parts of the facility so essential inspections, repairs, and upgrades can be carried out safely. This work can't be done while the plant is operating. To make the systems safe to execute the maintenance and project scopes, hydrocarbons need to be removed. This is the primary source of flaring during a turnaround.

Alongside preparation for the turnaround, Woodside is carrying out improvement activities on Pluto LNG's flare systems as part of our regular maintenance program. These works will help ensure the facility continues to operate safely and reliably, improve how gas is burned in the flare and reduce smoke where possible. It also ensures the flare system is ready to support future operations.

Flare improvement works are being completed in stages and are expected to continue in the first half of 2026. A testing stage is required to confirm systems are operating as intended before returning to normal operations.

Increased flaring is expected at Pluto LNG during these activities, particularly during system testing and restart works. This may include larger flames, increased noise, and occasional visible smoke, which is managed and reported in line with regulatory requirements.

Woodside adheres to regulatory requirements governing emissions, including those from flaring activities, and we implement robust monitoring to minimise environmental impacts.

To learn more about flaring, we invite you to view a short animation by scanning the QR code. You can also contact the Woodside Community Information Line on 1800 634 988.

Learn more about Woodside controlled flaring here.

Locals land a solid catch with new artificial reef

Recreational fishers in Dampier and Karratha have something to get excited about, with Recfishwest and Woodside Energy successfully installing a new artificial reef near Rosemary Island. The project has been years in the making with aims to boost local marine life and create a high-quality fishing destination for Pilbara residents and visitors.

The reef is made up of 48 purpose-built concrete modules, transported and lowered into place in December 2025. Within days, the first marine species began moving in. Acting EVP and COO Australia, Breyden Lonnie said the project reflects Woodside's commitment to supporting the region.

"Woodside is excited to collaborate with Recfishwest and the local fishing community to bring this new reef to life," he said. "The reef is expected to provide a productive marine habitat for diverse species of algae and corals, supporting an abundance of fish life."

Situated in approximately 35 metres of water and roughly 30 kilometres from the Dampier boat ramp, the reef's modules have been engineered with complex internal spaces that encourage coral growth, protect juvenile fish and support larger species such as spanish mackerel, cobia, emperor, cod and even sailfish. For local fishers it is expected to become a new fishing hotspot.

It's not all about fishing action. The reef is also expected to support local tourism and economic activity. Similar artificial reefs like Exmouth's King Reef, have shown how previously barren seafloor can transform into thriving ecosystems supporting more than 150 species within a few years.

The Dampier Artificial Reef is a true community effort, delivered with support from the WA Government, the City of Karratha, Traditional Owners and local fishing clubs.

Dampier Artificial Reef coordinates.

48 concrete modules were carefully lowered into place.

Recfishwest will provide updates as the reef continues to establish. For now, Pilbara anglers can look forward to a fresh fishing hotspot right on Dampier's doorstep.

The installation of the reef was funded by Woodside and its Scarborough Joint Venture partners; JERA Australia and LNG Japan. Woodside also acknowledges its Enfield Joint Venture partner Mitsui E&P Australia, for contributing to the acquisition of the concrete modules for the reef.

Murujuga Ranger vessel Nyamina sets sail

Representatives from Murujuga Aboriginal Corporation (MAC) Rangers and Circle of Elders, State Government and Woodside Energy joined together recently to celebrate the launch of the new Murujuga Ranger vessel, the Nyamina.

Named after the dugongs that inhabit Murujuga Sea Country, the Nyamina is a custom-built 5.8 metres rigid-hulled inflatable boat, designed for inshore waters and safe landing and unloading on beaches.

The vessel was funded by the State Government via Lotterywest and Woodside Energy, which contributed support towards the vessel, additional camera equipment and two years of operating costs.

Guided by the Murujuga Circle of Elders, the vessel will support ongoing collaboration between Rangers, government agencies and researchers in the management of Sea Country. It also provides the opportunity for Rangers to gain diverse skills and qualifications, including coxswain certification.

MAC Chairperson Peter Hicks said "The launch of this vessel is a proud moment for Murujuga, our Rangers, and for the ongoing care of our World Heritage listed Murujuga Cultural Landscape, which extends across the Burrup Peninsula, the islands of the Dampier Archipelago, and Sea Country."

Matthew Turnbull, General Manager Scarborough Business shares Woodside's pride in co-funding the vessel, supporting Ranger-led management of Murujuga and long-term outcomes for cultural heritage and Country. He says "MAC Rangers play a critical role in protecting cultural heritage, monitoring Country and supporting research across the World Heritage Listed Murujuga Cultural landscape."

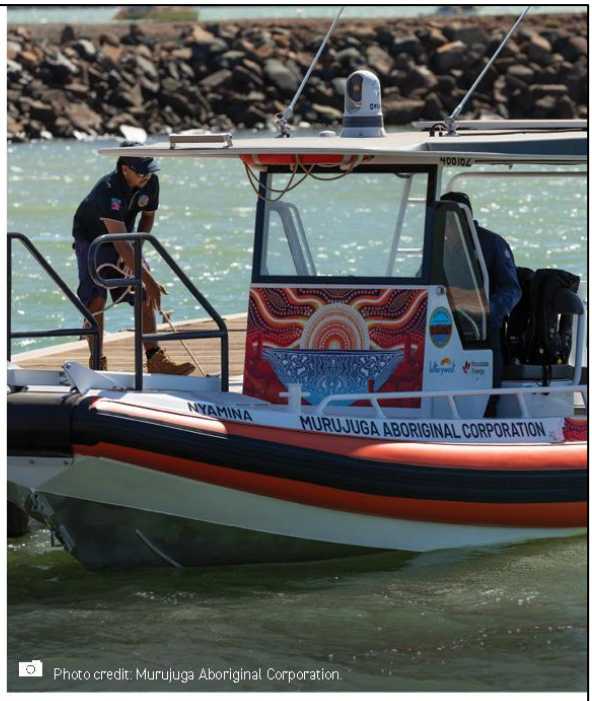

Photo credit: Murujuga Aboriginal Corporation.

"The launch of Nyamina gives the Rangers greater capability to manage Sea Country and to continue this important work safely and independently."

Watch the official launch on MAC's YouTube here.

KGP sets new record for lowest flaring

In 2025, Woodside achieved record low flaring performance at Karratha Gas Plant with flared quantities less than 10% of their peak in 2013.

This success reflects years of continuous improvement, which Matt Ladner, Senior Emissions and Production Optimisation Engineer, credits to a strong culture focused on emissions reduction, safety and reliability.

"It's a testament to the dedication of our engineering and operations teams who have embedded low-flaring practices into daily routines and decision making," says Matt.

"The record has been a result of a reliable plant and playing the long game in identifying and implementing flare reduction opportunities," explains Matt.

Flaring targets are set each year based on planned maintenance activities and expected plant reliability.

In 2025, Woodside implemented solutions to reduce our daily flaring by removing permanent gas supply to the flare, as well as optimised LNG plant maintenance and equipment restart improvements.

Woodside Community Grants

Applications now open

The Woodside Community Grants program is part of our commitment to help build local capacity and develop opportunities for community wellbeing.

If your club or organisation has a great idea or needs extra support, Woodside wants to hear from you. Grants of up to $5000 are available to support community initiatives in the City of Karratha, Shire of Exmouth and Town of Onslow.

Applications close Tuesday, 31 March 2026.

Find out more about Woodside Community Grants here.
For more information, please email northwestcommunities@woodside.com

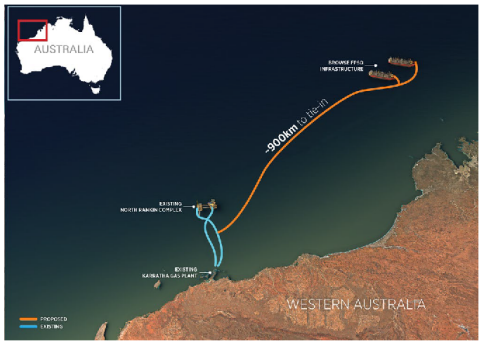
6.6.2.2 Edition Q2 – June 2026

Karratha Community Update

June 2026

Proposed Browse to North West Shelf Project continues to progress

The proposed Browse to North West Shelf (NWS) Project (Browse) presents a significant opportunity for Karratha, Western Australia and our regional partners.



As Australia's biggest undeveloped offshore gas resource, Browse offers long-term energy security to power homes and businesses and could create thousands of jobs and considerable economic benefits and tax revenue.

Importantly, processing Browse natural gas through the existing NWS infrastructure will keep the Karratha Gas Plant (KGP) operating, supporting local jobs in the region and helping Woodside continue its long-standing support for the Karratha and Roebourne communities.

The Browse project will develop gas fields in the Browse Basin, approximately 425 kilometres north of Broome, with gas transported via subsea pipelines to existing NWS infrastructure near Karratha.

A key focus of the project is carbon management. The development concept includes carbon capture and storage (CCS) infrastructure, designed to capture and permanently store a significant portion of carbon dioxide produced from the gas fields. This could reduce the project's emissions and lower the carbon intensity of gas supplied through the NWS.

Minimising environmental impacts is also central to project planning. The project is undergoing environmental assessment processes with both the Western Australian Environmental Protection Authority and the Commonwealth Department of Climate Change, Energy, the Environment and Water. As this assessment has progressed, Woodside has continued to provide updated scientific data and committed to additional measures aimed at minimising environmental impacts to marine life, including pygmy blue whales and green turtles. These changes include design, operational and monitoring controls, including spatial setbacks from sensitive receptors, vessel speed and noise management measures, and enhanced monitoring programs focused on key habitats such as Sandy Islet.

This image is conceptual only, not to scale. Developments are subject to joint venture approvals, regulatory approval and relevant commercial arrangements.

These measures build on more than 30 years of research carried out by Woodside and its joint venture partners at Scott Reef and in surrounding waters.

Browse is currently in the concept definition phase. As planning continues, Woodside has committed to ongoing engagement with regulators, Traditional Owners, local communities in the Pilbara and key stakeholders as the project is progressed.

For more information, view the Browse fact sheet here

Browse to deliver long-lasting benefits

MORE JOBS
4,760

Direct and indirect full-time equivalent jobs estimated across Australia at peak operations.[2]

Equivalent to staffing around 80 Western Australian public schools for a year.[3]

MORE TAX
A$56.2 BILLION

In estimated taxes, royalties and excise, including ~A$19.8 billion in Petroleum Resource Rent Tax (PRRT).

Equivalent to funding one new hospitalevery year for 31 years.[4]

STRONGER ECONOMY
~A$141 BILLION

Estimated uplift in Gross Domestic Product (GDP).[5]

On average, economic activity in Australia is expected to increase by around A$2.9 billion each year over the life of the Project, equivalent to more than 5 per cent of Australia's average annual GDP growth.[6]

Headline economic Figures are based on Deloitte Access Economics' independent modelling.[1]

1. Deloitte Access Economics, Browse to NWS Economic Impact Assessment, May 2026. Report commissioned by Woodside as Operator on behalf of the Browse Joint Venture. 2. Reflects broader supply chain and service industry roles generated across all regions. 3. Department of Education's 2024-25 Annual Report. 4. Women and Babies Hospitals - WA Government (2025) Budget Paper No. 2 Volume 1. 5. 2025 real undiscounted terms. Uplift over the life of the Project. A$34.2 billion in present value terms. Discounted at seven per cent per annum. 6. Australian Bureau of Statistics, Australian National Accounts 2024-25.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first people.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha.

We extend this recognition and respect to Indigenous Peoples and communities around the world.

Sharing stories from Ngarluma and Yindjibarndi Country

Sharon Warrie, Art Development Camp. Perth 2025. Photo by Marnie Richardson courtesy of FORM

The Woodside-operated Pluto LNG Project's community partnership with FORM is supporting Roebourne (Ieramugadu) artists to share important cultural stories from Ngarluma and Yindjibarndi Country.

As part of the community partnership, last year FORM worked with local artists to present the Where We Come From: The Artists of Ngarluma and Yindjibarndi Country exhibition at FORM Gallery in Perth. The exhibition showcased art that highlights rich cultural histories, lived experiences and strong connections to Country.

The project was shaped to tell these stories in an authentic and meaningful way. The result was a community-led exhibition that celebrated culture while also giving artists hands-on experience in curation, exhibition design and public engagement, helping build skills for future opportunities in arts.

More than 3,300 people visited the exhibition, taking part in guided tours, storytelling sessions, panel discussions and children's workshops, gaining a deeper understanding of local culture and identity.

Woodside is proud to support initiatives like this as part of our broader investment in Roebourne, helping strengthen local capability, culture and community wellbeing.

Woodside's 2026 Academy Awards

Woodside is proud to welcome 25 apprentices and trainees who have graduated from the Woodside Training Academy, marking an important milestone as they transition into roles across our business.

The Woodside Training Academy Graduation and Awards, held at the Red Earth Arts Precinct in Karratha, celebrated the cohort's achievements and recognised the dedication, resilience and perseverance shown throughout their training journey.

Academy Team Lead, Jacqui Meeson said the event was an opportunity to acknowledge both the collective success of the cohort and the outstanding contribution of the individuals.

"The award recipients were recognised not only for their technical capability, but for their commitment to learning, teamwork and living Woodside's values," Jacqui said.

"We are incredibly proud of what this group has achieved and look forward to their continued contribution to our workforce."

The ceremony also acknowledged the important role of mentors, supervisors and trainers who supported the graduates along the way. Pluto Asset Manager, Kate Bardill, thanked those across the business who contributed to developing future talent.

"Our graduates have built strong technical foundations and demonstrated the behaviours that will set them up for success," she said.

Woodside continues to invest in building local capability through its long-standing partnership with Programmed Training Services. Around 80 apprentices and trainees are currently hosted across the Australian business, developing skills and experience that will support the future of our operations in Western Australia.

Woodside's 2026 Training Academy graduates on stage in Karratha, celebrating the successful completion of their apprenticeships and traineeships.

Roebourne school upgrade opens doors for students

Students and families in Ieramugadu (Roebourne) are now enjoying new and upgraded facilities at Roebourne District High School, following completion of the latest stage of the school's redevelopment.

The new facilities include additional classrooms for advisory programs, dedicated pastoral care spaces and preparation areas for teachers, Aboriginal and Islander Education Officers, and student support services, helping create a more supportive and engaging learning environment.

The redevelopment is part of a multi-stage project focused on improving education outcomes in Roebourne, while embedding Indigenous history, culture and language into the design and daily life of the school.

Woodside contributed A$20 million towards the project through the Resources Community Investment Initiative, as part of our broader, long-term investment in the Roebourne community.

In 2025, Woodside and its Joint Venture participants also invested more than A$5.7 million in programs supporting education and community wellbeing in Roebourne.

Woodside Chief Executive Officer, Liz Westcott said the opening marked an important milestone.

"For Woodside, supporting communities means working in partnership and investing for the long term," Liz said.

"Education has always been central to that commitment in Roebourne, and these new facilities reflect what can be achieved when community, government and industry work together."

Students from Ieramugadu (Roebourne) at the opening of the new and upgraded facilities alongside WA Premier Roger Cook and Woodside CEO Liz Westcott.

For more than a decade, Woodside has worked alongside the school and educators through the Karratha and Roebourne Education Initiative, supporting literacy and numeracy development, strengthening student engagement and pathways beyond school.

Celebrating creativity and connection at REAF

Woodside and our joint venture partners were pleased to support the City of Karratha's Red Earth Arts Festival (REAF) for another year, with a vibrant 2026 program bringing the community together through arts, culture and creativity.

At The Quarter, our continued support helped deliver a range of free, family-friendly activities, transforming the space into a lively hub of artistic and cultural activity. A highlight was the Harmony & HeART community event, featuring live entertainment, roving performers, markets and activities for all ages.

The 'Silent Observers' installation brought tree disc artworks to life through projection mapping, creating an engaging and immersive visual experience.

Artists from Yinjaa-Barni Art Group painted and displayed artworks on site, welcoming the community to watch the creation of several pieces and engage in conversations. They also hosted a kids' workshop, where young creatives could learn about culture and storytelling through art, creating their own pieces to take home.

The evening program featured roving entertainment, stage performances, music, food trucks and the Karratha & Districts Chamber of Commerce and Industry markets. Woodside employees at the Woodside stall enjoyed the opportunity to engage with the community, share updates on our activities in the north west and hear local feedback in a relaxed and welcoming environment.

Thanks to the City of Karratha for featuring the four-day festival delivered a diverse mix of performances, workshops and experiences across Karratha and surrounding communities, including Roebourne, Dampier, Cossack and Point Samson.

Audiences enjoyed a strong line-up of local, national and Indigenous artists, including the West Australian Opera Gala and theatre performances such as Blacksheep and Shadow Boxing, alongside live music, comedy and cultural storytelling.

REAF continues to grow as a much-loved event in the region, and Woodside and its joint venture partners are proud to support community events that contribute to the vibrancy and liveability of the Pilbara.

EXECUTIVE SUMMARY

Woodside Energy Ltd (Woodside), as Operator of the Browse development, has developed its oil spill preparedness and response position for the Browse Geophysical and Geotechnical (GPGT) Surveys - Commonwealth activities (the 'Petroleum Activity').

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to As Low as Reasonably Practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental impacts resulting from an unplanned loss of hydrocarbon containment associated with the Petroleum Activity described in the Environment Plan (EP). This document outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness.

A summary of the key facts and references to additional detail within this document are presented below.

Table 0-1: Summary of the key details for assessment

Key details of assessment	Summary			Reference to additional detail
Worst Case Credible Scenario	Credible Scenario-01 (CS-01): Vessel collision at Operational Area A. 14°1'24.07"S, 121°54'40.46"E. Instantaneous surface release of 200 m^3 of Marine Gas Oil (MGO). 5% residual component of 10 m^3.			Section 2.2
	Credible Scenario-02 (CS-02): Vessel collision at Operational Area B. 14°23′45.39"S, 121°41'48.81"E. Instantaneous surface release of 200 m^3 of Marine Gas Oil (MGO). 5% residual component of 10 m^3.			
Hydrocarbon Properties	MGO is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. Evaporation rates will increase with temperature, but in general about 40% should evaporate within the first 24 hours (BP < 265 °C). Evaporation then slows, with ~5% of the remaining mass lost over the following six days. Only a small fraction (~2%) is degraded by microbial and photochemical processes during the first week. The low viscosity of MGO fuels require relatively low wave energy to break up floating slicks and suspend MGO as droplets mixed into the wave-affected layer of the ocean surface. These suspended droplets will be buoyant but will remain in suspension when there is sufficient wave energy. Waves generated by wind speeds as low as 6–7 knots on the open ocean will start to suspend films of floating MGO. Entrainment rates will increase significantly as sea conditions become more energetic. One effect of suspension will be reduction of the evaporation rates of the component hydrocarbons.			Section 6.9.1 of the EP Appendix A of the First Strike Plan
Modelling Results	Stochastic modelling A quantitative, stochastic assessment has been undertaken for credible spill scenarios to help assess the environmental risk of a hydrocarbon spill. A total of 200 replicate simulations were completed for the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (50 simulations per quarter).			Section 2.3
		CS-01: Instantaneous hydrocarbon release of 200 m^3 MGO caused by vessel collision in Operational Area A (WCCS)	CS-02: Instantaneous hydrocarbon release of 200 m^3 MGO caused by vessel collision in Operational Area B

	Minimum time to floating hydrocarbon contact with the offshore edge(s) of any shoreline receptor polygon (at a concentration of 10 g/m^2)	1 hour – Scott Reef North and Scott Reef South	15 hours – Scott Reef South	
	Minimum time to commencement of hydrocarbon accumulation at any shoreline receptor (at a concentration of 100 g/m^2)	10 hours – Scott Reef South (including Sandy Islet)	54 hours – Scott Reef South (including Sandy Islet)	
	Maximum accumulated hydrocarbon volume at any individual shoreline receptor (averaged over all replicate simulations)	2 m^3 – Scott Reef South (including Sandy Islet)	<1 m^3 – Scott Reef South (including Sandy Islet)	
	Maximum accumulated hydrocarbon volume at any individual shoreline receptor (worst case replicate simulation)	80 m^3 – Scott Reef South (including Sandy Islet)	11 m^3 – Ashmore Reef	
	Maximum cumulative hydrocarbon volume accumulated across all shoreline receptors contacted by accumulated hydrocarbons	80 m^3 – Scott Reef South (including Sandy Islet) (only one receptor predicted to be contacted)	11 m^3 – Ashmore Reef	
	Minimum time to dissolved hydrocarbon contact with the offshore edges of any receptor polygon (at a exposure value of 10 ppb)	1 hour – Scott Reef North	10 hours – Scott Reef South	
Net Environmental Benefit Analysis	Monitor and evaluate, source control, shoreline clean-up, oiled wildlife response, are all identified as potentially having a net environmental benefit (dependent on the actual spill scenario) and carried forward for further assessment.			Section 4
ALARP evaluation of selected response techniques	The evaluation of the selected response techniques shows the proposed controls reduced the risk to an ALARP and acceptable level for the risk presented in Section 2, without the implementation of considered additional, alternative or improved control measures.			Section 6

1 INTRODUCTION

1.1 Overview

Woodside Energy Ltd (Woodside), as Operator of the Browse development, has developed its oil spill preparedness and response position for the Browse Geophysical and Geotechnical Surveys – Commonwealth activities, hereafter known as the Petroleum Activity. This document outlines Woodside's decisions and techniques for responding to a hydrocarbon loss of containment event and the process for determining its level of hydrocarbon spill preparedness.

1.2 Purpose

This document, together with the documents listed below, meet the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations) relating to hydrocarbon spill response arrangements.

- The Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth) Environment Plan (EP)
- Hydrocarbon Spill Australia Regulatory Framework[1]
- The Browse to NWS Project Geophysical and Geotechnical Surveys (Commonwealth) Oil Pollution Emergency Plan (OPEP) including
- Oil Pollution First Strike Plan (FSP)
  - Operational and Scientific Monitoring Bridging Implementation Plan (OSM BIP)
  - Relevant Operations Plans
  - Relevant Tactical Response Plans (TRPs)
  - Relevant Supporting Plans
  - Data Directory.

1.3 Scope

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to ALARP and an acceptable level. It achieves this by evaluating response options to address the potential environmental risks and impacts resulting from an unplanned loss of hydrocarbon containment associated with the Petroleum Activity described in the EP. This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness. It should be read in conjunction with the documents listed in Table 1-1. The location of the Petroleum Activity is shown in Figure 3-1 of the EP.

1.4 Oil spill response document overview

The documents outlined in Table 1-1 and Figure 1-1 are collectively used to manage the preparedness and response for a hydrocarbon release.

The Oil Pollution First Strike Plan (FSP) contains a pre-operational Net Environmental Benefit Analysis (NEBA) summary, outlining the selected response techniques for this Petroleum Activity. Relevant Operational Plans to be initiated for associated response techniques are identified in the FSP and relevant forms to initiate a response are appended to the FSP.

The process to develop an Incident Action Plan (IAP) begins once the oil pollution FSP is underway. The IAP includes inputs from monitor and evaluate and operational monitoring activities and the operational NEBA (Section 4). Planning, coordination and resource management are initiated by the Corporate Incident

1 In accordance with Regulation 56 of the Environmental Regulations, references to the Hydrocarbon Spill Australia Regulatory Framework within this document refer to the version submitted with accepted North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan, which is available on NOPSEMA's website at: https://docs.nopsema.gov.au/A1282743

Management Team (CIMT). In some instances, technical specialists may be utilised to provide expert advice. The planning may also involve liaison officers from supporting government agencies.

During each operational period, field reports are continually reviewed to evaluate the effectiveness of response operations. In addition, the operational NEBA is continually reviewed and updated to confirm the response techniques implemented continue to result in a net environmental benefit (Section 4).

The response will continue as described in Section 5 until the response termination criteria have been met.

2 RESPONSE PLANNING PROCESS

This document details Woodside's process for identifying potential response options for the hydrocarbon release scenarios, identified in the EP. Figure 2-1 outlines the interaction between Woodside's response, planning, preparedness and selection process.

This structure has been used because it shows how the planning and preparedness activities inform a response and provides indicative guidance on what activities would be undertaken, in sequential order, if a real event were to occur. The process also evaluates alternative, additional and/or improved control measures specific to the Petroleum Activity.

The Browse to NWS Project Geophysical and Geotechnical Surveys (Commonwealth) Oil Pollution First Strike Plan (FSP) then summarises the outcome of the response planning process and provides initial response guidance and a summary of ongoing response activities if an incident were to occur.

2.1 Response planning process outline

This document is expanded below to provide additional context on the key steps in determining capability, evaluating ALARP and hydrocarbon spill response requirements.

- Section 1: Introduction
- Section 2: Response planning process
  - identification of worst-case credible scenario(s) (WCCS)
  - spill modelling for WCCS.
- Section 3: Identify response protection areas (RPAs)
  - areas predicted to be contacted at concentration >100 g/m^2.
- Section 4: Net environmental benefit analysis (NEBA)
  - pre-operational NEBA (during planning/ALARP evaluation): this must be reviewed during the initial response to an incident to confirm its accuracy
  - selected response techniques prioritised and carried forward for ALARP assessment.
- Section 5: Hydrocarbon spill ALARP process
  - determines the response need based on predicted consequence parameters.
  - details the environmental performance of the selected response options based on need.
  - sets the environmental performance outcomes, environmental performance standards and measurement criteria.
- Section 6: ALARP evaluation
  - evaluates alternative, additional, and improved options for each response technique to demonstrate the risk has been reduced to ALARP.
  - provides a detailed ALARP assessment of selected control measure options against:
    - predicted cost associated with implementing the option
    - predicted change to environmental benefit
    - predicted effectiveness / feasibility of the control measure.
- Section 7: Environmental risk assessment of selected response techniques
  - evaluation of impacts and risks from implementing selected response options.
- Section 8: ALARP conclusion
- Section 9: Acceptability conclusion

2.1.1 Response Planning Assumptions

Figure 2-2 illustrates the initial steps of a response to an oil spill event and, where available, the indicative timing. For the latter stages, the timing will be specific to the selective response option.

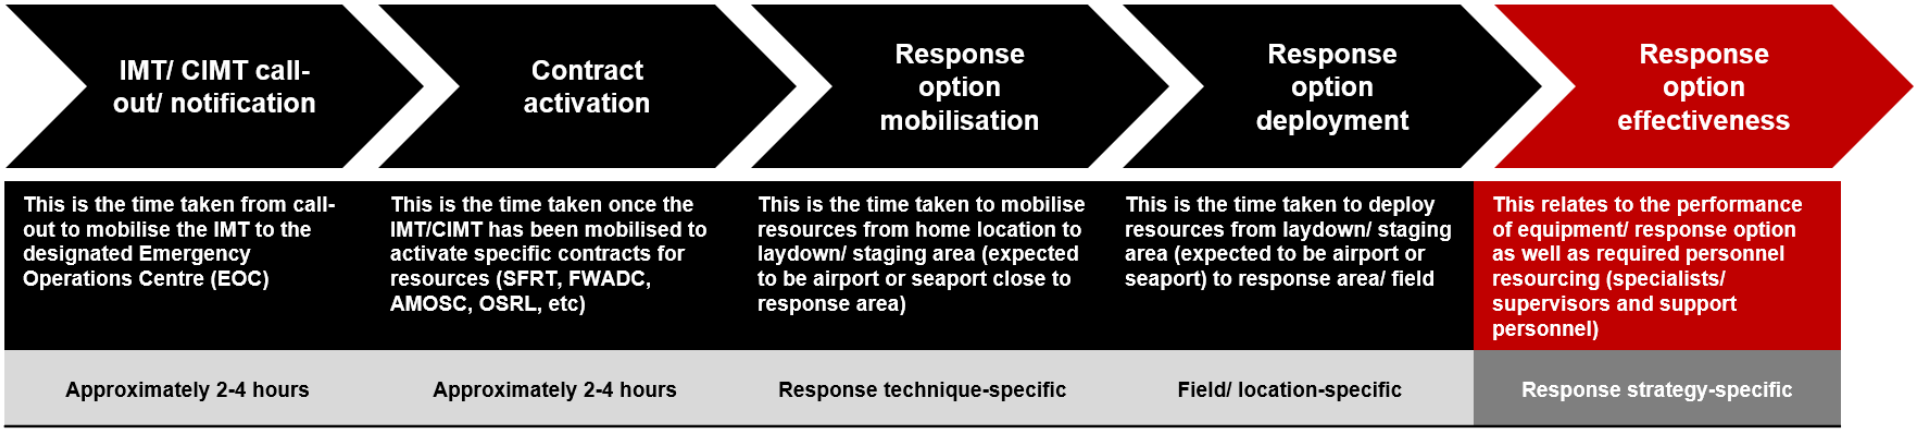

Figure 2-2: Response planning assumption – timing, resourcing and effectiveness

2.2 Environment plan risk assessment (credible spill scenarios)

Potential hydrocarbon release scenarios from the Petroleum Activity have been identified during the risk assessment process (Section 6.9 of the EP). Further descriptions of risk, impacts and mitigation measures (which are not related to hydrocarbon preparedness and response) are provided in Section 6 of the EP. Two unplanned events or credible spill scenarios for the Petroleum Activity have been selected as representative across types, sources and incident/response levels, up to and including the WCCS.

Table 2-1 presents the credible scenarios for the Petroleum Activity. The WCCS for the activity is then used for response planning purposes, as all other scenarios are of a lesser scale and extent. By demonstrating capability to manage the response to the WCCS, Woodside assumes other scenarios that are smaller in nature and scale can also be managed by the same capability. Response performance measures have been defined based on a response to the WCCS.

Two oil spill modelling scenarios were run at different locations within the operational area (RPS 2026). The location of CS-01 was selected as the worst-case location for the Petroleum Activity due to its proximity to Scott Reef. The location of CS-01 and CS-02 are shown in Figure 2-3.

The selection of WCCS for OSM planning purposes is discussed in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

2.2.1 Hydrocarbon characteristics

Hydrocarbon characteristics, including modelled weathering data and ecotoxicity, are included in Section 6.9.1.2 of the EP.

Marine Gas Oil

Marine Gas Oil (MGO) is typically classed as an International Tanker Owners Pollution Federation (ITOPF) Group I/II oil. Group I oils are non-persistent and tend to dissipate completely through evaporation within a few hours and do not normally form emulsions.

MGO is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. In general, about 6% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 35% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 54% should evaporate over several days (265 °C < BP < 380 °C). Approximately 5% of the oil is shown to be persistent. The aromatic content of the oil is approximately 3%.

If released in the marine environment and in contact with the atmosphere (i.e., surface spill), approximately 41% by mass of this oil is predicted to evaporate over the first couple of days depending upon the prevailing conditions, with further evaporation slowing over time. The heavier (low volatility) components of the oil tend to entrain into the upper water column due to wind-generated waves but can subsequently resurface if wind-waves abate. Therefore, the heavier components of this oil can remain entrained or on the sea surface for an extended period, with associated potential for dissolution of the soluble aromatic fraction.

2.3 Hydrocarbon spill modelling

Oil spill trajectory modelling (OSTM) tools are used for environmental impact assessment and during response planning to understand spatial scale and timeframes for response operations. Woodside recognises there is a degree of uncertainty related to the use of modelling data and has subsequently utilised conservative approaches to volumes, weathering, spatial areas, timing and response effectiveness to scale capability to need.

The Oil Spill Model and Response System (OILMAP) and Integrated Oil Spill Impact Model System (SIMAP) models are both used for stochastic and deterministic trajectory modelling. They have been developed over three decades of planning, exercises, actual responses, several peer reviews, and validation studies. OILMAP was originally derived from the United States Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Type A model (French et al. 1996), for assessing marine transport, biological impact and economic damage that was also used under the United States Oil Pollution Act 1990 Natural Resource Damage Assessment (NRDA) regulations. Notable spills where the model has been used and validated against actual field observations include, Exxon Valdez (French McCay 2004), North Cape Oil Spill (French McCay 2003), along with an assessment of 20 other spills (French McCay and Rowe, 2004). In addition, test spills designed to verify fate, weathering and movement algorithms have been conducted regularly and in a range of climate conditions (French and Rines 1997; French et al. 1997; Payne et al. 2007; French McCay et al. 2007).

Further to this, the algorithms have been updated using the latest findings from the Macondo/Deepwater Horizon well blowout in the Gulf of Mexico and validated according to the Deepwater Horizon (DWH) oil spill in support of the NRDA (Spaulding et al. 2015; French McCay et al. 2015, 2016). Finally, the OILMAP and SIMAP models have been used extensively in Australia to prosecute pollution offences, predict discharge locations and likely spill volumes based on weathering and surveillance observations, and has been used as expert witness evidence in Australian court proceedings, aiding the prosecution to determine spill quantum estimates.

2.3.1 Stochastic modelling

Quantitative, stochastic assessments have been undertaken for the credible spill scenarios (refer to Table 2-1) to help assess the environmental consequences of a hydrocarbon spill.

A total of 200 replicate simulations were completed for each of the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (50 simulations per quarter). Further details relating to the assessments for the scenarios can be found in Section 6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

2.3.1.1 Environmental impact thresholds – Environment that May Be Affected (EMBA) and hydrocarbon exposure

The outputs of the stochastic spill modelling are used to assess the potential environmental impact from the credible scenarios. The stochastic modelling results are used to delineate areas of the marine and shoreline environment that could be exposed to hydrocarbon levels exceeding environmental impact threshold concentrations. The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA and is discussed further in Section 6 of the EP. As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean mechanism of transportation, a different EMBA is presented for each fate within the EP.

A conservative approach – adopting accepted accumulation thresholds for impacts on the marine environment – is used to define the EMBA. These hydrocarbon thresholds are presented in Table 2-2 below and described in Section 6 of the EP.

Table 2-2: Summary of thresholds applied to the stochastic hydrocarbon spill modelling to determine the EMBA and environmental impacts

Hydrocarbon	Surface hydrocarbon (g/m^2)	Dissolved hydrocarbon (ppb)	Entrained hydrocarbon (ppb)	Accumulated hydrocarbon (g/m^2)
EMBA				
Diesel	10	10	1,000	100
Operational and scientific monitoring (OSM) assessment (see ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy)				
All hydrocarbon types	1	10	10	10

2.3.2 Deterministic modelling

Response planning

Woodside uses deterministic modelling to evaluate risks and impacts and response capability requirements. For planning and scaling the clean-up element of the response, deterministic modelling is undertaken where initial stochastic modelling has indicated that hydrocarbons are present at the minimum feasible clean-up exposure values of ≥50 g/m^2 for floating hydrocarbons, and/or ≥100 g/m^2 for shoreline accumulations and where such shoreline contact is predicted at multiple locations. The deterministic modelling outputs are then used to scale the required capability for the offshore (surface dispersant and containment and recovery) and/or shoreline responses.

Stochastic modelling for CS-01 predicted shoreline contact was localised to one receptor location (Scott Reef South [including Sandy Islet]) above the 100 g/m^2 shoreline response exposure value. Similarly, modelling predicted floating hydrocarbons exceeding the exposure value of 50 g/m^2 to also be localised around Scott Reef North and South. Deterministic modelling is therefore not required and stochastic modelling has thus been used to scale the clean-up response within this assessment.

Operational and scientific monitoring

Deterministic modelling may also be used for planning Operational and Scientific Monitoring (OSM) activities. This is undertaken where stochastic modelling predicts that the existing response capability, required to resource monitoring at receptors forecast to be contacted by floating, shoreline and/or dissolved hydrocarbons (at ≥10% probability and within the initial 14 days), has been exceeded. For this Petroleum Activity, stochastic modelling does not predict that existing capability would be exceeded and therefore deterministic modelling for OSM planning is not required. Therefore, stochastic modelling has been used to plan the OSM activities as detailed in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

Woodside is committed to a realistic, scalable response capability commensurate to the level of risk and able to be practically implemented and feasibly sustained.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

2.3.3 Response planning thresholds for surface and shoreline hydrocarbon exposure

Exposure values to determine the EMBA and inform OSM are used to predict and assess environmental impacts, however they do not appropriately represent the exposure values at which an effective response can be implemented.

Additional response exposure values are used for response planning and to determine areas where response techniques would be most effective. These exposure values are provided as a guide for response planning based on case studies that have demonstrated some response strategies (e.g. containment and recovery, chemical dispersant application) require certain oil spill thicknesses and conditions to be effective.

Response planning exposure values assist with understanding worst-case spill scenario response strategy capability requirements when used in conjunction with oil spill trajectory modelling results. Modelling informs the predicted spatial extent of the spill at certain response exposure values, which in turn can inform response strategy capability.

2.3.3.1 Surface hydrocarbon concentrations

Table 2-3: Surface hydrocarbon exposure values for response planning

Surface hydrocarbon exposure value (g/m^2)	Description	Bonn Agreement Oil Appearance Code	Mass per area (m^3/km^2)
>10	Predicted minimum exposure value for commencing monitor and evaluate[2]	Code 3 – Dull metallic colours	5–50
50	Predicted minimum floating oil exposure value for containment and recovery and surface dispersant application [3]	Code 4 – Discontinuous true oil colour	50–200
100	Predicted optimum floating oil exposure value for containment and recovery and surface dispersant application	Code 5 – Continuous true oil colour	>200
Shoreline hydrocarbon exposure value (g/m^2)	**Description**	**National Plan Guidance on Oil Contaminated Foreshores**	**Mass per area (m^3/km^2)**
100	Predicted minimum shoreline accumulation exposure value for shoreline assessment operations	Stain	>100
250	Predicted minimum exposure value for commencing shoreline clean-up operations	Level 3 – Thin Coating	200–1,000

The surface thickness of oil at which dispersants are typically effective is approximately 100 g/m^2. However, substantial variations occur in the thickness of the oil within the slick, and most fresh crude oils spread within a few hours, so overall the average thickness is 0.1 mm (or approx. 100 g/m^2 ITOPF 2011). Additionally, the recommended rate of application for surface dispersant is typically one part dispersant to 20 or 25 parts of spilled oil. These figures assume a 0.1 mm slick thickness, averaged over the thickest part of the spill, to calculate a litres/hectare application rate from vessels and aircraft. In practice this can be difficult to achieve as it is not possible to accurately assess the thickness of the floating oil.

Some degree of localised over-dosage and under-dosage is inevitable in dispersant response. An average oil layer thickness of 0.1 mm is often assumed, although the actual thickness can vary over a wide range (from less than 0.0001 mm to more than 1 mm) over short distances (International Petroleum Industry Environment Conservation Association [IPIECA] 2015).

[2] Monitor and evaluate will be undertaken from the outset of a spill whether or not this exposure value has been reached. Monitoring is needed throughout the response to assess the nature of the spill, track its location and inform the need for any additional monitoring and/or response techniques. It also informs when the spill has entered State Waters and control of the incident passes to statutory authorities e.g. Western Australia Department of Transport and Major Infrastructure (WA DTMI) or AMSA.

[3] At 50 g/m^2, containment and recovery and surface dispersant application operations are not expected to be particularly effective. This exposure value represents a conservative approach to planning response capability and containing the spread of surface oil.

Guidance from the Australian Maritime Safety Authority (AMSA, 2020) indicates spreading of spills of Group II or III products will rapidly decrease slick thickness over the first 24 hours of a spill resulting in the potential requirement of up to a ten (10) fold increase in capability on day 2 to achieve the same level of performance.

Further guidance from the European Maritime Safety Authority (EMSA) states spraying the 'metallic' looking area of an oil slick (Bonn Agreement Oil Appearance Code [BAOAC] 3, approx. 5 – 50 µm) with dispersant from spraying gear designed to treat an oil layer 0.1 mm (100 µm) thick, will inevitably cause dispersant over-treatment by a factor of 2 to 20 times (EMSA 2012).

Therefore, dispersant application should be concentrated on the thickest areas of an oil slick and Woodside intends on applying surface dispersants to only BAOAC 4 and 5. Spraying areas of oil designated as BAOAC Code 4 (Discontinuous true oil colour) with dispersant will, on average, deliver approximately the recommended treatment rate of dispersant.

Spraying areas of oil designated as BAOAC Code 5 with dispersant (Continuous true oil colour and more than 0.2 mm thick) will, on average, deliver approximately half the recommended treatment rate of dispersant. Repeated application of these areas of thicker oil, or increased dosage ratios, will be required to achieve the recommended treatment rate of dispersant (EMSA 2012).

Guidance from the National Oceanic and Atmospheric Administration (NOAA) in the United States is found in the document: *Characteristics of Response Strategies: A Guide for Spill Response Planning in Marine Environments 2013 (NOAA 2013).* This guide outlines advice for response planning across all common techniques, including surface dispersant spraying and containment and recovery. It states oil thickness can vary by orders of magnitude within distinct areas of a slick, thus the actual slick thickness and oil distribution of target areas are crucial for determining response method feasibility. Further to this, ITOPF also states in terms of oil spill response, sheen can be disregarded as it represents a negligible quantity of oil, cannot be recovered or otherwise dealt with to a significant degree by existing response techniques, and is likely to dissipate readily and naturally (ITOPF, 2014a, 2014b).

Figure 2-4 below from AMSA's Identification of Oil on Water – Aerial Observation and Identification Guide (AMSA 2014) shows expected percent coverage of surface hydrocarbons as a proportion of total surface area. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness exposure values for effective response.

From this information and other relevant sources (Allen and Dale 1996, EMSA 2012, Spence 2018) the surface exposure value of 50 g/m^2 was chosen as an average/equilibrium thickness for offshore response operations (50 g/m^2 is an average of 50% coverage of 0.1 mm Bonn Agreement Code 4 – discontinuous true oil colour, or 25% coverage of 0.2 mm Bonn Agreement Code 5 – continuous true oil colour which would represent small patches of thick oil or wind-rows).

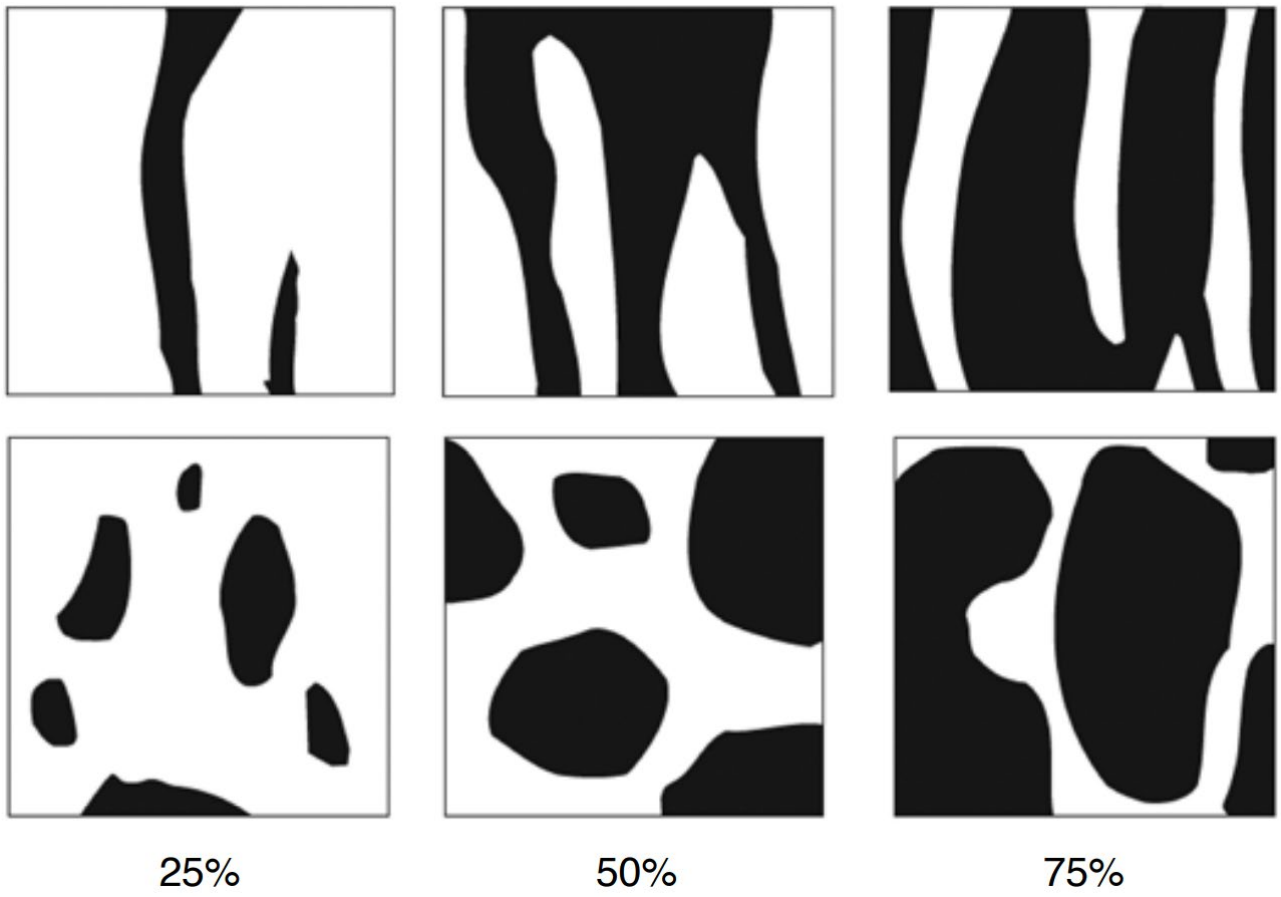

Figure 2-4: Proportion of total area coverage (AMSA, 2014)

Figure 2-5 illustrates the general relationships between on-water response techniques and slick thickness. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

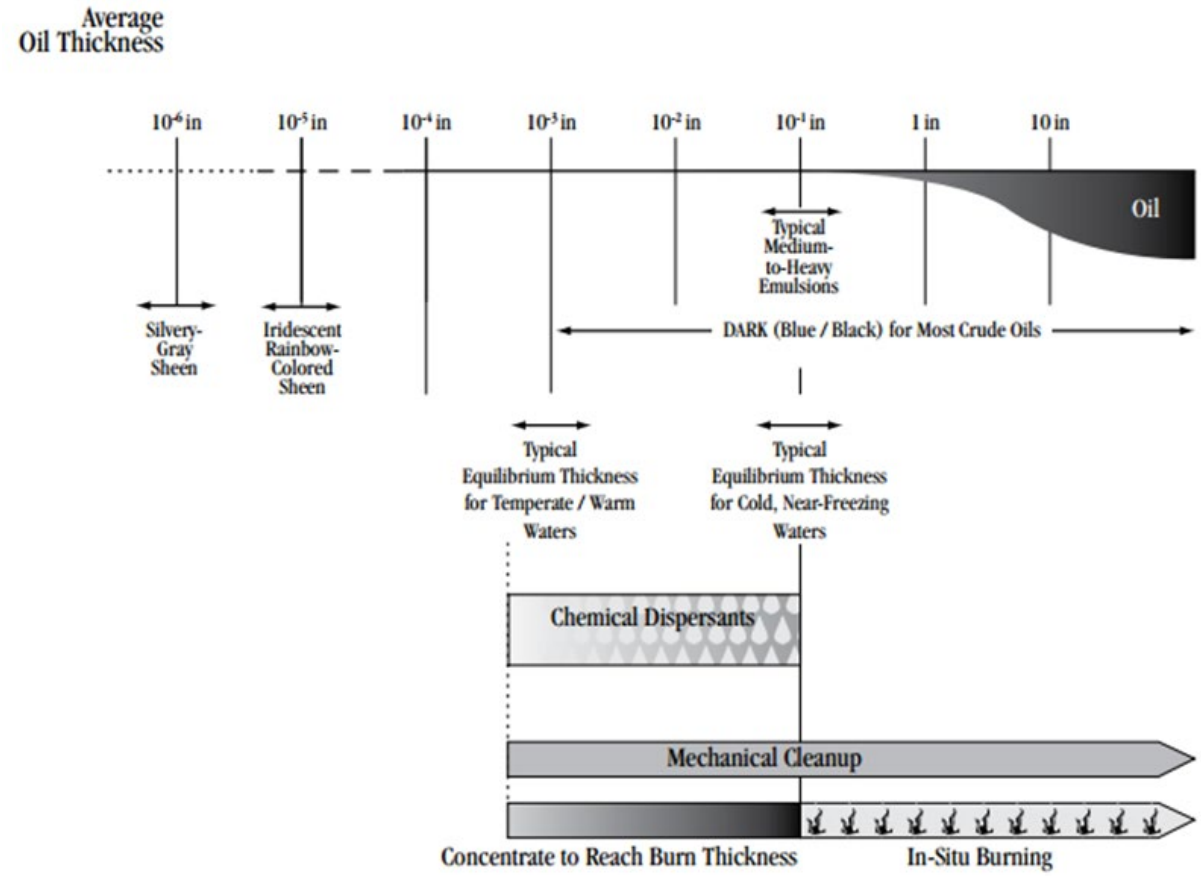

Figure 2-5: Oil thickness versus potential response options (from Allen & Dale 1996)

Wind and wave influence on the feasibility of response operations are also considered below (adapted from NOAA 2013):

- Mechanical Clean-up: Effectiveness drops significantly because of entrainment and/or splash-over as short period waves develop beyond 2–3 ft. (0.6–0.9m) in height. The ability to contain and recover oil decreases rapidly as the slick thickness becomes less than a thousandth of an inch (0.025 mm) (i.e., very low oil encounter rates). Waves and wind can also be limiting factors for the safe operation of vessels and aircraft.
- Dispersants: Effective dispersion requires a threshold amount of surface mixing energy (typically a few knots of wind and a light chop) to be effective. At higher wind and sea conditions, dispersant evaporation and wind-drift will limit chemical dispersion application effectiveness; and, there is a point (~25-kt winds, 10-ft waves) where natural dispersion forces become greater, particularly for light oils. Because of droplet size versus slick thickness constraints and application dose-rate limitations, dispersants work best on slick thicknesses of a few thousandths (approx. 50 g/m^2) to hundredths of an inch (approx. 250 g/m^2). Improved dispersants, higher dose rates, and multiple-pass techniques may extend the thickness limitation to 0.1 inch (2.5 mm) or more.

As offshore response operations (surface dispersant and containment and recovery) are intended to be undertaken at the thickest part of the slick, 50 g/m^2 and 100 g/m^2 (aligning with the lower limit of BAOAC 4 and midpoint of BAOAC 5) are utilised by Woodside when using deterministic modelling (if required) to identify the most likely locations for surface dispersant application and containment and recovery operations.

2.3.3.2 Surface hydrocarbon viscosity

Table 2-4: Surface hydrocarbon viscosity thresholds

Surface viscosity threshold (cSt)	Description	European Maritime Safety Authority (EMSA)	Viscosity at sea temperature (cSt)
5,000*	Predicted optimum viscosity for surface dispersant operations	Generally possible to disperse	500-5,000
10,000*	Predicted maximum viscosity for effective surface dispersant operations	Sometimes possible to disperse	5,000-10,000

**Measured at sea surface temperature*

Further to the required thickness for surface dispersant application and containment and recovery to be deployed effectively as outlined above, changes to viscosity will also limit the treatment of offshore response techniques. As outlined in the EMSA Manual on the Applicability of Oil Spill Dispersants (EMSA, 2012), guidance around changes to viscosity and likely effectiveness of surface dispersant application is provided.

This includes the following statements: “It has been known for many years that it is more difficult to disperse a high viscosity oil than a low or medium viscosity oil. Laboratory testing had shown that the effectiveness of dispersants is related to oil viscosity, being highest for modern ‘Concentrate, UK Type 2/3’ dispersants at an oil viscosity of about 1,000 or 2,000 mPa (1,000 – 2,000 cSt) and then declining to a low level with an oil viscosity of 10,000 mPa (10,000 cSt). It was considered that some generally applicable viscosity limit, such as 2,000 or 5,000 mPa (2,000 – 5,000 cSt), could be applied to all oils.”

However, modern oil spill dispersants are generally effective up to an oil viscosity of 5,000 mPa (5,000 cSt) or more, and their performance gradually decreases with increasing viscosity; oils with a viscosity of more than 10,000 cSt are in most cases, no longer dispersible. Guidance from CEDRE (EMSA, 2012) also indicates products with a range of 500 – 5,000 cSt at sea temperature are generally possible to disperse, while 5,000 – 10,000 cSt at sea temperature above pour point are sometimes possible to disperse, with products beyond 10,000 cSt at sea temperature below pour point are generally impossible to disperse.

To support decision making and response planning, a threshold of 10,000 cSt at sea temperature was chosen as a conservative estimate of maximum viscosity for surface dispersant spraying operations.

The thresholds described above are compared with the modelling results for the WCCS (Table 2-5).

2.3.4 Spill modelling results

2.3.4.1 Stochastic modelling results

The scenarios listed in Table 2 1 have been stochastically modelled. The receptors predicted to be contacted by surface (floating) and shoreline exposure values, together with the probability and timing of the contact, and any associated accumulated volumes, are detailed in Table 2-5.

This table covers floating and shoreline contact as it is relevant for planning spill clean-up. Contact within the water column, i.e. the predicted presence of dissolved and entrained hydrocarbons, is relevant for planning operational and scientific monitoring (OSM) activities. As such, these results are included in the OSM planning assessment in ANNEX C, Table C - 1.

It should be noted that the receptor polygons utilised by the modelling software overlap in some cases. This can result in the same shoreline accumulation being captured under a number of receptors. Where this has occurred, the receptors have been grouped and one accumulation listed.

2.3.4.2 Deterministic modelling results

Based upon the stochastic modelling results (Table 2-5), and as discussed in Section 2.3.2, neither scenario meets the trigger criteria for undertaking deterministic modelling, i.e. they do not meet the minimum exposure values required for feasible offshore and shoreline clean-up, or the criteria for OSM deterministic modelling. As such, no deterministic modelling has been undertaken for this Petroleum Activity.

3 IDENTIFY RESPONSE PROTECTION AREAS (RPAS)

In a response, monitor and evaluate – including trajectory modelling and vessel/aerial observations – would be used to predict RPAs that may be impacted. For the purposes of planning and appropriately scaling a response, modelling has been used to identify RPAs as outlined below in Figure 3-1.

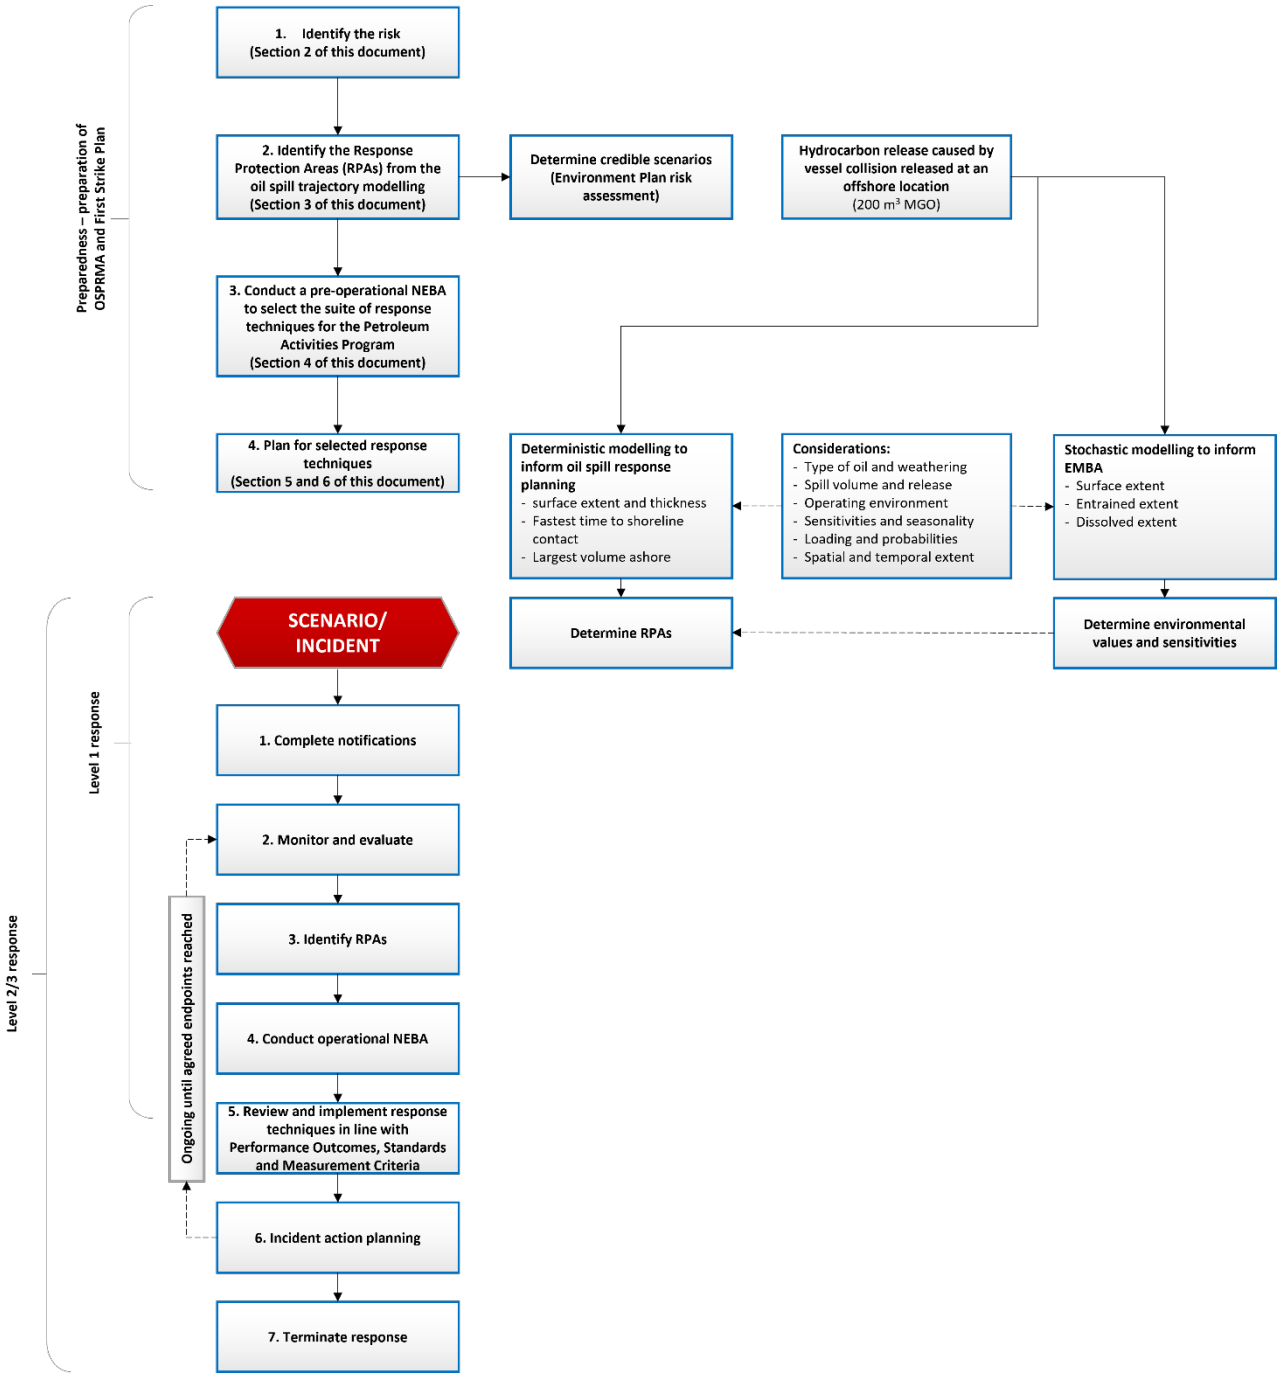

Figure 3-1: Identify Response Protection Areas (RPAs) flowchart

3.1 Identified sensitive receptor locations

Section 6.9.2 of the EP includes the list of sensitive receptor locations that have been identified by stochastic modelling as meeting the requirements outlined below:

- receptors with the potential to incur surface, entrained or shoreline accumulation contact above environmental impact exposure values

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth)

- receptors within the EMBA which meet the following:
  - a number of priority protection criteria/categories
  - International Union for Conservation of Nature (IUCN) marine protected area categories
  - high conservation value habitat and species
  - important socio-economic/heritage value.

3.2 Identify Response Protection Areas (RPAs)

RPAs have been selected on the basis of their environmental ecological, social, economic, cultural and heritage values and sensitivities and the ability to conduct a response based on the minimum response exposure values (Section 2.3.3). It is important to note that the results outlined in Table 3-1 are the combined results of the individual worst-case runs and do not indicate a single worst case credible scenario (where the timings and volumes are all expected from one release).

From the identified sensitive receptors described in Section 6.9.2 of the EP, only those which a shoreline response could feasibly be conducted (accumulation ≥100 g/m^2 for shoreline assessment and/or contact with surface slicks ≥10 g/m^2 for monitor and evaluate and/or oiled wildlife response) have been selected for response planning purposes. While not discounting other sensitivities, these RPAs have been used as the basis for demonstrating the capability to respond to the nature and scale of a spill from the WCCS and prioritising response techniques.

Table 3-1 outlines Response Protection Areas (RPAs) identified for feasible shoreline clean-up from the WCCS stochastic modelling results (CS-01). The full list of sensitive receptors potentially contacted from stochastic modelling (as per EMBA definition) are presented in the existing environment description (Section 4 of the EP) and impact assessment section (Section 6 of the EP) for each respective spill scenario.

The pre-operational NEBA (Annex A) includes additional RPAs contacted at lower exposure values to allow consideration of all feasible response techniques in the planning phase.

The RPAs identified in Table 3-1 are used to plan for the nature and scale of a shoreline response.

Table 3-1: Response Protection Areas (RPAs) from deterministic modelling

Response protection area	Conservation status	IUCN protection category	Minimum time to shoreline contact (above 100 g/m^2) in days [4]	Maximum shoreline accumulation (above 100 g/m^2) in m^3 [5]
Scott Reef South (including Sandy Islet)	Nature Reserve	N/A	3.5	0.4 days (10 hours)

4 This volume and time represent the first time to contact on defined shoreline polygon and the maximum volume ashore for that 24 hour period.

5 This volume and time represent the maximum volume ashore on defined shoreline polygon

4 NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

A Net Environmental Benefit Analysis (NEBA) is a structured process to consider which response techniques are likely to provide the greatest net environmental benefit.

The NEBA process is stage 3 of the preparedness process and typically involves four key steps outlined in Figure 4-1: evaluate data, predict outcomes, balance trade-offs, and select response options. These steps are followed both in the planning/preparedness process and during a response

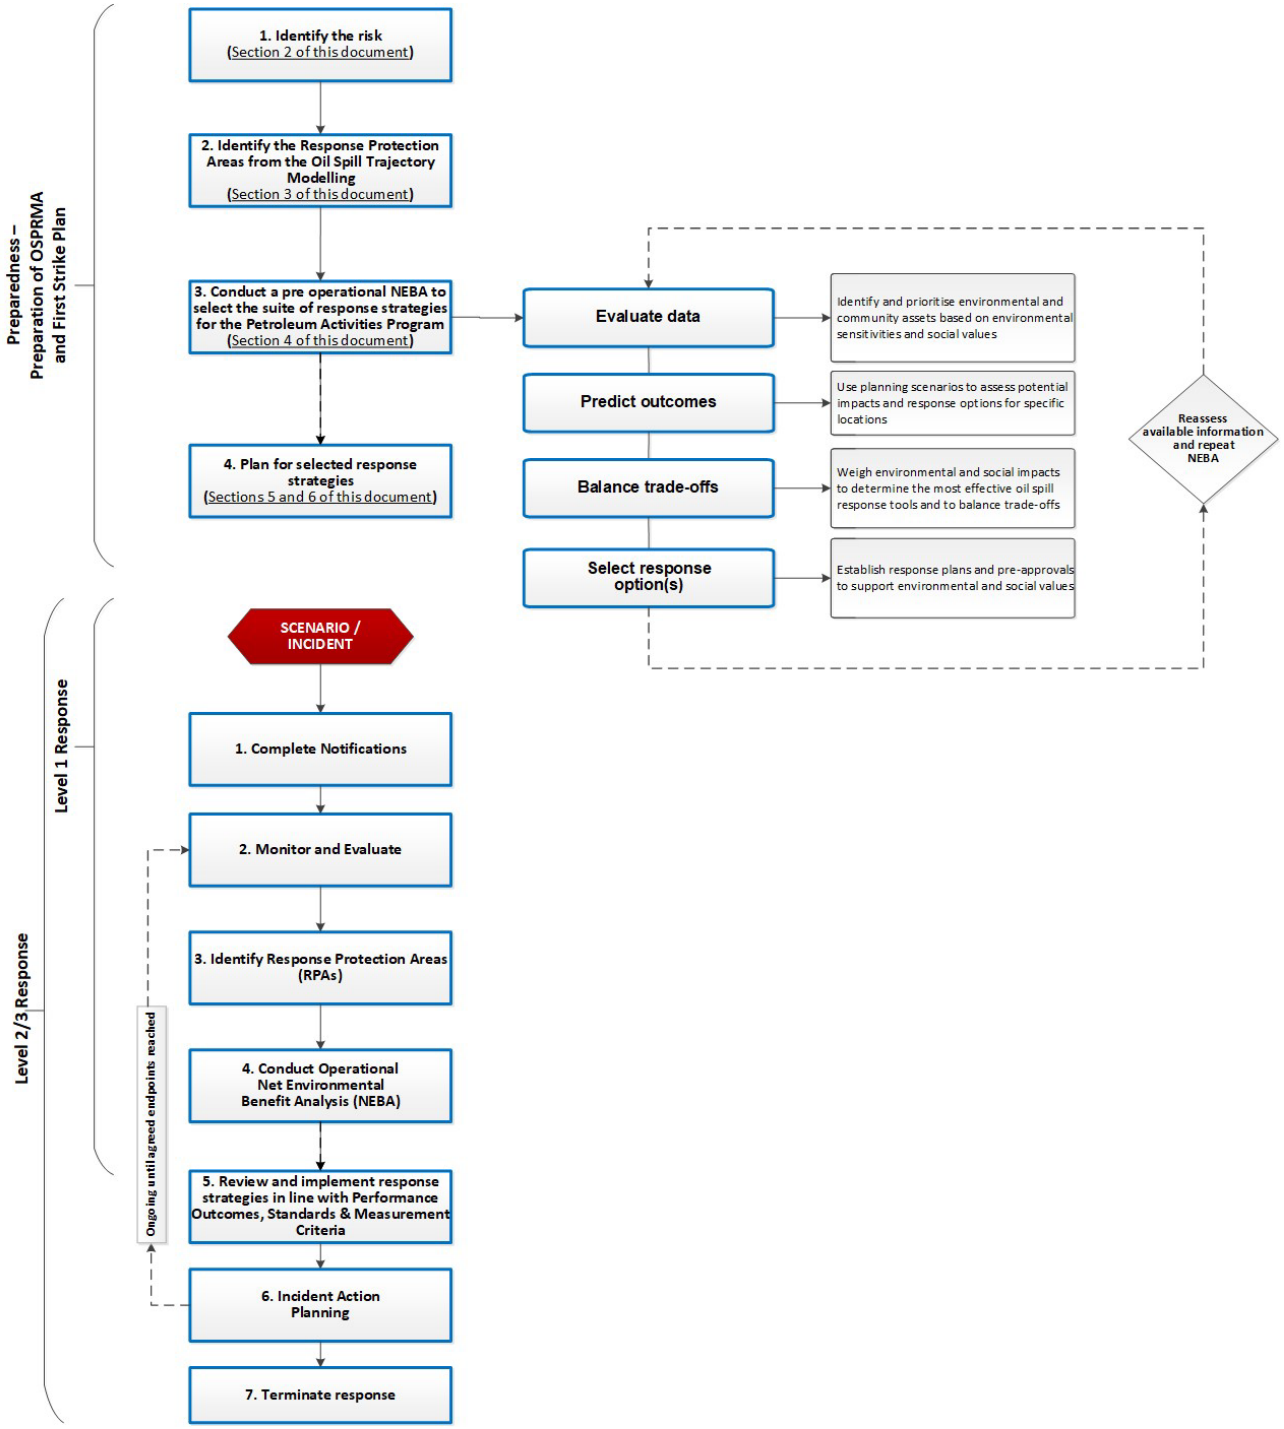

Figure 4-1: Net Environmental Benefit Analysis (NEBA) flowchart

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth)

4.1 Pre-operational / Strategic NEBA

The pre-operational NEBA identifies positive and negative impacts to sensitive receptors from implementing the response techniques. Feasibility is considered by assessing the receptors potentially impacted above response exposure values (Section 2.3.3) and the surface concentrations (Section 2.3.3.1).

Completing a pre-operational NEBA is a key response planning control that reduces the environmental risks and impacts of implementing the selected response techniques. Comprehensive details of the pre-operational NEBA for this Petroleum Activity are contained in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.2 Stage 1: Evaluate data

Woodside identifies and prioritises environmental and community assets based on environmental sensitivities and social values, informed through the use of trajectory modelling. Interpretation of stochastic oil spill modelling determines the EMBA for the release, which defines the spatial area that may be potentially impacted by the Petroleum Activity activities.

4.2.1 Define the scenario(s)

Woodside uses scenarios identified from the risk assessment in the EP to assess potential impacts and response options for specific locations. The WCCS is then selected for deterministic modelling (if required) and is used for this pre-operational NEBA. Outlier locations with potential environmental impacts, selected from the stochastic modelling may also be included for assessment. Response exposure values and deterministic modelling (if required) are then used to assess the feasibility/effectiveness and scale of the response. Modelling results are available in Table 2-5 and Table 3-1.

4.3 Stage 2: Predict Outcomes

Woodside uses planning scenarios to assess potential impacts and response options for specific locations. Locations with potential environmental impacts, selected from the stochastic modelling are included for assessment. Response exposure values and deterministic modelling are then used to assess the feasibility/ effectiveness of a response.

4.4 Stage 3: Balance trade-offs

Woodside considers environmental impacts and response effectiveness/ feasibility to determine the most effective oil spill response tools and balance trade-offs, using an automated NEBA tool. The tool considers potential benefits and impacts associated with a response at sensitive receptors and then considers the effectiveness/ feasibility of the response to select the response techniques carried forward to the ALARP assessment. The NEBA can be found in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.5 Stage 4: Select Best Response Options

To select the response technique, all the other stages in the NEBA process are considered and used to establish response plans and any pre-approvals to support protection of identified environmental and social values.

The response techniques implemented may vary according to a particular spill. The hydrocarbon type released and the sensitivities of the receptors (both ecological and socio-economic) may influence the response. The pre-operational NEBA broadly evaluates each response technique and supports decisions on whether they are feasible and of net environmental benefit. Response techniques that are not feasible or beneficial are rejected at this stage and not progressed to planning.

Further risks and impacts from implementing these selected response options are outlined in Section 7.

4.5.1 Determining potential response options

The available response techniques based on current technology can be summarised under the following headings:

- Monitor and evaluate
- Source control via vessel Shipboard Oil Pollution Emergency Plan (SOPEP)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth)

- Surface dispersant application:
  - aerial dispersant application
  - vessel dispersant application
- Mechanical dispersion
- In-situ burning
- Containment and recovery
- Shoreline protection and deflection:
  - protection
  - deflection
- Shoreline clean-up:
  - Phase 1 – mechanical clean-up
  - Phase 2 – manual clean-up
  - Phase 3 – final polishing
- Oiled wildlife response (including hazing)

Support functions may include:

- Waste management
- Operational and scientific monitoring

Table 4-1 includes scenario-specific assessments of feasible response options and justification for the exclusion of inappropriate options. These options are evaluated against the scenario parameters including oil type, volume, characteristics, prevailing weather conditions, logistical support, and resource availability to determine deployment feasibility.

A shortlist of the feasible response options is then carried forward for the ALARP assessment. This assessment will typically result in a range of available options, that are deployed at different areas (at-source, offshore, nearshore and onshore) and different times during the response. The NEBA process assists in prioritising which options to use where and when, and timings throughout the response.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Table 4-1: Response technique evaluation – vessel collision

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: MGO				
Monitor and evaluate	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • Pre-emptive assessment of sensitive receptors at risk – triggered once operational monitoring informs likely RPAs at risk.	Monitoring of an MGO spill is a feasible response technique and outputs will be used to guide decision making on the use of other monitoring/response techniques and providing information to regulatory agencies including AMSA and the Western Australian (WA) Department of Transport and Major infrastructure (DTMI). Practicable techniques that could be used for this scenario include predictive modelling, surveillance and reconnaissance and monitoring of hydrocarbon presence in water.	Yes	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via vessel SOPEP	Controlling the spill of MGO at source would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	A spill of MGO from a vessel collision will be instantaneous and source control will be limited to what the vessel or facility can safely achieve whilst responding to the incident.	Yes	Ability to stop the spill at source will be dependent upon the specific spill circumstances and whether or not it is safe for response personnel to access/isolate the source of the spill.
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce volatile organic compounds (VOCs) in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	Whilst modelling predicts that floating oil will reach the minimum feasible exposure value at which to commence surface dispersant application (≥50 g/m^2) at Scott Reef North, this technique is not suitable for MGO spills as this hydrocarbon is prone to rapid spreading and evaporation and are not considered effective when applied on thin surface films such as MGO as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon resulting in the unnecessary addition of chemicals to the marine environment. The volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon thus this response technique is deemed inappropriate.	No	The application of dispersant to MGO is unnecessary as the MGO will rapidly evaporate and would thus unnecessarily introduce additional chemical substances to the marine environment. The additional entrainment would also increase exposure of subsea species and habitats to hydrocarbons.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In situ burning	In situ burning is only effective where minimum slick thickness can be achieved.	Use of in situ burning as a response technique for MGO is unfeasible as the minimum slick thickness cannot be attained due to rapid spreading. In addition, there is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which is unlikely to be achieved. Furthermore, entering a volatile environment to undertake this technique would be unsafe for response personnel and its used would unnecessarily cause an increase in the release of atmospheric pollutants.	No	Diesel characteristics are not appropriate for the use of in situ burning and would unnecessarily cause an increase in the release of atmospheric pollutants.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5 with a 50-100% coverage of 100–200 g/m^2.	Whilst modelling predicts that floating oil will reach the minimum feasible exposure value at which to commence containment and recovery (50 g/m^2) at Scott Reef North, this technique is not suitable for MGO spills as it is prone to rapid spreading and evaporation and is deemed unsuitable for effective containment and recovery operations. The volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon thus this response technique is deemed inappropriate.	No	Containment and recovery would be an inappropriate response technique for a spill of Marine Gas Oil (MGO). Corralling a volatile hydrocarbon such as MGO is deemed unsafe for response personnel thus this response strategy is not considered feasible. In addition to the safety issues, most of the spilled MGO would have been subject to rapid evaporation prior to the commencement of containment and recovery operations.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of at-risk areas.	A MGO spill would be prone to rapid spreading and evaporation. Modelling predicts that whilst one shoreline receptor will be contacted at the response exposure value, this will occur within 10 hours, which is faster than shoreline protection teams could be deployed. Furthermore, the volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Operational monitoring will, however, be deployed from the outset of a spill to track the spill location and fate in real-time.	No	Although spill modelling predicts shoreline contact at Scott Reef within 10 hours, this timeframe is insufficient to mobilise and deploy shoreline protection and deflection equipment to such a remote location. Tidal influences, lack of safe access, and the absence of suitable anchoring points further limit the practicability of effective boom placement. Given these operational constraints, the deployment of this technique is considered unlikely to achieve meaningful protection and could cause greater environmental harm than the spill itself through physical disturbance to sensitive reef habitats.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m^2.	Spill modelling predicts shoreline contact above the response exposure value at one receptor location (Scott Reef South (including Sandy Islet)). Shoreline clean-up is therefore a feasible response technique for this scenario, where it is safe and practical to implement. However, an MGO spill would be prone to rapid spreading and evaporation and intrusive activities such as physical removal of waste can cause greater impacts than the oil alone. Secondary impacts can be minimised through the use of trained personnel to lead operations. Logistically, clean-up operations will require site access, decontamination, waste storage, personal protective equipment, catering and transport services to support personnel working on shorelines, which will be challenging and possibly lead to additional impacts at the remote location of Scott Reef. Monitor and evaluate activities will be deployed from the outset of a spill to track the spill location and fate in real-time to inform the need for and scale of clean-up operations.	Yes	While shoreline clean-up is a feasible technique, it is considered a secondary response strategy for this scenario. Shoreline clean-up activities can result in physical disturbance to sensitive shoreline habitats and intrusive activities require careful site-specific planning to minimise secondary impacts such as habitat disturbance, erosion and spreading of oil. Given the high rates of natural dispersion and biodegradation of MGO, and the significant logistical challenges of accessing and sustaining operations at the remote location of Scott Reef, this technique would only be used if an Operational NEBA indicated it would provide an overall benefit to the environment. Where it is safe and practical to implement, shoreline clean-up will be undertaken as directed by OM6: Shoreline Clean-up Assessment recommendations.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	Due to the likely volatile atmospheric conditions surrounding a MGO spill, response options may be limited to hazing to ensure the safety of response personnel. The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. Monitor and evaluate will, however, be deployed from the outset of a spill to track the spill location and fate in real-time. Thus, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists.	Yes	The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. However, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken as and where required.

5 HYDROCARBON SPILL ALARP PROCESS

Woodside's hydrocarbon spill ALARP process is aligned with guidance provided by NOPSEMA in *ALARP Guidance Note N-04300-GN0166* (2022) and *Oil Spill Risk Management Guidance Note N-04750-GN1488 A382148* (2026) and is set out in the 'Woodside Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) Guidelines'.

From the identified response planning need and pre-operational NEBA/ Spill Impact Mitigation Assessment (SIMA), Woodside conducts a structured, semi-quantitative hydrocarbon spill process which has the following steps:

- considers the Response Planning Need identified in terms of surface area (km^2) and available surface hydrocarbon volumes (m^3) against existing Woodside capability
- considers alternative, additional, and improved options for each response technique/control measure by providing an initial and, if required, detailed evaluation of:
  - predicted cost associated with adopting the control measure
  - predicted change/environmental benefit
  - predicted effectiveness/feasibility of the control measure.
- evaluates the risks and impacts of implementing the proposed response techniques, and any further control measures with associated environmental performance to manage these additional risks and impacts.

Woodside considers the risks and impacts from a hydrocarbon spill to have been reduced to ALARP when:

- a structured process for identifying and considering alternative, additional, and improved options has been completed for each selected response technique
- the analysis of alternate, additional, and improved control measures meets one of the following criteria:
  - all identified, reasonably practicable control measures have been adopted; or
  - no identified reasonably practicable additional, alternative and/or improved control measures would provide further overall increased proportionate environmental benefit; or
  - no reasonably practical additional, alternative, and/or improved control measures have been identified.
- where an alternative, additional and/or improved control measure is adopted, a measurable level of environmental performance has been assigned
- higher order impacts/ risks have received more comprehensive alternative, additional, and improved control measure evaluations and do not just compare the cost of the adopted control measures to the costs of an extreme or clearly unreasonable control measure
- cumulative effects have been analysed when considered in combination across the whole activity.

The response technique selection is based on the risk assessment conducted in the EP. The risk assessment identifies the type of oil, volume of release, duration of release, predicted fate, weathering and the EMBA (along with other requirements such as time to impact and predicted volumes ashore). Modelling is then used to inform the NEBA and the prioritisation of suitable response options. The scale of the response techniques selected in the pre-operational NEBA is informed through the assessment of results from deterministic modelling.

For the purpose of the ALARP assessment, the following terms and definitions have been used:

- response techniques are considered the control measures that reduce consequences from hydrocarbon spill events. The terms 'response technique' and 'control measure' are used interchangeably
- cost is defined as the time, effort and/or trouble taken in financial, safety, design/storage/installation, capital/lease, and/or operations/maintenance terms to adopt a control measure

5.1 Monitor and evaluate

Monitor and evaluate includes the gathering and evaluation of data to inform the oil spill response planning and operations. It includes fate and trajectory modelling, spill tracking, weather updates and field observations. This response option is deployed in some capacity for every event.

Techniques may include:

- Predictive modelling of hydrocarbons to assess resources at risk
- Surveillance and reconnaissance to detect hydrocarbons and resources at risk
- Pre-emptive assessment of sensitive receptors at risk (desktop)

Woodside maintains an Operational Monitoring Operational Plan. If shoreline contact is predicted, Response Protection Areas (RPAs) will be identified and assessed before contact. If shorelines are contacted, a shoreline assessment survey (SCAT) will be completed to guide effective shoreline clean-up operations per arrangements detailed in Woodside's Operational and Scientific Monitoring Bridging Implementation Plan (OSM-BIP) (see Section 5.6). This plan includes the process for the CIMT to mobilise resources depending on the nature and scale of the spill.

The proximity of Broome/ Port Hedland to the spill event location means that multiple logistical options are available to monitor the spill in relatively short timeframes. The primary mobilisation base for initial monitoring activities would be Broome/ Port Hedland. However, in the unlikely event of an extended spill with potential to impact receptors further afield, monitoring activities may also be mobilised from Exmouth, Dampier or Karratha.

5.1.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Floating surface oil in sufficient concentrations for effective operational monitoring is expected to be present with surface concentrations of 50 g/m^2 extending up to 22 km, 10 g/m^2 up to 51 km and 1 g/m^2 up to 157 km from the release location, respectively, for scenario CS-01.
- The shortest timeframe for shoreline accumulation (≥10 g/m^2) is predicted at 0.4 days (10 hours) at Scott Reef South (CS-01).
- The fastest time to contact for oil at concentrations of dissolved hydrocarbons greater than 10 ppb at shoreline receptors is 1 hour at Scott Reef North and Scott Reef South.
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.
- The duration of the spill would be instantaneous with response operations extending until surface hydrocarbons are no longer visible, and no additional response or clean-up of wildlife or habitats is predicted.

5.1.2 Environmental performance based on need

Table 5-1: Environmental Performance – Monitor and evaluate

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
1	Oil spill trajectory modelling	1.1	Initial modelling available within 6 hours using the Rapid Assessment Tool	1, 3B, 3C, 4
		1.2	Detailed modelling available within 4 hours of RPS receiving information from Woodside	
		1.3	Detailed modelling service available for the duration of the incident upon contract activation	
2	Tracking buoy	2.1	Tracking buoy located on facility/ lead vessel and ready for deployment 24/7	1, 3A, 3C, 4
		2.2	Deploy tracking buoy from facility/ lead vessel within 2 hours as per the First Strike Plan.	1, 3A, 3B, 4
		2.3	Contract in place with service provider to allow data from tracking buoy to be received 24/7 and processed.	1, 3B, 3C, 4
		2.4	Data received to be uploaded into Woodside common operating picture (COP) daily to improve the accuracy of other Operational Monitoring techniques.	1, 3B, 4
3	Satellite imagery	3.1	Contract in place with 3rd party provider to enable access and analysis of satellite imagery. Imagery source/type requested on activation of service.	1, 3C, 4
		3.2	3rd party provider will confirm availability of an initial acquisition within 2 hours	1, 3B, 3C, 4
		3.3	First image received with 24 hours of Woodside confirming to 3rd party provider its acceptance of the proposed acquisition plan.	1
		3.4	3rd party provider to submit report to Woodside per image. Report is to include a polygon of any possible or identified slick(s) with metadata.	1
		3.5	Data received to be uploaded into Woodside COP daily to improve accuracy of other Operational Monitoring techniques.	1, 3B, 4
		3.6	Satellite Imagery services available and employed during response	1, 3C, 4
4	Aerial surveillance	4.1	Two trained aerial observers available to be deployed by day 1 from resource pool.	1, 2, 3B, 3C, 4
		4.2	One aircraft available for 2 sorties per day, available for the duration of the response from day 1	1, 3C, 4
		4.3	Observer to compile report during flight as per FSP. Observers report available to the IMT within 2 hours of landing after each sortie.	1, 2, 3B, 4
		4.4	Unmanned Aerial Vehicles/Systems (UAV/UASs) to support Shoreline Contamination Assessment Technique (SCAT), containment and recovery and surface dispersal and pre-emptive assessments as contingency if required.	1, 2
5	Pre-emptive assessment	5.1	Desktop pre-emptive assessment of sensitive receptors to help determine Response Protection Areas (RPAs) to guide deployment of response personnel	1, 2, 3B, 3C, 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
	of sensitive receptors	5.2	If response personnel are deployed, provide daily reports to the IMT on the status of RPAs and maximise the effective use of resources.	1, 3B, 4

The control measures and capability of Woodside and its third-party service providers are shown to support monitor and evaluate activities up to and including the identified WCCS. This is demonstrated by the following:

- Woodside has a documented, structured and tested capability for Operational Monitoring operations including internal trajectory modelling capabilities, tracking buoys located offshore and contracted aerial observation platforms with access to trained observers.
- Woodside and its third-party service providers seek to maintain sufficient capability for the duration of the response.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.1.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.2 Source Control via vessel Shipboard Oil Pollution Emergency Plan (SOPEP)

Vessel source control will be conducted, where feasible and in accordance with MARPOL 73/78 Annex I, by the Vessel Master under the Shipboard Oil Pollution Emergency Plan (SOPEP) triggered by any loss of containment from the Petroleum Activity vessels.

The SOPEP provides guidance to the Master and Officers on board the vessel with respect to the extra steps to be taken when an unexpected pollution incident has occurred or is likely to occur. The SOPEP contains all information and operational instructions required by International Maritime Organization (IMO) Resolution MEPC.54 (32) adopted on 6 March 1992, as amended by resolution MEPC.86 (44) adopted on 13 March 2000.

Its purpose is to set in motion the necessary actions to stop or minimise oil discharge and mitigate its effects and outlines responsibilities, pollution reporting requirements, procedures and resources needed in the event of a hydrocarbon spill from vessel activities.

In the event of the WCCS vessel collision event, the vessel master may engage precautionary marine manoeuvres to avoid collision or commence pumping operations to transfer MGO and thus minimise the release.

5.2.1 Environmental performance based on need

Woodside has established control measures, environmental performance outcomes, performance standards and measurement criteria to be used for vessel-source oil spill response during the Petroleum Activity which are detailed in Section 6.9 of the EP. The vessel master's roles and responsibilities are described in Section 7.3 of the EP.

Performance standards for each contracted Petroleum Activity vessel are detailed in the vessel's specific SOPEP.

These standards maintain availability of sufficient resources and are adequately tested for successful implementation of the SOPEP in the event of a hydrocarbon spill.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.3 Shoreline Clean-up

Shoreline clean-up may be undertaken using a broad range of techniques when floating hydrocarbons contact shorelines. The timing, location and extent of shoreline clean-up activities can vary from one scenario to another, depending on the hydrocarbon type, sensitivities and values contacted, shoreline type and access, degree of oiling, and area oiled.

Shoreline clean-up is typically undertaken as a three-phase process:

- Phase 1 (gross contamination removal) involving the collection of bulk oil, either floating against the shoreline or stranded on it
- Phase 2 (moderate to heavy contamination removal) involving removal or in-situ treatment of shoreline substrates such as sand or pebble beaches, and
- Phase 3 (final treatment or polishing) involving removal of the remaining residues of oil.

As phase 1 typically involves recovery of floating and pooled oil, and phase 3 removes minor volumes, they have not been considered in the assessment of response need for the scenarios identified.

The Shoreline Clean-up Operational Plan details the mobilisation and resource requirements for a shoreline clean-up operation including the logistics, support and facility arrangements to manage the movement of personnel and resources.

The Shoreline Clean-up Operational Plan includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Woodside would activate and mobilise trained and competent personnel in shoreline assessment before or following shoreline contact at response exposure values.

Shoreline clean-up consists of different manual and mechanical recovery techniques to remove hydrocarbons and contaminated debris from a shoreline; this is to minimise ongoing environmental contamination and impact. The National Plan also provides guidance on shoreline clean-up techniques as outlined in National Plan Guidance Response assessment and termination of cleaning for oil contaminated foreshores (AMSA 2015).

5.3.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The fastest time to shoreline contact is predicted to be 0.4 days at Scott Reef South (including Sandy Islet) with shoreline accumulation averaging 2 m^3 (across all replicate simulations) and up to 80 m^3 in the worst replicate simulation (the single worst run).
- MGO is likely to be difficult to remove given its light nature and high weathering potential. It can be readily washed from sediments by wave and tidal flushing. The likely waste products from an MGO spill shoreline response would be contaminated sand and debris.
- The duration of the spill would be instantaneous with response operations extending surface hydrocarbons are no longer visible, and no additional response or clean-up of wildlife or habitats is predicted.
- Desktop pre-emptive assessment and shoreline assessments (OM6: Shoreline Clean-up Assessment via the Woodside OSM-BIP) will be mobilised prior to shoreline clean-up operations to determine the appropriateness of clean-up tactics. Selection of shoreline clean-up methods and controls to prevent further damage from the clean-up activities are to be undertaken in consultation with the Control Agency and selected based on a NEBA.
- Following Shoreline Assessment and agreement of prioritisation with WA Department of Transport and Major Infrastructure, clean-up operations would commence until agreed termination criteria are reached.
- Arrangements for support organisations who provide specialist services (trained personnel, labour hire, shoreline clean-up, and site management equipment) and/or resources and should be tested regularly.
- Tactical Response Plans (TRPs) for Response Protection Areas (RPAs) along with other relevant plans, procedures and support documents should be in developed and in place for Operational and Support Sections. These should be reviewed and updated regularly.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

In addition, a number of assumptions are required to estimate the response need for shoreline clean-up. These assumptions have been described in the table below.

Table 5-2: Response Planning Assumptions – Shoreline Clean-up

Response planning assumptions: Shoreline clean-up	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
Operational considerations	Scott Reef/ Sandy Islet presents operational and environmental constraints for shoreline clean-up activities including: • remote location presenting logistical challenges for landing vessels, people and equipment • small sand island within a submerged and emergent reef system presenting challenges for personnel to work with suitable facilities and waste storage • landing and undertaking shoreline clean-up activities is likely to result in damage of any turtle and bird nesting sites that may be present.
Manual shoreline clean-up operation (Phase 2)	One, manual shoreline clean-up operation (Phase 2) may include: • 1–2 x trained supervisor • 8–10 x personnel/ labour hire (possibly smaller teams due to RPA sensitivities) • Supporting equipment for manual clean-up including rakes, shovels, plastic bags etc.
Physical properties	Surface exposure value • Lower – 100 g/m^2 – 100% coverage of ‘stain’ – cannot be scratched off easily on coarse sediments or bedrock – Expected trigger to undertake detailed shoreline survey • Optimum – 250 g/m^2 – 25% coverage of ‘coat’ – can be scratched off with a fingernail on coarse sediments – Expected trigger to commence clean-up operations

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Table 5-3: Shoreline Clean-up techniques and recommendations

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Natural recovery	Allowing shoreline to self-clean; no intervention undertaken.	Remote and inaccessible shorelines for personnel, vehicles and machinery. Other clean-up techniques may cause more damage than allowing the shoreline to naturally recover. Natural recovery may be recommended for areas with mangroves and coral reefs due to their sensitivity to disturbance from other shoreline clean-up techniques. High-energy shorelines: where natural removal rates are high, and hydrocarbons will be removed over a short timeframe.	Low-energy shorelines: these areas tend to be where hydrocarbon accumulates and penetrates soil and substrates.	May be employed, if the operational NEBA identifies that other clean-up techniques will have a negligible or negative environmental impact on the shoreline. May also be used for buried or reworked hydrocarbons where other techniques may not recover these.
Manual recovery	Use of manpower to collect hydrocarbons from the shoreline. Use of this form of clean-up is based on type of shoreline.	Remote and inaccessible shorelines for vehicles and machinery. Areas where shorelines may not be accessible by vehicles or machinery and personnel can recover hydrocarbons manually. Where hydrocarbons have formed semi-solid to solid masses that can be picked up manually. Areas where nesting and breeding fauna cannot or should not be disturbed.	Coral reef or other sensitive intertidal habitats, as the presence of a response may cause more environmental damage then allowing them to recover naturally. For some high-energy shorelines such as cliffs and sea walls, manual recovery may not be recommended as it may pose a safety threat to responders.	May be used for sandy shorelines. Buried hydrocarbons may be recovered using shovels into small carry waste bags, but where possible the shoreline should be left to naturally recover to prevent any further burying of hydrocarbons (from general clean-up activities).
Sorbents	Sorbent boom or pads used to recover fluid or sticky hydrocarbons. Can also be used after manual clean-up to remove any residues from crevices or from vegetation.	When hydrocarbons are free-floating close to shore or stranded onshore. As a secondary treatment method after hydrocarbon removal and in sensitive areas where access is restricted.	Access for deploying and retrieving sorbents should not be through soft or sensitive habitats or affect wildlife.	Used for rocky shorelines. Sorbent boom will allow for deployment from small shallow draught vessels, which will allow deployment close to shore where water is sheltered and to aid recovery. Sorbents will create more solid waste compared with manual clean-up, so will be limited to cleaning rocky shorelines.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Vacuum recovery, flushing, washing	The use of high volumes of low-pressure water, pumping and/or vacuuming to remove floating hydrocarbons accumulated at shorelines.	Suited to rocky or pebble shores where flushing can remobilise hydrocarbons (to be broken up) and aid natural recovery. Any accessible shoreline type from land or water. May be mounted on barges for water-based operations, on trucks driven to the recovery area, or hand-carried to remote sites. Flushing and vacuum may be useful for rocky substrate. Medium- to high-energy shorelines where natural removal rates are moderate to high. Where flushed hydrocarbons can be recovered to prevent further oiling of shorelines.	Areas of pooled light, fresh hydrocarbons may not be recoverable via vacuum due to fire and explosion risks. Shorelines with limited access. Flushing and washing not recommended for loose sediments. High-energy shorelines where access is restricted.	High volume low pressure (HVLP) flushing and washing into a sorbent boom could be used for rocky substrate, if protection booming has been unsuccessful in deflecting hydrocarbons from these areas.
Sediment reworking	Movement of sediment to surf to allow hydrocarbons to be removed from the sediment and move sand via heavy machinery.	When hydrocarbons have penetrated below the surface. Recommended for pebble/cobble shoreline types. Medium- to high-energy shorelines where natural removal rates are moderate to high.	Low-energy shorelines as the movement of substrate will not accelerate the natural cleaning process. Areas used by fauna which could potentially be affected by remobilised hydrocarbons.	Use of wave action to clean sediment: appropriate for sandy beaches where light machinery is accessible.
Vegetation cutting	Cutting vegetation to prevent oiling and reduce volume of waste and debris.	Vegetation cutting may be recommended to reduce the potential for wildlife being oiled. Where oiling is restricted to fringing vegetation.	Access in bird-nesting areas should be restricted during nesting seasons. Areas of slow-growing vegetation.	May be used on shorelines where vegetation can be safely cleared to reduce oiling.
Cleaning agents (oil spill control agent [OSCA])	Application of chemicals such as dispersants to remove hydrocarbons.	May be used for manmade structures and where public safety may be a concern.	Natural substrates and in low-energy environments where sufficient mixing energy is not present.	Not recommended for shorelines. Could be used for manmade structures such as boat ramps.

5.3.2 Environmental performance based on need

Table 5-4: Environmental Performance – Shoreline Clean-up

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
6	Shoreline responders	6.1	In liaison with WA DTMI (for Level 2/3 incidents), deployment of 1 shoreline clean-up team to contaminated RPAs comprised of: • 1–2 trained specialists per operation • 8–10 personnel/labour hire (possibly a smaller team due to RPA sensitivities) • Personnel sourced through resource pool within 24–48 hours of request from the IMT.	1, 2, 3A, 3B, 3C, 4
		6.2	Relevant Tactical Response Plans (TRPs) will be identified in the first strike plan for activation within 24 hours.	1, 3A, 3C, 4
		6.3	Clean-up operations for shorelines in line with results and recommendations from SCAT outputs	1, 3A, 3B
		6.4	All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates.	
		6.5	In liaison with WA DTMI (for Level 2/3 incidents), mobilise and deploy 1 shoreline clean-up operation by Week 1.	1, 2, 3A, 3C, 4 1, 3B, 4
		6.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline clean-up operations: • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel	
		6.7	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s)	1, 3A, 3B
7	Shoreline clean up equipment	7.1	Contract in place with 3rd party providers to access equipment.	1, 3A, 3C, 4
		7.2	Equipment mobilised from closest stockpile (detail in activity specific ALARP) within 24-48 hours.	
		7.3	Supplementary equipment mobilised from Australian Marine Oil Spill Centre (AMOSC) and State stockpiles within 48 hours.	1, 3C, 4
		7.4	Supplementary equipment mobilised from OSRL within 72 hours (if required).	
8	Management of Environmental Impact of the response risks	8.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
		8.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		8.3	Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations	
		8.4	Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves	
		8.5	Removal of vegetation will be limited to moderately or heavily oiled vegetation	
		8.6	Oversight by trained personnel who are aware of the risks	
		8.7	Trained unit leader's brief personnel of the risks prior to operations	

The resulting shoreline clean-up capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the Petroleum Activity.

Whilst modelling predicts shoreline contact from day 1 (Scott Reef South (including Sandy Islet)) Woodside is satisfied that the current capability is managing risks and impacts to ALARP.

The capability available meets the need identified for this activity. The shoreline clean-up capability has the following expected performance (if required during a response):

- Woodside has the capacity to mobilise and deploy multiple shoreline clean-up teams in week 1 to Scott Reef/ Sandy Islet using existing labour hire contracts with Woodside, AMOSC, Core Group and OSRL team leads, and appropriate shoreline response equipment. However, due to the environmental sensitives of Scott Reef/ Sandy Islet, it may be more appropriate to conduct clean-up activities with one small team over a longer period of time using more passive recovery techniques.
- Assessment of response capability indicates that for a worst-case scenario the actual teams required would meet the available capability and the response would be completed by end month 1, even with the use of smaller teams and passive recovery techniques.
- Woodside has considered deployment of additional personnel to undertake shoreline clean-up operations but is satisfied that the identified level of resource is balanced between environmental sensitivities, cost, time and effectiveness. The most significant constraint on expanding the scale of response operations is the potential ecological impacts of positioning large numbers of clean-up responders on a small, remote island. The numbers of response personnel and techniques employed during any clean-up operation would need to be carefully evaluated via an operational NEBA and evaluate the trade-offs between sending multiple clean-up teams or smaller numbers of teams.
- TRPs have been developed for all identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.3.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.4 Oiled wildlife response (including hazing)

Oiled wildlife response (OWR) includes wildlife surveillance/reconnaissance, wildlife hazing, pre-emptive capture, and the capture, cleaning, treatment, and rehabilitation of animals that have been oiled. In addition, it includes the collection, post-mortem examination, and disposal of deceased animals that have succumbed to the effects of oiling.

For a petroleum activity spill in Commonwealth waters, Woodside will act as the Control Agency and will be responsible for the wildlife response. In such circumstances, Woodside would implement a response in accordance with the Oiled Wildlife Operational Plan, the WA Oiled Wildlife Response Plan (WAOWRP) (DBCA 2022a) and the WA OWR Manual (DBCA 2022b). The Oiled Wildlife Operational Plan includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Oiled wildlife operations would be implemented with advice and assistance from the Oiled Wildlife Advisor from the Department of Biodiversity, Conservation and Attractions (DBCA).

The key plan for OWR in WA is the WAOWRP (DBCA 2022a). The WAOWRP establishes the framework for preparing and responding to potential or actual wildlife impacts during a spill and sets out the management arrangements for implementing an OWR in conjunction with the DTMI State Hazard Plan – Maritime Environmental Emergencies (SHP-MEE). It is the responsibility of DBCA to administer the WAOWRP under the direction of the DTMI. The WA OWR Manual (DBCA 2022b) supports, and should be used in conjunction with, the WAOWRP. The purpose of the WA OWR Manual is to standardise the operating procedures, protocols and processes for an OWR during a spill event in WA waters, and to create alignment between the wildlife response processes and the overall incident response (DBCA 2022b).

If a spill occurs in WA State waters or enters State waters, DBCA is the Jurisdictional Authority for wildlife, for level 2/3 spills, and will also lead the oiled wildlife response under the control of the DTMI. DBCA is the State Government agency responsible for administering the Biodiversity Conservation Act 2016 (BC Act) which has provisions for authorising activities that affect wildlife.

For level 1 spills in State waters, Woodside will be the Control Agency, including for wildlife response. It is, however, also an expectation that for level 2/3 petroleum activity spills, Woodside will conduct the initial first-strike response actions for wildlife response and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

Woodside retains specialist personnel to support and manage oiled wildlife operations, including trained and competent responders for deployment in Exmouth and Dampier. Additional personnel would be sourced through Woodside's arrangements to support an oiled wildlife response as required.

5.4.1 Response need based on predicted consequence parameters

Wildlife response priority areas and assessment of wildlife impact

French-McCay et al. (2002), based on a review of existing literature at the time, determined lethal exposure values for floating and shoreline oil for the external coating of wildlife to be 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation. It should however be noted that toxicity exposure values for wildlife are likely to be highly variable due to differences in species sensitivity, type of hydrocarbon, type of exposure (ingestion or external oiling), life-stage, and on-water versus land habitat.

For planning purposes, determination of wildlife priority protection areas is based on stochastic modelling of the worst-case spill scenarios at 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation (acknowledging that impacts to wildlife may occur at lower concentrations), the known presence of wildlife, and in consideration of:

- Presence of high densities of wildlife, threatened species, and/or endemic species with high site fidelity
- Greatest probability of shoreline accumulation
- Shortest timeframe to contact

Table 5-5 outlines the wildlife response areas for this activity. At the time of a spill, identification and allocation of wildlife RPAs should also take into consideration any key biological activities. Additional detail regarding species and their key biological activities within the vicinity of the Petroleum Activity are described in Section 4 of the Environment Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

For WA, the Pilbara and Kimberley Regional Oiled Wildlife Plans (DBCA [formerly Department of Parks and Wildlife), 2014) provide useful information relating to wildlife priority response areas in their respective regions.

Table 5-5: Key at-risk species potentially in RPAs and open ocean (CS-01)

Species	Scott Reef South (including Sandy Islet)	Scott Reef North	Seringapatam Reef	Open Ocean	Scott Reef South (including Sandy Islet)
Marine turtles	✓	✓	✓		✓
Whale sharks	✓	✓	✓		✓
Seabirds and/or migratory shorebirds	✓	✓	✓	✓	✓
Cetaceans – migratory whales	✓	✓	✓	✓	✓
Cetaceans – dolphins and porpoises	✓	✓	✓	✓	✓
Dugongs					
Sharks and rays	✓	✓	✓	✓	✓

The following statements identify the key parameters upon which a wildlife response need can be based:

- The shortest timeframe for floating oil at ≥10 g/m^2 is predicted at Scott Reef North and Scott Reef South within 1 hour for CS-01.
- The shortest timeframe for shoreline accumulation at the minimum required exposure values (≥100 g/m^2) is predicted to be 10 hours at Scott Reef South (including Sandy Islet) (80 m^3 worst-case individual simulation).
- At sea there are likely to be low numbers of at risk or impacted wildlife, and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and operational and scientific monitoring are more likely to be the focus of response efforts.
- As the surface oil approaches shorelines and as oil accumulates on the shoreline, potential for oiled wildlife impacts is likely to increase as well as opportunities to rescue wildlife.
- It is estimated that the wildlife impact would be between medium and high, as defined in the WAOWRP (DBCA, 2022a) (Table 5-6).

Table 5-6: WAOWRP Guide for rating wildlife impact of an oil spill (DBCA, 2022)

Wildlife Impact Rating	Low	Medium	High
What is the likely duration of the wildlife response?	<3 days	3-10 days	>10 days
What is the likely total intake of animals?	<10	11-25	>25
What is the likely daily intake of animals?	0-2	2-5	>5
Are threatened species, or species protected by treaty, likely to be impacted, either directly or by pollution of habitat or breeding areas?	No	Yes – possible	Yes – likely
Is there likely to be a requirement for building primary care facility for treatment, cleaning and rehabilitation?	No	Yes – possible	Yes – likely

Tactics

Where there is imminent or actual impact to wildlife, Woodside will activate the Wildlife Division and follow the oiled wildlife incident management framework and implementation plan outlined in the Woodside Oiled Wildlife Operational Plan.

In Commonwealth waters, Woodside will be responsible for the planning and implementation of the OWR in its entirety. Noting that at sea, and in comparison to the shoreline, there are likely to be less wildlife impacted by an oil spill and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

that cannot be retrieved and integration with operational and scientific monitoring are more likely to be the focus of the OWR.

In State waters, Woodside will conduct the initial first-strike response actions for wildlife and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

If a protracted response is likely, requiring preventative actions and/or wildlife rescue, and formal hand over to the Control Agency (in State waters) has not yet occurred, the Wildlife Division will be responsible for the development of the Wildlife Division portion of the IAP. Preventative actions, such as hazing, along with capture, intake and treatment require a higher degree of planning, approval (licenses) and skills and will be planned for and carried out under the IAP as outlined in the Oiled Wildlife Operational Plan and in accordance with the WAOWRP (DBCA 2022a) and WA OWR Manual (DBCA 2022b).

The oiled wildlife response technique targets key wildlife populations at risk within Commonwealth open waters and the nearshore waters as described in Section 4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.4.2 Environmental performance based on need

Table 5-7: Environmental Performance – Oiled Wildlife Response (OWR)

Environmental Performance Outcome		OWR is conducted in accordance with the Western Australian Oiled Wildlife Response Plan (WAOWRP, 2022) to meet legislative requirements to house, release or euthanise wildlife under the *Biodiversity Conservation Act 2016*.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
9	Wildlife response arrangements	9.1	Oiled Wildlife Operational Plan in place and utilised during a response to plan, coordinate, implement and terminate operations	1, 3A, 4
		9.2	Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by Operational Monitoring Plan (OMP): Marine Fauna Assessment and in liaison with DBCA.	1
10	Wildlife response equipment	10.1	Maintain contract with AMOSC for immediate access to oiled wildlife response equipment.	1, 3C, 4
		10.2	Maintain contract with OSRL to access additional oiled wildlife response equipment.	1, 3C, 4
11	Wildlife responders	11.1	Two Oiled Wildlife Team Members to supervise the oiled wildlife operations who have completed an OWR Management course.	1, 2, 3B
		11.2	Maintain contract with AMOSC for immediate access to trained oiled wildlife response specialists	1, 3B, 3C
		11.3	Maintain contract with OSRL to access additional trained OWR specialists	1, 3B, 3C
		11.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
12	Management of environmental impacts of response risks	12.1	Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA Oiled Wildlife Response Plan (OWRP) and the relevant regional plan.	1

The resulting wildlife response capability has been assessed against the WCCS (CS-01). The range of techniques provide an ongoing approach to response at identified RPAs.

Under optimal conditions, during the subsea or surface release, the capability available meets the need identified. It indicates that, the wildlife response capability has the following expected performance:

- undertake OWR first strike response:
  - mobilisation of monitor and evaluate and/or OM5: Rapid Marine Fauna Assessment to identify wildlife and RPAs contacted or at imminent risk of contact by hydrocarbons.
- availability and mobilisation of trained OWR personnel to supervise OWR activities.
- access to wildlife resources (personnel and equipment) to meet the needs where there are medium or high levels of wildlife impact.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.5 Waste Management

Waste management is considered a support technique to wildlife response and shoreline clean-up. Waste generated and collected during the response that will require handling, management and disposal may consist of:

- Liquids (hydrocarbons and contaminated liquids) collected during shoreline clean-up and wildlife response, and/or
- Solids/semi-solids (oily solids, garbage, contaminated materials) and debris (e.g. seaweed, sand, woods, and plastics) collected during shoreline clean-up and wildlife response.

Expected waste volumes during an event are likely to vary depending on oil type, volume released, response techniques employed and how weathering of hydrocarbons. Waste management, handling and capacity should be scalable to maintain continuous response operations.

All waste management activities will follow the Environment Protection (Controlled Waste) Regulations 2004 and the waste will be managed to minimise final disposal volumes. Waste treatment techniques will consider contaminated solids treatment to allow disposal to landfill and solids with high concentrations of hydrocarbon will be treated and recycled where possible or used in clean fill if suitable.

The waste products would be transported from response locations to the nearest suitable staging area/waste transfer station for treatment, disposal or recycling. Waste will be transferred with appropriately licensed vehicles. Containers will be available for temporary waste storage and will be:

- labelled with the waste type
- provided with appropriate lids to prevent waste being blown overboard
- bunded if storing liquid wastes.
- processes will be in place for transfers of bulk liquid wastes and include:
  - inspection of transfer hose undertaken prior to transfer
  - watchman equipped with radio visually monitors loading hose during transfer
  - tank gauges monitored throughout operation to prevent overflow

The *Oil Spill Preparedness Waste Management Support Plan* details the procedures, capability and capacity in place between Woodside and its primary waste services contractor to manage waste volumes generated from response activities.

5.5.1 Response need based on predicted consequence parameters

Table 5-8: Response Planning Assumptions – Waste Management

Response planning assumptions: Waste management	
Waste loading per m^3 oil recovered (multiplier)	Shoreline clean-up (manual) – ~5–10x multiplier for oily solid and liquid wastes generated by manual clean-up.
	Oiled wildlife response – ~1 m^3 of oily solid and liquid waste generated for each wildlife unit cleaned

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.5.2 Environmental performance based on need

Table 5-9: Environmental Performance – Waste Management

Environmental Performance Outcome		To minimise further impacts, waste will be managed, tracked and disposed of in accordance with laws and regulations.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
13	Waste Management	13.1	Contract with waste management services for transport, removal, treatment and disposal of waste	1, 3A, 3B, 3C, 4
		13.2	Access to at least 213 m^3 of solid and liquid waste storage available within 2 days upon activation of 3rd party contract.	
		13.3	Access to up to 2,400 m^3 by day 6.	
		13.4	Recovered hydrocarbons and wastes will be transferred to licensed treatment facility for reprocessing or disposal.	
		13.5	Waste management provider support staff available year-round to assist in the event of an incident with waste management as detailed in contract.	
		13.6	Open communication line to be maintained between IMT and waste management services to ensure the reliable flow of accurate information between parties.	
		13.7	Waste management to be conducted in accordance with Australian laws and regulations	1, 3A, 3B
		13.8	Waste management services available and employed during response	1, 3A, 3B, 3C, 4
14	Management of environmental impacts of response risks	14.1	Teams will segregate liquid and solid wastes at the earliest opportunity.	1, 3A, 3B, 3C, 4

The resulting waste management capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to waste management at identified RPAs.

The largest volumes ashore occur only in Week 1, averaging 2 m^3 (across all replicate simulations) and up to 80 m^3 in the worst replicate simulation (the single worst run). Based on the worst case maximum volume of 80 m^3 ashore, an estimated daily peak of 160-914 m^3 of waste may be generated from shoreline clean-up operations. Woodside has access to 124 m^3 waste storage on day 1,675 m^3 by day 4, and 2,400 m^3 by day 6 therefore the capability available meets the need identified.

It indicates that the waste management capability has the following expected performance:

- Shoreline operations may generate a daily peak of 160-914 m^3 within Week 1. No additional shoreline contact is predicted after Week 1
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.5.
- Woodside's waste contractor has access to ~120,000 m^3 to treat overall waste volumes. The waste management requirements are within Woodside's and its service providers existing capacity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.6 Operational and Scientific monitoring

Operational and scientific monitoring (OSM) is a key component of the environmental management document framework for offshore petroleum activities, which includes activity EPs and OPEPs. The key elements and differences between operational monitoring and scientific monitoring include:

- **Operational Monitoring (OM)** – Is undertaken during the course of the spill and includes any physical, chemical and biological assessments that may guide operational decisions such as selecting the appropriate response and mitigation methods and/or to determine a response activity. This monitoring is additional to the activities (aerial/vessel surveillance, tracking buoys, oil spill trajectory modelling and satellite tracking) performed as part of the Monitor and Evaluate Strategy (Section 5.1). Information needs to be collected and processed rapidly to suit response needs, with a lower level of sampling and accuracy needed than for scientific purposes. For the Operational Monitoring Plan (OMP) initiation and termination criteria during a Level 2–3 spill event refer to Table 9-1 of the Joint Industry OSM Framework (APPEA [now Australian Energy Producers (AEP)] 2021).
- **Scientific Monitoring (SM)** – Is the principal tool for determining the extent, severity and persistence of possible environmental impacts from a hydrocarbon spill and for informing resultant remediation activities. Consequently, such studies are required to account for natural or sampling variation, and study designs must be robust and produce defensible data. Scientific monitoring is typically conducted over a wider study area, extending beyond the spill footprint, and a longer time period, extending beyond the spill response. For the Scientific Monitoring Plan (SMP) initiation and termination criteria during a Level 2–3 spill event refer to Table 9-2 of the Joint Industry OSM Framework (APPEA [now Australian Energy Producers (AEP)] 2021).

Woodside has developed a Woodside OSM Bridging Implementation Plan (OSM-BIP), which describes a program of monitoring oil pollution that will be adopted in the event of a hydrocarbon spill incident (Level 2–3) to marine waters. It aligns with the Joint Industry OSM Framework (APPEA [now Australian Energy Producers (AEP)] 2021) and describes how this Framework applies to Woodside activities and spill risks.

A series of Operational Monitoring Plans (OMPs) and Scientific Monitoring Plans (SMPs) form part of the Joint Industry OSM Framework and provide detail on monitoring design, standard operating procedures, data management, quality assurance and quality control and reporting.

Table 5-10 lists the Joint Industry OMPs and SMPs that are relevant to the Petroleum Activity. The aims/objectives of each OMP and SMP are listed in Tables 5-1 and 6-1 of the Joint Industry OSM Framework respectively. Woodside confirms it has reviewed these aims/objectives and determined they are all appropriate to address the potential impacts, risks and response activities of this activity, noting that dispersant application is not a suitable response strategy for this activity.

The OSM-BIP is structured so that it can provide a flexible framework that can be adapted to individual spill incidents. The Combined OSM Planning Area (refer to Section 2.1 of the OSM-BIP), derived from all Woodside worst-case scenarios, represents the geographical extent of the Woodside OSM-BIP.

The OSM requirements for this activity's credible spill scenarios, including monitoring priorities, implementation timeframes and capability is provided in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

Woodside will review the initiation criteria for OMPs and SMPs (provided in Table 9-1 [OMPs] and Table 9-2 [SMPs] of the Joint Industry Operational and Scientific Monitoring Framework (APPEA [now AEP] 2021)) during the preparation of the initial IAPs, and subsequent IAPs. If any initiation criteria are met, then that relevant OMP and/or SMP will be activated via the OSM Services Provider.

Table 5-10: Joint industry OSM plans relevant to Petroleum Activity

Operational Monitoring	Relevant for the activity	Scientific Monitoring	Relevant for the activity
OM1: Hydrocarbon Characterisation	✓	SM1: Water Quality Impact Assessment	✓
OM2: Hydrocarbon in Water Assessment	✓	SM2: Sediment Quality Impact Assessment	✓
OM3: Hydrocarbon in Sediment Assessment	✓	SM3: Intertidal & Coastal Habitat Assessment	✓

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Operational Monitoring	Relevant for the activity	Scientific Monitoring	Relevant for the activity
OM4a: Dispersant Effectiveness Monitoring (Subsea)	×	SM4: Seabirds and Shorebirds Assessment	✓
OM4b: Dispersant Effectiveness Monitoring (Surface)	×	SM5: Marine mega-fauna Assessment	✓
OM5: Rapid Marine Fauna Surveillance	✓	SM6: Benthic habitat Assessment	✓
OM6: Shoreline Clean-up Assessment (SCAT)	✓	SM7: Marine fish and elasmobranch assemblages assessment	✓
		SM8: Fisheries Impact Assessment	✓

		SM10: Social Impact Assessment	✓

5.6.1 Response need for Shoreline Clean-Up Assessment (SCAT) based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- SCAT will be mobilised to RPAs contacted at 100 g/m^2.
- The stochastic run with the shortest timeframe for shoreline accumulation at 100 g/m^2 predicted is 10 hours to Scott Reef South (including Sandy Islet) (CS-01).

In addition, a number of assumptions are required to estimate the response need for SCAT. These assumptions have been described in Table 5-11. Consequently, for planning purposes and based on the modelling results for shortest time to contact at 100 g/m^2 there is one RPA (Scott Reef South (including Sandy Islet)) requiring 2 SCAT specialists. These resourcing requirements can be met via the resourcing arrangements outlined in Table 8-3 of the OSM-BIP.

Table 5-11: Response planning assumptions – SCAT

Response planning assumptions: SCAT	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
SCAT	Deployment of 2 specialists in SCAT from resource pool for each of the RPAs with predicted impacts

5.6.2 Summary – Operational and scientific monitoring

A detailed OSM preparedness assessment is provided in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

The ALARP assessment for operational and scientific monitoring (Section 6.6 considers alternate, additional, and/or improved control measures on each selected response technique.

Known, reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness determined to be medium. The OSM program's main objectives can be met, with no additional, alternative or improved control measures providing further benefit.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.6.3 Environmental performance based on need

Table 5-12: Operational and scientific monitoring

Environmental Performance Outcome		Implement OSM programs to assess and report on the impact, extent, severity, persistence and recovery of sensitive receptors contacted by a spill or affected by spill response.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
15	OSM arrangements	15.1	Maintain access to OSM expertise qualified to fulfil OSM Implementation Lead role during a Level 2/3 spill event per Joint Industry OSM Framework requirements.	3A, 3B, 3C, 4
		15.2	OSM Implementation Lead responsible for overseeing implementation of OMP and SMP components in accordance with the Woodside OSM Bridging Implementation Plan.	
16	Access to adequate OSM capability to provide both initial and ongoing monitoring	16.1	Maintain contract with third-party OSM Services Provider to provide access to suitably qualified and competent personnel and equipment to assist in the implementation of monitoring in accordance with the capability and resourcing requirement described in Sections 8–10 of the OSM-BIP and the activity-specific capability assessment in Table C - 8 and Table C - 9 in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.	3A, 3B, 3C, 4
		16.2	Obtain monthly capability reports from OSM Service Provider to demonstrate the capability described in Section 10 of the OSM-BIP is available throughout the activity	
		16.3	Annual testing of OSM Service Provider standby arrangements and activation process	
17	Baseline studies assurance	17.1	Annual review of environmental baseline data for all locations where spill modelling has predicted contact at relevant hydrocarbon exposure values within 7 days	3C
18	OSM-BIP maintenance	18.1	Annual review will be conducted according to the criteria in Section 11 of the OSM-BIP	3A, 3B, 3C, 4
19	OSM response	19.1	OMPs and SMPs will be activated in accordance with the initiation criteria provided in Tables 9-1 and 9-2 of the Joint Industry OSM Framework (APPEA [now AEP] 2021)	1
		19.2	Initiation criteria of OMPs and SMPs will be reviewed during the preparation of the initial Incident Action Plan (IAPs) and subsequent IAPs; and if any criteria are met, relevant OMPs and SMPs will be activated	
		19.3	If the OSM Implementation Lead identifies that additional monitoring capability is required beyond that described in Section 10 of the OSM-BIP, the need for these resources will be identified as soon as practicable and mobilised through the OSM Services Provider Contract, which includes provisions for scaling up personnel to meet monitoring program requirements	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

		19.4	Decisions regarding co-mobilisation of monitoring teams will be determined following a spill event, as part of the Incident Action Planning process. These decisions will be made by the CIMT in consultation with the OSM Services Provider and relevant stakeholders, with due consideration given to safety, access to sensitive receptors, timing, and data quality requirements	
		19.5	OSM to be conducted in accordance with the Woodside OSM-BIP and, where relevant to the activity, the assessment detailed in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.	
		19.6	Monitoring prioritisation will be undertaken in accordance with the process and checklist provided in Table 13-1, informed by the guidance in Section C.2 of the OSPRMA	
		19.7	Mobilisation and implementation of OMPs and SMPs will be undertaken in accordance with the indicative timeframes and sequencing described in Section C.3 of the OSPRMA and Part B of the OSM-BIP	
		19.8	Implementation of OSM will comply with the minimum standards listed in Appendix A of the Joint Industry OSM Framework	
		19.9	Once Scientific Monitoring data reports are drafted they will be peer reviewed by an expert panel for data integrity	
		19.10	OMPs and SMPs will be terminated in accordance with the termination criteria provided in Table 9-1 and 9-2 of the Joint Industry OSM Framework (APPEA [now AEP] 2021)	
20	Shoreline Clean-up Assessment Technique (SCAT)	20.1	Mobilisation within 24 hours, in agreement with WA DTMI (for Level 2/3 incidents), deployment of 2 x specialist(s) in SCAT from resource pool for each of the Response Protection Areas (RPAs) with predicted impacts	1, 2, 3B, 3C, 4
		20.2	Reports from OM6: Shoreline Clean-up Assessment will be provided to the IMT daily, detailing the assessed areas to maximise effective utilisation of resources.	1, 3B, 4
		20.3	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		20.4	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		20.5	Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations	
		20.6	Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.7 Incident Management System (IMS)

The Incident Management System (IMS) is both a control measure and a measurement criteria. As a control measure the IMS function is to prompt, facilitate and record the completion of the key response planning processes detailed below (see Section 5.7.1, 5.7.2 and 5.7.3). As a measurement criteria the IMS records the evidence of the timeliness of all response actions included in the environmental performance standards and the plans used of the Petroleum Activity.

As the IMS does not directly remove hydrocarbons spilt into the marine environment there is no direct relationship to the response planning need.

5.7.1 Incident action planning

The CIMT will be required to collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist the IMT with the execution of that plan. The site-based Incident Commander (IC) may request the CIMT to complete notifications internally within Woodside, to relevant persons/ organisations and government agencies as required. Depending on the type and scale of the incident either the CIMT DM or IC will be responsible for ensuring the development of the IAP. Incident Action Planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.

5.7.2 Operational NEBA process

In the event of a response Woodside will confirm that the response techniques adopted at the time of EP/ OPEP acceptance remain appropriate to reduce the consequences of the spill. This process verifies that there is a continuing net environmental benefit associated with continuing the response technique through the operational NEBA process. This process manages the environmental risks and impacts of response techniques during the spill response, An operational NEBA will be undertaken throughout the response, for each operational period.

The operational NEBA will consider the risks and benefits of conducting and response activity. For example, if vessels are required for access to nearshore or onshore areas, anchoring locations will be selected to minimise disturbance to benthic habitats. Vessel cleanliness would be commensurate with the receiving environment. The operational NEBA will consider the risks and benefits of conducting other response techniques.

The operational NEBA process is also used to terminate a response. Using data from operational and scientific monitoring activities the response to a hydrocarbon spill will be terminated in accordance with the termination process outlined in the Joint Industry OSM Framework (APPEA, 2021). In effect the operational NEBA will determine whether there is net environmental benefit to continue response operations.

5.7.3 Consultation engagement process

Woodside will consult relevant persons/ organisations are engaged during the spill response in accordance with internal standards. This process requires that Woodside will:

- Undertake all required notifications (including government notifications) for relevant persons/ organisations in the region (identified in the First Strike Plan). This includes notification to mariners to communicate navigational hazards introduced through response equipment and personnel.
- In the event of a response, identify and engage with relevant persons/ organisations and continually assess and review.

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.7.4 Environmental performance based on need

Table 5-13: Environmental Performance – Incident Management System

Environmental Performance Outcome		To support the effectiveness of all other control measures and monitor/record the performance levels achieved.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
21	Operational SIMA	21.1	Confirm that the response techniques adopted at the time of acceptance remain appropriate to reduce the consequences of the spill within 24 hours.	1, 3A
		21.2	Record the evidence and justification for any deviation from the planned response activities.	
		21.3	Record the information and data from operational and scientific monitoring activities used to inform the SIMA.	
22	Stakeholder engagement	22.1	Prompt and record all notifications (including government notifications) for persons/ organisations in the region are made	
		22.2	In the event of a response, identification of relevant persons/ organisations will be re-assessed throughout the response period.	
		22.3	Undertake communications in accordance with: • Functional Support Team Guideline – Reputation • External Communication and Continuous Disclosure Procedure	
23	Personnel required to support any response	23.1	Action planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident are appropriate to the situation at the time.	1, 3B
		23.2	A duty roster of trained and competent people will be maintained to maintain minimum manning requirements are met all year round.	3C
		23.3	Immediately activate the CIMT with personnel filling one or more of the following roles: • CIMT Incident Commander • CIMT Deputy Incident Commander • Operations Section Chief • Planning Section Chief • Logistics Section Chief • Documentation Unit Leader • Safety Officer • Environment Unit Leader • Human Resources Officer • Public Information Officer • Situation Unit Leader • Finance Section Chief • Source Control Section Chief	1, 2, 3B, 3C, 4
		23.4	Collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist with the execution of that plan.	
		23.5	Security and emergency management (S&EM) advisors will be integrated into CIMT to monitor performance of all functional roles.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Environmental Performance Outcome		To support the effectiveness of all other control measures and monitor/record the performance levels achieved.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
		23.6	Continually communicate the status of the spill and support Woodside to determine the most appropriate response by delivering on the responsibilities of their role.	
		23.7	Follow the Hydrocarbon Spill Australia Regulatory Framework[1], Operational Plans, FSPs, support plans and the IAPs developed.	1, 2, 3A, 4
		23.8	Contribute to Woodside's response in accordance with the aims and objectives set by the Incident Commander.	1, 2, 3B, 3C, 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.8 Measurement criteria for all response techniques

Woodside measures compliance with environmental performance outcomes and standards through four primary mechanisms. The aforementioned performance tables identify which of these four mechanisms monitors the readiness and records the effectiveness and performance of the control measures adopted.

1. The Incident Management System

The Incident Management System (IMS) supports the implementation of the Crisis and Emergency Management Standard. The IMS provides a near real-time, single source of information for monitoring and recording an incident and measuring the performance of those control measures.

The Crisis and Emergency Management (CEM) Standard defines the management framework, including roles and responsibilities, to be applied to any size incident (including hydrocarbon spills). The organisational structure required to manage an incident is developed in a modular fashion and is based on the specific requirements of each incident. The structure can be scaled up or down. The IAP process formally documents and communicates the:

- Incident objectives
- Status of assets
- Operational period objectives
- Response techniques (defined during response planning)
- The effectiveness of response techniques.

The information captured in the IMS (including information from personal logs and assigned tasks/close outs) confirms the response techniques implemented remain appropriate to reduce the consequences of the spill. The system also records all information and data that can be used to support the site-based IMT, development and the execution of the IAP.

2. The CEM Competency Dashboard

The CEM competency dashboard records the number of trained and competent responders that are available across Woodside to participate in a response.

This number varies dependent on expiry of competency certificates, staff attrition, internal rotations, leave and other absences. As such the Dashboard is designed to identify the minimum manning requirements and to identify sufficient redundancy to cater for the variances listed above.

Figure 5-1 shows the minimum manning numbers for the different hydrocarbon spill response roles and the number of qualified persons against those roles.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

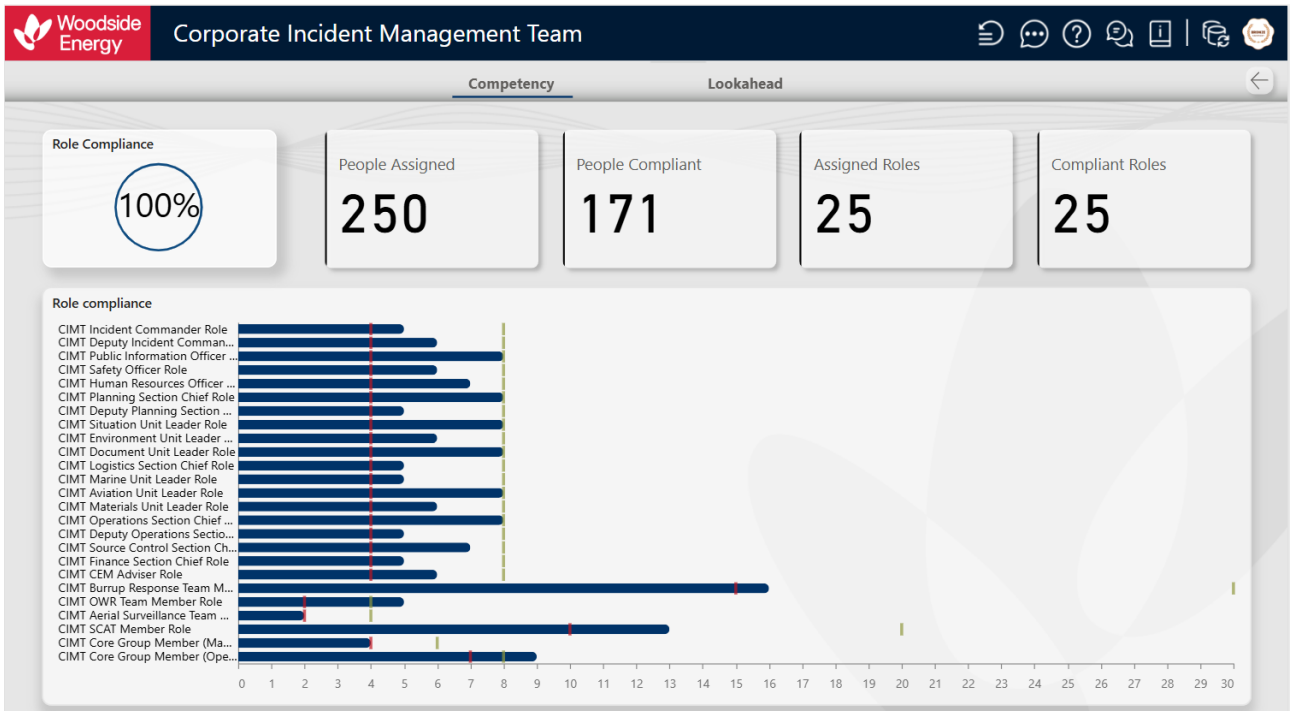

Figure 5-1: Example screenshot of the CEM dashboard

The Dashboard is one of Woodside's key means of monitoring its readiness to respond. It also demonstrates Woodside's ability to meet the requirements of the environmental performance standards that relate to filling certain response roles.

Figure 5-2 shows an example of the SCAT role and the training modules required to show competence.

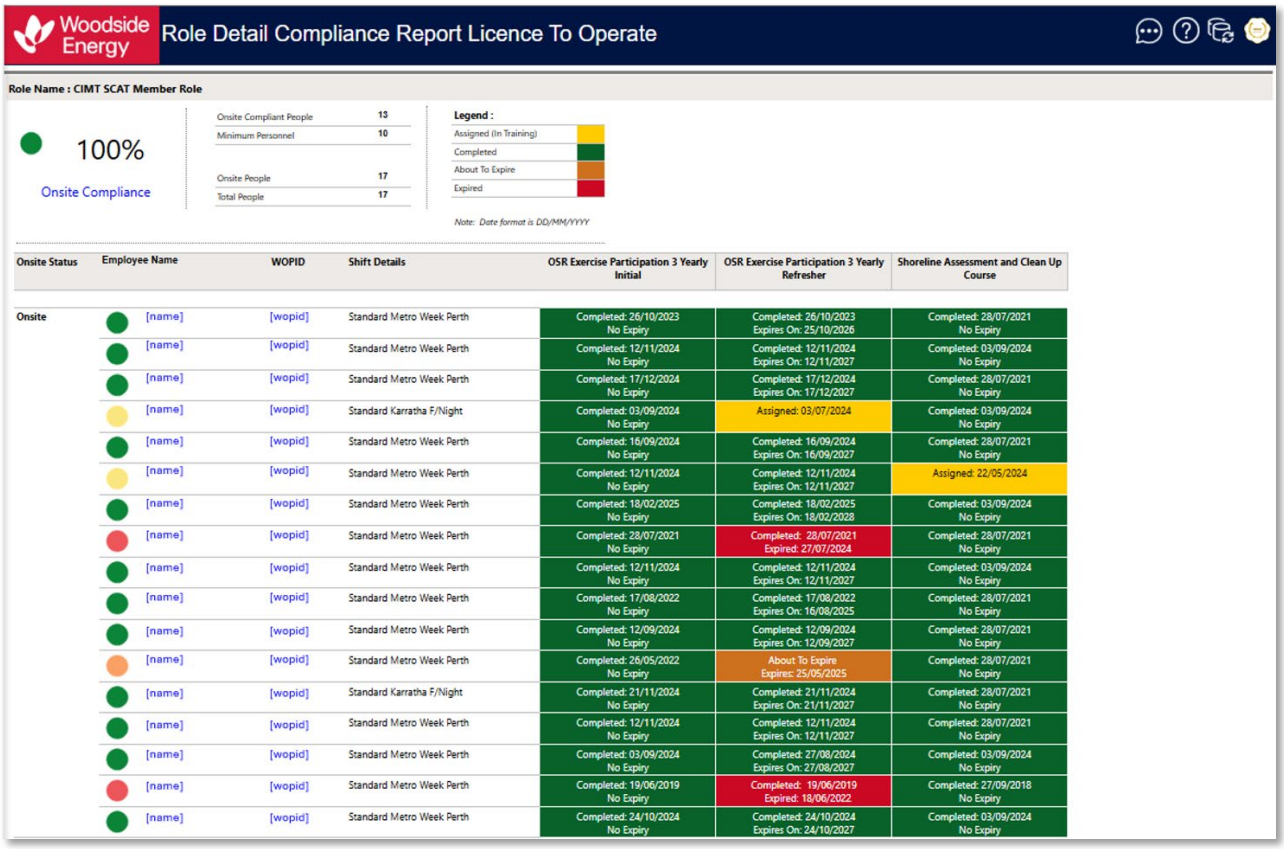

Figure 5-2: Example screenshot for the SCAT role

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Woodside also maintains a pool of trained responders which is composed of but not limited to personnel from the following organisations:

- Woodside internal
- Australian Marine Oil Spill Centre (AMOSC) core group
- AMOSC
- Oil Spill Response Limited (OSRL)
- Marine Spill Response Corporation (MSRC)
- Woodside contracted workforce

3. The Hydrocarbon Spill Preparedness Assurance Process

The Hydrocarbon Spill Response Team uses Woodside's assurance process to track compliance over three key control areas:

a. Plans – confirms all plans (including: Hydrocarbon Spill Australia Regulatory Framework[1], first strike plans, operational plans, support plans and tactical response plans) are current and in line with regulatory and internal requirements.

b. Competency (personnel and testing) – confirms the competency dashboard is up to date and there are the minimum numbers across CIMT, Crisis Management Team (CMT) and hydrocarbon spill response roles. The hydrocarbon spill training plan and exercise schedule, including testing of arrangements is also tracked. The Testing of Arrangements (ToA) register tracks the testing of all hydrocarbon spill response arrangements, key contracts and agreements in place with internal and external parties to ensure compliance.

c. Capability (equipment and contracts) – tracks and monitors capability that could be required in a hydrocarbon incident, including but not limited to: integrated fleet6 vessel schedule, dispersant availability, rig/vessels monitoring, equipment stockpiles, tracking buoy locations and the CIMT duty roster.

The assurance process records how each commitment listed in the performance tables above is managed for ongoing compliance monitoring. The level of compliance can be reviewed in real time and is reported on a monthly basis through the CEM Function.

4. The Hydrocarbon Spill Planning Standard, Hydrocarbon Spill Planning Work Instruction (Australia), Hydrocarbon Spill Capability and Competency Standard, and Hydrocarbon Spill Response Standard

The Hydrocarbon Spill Planning Standard sets out how to plan and prepare for a liquid hydrocarbon spill to the marine environment. (Note, this standard does not apply to scenarios relating to gas releases in the marine environment). This standard details the requirement for an OPEP to be developed, maintained, reviewed, and approved by appropriate regulators (where applicable).

The Hydrocarbon Spill Planning Work Instruction (Australia) details planning for hydrocarbon spill response preparedness including:

- Developing OPEPs.
- Defining how spill scenarios are developed on an activity specific basis
- Priority response receptor determination.
- ALARP determination.

The Hydrocarbon Spill Capability and Competency Standard details:

- Developing spill training requirements and ongoing maintenance of training and competency for personnel
- Developing requirements for spill exercising / testing of spill response arrangements

6 The Integrated fleet consists of vessels from multiple operators that have been contracted to Woodside to undertake a number of duties including hydrocarbon spill response.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

- Maintaining access to identified equipment, personnel and contracts.
- Ensuring compliance and assurance is undertaken in accordance with external and internal requirements.

The Hydrocarbon Spill Response Standard details requirements for appropriate hydrocarbon spill response standards including:

- safeguarding the safety and health of people (responders and communities)
- stopping the source of the spill as quickly as possible
- minimising the environmental and community impact

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6 ALARP EVALUATION

This Section should be read in conjunction with Section 5 which is the capability planned for this activity.

6.1 Monitor and evaluate – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.1 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.1.1 Monitor and evaluate – Control Measure Options Analysis

6.1.1.1 Alternative Control Measures

Alternative Control Measures considered Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Aerostat (or similar inflatable observation platform) for localised aerial surveillance.	Lead time to Aerostat surveillance is disproportionate to the environmental benefit. The system also provides a very limited field of visibility around the vessel it is deployed from.	Long lead time to access (>10 days). Each system would require an operator to interpret data and direct vessels accordingly. Requires multiple systems for shoreline use.	Purchase cost per system is approximately A$300,000.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No

6.1.1.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional personnel trained to use systems.	Current arrangement provides an environmental benefit in the availability of trained personnel facilitating access to Monitor and evaluate data used to inform all other response techniques. No improvement required.	Woodside considers no improvement can be made, all personnel in technical roles e.g. intelligence unit are trained and competent on the software systems. Personnel are trained and exercised regularly. Use of the software and systems forms part of regular work assignments and projects.	Cost for training in-house staff would be approximately A$25,000.	This option is not adopted as the current capability meets the need.	No
Additional satellite tracking buoys to enable greater area coverage.	Increased capability does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	Tracking buoy on location at manned facility and additional needs are met from Woodside-owned stocks in King Bay Supply Facility (KBSF) and Exmouth or can be provided by service provider.	Cost for an additional satellite tracking buoy would be A$200 per day or A$6,000 to purchase.	This option is not adopted as the current capability meets the need, but additional units are available if required.	No
Additional trained aerial observers.	Current capability meets need. Woodside has access to a pool of trained, competent observers at strategic locations to allow timely and sustainable response. Additional observers are available through current contracts with AMOSC and OSRL.	Aviation standards and guidelines confirm all aircraft crews are competent for their roles. Woodside maintains a pool of trained and competent aerial observers with various home base locations to be called upon at the time of an incident. Regular audits of oil spill response organisations maintain training and competency.	Cost for additional trained aerial observers would be A$2,000 per person per day.	This option is not adopted as the current capability meets the need, but additional observers are available via response contractors if required.	No

6.1.1.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster turnaround time from modelling contractor.	Improved control measure does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	External contractor on CIMT roster to be called as soon as required. However initial information needs to be gathered by CIMT team to request an accurate model. External contractor has person on call to respond from their own location.	Modelling service with a faster activation time would be achieved via membership of an alternative modelling service at an annual cost of A$50,000 for 24-hour access plus an initial A$5,000 per modelling run.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Night-time aerial surveillance.	The risk of undertaking the aerial observations at night is disproportionate to the limited environmental benefit. The images would be of low quality and as such the variable is not adopted.	Flights will only occur when deemed safe by the pilot. The risk of night operations is disproportionate to the benefit gained, as images from sensors (infrared, ultraviolet, etc). will be low quality. Flight time limitations will be adhered to.	No improvement can be made without risk to personnel health and safety and breaching Woodside's Golden Safety Rules.	This option is not adopted as the safety considerations outweigh any environmental benefit gained.	No

6.1.2 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.2 Source Control via Vessel SOPEP – ALARP Assessment

Alternative, additional and improved options have been assessed against the base capability described in Section 5.2 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.2.1 Source Control via Vessel SOPEP – Control Measure Options Analysis

6.2.1.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.2.1.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical additional control measures identified					

6.2.1.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.2.2 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.3 Shoreline Clean-up – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.3 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.3.1 Existing Capability – Shoreline Clean-up

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.3.2 Response planning: Browse to NWS GPGT Surveys – Shoreline Clean-up

Woodside has assessed existing capability against the WCCS and has identified that the range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the Petroleum Activity.

Modelling predicts shoreline contact at Scott Reef South (including Sandy Islet) within 0.4 days (10 hours). This is the only shoreline receptor predicted to be contacted by hydrocarbons. Maximum shoreline accumulation at Scott Reef South (including Sandy Islet) is predicted to be 80 m^3 in the worst replicate simulation (modelling predicted an average of 2 m^3 over all replicate simulations). Woodside is satisfied that the current capability is managing risks and impacts to ALARP. Relevant Tactical Response Plans available for identified RPAs are included in ANNEX D: Tactical Response Plans.

Sandy Islet is the only emergent feature at Scott Reef South, and is a sandy cay, ~640 m long and 100 m wide at its widest point. Given the small size and risk of ecological impacts from clean-up activities to Sandy Islet and surrounding intertidal reef, the islet could only accommodate one shoreline clean-up team, which would be subject to an operational NEBA at the time of the spill. For the surrounding intertidal reef system, it is likely that natural flushing and re-floating of the oil would occur with the tide. The applicability of shoreline clean-up techniques for any oil found to persistently adhere to the intertidal reef should be assessed during SCAT assessments and undergo operational NEBA.

A response planning need scenario that provides worst-case capability requirements for planning purposes is outlined below.

Woodside has identified several options which could be mobilised to achieve defined response objectives. Evaluation considers the benefit in terms of the time to respond and the scale of response made possible by each option. The evaluation of possible control measures is summarised in Section 6.3.3.

Table 6-1: Response Planning – Shoreline Clean-up

	Shoreline Clean-up (Phase 2)	Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3	Month 4
	Oil on shoreline (from deterministic modelling) m^3													
	Shoreline accumulation (above 100 g/m^2) – m^3	80	80	0	0	0	0	0	0	0	0	0	0	0
	Oil remaining following response operations – m^3	0	80	26	13	7	3	2	0	0	0	0	0	0
A	**Capability Required (number of operations)**													
A1	Shoreline Clean-up (SCU) operations required (lower)	9	8	3	1	1	0	0	0	0	0	0	0	0
A2	SCU operations required (upper)	0	11	4	2	1	0	0	0	0	0	0	0	0
B	**Capability Available (number of operations)**													
B1	SCU operations available – Stage 2 – Manual (lower)	0	15	15	20	20	20	20	105	105	105	560	560	560
B2	SCU operations available – Stage 2 – Manual (upper)	0	15	15	20	20	20	20	140	140	140	560	560	560
C	**Capability Gap**													
C1	SCU operations gap (lower)	9	-7	-12	-19	-19	-20	-20	-105	-105	-105	-560	-560	-560
C2	SCU operations gap (upper)	0	-4	-11	-18	-19	-20	-20	-140	-140	-140	-560	-560	-560

A1 and A2 – the number of Shoreline Clean-up operations required based on the hydrocarbon volumes ashore above 100 g/m^2

B1 and B2 – the upper and lower number of shoreline clean-up operations available (based on response planning assumptions in Section 5.3),

C1 and C2 – the gap between the upper and lower number of shoreline clean-up operations required in A1 and A2 compared to the operations available in B1 and B2. Green numbers denote where capability exceeds the need

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.3.3 Shoreline Clean-up – Control measure options analysis

6.3.3.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.3.3.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional trained personnel available	The level of training and competency of the response personnel ensures the shoreline clean-up operation is delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside *People & Global Capability Surge Labour Requirement Plan*. Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety brief prior to commencing operations.	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	No
Additional trained personnel deployed	Additional personnel conducting clean-up activities may be able to complete the clean-up in a shorter timeframe, but large numbers of response personnel on Scott Reef South/Sandy Islet is likely to cause ecological impacts to this sensitive sandy cay. Managing a smaller, targeted response using less intrusive clean-up techniques is expected to achieve an environmental benefit through ensuring the shoreline clean-up response is suitable and scalable for the shoreline substrate and sensitivity type. This will ensure there is no increased impact from the shoreline clean-up through the presence of unnecessary personnel and equipment.	Personnel on site will include members with the appropriate specialties to ensure an efficient shoreline clean-up. Additional personnel are available through existing contracts with oil spill response organisations, labour hire organisations and environmental panel contractors	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	No

6.3.3.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response/ mobilisation time	Modelling predicts floating or shoreline accumulation at exposure value at day 0.4 (10 hours) at Scott Reef (CS-01) thus faster response times are not practicable.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial clean-up response will be available for mobilisation within 24–48 hours of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days.	The cost of establishing a local stockpile of new shoreline clean-up equipment closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as additional shoreline clean-up capability is not considered practicable in the time frames prior to contact. Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stage of the response. Given the rapid natural weathering rate of MGO, faster mobilisation is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No

6.3.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.4 Oiled Wildlife Response – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.4 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.4.1 Existing Capability – Wildlife Response

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.4.2 Oiled Wildlife Response - Control Measure Options Analysis

6.4.2.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Direct contracts with service providers	This option duplicates the capability accessed through AMOSC and OSRL and would compete for the same resources. Does not provide a significant increase in environmental benefit.	These delivery options provide increased effectiveness through more direct communication and control of specialists. However, no significant net benefit is anticipated.	Duplication of capability – already subscribed to through contracts with AMOSC and OSRL	This option is not adopted as the existing capability meets the need.	No

6.4.2.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional wildlife treatment systems	The selected delivery options provide access to call-off contracts with selected specialist providers. The agreements ensure that these resources can be mobilised to meet the required response objectives, commensurate with the progressive nature of environmental impact and the time available to monitor hydrocarbon plume trajectories. Provides response equipment and personnel by Day 3. The additional cost in having a dedicated oiled wildlife response (equipment and personnel) in place is disproportionate to environmental benefit. These selected delivery options provide capacity to carry out an oiled wildlife response if contact is predicted; and to scale up the response if required to treat widespread contamination. Current capability meets the needs required and there is no additional environmental benefit in adopting the improvements.	Although hydrocarbon contact above wildlife response exposure value concentrations (≥10 g/m^2) with offshore waters is expected from day one (CS-01), given the low likelihood of such an event occurring and that the current capability meets the need, the cost of implementing measures to reduce the mobilisation time is considered disproportionate to the benefit. Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas. Oiled wildlife response capacity would be addressed for open Commonwealth waters through the AMOSC arrangements, as informed by monitor and evaluate. The cost and organisational complexity of this approach is moderate, and the overall delivery effectiveness is high.	Additional wildlife response resources could total A$1,700 per operational site per day.	This option is not adopted as the existing capability meets the need.	No
Additional trained wildlife responders	Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas. The potential environmental benefit of training additional personnel is expected to be low.	Current numbers meet the needs required and additional personnel are available through existing contracts with oil spill response organisations and environmental panel contractors. Additional equipment and facilities would be required to support ongoing response, depending on the scale of the event and the impact to wildlife and maybe sourced via existing contracts with OSROs. Materials for holding facilities, portable pools, enclosures and rehabilitation areas would be sourced as required.	Additional wildlife response personnel cost A$2,000 per person per day	This option is not adopted as the existing capability meets the need.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.4.2.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster mobilisation time for wildlife response	Response time is limited by specialist personnel mobilisation time. Current timing is sufficient for expected first shoreline contact. This control measure provides increased effectiveness through faster mobilisation of specialists. However, no significant net environmental benefit is expected due to shoreline stranding times.	Pre-positioning vessels or equipment would reduce mobilisation time for oiled wildlife response activities. However, given the effectiveness of an oiled wildlife response is expected to be low, an earlier response would provide a marginal increase in environmental benefit.	Wildlife response packages to preposition at vulnerable sites identified through the deterministic modelling cost A$700 per package per day. The cost of having dedicated equipment and personnel available to respond faster is considered disproportionate to the environmental benefit.	This option is not adopted as the existing capability meets the need.	No

6.4.3 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.5 Waste Management – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.5 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.5.1 Existing Capability – Waste Management

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.5.2 Waste Management - Control Measure Options Analysis

6.5.2.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.5.2.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Increased waste storage capability	The procurement of waste storage equipment options on the day of the event will allow immediate response and storage of collected waste. The environmental benefit of immediate waste storage is to reduce ecological consequence by safely securing waste, allowing continuous response operations to occur.	Access to Veolia's storage options provides the resources required to store and transport sufficient waste to meet the need. Access to waste contractors existing facilities enables waste to be stockpiled and gradually processed within the regional waste handling facilities. Additional temporary storage equipment is available through existing contract and arrangements with OSRL. Existing arrangements meet identified need for the Petroleum Activity.	Cost for increased waste disposal capability would be ~A$1,300 per m^3. Cost for increased onshore temporary waste storage capability would be ~A$40 per unit per day.	This option is not adopted as the existing capability meets the need.	No

6.5.2.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response time	The access to Veolia waste storage options provides the resources to store and transport waste, permitting the wastes to be stockpiled and gradually processed within the regional waste handling facilities. Bulk transport to Veolia's licensed waste management facilities would be undertaken via controlled-waste-licensed vehicles and in accordance with Environmental Protection (Controlled Waste) Regulations 2004. The environmental benefit from successful waste storage will reduce pressure on the treatment and disposal facilities reducing ecological consequences by safely securing waste. In addition, waste storage and transport will allow continuous response operations to occur. This delivery option would increase known available storage, eliminating the risk of additional resources not being available at the time of the event. However, the environmental benefit of Woodside procuring additional waste storage is considered minor as the risk of additional storage not being available at the time of the event is considered low and existing arrangements provide adequate storage to support the response.	Woodside already maintains an equipment stockpile in Exmouth to enable shorter response times to incidents. This stockpile includes temporary waste storage equipment. Woodside has access to stockpiles of waste storage and equipment in Dampier and Exmouth through existing contracts and arrangements.	The incremental benefit of having a dedicated local Woodside owned stockpile of waste equipment and transport is considered minor and cost is considered disproportionate to the benefit gained given predicted shoreline contact times.	This option is not adopted as the existing capability meets the need.	No

All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.5.3 Selected control measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.6 Operational and Scientific Monitoring – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.6 with those that have been selected for implementation which are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.6.1 Existing Capability – Operational and Scientific Monitoring

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/ pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.6.2 Operational and Scientific Monitoring – Control Measure Options Analysis

6.6.2.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Dedicated contracted OSM vessel (exclusive to Woodside)	Would provide marginally faster mobilisation time of first-strike monitoring resources. However, the timescale difference would be limited when compared to the availability of in-field support vessels which are equipped with water quality sampling equipment, meaning it would result in very minor to no environmental benefit.	Chartering and equipping additional vessels on standby for operational and scientific monitoring has been considered. The option is reasonably practicable but the sacrifice (charter costs and organisational complexity) is significant, particularly when existing contracted support vessels can be equipped with water quality sampling equipment. Additionally, vessels are not the limiting factor in deployment times, as the majority of operational and scientific monitoring components require trained specialists, who can take ≥72 hours to mobilise.	The cost and organisational complexity of contracting a dedicated response vessel is considered disproportionate to the marginal environmental benefit by adopting these delivery options.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	No

6.6.2.2 Additional control measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Pre-position a team of trained scientific monitoring personnel on standby in Dampier	Pre-positioning a team of trained scientific monitoring personnel closer to the spill location would result in quicker mobilisation times for one or two priority OMPs or SMPs to be implemented.	A trained team of scientific monitoring personnel positioned in Dampier could result in a more rapid deployment of initial monitoring. However, this option is reliant on suitable vessels being readily available in Dampier and not requiring relocation from nearby ports or adjacent offshore locations.	The costs of having a small team of trained scientific monitoring personnel available on standby in Dampier would be in excess of $3–4M / annum and would be an associated cost to the activity whether there was a spill or not.	The cost of maintaining a team of trained scientific monitoring personnel on standby in Dampier is considered disproportionate, as multiple teams of trained personnel are required to implement multiple OMPs and SMPs. It is considered more cost effective and feasible to pre-position first strike sampling kits on support vessels (see below).	No
Contract additional OSM Service Providers to increase availability of monitoring personnel in the first 2 weeks of the spill	The availability of additional monitoring personnel could theoretically increase the number of receptors and locations able to be monitored, however, the ability to deploy personnel would be subject to a range of feasibility considerations.	This option has been considered and evaluated; however, it has been discounted on the basis that deploying a significantly larger number of monitoring teams concurrently with response operations would introduce additional safety, environmental, and operational risks. The current resource assessment within Section C.4 indicates that up to 16 monitoring teams may be required during the initial 2 weeks of the response. Expanding this effort further by engaging additional contracted monitoring teams would likely result in increased simultaneous operations (SIMOPs), elevating the potential for vessel interactions, collision risks, anchoring impacts, and waste discharges, thereby increasing the overall risk profile. To ensure risk remains ALARP, a staged and scalable approach to resourcing has been adopted. Should additional monitoring capacity be required from week 3 onwards, this will be identified early	Cost to contract an additional OSM Service Provider.	The option to contract an additional OSM Service Provider to increase the number of contracted monitoring teams during the initial stages of the spill response has been assessed and found not to be reasonably practicable due to the elevated safety and environmental risks associated with SIMOPs, including vessel collisions, anchoring impacts, and waste discharges. These risks outweigh the marginal benefit of increased early-stage monitoring coverage, particularly given the scale of the existing response and monitoring deployment already planned.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

		through ongoing review of monitor and evaluate activities and existing monitoring efforts. Woodside will activate additional resourcing via its existing contract with the OSM Services Provider, thereby ensuring a streamlined and controlled expansion of effort. By this stage of the response, operational response activities are expected to have stabilised, reducing the likelihood and severity of SIMOPs-related risks. In addition, efficiencies may be gained by reallocating existing monitoring teams to other priority receptors where monitoring is still required, particularly in cases where termination criteria have been met at initial locations. This dynamic resourcing approach ensures that additional personnel are only deployed when necessary, thereby supporting both environmental and safety performance outcomes and maintaining ALARP principles throughout the monitoring program.			
Purchase initial water quality / hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection	The availability of initial water quality / hydrocarbon sampling kits on nearby support vessels (and an accompanying technical procedure for sample collection) will provide an opportunity for more rapid initial measurements of hydrocarbon properties and concentrations. This information will provide important initial situational awareness information that will aid decision making in both monitoring and response efforts.	This control measure will improve the availability and timeframe for initial water quality sampling.	Implementing this additional control measure will involve time and effort to source and supply initial sampling kits to the selected supply vessels. There will also be employee time involved in developing and conducting training to vessel crews on the technical procedure for sample collection.	Adoption of this control measure will provide an additional and quicker opportunity for initial water quality sampling, resulting in improved situational awareness for decision making in monitoring and response teams.	Yes
Modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)	Initial aerial surveillance provides important information for decision making in response operations, but can also provide important initial environmental monitoring data. Amending the Woodside Aerial Surveillance Observer Log to include the ability to report on location, presence and type of fauna could assist in a more rapid, effective deployment of specialised OMP teams for Marine Fauna Assessment and Oiled Wildlife Response.	This control measure is considered reasonably practicable to implement.	Cost to modify the Aerial Surveillance Observer Log is minimal and is associated with time and effort of existing employees.	Adoption of this control measure is considered to be beneficial as it could assist in more effective and efficient deployment of fauna monitoring and response efforts.	Yes
Conduct periodical review of existing baseline data sources across receptors predicted to be contacted within 7 days at the low exposure values and a probability ≥10%	This ensures that receptors with deficient baseline data are identified. This a consideration for first-strike monitoring prioritisation and the finalisation of each SMP design	This control measure is considered reasonably practicable to implement.	Cost of contract with Service Provider.	Understanding the presence or absence, suitability and quality of baseline data for receptors predicted to be contacted within 7 days, at a probability ≥ 10%, is an important preparatory measure. Understanding which receptors have insufficient baseline data will help quickly guide monitoring prioritisation and the finalisation of each SMP design and whether there is a need to include alternative designs.	Yes

6.6.2.3 Improved Control Measures considered

Improved Control Measures considered Improved control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Adoption of the OSRL OSM Supplementary Service Agreement for OSM capability provision	A Joint Industry capability provision has considerable benefits, including an improvement to industry OSM standards; improved reliability in accessing specialist personnel; efficiencies and capability growth associated with shared testing and exercising; and greater depth in Monitoring Service Provider (MSP) capability, with a centralised contract coordinating multiple consultancies and MSPs.	This control measure has already been developed by Industry and is considered reasonably practicable to implement.	Cost of annual subscription to OSRL OSM Supplementary Service Agreement	Adopting this control measure involves additional costs, but the benefits of a Joint Industry OSM capability provision outweighs the costs and therefore this additional measure has been accepted.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas	Understanding vessel specification requirements for OSM at priority locations will result in quicker mobilisation times, and more effective monitoring, as correctly equipped vessels will be made available at the commencement the monitoring effort.	This control measure is considered reasonably practicable to implement.	Cost to determine vessel specifications is minimal and is associated with time and effort of existing employees.	This control measure would result in the correct vessels being mobilised for monitoring personnel and result in quicker implementation of monitoring.	Yes

6.6.3 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity:

- Alternative: none selected
- Additional:
  - purchase water quality / hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection
  - modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)
  - conduct periodical review of existing baseline data sources for receptors predicted to be contacted within 7 days, at the low exposure values and a probability ³ 10%.
- Improved:
  - adopt the OSRL OSM Supplementary Service Agreement for OSM capability provision
  - determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.6.4 ALARP and Acceptability Summary

ALARP and Acceptability Summary		
Operational and Scientific Monitoring		
ALARP Summary	X	Known, reasonably practicable control measures have been adopted
	X	No additional, alternative and improved control measures would provide further benefit
	X	No reasonably practical additional, alternative, and/or improved control measure exists
	The resulting operational and scientific monitoring capability has been assessed against the credible spill scenarios. The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts. Known, reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be Moderate and the overall delivery effectiveness considered Medium. The operational and scientific monitoring's main objectives can be met, with the adoption of three additional and one improved control measures to provide further benefit.	
Acceptability Summary	The control measures selected for implementation manage the potential impacts and risks to ALARP. In the event of a hydrocarbon spill for the Petroleum Activity, the control measures selected, meet or exceed the requirements of Woodside Management System and industry best-practice. Operational and scientific monitoring control and activities are compliant with relevant environmental legislation and regulations, including the EPBC Act. Throughout the Petroleum Activity, relevant Australian standards and codes of practice will be followed to evaluate the impacts from a loss of containment event. Stakeholder consultation undertaken for the Petroleum Activity did not receive feedback regarding concerns for Scientific Monitoring activities in response to a hydrocarbon spill. The level of impact and risk to the environment has been considered with regards to the principles of Ecologically Sustainable Development; and risks and impacts from a range of identified scenarios were assessed in detail. The control measures described consider the conservation of biological and ecological diversity, through both the selection of control measures and the management of their performance. The control measures have been developed to account for credible case scenarios, and uncertainty has not been used as a reason for postponing control measures.	
On the basis from the ALARP and acceptability summary as presented above and in Section [xx] of the EP Woodside considers the adopted controls discussed manage the impacts and risks associated with implementing operational and scientific monitoring activities to a level that is ALARP and acceptable.		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 7 ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

The implementation of response techniques may modify the impacts and risks identified in the EP and response activities can introduce additional impacts and risks from response operations themselves. Therefore, it is necessary to complete an assessment to ensure these impacts and risks have been considered and specific measures are put in place to continually review and manage these further impacts and risks to ALARP and Acceptable levels. A simplified assessment process has been used to complete this task which covers the identification, analysis, evaluation and treatment of impacts and risks introduced by responding to the event.

7.1 Identification of impacts and risks from implementing response techniques

Each of the control measures can modify the impacts and risks identified in the EP. These impacts and risks have been previously assessed within the scope of the EP. Refer to the EP for details regarding how these risks are being managed. They are not discussed further in this document.

- Atmospheric emissions
- Routine and non-routine discharges
- Physical presence, proximity to other vessels (shipping and fisheries)
- Routine acoustic emissions vessels
- Lighting for night work/navigational safety
- Invasive marine species
- Collision with marine fauna
- Disturbance to Seabed

Additional impacts and risks associated with the control measures not included within the scope of the EP include

- Vessel operations and anchoring
- Presence of personnel on the shoreline
- Human presence (manual cleaning)
- Vegetation cutting
- Additional stress or injury caused to wildlife
- Secondary contamination from the management of waste

7.2 Analysis of impacts and risks from implementing response techniques

The table below compares the adopted control measures for this activity against the environmental values that can be affected when they are implemented.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

7.3 Evaluation of impacts and risks from implementing response techniques

Vessel operations and anchoring

During the implementation of response techniques, where water depths allow, it is possible that response vessels will be required to anchor (e.g. during shoreline surveys). The use of vessel anchoring will be minimal and likely to occur when the impacted shoreline is inaccessible via road. Anchoring in the nearshore environment of sensitive receptor locations will have the potential to impact coral reef, seagrass beds and other benthic communities in these areas. Recovery of benthic communities from anchor damage depends on the size of anchor and frequency of anchoring. Impacts would be highly localised (restricted to the footprint of the vessel anchor and chain) and temporary, with full recovery expected.

Presence of personnel on the shoreline

Presence of personnel on the shoreline during shoreline operations could potentially result in disturbance to wildlife and habitats. During the implementation of response techniques, it is possible that personnel may have minimal, localised impacts on habitats, wildlife and coastlines. The impacts associated with human presence on shorelines during shoreline surveys may include:

- Damage to vegetation/habitat to gain access to areas of shoreline oiling
- Damage or disturbance to wildlife during shoreline surveys
- Removal of surface layers of intertidal sediments (potential habitat depletion)
- Excessive removal of substrate causing erosion and instability of localised areas of the shoreline.

Human presence

Human presence for manual clean-up operations may lead to the compaction of sediments and damage to the existing environment especially in sensitive locations such as turtle nesting beaches. However, any impacts are expected to be localised with full recovery expected.

Waste generation

Implementing the selected response techniques will result in the generation of the following waste streams that will require management and disposal:

- Liquids (recovered oil/water mixture), recovered from shoreline clean-up operations
- Semi-solids/solids (oily solids), collected during shoreline clean-up operations
- Debris (e.g. seaweed, sand, woods, plastics), collected during shoreline clean-up operations and oiled wildlife response.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

If not managed and disposed of correctly, wastes generated during the response have the potential for secondary contamination similar to that described above, impacts to wildlife through contact with or ingestion of waste materials and contamination risks if not disposed of correctly onshore.

Additional stress or injury caused to wildlife

Additional stress or injury to wildlife could be caused through the following phases of a response:

- Capturing wildlife
- Transporting wildlife
- Stabilisation of wildlife
- Cleaning and rinsing of oiled wildlife
- Rehabilitation (e.g. diet, cage size, housing density)
- Release of treated wildlife

Inefficient capture techniques have the potential to cause undue stress, exhaustion or injury to wildlife, additionally pre-emptive capture could cause undue stress and impacts to wildlife when there are uncertainties in the forecast trajectory of the spill. During the transportation and stabilisation phases there is the potential for additional thermoregulation stress on captured wildlife. Additionally, during the cleaning process, it is important personnel undertaking the tasks are familiar with the relevant techniques to ensure that further injury and the removal of water proofing feathers are managed and mitigated. Finally, during the release phase, it is important that wildlife is not released back into a contaminated environment.

7.4 Treatment of impacts and risks from implementing response techniques

In respect of the impacts and risks assessed the following treatment measures have been adopted. It must be recognised that this environmental assessment is seeking to identify how to maintain the level of impact and risks at levels that are ALARP and of an acceptable level rather than exploring further impact and risk reduction. It is for this reason that the treatment measures identified in this assessment will be captured in Operational Plans, Tactical Response Plans, and/or First Strike Plans.

Vessel operations and access in the nearshore environment

- If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified (Performance Standard [PS] 8.1, PS 20.3).
- Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines (PS 8.2, PS 20.4).

Presence of personnel on the shoreline

- Oversight by trained personnel who are aware of the risks (PS 8.6).
- Trained unit leader's brief personnel of the risks prior to operations (PS 8.7).

Human Presence

- Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations (PS 8.3, PS 20.5)
- Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves. (PS 8.4, PS 20.6)

Waste generation

- All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates. (PS 6.4)
- Removal of vegetation will be limited to moderately or heavily oiled vegetation (PS 8.5)
- Teams will segregate liquid and solid wastes at the earliest opportunity (PS 14.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Additional stress or injury caused to wildlife

- Oiled wildlife operations (including hazing) would be implemented with advice from the DBCA Oiled Wildlife Advisor and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan (PS 12.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

8 ALARP CONCLUSION

An analysis of alternative, additional and improved control measures has been undertaken to determine their reasonableness and practicability. The tables in Section 6 document the considerations made in this evaluation. Where the costs of an alternative, additional, or improved control measure have been determined to be clearly disproportionate to the environmental benefit gained from its adoption it has been rejected. Where this is not considered to be the case the control measure has been adopted.

The risks from a hydrocarbon spill have been reduced to ALARP because:

- Woodside has a significant hydrocarbon spill response capability to respond to the WCCS through the control measures identified.
- New and modified impacts and risks associated with implementing response techniques have been considered and will not increase the risks associated with the activity.
- A consideration of alternative, additional, and improved control measures identified any other control measures that delivered proportionate environmental benefit compared to the cost of adoption for this activity ensuring that:
  - Known, reasonably practicable control measures have been adopted.
  - No additional, reasonably practicable alternative and/or improved control measures would provide further environmental benefit.
  - No reasonably practical additional, alternative, and/or improved control measure exists.
- A structured process for considering alternative, additional, and improved control measures was completed for each control measure.
- The evaluation was undertaken based on the outputs of the WCCS so that the capability in place is sufficient for all other scenario from this activity.
- The likelihood of the WCCS spill has been ignored in evaluating what was reasonably practicable.

9 ACCEPTABILITY CONCLUSION

Following the ALARP evaluation process, Woodside deems the hydrocarbon spill risks and impacts have been reduced to an acceptable level by meeting all of the following criteria:

- Techniques are consistent with Woodside's processes and relevant internal requirements including policies, culture, processes, standards, structures and systems.
- Levels of risk/ impact are deemed acceptable by relevant persons/ organisations are aligned with the uniqueness of, and/or the level of protection assigned to the environment, its sensitivity to pressures introduced by the activity, and the proximity of activities to sensitive receptors, and have been aligned with Part 3 of the EPBC Act.
- Selected control measures meet requirements of legislation and conventions to which Australia is a signatory (e.g. MARPOL, the World Heritage Convention, the Ramsar Convention, and the Biodiversity Convention etc.). In addition to these, other non-legislative requirements met include:
  - Australian IUCN reserve management principles for Commonwealth marine protected areas and bioregional marine plans.
  - National Water Quality Management Strategy and supporting guidelines for marine water quality.
  - Conditions of approval set under other legislation.
  - National and international requirements for managing pollution from ships.
  - National biosecurity requirements.
- Industry standards, best practices and widely adopted standards and other published materials have been used and referenced when defining acceptable levels. Where these are inconsistent with mandatory/ legislative regulations, explanation has been provided for the proposed deviation. Any deviation produces the same or a better level of environmental performance (or outcome).

11 GLOSSARY AND ABBREVIATIONS

Term	Description / Definition
~	Approximately
<, ≤	Less than, less than or equal to
>, ≥	Greater then, greater than or equal to
°C	Degrees Celsius
AEP	Australian Energy Producers (formerly Australian Petroleum Production and Exploration Association [APPEA]; from 13 September 2023)
ALARP	As low as reasonably practicable; Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
AMOP	Arctic and Marine Oil Spill Program
AMOSC	Australian Marine Oil Spill Centre
AMSA	Australian Maritime Safety Authority
APPEA	Australian Petroleum Production & Exploration Association (now Australian Energy Producers (AEP); from 13 September 2023)
Availability	The availability of a control measure is the percentage of time that it is capable of performing its function (operating time plus standby time) divided by the total period (whether in service or not). In other words, it is the probability that the control has not failed or is undergoing a maintenance or repair function when it needs to be used.
BAOAC	Bonn Agreement Oil Appearance Code
BC Act	Western Australian Biodiversity Conservation Act 2016
BIA	Biologically Important Area
BIP	Bridging Implementation Plan
BP	Boiling point
CEM	Crisis and Emergency Management
CERCLA	United States Comprehensive Environmental Response, Compensation, and Liability Act
CIMT	Corporate Incident Management Team (Level 2 incidents)
CMT	Crisis Management Team (Level 3 incidents)
Control	The means by which risk from events is eliminated or minimised.
Control effectiveness	A measure of how well the control measures perform their required function.
Control measure (risk control measure)	The features that eliminate, prevent, reduce or mitigate the risk to environment associated with Petroleum Activity.
COP	Common Operating Picture
Credible spill scenario	A spill considered by Woodside as representative of maximum volume and characteristics of a spill that could occur as part of the Petroleum Activity.
CS	Credible scenario
cSt	Centistokes
DBCA	Western Australia Department of Biodiversity, Conservation and Attractions
DTMI	Western Australia Department of Transport and Major Infrastructure
DWH	Deepwater Horizon

Term	Description / Definition
EMBA	Environment that May Be Affected. The summary of quantitative modelling where the marine environment could be exposed to hydrocarbons levels exceeding hydrocarbon exposure value concentrations.
EMSA	European Maritime Safety Agency
Environment Regulations	Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023
EP	Environment Plan
EPBC Act	Commonwealth Environment Protection and Biodiversity Conservation Act 1999
Exposure value	Hydrocarbon concentrations applied to the risk assessment to evaluate hydrocarbon spills
FSP	First Strike Plan
ft	Feet (non-metric distance measurement)
GPGT	Geophysical and geotechnical
HSE	Health, safety and environment
HSP	Hydrocarbon Spill Preparedness
HVLP	High volume low pressure
IAP	Incident Action Plan
IC	Incident Commander
IMO	International Maritime Organization
IMS	Incident Management System
IMT	Incident Management Team (Level 1 incidents)
Incident	An event where a release of energy resulted in or had (with) the potential to cause injury, ill health, damage to the environment, damage to equipment or assets or company reputation.
IPIECA	International Petroleum Industry Environment Conservation Association
ITOPF	International Tanker Owners Pollution Federation
IUCN	International Union for Conservation of Nature
KBSF	King Bay Supply Facility
KEF	Key Ecological Feature
KGP	Karratha Gas Plant
km	Kilometre
m	Metre
MARPOL	The International Convention for the Prevention of Pollution From Ships, 1973 as modified by the Protocol of 1978. Also known as MARPOL 73/78.
MGO	Marine Gas Oil
MEPC	Marine Environment Protection Committee (part of the IMO)
MGO	Marine Gas Oil
mm	Millimetre
MSA	Master Services Agreement
MSP	Monitoring Service Provider
MSRC	Marine Spill Response Corporation
NEBA	Net Environmental Benefit Analysis
NOAA	National Oceanic and Atmospheric Administration

Term	Description / Definition
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority (Australia)
NR	Nature Reserve
NRDA	Natural Resource Damage Assessment
OILMAP	Oil Spill Model and Response System
OM	Operational Monitoring
OMP	Operational Monitoring Plan
OPEP	Oil Pollution Emergency Plan
OSCA	Oil Spill Control Agent
OSM	Operational and Scientific Monitoring
OSPRMA	Oil Spill Preparedness and Response Mitigation Assessment
OSRL	Oil Spill Response Limited
OSTM	Oil Spill Trajectory Modelling
OWR	Oiled Wildlife Response
OWRP	Oiled Wildlife Response Plan
Performance outcome	A statement of the overall goal or outcome to be achieved by a control measure
Performance standard	The parameters against which [risk] controls are assessed to ensure they reduce risk to ALARP. A statement of the key requirements (indicators) that the control measure has to achieve in order to perform as intended in relation to its functionality, availability, reliability, survivability and dependencies.
PPA	Priority Protection Area
ppb	Parts per billion
Preparedness	Measures taken before an incident in order to improve the effectiveness of a response
PS	Performance Standard
Reasonably practicable	... a computation ... made by the owner, in which the quantum of risk is placed on one scale and the sacrifice involved in the measures necessary for averting the risk (whether in money, time or trouble) [showing whether or not] that there is a gross disproportion between them ... made by the owner at a point of time anterior to the accident. (Judgement: Edwards v National Coal Board [1949])
Receptor areas	Geographically referenced areas such as bays, islands, coastlines and/or protected area (World Heritage Area [WHA], Commonwealth or State marine reserve or park) containing one or more receptor type.
Receptors at risk	Physical, biological and social resources identified as at risk from hydrocarbon contact using oil spill modelling predictions.
Regulator	NOPSEMA are the Environment Regulator under the Environment Regulations.
Reliability	The probability that at any point in time a control measure will operate correctly for a further specified length of time.
Response technique	The key priorities and objectives to be achieved by the response plan Measures taken in response to an event to reduce or prevent adverse consequences.
RPA	Response Protection Area
S&EM	Security and Emergency Management
SCAT	Shoreline Clean-up Assessment Techniques
SCU	Shoreline clean-up

ANNEX A: NET ENVIRONMENTAL BENEFIT ANALYSIS DETAILED OUTCOMES

A NEBA has been conducted to assess the net environmental benefit of different response techniques to selected receptors in the event of an MGO spill from the Petroleum Activity for CS-01. The complete list of potential receptor locations within the EMBA for the Petroleum Activity is included in Section 6.9 of the EP.

The locations used for the NEBA were limited to the identified RPAs of the Petroleum Activity identified from modelling (see Section 3 for outline of selection). These include receptors which have potential for the following:

- Surface contact (>50 g/m^2) – no contact predicted at any RPA at any time
- Surface contact (>10 g/m^2 for potential oiled wildlife response)
- Shoreline accumulation (>100 g/m^2)

The detailed NEBA assessment outcomes are shown below. The Petroleum Activity preoperational NEBAs contains the full assessments.

Table A-1: NEBA assessment technique recommendations for MGO vessel collision (CS-01)

Receptor	Monitor and evaluate	Containment and recovery	Dispersant application: sub-sea	Dispersant application: >20 m water depth and >10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Source control (via vessel SOPEP)
Scott Reef North*	Yes	No	N/A	No	N/A	N/A	N/A	N/A	Yes	No	No	Yes
Scott Reef South	Yes	No	N/A	No	No	Yes	No	No	Yes	No	No	Yes
Sandy Islet	Yes	No	N/A	No	No	Yes	No	No	Yes	No	No	Yes
Seringapatam Reef*	Yes	No	N/A	No	N/A	N/A	N/A	N/A	Yes	No	No	Yes

** Oil spill modelling predicted this receptor only to be contacted by floating hydrocarbons >10 g/m^2 for consideration of oiled wildlife response*

Overall assessment

Sensitive receptor (sites identified in EP)	Monitor and evaluate	Containment and recovery	Dispersant application: sub-sea	Dispersant application: >20 m water depth and >10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Source control (via vessel SOPEP)
Is this response practicable?	Yes	No	N/A	No	No	Potentially	No	No	Yes	No	No	Yes
NEBA identifies response potentially of net environmental benefit?	Yes	No	N/A	No	No	Potentially	No	No	Yes	No	No	Yes

NEBA Impact Ranking Classification Guidance

To reduce variability between assessments, the following ranking descriptions have been devised to guide the workshop process:

			Degree of impact7	Potential duration of impact	Equivalent Woodside Corporate Risk Matrix Consequence Level
Positive	3P	Major	Likely to prevent: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-today business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches) or regulatory designations.	Decrease in duration of impact by > 5 years	N/A
	2P	Moderate	Likely to prevent: • significant impact to a single phase of reproductive cycle of biological receptors • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors.	Decrease in duration of impact by 1–5 years	N/A
	1P	Minor	Likely to prevent impacts on: • significant proportion of population or breeding stages of biological receptors • socio-economic receptors such as: - significant impact to the sensitivity of protective designation; or - significant and long-term impact to business/industry.	Decrease in duration of impact by several seasons (< 1 year)	N/A
	0	Non-mitigated spill impact	No detectable difference to unmitigated spill scenario.		
Negative	1N	Minor	Likely to result in: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches), or regulatory designations.	Increase in duration of impact by several seasons (< 1 year)	Increase in risk by one sub-category, without changing category (e.g. Minor (E) to Minor (D))
	2N	Moderate	Likely to result in: • significant impact to a single phase of reproductive cycle for biological receptors; or • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. This level of negative impact is recoverable and unlikely to result in closure of business/industry in the region.	Increase in duration of impact by 1–5 years	Increase in risk by one category (e.g. Minor (D) to Moderate (C or B))
	3N	Major	Likely to result in impacts on: • significant proportion of population or breeding stages of biological receptors • socio-economic receptors resulting in either: - significant impact to the sensitivity of protective designation; or - significant and long-term impact to business/industry.	Increase in duration of impact by > 5 years or unrecoverable	Increase in risk by two categories (e.g. Minor (E) to Major (A))

.

7 NOTE: the maximum likely impact should be considered; for example, if a spill were to directly impact the behaviour that results in an impact to reproduction and/or the breeding population (such as fish failing to aggregate to spawn), then the score should be a 2 or 3 rather than a 1. Similarly, if a change in behaviour resulted in an increased risk of mortality of a population, then it should be scored as a 2 or 3

ANNEX B: MONITOR AND EVALUATE ACTIVATION AND TERMINATION CRITERIA

Table B-1: Monitor and evaluate objectives, triggers and termination criteria

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Predictive Modelling of Hydrocarbons to Assess Resources at Risk	Predictive modelling focuses on the conditions that have prevailed since a spill commenced, as well as those that are forecasted in the short term (1–3 days ahead) and longer term. Predictive modelling utilises computer-based forecasting methods to predict hydrocarbon spill movement and guide the management and execution of spill response operations to maximise the protection of environmental resources at risk. The objectives of predictive modelling are to: • Provide forecasting of the movement and weathering of spilled hydrocarbons • Identify resources that are potentially at risk of contamination • Provide simulations showing the outcome of alternative response options (booming patterns etc.) to inform on-going Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP	• Predictive modelling will be triggered immediately following a level 2/3 hydrocarbon spill.	• The criteria for the termination of predictive modelling are: • The hydrocarbon discharge has ceased and no further surface oil is visible • Response activities have ceased • Hydrocarbon spill modelling (as verified by surveillance observations) predicts no additional natural resources will be impacted
Surveillance and reconnaissance to detect hydrocarbons and resources at risk	Surveillance and reconnaissance aims to provide regular, on-going hydrocarbon spill surveillance throughout a broad region, in the event of a spill. The objectives of surveillance and reconnaissance are: • Verify spill modelling results and recalibrate spill trajectory models. • Understand the behaviour, weathering and fate of surface hydrocarbons. • Identify environmental receptors and locations at risk or contaminated by hydrocarbons. • Inform ongoing Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP. • To aid in the subsequent assessment of the short- to long-term impacts and/or recovery of natural resources (assessed in SMPs) by ensuring that the visible cause and effect relationships between the hydrocarbon spill and its impacts to natural resources have been observed and recorded during the operational phase.	• Surveillance and reconnaissance will be triggered immediately following a level 2/3 hydrocarbon spill.	• The termination triggers for the Surveillance and reconnaissance are: • 72 hours has elapsed since the last confirmed observation of surface hydrocarbons. • Latest hydrocarbon spill modelling results do not predict surface exposures at visible levels.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Pre-emptive assessment of sensitive receptors at risk	• Pre-emptive shorelines assessment aims to undertake a rapid assessment of the presence, extent and current status of shoreline sensitive receptors prior to contact from the hydrocarbon spill, by providing categorical or semi-quantitative information on the characteristics of resources at risk. • The primary objective of pre-emptive shorelines assessment is to confirm understanding of the status and characteristics of environmental resources, predicted by predictive modelling and surveillance, to be at risk, to further assist in making decisions on the selection of appropriate response actions and prioritisation of resources. • Indirectly, qualitative/semi-quantitative pre-contact information collected by pre-emptive shorelines assessment on the status of environmental resources may also aid in the verification of environmental baseline data and provide context for the assessment of environmental impacts, as determined through subsequent SMPs. • Pre-emptive shorelines assessment would be undertaken in liaison with WA DTMI as the control agency once the oil is in State Waters (if a Level 2/3 incident).	• Triggers for commencing pre-emptive shorelines assessment include: • Contact of a sensitive habitat or shoreline is predicted by predictive modelling and surveillance. • The pre-emptive assessment methods can be implemented before contact from hydrocarbons (once a receptor has been contacted by hydrocarbons it will be assessed via SCAT.	• The criteria for the termination of pre-emptive shorelines assessment at any given location are: • Locations predicted to be contacted by hydrocarbons have been contacted. • The location has not been contacted by hydrocarbons and is no longer predicted to be contacted by hydrocarbons (resources should be reallocated as appropriate).

ANNEX C: PETROLEUM ACTIVITY OSM ACTIVITY SPECIFIC REQUIREMENT AND VERIFICATION OF OSM-BIP ADEQUACY

The Woodside OSM-BIP comprehensively presents important information for OSM assessment and implementation, including the process for assessing OSM requirements for each activity. This Annex provides the activity-specific information required for the Browse Geophysical and Geotechnical Surveys – Commonwealth (hereafter referred to as the Petroleum Activity) OSM Assessment, including:

- OSM Planning Area
- Monitoring priorities
- Mobilisation and implementation timeframes
- Resourcing requirements and capability assessment.

C.1 Determine if the activity OSM Planning Area fits within the Combined OSM Planning Area

The OSM Planning Area for the Petroleum Activity credible spill scenarios (as shown in Figure C - 1) fits within the Combined OSM Planning Area (Figure 2-1 in the OSM-BIP).

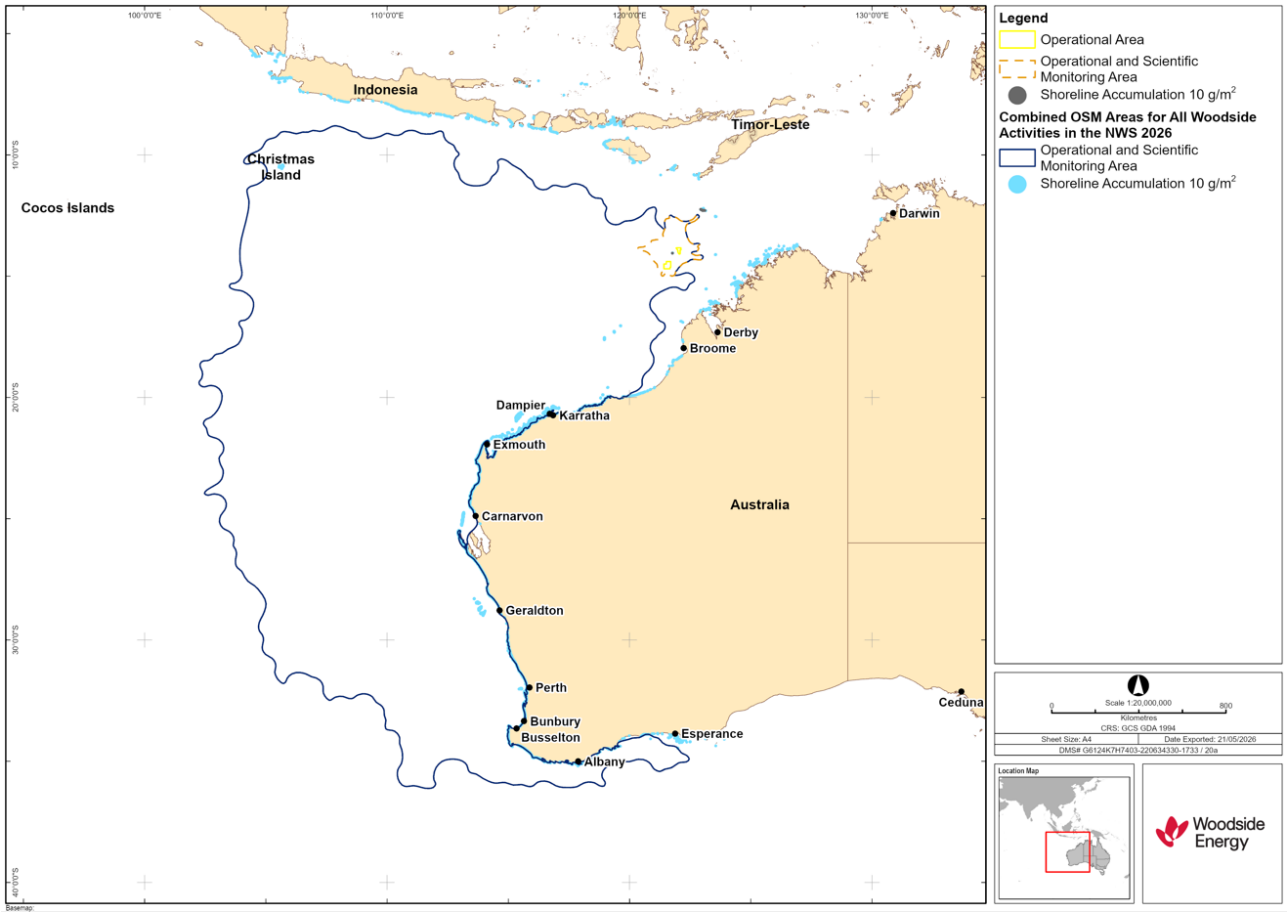

Figure C - 1: Petroleum Activity OSM Planning Area based on the area potentially contacted by the low (below ecological impact) hydrocarbon exposure values in the event of the worst-case credible spill scenarios (CS-01 and CS-02)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

C.2 Determine activity-specific monitoring priorities

The monitoring priorities for the Petroleum Activity have been identified through application of the tiered prioritisation hierarchy described in Section 2.2 of the Woodside OSM-BIP to the stochastic oil spill modelling results for the two WCCS spill scenarios: CS-01 – Vessel collision of 200 m^3 of MGO at Operational Area A; and CS-02 – Vessel collision of 200 m^3 of MGO at Operational Area B.

Floating oil and shoreline accumulation stochastic outputs at the three tier exposure values for both scenarios are presented in Table 2-5. Entrained and dissolved outputs are presented in Table C - 1 (CS-01) and Table C - 2 (CS-02). As the credible spill is a 200 m³ MGO vessel release, monitoring priorities are concentrated at the Scott Reef complex; no receptor beyond it reaches a monitoring tier.

Initial monitoring priorities (within the first 14 days of a spill)

Each receptor identified in Table C - 1 and Table C - 2 has been assigned a base monitoring tier by applying the base tier criteria in Table 2-2 of the OSM-BIP to the highest exposure value predicted across the floating, shoreline, entrained and dissolved hydrocarbon phases within 14 days at a probability ≥10%. The base tier has then been refined, where warranted, by applying the additional monitoring prioritisation criteria in Table 2-3 of the OSM-BIP (Section 2.2.3): receptor sensitivity (the Western Australian DTMI ranking), vulnerability to the predicted exposure pathway, and baseline data adequacy, following the decision logic in Figure 2-2 of the OSM-BIP. The resultant base tier, the additional criteria applied and the refined initial monitoring priority for each receptor are presented in Table C - 4 (CS-01) and Table C - 5 (CS-02). The geographic extent of the Tier 1, Tier 2 and Tier 3 stochastic exposure areas for CS-01 within the 14-day initial prioritisation window is illustrated in Figure C - 2.

Broad-scale ecological features that intersect a receptor (including Key Ecological Features (KEFs), Biologically Important Areas (BIAs) and Australian Marine Parks (AMPs)) are embedded in that receptor's Western Australian DTMI sensitivity ranking and are therefore considered in the prioritisation without being listed separately as monitoring priorities. Where such features, or transient and protected species, extend beyond the named-receptor footprint, they are captured in the monitoring units described in Section C.4 (Table C - 7).

For CS-01 (Operational Area A), two receptors are classified as Tier 1 initial monitoring priorities and three as Tier 3 priorities (Table C - 4); no receptor reaches Tier 2. The Tier 1 receptors are Scott Reef North and Scott Reef South, driven by predicted entrained hydrocarbon exposure at ≥1,000 ppb within 14 days (15% and 10.5% probability of contact respectively); floating oil exposure at ≥50 g/m² is also predicted at Scott Reef North (100% probability), reflecting its proximity to the release location. Each receptor's refined initial monitoring priority equals its base tier; no promotion was warranted under the additional monitoring prioritisation criteria, as the Tier 3 receptors are contacted by entrained hydrocarbons alone.

For CS-02 (Operational Area B), no receptors are classified as Tier 1 or Tier 2 initial monitoring priorities; all five contacted receptors - Scott Reef North, Scott Reef South, Scott Reef Nature Reserve, Sandy Islet and Seringapatam Reef - are classified as Tier 3 (Table C - 5). Each is contacted within 14 days by entrained hydrocarbons at ≥10 ppb only. No promotion was warranted under the additional monitoring prioritisation criteria. The absence of higher-tier receptors for CS-02 relative to CS-01 reflects the lower predicted exposure at the Scott Reef complex from the Operational Area B release location.

The tier rankings presented in Table C - 4 and Table C - 5 are pre-spill, modelling-derived classifications. Because these priorities are derived from stochastic modelling, which combines the full range of possible spill trajectories across many simulation runs, not all of the listed receptors may be contacted by a single spill event. At the time of a spill, Woodside, its OSM Services Provider/s and key stakeholders will confirm the initial tier ranking for each receptor and adapt it through continual re-evaluation as the spill evolves and actual exposure data becomes available (refer to Section 13 and Section 18.1 of the OSM-BIP).

Receptors identified as RPAs in Section 3 of this OSPRMA (Table 3-1) are included in Table C - 4 and Table C - 5 only where they are contacted at a probability ≥10% within 14 days. RPA status is recorded in the 'Additional monitoring prioritisation criteria' column of these tables for completeness only; it is not an additional monitoring prioritisation criterion and does not promote or demote a receptor's tier. Where shoreline contact is predicted only beyond the 14-day window, phased operational monitoring mobilisation is aligned with the predicted arrival of the spill (Section 2.2.5 of the OSM-BIP).

The availability and adequacy of baseline data for the receptors identified as initial monitoring priorities has been assessed against the parameters and methods of the relevant Joint Industry Scientific Monitoring Plans (SMPs). This activity-specific baseline data assessment is presented in Table C - 3. Consistent with Section

2.2.3 of the OSM-BIP, the baseline data assessment was considered as one of the additional monitoring prioritisation criteria. Where baseline data for a receptor and its relevant monitoring program(s) is limited or absent, this supports the prioritisation of that receptor for scientific monitoring and informs the design of any reactive (post-spill, pre-contact) baseline data collection at the time of a spill.

Tier 1 or Tier 2 monitoring would be initiated if situational awareness data and/or surveillance during an actual spill identifies exposure at a receptor, as per the dynamic re-evaluation process in Sections 13 and 18 of the OSM-BIP. Therefore, Woodside and its OSM Services Provider/s will still activate and mobilise monitoring resources to Tier 3 receptors in the absence of any higher ranked receptors.

The inclusion of entrained hydrocarbons at concentrations at or above the 10 ppb exposure value denotes exposure but does not necessarily imply toxicity; for entrained whole-oil droplets, the toxic fraction is small as many hydrocarbon constituents remain sequestered and not bioavailable (French-McCay, 2026). Where a receptor is contacted only by the lowest concentration of entrained hydrocarbons and not by any other hydrocarbon phase, it has been assigned to Tier 3, with the rationale recorded in Table C - 4 and Table C - 5.

Receptors contacted beyond the 14-day initial prioritisation window

A beyond 14-day receptor assessment is not undertaken on an activity-specific basis for the Petroleum Activity (as per OSM-BIP Section 2.2.4). Receptors observed or predicted to be contacted beyond the 14-day initial prioritisation window during a spill are added to the monitoring scope through the post-spill continual re-evaluation process described in OSM-BIP Section 18 (Use of Data in Response Decision-making). Tier assignment at the time of predicted or observed beyond-14-day contact is undertaken by the Woodside Environment Unit Leader (or delegate) in consultation with the OSM Services Provider and key stakeholders using the same tier framework in OSM-BIP Section 2.2.

C.3 Mobilisation and timing of OMP and SMP implementation

Table C - 6provides a list of OMPs and SMPs relevant to Petroleum Activity activities, as well as indicative timeframes for mobilisation of each OMP and SMP for key receptors. In addition, monitor and evaluate activities will capture initial observations of fauna, habitat, and other sensitive receptors. Water samples will be collected during vessel surveillance for OM1: Hydrocarbon Characterisation, when safe to do so. SCAT teams will begin mobilisation within 48–72 hours of notification and will also document fauna observations. This information will be provided to the IMT to aid early decision making per the process outlined in Section 18.1 of the OSM-BIP.

Table C - 6: Indicative OMP and SMP implementation schedule for OSM activities if initiation criteria are met

Proximity to spill source	Monitoring type	0–48 hours from OSM activation	Within 72 hours of OSM activation	~5–7 days from OSM activation	Weeks 1–2 from OSM activation	Ongoing
Spill site and surrounding waters	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations. • Commence activation and mobilisation of OM personnel.	• OM1: Hydrocarbon Characterisation, where resources are available (e.g. Supply Vessel with onboard sampling equipment). • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM5: Rapid Marine Fauna Surveillance • Continue to finalise OMPs. • Continue to activate and mobilise OM personnel.	Continued (as per ongoing arrangements)	Continued (as per ongoing arrangements)	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (e.g. Situation Unit) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill.
	SM	• Commence activation and mobilisation process. • Activation of SMP Team Leads.	• Continue to activate and mobilise personnel. • Work on finalising SMPs.	• SM1: Water Quality Impact Assessment • SM2: Sediment Quality Impact Assessment • SM6: Benthic Habitat Assessment • SM7: Marine fish and elasmobranch assemblages assessment	Continued	Continue SMP monitoring until termination criteria are met
Sensitive receptors predicted to be contacted within 7 days	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations. • OM6: Shoreline Clean-up Assessment • Commence activation and mobilisation of OM personnel.	• OM1: Hydrocarbon Characterisation • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM5: Rapid Marine Fauna Surveillance • Continue to finalise OMPs. • Continue to activate and mobilise OM personnel.	Continued (as per on-going arrangements)	Continued (as per on-going arrangements)	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (Situation Unit Lead) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill until termination criteria are met
	SM	• Activation of SMP Team Leads and finalisation of SMPs.	• Continue to activate and mobilise personnel. • Work on finalising SMPs.	• SM1: Water Quality Impact Assessment • SM2: Sediment Quality Impact Assessment • SM4: Seabirds and Shorebirds • SM3: Intertidal and Coastal Habitat Assessment • SM5: Marine Mega-fauna Assessment – Reptiles • SM5: Marine Mega-fauna Assessment – Cetaceans, Whale Sharks, Dugong • SM6: Benthic Habitat Assessment • SM7: Marine Fish and Elasmobranch Assemblages assessment • SM8: Fisheries impact assessment • SM9: Heritage Features Assessment • SM10: Social Impact Assessment	Continued	Continue SMP implementation until termination criteria are met.
Sensitive receptors (including shorelines, reefs, banks and shoals) predicted to be contacted week 1–2	OM	–	–	• Additional Activation of OMP Team Leads. • Commence activation and mobilisation of additional OM personnel.	• Continue to finalise OMPs. • Continue to activate and mobilise OM personnel. • OM1: Hydrocarbon Characterisation • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (Situation Unit Leader) and used in the Incident Action Planning process for the next operational period. C.4 Determine OSM resourcing requirements and assess capability for the activity

To guide the OSM resourcing requirements assessment for the Petroleum Activity, the scenario most likely to require the greatest initial capability was selected from the two WCCS scenarios (see) based on the stochastic modelling results focusing on the scenario with the greatest predicted number of receptors contacted within 14 days and at the highest contact probabilities. If a receptor is only contacted by low concentrations of entrained hydrocarbons and not by any other hydrocarbon phase, it will be considered a lower priority during the initial monitoring response as outlined in Section 2.2 of the OSM-BIP.

The instantaneous release of 200 m^3 of MGO at Operational Area A (CS-01) was identified as the worst-case scenario, affecting the most receptors within 14 days and determined to require the greatest OSM capability.

The tier rankings in Section C.2 (Table C - 4 and Table C - 5) are derived from the stochastic suite and reflect each receptor's overall risk profile across the full range of modelled trajectories. In any single spill trajectory, a receptor may or may not be contacted within 14 days depending on the prevailing metocean and weathering conditions of that run.

The first 14 days of the response has been selected as the focus area for the OSM resourcing assessment as it is the period during which resources are likely to be overwhelmed, before additional resources (including appropriately qualified personnel, suitable vessels and additional monitoring equipment) can be scaled in locally and from interstate and international resources. Other factors influencing the selection of the scenario with the highest capability requirements were location of the spill, proximity to receptors, and hydrocarbon properties. The OSM Services Provider Contract includes provision of scale-up resources, which would be considered and mobilised as soon as practicable following the spill.

Consideration of Key Ecological Features, Biologically Important Areas and transient receptors

A number of broadscale ecological features are located within the OSM Planning Area and have been considered in monitoring prioritisation and OSM capability planning for the Petroleum Activity activities. The following Key Ecological Features (KEFs) (and their distances to the Operational Area) are noted in Table 4-14 of the EP:

- Continental Slope Demersal Fish Communities KEF – overlaps Operational Area
- Seringapatam Reef and Commonwealth waters in the Scott Reef Complex KEF – overlaps Operational Area
- Ancient coastline at 125 m depth contour KEF – 74 km south-east of Operational Area

The Continental Slope Demersal Fish Communities KEF and Seringapatam Reef and Commonwealth waters in the Scott Reef Complex KEF overlap the Petroleum Activity Operational Area, so are at a higher risk of contact with hydrocarbons. All KEFs within the OSM Planning Area are described in detail in Section 4.7 and Appendix C of the EP. These KEFs include subsea receptors therefore, OSM planning and resourcing for this activity includes relevant monitoring requirements, such as water quality, sediment quality, benthic habitats and fish for these features.

The OSM Area also overlaps a number of Biologically Important Areas (BIAs) with protected species potentially occurring in the area, as described in Section 4.6 of the EP. A number of the BIAs and protected species are located within the geographical extents of other receptors, such as marine turtles within the Scott Reef Nature Reserve and KEF so these BIAs and protected species would automatically be included in the relevant SMPs for that receptor (refer to Table C - 7). Where BIAs, protected species and KEFs are situated away from the monitoring priorities, they will be captured in the Offshore Environs monitoring unit described in Table C - 7.

Monitoring Units

Using the stochastic modelling results, Woodside has grouped the monitoring priorities for the Petroleum Activity into monitoring 'units' (Table C - 7). These units incorporate all of the possible receptors that may be contacted by the Petroleum Activity scenarios shown in Table 2-1 at a probability ≥10%. Receptors only contacted by entrained hydrocarbons and no other phase of hydrocarbon were not included. These unit groupings are based on consultation with experienced monitoring personnel and planners, who often group these receptors together for time-bound monitoring projects. The grouping of units is based on factors such as access and distance to ports, simultaneous operations (SIMOPS) of multiple vessels and teams working in a close area, travel time between individual locations/receptors and time taken to collect samples for each SMP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

The monitoring units presented in Table C - 7 also include KEFs, BIAs and transient species. Additional information on the seasonality of the receptors can be found in Appendix B of the OSM-BIP and in Section 4.7 of the EP. Each monitoring unit will require 1–2 teams during the initial response (first 14 days). The number of teams allocated to each unit will depend on the extent of the spill, the outcome of the monitoring prioritisation finalised at the time of the spill (Section 13 of the OSM-BIP), the ALARP assessment, and SIMOPs.

It should be noted that not all monitoring units will be contacted by a single spill and that the list below has been generated from stochastic modelling results.

Table C - 7: Monitoring units for the Petroleum Activity relevant to stochastic modelling results

Receptors within each Unit	Type
Scott Reef	
Scott Reef*	Nature Reserve
Scott Reef North*	Reef, Shoals and Banks
Scott Reef South	Reef, Shoals and Banks
Sandy Islet (emergent feature of Scott Reef South)	Reef, Shoals and Banks
Whale shark (foraging)	BIA
Marine turtle	BIA
Pygmy blue whale (distribution)	BIA
Seabird and shorebirds	BIA
Continental Slope Demersal Fish Communities*	KEF
Ancient Coastline at 125 m depth contour*	KEF
Seringapatam Reef and Commonwealth waters in the Scott Reef Complex*	KEF
Control	
Control sites	All

**Submerged receptor that has no features above the sea surface.*

Stochastic modelling

OSM resourcing requirements were determined using stochastic modelling. Deterministic modelling was not undertaken, as the existing response capability arrangements (refer to Sections 9 and 10 of the OSM-BIP) provide sufficient capacity to meet or exceed the resourcing requirements for all receptors forecast to be contacted by floating, shoreline and/or dissolved hydrocarbons (at ≥10% probability) by stochastic modelling within the initial two weeks of the Petroleum Activity.

The resources required to commence operational and scientific monitoring components during weeks 1–2 are presented in Table C - 8 and Table C - 9 respectively. These are based on the monitoring priorities (Table C - 4 and Table C - 5), the implementation schedule (Table C - 6) and the worst-case stochastic results, and include the resources for monitoring unaffected control sites.

Woodside's OSM capability arrangements are detailed in Sections 9 and 10 of the OSM-BIP. These sections demonstrate that Woodside has established arrangements to mobilise up to 5-6 teams for most OMPs and SMPs in the initial stages of a spill, and provision for scale-up capability, confirming that despite the use of stochastic modelling (which means an overconservative estimate of capability has been used for this activity) the OSM capability requirements for the Petroleum Activity (Table C - 8 and Table C - 9) are satisfied by the existing capability arrangements in the OSM-BIP.

SM10: Social impact assessment	**1 team**	**1 team**	OSRL OSM Supplementary Service Agreement
Total number of teams	**16 teams**	**16 teams**	

[#] Specific monitoring units are mentioned for planning and guidance purposes based on a worst case planning approach. In the event of an actual spill, other locations and/or receptors may be contacted and the ability to access these locations (i.e. with consideration of safety and SIMOPS) would be assessed. This would be identified and managed as part of implementation as per the guidance in Section 13 of the BIP.

** Initial co-mobilisation between SMP: Water quality impact assessment and SMP: Sediment quality impact assessment.*

^ Can initially be performed by the same team as the relevant OMP. This SMP may replace the relevant OMP, if the relevant OMP's termination criteria are triggered.

CONTROLLING AGENCIES AND INCIDENT CONTROLLERS

Source	Location	Level	Jurisdictional Authority/ Hazard Management Agency	Control Agency	Incident Controller
Spill from facility including subsea infrastructure *Note: pipe laying and accommodation vessels are considered a "facility" under Australian regulations*	Commonwealth waters	1	National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA)	Woodside	Person In Charge (PIC) with support from Onshore Team Leader (OTL)
		2/3		Woodside	Corporate Incident Management Team Incident Commander (CIMT IC)
	State waters	1/2/3	Western Australian Department of Transport and Major Infrastructure (DTMI)	DTMI	DTMI Incident Controller
	Within port limits	1	DTMI	Port Authority	Port Harbour Master
		2/3		Port Authority / DTMI	Port Harbour Master / DTMI Incident Controller
Spill from vessel *Note: Shipboard Oil Pollution Emergency Plan (SOPEP) should be implemented in conjunction with this document*	Commonwealth waters	1	Australian Marine Safety Authority (AMSA)	AMSA	Vessel Master
		2/3		AMSA	AMSA (with response assistance from Woodside)
	State waters	1/2/3	DTMI	DTMI	DTMI Incident Controller
	Within port limits	1	DTMI	Port Authority	Port Harbour Master
		2/3		Port Authority/ DTMI	Port Harbour Master/ DTMI Incident Controller

SPILLS IN STATE WATERS

In the event of a hydrocarbon spill (hereafter 'spill') where Woodside is the responsible party and the spill may impact State waters and shorelines, Woodside (or the Vessel Master) will commence the initial response actions and notify the Western Australian Department of Transport and Major Infrastructure (DTMI).

Initially Woodside will be required to make available an appropriate number of suitably qualified persons to work in the DTMI Incident Management Team (IMT) (Appendix F: Woodside Liaison Officer resources to DTMI). DTMI's role as the Controlling Agency in State Waters does not negate the requirement for Woodside to have appropriate plans and resources in place to adequately respond to a marine hydrocarbon spill incident in State Waters or to commence the initial response actions to a spill prior to DTMI establishing incident control in line with DTMI *Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements* (July 2020). Cost recovery arrangements for offshore marine pollution incidents (MOP) are in accordance with Section 9 of the Guidance Note: https://www.transport.wa.gov.au/mediaFiles/marine/MAC_P_Westplan_MOP_OffshorePetroleumIndGuidance.pdf

Woodside's Incident Management Structure for a hydrocarbon spill, including Woodside Liaison Officer's command structure within DTMI can be seen at Appendix E: Woodside Incident Management Structure.

The coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines is shown in Appendix D: Coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

RESPONSE PROCESS OVERVIEW

	For guidance on credible scenarios and hydrocarbon characteristics, refer to APPENDIX A	
ALL INCIDENTS	Notify the Woodside Communication Centre (WCC) on: [1]	
	If further support required, Incident Commander or delegate to implement this Oil Pollution First Strike Plan per relevant actions detailed in Table 1-1 and Table 2-1.	
LEVEL 1	**FACILITY INCIDENT**	**VESSEL INCIDENT**
	Coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan Remember to download each Operational Plan.	Notify DTMI and coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan Remember to download each Operational Plan.
	If the spill escalates such that the site cannot manage the incident, inform the WCC on: [1] and escalate to a level 2/3 incident.	
LEVEL 2/3	**FACILITY INCIDENT**	**VESSEL INCIDENT**
	Hand over control to CIMT and notify DTMI	Hand over control to AMSA and stand up CIMT to assist
	Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Undertake validated strategies.	If requested by AMSA: Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Undertake validated strategies
	Create an Incident Action Plan (IAP) for ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational Net Environmental Benefit Analysis (NEBA), see Appendix A of the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA).	If requested by AMSA: Create an IAP for ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational NEBA, see Appendix A of the OSPRMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

1. NOTIFICATIONS

The Incident Controller or delegate must ensure the below notifications (Table 1-1) are completed within the designated timeframes.

For spills from a vessel, relevant notifications must be undertaken by a Woodside representative.

Table 1-1: Notifications

In the event of an incident between campaign vessels, also activate relevant Emergency Response Plans and/or Bridging Documents							
Timing	**By**	**To**	**Name**	**Contact**	**Instruction**	**Form**	**Complete? (✓)**
NOTIFICATIONS FOR ALL LEVELS OF SPILL							
Immediately	Offshore Installation Manager (OIM) or Vessel Master	Woodside Communication Centre (WCC)	Corporate Incident Management Team Incident Commander (CIMT IC)	[1]	Verbally notify WCC of event and estimated volume and hydrocarbon type. If further support required, implement this Oil Pollution First Strike Plan per relevant actions detailed below and in Table 2-1	Verbal	
Within 2 hours	Woodside Site Rep (WSR), CIMT IC or Delegate	National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA[1])	Incident notification office	[2]	Verbally notify NOPSEMA for spills >80 litres[2]. Record notification using Initial Verbal Notification Form or equivalent and send to NOPSEMA as soon as practicable (cc to NOPTA and DMPE).	Link	
Within 3 days	WSR, CIMT IC or Delegate				Provide a written NOPSEMA Incident Report Form as soon as practicable (no later than 3 days after notification) (cc to NOPTA and DMPE) • NOPSEMA: [2] • NOPTA: [3] • DMPE: [4]	[2]	
As soon as practicable	CIMT IC or Delegate	Woodside	Environment Unit Leader	As per roster	Verbally notify Environment Unit Leader of event and seek advice on relevant performance standards from the Environment Plan (EP)	Verbal	
Within 2 hours of becoming aware of a marine pollution incident (MOP) that occurs in or may impact state waters	CIMT IC or Delegate	Western Australian (WA) Department of Transport and Major Infrastructure (DTMI)	DTMI Maritime Environmental Emergency Response Unit (MEER) Duty Officer	[5]	Verbally notify DTMI MEER Duty Officer that a spill has occurred and, if required, request use of equipment stored in Karratha. Follow up with a written Marine Pollution Report (POLREP) as soon as practicable following verbal notification. Additionally, DTMI to be notified if spill is likely to extend into WA State waters. Request DTMI to provide Liaison to Woodside IMT.	[5]	
Within 24 hours of Woodside reporting the incident to the appropriate authority	CIMT IC or Delegate	Department of Primary Industries and Regional Development (DPIRD)			Notification to DPIRD via email within 24 hours of Woodside reporting the incident to the appropriate authority: [6]	Email	
Within 24 hours of Woodside reporting the incident to the appropriate authority	CIMT IC or Delegate	WA Fishing Industry Council (WAFIC)	Industry Liaison Officer	[7]	Notification to WAFIC via email within 24 hours of Woodside reporting the incident to the appropriate authority: [7]	Verbal/ email	
As soon as practicable	CIMT IC or Delegate	Department of Climate Change, Energy, the Environment and Water (DCCEEW) Director of National Parks (DNP)	Marine Park Compliance Duty Officer	[8]	The DNP should be made aware of oil/ gas pollution incidences which occur within a marine park or are likely to impact a marine park as soon as possible. Notification should be provided to the 24 hour Marine Compliance Duty Officer. This notification should include: • titleholder details • time and location of the incident (including name of marine park potentially affected) • proposed response arrangements as per the Oil Pollution Emergency Plan (OPEP) • confirmation of providing access to relevant monitoring and evaluation reports when available; and • contact details for the response coordinator.	Verbal	
As soon as practicable if there is potential for oiled	CIMT IC or Delegate	WA Department of Biodiversity,	Duty Officer	[9]	Phone call notification	Verbal	

[1] Notification to NOPSEMA must be from a Woodside Representative.

[2] An uncontrolled release of petroleum liquids exceeding 80 litres is required to be reported as a dangerous occurrence related to safety at a facility, under clause 82 of Schedule 3 of the OPGGS Act and Part 4 of the Safety Regulations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

In the event of an incident between campaign vessels, also activate relevant Emergency Response Plans and/or Bridging Documents							
Timing	**By**	**To**	**Name**	**Contact**	**Instruction**	**Form**	**Complete? (✓)**
wildlife or the spill is expected to contact land or waters managed by WA Department of Biodiversity, Conservation and Attractions		Conservation and Attractions (DBCA)					
As soon as practicable	Public Information	Relevant persons/ organisations	To be determined	To be determined	Should it be identified that additional persons such as, but not limited to, commercial fishers or tourism operators may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for the Browse Trunkline Geophysical and Geotechnical Survey. Relevant persons/ organisations will be re-assessed throughout the response period.	Verbal initially	
As soon as practicable	Public Information	Relevant cultural authorities	To be determined	To be determined	Should it be identified that relevant cultural authorities may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the OSPRMA for the Browse Trunkline Geophysical and Geotechnical Survey. Relevant cultural authorities will be re-assessed throughout the response period.	Verbal initially	
ADDITIONAL NOTIFICATIONS TO BE MADE ONLY IF SPILL IS FROM A VESSEL							
"Without delay" as per Protection of the *Sea (Prevention of Pollution from Ships) Act 1983* (Cth) s 11(1)	Vessel Master	Australian Maritime Safety Authority (AMSA)	Joint Rescue Coordination Centre (JRCC)	[10]	Verbally notify AMSA RCC of the hydrocarbon spill. Follow up with a written Harmful Substances Report (POLREP) as soon as practicable following verbal notification.	[10]	
ADDITIONAL LEVEL 2/3 NOTIFICATIONS							
As soon as practicable	CIMT IC or Delegate	AMOSC	AMOSC Duty Manager	[11]	Notify AMOSC that a spill has occurred and follow-up with an email from the **CIMT IC/ CIMT Deputy IC/ CMT Leader** to formally activate AMOSC. Determine what resources are required consistent with the AMOSPlan and detail in a Service Contract that will be sent to Woodside from AMOSC upon activation.	[11]	
As soon as practicable	CIMT IC or Delegate	Oil Spill Response Limited (OSRL)	OSRL Duty Manager	[12]	Notification for all services: Contact OSRL duty manager and request assistance from technical advisor. Send the completed notification form to OSRL as soon as practicable.	[12]	
					Mobilisation of response personnel/ equipment: For mobilisation of response personnel/ resources, send the Mobilisation Form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside i.e. **CIMT IC/ CIMT Deputy IC/ CMT Leader**. OSRL can advise the names on the call out authority list, if required.	[12]	
					Mobilisation of Operational and Scientific Monitoring service: For mobilisation of Operational and Scientific Monitoring (OSM) service, send the OSM Mobilisation Form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside i.e. **CIMT IC/ CIMT Deputy IC/ CMT Leader**. OSRL can advise the names on the call out authority list, if required.	[12]	
As soon as practicable if extra personnel are required for incident support	CIMT IC or Delegate	Marine Spill Response Corporation (MSRC)	MSRC Response Manager	[13]	Activate the contract with MSRC (in full) for the provision of up to 14 personnel depending on what skills are required. Please note that provision of these personnel from MSRC are on a best endeavours basis and are not guaranteed.	Verbal

2. RESPONSE TECHNIQUES

Table 2-1: Response techniques

Technique	Hydrocarbon type	Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO					
Monitor and evaluate – tracking buoy	**Yes**	**ALL**	Deploy the oil spill tracking buoy within 2 hours in the event of release of hydrocarbons to the marine environment. If no oil spill tracking buoy is available, mobilise unit from the King Bay Supply Facility (KBSF) stockpile.	Operations	**WITHIN 2 HOURS:** Tracking buoy deployed within 2 hours.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk in Operational Monitoring Operational Plan. Deploy tracking buoy in accordance with Link.
Monitor and evaluate – predictive modelling	**Yes**	**ALL**	Undertake initial modelling using OceansMap and weathering fate analysis using Automated Data Inquiry for Oil Spills (ADIOS) or refer to the hydrocarbon information in Appendix A.	Environment	**WITHIN 6 HOURS:** Initial modelling within 6 hours using the OceansMap tool.	Predictive Modelling of Hydrocarbons to Assess Resources at Risk in Operational Monitoring Operational Plan. *Planning Section to download immediately and follow steps*
	Yes	**ALL**	Send Oil Spill Trajectory Modelling (OSTM) form (Appendix B, Form 7) to RPS Response ([14]). Outputs will be uploaded to OceansMap by RPS.	Environment	**WITHIN 24 HOURS:** Detailed modelling received within 4 hours of RPS Response receiving information from Woodside.	
Monitor and evaluate – aerial surveillance	**Yes**	**ALL**	Aviation Unit Leader to commence aerial observations in daylight hours. Aerial surveillance observer to complete log in Appendix B Form 8.	Logistics – Aviation	**WITHIN 24 HOURS:** 2 trained aerial observers. 1 aircraft available. Report made available to the IMT within 2 hours of landing after each sortie.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk in Operational Monitoring Operational Plan. *Planning Section to download immediately and follow steps*
Monitor and evaluate – satellite tracking	**Yes**	**ALL**	Environment Unit Leader to action satellite imagery services. This may be obtained via: • AMOSC Duty Manager: [11] • OSRL Duty Manager: [12] • KSAT: [15] • Others identified by CIMT	Environment	**WITHIN 24 HOURS:** Service provider will confirm availability of an initial acquisition within 2 hours. Data received to be uploaded into Woodside Common Operating Picture.	
Revalidate pre-operational NEBA	**Yes**	**ALL**	Environment Unit Leader to revalidate pre-operational NEBA against current situational awareness from monitor and evaluate techniques.	Environment	**WITHIN 24 HOURS**: Revalidate pre-operational NEBA and incorporate into IAP	Pre-operational NEBAs
Monitor and evaluate – pre-emptive assessment of receptors at risk	**Yes**	**ALL**	Consider the need to mobilise resources to undertake pre-emptive assessment of sensitive receptors at risk.	Planning or Environment	Desktop pre-emptive assessment of sensitive receptors to help determine Response Protection Areas (RPAs) to guide deployment of response personnel	Pre-emptive Assessment of Sensitive Receptors in Operational Monitoring Operational Plan.
Operational monitoring – shoreline assessment	**Yes**	**ALL**	Consider the need to mobilise resources to undertake shoreline assessment surveys.	Planning or Environment	In agreement with WA DTMI, deployment of 2 specialists trained in OM6: Shoreline Clean-up Assessment Technique for each of the RPAs with predicted impacts.	Mobilise OSM service via OSRL: [12] Refer to OSM Bridging Implementation Plan – Part B for additional implementation information: Link Refer to Joint Industry Operational And Scientific Monitoring Plan Framework for activation criteria and additional supporting information.
Operational and Scientific Monitoring	**Yes**	**ALL**	Consider the need to mobilise OSM resources via third party service provider.	Environment	**WITHIN 4 HOURS**: Notify service provider of spill event. **OSM:** OMPs and SMPs will be activated in accordance with the initiation criteria provided in Tables 9-1 and 9-2 of the Joint Industry OSM Framework (APPEA [now AEP], 2021)	
Surface dispersant	**No**	**N/A**	This response strategy is not recommended.			
Containment and recovery	**No**	**N/A**	This response strategy is not recommended.			
Mechanical dispersion	**No**	**N/A**	This response strategy is not recommended.			
In-situ burning	**No**	**N/A**	This response strategy is not recommended.			
Shoreline protection and deflection	**No**	**N/A**	This response strategy is not recommended.

Technique	Hydrocarbon type	Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO					
Shoreline clean-up	**Yes**	**ALL**	Equipment from Woodside, AMOSC and State stockpiles and relevant personnel mobilised. Consideration of mobilisation of interstate/international shoreline clean-up equipment and relevant personnel (i.e. OSRL).	Logistics and Planning	**WITHIN 24 HOURS:** Relevant Tactical Response Plans (TRPs) identified for activation within 24 hours of a release. **WITHIN 24-48 HOURS:** In liaison with WA DTMI (for Level 2/3 incidents), deployment of 1 shoreline clean-up team to contaminated RPA(s). Equipment mobilised from closest stockpile within 24-48 hours. Supplementary equipment mobilised from AMOSC and State stockpiles within 48 hours. Supplementary equipment mobilised from OSRL within 72 hours (if required). Access to ~213 m^3 of solid and liquid waste storage available within 48 hours upon activation of 3rd party contract.	Shoreline Clean-up Operational Plan *Logistics Section to download immediately and follow steps*
Oiled wildlife response	**Yes**	**ALL**	If oiled wildlife is a potential impact, request AMOSC to mobilise containerised oiled wildlife first strike kits and relevant personnel. Refer to relevant Tactical Response Plan (TRP) for potential wildlife at risk. Mobilise AMOSC Oiled Wildlife Containers. Consider whether additional equipment is required from local suppliers.	Logistics and Planning		Oiled Wildlife Response Operational Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3. RESPONSE PROTECTION AREAS

Action: Provide relevant Control Agency with applicable Tactical Response Plans for any Response Protection Areas (RPAs) identified during operational monitoring.

Based on hydrocarbon spill modelling results, the sensitive receptors outlined in Table 3-1 are identified as priority protection areas, as they have the potential for shoreline hydrocarbon accumulations at or above impact threshold levels within 48 hours of a spill.

Table 3-1: Receptors for Priority Protection with Potential Impact within 48 Hours (Credible Scenario-01, Operational Area A)

Receptor	Distance / direction from Operational Area (km)	Min. time to shoreline contact (above 100 g/m^2) in days	Max. shoreline accumulation (above 100 g/m^2) in m^3	Tactical Response Plans
Sandy Islet (emergent component of Scott Reef South)	5.5	0.4 (10 hours)	80 [3]	Scott Reef

Hydrocarbon spill modelling results for Credible Scenario-02 in Operational Area B indicate that the following sensitive receptors have the potential to be contacted by hydrocarbons beyond 48 hours of a spill:

- Sandy Islet (emergent component of Scott Reef South) – 10 m^3 (2.25 days or 54 hours)
- Ashmore Reef – 11 m^3 (17.2 days or 413 hours)

Tactical Response plans for these locations can be accessed via the link here and include the details of potential forward operating bases and staging areas.

Oil Spill Trajectory Modelling specific to the spill event will be required to determine the regional sensitive receptors that may be contacted beyond 48 hours of a spill.

Figure 3-1 illustrates the location of regional sensitive receptors in relation to the Browse Geophysical and Geotechnical Survey Operational Area.

Consideration should be given to other stakeholders (including mariners) in the vicinity of the spill location. Table 3-2 indicates the assets within the vicinity of the Browse Geophysical and Geotechnical Survey Operational Area.

Table 3-2: Assets in the vicinity of the Browse Geophysical and Geotechnical Survey Operational Area

Asset	Distance / direction from Operational Area	Operator
Ichthys Venturer Floating Production Storage Offtake (FPSO)	123.7 km east of Operational Area A	INPEX
Montara Venture FPSO	288.6 km north east of Operational Area A	Jadestone

[3] *Maximum accumulated hydrocarbon volume at any individual shoreline receptor (a single worst case replicate simulation). The maximum accumulated hydrocarbon volume at any individual shoreline receptor (averaged over all replicate simulations) was 2 m^3.*

APPENDIX A CREDIBLE SPILL SCENARIOS AND HYDROCARBON INFORMATION

Table A-1: Credible spill scenarios and hydrocarbon information

Scenario	Product	Density (g/cm^3)	Volume	Residue	Weathering rate		Suggested ADIOS2 Analogue[4]
CS-01 (WCCS) An instantaneous release due to a vessel collision at Operational Area A	Marine Gas Oil (MGO)	0.829 at 25 °C	200 m^3	5% of 200 m^3 (10 m^3)	12 hours (BP < 180 °C)	6%	Diesel Fuel Oil - Southern ISA 1 (API 37.2)
					24 hours (180 °C < BP < 265 °C)	34.6%	
					Several days (265 °C < BP < 380 °C)	54.4%	
CS-02 An instantaneous release due to a vessel collision at Operational Area B	MGO	0.829 at 25 °C	200 m^3	5% of 200 m^3 (10 m^3)	12 hours (BP < 180 °C)	6%	Diesel Fuel Oil - Southern ISA 1 (API 37.2)
					24 hours (180 °C < BP < 265 °C)	34.6%	
					Several days (265 °C < BP < 380 °C)	54.4%	

[4] Initial screening of possible ADIOS2 analogues considered hydrocarbons with similar APIs. Suggested selection is based on the closest distillation cut to the Woodside hydrocarbon. Only hydrocarbons with >380 °C distillation cuts were included in selection process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX B NOTIFICATION FORMS AND TEMPLATES

Table B-1: Notification forms

No.	Form Name	Link

FORM 1 – Record of initial verbal notification to NOPSEMA

NOPSEMA phone: [2]		
Date of call		
Time of call		
Call made by		
Call made to		
Information to be provided to NOPSEMA:		
Date and time of incident / time caller became aware of incident		
Details of incident	**1. Location**	
	2. Title	
	3. Source	□ Platform
		□ Pipeline
		□ FPSO
		□ Exploration drilling
		□ Well
		□ Other (please specify)
	4. Hydrocarbon type	
	5. Estimated volume	
	6. Has the discharge ceased?	
	7. Fire, explosion or collision?	
	8. Environment Plan(s)	
	9. Other details	
Actions taken to avoid or mitigate environmental impacts		
Corrective actions taken or proposed to stop, control or remedy the incident		
After the initial call is made to NOPSEMA, please send this record as soon as practicable to:		
NOPSEMA	[2]	
NOPTA	[3]	
DMPE	[4]

APPENDIX C SPILL ASSESSMENT QUESTIONS

What has happened?			
Date/time			
Spill source			
Spill cause			
Safety situation			
What is it?			
Oil type and name			
Oil properties	Specific gravity		
	Viscosity		
	Pour point		
	Asphaltenes		
	Wax content		
	Boiling point		
Where is it?			
Latitude and longitude			
Distance and bearing			
Affected area	☐ Offshore	☐ Subsea	☐ Shoreline
	☐ Estuary	☐ Port	☐ Harbour
	☐ Inland	☐ River	☐ Other (please detail):
Water depth			
How big is it?			
Area			
Release type	☐ Instantaneous	Estimated volume:	
	☐ Continuous release	Estimated release rate:	
Where is it going?			
Metocean conditions			
Currents and tides			
What is in the way?			
Resources at risk			
Time until resource contact			
What is happening to it?			
Weathering processes			
Response actions underway

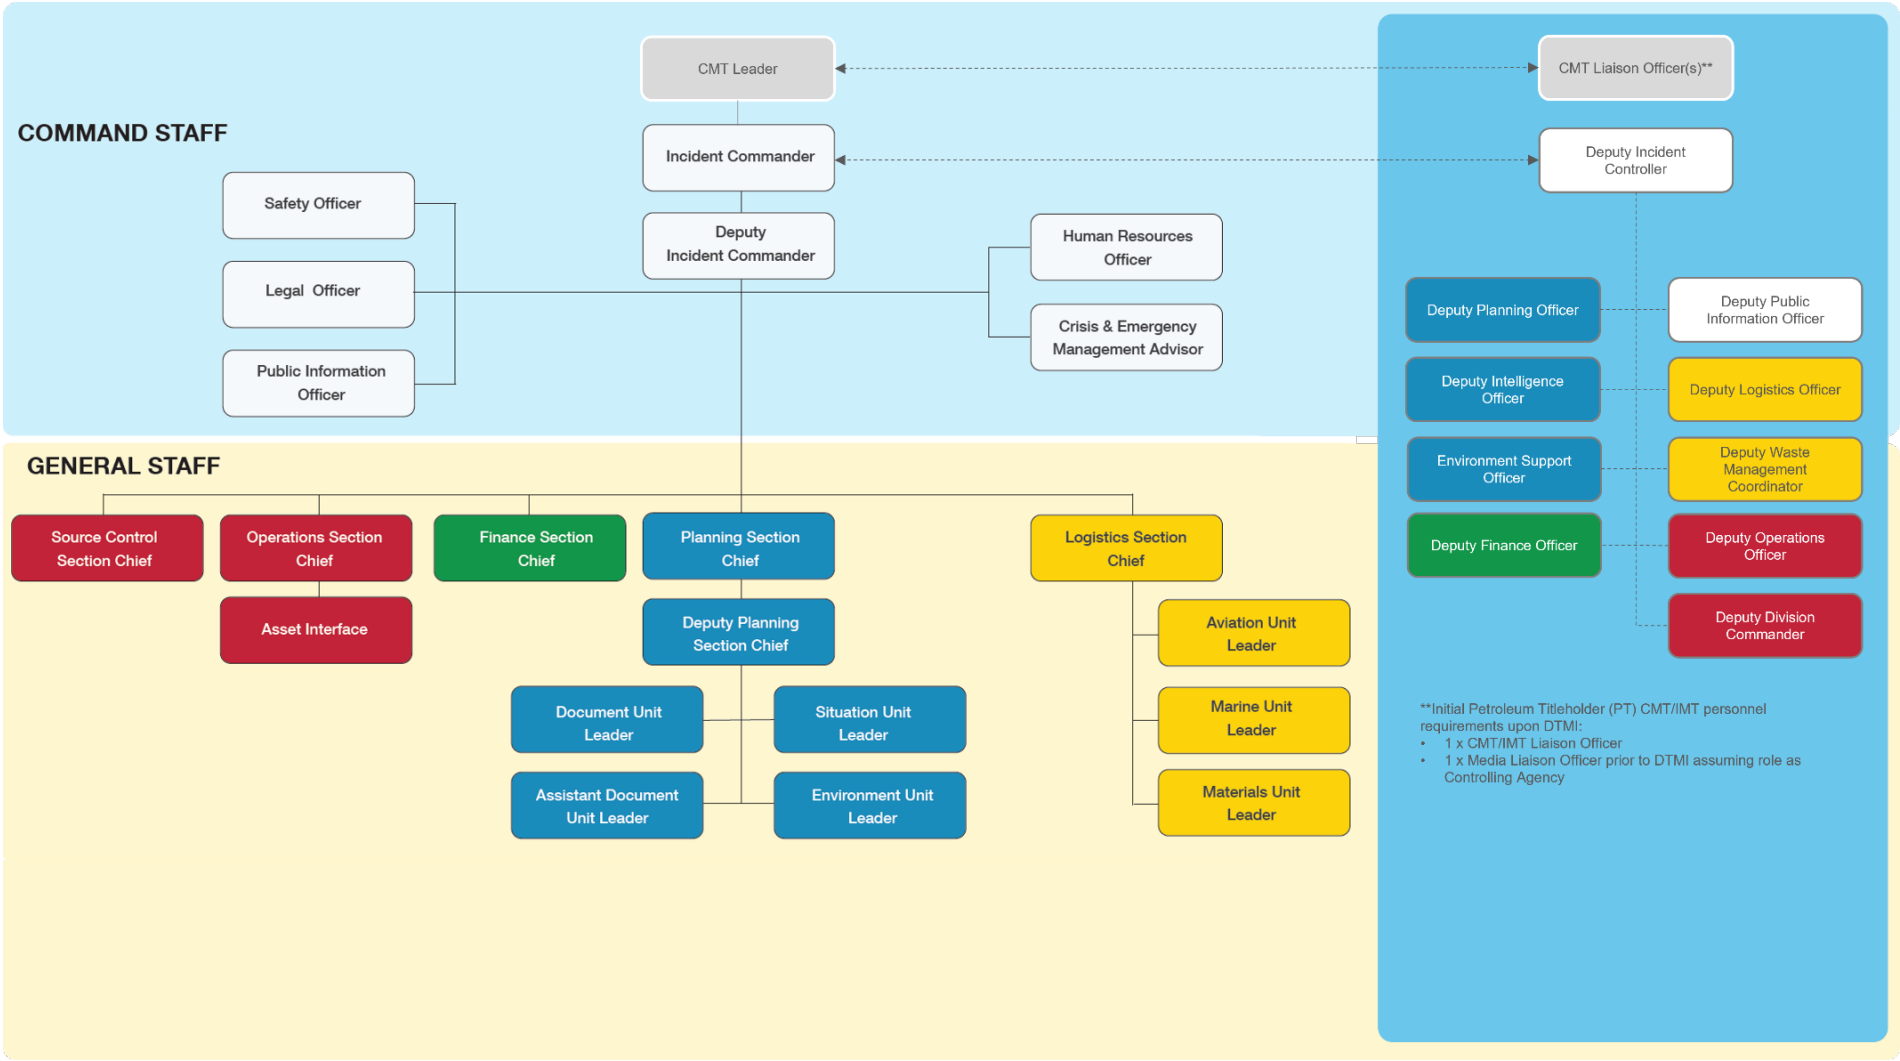
APPENDIX D COORDINATION STRUCTURE FOR A CONCURRENT HYDROCARBON SPILL IN BOTH COMMONWEALTH AND STATE WATERS/ SHORELINES[5]

The Control Agency for a hydrocarbon spill in Commonwealth waters resulting from an offshore petroleum activity is Woodside (the Petroleum Titleholder).



The Control Agency/ Hazard Management Agency (HMA) for a hydrocarbon spill in State waters/ shorelines resulting from an offshore petroleum activity is DTMI. DTMI will appoint an Incident Controller and form a separate IMT to only manage the spill within State waters/ shorelines.

[5] *Adapted from DTMI Offshore Petroleum Industry Guidance Note, Marine Oil Pollution: Response and Consultation Arrangements, July 2020. Note: For full structure up to Commonwealth Cabinet/Minister refer to Marine Oil Pollution: Response and Consultation Arrangements Section 6.5, Figure 4.*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX E WOODSIDE INCIDENT MANAGEMENT STRUCTURE

Woodside Incident Management Structure for hydrocarbon spill (including Woodside Liaison Officers command structure within DTMI IMT if required) is shown below. Woodside's CIMT would operate from the Emergency Operations Centre (EOC) at the Woodside headquarters in Perth.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX F WOODSIDE LIAISON OFFICER RESOURCES TO DTMI

In the event that DTMI is required to establish an IMT, Woodside will make available an appropriate number of appropriately qualified persons to work within the DTMI IMT.

It is an expectation that Woodside's nominated CMT Liaison Officer and the Deputy Incident Controller attend the DTMI Fremantle Incident Control Centre (ICC) as soon as possible after the formal request has been made by the State Marine Pollution Coordinator (SMPC), and that the remaining initial cohort will attend no later than 8:00am on the day following the request being formally made to Woodside by the SMPC. For Woodside personnel designated to serve in DTMI's Forward Operating Base (FOB), it is expected that they arrive at the FOB no later than 24 hours from the formal request being made by the SMPC.

Area	Role	Woodside personnel[6]	Key Duties	#
DTMI Maritime Environmental Emergency Coordination Centre (MEECC)	CMT Liaison Officer	CIMT Liaison	• Provide a direct liaison between the CMT and the MEECC. • Facilitate effective communications and coordination between the CIMT Leader and SMPC. • Offer advice to SMPC on matters pertaining to PT crisis management policies and procedures.	1
DTMI IMT Incident Control	Deputy Incident Controller	Deputy Incident Commander (Deputy IC)	• Provide a direct liaison between the PT IMT and DTMI IMT. • Facilitate effective communications and coordination between the PT IC and the DTMI IC. • Offer advice to the DTMI IC on matters pertaining to PT incident response policies and procedures. • Offer advice to the Safety Coordinator on matters pertaining to PT safety policies and procedures, particularly as they relate to PT employees or contractors operating under the control of the DTMI IMT.	1
DTMI IMT Intelligence	Deputy Intelligence Officer	Situation Unit Leader (Intelligence)	• As part of the Intelligence Team, assist the Intelligence Officer in the performance of their duties in relation to situation and awareness. • Facilitate the provision of relevant modelling and predications from the PT IMT. • Assist in the interpretation of modelling and predictions originating from the PT IMT. • Facilitate the provision of relevant situation and awareness information originating from the DTMI IMT to the PT IMT. • Facilitate the provision of relevant mapping from the PT IMT. • Assist in the interpretation of mapping originating from the PT IMT.	1

[6] *These positions would be mobilised, in consultation with DTMI, to align to the actual spill scenario. The selected roles and/or individual personnel would be subject to continued evaluation to ensure continued 'best fit'. For CIMT roster arrangements, contact the WCC. During a prolonged response, additional personnel may be sourced through internal resourcing and mutual Aid agreements such as the AMOSC Core Group via [11]*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside personnel[6]	Key Duties	#
			• Facilitate the provision of relevant mapping originating from the DTMI IMT to the PT IMT.	
DTMI IMT Intelligence – Environment	Environment Support Officer	Deputy Environment Unit Leader	• As part of the Intelligence Team, assist the Environment Coordinator in the performance of their duties in relation to the provision of environmental support into the planning process. • Assist in the interpretation of the PT OPEP and relevant TRP plans. • Facilitate in requesting, obtaining and interpreting environmental monitoring data originating from the PT IMT. • Facilitate the provision of relevant environmental information and advice originating from the DTMI IMT to the PT IMT.	1
DTMI IMT Planning-Plans/ Resources	Deputy Planning Officer	Deputy Planning Section Chief	• As part of the Planning Team, assist the Planning Officer in the performance of their duties in relation to the interpretation of existing response plans and the development of incident action plans and related sub plans. • Facilitate the provision of relevant IAP and sub plans from the PT IMT. • Assist in the interpretation of the PT OPEP from the PT. • Assist in the interpretation of the PT IAP and sub plans from the PT IMT. • Facilitate the provision of relevant IAP and sub plans originating from the DTMI IMT to the PT IMT. • Assist in the interpretation of the PT existing resource plans. • Facilitate the provision of relevant components of the resource sub plan originating from the DTMI IMT to the PT IMT. **(Note this individual must have intimate knowledge of the relevant PT OPEP and planning processes)**	1
DTMI IMT Public Information-Media/ Community Engagement	Deputy Public Information Officer	Deputy Public Information Officer	• As part of the Public Information Team, provide a direct liaison between the PT Media team and DTMI IMT Media team. • Facilitate effective communications and coordination between the PT and DTMI media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DTMI Information and Warnings team. • Offer advice to the DTMI Media Coordinator on matters pertaining to PT media policies and procedures. • Facilitate effective communications and coordination between the PT and DTMI Community Liaison teams. • Assist in the conduct of joint community briefings and events.	1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside personnel[6]	Key Duties	#
			• Offer advice to the DTMI Community Liaison Coordinator on matters pertaining to the PT community liaison policies and procedures. • Facilitate the effective transfer of relevant information obtained from through the Contact Centre to the PT IMT.	
DTMI IMT Logistics	Deputy Logistic Officer	Deputy Logistics Section Chief	• As part of the Logistics Team, assist the Logistics Officer in the performance of their duties in relation to the provision of supplies to sustain the response effort. • Facilitate the acquisition of appropriate supplies through the PTs existing OSRL, AMOSC and private contract arrangements. • Collects Request Forms from DTMI to action via PT IMT. **(Note this individual must have intimate knowledge of the relevant PT logistics processes and contracts)**	1
DTMI IMT Finance-Accounts/ Financial Monitoring	Deputy Finance Officer	Deputy Finance Section Chief	• As part of the Finance Team, assist the Finance Officer in the performance of their duties in relation to the setting up and payment of accounts for those services acquired through the PTs existing OSRL, AMOSC and private contract arrangements. • Facilitate the communication of financial monitoring information to the PT to allow them to track the overall cost of the response. • Assist the Finance Officer in the tracking of financial commitments through the response, including the supply contracts commissioned directly by DTMI and to be charged back to the PT.	1
DTMI IMT Operations	Deputy Operations Officer	Deputy Operations Section Chief	• As part of the Operations Team, assist the Operations Officer in the performance of their duties in relation to the implementation and management of operational activities undertaken to resolve an incident. • Facilitate effective communications and coordination between the PT Operations Section and the DTMI Operations Section. • Offer advice to the DTMI Operations Officer on matters pertaining to PT incident response procedures and requirements. • Identify efficiencies and assist to resolve potential conflicts around resource allocation and simultaneous operations of PT and DTMI response efforts.	1
DTMI IMT Operations – Waste Management	Deputy Waste Management Coordinator	Deputy Waste Coordinator (Materials)	• As part of the Operations Team, assist the Waste Management Coordinator in the performance of their duties in relation to the provision of the management and disposal of waste collected in State waters. • Facilitate the disposal of waste through the PT's existing private contract arrangements related to waste management and in line with legislative and regulatory requirements. • Collects Request Forms from DTMI to action via PT IMT.	1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside personnel[6]	Key Duties	#
DTMI FOB Operations Command	Deputy Division Commander	FOB Deputy Incident Commander	• As part of the Field Operations Team, assist the Division Commander in the performance of their duties in relation to the oversight and coordination of field operational activities undertaken in line with the IMT Operations Section's direction. • Provide a direct liaison between the PT FOB and DTMI FOB. • Facilitate effective communications and coordination between the PT Division Commander and the DTMI Division Commander. • Offer advice to the DTMI Division Commander on matters pertaining to PT incident response policies and procedures. • Assist the Safety Coordinator deployed in the FOB in the performance of their duties, particularly as they relate to PT employees or contractors. • Offer advice to the Safety Coordinator deployed in the FOB on matters pertaining to PT safety policies and procedures.	1

APPENDIX G DTMI LIAISON OFFICER RESOURCES TO WOODSIDE

Once DTMI activates a State waters/ shorelines IMT, DTMI will make available the following roles to Woodside.

Area	DTMI Liaison Role	Personnel Sourced from	Key Duties	#
Woodside CMT	DTMI Liaison Officer (prior to DTMI assuming Controlling Agency) / Deputy Incident Controller – State waters (after DTMI assumes Controlling Agency)	DTMI	• Facilitate effective communications between DTMI's SMPC/ Incident Controller and the Petroleum Titleholder's appointed CMT Leader / Incident Controller. • Provide enhanced situational awareness to DTMI of the incident and the potential impact on State waters. • Assist in the provision of support from DTMI to the Petroleum Titleholder. • Facilitate the provision technical advice from DTMI to the Petroleum Titleholder Incident Controller as required.	1
Woodside CIMT Public Information – Media	DTMI Media Liaison Officer	DTMI	• Provide a direct liaison between the PT Media team and DTMI IMT Media team. • Facilitate effective communications and coordination between the PT and DTMI media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DTMI Information & Warnings team. • Offer advice to the PT Media Coordinator on matters pertaining to DTMI and wider Government media policies and procedures.	1
			Total DTMI personnel initial requirement to Woodside	**2**

CONTENTS

Executive Summary 7

1 INTRODUCTION 9

1.1 Overview 9
1.2 Purpose 9
1.3 Scope 9
1.4 Oil spill response document overview 9

2 RESPONSE PLANNING PROCESS 15

2.1 Response planning process outline 17
2.1.1 Response Planning Assumptions 18
2.2 Environment plan risk assessment (credible spill scenarios) 19
2.2.1 Hydrocarbon characteristics 22
2.3 Hydrocarbon spill modelling 22
2.3.1 Stochastic modelling 22
2.3.2 Deterministic modelling 23
2.3.3 Response planning thresholds for surface and shoreline hydrocarbon exposure 24
2.3.4 Spill modelling results 28

3 IDENTIFY RESPONSE PROTECTION AREAS (RPAs) 30

3.1 Identified sensitive receptor locations 30
3.2 Identify Response Protection Areas (RPAs) 31

4 NET ENVIRONMENTAL BENEFIT Analysis (NEBA) 32

4.1 Pre-operational / Strategic NEBA 33
4.2 Stage 1: Evaluate data 33
4.2.1 Define the scenario(s) 33
4.3 Stage 2: Predict Outcomes 33
4.4 Stage 3: Balance trade-offs 33
4.5 Stage 4: Select Best Response Options 33
4.5.1 Determining potential response options 33

5 HYDROCARBON SPILL ALARP PROCESS 37

5.1 Monitor and evaluate 39
5.1.1 Response need based on predicted consequence parameters 39
5.1.2 Environmental performance based on need 40
5.2 Source Control via vessel Shipboard Oil Pollution Emergency Plan (SOPEP) 42
5.2.1 Environmental performance based on need 42
5.3 Shoreline Clean-up 43
5.3.1 Response need based on predicted consequence parameters 43
5.3.2 Environmental performance based on need 47
5.4 Oiled wildlife response (including hazing) 49
5.4.1 Response need based on predicted consequence parameters 49
5.4.2 Environmental performance based on need 52
5.5 Waste Management 53
5.5.1 Response need based on predicted consequence parameters 53
5.5.2 Environmental performance based on need 54
5.6 Operational and Scientific monitoring 55

EXECUTIVE SUMMARY

Woodside Energy Ltd (Woodside), as Operator of the Browse development, has developed its oil spill preparedness and response position for the Browse Geophysical and Geotechnical (GPGT) Surveys - Commonwealth activities (the 'Petroleum Activity').

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to As Low as Reasonably Practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental impacts resulting from an unplanned loss of hydrocarbon containment associated with the Petroleum Activity described in the Environment Plan (EP). This document outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness.

A summary of the key facts and references to additional detail within this document are presented below.

Table 0-1: Summary of the key details for assessment

Key details of assessment	Summary			Reference to additional detail
Worst Case Credible Scenario	Credible Scenario-01 (CS-01): Vessel collision at Operational Area A. 14°1'24.07"S, 121°54'40.46"E. Instantaneous surface release of 200 m^3 of Marine Gas Oil (MGO). 5% residual component of 10 m^3.			Section 2.2
	Credible Scenario-02 (CS-02): Vessel collision at Operational Area B. 14°23′45.39"S, 121°41'48.81"E. Instantaneous surface release of 200 m^3 of Marine Gas Oil (MGO). 5% residual component of 10 m^3.			
Hydrocarbon Properties	MGO is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. Evaporation rates will increase with temperature, but in general about 40% should evaporate within the first 24 hours (BP < 265 °C). Evaporation then slows, with ~5% of the remaining mass lost over the following six days. Only a small fraction (~2%) is degraded by microbial and photochemical processes during the first week. The low viscosity of MGO fuels require relatively low wave energy to break up floating slicks and suspend MGO as droplets mixed into the wave-affected layer of the ocean surface. These suspended droplets will be buoyant but will remain in suspension when there is sufficient wave energy. Waves generated by wind speeds as low as 6–7 knots on the open ocean will start to suspend films of floating MGO. Entrainment rates will increase significantly as sea conditions become more energetic. One effect of suspension will be reduction of the evaporation rates of the component hydrocarbons.			Section 6.9.1 of the EP Appendix A of the First Strike Plan
Modelling Results	Stochastic modelling A quantitative, stochastic assessment has been undertaken for credible spill scenarios to help assess the environmental risk of a hydrocarbon spill. A total of 200 replicate simulations were completed for the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (50 simulations per quarter).			Section 2.3
		CS-01: Instantaneous hydrocarbon release of 200 m^3 MGO caused by vessel collision in Operational Area A (WCCS)	CS-02: Instantaneous hydrocarbon release of 200 m^3 MGO caused by vessel collision in Operational Area B

	Minimum time to floating hydrocarbon contact with the offshore edge(s) of any shoreline receptor polygon (at a concentration of 10 g/m^2)	1 hour – Scott Reef North and Scott Reef South	15 hours – Scott Reef South	
	Minimum time to commencement of hydrocarbon accumulation at any shoreline receptor (at a concentration of 100 g/m^2)	10 hours – Scott Reef South (including Sandy Islet)	54 hours – Scott Reef South (including Sandy Islet)	
	Maximum accumulated hydrocarbon volume at any individual shoreline receptor (averaged over all replicate simulations)	2 m^3 – Scott Reef South (including Sandy Islet)	<1 m^3 – Scott Reef South (including Sandy Islet)	
	Maximum accumulated hydrocarbon volume at any individual shoreline receptor (worst case replicate simulation)	80 m^3 – Scott Reef South (including Sandy Islet)	11 m^3 – Ashmore Reef	
	Maximum cumulative hydrocarbon volume accumulated across all shoreline receptors contacted by accumulated hydrocarbons	80 m^3 – Scott Reef South (including Sandy Islet) (only one receptor predicted to be contacted)	11 m^3 – Ashmore Reef	
	Minimum time to dissolved hydrocarbon contact with the offshore edges of any receptor polygon (at a exposure value of 10 ppb)	1 hour – Scott Reef North	10 hours – Scott Reef South	
Net Environmental Benefit Analysis	Monitor and evaluate, source control, shoreline clean-up, oiled wildlife response, are all identified as potentially having a net environmental benefit (dependent on the actual spill scenario) and carried forward for further assessment.			Section 4
ALARP evaluation of selected response techniques	The evaluation of the selected response techniques shows the proposed controls reduced the risk to an ALARP and acceptable level for the risk presented in Section 2, without the implementation of considered additional, alternative or improved control measures.			Section 6

1 INTRODUCTION

1.1 Overview

Woodside Energy Ltd (Woodside), as Operator of the Browse development, has developed its oil spill preparedness and response position for the Browse Geophysical and Geotechnical Surveys – Commonwealth activities, hereafter known as the Petroleum Activity. This document outlines Woodside's decisions and techniques for responding to a hydrocarbon loss of containment event and the process for determining its level of hydrocarbon spill preparedness.

1.2 Purpose

This document, together with the documents listed below, meet the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations) relating to hydrocarbon spill response arrangements.

- The Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth) Environment Plan (EP)
- Hydrocarbon Spill Australia Regulatory Framework[1]
- The Browse to NWS Project Geophysical and Geotechnical Surveys (Commonwealth) Oil Pollution Emergency Plan (OPEP) including
- Oil Pollution First Strike Plan (FSP)
  - Operational and Scientific Monitoring Bridging Implementation Plan (OSM BIP)
  - Relevant Operations Plans
  - Relevant Tactical Response Plans (TRPs)
  - Relevant Supporting Plans
  - Data Directory.

1.3 Scope

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to ALARP and an acceptable level. It achieves this by evaluating response options to address the potential environmental risks and impacts resulting from an unplanned loss of hydrocarbon containment associated with the Petroleum Activity described in the EP. This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness. It should be read in conjunction with the documents listed in Table 1-1. The location of the Petroleum Activity is shown in Figure 3-1 of the EP.

1.4 Oil spill response document overview

The documents outlined in Table 1-1 and Figure 1-1 are collectively used to manage the preparedness and response for a hydrocarbon release.

The Oil Pollution First Strike Plan (FSP) contains a pre-operational Net Environmental Benefit Analysis (NEBA) summary, outlining the selected response techniques for this Petroleum Activity. Relevant Operational Plans to be initiated for associated response techniques are identified in the FSP and relevant forms to initiate a response are appended to the FSP.

The process to develop an Incident Action Plan (IAP) begins once the oil pollution FSP is underway. The IAP includes inputs from monitor and evaluate and operational monitoring activities and the operational NEBA (Section 4). Planning, coordination and resource management are initiated by the Corporate Incident

1 In accordance with Regulation 56 of the Environmental Regulations, references to the Hydrocarbon Spill Australia Regulatory Framework within this document refer to the version submitted with accepted North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan, which is available on NOPSEMA's website at: https://docs.nopsema.gov.au/A1282743

Management Team (CIMT). In some instances, technical specialists may be utilised to provide expert advice. The planning may also involve liaison officers from supporting government agencies.

During each operational period, field reports are continually reviewed to evaluate the effectiveness of response operations. In addition, the operational NEBA is continually reviewed and updated to confirm the response techniques implemented continue to result in a net environmental benefit (Section 4).

The response will continue as described in Section 5 until the response termination criteria have been met.

2 RESPONSE PLANNING PROCESS

This document details Woodside's process for identifying potential response options for the hydrocarbon release scenarios, identified in the EP. Figure 2-1 outlines the interaction between Woodside's response, planning, preparedness and selection process.

This structure has been used because it shows how the planning and preparedness activities inform a response and provides indicative guidance on what activities would be undertaken, in sequential order, if a real event were to occur. The process also evaluates alternative, additional and/or improved control measures specific to the Petroleum Activity.

The Browse to NWS Project Geophysical and Geotechnical Surveys (Commonwealth) Oil Pollution First Strike Plan (FSP) then summarises the outcome of the response planning process and provides initial response guidance and a summary of ongoing response activities if an incident were to occur.

2.1 Response planning process outline

This document is expanded below to provide additional context on the key steps in determining capability, evaluating ALARP and hydrocarbon spill response requirements.

- Section 1: Introduction
- Section 2: Response planning process
  - identification of worst-case credible scenario(s) (WCCS)
  - spill modelling for WCCS.
- Section 3: Identify response protection areas (RPAs)
  - areas predicted to be contacted at concentration >100 g/m^2.
- Section 4: Net environmental benefit analysis (NEBA)
  - pre-operational NEBA (during planning/ALARP evaluation): this must be reviewed during the initial response to an incident to confirm its accuracy
  - selected response techniques prioritised and carried forward for ALARP assessment.
- Section 5: Hydrocarbon spill ALARP process
  - determines the response need based on predicted consequence parameters.
  - details the environmental performance of the selected response options based on need.
  - sets the environmental performance outcomes, environmental performance standards and measurement criteria.
- Section 6: ALARP evaluation
  - evaluates alternative, additional, and improved options for each response technique to demonstrate the risk has been reduced to ALARP.
  - provides a detailed ALARP assessment of selected control measure options against:
    - predicted cost associated with implementing the option
    - predicted change to environmental benefit
    - predicted effectiveness / feasibility of the control measure.
- Section 7: Environmental risk assessment of selected response techniques
  - evaluation of impacts and risks from implementing selected response options.
- Section 8: ALARP conclusion
- Section 9: Acceptability conclusion

This document is protected by copyright. 2.1.1 Response Planning Assumptions

Figure 2-2 illustrates the initial steps of a response to an oil spill event and, where available, the indicative timing. For the latter stages, the timing will be specific to the selective response option.

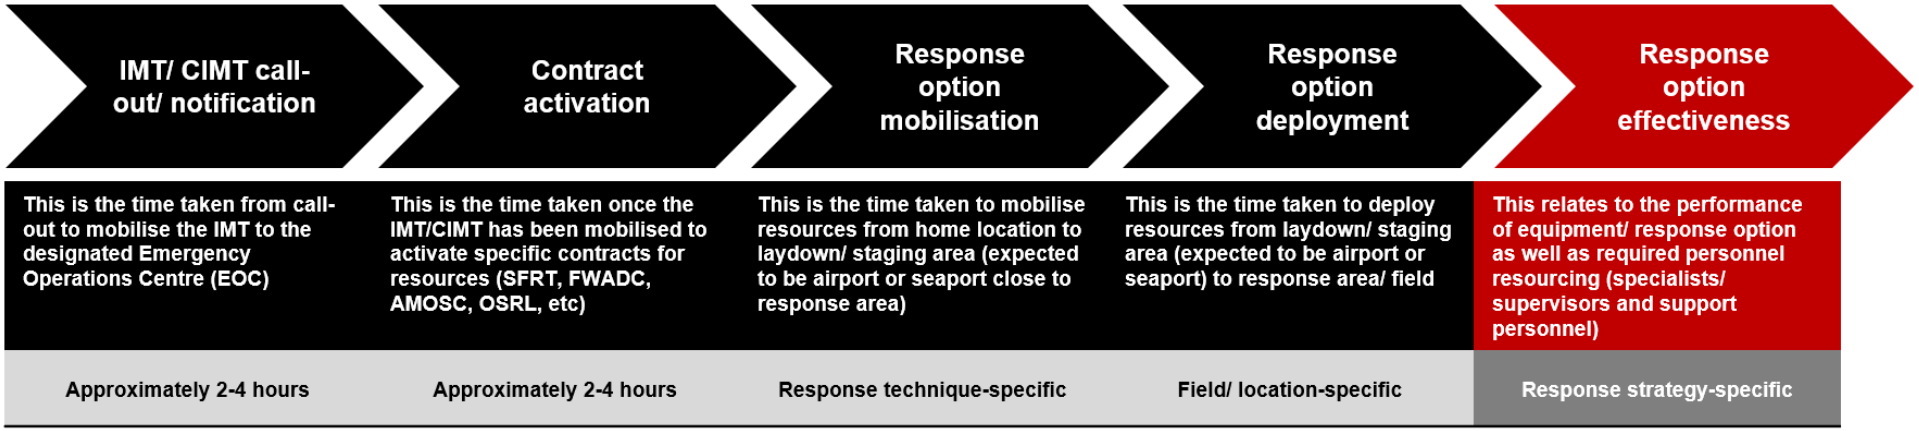

Figure 2-2: Response planning assumption – timing, resourcing and effectiveness

2.2 Environment plan risk assessment (credible spill scenarios)

Potential hydrocarbon release scenarios from the Petroleum Activity have been identified during the risk assessment process (Section 6.9 of the EP). Further descriptions of risk, impacts and mitigation measures (which are not related to hydrocarbon preparedness and response) are provided in Section 6 of the EP. Two unplanned events or credible spill scenarios for the Petroleum Activity have been selected as representative across types, sources and incident/response levels, up to and including the WCCS.

Table 2-1 presents the credible scenarios for the Petroleum Activity. The WCCS for the activity is then used for response planning purposes, as all other scenarios are of a lesser scale and extent. By demonstrating capability to manage the response to the WCCS, Woodside assumes other scenarios that are smaller in nature and scale can also be managed by the same capability. Response performance measures have been defined based on a response to the WCCS.

Two oil spill modelling scenarios were run at different locations within the operational area (RPS 2026). The location of CS-01 was selected as the worst-case location for the Petroleum Activity due to its proximity to Scott Reef. The location of CS-01 and CS-02 are shown in Figure 2-3.

The selection of WCCS for OSM planning purposes is discussed in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

2.2.1 Hydrocarbon characteristics

Hydrocarbon characteristics, including modelled weathering data and ecotoxicity, are included in Section 6.9.1.2 of the EP.

Marine Gas Oil

Marine Gas Oil (MGO) is typically classed as an International Tanker Owners Pollution Federation (ITOPF) Group I/II oil. Group I oils are non-persistent and tend to dissipate completely through evaporation within a few hours and do not normally form emulsions.

MGO is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. In general, about 6% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 35% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 54% should evaporate over several days (265 °C < BP < 380 °C). Approximately 5% of the oil is shown to be persistent. The aromatic content of the oil is approximately 3%.

If released in the marine environment and in contact with the atmosphere (i.e., surface spill), approximately 41% by mass of this oil is predicted to evaporate over the first couple of days depending upon the prevailing conditions, with further evaporation slowing over time. The heavier (low volatility) components of the oil tend to entrain into the upper water column due to wind-generated waves but can subsequently resurface if wind-waves abate. Therefore, the heavier components of this oil can remain entrained or on the sea surface for an extended period, with associated potential for dissolution of the soluble aromatic fraction.

2.3 Hydrocarbon spill modelling

Oil spill trajectory modelling (OSTM) tools are used for environmental impact assessment and during response planning to understand spatial scale and timeframes for response operations. Woodside recognises there is a degree of uncertainty related to the use of modelling data and has subsequently utilised conservative approaches to volumes, weathering, spatial areas, timing and response effectiveness to scale capability to need.

The Oil Spill Model and Response System (OILMAP) and Integrated Oil Spill Impact Model System (SIMAP) models are both used for stochastic and deterministic trajectory modelling. They have been developed over three decades of planning, exercises, actual responses, several peer reviews, and validation studies. OILMAP was originally derived from the United States Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Type A model (French et al. 1996), for assessing marine transport, biological impact and economic damage that was also used under the United States Oil Pollution Act 1990 Natural Resource Damage Assessment (NRDA) regulations. Notable spills where the model has been used and validated against actual field observations include, Exxon Valdez (French McCay 2004), North Cape Oil Spill (French McCay 2003), along with an assessment of 20 other spills (French McCay and Rowe, 2004). In addition, test spills designed to verify fate, weathering and movement algorithms have been conducted regularly and in a range of climate conditions (French and Rines 1997; French et al. 1997; Payne et al. 2007; French McCay et al. 2007).

Further to this, the algorithms have been updated using the latest findings from the Macondo/Deepwater Horizon well blowout in the Gulf of Mexico and validated according to the Deepwater Horizon (DWH) oil spill in support of the NRDA (Spaulding et al. 2015; French McCay et al. 2015, 2016). Finally, the OILMAP and SIMAP models have been used extensively in Australia to prosecute pollution offences, predict discharge locations and likely spill volumes based on weathering and surveillance observations, and has been used as expert witness evidence in Australian court proceedings, aiding the prosecution to determine spill quantum estimates.

2.3.1 Stochastic modelling

Quantitative, stochastic assessments have been undertaken for the credible spill scenarios (refer to Table 2-1) to help assess the environmental consequences of a hydrocarbon spill.

A total of 200 replicate simulations were completed for each of the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (50 simulations per quarter). Further details relating to the assessments for the scenarios can be found in Section 6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

2.3.1.1 Environmental impact thresholds – Environment that May Be Affected (EMBA) and hydrocarbon exposure

The outputs of the stochastic spill modelling are used to assess the potential environmental impact from the credible scenarios. The stochastic modelling results are used to delineate areas of the marine and shoreline environment that could be exposed to hydrocarbon levels exceeding environmental impact threshold concentrations. The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA and is discussed further in Section 6 of the EP. As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean mechanism of transportation, a different EMBA is presented for each fate within the EP.

A conservative approach – adopting accepted accumulation thresholds for impacts on the marine environment – is used to define the EMBA. These hydrocarbon thresholds are presented in Table 2-2 below and described in Section 6 of the EP.

Table 2-2: Summary of thresholds applied to the stochastic hydrocarbon spill modelling to determine the EMBA and environmental impacts

Hydrocarbon	Surface hydrocarbon (g/m^2)	Dissolved hydrocarbon (ppb)	Entrained hydrocarbon (ppb)	Accumulated hydrocarbon (g/m^2)
EMBA				
Diesel	10	10	1,000	100
Operational and scientific monitoring (OSM) assessment (see ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy)				
All hydrocarbon types	1	10	10	10

2.3.2 Deterministic modelling

Response planning

Woodside uses deterministic modelling to evaluate risks and impacts and response capability requirements. For planning and scaling the clean-up element of the response, deterministic modelling is undertaken where initial stochastic modelling has indicated that hydrocarbons are present at the minimum feasible clean-up exposure values of ≥50 g/m^2 for floating hydrocarbons, and/or ≥100 g/m^2 for shoreline accumulations and where such shoreline contact is predicted at multiple locations. The deterministic modelling outputs are then used to scale the required capability for the offshore (surface dispersant and containment and recovery) and/or shoreline responses.

Stochastic modelling for CS-01 predicted shoreline contact was localised to one receptor location (Scott Reef South [including Sandy Islet]) above the 100 g/m^2 shoreline response exposure value. Similarly, modelling predicted floating hydrocarbons exceeding the exposure value of 50 g/m^2 to also be localised around Scott Reef North and South. Deterministic modelling is therefore not required and stochastic modelling has thus been used to scale the clean-up response within this assessment.

Operational and scientific monitoring

Deterministic modelling may also be used for planning Operational and Scientific Monitoring (OSM) activities. This is undertaken where stochastic modelling predicts that the existing response capability, required to resource monitoring at receptors forecast to be contacted by floating, shoreline and/or dissolved hydrocarbons (at ≥10% probability and within the initial 14 days), has been exceeded. For this Petroleum Activity, stochastic modelling does not predict that existing capability would be exceeded and therefore deterministic modelling for OSM planning is not required. Therefore, stochastic modelling has been used to plan the OSM activities as detailed in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

Woodside is committed to a realistic, scalable response capability commensurate to the level of risk and able to be practically implemented and feasibly sustained.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

2.3.3 Response planning thresholds for surface and shoreline hydrocarbon exposure

Exposure values to determine the EMBA and inform OSM are used to predict and assess environmental impacts, however they do not appropriately represent the exposure values at which an effective response can be implemented.

Additional response exposure values are used for response planning and to determine areas where response techniques would be most effective. These exposure values are provided as a guide for response planning based on case studies that have demonstrated some response strategies (e.g. containment and recovery, chemical dispersant application) require certain oil spill thicknesses and conditions to be effective.

Response planning exposure values assist with understanding worst-case spill scenario response strategy capability requirements when used in conjunction with oil spill trajectory modelling results. Modelling informs the predicted spatial extent of the spill at certain response exposure values, which in turn can inform response strategy capability.

2.3.3.1 Surface hydrocarbon concentrations

Table 2-3: Surface hydrocarbon exposure values for response planning

Surface hydrocarbon exposure value (g/m^2)	Description	Bonn Agreement Oil Appearance Code	Mass per area (m^3/km^2)
>10	Predicted minimum exposure value for commencing monitor and evaluate[2]	Code 3 – Dull metallic colours	5–50
50	Predicted minimum floating oil exposure value for containment and recovery and surface dispersant application [3]	Code 4 – Discontinuous true oil colour	50–200
100	Predicted optimum floating oil exposure value for containment and recovery and surface dispersant application	Code 5 – Continuous true oil colour	>200
Shoreline hydrocarbon exposure value (g/m^2)	**Description**	**National Plan Guidance on Oil Contaminated Foreshores**	**Mass per area (m^3/km^2)**
100	Predicted minimum shoreline accumulation exposure value for shoreline assessment operations	Stain	>100
250	Predicted minimum exposure value for commencing shoreline clean-up operations	Level 3 – Thin Coating	200–1,000

The surface thickness of oil at which dispersants are typically effective is approximately 100 g/m^2. However, substantial variations occur in the thickness of the oil within the slick, and most fresh crude oils spread within a few hours, so overall the average thickness is 0.1 mm (or approx. 100 g/m^2 ITOPF 2011). Additionally, the recommended rate of application for surface dispersant is typically one part dispersant to 20 or 25 parts of spilled oil. These figures assume a 0.1 mm slick thickness, averaged over the thickest part of the spill, to calculate a litres/hectare application rate from vessels and aircraft. In practice this can be difficult to achieve as it is not possible to accurately assess the thickness of the floating oil.

Some degree of localised over-dosage and under-dosage is inevitable in dispersant response. An average oil layer thickness of 0.1 mm is often assumed, although the actual thickness can vary over a wide range (from less than 0.0001 mm to more than 1 mm) over short distances (International Petroleum Industry Environment Conservation Association [IPIECA] 2015).

[2] Monitor and evaluate will be undertaken from the outset of a spill whether or not this exposure value has been reached. Monitoring is needed throughout the response to assess the nature of the spill, track its location and inform the need for any additional monitoring and/or response techniques. It also informs when the spill has entered State Waters and control of the incident passes to statutory authorities e.g. Western Australia Department of Transport and Major Infrastructure (WA DTMI) or AMSA.

[3] At 50 g/m^2, containment and recovery and surface dispersant application operations are not expected to be particularly effective. This exposure value represents a conservative approach to planning response capability and containing the spread of surface oil.

Guidance from the Australian Maritime Safety Authority (AMSA, 2020) indicates spreading of spills of Group II or III products will rapidly decrease slick thickness over the first 24 hours of a spill resulting in the potential requirement of up to a ten (10) fold increase in capability on day 2 to achieve the same level of performance.

Further guidance from the European Maritime Safety Authority (EMSA) states spraying the 'metallic' looking area of an oil slick (Bonn Agreement Oil Appearance Code [BAOAC] 3, approx. 5 – 50 µm) with dispersant from spraying gear designed to treat an oil layer 0.1 mm (100 µm) thick, will inevitably cause dispersant over-treatment by a factor of 2 to 20 times (EMSA 2012).

Therefore, dispersant application should be concentrated on the thickest areas of an oil slick and Woodside intends on applying surface dispersants to only BAOAC 4 and 5. Spraying areas of oil designated as BAOAC Code 4 (Discontinuous true oil colour) with dispersant will, on average, deliver approximately the recommended treatment rate of dispersant.

Spraying areas of oil designated as BAOAC Code 5 with dispersant (Continuous true oil colour and more than 0.2 mm thick) will, on average, deliver approximately half the recommended treatment rate of dispersant. Repeated application of these areas of thicker oil, or increased dosage ratios, will be required to achieve the recommended treatment rate of dispersant (EMSA 2012).

Guidance from the National Oceanic and Atmospheric Administration (NOAA) in the United States is found in the document: *Characteristics of Response Strategies: A Guide for Spill Response Planning in Marine Environments 2013 (NOAA 2013).* This guide outlines advice for response planning across all common techniques, including surface dispersant spraying and containment and recovery. It states oil thickness can vary by orders of magnitude within distinct areas of a slick, thus the actual slick thickness and oil distribution of target areas are crucial for determining response method feasibility. Further to this, ITOPF also states in terms of oil spill response, sheen can be disregarded as it represents a negligible quantity of oil, cannot be recovered or otherwise dealt with to a significant degree by existing response techniques, and is likely to dissipate readily and naturally (ITOPF, 2014a, 2014b).

Figure 2-4 below from AMSA's Identification of Oil on Water – Aerial Observation and Identification Guide (AMSA 2014) shows expected percent coverage of surface hydrocarbons as a proportion of total surface area. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness exposure values for effective response.

From this information and other relevant sources (Allen and Dale 1996, EMSA 2012, Spence 2018) the surface exposure value of 50 g/m^2 was chosen as an average/equilibrium thickness for offshore response operations (50 g/m^2 is an average of 50% coverage of 0.1 mm Bonn Agreement Code 4 – discontinuous true oil colour, or 25% coverage of 0.2 mm Bonn Agreement Code 5 – continuous true oil colour which would represent small patches of thick oil or wind-rows).

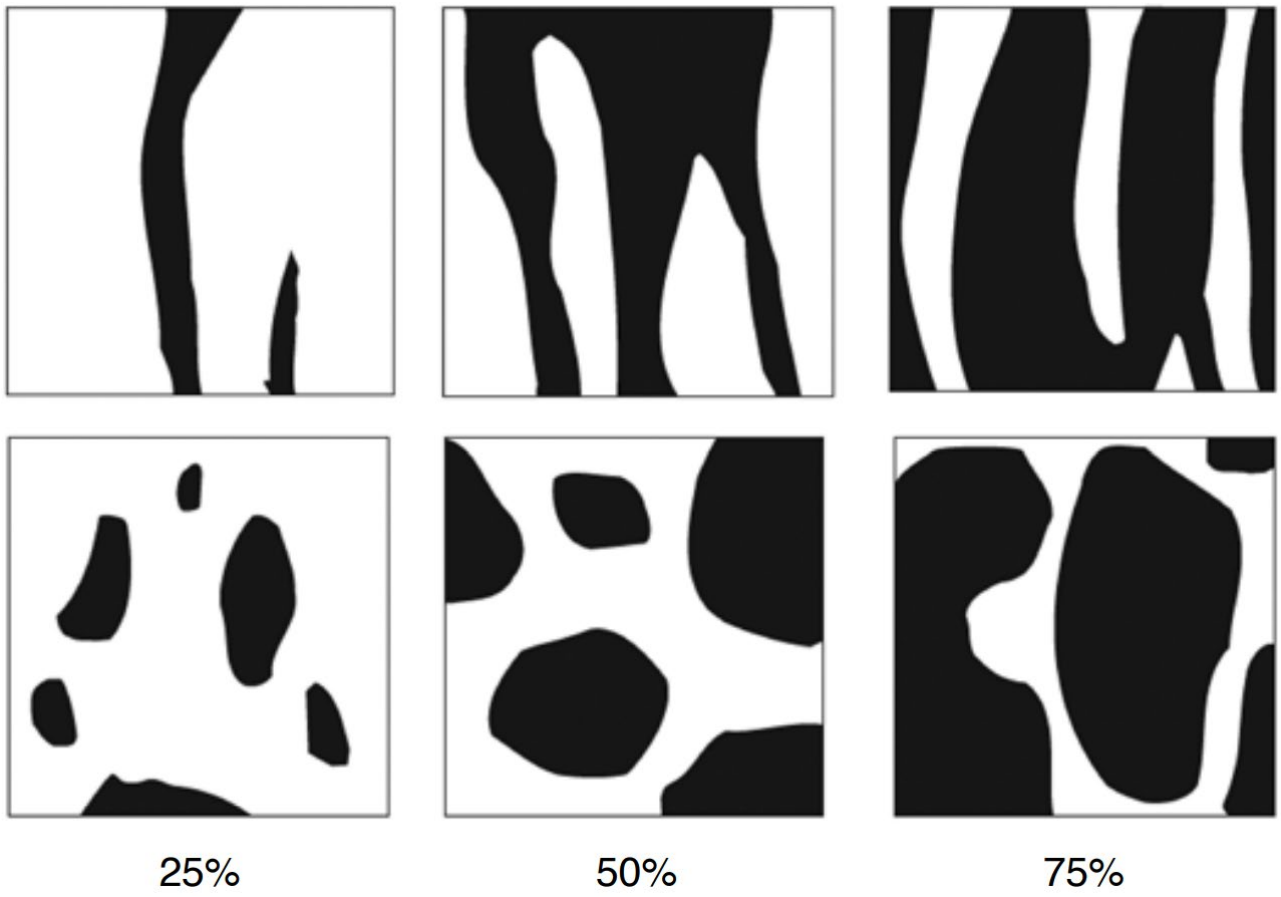

Figure 2-4: Proportion of total area coverage (AMSA, 2014)

Figure 2-5 illustrates the general relationships between on-water response techniques and slick thickness. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

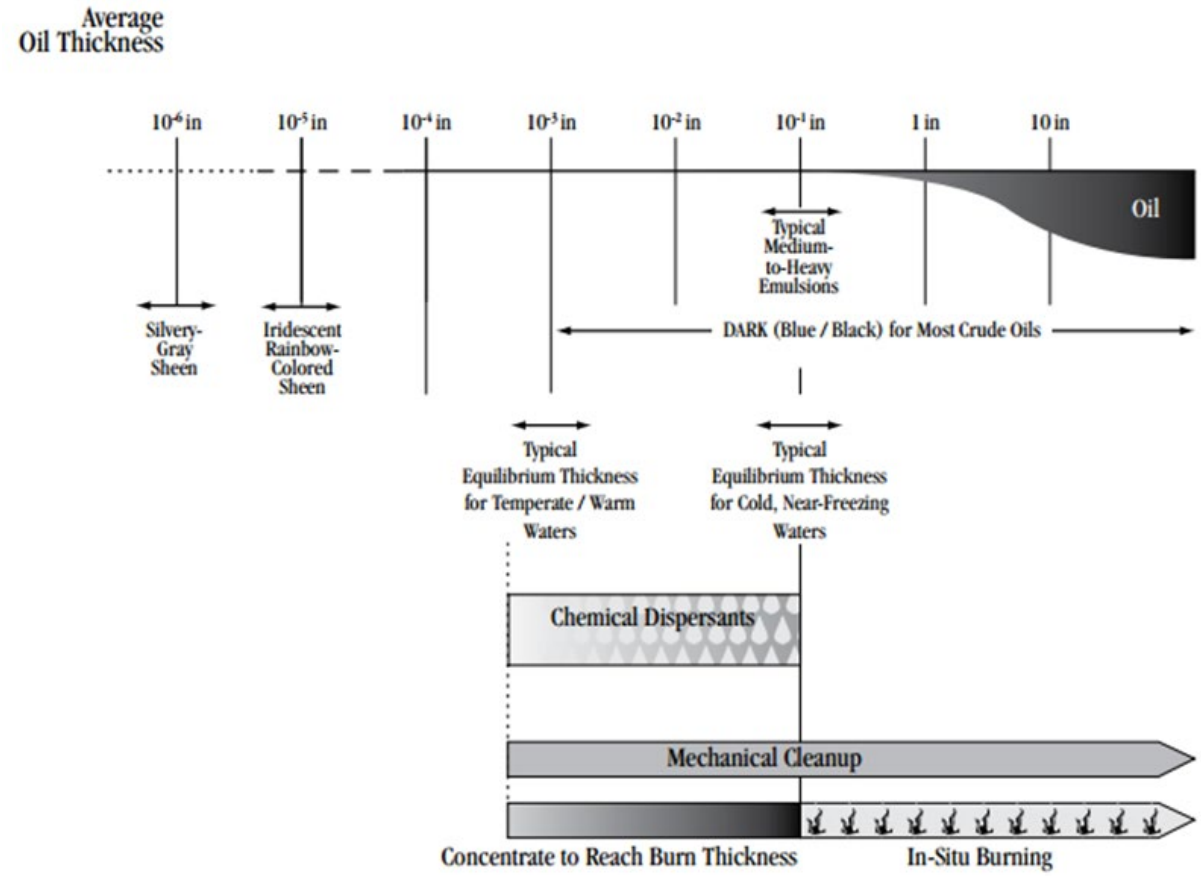

Figure 2-5: Oil thickness versus potential response options (from Allen & Dale 1996)

Wind and wave influence on the feasibility of response operations are also considered below (adapted from NOAA 2013):

- Mechanical Clean-up: Effectiveness drops significantly because of entrainment and/or splash-over as short period waves develop beyond 2–3 ft. (0.6–0.9m) in height. The ability to contain and recover oil decreases rapidly as the slick thickness becomes less than a thousandth of an inch (0.025 mm) (i.e., very low oil encounter rates). Waves and wind can also be limiting factors for the safe operation of vessels and aircraft.
- Dispersants: Effective dispersion requires a threshold amount of surface mixing energy (typically a few knots of wind and a light chop) to be effective. At higher wind and sea conditions, dispersant evaporation and wind-drift will limit chemical dispersion application effectiveness; and, there is a point (~25-kt winds, 10-ft waves) where natural dispersion forces become greater, particularly for light oils. Because of droplet size versus slick thickness constraints and application dose-rate limitations, dispersants work best on slick thicknesses of a few thousandths (approx. 50 g/m^2) to hundredths of an inch (approx. 250 g/m^2). Improved dispersants, higher dose rates, and multiple-pass techniques may extend the thickness limitation to 0.1 inch (2.5 mm) or more.

As offshore response operations (surface dispersant and containment and recovery) are intended to be undertaken at the thickest part of the slick, 50 g/m^2 and 100 g/m^2 (aligning with the lower limit of BAOAC 4 and midpoint of BAOAC 5) are utilised by Woodside when using deterministic modelling (if required) to identify the most likely locations for surface dispersant application and containment and recovery operations.

2.3.3.2 Surface hydrocarbon viscosity

Table 2-4: Surface hydrocarbon viscosity thresholds

Surface viscosity threshold (cSt)	Description	European Maritime Safety Authority (EMSA)	Viscosity at sea temperature (cSt)
5,000*	Predicted optimum viscosity for surface dispersant operations	Generally possible to disperse	500-5,000
10,000*	Predicted maximum viscosity for effective surface dispersant operations	Sometimes possible to disperse	5,000-10,000

**Measured at sea surface temperature*

Further to the required thickness for surface dispersant application and containment and recovery to be deployed effectively as outlined above, changes to viscosity will also limit the treatment of offshore response techniques. As outlined in the EMSA Manual on the Applicability of Oil Spill Dispersants (EMSA, 2012), guidance around changes to viscosity and likely effectiveness of surface dispersant application is provided.

This includes the following statements: “It has been known for many years that it is more difficult to disperse a high viscosity oil than a low or medium viscosity oil. Laboratory testing had shown that the effectiveness of dispersants is related to oil viscosity, being highest for modern ‘Concentrate, UK Type 2/3’ dispersants at an oil viscosity of about 1,000 or 2,000 mPa (1,000 – 2,000 cSt) and then declining to a low level with an oil viscosity of 10,000 mPa (10,000 cSt). It was considered that some generally applicable viscosity limit, such as 2,000 or 5,000 mPa (2,000 – 5,000 cSt), could be applied to all oils.”

However, modern oil spill dispersants are generally effective up to an oil viscosity of 5,000 mPa (5,000 cSt) or more, and their performance gradually decreases with increasing viscosity; oils with a viscosity of more than 10,000 cSt are in most cases, no longer dispersible. Guidance from CEDRE (EMSA, 2012) also indicates products with a range of 500 – 5,000 cSt at sea temperature are generally possible to disperse, while 5,000 – 10,000 cSt at sea temperature above pour point are sometimes possible to disperse, with products beyond 10,000 cSt at sea temperature below pour point are generally impossible to disperse.

To support decision making and response planning, a threshold of 10,000 cSt at sea temperature was chosen as a conservative estimate of maximum viscosity for surface dispersant spraying operations.

The thresholds described above are compared with the modelling results for the WCCS (Table 2-5).

2.3.4 Spill modelling results

2.3.4.1 Stochastic modelling results

The scenarios listed in Table 2 1 have been stochastically modelled. The receptors predicted to be contacted by surface (floating) and shoreline exposure values, together with the probability and timing of the contact, and any associated accumulated volumes, are detailed in Table 2-5.

This table covers floating and shoreline contact as it is relevant for planning spill clean-up. Contact within the water column, i.e. the predicted presence of dissolved and entrained hydrocarbons, is relevant for planning operational and scientific monitoring (OSM) activities. As such, these results are included in the OSM planning assessment in ANNEX C, Table C - 1.

It should be noted that the receptor polygons utilised by the modelling software overlap in some cases. This can result in the same shoreline accumulation being captured under a number of receptors. Where this has occurred, the receptors have been grouped and one accumulation listed.

2.3.4.2 Deterministic modelling results

Based upon the stochastic modelling results (Table 2-5), and as discussed in Section 2.3.2, neither scenario meets the trigger criteria for undertaking deterministic modelling, i.e. they do not meet the minimum exposure values required for feasible offshore and shoreline clean-up, or the criteria for OSM deterministic modelling. As such, no deterministic modelling has been undertaken for this Petroleum Activity.

3 IDENTIFY RESPONSE PROTECTION AREAS (RPAS)

In a response, monitor and evaluate – including trajectory modelling and vessel/aerial observations – would be used to predict RPAs that may be impacted. For the purposes of planning and appropriately scaling a response, modelling has been used to identify RPAs as outlined below in Figure 3-1.

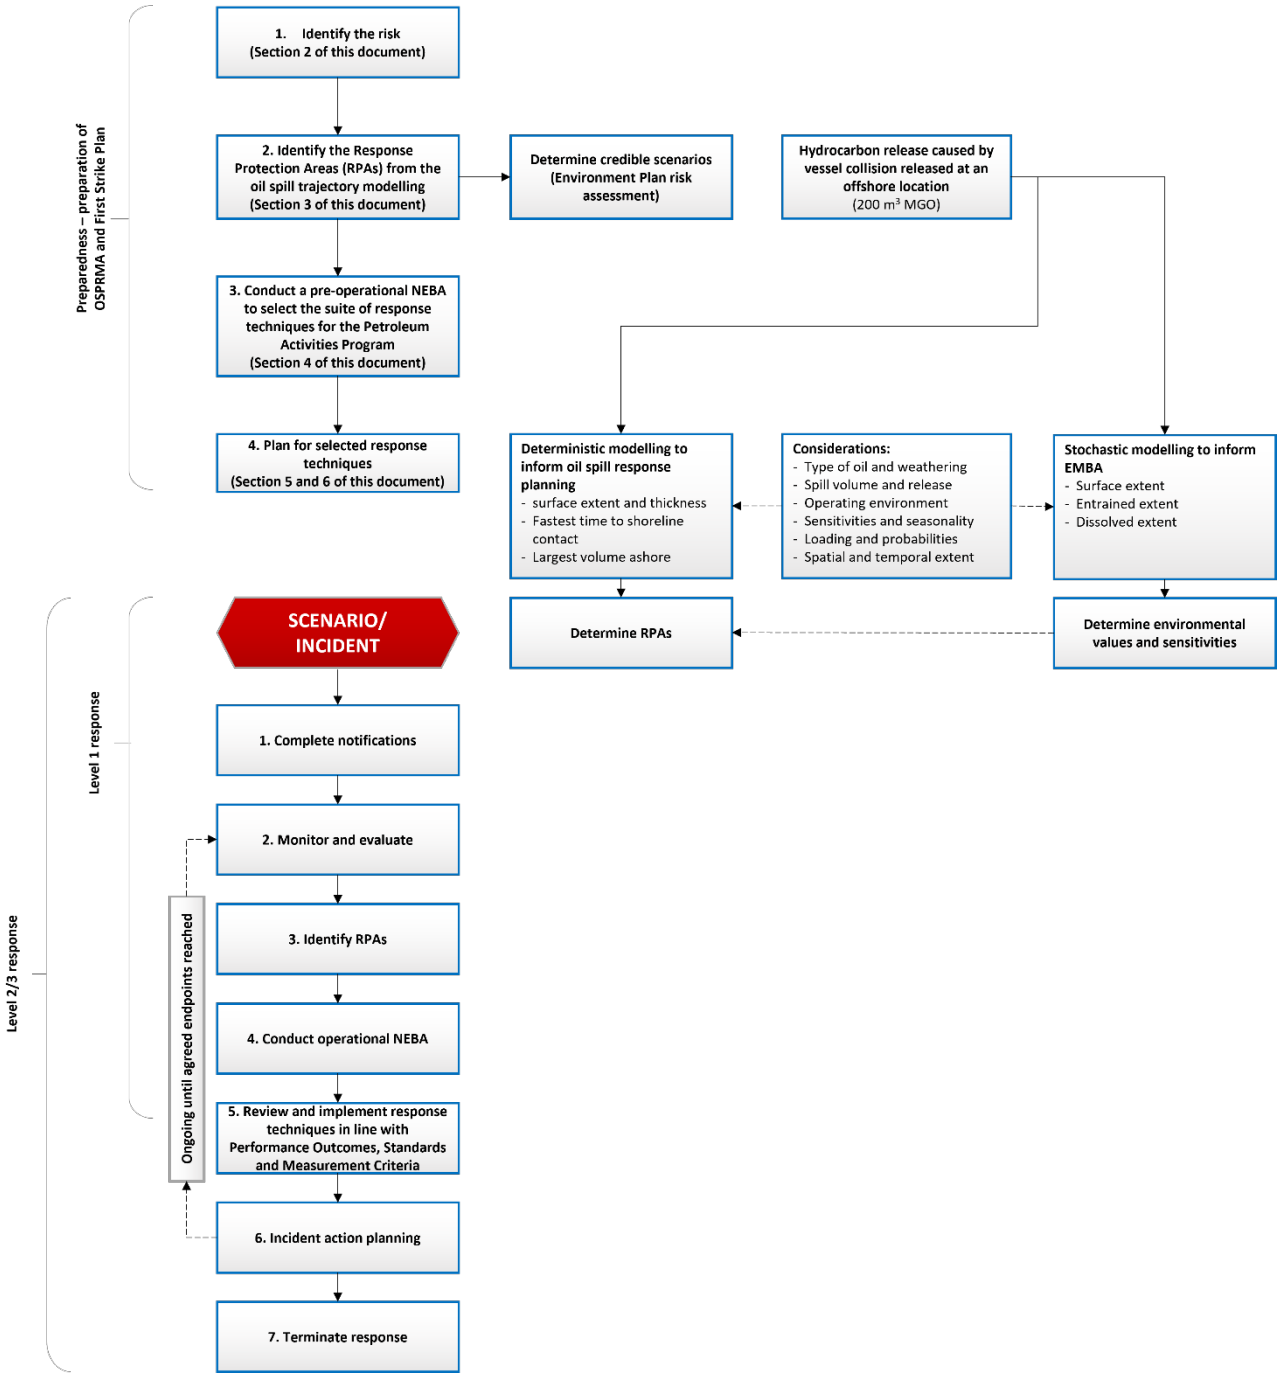

Figure 3-1: Identify Response Protection Areas (RPAs) flowchart

3.1 Identified sensitive receptor locations

Section 6.9.2 of the EP includes the list of sensitive receptor locations that have been identified by stochastic modelling as meeting the requirements outlined below:

- receptors with the potential to incur surface, entrained or shoreline accumulation contact above environmental impact exposure values

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth)

- receptors within the EMBA which meet the following:
  - a number of priority protection criteria/categories
  - International Union for Conservation of Nature (IUCN) marine protected area categories
  - high conservation value habitat and species
  - important socio-economic/heritage value.

3.2 Identify Response Protection Areas (RPAs)

RPAs have been selected on the basis of their environmental ecological, social, economic, cultural and heritage values and sensitivities and the ability to conduct a response based on the minimum response exposure values (Section 2.3.3). It is important to note that the results outlined in Table 3-1 are the combined results of the individual worst-case runs and do not indicate a single worst case credible scenario (where the timings and volumes are all expected from one release).

From the identified sensitive receptors described in Section 6.9.2 of the EP, only those which a shoreline response could feasibly be conducted (accumulation ≥100 g/m^2 for shoreline assessment and/or contact with surface slicks ≥10 g/m^2 for monitor and evaluate and/or oiled wildlife response) have been selected for response planning purposes. While not discounting other sensitivities, these RPAs have been used as the basis for demonstrating the capability to respond to the nature and scale of a spill from the WCCS and prioritising response techniques.

Table 3-1 outlines Response Protection Areas (RPAs) identified for feasible shoreline clean-up from the WCCS stochastic modelling results (CS-01). The full list of sensitive receptors potentially contacted from stochastic modelling (as per EMBA definition) are presented in the existing environment description (Section 4 of the EP) and impact assessment section (Section 6 of the EP) for each respective spill scenario.

The pre-operational NEBA (Annex A) includes additional RPAs contacted at lower exposure values to allow consideration of all feasible response techniques in the planning phase.

The RPAs identified in Table 3-1 are used to plan for the nature and scale of a shoreline response.

Table 3-1: Response Protection Areas (RPAs) from deterministic modelling

Response protection area	Conservation status	IUCN protection category	Minimum time to shoreline contact (above 100 g/m^2) in days [4]	Maximum shoreline accumulation (above 100 g/m^2) in m^3 [5]
Scott Reef South (including Sandy Islet)	Nature Reserve	N/A	3.5	0.4 days (10 hours)

4 This volume and time represent the first time to contact on defined shoreline polygon and the maximum volume ashore for that 24 hour period.

5 This volume and time represent the maximum volume ashore on defined shoreline polygon

4 NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

A Net Environmental Benefit Analysis (NEBA) is a structured process to consider which response techniques are likely to provide the greatest net environmental benefit.

The NEBA process is stage 3 of the preparedness process and typically involves four key steps outlined in Figure 4-1: evaluate data, predict outcomes, balance trade-offs, and select response options. These steps are followed both in the planning/preparedness process and during a response

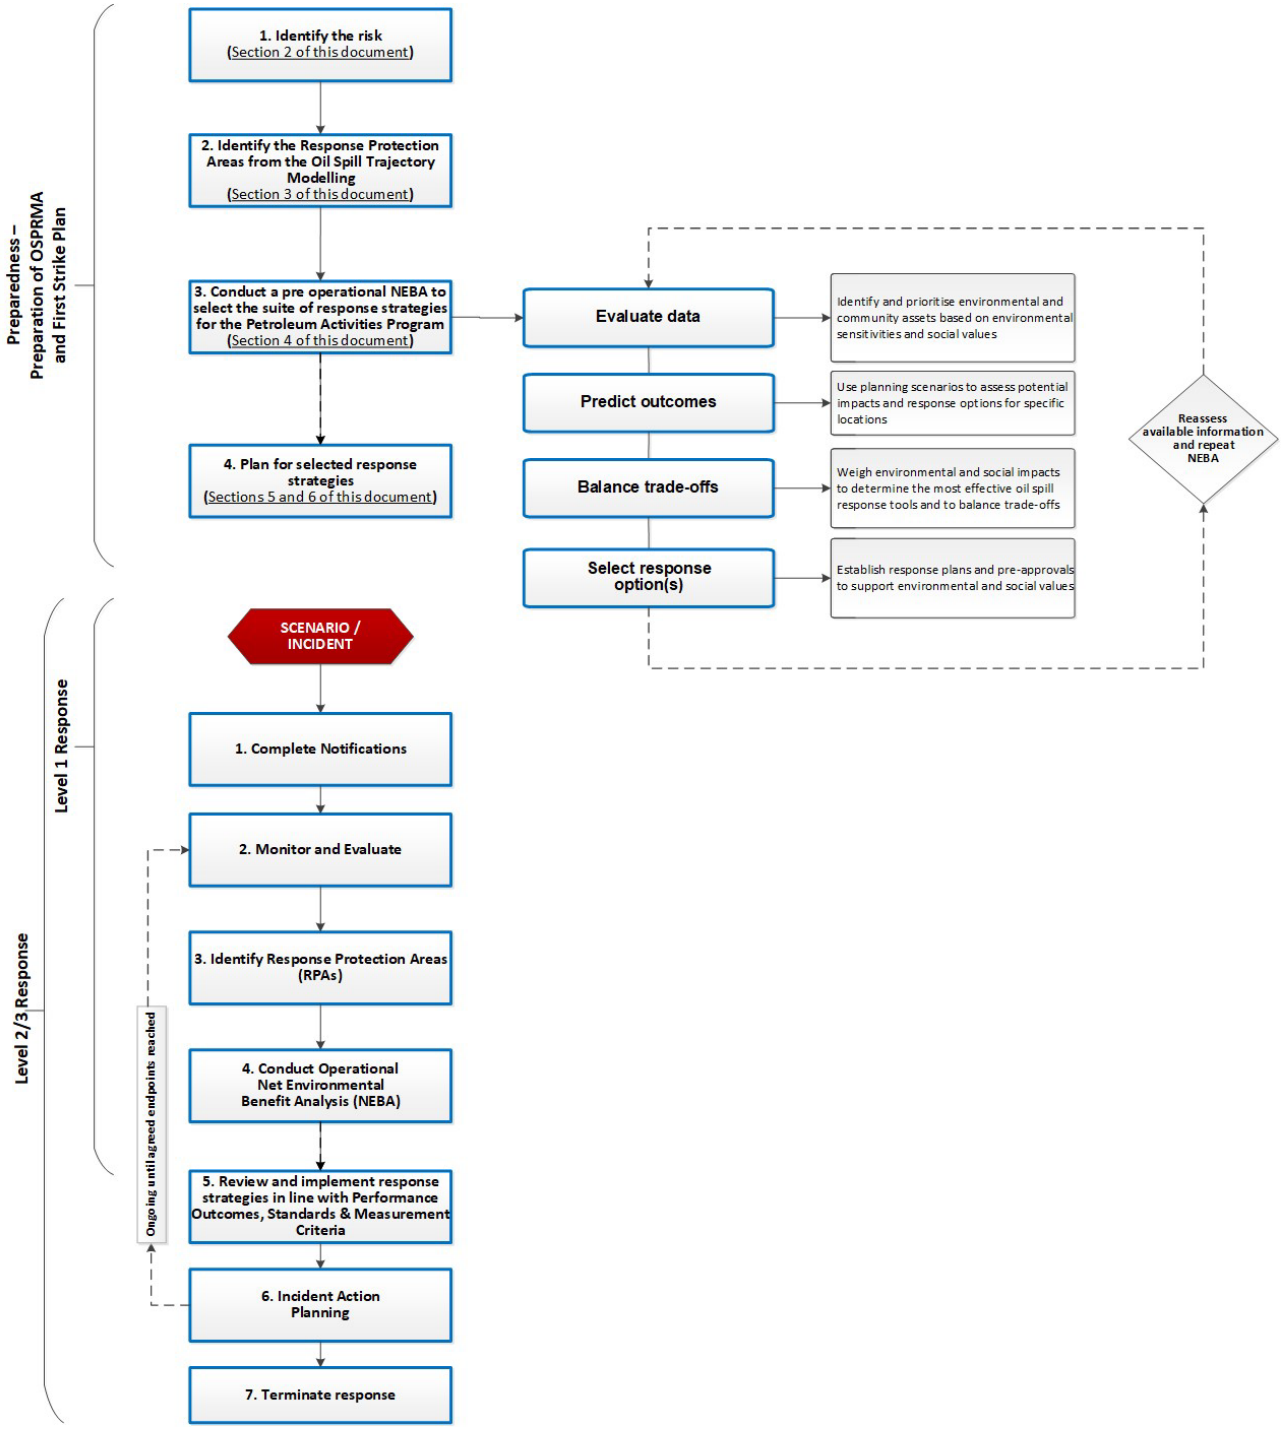

Figure 4-1: Net Environmental Benefit Analysis (NEBA) flowchart

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth)

4.1 Pre-operational / Strategic NEBA

The pre-operational NEBA identifies positive and negative impacts to sensitive receptors from implementing the response techniques. Feasibility is considered by assessing the receptors potentially impacted above response exposure values (Section 2.3.3) and the surface concentrations (Section 2.3.3.1).

Completing a pre-operational NEBA is a key response planning control that reduces the environmental risks and impacts of implementing the selected response techniques. Comprehensive details of the pre-operational NEBA for this Petroleum Activity are contained in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.2 Stage 1: Evaluate data

Woodside identifies and prioritises environmental and community assets based on environmental sensitivities and social values, informed through the use of trajectory modelling. Interpretation of stochastic oil spill modelling determines the EMBA for the release, which defines the spatial area that may be potentially impacted by the Petroleum Activity activities.

4.2.1 Define the scenario(s)

Woodside uses scenarios identified from the risk assessment in the EP to assess potential impacts and response options for specific locations. The WCCS is then selected for deterministic modelling (if required) and is used for this pre-operational NEBA. Outlier locations with potential environmental impacts, selected from the stochastic modelling may also be included for assessment. Response exposure values and deterministic modelling (if required) are then used to assess the feasibility/effectiveness and scale of the response. Modelling results are available in Table 2-5 and Table 3-1.

4.3 Stage 2: Predict Outcomes

Woodside uses planning scenarios to assess potential impacts and response options for specific locations. Locations with potential environmental impacts, selected from the stochastic modelling are included for assessment. Response exposure values and deterministic modelling are then used to assess the feasibility/ effectiveness of a response.

4.4 Stage 3: Balance trade-offs

Woodside considers environmental impacts and response effectiveness/ feasibility to determine the most effective oil spill response tools and balance trade-offs, using an automated NEBA tool. The tool considers potential benefits and impacts associated with a response at sensitive receptors and then considers the effectiveness/ feasibility of the response to select the response techniques carried forward to the ALARP assessment. The NEBA can be found in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.5 Stage 4: Select Best Response Options

To select the response technique, all the other stages in the NEBA process are considered and used to establish response plans and any pre-approvals to support protection of identified environmental and social values.

The response techniques implemented may vary according to a particular spill. The hydrocarbon type released and the sensitivities of the receptors (both ecological and socio-economic) may influence the response. The pre-operational NEBA broadly evaluates each response technique and supports decisions on whether they are feasible and of net environmental benefit. Response techniques that are not feasible or beneficial are rejected at this stage and not progressed to planning.

Further risks and impacts from implementing these selected response options are outlined in Section 7.

4.5.1 Determining potential response options

The available response techniques based on current technology can be summarised under the following headings:

- Monitor and evaluate
- Source control via vessel Shipboard Oil Pollution Emergency Plan (SOPEP)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth)

- Surface dispersant application:
  - aerial dispersant application
  - vessel dispersant application
- Mechanical dispersion
- In-situ burning
- Containment and recovery
- Shoreline protection and deflection:
  - protection
  - deflection
- Shoreline clean-up:
  - Phase 1 – mechanical clean-up
  - Phase 2 – manual clean-up
  - Phase 3 – final polishing
- Oiled wildlife response (including hazing)

Support functions may include:

- Waste management
- Operational and scientific monitoring

Table 4-1 includes scenario-specific assessments of feasible response options and justification for the exclusion of inappropriate options. These options are evaluated against the scenario parameters including oil type, volume, characteristics, prevailing weather conditions, logistical support, and resource availability to determine deployment feasibility.

A shortlist of the feasible response options is then carried forward for the ALARP assessment. This assessment will typically result in a range of available options, that are deployed at different areas (at-source, offshore, nearshore and onshore) and different times during the response. The NEBA process assists in prioritising which options to use where and when, and timings throughout the response.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Table 4-1: Response technique evaluation – vessel collision

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: MGO				
Monitor and evaluate	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • Pre-emptive assessment of sensitive receptors at risk – triggered once operational monitoring informs likely RPAs at risk.	Monitoring of an MGO spill is a feasible response technique and outputs will be used to guide decision making on the use of other monitoring/response techniques and providing information to regulatory agencies including AMSA and the Western Australian (WA) Department of Transport and Major infrastructure (DTMI). Practicable techniques that could be used for this scenario include predictive modelling, surveillance and reconnaissance and monitoring of hydrocarbon presence in water.	Yes	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via vessel SOPEP	Controlling the spill of MGO at source would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	A spill of MGO from a vessel collision will be instantaneous and source control will be limited to what the vessel or facility can safely achieve whilst responding to the incident.	Yes	Ability to stop the spill at source will be dependent upon the specific spill circumstances and whether or not it is safe for response personnel to access/isolate the source of the spill.
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce volatile organic compounds (VOCs) in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	Whilst modelling predicts that floating oil will reach the minimum feasible exposure value at which to commence surface dispersant application (≥50 g/m^2) at Scott Reef North, this technique is not suitable for MGO spills as this hydrocarbon is prone to rapid spreading and evaporation and are not considered effective when applied on thin surface films such as MGO as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon resulting in the unnecessary addition of chemicals to the marine environment. The volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon thus this response technique is deemed inappropriate.	No	The application of dispersant to MGO is unnecessary as the MGO will rapidly evaporate and would thus unnecessarily introduce additional chemical substances to the marine environment. The additional entrainment would also increase exposure of subsea species and habitats to hydrocarbons.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In situ burning	In situ burning is only effective where minimum slick thickness can be achieved.	Use of in situ burning as a response technique for MGO is unfeasible as the minimum slick thickness cannot be attained due to rapid spreading. In addition, there is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which is unlikely to be achieved. Furthermore, entering a volatile environment to undertake this technique would be unsafe for response personnel and its used would unnecessarily cause an increase in the release of atmospheric pollutants.	No	Diesel characteristics are not appropriate for the use of in situ burning and would unnecessarily cause an increase in the release of atmospheric pollutants.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5 with a 50-100% coverage of 100–200 g/m^2.	Whilst modelling predicts that floating oil will reach the minimum feasible exposure value at which to commence containment and recovery (50 g/m^2) at Scott Reef North, this technique is not suitable for MGO spills as it is prone to rapid spreading and evaporation and is deemed unsuitable for effective containment and recovery operations. The volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon thus this response technique is deemed inappropriate.	No	Containment and recovery would be an inappropriate response technique for a spill of Marine Gas Oil (MGO). Corralling a volatile hydrocarbon such as MGO is deemed unsafe for response personnel thus this response strategy is not considered feasible. In addition to the safety issues, most of the spilled MGO would have been subject to rapid evaporation prior to the commencement of containment and recovery operations.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of at-risk areas.	A MGO spill would be prone to rapid spreading and evaporation. Modelling predicts that whilst one shoreline receptor will be contacted at the response exposure value, this will occur within 10 hours, which is faster than shoreline protection teams could be deployed. Furthermore, the volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Operational monitoring will, however, be deployed from the outset of a spill to track the spill location and fate in real-time.	No	Although spill modelling predicts shoreline contact at Scott Reef within 10 hours, this timeframe is insufficient to mobilise and deploy shoreline protection and deflection equipment to such a remote location. Tidal influences, lack of safe access, and the absence of suitable anchoring points further limit the practicability of effective boom placement. Given these operational constraints, the deployment of this technique is considered unlikely to achieve meaningful protection and could cause greater environmental harm than the spill itself through physical disturbance to sensitive reef habitats.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m^2.	Spill modelling predicts shoreline contact above the response exposure value at one receptor location (Scott Reef South (including Sandy Islet)). Shoreline clean-up is therefore a feasible response technique for this scenario, where it is safe and practical to implement. However, an MGO spill would be prone to rapid spreading and evaporation and intrusive activities such as physical removal of waste can cause greater impacts than the oil alone. Secondary impacts can be minimised through the use of trained personnel to lead operations. Logistically, clean-up operations will require site access, decontamination, waste storage, personal protective equipment, catering and transport services to support personnel working on shorelines, which will be challenging and possibly lead to additional impacts at the remote location of Scott Reef. Monitor and evaluate activities will be deployed from the outset of a spill to track the spill location and fate in real-time to inform the need for and scale of clean-up operations.	Yes	While shoreline clean-up is a feasible technique, it is considered a secondary response strategy for this scenario. Shoreline clean-up activities can result in physical disturbance to sensitive shoreline habitats and intrusive activities require careful site-specific planning to minimise secondary impacts such as habitat disturbance, erosion and spreading of oil. Given the high rates of natural dispersion and biodegradation of MGO, and the significant logistical challenges of accessing and sustaining operations at the remote location of Scott Reef, this technique would only be used if an Operational NEBA indicated it would provide an overall benefit to the environment. Where it is safe and practical to implement, shoreline clean-up will be undertaken as directed by OM6: Shoreline Clean-up Assessment recommendations.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	Due to the likely volatile atmospheric conditions surrounding a MGO spill, response options may be limited to hazing to ensure the safety of response personnel. The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. Monitor and evaluate will, however, be deployed from the outset of a spill to track the spill location and fate in real-time. Thus, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists.	Yes	The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. However, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken as and where required.

5 HYDROCARBON SPILL ALARP PROCESS

Woodside's hydrocarbon spill ALARP process is aligned with guidance provided by NOPSEMA in *ALARP Guidance Note N-04300-GN0166* (2022) and *Oil Spill Risk Management Guidance Note N-04750-GN1488 A382148* (2026) and is set out in the 'Woodside Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) Guidelines'.

From the identified response planning need and pre-operational NEBA/ Spill Impact Mitigation Assessment (SIMA), Woodside conducts a structured, semi-quantitative hydrocarbon spill process which has the following steps:

- considers the Response Planning Need identified in terms of surface area (km^2) and available surface hydrocarbon volumes (m^3) against existing Woodside capability
- considers alternative, additional, and improved options for each response technique/control measure by providing an initial and, if required, detailed evaluation of:
  - predicted cost associated with adopting the control measure
  - predicted change/environmental benefit
  - predicted effectiveness/feasibility of the control measure.
- evaluates the risks and impacts of implementing the proposed response techniques, and any further control measures with associated environmental performance to manage these additional risks and impacts.

Woodside considers the risks and impacts from a hydrocarbon spill to have been reduced to ALARP when:

- a structured process for identifying and considering alternative, additional, and improved options has been completed for each selected response technique
- the analysis of alternate, additional, and improved control measures meets one of the following criteria:
  - all identified, reasonably practicable control measures have been adopted; or
  - no identified reasonably practicable additional, alternative and/or improved control measures would provide further overall increased proportionate environmental benefit; or
  - no reasonably practical additional, alternative, and/or improved control measures have been identified.
- where an alternative, additional and/or improved control measure is adopted, a measurable level of environmental performance has been assigned
- higher order impacts/ risks have received more comprehensive alternative, additional, and improved control measure evaluations and do not just compare the cost of the adopted control measures to the costs of an extreme or clearly unreasonable control measure
- cumulative effects have been analysed when considered in combination across the whole activity.

The response technique selection is based on the risk assessment conducted in the EP. The risk assessment identifies the type of oil, volume of release, duration of release, predicted fate, weathering and the EMBA (along with other requirements such as time to impact and predicted volumes ashore). Modelling is then used to inform the NEBA and the prioritisation of suitable response options. The scale of the response techniques selected in the pre-operational NEBA is informed through the assessment of results from deterministic modelling.

For the purpose of the ALARP assessment, the following terms and definitions have been used:

- response techniques are considered the control measures that reduce consequences from hydrocarbon spill events. The terms 'response technique' and 'control measure' are used interchangeably
- cost is defined as the time, effort and/or trouble taken in financial, safety, design/storage/installation, capital/lease, and/or operations/maintenance terms to adopt a control measure

All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.1 Monitor and evaluate

Monitor and evaluate includes the gathering and evaluation of data to inform the oil spill response planning and operations. It includes fate and trajectory modelling, spill tracking, weather updates and field observations. This response option is deployed in some capacity for every event.

Techniques may include:

- Predictive modelling of hydrocarbons to assess resources at risk
- Surveillance and reconnaissance to detect hydrocarbons and resources at risk
- Pre-emptive assessment of sensitive receptors at risk (desktop)

Woodside maintains an Operational Monitoring Operational Plan. If shoreline contact is predicted, Response Protection Areas (RPAs) will be identified and assessed before contact. If shorelines are contacted, a shoreline assessment survey (SCAT) will be completed to guide effective shoreline clean-up operations per arrangements detailed in Woodside's Operational and Scientific Monitoring Bridging Implementation Plan (OSM-BIP) (see Section 5.6). This plan includes the process for the CIMT to mobilise resources depending on the nature and scale of the spill.

The proximity of Broome/ Port Hedland to the spill event location means that multiple logistical options are available to monitor the spill in relatively short timeframes. The primary mobilisation base for initial monitoring activities would be Broome/ Port Hedland. However, in the unlikely event of an extended spill with potential to impact receptors further afield, monitoring activities may also be mobilised from Exmouth, Dampier or Karratha.

5.1.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Floating surface oil in sufficient concentrations for effective operational monitoring is expected to be present with surface concentrations of 50 g/m^2 extending up to 22 km, 10 g/m^2 up to 51 km and 1 g/m^2 up to 157 km from the release location, respectively, for scenario CS-01.
- The shortest timeframe for shoreline accumulation (≥10 g/m^2) is predicted at 0.4 days (10 hours) at Scott Reef South (CS-01).
- The fastest time to contact for oil at concentrations of dissolved hydrocarbons greater than 10 ppb at shoreline receptors is 1 hour at Scott Reef North and Scott Reef South.
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.
- The duration of the spill would be instantaneous with response operations extending until surface hydrocarbons are no longer visible, and no additional response or clean-up of wildlife or habitats is predicted.

5.1.2 Environmental performance based on need

Table 5-1: Environmental Performance – Monitor and evaluate

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
1	Oil spill trajectory modelling	1.1	Initial modelling available within 6 hours using the Rapid Assessment Tool	1, 3B, 3C, 4
		1.2	Detailed modelling available within 4 hours of RPS receiving information from Woodside	
		1.3	Detailed modelling service available for the duration of the incident upon contract activation	
2	Tracking buoy	2.1	Tracking buoy located on facility/ lead vessel and ready for deployment 24/7	1, 3A, 3C, 4
		2.2	Deploy tracking buoy from facility/ lead vessel within 2 hours as per the First Strike Plan.	1, 3A, 3B, 4
		2.3	Contract in place with service provider to allow data from tracking buoy to be received 24/7 and processed.	1, 3B, 3C, 4
		2.4	Data received to be uploaded into Woodside common operating picture (COP) daily to improve the accuracy of other Operational Monitoring techniques.	1, 3B, 4
3	Satellite imagery	3.1	Contract in place with 3rd party provider to enable access and analysis of satellite imagery. Imagery source/type requested on activation of service.	1, 3C, 4
		3.2	3rd party provider will confirm availability of an initial acquisition within 2 hours	1, 3B, 3C, 4
		3.3	First image received with 24 hours of Woodside confirming to 3rd party provider its acceptance of the proposed acquisition plan.	1
		3.4	3rd party provider to submit report to Woodside per image. Report is to include a polygon of any possible or identified slick(s) with metadata.	1
		3.5	Data received to be uploaded into Woodside COP daily to improve accuracy of other Operational Monitoring techniques.	1, 3B, 4
		3.6	Satellite Imagery services available and employed during response	1, 3C, 4
4	Aerial surveillance	4.1	Two trained aerial observers available to be deployed by day 1 from resource pool.	1, 2, 3B, 3C, 4
		4.2	One aircraft available for 2 sorties per day, available for the duration of the response from day 1	1, 3C, 4
		4.3	Observer to compile report during flight as per FSP. Observers report available to the IMT within 2 hours of landing after each sortie.	1, 2, 3B, 4
		4.4	Unmanned Aerial Vehicles/Systems (UAV/UASs) to support Shoreline Contamination Assessment Technique (SCAT), containment and recovery and surface dispersal and pre-emptive assessments as contingency if required.	1, 2
5	Pre-emptive assessment	5.1	Desktop pre-emptive assessment of sensitive receptors to help determine Response Protection Areas (RPAs) to guide deployment of response personnel	1, 2, 3B, 3C, 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
	of sensitive receptors	5.2	If response personnel are deployed, provide daily reports to the IMT on the status of RPAs and maximise the effective use of resources.	1, 3B, 4

The control measures and capability of Woodside and its third-party service providers are shown to support monitor and evaluate activities up to and including the identified WCCS. This is demonstrated by the following:

- Woodside has a documented, structured and tested capability for Operational Monitoring operations including internal trajectory modelling capabilities, tracking buoys located offshore and contracted aerial observation platforms with access to trained observers.
- Woodside and its third-party service providers seek to maintain sufficient capability for the duration of the response.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.1.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.2 Source Control via vessel Shipboard Oil Pollution Emergency Plan (SOPEP)

Vessel source control will be conducted, where feasible and in accordance with MARPOL 73/78 Annex I, by the Vessel Master under the Shipboard Oil Pollution Emergency Plan (SOPEP) triggered by any loss of containment from the Petroleum Activity vessels.

The SOPEP provides guidance to the Master and Officers on board the vessel with respect to the extra steps to be taken when an unexpected pollution incident has occurred or is likely to occur. The SOPEP contains all information and operational instructions required by International Maritime Organization (IMO) Resolution MEPC.54 (32) adopted on 6 March 1992, as amended by resolution MEPC.86 (44) adopted on 13 March 2000.

Its purpose is to set in motion the necessary actions to stop or minimise oil discharge and mitigate its effects and outlines responsibilities, pollution reporting requirements, procedures and resources needed in the event of a hydrocarbon spill from vessel activities.

In the event of the WCCS vessel collision event, the vessel master may engage precautionary marine manoeuvres to avoid collision or commence pumping operations to transfer MGO and thus minimise the release.

5.2.1 Environmental performance based on need

Woodside has established control measures, environmental performance outcomes, performance standards and measurement criteria to be used for vessel-source oil spill response during the Petroleum Activity which are detailed in Section 6.9 of the EP. The vessel master's roles and responsibilities are described in Section 7.3 of the EP.

Performance standards for each contracted Petroleum Activity vessel are detailed in the vessel's specific SOPEP.

These standards maintain availability of sufficient resources and are adequately tested for successful implementation of the SOPEP in the event of a hydrocarbon spill.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.3 Shoreline Clean-up

Shoreline clean-up may be undertaken using a broad range of techniques when floating hydrocarbons contact shorelines. The timing, location and extent of shoreline clean-up activities can vary from one scenario to another, depending on the hydrocarbon type, sensitivities and values contacted, shoreline type and access, degree of oiling, and area oiled.

Shoreline clean-up is typically undertaken as a three-phase process:

- Phase 1 (gross contamination removal) involving the collection of bulk oil, either floating against the shoreline or stranded on it
- Phase 2 (moderate to heavy contamination removal) involving removal or in-situ treatment of shoreline substrates such as sand or pebble beaches, and
- Phase 3 (final treatment or polishing) involving removal of the remaining residues of oil.

As phase 1 typically involves recovery of floating and pooled oil, and phase 3 removes minor volumes, they have not been considered in the assessment of response need for the scenarios identified.

The Shoreline Clean-up Operational Plan details the mobilisation and resource requirements for a shoreline clean-up operation including the logistics, support and facility arrangements to manage the movement of personnel and resources.

The Shoreline Clean-up Operational Plan includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Woodside would activate and mobilise trained and competent personnel in shoreline assessment before or following shoreline contact at response exposure values.

Shoreline clean-up consists of different manual and mechanical recovery techniques to remove hydrocarbons and contaminated debris from a shoreline; this is to minimise ongoing environmental contamination and impact. The National Plan also provides guidance on shoreline clean-up techniques as outlined in National Plan Guidance Response assessment and termination of cleaning for oil contaminated foreshores (AMSA 2015).

5.3.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The fastest time to shoreline contact is predicted to be 0.4 days at Scott Reef South (including Sandy Islet) with shoreline accumulation averaging 2 m^3 (across all replicate simulations) and up to 80 m^3 in the worst replicate simulation (the single worst run).
- MGO is likely to be difficult to remove given its light nature and high weathering potential. It can be readily washed from sediments by wave and tidal flushing. The likely waste products from an MGO spill shoreline response would be contaminated sand and debris.
- The duration of the spill would be instantaneous with response operations extending surface hydrocarbons are no longer visible, and no additional response or clean-up of wildlife or habitats is predicted.
- Desktop pre-emptive assessment and shoreline assessments (OM6: Shoreline Clean-up Assessment via the Woodside OSM-BIP) will be mobilised prior to shoreline clean-up operations to determine the appropriateness of clean-up tactics. Selection of shoreline clean-up methods and controls to prevent further damage from the clean-up activities are to be undertaken in consultation with the Control Agency and selected based on a NEBA.
- Following Shoreline Assessment and agreement of prioritisation with WA Department of Transport and Major Infrastructure, clean-up operations would commence until agreed termination criteria are reached.
- Arrangements for support organisations who provide specialist services (trained personnel, labour hire, shoreline clean-up, and site management equipment) and/or resources and should be tested regularly.
- Tactical Response Plans (TRPs) for Response Protection Areas (RPAs) along with other relevant plans, procedures and support documents should be in developed and in place for Operational and Support Sections. These should be reviewed and updated regularly.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

In addition, a number of assumptions are required to estimate the response need for shoreline clean-up. These assumptions have been described in the table below.

Table 5-2: Response Planning Assumptions – Shoreline Clean-up

Response planning assumptions: Shoreline clean-up	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
Operational considerations	Scott Reef/ Sandy Islet presents operational and environmental constraints for shoreline clean-up activities including: • remote location presenting logistical challenges for landing vessels, people and equipment • small sand island within a submerged and emergent reef system presenting challenges for personnel to work with suitable facilities and waste storage • landing and undertaking shoreline clean-up activities is likely to result in damage of any turtle and bird nesting sites that may be present.
Manual shoreline clean-up operation (Phase 2)	One, manual shoreline clean-up operation (Phase 2) may include: • 1–2 x trained supervisor • 8–10 x personnel/ labour hire (possibly smaller teams due to RPA sensitivities) • Supporting equipment for manual clean-up including rakes, shovels, plastic bags etc.
Physical properties	Surface exposure value • Lower – 100 g/m^2 – 100% coverage of ‘stain’ – cannot be scratched off easily on coarse sediments or bedrock – Expected trigger to undertake detailed shoreline survey • Optimum – 250 g/m^2 – 25% coverage of ‘coat’ – can be scratched off with a fingernail on coarse sediments – Expected trigger to commence clean-up operations

Table 5-3: Shoreline Clean-up techniques and recommendations

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Natural recovery	Allowing shoreline to self-clean; no intervention undertaken.	Remote and inaccessible shorelines for personnel, vehicles and machinery. Other clean-up techniques may cause more damage than allowing the shoreline to naturally recover. Natural recovery may be recommended for areas with mangroves and coral reefs due to their sensitivity to disturbance from other shoreline clean-up techniques. High-energy shorelines: where natural removal rates are high, and hydrocarbons will be removed over a short timeframe.	Low-energy shorelines: these areas tend to be where hydrocarbon accumulates and penetrates soil and substrates.	May be employed, if the operational NEBA identifies that other clean-up techniques will have a negligible or negative environmental impact on the shoreline. May also be used for buried or reworked hydrocarbons where other techniques may not recover these.
Manual recovery	Use of manpower to collect hydrocarbons from the shoreline. Use of this form of clean-up is based on type of shoreline.	Remote and inaccessible shorelines for vehicles and machinery. Areas where shorelines may not be accessible by vehicles or machinery and personnel can recover hydrocarbons manually. Where hydrocarbons have formed semi-solid to solid masses that can be picked up manually. Areas where nesting and breeding fauna cannot or should not be disturbed.	Coral reef or other sensitive intertidal habitats, as the presence of a response may cause more environmental damage then allowing them to recover naturally. For some high-energy shorelines such as cliffs and sea walls, manual recovery may not be recommended as it may pose a safety threat to responders.	May be used for sandy shorelines. Buried hydrocarbons may be recovered using shovels into small carry waste bags, but where possible the shoreline should be left to naturally recover to prevent any further burying of hydrocarbons (from general clean-up activities).
Sorbents	Sorbent boom or pads used to recover fluid or sticky hydrocarbons. Can also be used after manual clean-up to remove any residues from crevices or from vegetation.	When hydrocarbons are free-floating close to shore or stranded onshore. As a secondary treatment method after hydrocarbon removal and in sensitive areas where access is restricted.	Access for deploying and retrieving sorbents should not be through soft or sensitive habitats or affect wildlife.	Used for rocky shorelines. Sorbent boom will allow for deployment from small shallow draught vessels, which will allow deployment close to shore where water is sheltered and to aid recovery. Sorbents will create more solid waste compared with manual clean-up, so will be limited to cleaning rocky shorelines.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Vacuum recovery, flushing, washing	The use of high volumes of low-pressure water, pumping and/or vacuuming to remove floating hydrocarbons accumulated at shorelines.	Suited to rocky or pebble shores where flushing can remobilise hydrocarbons (to be broken up) and aid natural recovery. Any accessible shoreline type from land or water. May be mounted on barges for water-based operations, on trucks driven to the recovery area, or hand-carried to remote sites. Flushing and vacuum may be useful for rocky substrate. Medium- to high-energy shorelines where natural removal rates are moderate to high. Where flushed hydrocarbons can be recovered to prevent further oiling of shorelines.	Areas of pooled light, fresh hydrocarbons may not be recoverable via vacuum due to fire and explosion risks. Shorelines with limited access. Flushing and washing not recommended for loose sediments. High-energy shorelines where access is restricted.	High volume low pressure (HVLP) flushing and washing into a sorbent boom could be used for rocky substrate, if protection booming has been unsuccessful in deflecting hydrocarbons from these areas.
Sediment reworking	Movement of sediment to surf to allow hydrocarbons to be removed from the sediment and move sand via heavy machinery.	When hydrocarbons have penetrated below the surface. Recommended for pebble/cobble shoreline types. Medium- to high-energy shorelines where natural removal rates are moderate to high.	Low-energy shorelines as the movement of substrate will not accelerate the natural cleaning process. Areas used by fauna which could potentially be affected by remobilised hydrocarbons.	Use of wave action to clean sediment: appropriate for sandy beaches where light machinery is accessible.
Vegetation cutting	Cutting vegetation to prevent oiling and reduce volume of waste and debris.	Vegetation cutting may be recommended to reduce the potential for wildlife being oiled. Where oiling is restricted to fringing vegetation.	Access in bird-nesting areas should be restricted during nesting seasons. Areas of slow-growing vegetation.	May be used on shorelines where vegetation can be safely cleared to reduce oiling.
Cleaning agents (oil spill control agent [OSCA])	Application of chemicals such as dispersants to remove hydrocarbons.	May be used for manmade structures and where public safety may be a concern.	Natural substrates and in low-energy environments where sufficient mixing energy is not present.	Not recommended for shorelines. Could be used for manmade structures such as boat ramps.

5.3.2 Environmental performance based on need

Table 5-4: Environmental Performance – Shoreline Clean-up

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
6	Shoreline responders	6.1	In liaison with WA DTMI (for Level 2/3 incidents), deployment of 1 shoreline clean-up team to contaminated RPAs comprised of: • 1–2 trained specialists per operation • 8–10 personnel/labour hire (possibly a smaller team due to RPA sensitivities) • Personnel sourced through resource pool within 24–48 hours of request from the IMT.	1, 2, 3A, 3B, 3C, 4
		6.2	Relevant Tactical Response Plans (TRPs) will be identified in the first strike plan for activation within 24 hours.	1, 3A, 3C, 4
		6.3	Clean-up operations for shorelines in line with results and recommendations from SCAT outputs	1, 3A, 3B
		6.4	All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates.	
		6.5	In liaison with WA DTMI (for Level 2/3 incidents), mobilise and deploy 1 shoreline clean-up operation by Week 1.	1, 2, 3A, 3C, 4 1, 3B, 4
		6.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline clean-up operations: • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel	
		6.7	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s)	1, 3A, 3B
7	Shoreline clean up equipment	7.1	Contract in place with 3rd party providers to access equipment.	1, 3A, 3C, 4
		7.2	Equipment mobilised from closest stockpile (detail in activity specific ALARP) within 24-48 hours.	
		7.3	Supplementary equipment mobilised from Australian Marine Oil Spill Centre (AMOSC) and State stockpiles within 48 hours.	1, 3C, 4
		7.4	Supplementary equipment mobilised from OSRL within 72 hours (if required).	
8	Management of Environmental Impact of the response risks	8.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
		8.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		8.3	Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations	
		8.4	Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves	
		8.5	Removal of vegetation will be limited to moderately or heavily oiled vegetation	
		8.6	Oversight by trained personnel who are aware of the risks	
		8.7	Trained unit leader's brief personnel of the risks prior to operations	

The resulting shoreline clean-up capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the Petroleum Activity.

Whilst modelling predicts shoreline contact from day 1 (Scott Reef South (including Sandy Islet)) Woodside is satisfied that the current capability is managing risks and impacts to ALARP.

The capability available meets the need identified for this activity. The shoreline clean-up capability has the following expected performance (if required during a response):

- Woodside has the capacity to mobilise and deploy multiple shoreline clean-up teams in week 1 to Scott Reef/ Sandy Islet using existing labour hire contracts with Woodside, AMOSC, Core Group and OSRL team leads, and appropriate shoreline response equipment. However, due to the environmental sensitives of Scott Reef/ Sandy Islet, it may be more appropriate to conduct clean-up activities with one small team over a longer period of time using more passive recovery techniques.
- Assessment of response capability indicates that for a worst-case scenario the actual teams required would meet the available capability and the response would be completed by end month 1, even with the use of smaller teams and passive recovery techniques.
- Woodside has considered deployment of additional personnel to undertake shoreline clean-up operations but is satisfied that the identified level of resource is balanced between environmental sensitivities, cost, time and effectiveness. The most significant constraint on expanding the scale of response operations is the potential ecological impacts of positioning large numbers of clean-up responders on a small, remote island. The numbers of response personnel and techniques employed during any clean-up operation would need to be carefully evaluated via an operational NEBA and evaluate the trade-offs between sending multiple clean-up teams or smaller numbers of teams.
- TRPs have been developed for all identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.3.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.4 Oiled wildlife response (including hazing)

Oiled wildlife response (OWR) includes wildlife surveillance/reconnaissance, wildlife hazing, pre-emptive capture, and the capture, cleaning, treatment, and rehabilitation of animals that have been oiled. In addition, it includes the collection, post-mortem examination, and disposal of deceased animals that have succumbed to the effects of oiling.

For a petroleum activity spill in Commonwealth waters, Woodside will act as the Control Agency and will be responsible for the wildlife response. In such circumstances, Woodside would implement a response in accordance with the Oiled Wildlife Operational Plan, the WA Oiled Wildlife Response Plan (WAOWRP) (DBCA 2022a) and the WA OWR Manual (DBCA 2022b). The Oiled Wildlife Operational Plan includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Oiled wildlife operations would be implemented with advice and assistance from the Oiled Wildlife Advisor from the Department of Biodiversity, Conservation and Attractions (DBCA).

The key plan for OWR in WA is the WAOWRP (DBCA 2022a). The WAOWRP establishes the framework for preparing and responding to potential or actual wildlife impacts during a spill and sets out the management arrangements for implementing an OWR in conjunction with the DTMI State Hazard Plan – Maritime Environmental Emergencies (SHP-MEE). It is the responsibility of DBCA to administer the WAOWRP under the direction of the DTMI. The WA OWR Manual (DBCA 2022b) supports, and should be used in conjunction with, the WAOWRP. The purpose of the WA OWR Manual is to standardise the operating procedures, protocols and processes for an OWR during a spill event in WA waters, and to create alignment between the wildlife response processes and the overall incident response (DBCA 2022b).

If a spill occurs in WA State waters or enters State waters, DBCA is the Jurisdictional Authority for wildlife, for level 2/3 spills, and will also lead the oiled wildlife response under the control of the DTMI. DBCA is the State Government agency responsible for administering the Biodiversity Conservation Act 2016 (BC Act) which has provisions for authorising activities that affect wildlife.

For level 1 spills in State waters, Woodside will be the Control Agency, including for wildlife response. It is, however, also an expectation that for level 2/3 petroleum activity spills, Woodside will conduct the initial first-strike response actions for wildlife response and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

Woodside retains specialist personnel to support and manage oiled wildlife operations, including trained and competent responders for deployment in Exmouth and Dampier. Additional personnel would be sourced through Woodside's arrangements to support an oiled wildlife response as required.

5.4.1 Response need based on predicted consequence parameters

Wildlife response priority areas and assessment of wildlife impact

French-McCay et al. (2002), based on a review of existing literature at the time, determined lethal exposure values for floating and shoreline oil for the external coating of wildlife to be 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation. It should however be noted that toxicity exposure values for wildlife are likely to be highly variable due to differences in species sensitivity, type of hydrocarbon, type of exposure (ingestion or external oiling), life-stage, and on-water versus land habitat.

For planning purposes, determination of wildlife priority protection areas is based on stochastic modelling of the worst-case spill scenarios at 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation (acknowledging that impacts to wildlife may occur at lower concentrations), the known presence of wildlife, and in consideration of:

- Presence of high densities of wildlife, threatened species, and/or endemic species with high site fidelity
- Greatest probability of shoreline accumulation
- Shortest timeframe to contact

Table 5-5 outlines the wildlife response areas for this activity. At the time of a spill, identification and allocation of wildlife RPAs should also take into consideration any key biological activities. Additional detail regarding species and their key biological activities within the vicinity of the Petroleum Activity are described in Section 4 of the Environment Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

For WA, the Pilbara and Kimberley Regional Oiled Wildlife Plans (DBCA [formerly Department of Parks and Wildlife), 2014) provide useful information relating to wildlife priority response areas in their respective regions.

Table 5-5: Key at-risk species potentially in RPAs and open ocean (CS-01)

Species	Scott Reef South (including Sandy Islet)	Scott Reef North	Seringapatam Reef	Open Ocean	Scott Reef South (including Sandy Islet)
Marine turtles	✓	✓	✓		✓
Whale sharks	✓	✓	✓		✓
Seabirds and/or migratory shorebirds	✓	✓	✓	✓	✓
Cetaceans – migratory whales	✓	✓	✓	✓	✓
Cetaceans – dolphins and porpoises	✓	✓	✓	✓	✓
Dugongs					
Sharks and rays	✓	✓	✓	✓	✓

The following statements identify the key parameters upon which a wildlife response need can be based:

- The shortest timeframe for floating oil at ≥10 g/m^2 is predicted at Scott Reef North and Scott Reef South within 1 hour for CS-01.
- The shortest timeframe for shoreline accumulation at the minimum required exposure values (≥100 g/m^2) is predicted to be 10 hours at Scott Reef South (including Sandy Islet) (80 m^3 worst-case individual simulation).
- At sea there are likely to be low numbers of at risk or impacted wildlife, and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and operational and scientific monitoring are more likely to be the focus of response efforts.
- As the surface oil approaches shorelines and as oil accumulates on the shoreline, potential for oiled wildlife impacts is likely to increase as well as opportunities to rescue wildlife.
- It is estimated that the wildlife impact would be between medium and high, as defined in the WAOWRP (DBCA, 2022a) (Table 5-6).

Table 5-6: WAOWRP Guide for rating wildlife impact of an oil spill (DBCA, 2022)

Wildlife Impact Rating	Low	Medium	High
What is the likely duration of the wildlife response?	<3 days	3-10 days	>10 days
What is the likely total intake of animals?	<10	11-25	>25
What is the likely daily intake of animals?	0-2	2-5	>5
Are threatened species, or species protected by treaty, likely to be impacted, either directly or by pollution of habitat or breeding areas?	No	Yes – possible	Yes – likely
Is there likely to be a requirement for building primary care facility for treatment, cleaning and rehabilitation?	No	Yes – possible	Yes – likely

Tactics

Where there is imminent or actual impact to wildlife, Woodside will activate the Wildlife Division and follow the oiled wildlife incident management framework and implementation plan outlined in the Woodside Oiled Wildlife Operational Plan.

In Commonwealth waters, Woodside will be responsible for the planning and implementation of the OWR in its entirety. Noting that at sea, and in comparison to the shoreline, there are likely to be less wildlife impacted by an oil spill and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

that cannot be retrieved and integration with operational and scientific monitoring are more likely to be the focus of the OWR.

In State waters, Woodside will conduct the initial first-strike response actions for wildlife and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

If a protracted response is likely, requiring preventative actions and/or wildlife rescue, and formal hand over to the Control Agency (in State waters) has not yet occurred, the Wildlife Division will be responsible for the development of the Wildlife Division portion of the IAP. Preventative actions, such as hazing, along with capture, intake and treatment require a higher degree of planning, approval (licenses) and skills and will be planned for and carried out under the IAP as outlined in the Oiled Wildlife Operational Plan and in accordance with the WAOWRP (DBCA 2022a) and WA OWR Manual (DBCA 2022b).

The oiled wildlife response technique targets key wildlife populations at risk within Commonwealth open waters and the nearshore waters as described in Section 4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.4.2 Environmental performance based on need

Table 5-7: Environmental Performance – Oiled Wildlife Response (OWR)

Environmental Performance Outcome		OWR is conducted in accordance with the Western Australian Oiled Wildlife Response Plan (WAOWRP, 2022) to meet legislative requirements to house, release or euthanise wildlife under the *Biodiversity Conservation Act 2016*.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
9	Wildlife response arrangements	9.1	Oiled Wildlife Operational Plan in place and utilised during a response to plan, coordinate, implement and terminate operations	1, 3A, 4
		9.2	Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by Operational Monitoring Plan (OMP): Marine Fauna Assessment and in liaison with DBCA.	1
10	Wildlife response equipment	10.1	Maintain contract with AMOSC for immediate access to oiled wildlife response equipment.	1, 3C, 4
		10.2	Maintain contract with OSRL to access additional oiled wildlife response equipment.	1, 3C, 4
11	Wildlife responders	11.1	Two Oiled Wildlife Team Members to supervise the oiled wildlife operations who have completed an OWR Management course.	1, 2, 3B
		11.2	Maintain contract with AMOSC for immediate access to trained oiled wildlife response specialists	1, 3B, 3C
		11.3	Maintain contract with OSRL to access additional trained OWR specialists	1, 3B, 3C
		11.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
12	Management of environmental impacts of response risks	12.1	Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA Oiled Wildlife Response Plan (OWRP) and the relevant regional plan.	1

The resulting wildlife response capability has been assessed against the WCCS (CS-01). The range of techniques provide an ongoing approach to response at identified RPAs.

Under optimal conditions, during the subsea or surface release, the capability available meets the need identified. It indicates that, the wildlife response capability has the following expected performance:

- undertake OWR first strike response:
  - mobilisation of monitor and evaluate and/or OM5: Rapid Marine Fauna Assessment to identify wildlife and RPAs contacted or at imminent risk of contact by hydrocarbons.
- availability and mobilisation of trained OWR personnel to supervise OWR activities.
- access to wildlife resources (personnel and equipment) to meet the needs where there are medium or high levels of wildlife impact.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.5 Waste Management

Waste management is considered a support technique to wildlife response and shoreline clean-up. Waste generated and collected during the response that will require handling, management and disposal may consist of:

- Liquids (hydrocarbons and contaminated liquids) collected during shoreline clean-up and wildlife response, and/or
- Solids/semi-solids (oily solids, garbage, contaminated materials) and debris (e.g. seaweed, sand, woods, and plastics) collected during shoreline clean-up and wildlife response.

Expected waste volumes during an event are likely to vary depending on oil type, volume released, response techniques employed and how weathering of hydrocarbons. Waste management, handling and capacity should be scalable to maintain continuous response operations.

All waste management activities will follow the Environment Protection (Controlled Waste) Regulations 2004 and the waste will be managed to minimise final disposal volumes. Waste treatment techniques will consider contaminated solids treatment to allow disposal to landfill and solids with high concentrations of hydrocarbon will be treated and recycled where possible or used in clean fill if suitable.

The waste products would be transported from response locations to the nearest suitable staging area/waste transfer station for treatment, disposal or recycling. Waste will be transferred with appropriately licensed vehicles. Containers will be available for temporary waste storage and will be:

- labelled with the waste type
- provided with appropriate lids to prevent waste being blown overboard
- bunded if storing liquid wastes.
- processes will be in place for transfers of bulk liquid wastes and include:
  - inspection of transfer hose undertaken prior to transfer
  - watchman equipped with radio visually monitors loading hose during transfer
  - tank gauges monitored throughout operation to prevent overflow

The *Oil Spill Preparedness Waste Management Support Plan* details the procedures, capability and capacity in place between Woodside and its primary waste services contractor to manage waste volumes generated from response activities.

5.5.1 Response need based on predicted consequence parameters

Table 5-8: Response Planning Assumptions – Waste Management

Response planning assumptions: Waste management	
Waste loading per m^3 oil recovered (multiplier)	Shoreline clean-up (manual) – ~5–10x multiplier for oily solid and liquid wastes generated by manual clean-up.
	Oiled wildlife response – ~1 m^3 of oily solid and liquid waste generated for each wildlife unit cleaned

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.5.2 Environmental performance based on need

Table 5-9: Environmental Performance – Waste Management

Environmental Performance Outcome		To minimise further impacts, waste will be managed, tracked and disposed of in accordance with laws and regulations.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
13	Waste Management	13.1	Contract with waste management services for transport, removal, treatment and disposal of waste	1, 3A, 3B, 3C, 4
		13.2	Access to at least 213 m^3 of solid and liquid waste storage available within 2 days upon activation of 3rd party contract.	
		13.3	Access to up to 2,400 m^3 by day 6.	
		13.4	Recovered hydrocarbons and wastes will be transferred to licensed treatment facility for reprocessing or disposal.	
		13.5	Waste management provider support staff available year-round to assist in the event of an incident with waste management as detailed in contract.	
		13.6	Open communication line to be maintained between IMT and waste management services to ensure the reliable flow of accurate information between parties.	
		13.7	Waste management to be conducted in accordance with Australian laws and regulations	1, 3A, 3B
		13.8	Waste management services available and employed during response	1, 3A, 3B, 3C, 4
14	Management of environmental impacts of response risks	14.1	Teams will segregate liquid and solid wastes at the earliest opportunity.	1, 3A, 3B, 3C, 4

The resulting waste management capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to waste management at identified RPAs.

The largest volumes ashore occur only in Week 1, averaging 2 m^3 (across all replicate simulations) and up to 80 m^3 in the worst replicate simulation (the single worst run). Based on the worst case maximum volume of 80 m^3 ashore, an estimated daily peak of 160-914 m^3 of waste may be generated from shoreline clean-up operations. Woodside has access to 124 m^3 waste storage on day 1,675 m^3 by day 4, and 2,400 m^3 by day 6 therefore the capability available meets the need identified.

It indicates that the waste management capability has the following expected performance:

- Shoreline operations may generate a daily peak of 160-914 m^3 within Week 1. No additional shoreline contact is predicted after Week 1
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.5.
- Woodside's waste contractor has access to ~120,000 m^3 to treat overall waste volumes. The waste management requirements are within Woodside's and its service providers existing capacity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.6 Operational and Scientific monitoring

Operational and scientific monitoring (OSM) is a key component of the environmental management document framework for offshore petroleum activities, which includes activity EPs and OPEPs. The key elements and differences between operational monitoring and scientific monitoring include:

- **Operational Monitoring (OM)** – Is undertaken during the course of the spill and includes any physical, chemical and biological assessments that may guide operational decisions such as selecting the appropriate response and mitigation methods and/or to determine a response activity. This monitoring is additional to the activities (aerial/vessel surveillance, tracking buoys, oil spill trajectory modelling and satellite tracking) performed as part of the Monitor and Evaluate Strategy (Section 5.1). Information needs to be collected and processed rapidly to suit response needs, with a lower level of sampling and accuracy needed than for scientific purposes. For the Operational Monitoring Plan (OMP) initiation and termination criteria during a Level 2–3 spill event refer to Table 9-1 of the Joint Industry OSM Framework (APPEA [now Australian Energy Producers (AEP)] 2021).
- **Scientific Monitoring (SM)** – Is the principal tool for determining the extent, severity and persistence of possible environmental impacts from a hydrocarbon spill and for informing resultant remediation activities. Consequently, such studies are required to account for natural or sampling variation, and study designs must be robust and produce defensible data. Scientific monitoring is typically conducted over a wider study area, extending beyond the spill footprint, and a longer time period, extending beyond the spill response. For the Scientific Monitoring Plan (SMP) initiation and termination criteria during a Level 2–3 spill event refer to Table 9-2 of the Joint Industry OSM Framework (APPEA [now Australian Energy Producers (AEP)] 2021).

Woodside has developed a Woodside OSM Bridging Implementation Plan (OSM-BIP), which describes a program of monitoring oil pollution that will be adopted in the event of a hydrocarbon spill incident (Level 2–3) to marine waters. It aligns with the Joint Industry OSM Framework (APPEA [now Australian Energy Producers (AEP)] 2021) and describes how this Framework applies to Woodside activities and spill risks.

A series of Operational Monitoring Plans (OMPs) and Scientific Monitoring Plans (SMPs) form part of the Joint Industry OSM Framework and provide detail on monitoring design, standard operating procedures, data management, quality assurance and quality control and reporting.

Table 5-10 lists the Joint Industry OMPs and SMPs that are relevant to the Petroleum Activity. The aims/objectives of each OMP and SMP are listed in Tables 5-1 and 6-1 of the Joint Industry OSM Framework respectively. Woodside confirms it has reviewed these aims/objectives and determined they are all appropriate to address the potential impacts, risks and response activities of this activity, noting that dispersant application is not a suitable response strategy for this activity.

The OSM-BIP is structured so that it can provide a flexible framework that can be adapted to individual spill incidents. The Combined OSM Planning Area (refer to Section 2.1 of the OSM-BIP), derived from all Woodside worst-case scenarios, represents the geographical extent of the Woodside OSM-BIP.

The OSM requirements for this activity's credible spill scenarios, including monitoring priorities, implementation timeframes and capability is provided in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

Woodside will review the initiation criteria for OMPs and SMPs (provided in Table 9-1 [OMPs] and Table 9-2 [SMPs] of the Joint Industry Operational and Scientific Monitoring Framework (APPEA [now AEP] 2021)) during the preparation of the initial IAPs, and subsequent IAPs. If any initiation criteria are met, then that relevant OMP and/or SMP will be activated via the OSM Services Provider.

Table 5-10: Joint industry OSM plans relevant to Petroleum Activity

Operational Monitoring	Relevant for the activity	Scientific Monitoring	Relevant for the activity
OM1: Hydrocarbon Characterisation	✓	SM1: Water Quality Impact Assessment	✓
OM2: Hydrocarbon in Water Assessment	✓	SM2: Sediment Quality Impact Assessment	✓
OM3: Hydrocarbon in Sediment Assessment	✓	SM3: Intertidal & Coastal Habitat Assessment	✓

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Operational Monitoring	Relevant for the activity	Scientific Monitoring	Relevant for the activity
OM4a: Dispersant Effectiveness Monitoring (Subsea)	×	SM4: Seabirds and Shorebirds Assessment	✓
OM4b: Dispersant Effectiveness Monitoring (Surface)	×	SM5: Marine mega-fauna Assessment	✓
OM5: Rapid Marine Fauna Surveillance	✓	SM6: Benthic habitat Assessment	✓
OM6: Shoreline Clean-up Assessment (SCAT)	✓	SM7: Marine fish and elasmobranch assemblages assessment	✓
		SM8: Fisheries Impact Assessment	✓
		SM9: Heritage Features Assessment	✓
		SM10: Social Impact Assessment	✓

5.6.1 Response need for Shoreline Clean-Up Assessment (SCAT) based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- SCAT will be mobilised to RPAs contacted at 100 g/m^2.
- The stochastic run with the shortest timeframe for shoreline accumulation at 100 g/m^2 predicted is 10 hours to Scott Reef South (including Sandy Islet) (CS-01).

In addition, a number of assumptions are required to estimate the response need for SCAT. These assumptions have been described in Table 5-11. Consequently, for planning purposes and based on the modelling results for shortest time to contact at 100 g/m^2 there is one RPA (Scott Reef South (including Sandy Islet)) requiring 2 SCAT specialists. These resourcing requirements can be met via the resourcing arrangements outlined in Table 8-3 of the OSM-BIP.

Table 5-11: Response planning assumptions – SCAT

Response planning assumptions: SCAT	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
SCAT	Deployment of 2 specialists in SCAT from resource pool for each of the RPAs with predicted impacts

5.6.2 Summary – Operational and scientific monitoring

A detailed OSM preparedness assessment is provided in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.

The ALARP assessment for operational and scientific monitoring (Section 6.6 considers alternate, additional, and/or improved control measures on each selected response technique.

Known, reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness determined to be medium. The OSM program's main objectives can be met, with no additional, alternative or improved control measures providing further benefit.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.6.3 Environmental performance based on need

Table 5-12: Operational and scientific monitoring

Environmental Performance Outcome		Implement OSM programs to assess and report on the impact, extent, severity, persistence and recovery of sensitive receptors contacted by a spill or affected by spill response.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
15	OSM arrangements	15.1	Maintain access to OSM expertise qualified to fulfil OSM Implementation Lead role during a Level 2/3 spill event per Joint Industry OSM Framework requirements.	3A, 3B, 3C, 4
		15.2	OSM Implementation Lead responsible for overseeing implementation of OMP and SMP components in accordance with the Woodside OSM Bridging Implementation Plan.	
16	Access to adequate OSM capability to provide both initial and ongoing monitoring	16.1	Maintain contract with third-party OSM Services Provider to provide access to suitably qualified and competent personnel and equipment to assist in the implementation of monitoring in accordance with the capability and resourcing requirement described in Sections 8–10 of the OSM-BIP and the activity-specific capability assessment in Table C - 8 and Table C - 9 in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.	3A, 3B, 3C, 4
		16.2	Obtain monthly capability reports from OSM Service Provider to demonstrate the capability described in Section 10 of the OSM-BIP is available throughout the activity	
		16.3	Annual testing of OSM Service Provider standby arrangements and activation process	
17	Baseline studies assurance	17.1	Annual review of environmental baseline data for all locations where spill modelling has predicted contact at relevant hydrocarbon exposure values within 7 days	3C
18	OSM-BIP maintenance	18.1	Annual review will be conducted according to the criteria in Section 11 of the OSM-BIP	3A, 3B, 3C, 4
19	OSM response	19.1	OMPs and SMPs will be activated in accordance with the initiation criteria provided in Tables 9-1 and 9-2 of the Joint Industry OSM Framework (APPEA [now AEP] 2021)	1
		19.2	Initiation criteria of OMPs and SMPs will be reviewed during the preparation of the initial Incident Action Plan (IAPs) and subsequent IAPs; and if any criteria are met, relevant OMPs and SMPs will be activated	
		19.3	If the OSM Implementation Lead identifies that additional monitoring capability is required beyond that described in Section 10 of the OSM-BIP, the need for these resources will be identified as soon as practicable and mobilised through the OSM Services Provider Contract, which includes provisions for scaling up personnel to meet monitoring program requirements	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

		19.4	Decisions regarding co-mobilisation of monitoring teams will be determined following a spill event, as part of the Incident Action Planning process. These decisions will be made by the CIMT in consultation with the OSM Services Provider and relevant stakeholders, with due consideration given to safety, access to sensitive receptors, timing, and data quality requirements	
		19.5	OSM to be conducted in accordance with the Woodside OSM-BIP and, where relevant to the activity, the assessment detailed in ANNEX C: Petroleum Activity OSM Activity Specific Requirement and Verification of OSM-BIP Adequacy.	
		19.6	Monitoring prioritisation will be undertaken in accordance with the process and checklist provided in Table 13-1, informed by the guidance in Section C.2 of the OSPRMA	
		19.7	Mobilisation and implementation of OMPs and SMPs will be undertaken in accordance with the indicative timeframes and sequencing described in Section C.3 of the OSPRMA and Part B of the OSM-BIP	
		19.8	Implementation of OSM will comply with the minimum standards listed in Appendix A of the Joint Industry OSM Framework	
		19.9	Once Scientific Monitoring data reports are drafted they will be peer reviewed by an expert panel for data integrity	
		19.10	OMPs and SMPs will be terminated in accordance with the termination criteria provided in Table 9-1 and 9-2 of the Joint Industry OSM Framework (APPEA [now AEP] 2021)	
20	Shoreline Clean-up Assessment Technique (SCAT)	20.1	Mobilisation within 24 hours, in agreement with WA DTMI (for Level 2/3 incidents), deployment of 2 x specialist(s) in SCAT from resource pool for each of the Response Protection Areas (RPAs) with predicted impacts	1, 2, 3B, 3C, 4
		20.2	Reports from OM6: Shoreline Clean-up Assessment will be provided to the IMT daily, detailing the assessed areas to maximise effective utilisation of resources.	1, 3B, 4
		20.3	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		20.4	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		20.5	Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations	
		20.6	Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.7 Incident Management System (IMS)

The Incident Management System (IMS) is both a control measure and a measurement criteria. As a control measure the IMS function is to prompt, facilitate and record the completion of the key response planning processes detailed below (see Section 5.7.1, 5.7.2 and 5.7.3). As a measurement criteria the IMS records the evidence of the timeliness of all response actions included in the environmental performance standards and the plans used of the Petroleum Activity.

As the IMS does not directly remove hydrocarbons spilt into the marine environment there is no direct relationship to the response planning need.

5.7.1 Incident action planning

The CIMT will be required to collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist the IMT with the execution of that plan. The site-based Incident Commander (IC) may request the CIMT to complete notifications internally within Woodside, to relevant persons/ organisations and government agencies as required. Depending on the type and scale of the incident either the CIMT DM or IC will be responsible for ensuring the development of the IAP. Incident Action Planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.

5.7.2 Operational NEBA process

In the event of a response Woodside will confirm that the response techniques adopted at the time of EP/ OPEP acceptance remain appropriate to reduce the consequences of the spill. This process verifies that there is a continuing net environmental benefit associated with continuing the response technique through the operational NEBA process. This process manages the environmental risks and impacts of response techniques during the spill response, An operational NEBA will be undertaken throughout the response, for each operational period.

The operational NEBA will consider the risks and benefits of conducting and response activity. For example, if vessels are required for access to nearshore or onshore areas, anchoring locations will be selected to minimise disturbance to benthic habitats. Vessel cleanliness would be commensurate with the receiving environment. The operational NEBA will consider the risks and benefits of conducting other response techniques.

The operational NEBA process is also used to terminate a response. Using data from operational and scientific monitoring activities the response to a hydrocarbon spill will be terminated in accordance with the termination process outlined in the Joint Industry OSM Framework (APPEA, 2021). In effect the operational NEBA will determine whether there is net environmental benefit to continue response operations.

5.7.3 Consultation engagement process

Woodside will consult relevant persons/ organisations are engaged during the spill response in accordance with internal standards. This process requires that Woodside will:

- Undertake all required notifications (including government notifications) for relevant persons/ organisations in the region (identified in the First Strike Plan). This includes notification to mariners to communicate navigational hazards introduced through response equipment and personnel.
- In the event of a response, identify and engage with relevant persons/ organisations and continually assess and review.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

5.7.4 Environmental performance based on need

Table 5-13: Environmental Performance – Incident Management System

Environmental Performance Outcome		To support the effectiveness of all other control measures and monitor/record the performance levels achieved.		
Control measure		Performance Standard		Measurement Criteria (Section 5.8)
21	Operational SIMA	21.1	Confirm that the response techniques adopted at the time of acceptance remain appropriate to reduce the consequences of the spill within 24 hours.	1, 3A
		21.2	Record the evidence and justification for any deviation from the planned response activities.	
		21.3	Record the information and data from operational and scientific monitoring activities used to inform the SIMA.	
22	Stakeholder engagement	22.1	Prompt and record all notifications (including government notifications) for persons/ organisations in the region are made	
		22.2	In the event of a response, identification of relevant persons/ organisations will be re-assessed throughout the response period.	
		22.3	Undertake communications in accordance with: • Functional Support Team Guideline – Reputation • External Communication and Continuous Disclosure Procedure	
23	Personnel required to support any response	23.1	Action planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident are appropriate to the situation at the time.	1, 3B
		23.2	A duty roster of trained and competent people will be maintained to maintain minimum manning requirements are met all year round.	3C
		23.3	Immediately activate the CIMT with personnel filling one or more of the following roles: • CIMT Incident Commander • CIMT Deputy Incident Commander • Operations Section Chief • Planning Section Chief • Logistics Section Chief • Documentation Unit Leader • Safety Officer • Environment Unit Leader • Human Resources Officer • Public Information Officer • Situation Unit Leader • Finance Section Chief • Source Control Section Chief	1, 2, 3B, 3C, 4
		23.4	Collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist with the execution of that plan.	
		23.5	Security and emergency management (S&EM) advisors will be integrated into CIMT to monitor performance of all functional roles.

5.8 Measurement criteria for all response techniques

Woodside measures compliance with environmental performance outcomes and standards through four primary mechanisms. The aforementioned performance tables identify which of these four mechanisms monitors the readiness and records the effectiveness and performance of the control measures adopted.

1. The Incident Management System

The Incident Management System (IMS) supports the implementation of the Crisis and Emergency Management Standard. The IMS provides a near real-time, single source of information for monitoring and recording an incident and measuring the performance of those control measures.

The Crisis and Emergency Management (CEM) Standard defines the management framework, including roles and responsibilities, to be applied to any size incident (including hydrocarbon spills). The organisational structure required to manage an incident is developed in a modular fashion and is based on the specific requirements of each incident. The structure can be scaled up or down. The IAP process formally documents and communicates the:

- Incident objectives
- Status of assets
- Operational period objectives
- Response techniques (defined during response planning)
- The effectiveness of response techniques.

The information captured in the IMS (including information from personal logs and assigned tasks/close outs) confirms the response techniques implemented remain appropriate to reduce the consequences of the spill. The system also records all information and data that can be used to support the site-based IMT, development and the execution of the IAP.

2. The CEM Competency Dashboard

The CEM competency dashboard records the number of trained and competent responders that are available across Woodside to participate in a response.

This number varies dependent on expiry of competency certificates, staff attrition, internal rotations, leave and other absences. As such the Dashboard is designed to identify the minimum manning requirements and to identify sufficient redundancy to cater for the variances listed above.

Figure 5-1 shows the minimum manning numbers for the different hydrocarbon spill response roles and the number of qualified persons against those roles.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

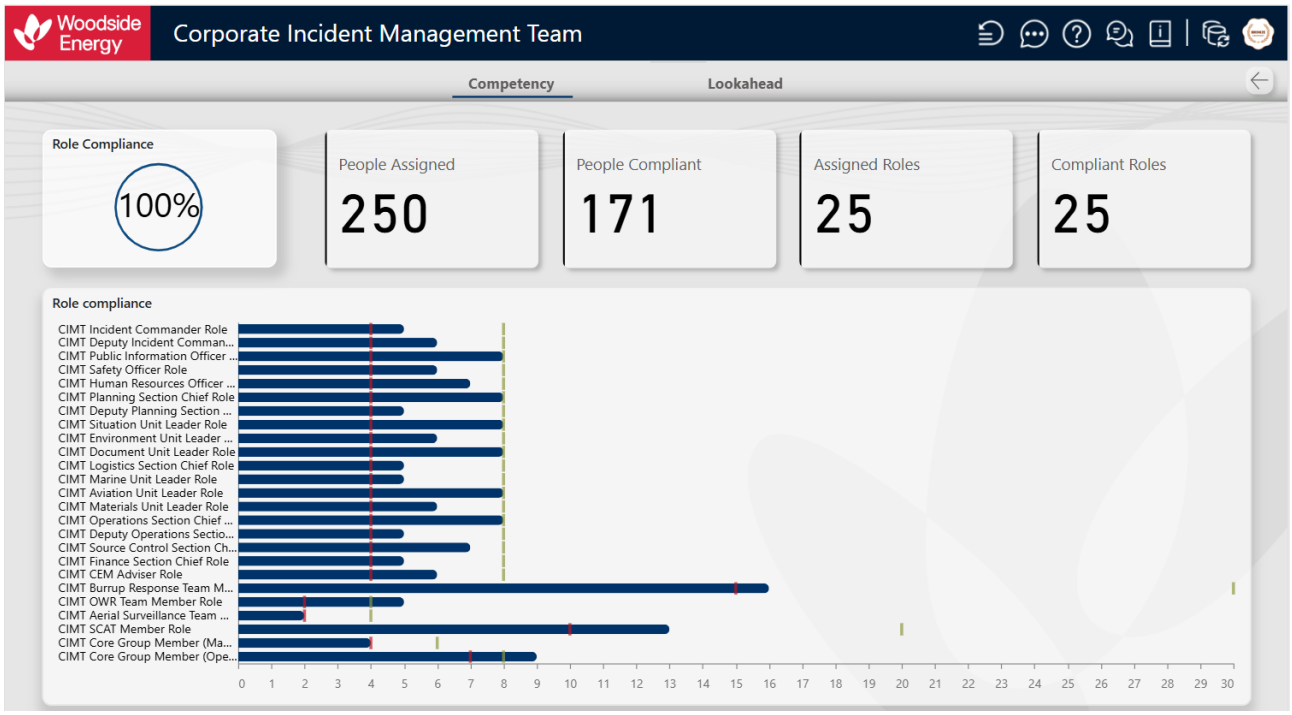

Figure 5-1: Example screenshot of the CEM dashboard

The Dashboard is one of Woodside's key means of monitoring its readiness to respond. It also demonstrates Woodside's ability to meet the requirements of the environmental performance standards that relate to filling certain response roles.

Figure 5-2 shows an example of the SCAT role and the training modules required to show competence.

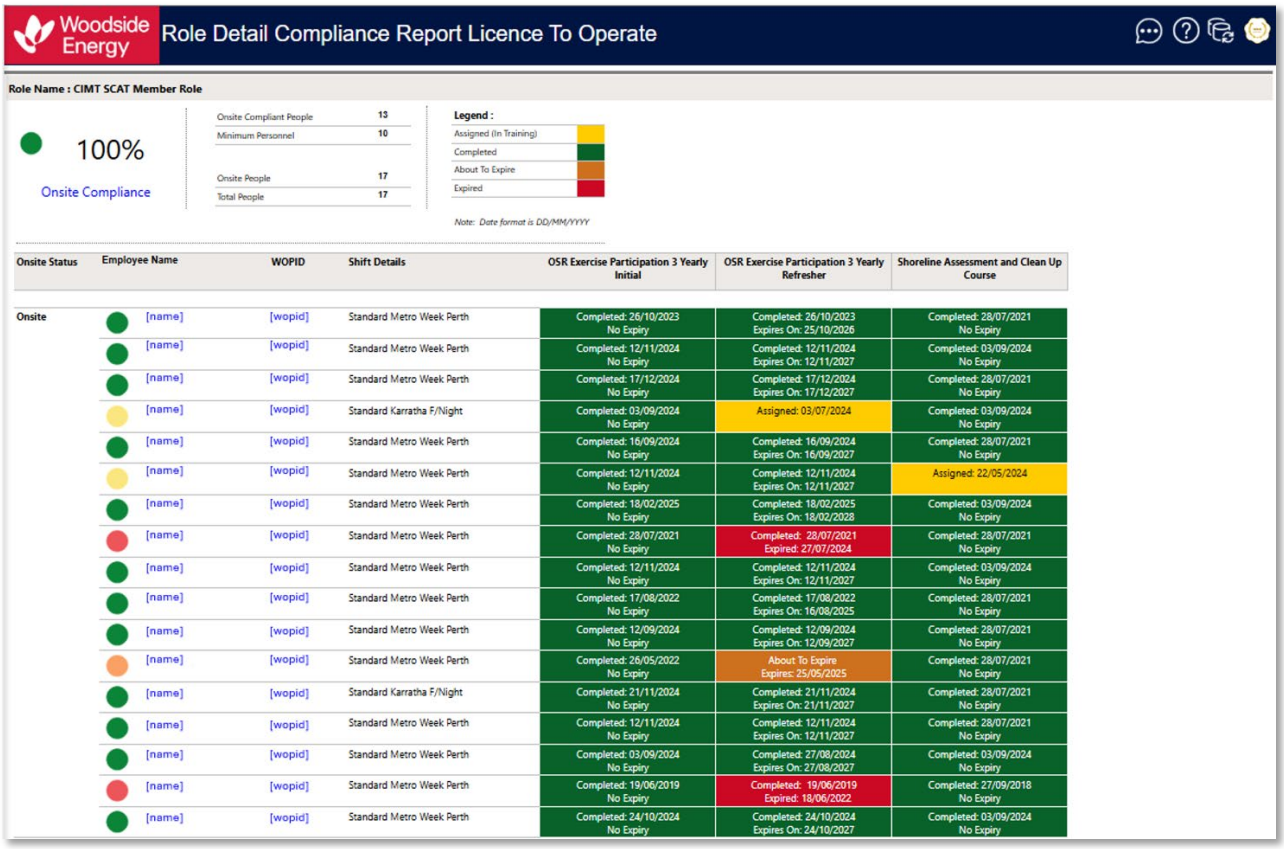

Figure 5-2: Example screenshot for the SCAT role

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Woodside also maintains a pool of trained responders which is composed of but not limited to personnel from the following organisations:

- Woodside internal
- Australian Marine Oil Spill Centre (AMOSC) core group
- AMOSC
- Oil Spill Response Limited (OSRL)
- Marine Spill Response Corporation (MSRC)
- Woodside contracted workforce

3. The Hydrocarbon Spill Preparedness Assurance Process

The Hydrocarbon Spill Response Team uses Woodside's assurance process to track compliance over three key control areas:

a. Plans – confirms all plans (including: Hydrocarbon Spill Australia Regulatory Framework[1], first strike plans, operational plans, support plans and tactical response plans) are current and in line with regulatory and internal requirements.

b. Competency (personnel and testing) – confirms the competency dashboard is up to date and there are the minimum numbers across CIMT, Crisis Management Team (CMT) and hydrocarbon spill response roles. The hydrocarbon spill training plan and exercise schedule, including testing of arrangements is also tracked. The Testing of Arrangements (ToA) register tracks the testing of all hydrocarbon spill response arrangements, key contracts and agreements in place with internal and external parties to ensure compliance.

c. Capability (equipment and contracts) – tracks and monitors capability that could be required in a hydrocarbon incident, including but not limited to: integrated fleet6 vessel schedule, dispersant availability, rig/vessels monitoring, equipment stockpiles, tracking buoy locations and the CIMT duty roster.

The assurance process records how each commitment listed in the performance tables above is managed for ongoing compliance monitoring. The level of compliance can be reviewed in real time and is reported on a monthly basis through the CEM Function.

4. The Hydrocarbon Spill Planning Standard, Hydrocarbon Spill Planning Work Instruction (Australia), Hydrocarbon Spill Capability and Competency Standard, and Hydrocarbon Spill Response Standard

The Hydrocarbon Spill Planning Standard sets out how to plan and prepare for a liquid hydrocarbon spill to the marine environment. (Note, this standard does not apply to scenarios relating to gas releases in the marine environment). This standard details the requirement for an OPEP to be developed, maintained, reviewed, and approved by appropriate regulators (where applicable).

The Hydrocarbon Spill Planning Work Instruction (Australia) details planning for hydrocarbon spill response preparedness including:

- Developing OPEPs.
- Defining how spill scenarios are developed on an activity specific basis
- Priority response receptor determination.
- ALARP determination.

The Hydrocarbon Spill Capability and Competency Standard details:

- Developing spill training requirements and ongoing maintenance of training and competency for personnel
- Developing requirements for spill exercising / testing of spill response arrangements

6 The Integrated fleet consists of vessels from multiple operators that have been contracted to Woodside to undertake a number of duties including hydrocarbon spill response.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

- Maintaining access to identified equipment, personnel and contracts.
- Ensuring compliance and assurance is undertaken in accordance with external and internal requirements.

The Hydrocarbon Spill Response Standard details requirements for appropriate hydrocarbon spill response standards including:

- safeguarding the safety and health of people (responders and communities)
- stopping the source of the spill as quickly as possible
- minimising the environmental and community impact

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6 ALARP EVALUATION

This Section should be read in conjunction with Section 5 which is the capability planned for this activity.

6.1 Monitor and evaluate – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.1 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.1.1 Monitor and evaluate – Control Measure Options Analysis

6.1.1.1 Alternative Control Measures

Alternative Control Measures considered Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Aerostat (or similar inflatable observation platform) for localised aerial surveillance.	Lead time to Aerostat surveillance is disproportionate to the environmental benefit. The system also provides a very limited field of visibility around the vessel it is deployed from.	Long lead time to access (>10 days). Each system would require an operator to interpret data and direct vessels accordingly. Requires multiple systems for shoreline use.	Purchase cost per system is approximately A$300,000.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No

6.1.1.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional personnel trained to use systems.	Current arrangement provides an environmental benefit in the availability of trained personnel facilitating access to Monitor and evaluate data used to inform all other response techniques. No improvement required.	Woodside considers no improvement can be made, all personnel in technical roles e.g. intelligence unit are trained and competent on the software systems. Personnel are trained and exercised regularly. Use of the software and systems forms part of regular work assignments and projects.	Cost for training in-house staff would be approximately A$25,000.	This option is not adopted as the current capability meets the need.	No
Additional satellite tracking buoys to enable greater area coverage.	Increased capability does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	Tracking buoy on location at manned facility and additional needs are met from Woodside-owned stocks in King Bay Supply Facility (KBSF) and Exmouth or can be provided by service provider.	Cost for an additional satellite tracking buoy would be A$200 per day or A$6,000 to purchase.	This option is not adopted as the current capability meets the need, but additional units are available if required.	No
Additional trained aerial observers.	Current capability meets need. Woodside has access to a pool of trained, competent observers at strategic locations to allow timely and sustainable response. Additional observers are available through current contracts with AMOSC and OSRL.	Aviation standards and guidelines confirm all aircraft crews are competent for their roles. Woodside maintains a pool of trained and competent aerial observers with various home base locations to be called upon at the time of an incident. Regular audits of oil spill response organisations maintain training and competency.	Cost for additional trained aerial observers would be A$2,000 per person per day.	This option is not adopted as the current capability meets the need, but additional observers are available via response contractors if required.	No

6.1.1.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster turnaround time from modelling contractor.	Improved control measure does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	External contractor on CIMT roster to be called as soon as required. However initial information needs to be gathered by CIMT team to request an accurate model. External contractor has person on call to respond from their own location.	Modelling service with a faster activation time would be achieved via membership of an alternative modelling service at an annual cost of A$50,000 for 24-hour access plus an initial A$5,000 per modelling run.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Night-time aerial surveillance.	The risk of undertaking the aerial observations at night is disproportionate to the limited environmental benefit. The images would be of low quality and as such the variable is not adopted.	Flights will only occur when deemed safe by the pilot. The risk of night operations is disproportionate to the benefit gained, as images from sensors (infrared, ultraviolet, etc). will be low quality. Flight time limitations will be adhered to.	No improvement can be made without risk to personnel health and safety and breaching Woodside's Golden Safety Rules.	This option is not adopted as the safety considerations outweigh any environmental benefit gained.	No

6.1.2 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.2 Source Control via Vessel SOPEP – ALARP Assessment

Alternative, additional and improved options have been assessed against the base capability described in Section 5.2 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.2.1 Source Control via Vessel SOPEP – Control Measure Options Analysis

6.2.1.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.2.1.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical additional control measures identified					

6.2.1.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.2.2 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.3 Shoreline Clean-up – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.3 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.3.1 Existing Capability – Shoreline Clean-up

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.3.2 Response planning: Browse to NWS GPGT Surveys – Shoreline Clean-up

Woodside has assessed existing capability against the WCCS and has identified that the range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the Petroleum Activity.

Modelling predicts shoreline contact at Scott Reef South (including Sandy Islet) within 0.4 days (10 hours). This is the only shoreline receptor predicted to be contacted by hydrocarbons. Maximum shoreline accumulation at Scott Reef South (including Sandy Islet) is predicted to be 80 m^3 in the worst replicate simulation (modelling predicted an average of 2 m^3 over all replicate simulations). Woodside is satisfied that the current capability is managing risks and impacts to ALARP. Relevant Tactical Response Plans available for identified RPAs are included in ANNEX D: Tactical Response Plans.

Sandy Islet is the only emergent feature at Scott Reef South, and is a sandy cay, ~640 m long and 100 m wide at its widest point. Given the small size and risk of ecological impacts from clean-up activities to Sandy Islet and surrounding intertidal reef, the islet could only accommodate one shoreline clean-up team, which would be subject to an operational NEBA at the time of the spill. For the surrounding intertidal reef system, it is likely that natural flushing and re-floating of the oil would occur with the tide. The applicability of shoreline clean-up techniques for any oil found to persistently adhere to the intertidal reef should be assessed during SCAT assessments and undergo operational NEBA.

A response planning need scenario that provides worst-case capability requirements for planning purposes is outlined below.

Woodside has identified several options which could be mobilised to achieve defined response objectives. Evaluation considers the benefit in terms of the time to respond and the scale of response made possible by each option. The evaluation of possible control measures is summarised in Section 6.3.3.

Table 6-1: Response Planning – Shoreline Clean-up

	Shoreline Clean-up (Phase 2)	Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3	Month 4
	Oil on shoreline (from deterministic modelling) m^3													
	Shoreline accumulation (above 100 g/m^2) – m^3	80	80	0	0	0	0	0	0	0	0	0	0	0
	Oil remaining following response operations – m^3	0	80	26	13	7	3	2	0	0	0	0	0	0
A	**Capability Required (number of operations)**													
A1	Shoreline Clean-up (SCU) operations required (lower)	9	8	3	1	1	0	0	0	0	0	0	0	0
A2	SCU operations required (upper)	0	11	4	2	1	0	0	0	0	0	0	0	0
B	**Capability Available (number of operations)**													
B1	SCU operations available – Stage 2 – Manual (lower)	0	15	15	20	20	20	20	105	105	105	560	560	560
B2	SCU operations available – Stage 2 – Manual (upper)	0	15	15	20	20	20	20	140	140	140	560	560	560
C	**Capability Gap**													
C1	SCU operations gap (lower)	9	-7	-12	-19	-19	-20	-20	-105	-105	-105	-560	-560	-560
C2	SCU operations gap (upper)	0	-4	-11	-18	-19	-20	-20	-140	-140	-140	-560	-560	-560

A1 and A2 – the number of Shoreline Clean-up operations required based on the hydrocarbon volumes ashore above 100 g/m^2

B1 and B2 – the upper and lower number of shoreline clean-up operations available (based on response planning assumptions in Section 5.3),

C1 and C2 – the gap between the upper and lower number of shoreline clean-up operations required in A1 and A2 compared to the operations available in B1 and B2. Green numbers denote where capability exceeds the need

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.3.3 Shoreline Clean-up – Control measure options analysis

6.3.3.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.3.3.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional trained personnel available	The level of training and competency of the response personnel ensures the shoreline clean-up operation is delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside *People & Global Capability Surge Labour Requirement Plan*. Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety brief prior to commencing operations.	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	No
Additional trained personnel deployed	Additional personnel conducting clean-up activities may be able to complete the clean-up in a shorter timeframe, but large numbers of response personnel on Scott Reef South/Sandy Islet is likely to cause ecological impacts to this sensitive sandy cay. Managing a smaller, targeted response using less intrusive clean-up techniques is expected to achieve an environmental benefit through ensuring the shoreline clean-up response is suitable and scalable for the shoreline substrate and sensitivity type. This will ensure there is no increased impact from the shoreline clean-up through the presence of unnecessary personnel and equipment.	Personnel on site will include members with the appropriate specialties to ensure an efficient shoreline clean-up. Additional personnel are available through existing contracts with oil spill response organisations, labour hire organisations and environmental panel contractors	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	No

6.3.3.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response/ mobilisation time	Modelling predicts floating or shoreline accumulation at exposure value at day 0.4 (10 hours) at Scott Reef (CS-01) thus faster response times are not practicable.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial clean-up response will be available for mobilisation within 24–48 hours of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days.	The cost of establishing a local stockpile of new shoreline clean-up equipment closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as additional shoreline clean-up capability is not considered practicable in the time frames prior to contact. Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stage of the response. Given the rapid natural weathering rate of MGO, faster mobilisation is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No

6.3.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.4 Oiled Wildlife Response – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.4 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.4.1 Existing Capability – Wildlife Response

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.4.2 Oiled Wildlife Response - Control Measure Options Analysis

6.4.2.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Direct contracts with service providers	This option duplicates the capability accessed through AMOSC and OSRL and would compete for the same resources. Does not provide a significant increase in environmental benefit.	These delivery options provide increased effectiveness through more direct communication and control of specialists. However, no significant net benefit is anticipated.	Duplication of capability – already subscribed to through contracts with AMOSC and OSRL	This option is not adopted as the existing capability meets the need.	No

6.4.2.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional wildlife treatment systems	The selected delivery options provide access to call-off contracts with selected specialist providers. The agreements ensure that these resources can be mobilised to meet the required response objectives, commensurate with the progressive nature of environmental impact and the time available to monitor hydrocarbon plume trajectories. Provides response equipment and personnel by Day 3. The additional cost in having a dedicated oiled wildlife response (equipment and personnel) in place is disproportionate to environmental benefit. These selected delivery options provide capacity to carry out an oiled wildlife response if contact is predicted; and to scale up the response if required to treat widespread contamination. Current capability meets the needs required and there is no additional environmental benefit in adopting the improvements.	Although hydrocarbon contact above wildlife response exposure value concentrations (≥10 g/m^2) with offshore waters is expected from day one (CS-01), given the low likelihood of such an event occurring and that the current capability meets the need, the cost of implementing measures to reduce the mobilisation time is considered disproportionate to the benefit. Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas. Oiled wildlife response capacity would be addressed for open Commonwealth waters through the AMOSC arrangements, as informed by monitor and evaluate. The cost and organisational complexity of this approach is moderate, and the overall delivery effectiveness is high.	Additional wildlife response resources could total A$1,700 per operational site per day.	This option is not adopted as the existing capability meets the need.	No
Additional trained wildlife responders	Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas. The potential environmental benefit of training additional personnel is expected to be low.	Current numbers meet the needs required and additional personnel are available through existing contracts with oil spill response organisations and environmental panel contractors. Additional equipment and facilities would be required to support ongoing response, depending on the scale of the event and the impact to wildlife and maybe sourced via existing contracts with OSROs. Materials for holding facilities, portable pools, enclosures and rehabilitation areas would be sourced as required.	Additional wildlife response personnel cost A$2,000 per person per day	This option is not adopted as the existing capability meets the need.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.4.2.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster mobilisation time for wildlife response	Response time is limited by specialist personnel mobilisation time. Current timing is sufficient for expected first shoreline contact. This control measure provides increased effectiveness through faster mobilisation of specialists. However, no significant net environmental benefit is expected due to shoreline stranding times.	Pre-positioning vessels or equipment would reduce mobilisation time for oiled wildlife response activities. However, given the effectiveness of an oiled wildlife response is expected to be low, an earlier response would provide a marginal increase in environmental benefit.	Wildlife response packages to preposition at vulnerable sites identified through the deterministic modelling cost A$700 per package per day. The cost of having dedicated equipment and personnel available to respond faster is considered disproportionate to the environmental benefit.	This option is not adopted as the existing capability meets the need.	No

6.4.3 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.5 Waste Management – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.5 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.5.1 Existing Capability – Waste Management

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.5.2 Waste Management - Control Measure Options Analysis

6.5.2.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.5.2.2 Additional Control Measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Increased waste storage capability	The procurement of waste storage equipment options on the day of the event will allow immediate response and storage of collected waste. The environmental benefit of immediate waste storage is to reduce ecological consequence by safely securing waste, allowing continuous response operations to occur.	Access to Veolia's storage options provides the resources required to store and transport sufficient waste to meet the need. Access to waste contractors existing facilities enables waste to be stockpiled and gradually processed within the regional waste handling facilities. Additional temporary storage equipment is available through existing contract and arrangements with OSRL. Existing arrangements meet identified need for the Petroleum Activity.	Cost for increased waste disposal capability would be ~A$1,300 per m^3. Cost for increased onshore temporary waste storage capability would be ~A$40 per unit per day.	This option is not adopted as the existing capability meets the need.	No

6.5.2.3 Improved Control Measures

Improved Control Measures considered Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response time	The access to Veolia waste storage options provides the resources to store and transport waste, permitting the wastes to be stockpiled and gradually processed within the regional waste handling facilities. Bulk transport to Veolia's licensed waste management facilities would be undertaken via controlled-waste-licensed vehicles and in accordance with Environmental Protection (Controlled Waste) Regulations 2004. The environmental benefit from successful waste storage will reduce pressure on the treatment and disposal facilities reducing ecological consequences by safely securing waste. In addition, waste storage and transport will allow continuous response operations to occur. This delivery option would increase known available storage, eliminating the risk of additional resources not being available at the time of the event. However, the environmental benefit of Woodside procuring additional waste storage is considered minor as the risk of additional storage not being available at the time of the event is considered low and existing arrangements provide adequate storage to support the response.	Woodside already maintains an equipment stockpile in Exmouth to enable shorter response times to incidents. This stockpile includes temporary waste storage equipment. Woodside has access to stockpiles of waste storage and equipment in Dampier and Exmouth through existing contracts and arrangements.	The incremental benefit of having a dedicated local Woodside owned stockpile of waste equipment and transport is considered minor and cost is considered disproportionate to the benefit gained given predicted shoreline contact times.	This option is not adopted as the existing capability meets the need.	No

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.5.3 Selected control measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- Alternative: none selected
- Additional: none selected
- Improved: none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

6.6 Operational and Scientific Monitoring – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.6 with those that have been selected for implementation which are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.6.1 Existing Capability – Operational and Scientific Monitoring

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/ pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.6.2 Operational and Scientific Monitoring – Control Measure Options Analysis

6.6.2.1 Alternative Control Measures

Alternative Control Measures considered Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Dedicated contracted OSM vessel (exclusive to Woodside)	Would provide marginally faster mobilisation time of first-strike monitoring resources. However, the timescale difference would be limited when compared to the availability of in-field support vessels which are equipped with water quality sampling equipment, meaning it would result in very minor to no environmental benefit.	Chartering and equipping additional vessels on standby for operational and scientific monitoring has been considered. The option is reasonably practicable but the sacrifice (charter costs and organisational complexity) is significant, particularly when existing contracted support vessels can be equipped with water quality sampling equipment. Additionally, vessels are not the limiting factor in deployment times, as the majority of operational and scientific monitoring components require trained specialists, who can take ≥72 hours to mobilise.	The cost and organisational complexity of contracting a dedicated response vessel is considered disproportionate to the marginal environmental benefit by adopting these delivery options.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	No

6.6.2.2 Additional control measures

Additional Control Measures considered Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Pre-position a team of trained scientific monitoring personnel on standby in Dampier	Pre-positioning a team of trained scientific monitoring personnel closer to the spill location would result in quicker mobilisation times for one or two priority OMPs or SMPs to be implemented.	A trained team of scientific monitoring personnel positioned in Dampier could result in a more rapid deployment of initial monitoring. However, this option is reliant on suitable vessels being readily available in Dampier and not requiring relocation from nearby ports or adjacent offshore locations.	The costs of having a small team of trained scientific monitoring personnel available on standby in Dampier would be in excess of $3–4M / annum and would be an associated cost to the activity whether there was a spill or not.	The cost of maintaining a team of trained scientific monitoring personnel on standby in Dampier is considered disproportionate, as multiple teams of trained personnel are required to implement multiple OMPs and SMPs. It is considered more cost effective and feasible to pre-position first strike sampling kits on support vessels (see below).	No
Contract additional OSM Service Providers to increase availability of monitoring personnel in the first 2 weeks of the spill	The availability of additional monitoring personnel could theoretically increase the number of receptors and locations able to be monitored, however, the ability to deploy personnel would be subject to a range of feasibility considerations.	This option has been considered and evaluated; however, it has been discounted on the basis that deploying a significantly larger number of monitoring teams concurrently with response operations would introduce additional safety, environmental, and operational risks. The current resource assessment within Section C.4 indicates that up to 16 monitoring teams may be required during the initial 2 weeks of the response. Expanding this effort further by engaging additional contracted monitoring teams would likely result in increased simultaneous operations (SIMOPs), elevating the potential for vessel interactions, collision risks, anchoring impacts, and waste discharges, thereby increasing the overall risk profile. To ensure risk remains ALARP, a staged and scalable approach to resourcing has been adopted. Should additional monitoring capacity be required from week 3 onwards, this will be identified early	Cost to contract an additional OSM Service Provider.	The option to contract an additional OSM Service Provider to increase the number of contracted monitoring teams during the initial stages of the spill response has been assessed and found not to be reasonably practicable due to the elevated safety and environmental risks associated with SIMOPs, including vessel collisions, anchoring impacts, and waste discharges. These risks outweigh the marginal benefit of increased early-stage monitoring coverage, particularly given the scale of the existing response and monitoring deployment already planned.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

		through ongoing review of monitor and evaluate activities and existing monitoring efforts. Woodside will activate additional resourcing via its existing contract with the OSM Services Provider, thereby ensuring a streamlined and controlled expansion of effort. By this stage of the response, operational response activities are expected to have stabilised, reducing the likelihood and severity of SIMOPs-related risks. In addition, efficiencies may be gained by reallocating existing monitoring teams to other priority receptors where monitoring is still required, particularly in cases where termination criteria have been met at initial locations. This dynamic resourcing approach ensures that additional personnel are only deployed when necessary, thereby supporting both environmental and safety performance outcomes and maintaining ALARP principles throughout the monitoring program.			
Purchase initial water quality / hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection	The availability of initial water quality / hydrocarbon sampling kits on nearby support vessels (and an accompanying technical procedure for sample collection) will provide an opportunity for more rapid initial measurements of hydrocarbon properties and concentrations. This information will provide important initial situational awareness information that will aid decision making in both monitoring and response efforts.	This control measure will improve the availability and timeframe for initial water quality sampling.	Implementing this additional control measure will involve time and effort to source and supply initial sampling kits to the selected supply vessels. There will also be employee time involved in developing and conducting training to vessel crews on the technical procedure for sample collection.	Adoption of this control measure will provide an additional and quicker opportunity for initial water quality sampling, resulting in improved situational awareness for decision making in monitoring and response teams.	Yes
Modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)	Initial aerial surveillance provides important information for decision making in response operations, but can also provide important initial environmental monitoring data. Amending the Woodside Aerial Surveillance Observer Log to include the ability to report on location, presence and type of fauna could assist in a more rapid, effective deployment of specialised OMP teams for Marine Fauna Assessment and Oiled Wildlife Response.	This control measure is considered reasonably practicable to implement.	Cost to modify the Aerial Surveillance Observer Log is minimal and is associated with time and effort of existing employees.	Adoption of this control measure is considered to be beneficial as it could assist in more effective and efficient deployment of fauna monitoring and response efforts.	Yes
Conduct periodical review of existing baseline data sources across receptors predicted to be contacted within 7 days at the low exposure values and a probability ≥10%	This ensures that receptors with deficient baseline data are identified. This a consideration for first-strike monitoring prioritisation and the finalisation of each SMP design	This control measure is considered reasonably practicable to implement.	Cost of contract with Service Provider.	Understanding the presence or absence, suitability and quality of baseline data for receptors predicted to be contacted within 7 days, at a probability ≥ 10%, is an important preparatory measure. Understanding which receptors have insufficient baseline data will help quickly guide monitoring prioritisation and the finalisation of each SMP design and whether there is a need to include alternative designs.	Yes

6.6.2.3 Improved Control Measures considered

Improved Control Measures considered Improved control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Adoption of the OSRL OSM Supplementary Service Agreement for OSM capability provision	A Joint Industry capability provision has considerable benefits, including an improvement to industry OSM standards; improved reliability in accessing specialist personnel; efficiencies and capability growth associated with shared testing and exercising; and greater depth in Monitoring Service Provider (MSP) capability, with a centralised contract coordinating multiple consultancies and MSPs.	This control measure has already been developed by Industry and is considered reasonably practicable to implement.	Cost of annual subscription to OSRL OSM Supplementary Service Agreement	Adopting this control measure involves additional costs, but the benefits of a Joint Industry OSM capability provision outweighs the costs and therefore this additional measure has been accepted.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas	Understanding vessel specification requirements for OSM at priority locations will result in quicker mobilisation times, and more effective monitoring, as correctly equipped vessels will be made available at the commencement the monitoring effort.	This control measure is considered reasonably practicable to implement.	Cost to determine vessel specifications is minimal and is associated with time and effort of existing employees.	This control measure would result in the correct vessels being mobilised for monitoring personnel and result in quicker implementation of monitoring.	Yes

6.6.3 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity:

- Alternative: none selected
- Additional:
  - purchase water quality / hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection
  - modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)
  - conduct periodical review of existing baseline data sources for receptors predicted to be contacted within 7 days, at the low exposure values and a probability ³ 10%.
- Improved:
  - adopt the OSRL OSM Supplementary Service Agreement for OSM capability provision
  - determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 6.6.4 ALARP and Acceptability Summary

ALARP and Acceptability Summary		
Operational and Scientific Monitoring		
ALARP Summary	X	Known, reasonably practicable control measures have been adopted
	X	No additional, alternative and improved control measures would provide further benefit
	X	No reasonably practical additional, alternative, and/or improved control measure exists
	The resulting operational and scientific monitoring capability has been assessed against the credible spill scenarios. The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts. Known, reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be Moderate and the overall delivery effectiveness considered Medium. The operational and scientific monitoring's main objectives can be met, with the adoption of three additional and one improved control measures to provide further benefit.	
Acceptability Summary	The control measures selected for implementation manage the potential impacts and risks to ALARP. In the event of a hydrocarbon spill for the Petroleum Activity, the control measures selected, meet or exceed the requirements of Woodside Management System and industry best-practice. Operational and scientific monitoring control and activities are compliant with relevant environmental legislation and regulations, including the EPBC Act. Throughout the Petroleum Activity, relevant Australian standards and codes of practice will be followed to evaluate the impacts from a loss of containment event. Stakeholder consultation undertaken for the Petroleum Activity did not receive feedback regarding concerns for Scientific Monitoring activities in response to a hydrocarbon spill. The level of impact and risk to the environment has been considered with regards to the principles of Ecologically Sustainable Development; and risks and impacts from a range of identified scenarios were assessed in detail. The control measures described consider the conservation of biological and ecological diversity, through both the selection of control measures and the management of their performance. The control measures have been developed to account for credible case scenarios, and uncertainty has not been used as a reason for postponing control measures.	
On the basis from the ALARP and acceptability summary as presented above and in Section [xx] of the EP Woodside considers the adopted controls discussed manage the impacts and risks associated with implementing operational and scientific monitoring activities to a level that is ALARP and acceptable.		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 7 ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

The implementation of response techniques may modify the impacts and risks identified in the EP and response activities can introduce additional impacts and risks from response operations themselves. Therefore, it is necessary to complete an assessment to ensure these impacts and risks have been considered and specific measures are put in place to continually review and manage these further impacts and risks to ALARP and Acceptable levels. A simplified assessment process has been used to complete this task which covers the identification, analysis, evaluation and treatment of impacts and risks introduced by responding to the event.

7.1 Identification of impacts and risks from implementing response techniques

Each of the control measures can modify the impacts and risks identified in the EP. These impacts and risks have been previously assessed within the scope of the EP. Refer to the EP for details regarding how these risks are being managed. They are not discussed further in this document.

- Atmospheric emissions
- Routine and non-routine discharges
- Physical presence, proximity to other vessels (shipping and fisheries)
- Routine acoustic emissions vessels
- Lighting for night work/navigational safety
- Invasive marine species
- Collision with marine fauna
- Disturbance to Seabed

Additional impacts and risks associated with the control measures not included within the scope of the EP include

- Vessel operations and anchoring
- Presence of personnel on the shoreline
- Human presence (manual cleaning)
- Vegetation cutting
- Additional stress or injury caused to wildlife
- Secondary contamination from the management of waste

7.2 Analysis of impacts and risks from implementing response techniques

The table below compares the adopted control measures for this activity against the environmental values that can be affected when they are implemented.

This document is protected by copyright. 	Environmental Value						
	Soil and Groundwater	Marine Sediment Quality	Water Quality	Air Quality	Ecosystems/ Habitat	Species	Socio-Economic
Monitor and evaluate		✓	✓	✓	✓	✓	✓
Source control		✓	✓	✓	✓	✓	✓
Shoreline clean-up	✓	✓	✓	✓	✓	✓	✓
Oiled wildlife	✓	✓	✓	✓	✓	✓	✓
Operational and scientific monitoring		✓	✓	✓	✓	✓	✓
Waste management	✓	✓	✓	✓	✓	✓	✓

7.3 Evaluation of impacts and risks from implementing response techniques

Vessel operations and anchoring

During the implementation of response techniques, where water depths allow, it is possible that response vessels will be required to anchor (e.g. during shoreline surveys). The use of vessel anchoring will be minimal and likely to occur when the impacted shoreline is inaccessible via road. Anchoring in the nearshore environment of sensitive receptor locations will have the potential to impact coral reef, seagrass beds and other benthic communities in these areas. Recovery of benthic communities from anchor damage depends on the size of anchor and frequency of anchoring. Impacts would be highly localised (restricted to the footprint of the vessel anchor and chain) and temporary, with full recovery expected.

Presence of personnel on the shoreline

Presence of personnel on the shoreline during shoreline operations could potentially result in disturbance to wildlife and habitats. During the implementation of response techniques, it is possible that personnel may have minimal, localised impacts on habitats, wildlife and coastlines. The impacts associated with human presence on shorelines during shoreline surveys may include:

- Damage to vegetation/habitat to gain access to areas of shoreline oiling
- Damage or disturbance to wildlife during shoreline surveys
- Removal of surface layers of intertidal sediments (potential habitat depletion)
- Excessive removal of substrate causing erosion and instability of localised areas of the shoreline.

Human presence

Human presence for manual clean-up operations may lead to the compaction of sediments and damage to the existing environment especially in sensitive locations such as turtle nesting beaches. However, any impacts are expected to be localised with full recovery expected.

Waste generation

Implementing the selected response techniques will result in the generation of the following waste streams that will require management and disposal:

- Liquids (recovered oil/water mixture), recovered from shoreline clean-up operations
- Semi-solids/solids (oily solids), collected during shoreline clean-up operations
- Debris (e.g. seaweed, sand, woods, plastics), collected during shoreline clean-up operations and oiled wildlife response.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

If not managed and disposed of correctly, wastes generated during the response have the potential for secondary contamination similar to that described above, impacts to wildlife through contact with or ingestion of waste materials and contamination risks if not disposed of correctly onshore.

Additional stress or injury caused to wildlife

Additional stress or injury to wildlife could be caused through the following phases of a response:

- Capturing wildlife
- Transporting wildlife
- Stabilisation of wildlife
- Cleaning and rinsing of oiled wildlife
- Rehabilitation (e.g. diet, cage size, housing density)
- Release of treated wildlife

Inefficient capture techniques have the potential to cause undue stress, exhaustion or injury to wildlife, additionally pre-emptive capture could cause undue stress and impacts to wildlife when there are uncertainties in the forecast trajectory of the spill. During the transportation and stabilisation phases there is the potential for additional thermoregulation stress on captured wildlife. Additionally, during the cleaning process, it is important personnel undertaking the tasks are familiar with the relevant techniques to ensure that further injury and the removal of water proofing feathers are managed and mitigated. Finally, during the release phase, it is important that wildlife is not released back into a contaminated environment.

7.4 Treatment of impacts and risks from implementing response techniques

In respect of the impacts and risks assessed the following treatment measures have been adopted. It must be recognised that this environmental assessment is seeking to identify how to maintain the level of impact and risks at levels that are ALARP and of an acceptable level rather than exploring further impact and risk reduction. It is for this reason that the treatment measures identified in this assessment will be captured in Operational Plans, Tactical Response Plans, and/or First Strike Plans.

Vessel operations and access in the nearshore environment

- If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified (Performance Standard [PS] 8.1, PS 20.3).
- Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines (PS 8.2, PS 20.4).

Presence of personnel on the shoreline

- Oversight by trained personnel who are aware of the risks (PS 8.6).
- Trained unit leader's brief personnel of the risks prior to operations (PS 8.7).

Human Presence

- Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations (PS 8.3, PS 20.5)
- Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves. (PS 8.4, PS 20.6)

Waste generation

- All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates. (PS 6.4)
- Removal of vegetation will be limited to moderately or heavily oiled vegetation (PS 8.5)
- Teams will segregate liquid and solid wastes at the earliest opportunity (PS 14.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

Additional stress or injury caused to wildlife

- Oiled wildlife operations (including hazing) would be implemented with advice from the DBCA Oiled Wildlife Advisor and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan (PS 12.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

8 ALARP CONCLUSION

An analysis of alternative, additional and improved control measures has been undertaken to determine their reasonableness and practicability. The tables in Section 6 document the considerations made in this evaluation. Where the costs of an alternative, additional, or improved control measure have been determined to be clearly disproportionate to the environmental benefit gained from its adoption it has been rejected. Where this is not considered to be the case the control measure has been adopted.

The risks from a hydrocarbon spill have been reduced to ALARP because:

- Woodside has a significant hydrocarbon spill response capability to respond to the WCCS through the control measures identified.
- New and modified impacts and risks associated with implementing response techniques have been considered and will not increase the risks associated with the activity.
- A consideration of alternative, additional, and improved control measures identified any other control measures that delivered proportionate environmental benefit compared to the cost of adoption for this activity ensuring that:
  - Known, reasonably practicable control measures have been adopted.
  - No additional, reasonably practicable alternative and/or improved control measures would provide further environmental benefit.
  - No reasonably practical additional, alternative, and/or improved control measure exists.
- A structured process for considering alternative, additional, and improved control measures was completed for each control measure.
- The evaluation was undertaken based on the outputs of the WCCS so that the capability in place is sufficient for all other scenario from this activity.
- The likelihood of the WCCS spill has been ignored in evaluating what was reasonably practicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 9 ACCEPTABILITY CONCLUSION

Following the ALARP evaluation process, Woodside deems the hydrocarbon spill risks and impacts have been reduced to an acceptable level by meeting all of the following criteria:

- Techniques are consistent with Woodside's processes and relevant internal requirements including policies, culture, processes, standards, structures and systems.
- Levels of risk/ impact are deemed acceptable by relevant persons/ organisations are aligned with the uniqueness of, and/or the level of protection assigned to the environment, its sensitivity to pressures introduced by the activity, and the proximity of activities to sensitive receptors, and have been aligned with Part 3 of the EPBC Act.
- Selected control measures meet requirements of legislation and conventions to which Australia is a signatory (e.g. MARPOL, the World Heritage Convention, the Ramsar Convention, and the Biodiversity Convention etc.). In addition to these, other non-legislative requirements met include:
  - Australian IUCN reserve management principles for Commonwealth marine protected areas and bioregional marine plans.
  - National Water Quality Management Strategy and supporting guidelines for marine water quality.
  - Conditions of approval set under other legislation.
  - National and international requirements for managing pollution from ships.
  - National biosecurity requirements.
- Industry standards, best practices and widely adopted standards and other published materials have been used and referenced when defining acceptable levels. Where these are inconsistent with mandatory/ legislative regulations, explanation has been provided for the proposed deviation. Any deviation produces the same or a better level of environmental performance (or outcome).

11 GLOSSARY AND ABBREVIATIONS

Term	Description / Definition
~	Approximately
<, ≤	Less than, less than or equal to
>, ≥	Greater then, greater than or equal to
°C	Degrees Celsius
AEP	Australian Energy Producers (formerly Australian Petroleum Production and Exploration Association [APPEA]; from 13 September 2023)
ALARP	As low as reasonably practicable; Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
AMOP	Arctic and Marine Oil Spill Program
AMOSC	Australian Marine Oil Spill Centre
AMSA	Australian Maritime Safety Authority
APPEA	Australian Petroleum Production & Exploration Association (now Australian Energy Producers (AEP); from 13 September 2023)
Availability	The availability of a control measure is the percentage of time that it is capable of performing its function (operating time plus standby time) divided by the total period (whether in service or not). In other words, it is the probability that the control has not failed or is undergoing a maintenance or repair function when it needs to be used.
BAOAC	Bonn Agreement Oil Appearance Code
BC Act	Western Australian Biodiversity Conservation Act 2016
BIA	Biologically Important Area
BIP	Bridging Implementation Plan
BP	Boiling point
CEM	Crisis and Emergency Management
CERCLA	United States Comprehensive Environmental Response, Compensation, and Liability Act
CIMT	Corporate Incident Management Team (Level 2 incidents)
CMT	Crisis Management Team (Level 3 incidents)
Control	The means by which risk from events is eliminated or minimised.
Control effectiveness	A measure of how well the control measures perform their required function.
Control measure (risk control measure)	The features that eliminate, prevent, reduce or mitigate the risk to environment associated with Petroleum Activity.
COP	Common Operating Picture
Credible spill scenario	A spill considered by Woodside as representative of maximum volume and characteristics of a spill that could occur as part of the Petroleum Activity.
CS	Credible scenario
cSt	Centistokes
DBCA	Western Australia Department of Biodiversity, Conservation and Attractions
DTMI	Western Australia Department of Transport and Major Infrastructure
DWH	Deepwater Horizon

Term	Description / Definition
EMBA	Environment that May Be Affected. The summary of quantitative modelling where the marine environment could be exposed to hydrocarbons levels exceeding hydrocarbon exposure value concentrations.
EMSA	European Maritime Safety Agency
Environment Regulations	Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023
EP	Environment Plan
EPBC Act	Commonwealth Environment Protection and Biodiversity Conservation Act 1999
Exposure value	Hydrocarbon concentrations applied to the risk assessment to evaluate hydrocarbon spills
FSP	First Strike Plan
ft	Feet (non-metric distance measurement)
GPGT	Geophysical and geotechnical
HSE	Health, safety and environment
HSP	Hydrocarbon Spill Preparedness
HVLP	High volume low pressure
IAP	Incident Action Plan
IC	Incident Commander
IMO	International Maritime Organization
IMS	Incident Management System
IMT	Incident Management Team (Level 1 incidents)
Incident	An event where a release of energy resulted in or had (with) the potential to cause injury, ill health, damage to the environment, damage to equipment or assets or company reputation.
IPIECA	International Petroleum Industry Environment Conservation Association
ITOPF	International Tanker Owners Pollution Federation
IUCN	International Union for Conservation of Nature
KBSF	King Bay Supply Facility
KEF	Key Ecological Feature
KGP	Karratha Gas Plant
km	Kilometre
m	Metre
MARPOL	The International Convention for the Prevention of Pollution From Ships, 1973 as modified by the Protocol of 1978. Also known as MARPOL 73/78.
MGO	Marine Gas Oil
MEPC	Marine Environment Protection Committee (part of the IMO)
MGO	Marine Gas Oil
mm	Millimetre
MSA	Master Services Agreement
MSP	Monitoring Service Provider
MSRC	Marine Spill Response Corporation
NEBA	Net Environmental Benefit Analysis
NOAA	National Oceanic and Atmospheric Administration

Term	Description / Definition
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority (Australia)
NR	Nature Reserve
NRDA	Natural Resource Damage Assessment
OILMAP	Oil Spill Model and Response System
OM	Operational Monitoring
OMP	Operational Monitoring Plan
OPEP	Oil Pollution Emergency Plan
OSCA	Oil Spill Control Agent
OSM	Operational and Scientific Monitoring
OSPRMA	Oil Spill Preparedness and Response Mitigation Assessment
OSRL	Oil Spill Response Limited
OSTM	Oil Spill Trajectory Modelling
OWR	Oiled Wildlife Response
OWRP	Oiled Wildlife Response Plan
Performance outcome	A statement of the overall goal or outcome to be achieved by a control measure
Performance standard	The parameters against which [risk] controls are assessed to ensure they reduce risk to ALARP. A statement of the key requirements (indicators) that the control measure has to achieve in order to perform as intended in relation to its functionality, availability, reliability, survivability and dependencies.
PPA	Priority Protection Area
ppb	Parts per billion
Preparedness	Measures taken before an incident in order to improve the effectiveness of a response
PS	Performance Standard
Reasonably practicable	... a computation ... made by the owner, in which the quantum of risk is placed on one scale and the sacrifice involved in the measures necessary for averting the risk (whether in money, time or trouble) [showing whether or not] that there is a gross disproportion between them ... made by the owner at a point of time anterior to the accident. (Judgement: Edwards v National Coal Board [1949])
Receptor areas	Geographically referenced areas such as bays, islands, coastlines and/or protected area (World Heritage Area [WHA], Commonwealth or State marine reserve or park) containing one or more receptor type.
Receptors at risk	Physical, biological and social resources identified as at risk from hydrocarbon contact using oil spill modelling predictions.
Regulator	NOPSEMA are the Environment Regulator under the Environment Regulations.
Reliability	The probability that at any point in time a control measure will operate correctly for a further specified length of time.
Response technique	The key priorities and objectives to be achieved by the response plan Measures taken in response to an event to reduce or prevent adverse consequences.
RPA	Response Protection Area
S&EM	Security and Emergency Management
SCAT	Shoreline Clean-up Assessment Techniques
SCU	Shoreline clean-up

ANNEX A: NET ENVIRONMENTAL BENEFIT ANALYSIS DETAILED OUTCOMES

A NEBA has been conducted to assess the net environmental benefit of different response techniques to selected receptors in the event of an MGO spill from the Petroleum Activity for CS-01. The complete list of potential receptor locations within the EMBA for the Petroleum Activity is included in Section 6.9 of the EP.

The locations used for the NEBA were limited to the identified RPAs of the Petroleum Activity identified from modelling (see Section 3 for outline of selection). These include receptors which have potential for the following:

- Surface contact (>50 g/m^2) – no contact predicted at any RPA at any time
- Surface contact (>10 g/m^2 for potential oiled wildlife response)
- Shoreline accumulation (>100 g/m^2)

The detailed NEBA assessment outcomes are shown below. The Petroleum Activity preoperational NEBAs contains the full assessments.

Table A-1: NEBA assessment technique recommendations for MGO vessel collision (CS-01)

Receptor	Monitor and evaluate	Containment and recovery	Dispersant application: sub-sea	Dispersant application: >20 m water depth and >10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Source control (via vessel SOPEP)
Scott Reef North*	Yes	No	N/A	No	N/A	N/A	N/A	N/A	Yes	No	No	Yes
Scott Reef South	Yes	No	N/A	No	No	Yes	No	No	Yes	No	No	Yes
Sandy Islet	Yes	No	N/A	No	No	Yes	No	No	Yes	No	No	Yes
Seringapatam Reef*	Yes	No	N/A	No	N/A	N/A	N/A	N/A	Yes	No	No	Yes

** Oil spill modelling predicted this receptor only to be contacted by floating hydrocarbons >10 g/m^2 for consideration of oiled wildlife response*

Overall assessment

Sensitive receptor (sites identified in EP)	Monitor and evaluate	Containment and recovery	Dispersant application: sub-sea	Dispersant application: >20 m water depth and >10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Source control (via vessel SOPEP)
Is this response practicable?	Yes	No	N/A	No	No	Potentially	No	No	Yes	No	No	Yes

NEBA Impact Ranking Classification Guidance

To reduce variability between assessments, the following ranking descriptions have been devised to guide the workshop process:

			Degree of impact7	Potential duration of impact	Equivalent Woodside Corporate Risk Matrix Consequence Level
Positive	3P	Major	Likely to prevent: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-today business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches) or regulatory designations.	Decrease in duration of impact by > 5 years	N/A
	2P	Moderate	Likely to prevent: • significant impact to a single phase of reproductive cycle of biological receptors • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors.	Decrease in duration of impact by 1–5 years	N/A
	1P	Minor	Likely to prevent impacts on: • significant proportion of population or breeding stages of biological receptors • socio-economic receptors such as: - significant impact to the sensitivity of protective designation; or - significant and long-term impact to business/industry.	Decrease in duration of impact by several seasons (< 1 year)	N/A
	0	Non-mitigated spill impact	No detectable difference to unmitigated spill scenario.		
Negative	1N	Minor	Likely to result in: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches), or regulatory designations.	Increase in duration of impact by several seasons (< 1 year)	Increase in risk by one sub-category, without changing category (e.g. Minor (E) to Minor (D))
	2N	Moderate	Likely to result in: • significant impact to a single phase of reproductive cycle for biological receptors; or • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. This level of negative impact is recoverable and unlikely to result in closure of business/industry in the region.	Increase in duration of impact by 1–5 years	Increase in risk by one category (e.g. Minor (D) to Moderate (C or B))
	3N	Major	Likely to result in impacts on: • significant proportion of population or breeding stages of biological receptors • socio-economic receptors resulting in either: - significant impact to the sensitivity of protective designation; or - significant and long-term impact to business/industry.	Increase in duration of impact by > 5 years or unrecoverable	Increase in risk by two categories (e.g. Minor (E) to Major (A))

.

7 NOTE: the maximum likely impact should be considered; for example, if a spill were to directly impact the behaviour that results in an impact to reproduction and/or the breeding population (such as fish failing to aggregate to spawn), then the score should be a 2 or 3 rather than a 1. Similarly, if a change in behaviour resulted in an increased risk of mortality of a population, then it should be scored as a 2 or 3

ANNEX B: MONITOR AND EVALUATE ACTIVATION AND TERMINATION CRITERIA

Table B-1: Monitor and evaluate objectives, triggers and termination criteria

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Predictive Modelling of Hydrocarbons to Assess Resources at Risk	Predictive modelling focuses on the conditions that have prevailed since a spill commenced, as well as those that are forecasted in the short term (1–3 days ahead) and longer term. Predictive modelling utilises computer-based forecasting methods to predict hydrocarbon spill movement and guide the management and execution of spill response operations to maximise the protection of environmental resources at risk. The objectives of predictive modelling are to: • Provide forecasting of the movement and weathering of spilled hydrocarbons • Identify resources that are potentially at risk of contamination • Provide simulations showing the outcome of alternative response options (booming patterns etc.) to inform on-going Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP	• Predictive modelling will be triggered immediately following a level 2/3 hydrocarbon spill.	• The criteria for the termination of predictive modelling are: • The hydrocarbon discharge has ceased and no further surface oil is visible • Response activities have ceased • Hydrocarbon spill modelling (as verified by surveillance observations) predicts no additional natural resources will be impacted
Surveillance and reconnaissance to detect hydrocarbons and resources at risk	Surveillance and reconnaissance aims to provide regular, on-going hydrocarbon spill surveillance throughout a broad region, in the event of a spill. The objectives of surveillance and reconnaissance are: • Verify spill modelling results and recalibrate spill trajectory models. • Understand the behaviour, weathering and fate of surface hydrocarbons. • Identify environmental receptors and locations at risk or contaminated by hydrocarbons. • Inform ongoing Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP. • To aid in the subsequent assessment of the short- to long-term impacts and/or recovery of natural resources (assessed in SMPs) by ensuring that the visible cause and effect relationships between the hydrocarbon spill and its impacts to natural resources have been observed and recorded during the operational phase.	• Surveillance and reconnaissance will be triggered immediately following a level 2/3 hydrocarbon spill.	• The termination triggers for the Surveillance and reconnaissance are: • 72 hours has elapsed since the last confirmed observation of surface hydrocarbons. • Latest hydrocarbon spill modelling results do not predict surface exposures at visible levels.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Pre-emptive assessment of sensitive receptors at risk	• Pre-emptive shorelines assessment aims to undertake a rapid assessment of the presence, extent and current status of shoreline sensitive receptors prior to contact from the hydrocarbon spill, by providing categorical or semi-quantitative information on the characteristics of resources at risk. • The primary objective of pre-emptive shorelines assessment is to confirm understanding of the status and characteristics of environmental resources, predicted by predictive modelling and surveillance, to be at risk, to further assist in making decisions on the selection of appropriate response actions and prioritisation of resources. • Indirectly, qualitative/semi-quantitative pre-contact information collected by pre-emptive shorelines assessment on the status of environmental resources may also aid in the verification of environmental baseline data and provide context for the assessment of environmental impacts, as determined through subsequent SMPs. • Pre-emptive shorelines assessment would be undertaken in liaison with WA DTMI as the control agency once the oil is in State Waters (if a Level 2/3 incident).	• Triggers for commencing pre-emptive shorelines assessment include: • Contact of a sensitive habitat or shoreline is predicted by predictive modelling and surveillance. • The pre-emptive assessment methods can be implemented before contact from hydrocarbons (once a receptor has been contacted by hydrocarbons it will be assessed via SCAT.	• The criteria for the termination of pre-emptive shorelines assessment at any given location are: • Locations predicted to be contacted by hydrocarbons have been contacted. • The location has not been contacted by hydrocarbons and is no longer predicted to be contacted by hydrocarbons (resources should be reallocated as appropriate).

ANNEX C: PETROLEUM ACTIVITY OSM ACTIVITY SPECIFIC REQUIREMENT AND VERIFICATION OF OSM-BIP ADEQUACY

The Woodside OSM-BIP comprehensively presents important information for OSM assessment and implementation, including the process for assessing OSM requirements for each activity. This Annex provides the activity-specific information required for the Browse Geophysical and Geotechnical Surveys – Commonwealth (hereafter referred to as the Petroleum Activity) OSM Assessment, including:

- OSM Planning Area
- Monitoring priorities
- Mobilisation and implementation timeframes
- Resourcing requirements and capability assessment.

C.1 Determine if the activity OSM Planning Area fits within the Combined OSM Planning Area

The OSM Planning Area for the Petroleum Activity credible spill scenarios (as shown in Figure C - 1) fits within the Combined OSM Planning Area (Figure 2-1 in the OSM-BIP).

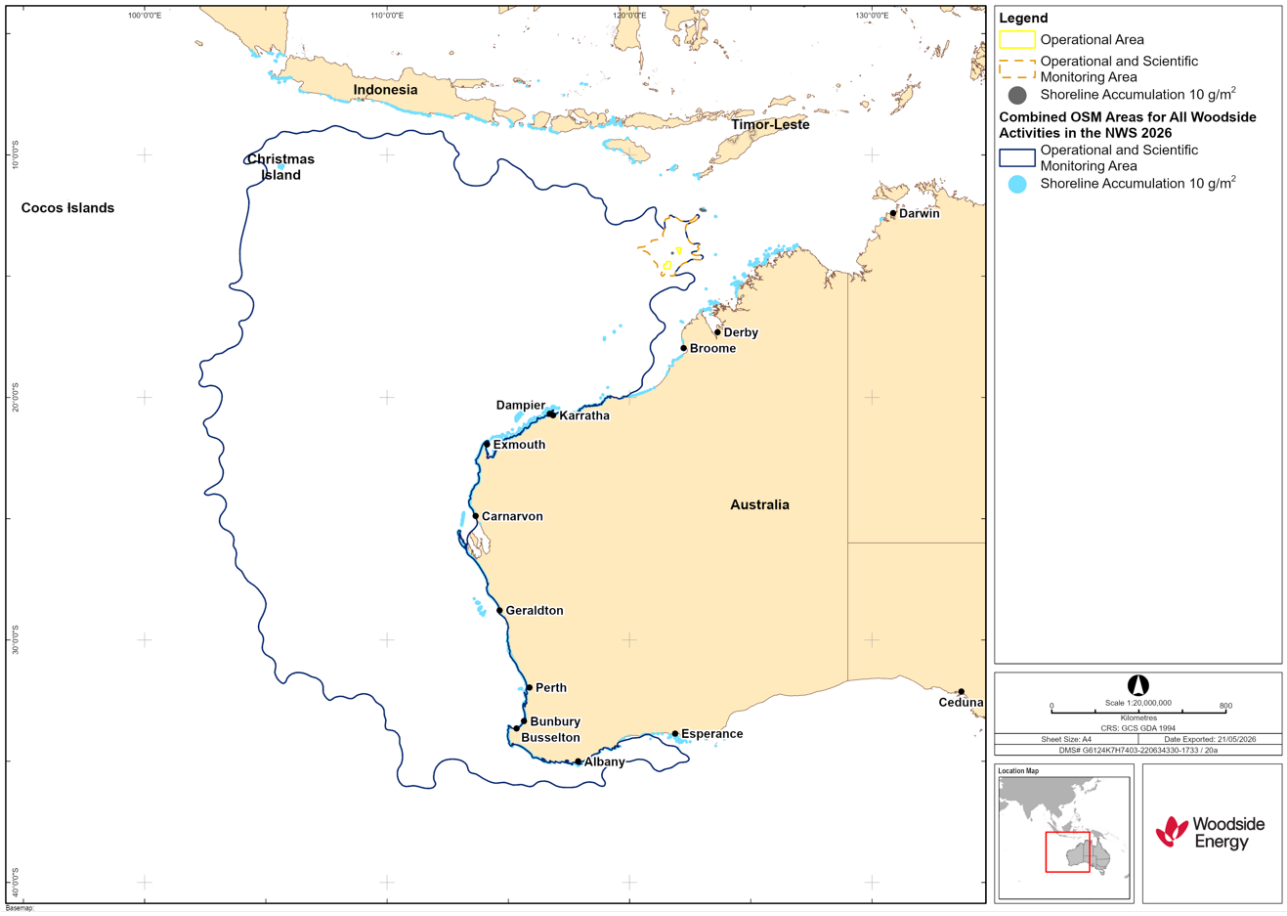

Figure C - 1: Petroleum Activity OSM Planning Area based on the area potentially contacted by the low (below ecological impact) hydrocarbon exposure values in the event of the worst-case credible spill scenarios (CS-01 and CS-02)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

C.2 Determine activity-specific monitoring priorities

The monitoring priorities for the Petroleum Activity have been identified through application of the tiered prioritisation hierarchy described in Section 2.2 of the Woodside OSM-BIP to the stochastic oil spill modelling results for the two WCCS spill scenarios: CS-01 – Vessel collision of 200 m^3 of MGO at Operational Area A; and CS-02 – Vessel collision of 200 m^3 of MGO at Operational Area B.

Floating oil and shoreline accumulation stochastic outputs at the three tier exposure values for both scenarios are presented in Table 2-5. Entrained and dissolved outputs are presented in Table C - 1 (CS-01) and Table C - 2 (CS-02). As the credible spill is a 200 m³ MGO vessel release, monitoring priorities are concentrated at the Scott Reef complex; no receptor beyond it reaches a monitoring tier.

Initial monitoring priorities (within the first 14 days of a spill)

Each receptor identified in Table C - 1 and Table C - 2 has been assigned a base monitoring tier by applying the base tier criteria in Table 2-2 of the OSM-BIP to the highest exposure value predicted across the floating, shoreline, entrained and dissolved hydrocarbon phases within 14 days at a probability ≥10%. The base tier has then been refined, where warranted, by applying the additional monitoring prioritisation criteria in Table 2-3 of the OSM-BIP (Section 2.2.3): receptor sensitivity (the Western Australian DTMI ranking), vulnerability to the predicted exposure pathway, and baseline data adequacy, following the decision logic in Figure 2-2 of the OSM-BIP. The resultant base tier, the additional criteria applied and the refined initial monitoring priority for each receptor are presented in Table C - 4 (CS-01) and Table C - 5 (CS-02). The geographic extent of the Tier 1, Tier 2 and Tier 3 stochastic exposure areas for CS-01 within the 14-day initial prioritisation window is illustrated in Figure C - 2.

Broad-scale ecological features that intersect a receptor (including Key Ecological Features (KEFs), Biologically Important Areas (BIAs) and Australian Marine Parks (AMPs)) are embedded in that receptor's Western Australian DTMI sensitivity ranking and are therefore considered in the prioritisation without being listed separately as monitoring priorities. Where such features, or transient and protected species, extend beyond the named-receptor footprint, they are captured in the monitoring units described in Section C.4 (Table C - 7).

For CS-01 (Operational Area A), two receptors are classified as Tier 1 initial monitoring priorities and three as Tier 3 priorities (Table C - 4); no receptor reaches Tier 2. The Tier 1 receptors are Scott Reef North and Scott Reef South, driven by predicted entrained hydrocarbon exposure at ≥1,000 ppb within 14 days (15% and 10.5% probability of contact respectively); floating oil exposure at ≥50 g/m² is also predicted at Scott Reef North (100% probability), reflecting its proximity to the release location. Each receptor's refined initial monitoring priority equals its base tier; no promotion was warranted under the additional monitoring prioritisation criteria, as the Tier 3 receptors are contacted by entrained hydrocarbons alone.

For CS-02 (Operational Area B), no receptors are classified as Tier 1 or Tier 2 initial monitoring priorities; all five contacted receptors - Scott Reef North, Scott Reef South, Scott Reef Nature Reserve, Sandy Islet and Seringapatam Reef - are classified as Tier 3 (Table C - 5). Each is contacted within 14 days by entrained hydrocarbons at ≥10 ppb only. No promotion was warranted under the additional monitoring prioritisation criteria. The absence of higher-tier receptors for CS-02 relative to CS-01 reflects the lower predicted exposure at the Scott Reef complex from the Operational Area B release location.

The tier rankings presented in Table C - 4 and Table C - 5 are pre-spill, modelling-derived classifications. Because these priorities are derived from stochastic modelling, which combines the full range of possible spill trajectories across many simulation runs, not all of the listed receptors may be contacted by a single spill event. At the time of a spill, Woodside, its OSM Services Provider/s and key stakeholders will confirm the initial tier ranking for each receptor and adapt it through continual re-evaluation as the spill evolves and actual exposure data becomes available (refer to Section 13 and Section 18.1 of the OSM-BIP).

Receptors identified as RPAs in Section 3 of this OSPRMA (Table 3-1) are included in Table C - 4 and Table C - 5 only where they are contacted at a probability ≥10% within 14 days. RPA status is recorded in the 'Additional monitoring prioritisation criteria' column of these tables for completeness only; it is not an additional monitoring prioritisation criterion and does not promote or demote a receptor's tier. Where shoreline contact is predicted only beyond the 14-day window, phased operational monitoring mobilisation is aligned with the predicted arrival of the spill (Section 2.2.5 of the OSM-BIP).

The availability and adequacy of baseline data for the receptors identified as initial monitoring priorities has been assessed against the parameters and methods of the relevant Joint Industry Scientific Monitoring Plans (SMPs). This activity-specific baseline data assessment is presented in Table C - 3. Consistent with Section

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

2.2.3 of the OSM-BIP, the baseline data assessment was considered as one of the additional monitoring prioritisation criteria. Where baseline data for a receptor and its relevant monitoring program(s) is limited or absent, this supports the prioritisation of that receptor for scientific monitoring and informs the design of any reactive (post-spill, pre-contact) baseline data collection at the time of a spill.

Tier 1 or Tier 2 monitoring would be initiated if situational awareness data and/or surveillance during an actual spill identifies exposure at a receptor, as per the dynamic re-evaluation process in Sections 13 and 18 of the OSM-BIP. Therefore, Woodside and its OSM Services Provider/s will still activate and mobilise monitoring resources to Tier 3 receptors in the absence of any higher ranked receptors.

The inclusion of entrained hydrocarbons at concentrations at or above the 10 ppb exposure value denotes exposure but does not necessarily imply toxicity; for entrained whole-oil droplets, the toxic fraction is small as many hydrocarbon constituents remain sequestered and not bioavailable (French-McCay, 2026). Where a receptor is contacted only by the lowest concentration of entrained hydrocarbons and not by any other hydrocarbon phase, it has been assigned to Tier 3, with the rationale recorded in Table C - 4 and Table C - 5.

Receptors contacted beyond the 14-day initial prioritisation window

A beyond 14-day receptor assessment is not undertaken on an activity-specific basis for the Petroleum Activity (as per OSM-BIP Section 2.2.4). Receptors observed or predicted to be contacted beyond the 14-day initial prioritisation window during a spill are added to the monitoring scope through the post-spill continual re-evaluation process described in OSM-BIP Section 18 (Use of Data in Response Decision-making). Tier assignment at the time of predicted or observed beyond-14-day contact is undertaken by the Woodside Environment Unit Leader (or delegate) in consultation with the OSM Services Provider and key stakeholders using the same tier framework in OSM-BIP Section 2.2.

C.3 Mobilisation and timing of OMP and SMP implementation

Table C - 6provides a list of OMPs and SMPs relevant to Petroleum Activity activities, as well as indicative timeframes for mobilisation of each OMP and SMP for key receptors. In addition, monitor and evaluate activities will capture initial observations of fauna, habitat, and other sensitive receptors. Water samples will be collected during vessel surveillance for OM1: Hydrocarbon Characterisation, when safe to do so. SCAT teams will begin mobilisation within 48–72 hours of notification and will also document fauna observations. This information will be provided to the IMT to aid early decision making per the process outlined in Section 18.1 of the OSM-BIP.

Table C - 6: Indicative OMP and SMP implementation schedule for OSM activities if initiation criteria are met

Proximity to spill source	Monitoring type	0–48 hours from OSM activation	Within 72 hours of OSM activation	~5–7 days from OSM activation	Weeks 1–2 from OSM activation	Ongoing
Spill site and surrounding waters	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations. • Commence activation and mobilisation of OM personnel.	• OM1: Hydrocarbon Characterisation, where resources are available (e.g. Supply Vessel with onboard sampling equipment). • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM5: Rapid Marine Fauna Surveillance • Continue to finalise OMPs. • Continue to activate and mobilise OM personnel.	Continued (as per ongoing arrangements)	Continued (as per ongoing arrangements)	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (e.g. Situation Unit) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill.
	SM	• Commence activation and mobilisation process. • Activation of SMP Team Leads.	• Continue to activate and mobilise personnel. • Work on finalising SMPs.	• SM1: Water Quality Impact Assessment • SM2: Sediment Quality Impact Assessment • SM6: Benthic Habitat Assessment • SM7: Marine fish and elasmobranch assemblages assessment	Continued	Continue SMP monitoring until termination criteria are met
Sensitive receptors predicted to be contacted within 7 days	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations. • OM6: Shoreline Clean-up Assessment • Commence activation and mobilisation of OM personnel.	• OM1: Hydrocarbon Characterisation • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM5: Rapid Marine Fauna Surveillance • Continue to finalise OMPs. • Continue to activate and mobilise OM personnel.	Continued (as per on-going arrangements)	Continued (as per on-going arrangements)	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (Situation Unit Lead) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill until termination criteria are met
	SM	• Activation of SMP Team Leads and finalisation of SMPs.	• Continue to activate and mobilise personnel. • Work on finalising SMPs.	• SM1: Water Quality Impact Assessment • SM2: Sediment Quality Impact Assessment • SM4: Seabirds and Shorebirds • SM3: Intertidal and Coastal Habitat Assessment • SM5: Marine Mega-fauna Assessment – Reptiles • SM5: Marine Mega-fauna Assessment – Cetaceans, Whale Sharks, Dugong • SM6: Benthic Habitat Assessment • SM7: Marine Fish and Elasmobranch Assemblages assessment • SM8: Fisheries impact assessment • SM9: Heritage Features Assessment • SM10: Social Impact Assessment	Continued	Continue SMP implementation until termination criteria are met.
Sensitive receptors (including shorelines, reefs, banks and shoals) predicted to be contacted week 1–2	OM	–	–	• Additional Activation of OMP Team Leads. • Commence activation and mobilisation of additional OM personnel.	• Continue to finalise OMPs. • Continue to activate and mobilise OM personnel. • OM1: Hydrocarbon Characterisation • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (Situation Unit Leader) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill until termination criteria are met

C.4 Determine OSM resourcing requirements and assess capability for the activity

To guide the OSM resourcing requirements assessment for the Petroleum Activity, the scenario most likely to require the greatest initial capability was selected from the two WCCS scenarios (see) based on the stochastic modelling results focusing on the scenario with the greatest predicted number of receptors contacted within 14 days and at the highest contact probabilities. If a receptor is only contacted by low concentrations of entrained hydrocarbons and not by any other hydrocarbon phase, it will be considered a lower priority during the initial monitoring response as outlined in Section 2.2 of the OSM-BIP.

The instantaneous release of 200 m^3 of MGO at Operational Area A (CS-01) was identified as the worst-case scenario, affecting the most receptors within 14 days and determined to require the greatest OSM capability.

The tier rankings in Section C.2 (Table C - 4 and Table C - 5) are derived from the stochastic suite and reflect each receptor's overall risk profile across the full range of modelled trajectories. In any single spill trajectory, a receptor may or may not be contacted within 14 days depending on the prevailing metocean and weathering conditions of that run.

The first 14 days of the response has been selected as the focus area for the OSM resourcing assessment as it is the period during which resources are likely to be overwhelmed, before additional resources (including appropriately qualified personnel, suitable vessels and additional monitoring equipment) can be scaled in locally and from interstate and international resources. Other factors influencing the selection of the scenario with the highest capability requirements were location of the spill, proximity to receptors, and hydrocarbon properties. The OSM Services Provider Contract includes provision of scale-up resources, which would be considered and mobilised as soon as practicable following the spill.

Consideration of Key Ecological Features, Biologically Important Areas and transient receptors

A number of broadscale ecological features are located within the OSM Planning Area and have been considered in monitoring prioritisation and OSM capability planning for the Petroleum Activity activities. The following Key Ecological Features (KEFs) (and their distances to the Operational Area) are noted in Table 4-14 of the EP:

- Continental Slope Demersal Fish Communities KEF – overlaps Operational Area
- Seringapatam Reef and Commonwealth waters in the Scott Reef Complex KEF – overlaps Operational Area
- Ancient coastline at 125 m depth contour KEF – 74 km south-east of Operational Area

The Continental Slope Demersal Fish Communities KEF and Seringapatam Reef and Commonwealth waters in the Scott Reef Complex KEF overlap the Petroleum Activity Operational Area, so are at a higher risk of contact with hydrocarbons. All KEFs within the OSM Planning Area are described in detail in Section 4.7 and Appendix C of the EP. These KEFs include subsea receptors therefore, OSM planning and resourcing for this activity includes relevant monitoring requirements, such as water quality, sediment quality, benthic habitats and fish for these features.

The OSM Area also overlaps a number of Biologically Important Areas (BIAs) with protected species potentially occurring in the area, as described in Section 4.6 of the EP. A number of the BIAs and protected species are located within the geographical extents of other receptors, such as marine turtles within the Scott Reef Nature Reserve and KEF so these BIAs and protected species would automatically be included in the relevant SMPs for that receptor (refer to Table C - 7). Where BIAs, protected species and KEFs are situated away from the monitoring priorities, they will be captured in the Offshore Environs monitoring unit described in Table C - 7.

Monitoring Units

Using the stochastic modelling results, Woodside has grouped the monitoring priorities for the Petroleum Activity into monitoring 'units' (Table C - 7). These units incorporate all of the possible receptors that may be contacted by the Petroleum Activity scenarios shown in Table 2-1 at a probability ≥10%. Receptors only contacted by entrained hydrocarbons and no other phase of hydrocarbon were not included. These unit groupings are based on consultation with experienced monitoring personnel and planners, who often group these receptors together for time-bound monitoring projects. The grouping of units is based on factors such as access and distance to ports, simultaneous operations (SIMOPS) of multiple vessels and teams working in a close area, travel time between individual locations/receptors and time taken to collect samples for each SMP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the Browse to NWS Project Geophysical and Geotechnical Surveys Environment Plan (Commonwealth).

The monitoring units presented in Table C - 7 also include KEFs, BIAs and transient species. Additional information on the seasonality of the receptors can be found in Appendix B of the OSM-BIP and in Section 4.7 of the EP. Each monitoring unit will require 1–2 teams during the initial response (first 14 days). The number of teams allocated to each unit will depend on the extent of the spill, the outcome of the monitoring prioritisation finalised at the time of the spill (Section 13 of the OSM-BIP), the ALARP assessment, and SIMOPs.

It should be noted that not all monitoring units will be contacted by a single spill and that the list below has been generated from stochastic modelling results.

Table C - 7: Monitoring units for the Petroleum Activity relevant to stochastic modelling results

Receptors within each Unit	Type
Scott Reef	
Scott Reef*	Nature Reserve
Scott Reef North*	Reef, Shoals and Banks
Scott Reef South	Reef, Shoals and Banks
Sandy Islet (emergent feature of Scott Reef South)	Reef, Shoals and Banks
Whale shark (foraging)	BIA
Marine turtle	BIA
Pygmy blue whale (distribution)	BIA
Seabird and shorebirds	BIA
Continental Slope Demersal Fish Communities*	KEF
Ancient Coastline at 125 m depth contour*	KEF
Seringapatam Reef and Commonwealth waters in the Scott Reef Complex*	KEF
Control	
Control sites	All

**Submerged receptor that has no features above the sea surface.*

Stochastic modelling

OSM resourcing requirements were determined using stochastic modelling. Deterministic modelling was not undertaken, as the existing response capability arrangements (refer to Sections 9 and 10 of the OSM-BIP) provide sufficient capacity to meet or exceed the resourcing requirements for all receptors forecast to be contacted by floating, shoreline and/or dissolved hydrocarbons (at ≥10% probability) by stochastic modelling within the initial two weeks of the Petroleum Activity.

The resources required to commence operational and scientific monitoring components during weeks 1–2 are presented in Table C - 8 and Table C - 9 respectively. These are based on the monitoring priorities (Table C - 4 and Table C - 5), the implementation schedule (Table C - 6) and the worst-case stochastic results, and include the resources for monitoring unaffected control sites.

Woodside's OSM capability arrangements are detailed in Sections 9 and 10 of the OSM-BIP. These sections demonstrate that Woodside has established arrangements to mobilise up to 5-6 teams for most OMPs and SMPs in the initial stages of a spill, and provision for scale-up capability, confirming that despite the use of stochastic modelling (which means an overconservative estimate of capability has been used for this activity) the OSM capability requirements for the Petroleum Activity (Table C - 8 and Table C - 9) are satisfied by the existing capability arrangements in the OSM-BIP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside.
